Working as a subcontractor to ICF Consulting of Laguna Niguel, California, Mr. Kamman provided technical assistance in the hydraulic modeling of sediment accumulation in selected spreading ground facilities owned and operated by the Los Angeles Department of Public Works. The object of this work is to evaluate changes in infiltration and groundwater recharge rates over time within the spreading grounds in association with sediment accumulation from turbid waters.

Corde Valle Golf Club Surface-Groundwater Interaction Study, Santa Clara County, CA
LSA Associates, 2004

On behalf of LSA Associates of Pt. Richmond, CA, Mr. Kamman completed a 3rd party independent review of available reports and data sets (boring logs, well water levels, groundwater quality, aquifer pump-test, and surface water monitoring) to evaluate if pumping of the Corde Valle irrigation well is adversely impacting flow in West Llagas Creek. This investigation was implemented in response to a concern expressed by California Department of Fish and Game staff regarding the potential for differential drying of the West Branch of Llagas Creek along Highland Avenue. The analysis was also complicated by the likely effects of pumping from surrounding off-site wells.

Aquifer Testing for Tennessee Hollow Watershed Project, San Francisco County, CA
Presidio Trust, 2002

The Mr. Kamman assisted in the design and implementation of an aquifer test at the Presidio of San Francisco. We prepared an aquifer test work plan and conducted step-drawdown and constant-rate aquifer tests at the site using both manual and electronic data collection methods. This work included interpretation of the aquifer test results using software-based solution methods and prepared a written summary of methods and findings. In addition, Mr. Kamman located, coordinated and managed a drilling effort for the logging and installation of several groundwater monitoring wells in the project area to address identified data gaps.

San Joaquin River Riparian Corridor Restoration Project, San Joaquin Valley, CA
McBain-Trush, 2002

Mr. Kamman completed an assessment of historic and existing shallow groundwater conditions beneath and adjacent to the San Joaquin River between Friant Dam and the Merced River. This work focused on reviewing available reports and flow/groundwater- level data to characterize surface water and groundwater interaction and implications for riparian vegetation, water quality and fishery habitat restoration. Hydrologic analyses were performed to identify the location and seasonal evolution of losing and gaining reaches an implication on future restoration planning and design efforts. The main deliverable for this analysis was a report section focused on describing the historical changes in regional and local groundwater conditions in the San Joaquin Valley and evolution of anthropogenic activities (e.g., groundwater withdrawals, irrigation drainage systems and return flows, development of diversion structures, changes in land-use; and introduction of CVP/State Water Project deliveries) and associated impacts on deep/shallow groundwater levels, surface water flows, and surface and groundwater quality.

Tidal, Estuarine & Coastal Projects

Quartermaster Reach Wetland Restoration Project, San Francisco County, CA
Presidio Trust, 2006-present

Mr. Kamman was retained in 2006 as part of a multi-disciplinary team to develop restoration alternative designs for a 10-acre filled and paved site marking the historic confluence of Tennessee Hollow Creek and Crissy Marsh adjacent to San Francisco Bay. The Trust's planning documents define the main objectives for Tennessee Hollow restoration as: a) "Restoration [of Tennessee Hollow] will expand riparian habitat and allow for an integrated system of freshwater streams and freshwater, brackish, and tidal marsh, re-establishing a connection to Crissy Marsh" and b) "Restore and protect Tennessee Hollow as a vibrant ecological corridor". The project is located within the setting of a National Park and a National Historic Landmark District. Thus, another goal for the project is to protect the area's historic buildings and sensitive cultural and archeological resources to the extent possible, to enhance visitor experience to the area, and to integrate creek restoration with other urban land uses.

Mr. Kamman provided H&H technical input and consultation to the design team to develop a restoration project consisting of a creek-brackish marsh-salt marsh interface and associated upland habitats. His work included evaluating surface water, groundwater and tidal sources. In addition, the development of a hydrodynamic model has informed and guided a preferred project design, including evaluation of storm surge, road crossing and Tsunami impacts to the project. A technical challenge addressed with the use of the model included predicting and quantifying salt/brackish marsh habitat zones within the restored wetland in response to periodically but prolonged closed-inlet conditions to Crissy Marsh - a water body that serves as the downstream connection to the proposed project.

Another unique challenge to this project includes integrating restoration planning and design efforts with the replacement and retrofit of Doyle Drive, the main on/off-ramp for the Golden Gate Bridge, being replaced along the entire northern boundary of the Presidio. Mr. Kamman is providing long-term technical review of this project to the Trust with respect to impacts to water resources and associated existing ecological habitats. The Quartermaster project also falls within the managerial jurisdiction of both the Presidio Trust and NPS-GGNRA, requiring work in close cooperation with both Presidio Trust and National Park Service (NPS) staff.

Salt River Ecosystem Restoration Project, Humboldt County, CA
Humboldt County RCD, 2005-2019

Mr. Kamman provided hydrology, engineering and environmental compliance services towards the planning and design of river and tidal wetland restoration on the Salt River (Eel River Delta plain) near Ferndale, California, in Humboldt County. The purpose of the Salt River Ecosystem Restoration Project (SRERP) is to restore historic processes and functions to the Salt River watershed. These processes and functions are necessary for re-establishing a functioning riverine, riparian, wetland and estuarine ecosystem as part of a land use, flood alleviation, and watershed management program. The Salt River Project has three components: 1) dredging the lower Salt River and lower Francis Creek from near the Wastewater Treatment Plant downstream for 2.5 miles; 2) restoring 247 acres of wetland estuary habitat in the lower Salt River within the 440-acre former

SELECTED EXPERIENCE *(CONTINUED)*

dairy; and 3) reducing sediment inputs from tributary watersheds. The Salt River Project was designed using an "ecosystem approach" to address hydrology, sedimentation, and fish and wildlife habitat.

As part of project feasibility assessment, Mr. Kamman completed a hydrologic and water quality monitoring program, and developed a MIKE11 hydrodynamic model of the lower Salt River and Eel River estuary in Humboldt County, for the Humboldt County RCD. The purpose of this work was to complete a hydrologic, geomorphic, and hydraulic modeling assessments of the character and dominant physical processes controlling flow of water and sediment through the lower Salt River. Land use changes in the area have caused significant aggradation and infilling of the Salt River, significantly reducing tidal exchange, fish passage, and exacerbating flooding in upland areas. A primary goal of this study is to evaluate the feasibility of proposed restoration elements intended to increase tidal prism and exchange and in-channel sediment scour and transport. The desired outcome is a sustained increase in river conveyance capacity to improve drainage of surrounding flood-prone lands and improve aquatic, wetland, and riparian habitat.

As part of project development and feasibility assessment, Mr. Kamman completed a hydrologic and water quality monitoring program and MIKE11 hydrodynamic model development of the lower Salt River and Eel River estuary in Humboldt County for the Humboldt County RCD. The purpose of this work is to complete a hydrologic, geomorphic, and hydraulic modeling assessments of the character and dominant physical processes controlling flow of water and sediment through the lower Salt River. Land use changes in the area have caused significant aggradation and infilling of the Salt River, significantly reducing tidal exchange, fish passage, and exacerbating flooding in upland areas. A primary goal of this study is to evaluate the feasibility of proposed restoration elements intended to increase tidal prism and exchange and in-channel sediment scour and transport. The desired outcome is a sustained increase in river conveyance capacity to improve drainage of surrounding flood-prone lands and improve aquatic, wetland and riparian habitat.

Western Stege Marsh Restoration Project, Contra Costa County, CA
Tetra Tech, 2008-2010

Mr. Kamman provided technical hydrology and wetland hydraulics support to post-project monitoring of the Western Stege Marsh Restoration Project. His involvement began by providing an independent technical review of previous year's hydrologic monitoring results to evaluate the proposed monitoring success criteria and the rationale used to develop these criteria. This work entailed reviewing historic monitoring data and available natural slough channel geometry data-sets for San Francisco Bay area marshes. Mr. Kamman's study approach was to independently develop desired and sustainable channel geometry relationships for natural, healthy San Francisco Bay salt-marshes and compare them to the published success criteria. Greg was also retained to implement the Year 4 post-project hydrologic monitoring, with modifications to aid in better linking hydrologic processes to ecological conditions and function within the restored marsh. This work consisted of completing more targeted water level monitoring and channel geometry surveys in reference marsh areas containing desired physical and ecological attributes. These data were used to develop geomorphic success criteria (target channel geometry) more tailored to the project marsh and augment the criteria provided in available literature. Working closely with the project team of scientists, Mr. Kamman compared these hydrologic monitoring results to available vegetation surveys to better assess the overall success and evolutionary trend of the marsh.

Giacomini Wetland Restoration Project, Marin County, CA
The National Park Service and Point Reyes National Seashore Association, 2003-2012

Mr. Kamman managed a multi-year project for the NPS in the design and feasibility analysis of a tidal wetland, riparian, and freshwater marsh complex, on the 500-acre Giacomini Dairy Ranch, at the south end of Tomales Bay. The project began in 2003 and included hydraulic, hydrologic, and geomorphic assessments to characterize existing physical conditions, developing restoration alternatives, and completing hydrologic feasibility analyses. Restoration alternatives evaluated creation of a mosaic of subtidal through upland wetland and riparian habitat zones, as well as improvements to salmonid passage, red-legged frog habitat, tidewater goby habitat, and clapper-rail habitat. Emphasis was placed on completing detailed studies to quantify project-induced changes in flood frequency, magnitude and duration, impacts on water quality to local groundwater supply wells, and changes in sediment and water quality conditions in Tomales Bay.

Beginning in 2006, Mr. Kamman managed and assisted design engineers, preparing plans, specification, and cost estimates for a three phased construction schedule, that was completed in the summer of 2008. This project illustrates Mr. Kamman's ability to complete a broad variety of hydrologic feasibility analyses, including flood frequency analyses for contributing watersheds, reproducing historic flood events through numerical modeling, flow duration analysis and evaluation of environmental flow regimes, development of a water budget for created freshwater marsh and frog breeding ponds, sediment yield estimates, completing field monitoring (flow, water level, groundwater level, sediment, and water quality monitoring) to characterize existing site hydrologic and geomorphic conditions (fluvial and tidal), wind-wave setup and run-up for levee stability determination and construction design, coordinating and performing topographic and hydrographic surveys, performing hydrodynamic and water quality modeling of existing and alternative conditions, developing detailed construction cost estimates preparation of technical reports and design drawings and specifications in support of NEPA/CEQA environmental compliance, and public meeting presentation and participation. In addition, Mr. Kamman managed staff in the generation of DEM and TIN models of the existing site and all action alternatives. All work was completed on budget and in a timely fashion, despite repeated expansions to the project boundary and last minute changes driven by endangered species issues.

Critical Dune Habitat Restoration to Protect Threatened and Endangered Species, Marin County, CA
The National Park Service, 2009-2010

Mr. Kamman provided and managed engineering, design, and implementation planning support for the restoration of 300 acres of critical dune habitat at Abbots Lagoon within the NPS Point Reyes National Seashore. He developed engineered drawings, technical specifications and engineer's cost estimates, and assisted NPS in defining a range of methodologies suitable to local conditions and sensitive flora and fauna. This area of the park supports the best remaining intact dune habitat, including some of the largest remaining expanses of two rare native plant communities: American dune grass (Leymus mollis) foredunes, and beach pea (Lathyrus littoralis). European beach grass and iceplant were removed from

SELECTED EXPERIENCE *(CONTINUED)*

the project site using mechanical removal and hand removal techniques. The project goal was to remove these invasive species from approximately 135 acres of prime dune habitat in the 300-acre project site, while not impacting sensitive species and habitats. The intended result was to remobilize this historic dune field and restore their natural form and migratory processes.

This project illustrates Mr. Kamman's ability to work closely with NPS staff to balance habitat protection and restoration across the landscape. As part of project design, he developed grading plans, and specified work flow, equipment movement and access routes which minimize impacts to special status species. Extensive fencing and exclusions zone planning was required to protect existing native habitats, and minimize tracking of plant stock to or through restored sties. In addition work elements had to be structured and prioritized to maximize ground work subject to budgetary constraints and work flow uncertainties. All work has been completed on budget and in a timely fashion, even with repeated expansions to the project boundary and affected area and last minute changes driven by endangered species issues.

Lower Gualala River and Estuary Assessment and Management Plan, Mendocino County, CA

California State Coastal Conservancy and Gualala River Watershed Council, and Sotoyome RCD, 2002-2005

Mr. Kamman worked with fisheries biologists to evaluate the hydrologic and water quality conditions in the lower Gualala River and estuary and identify and evaluate potential impacts to summer rearing habitat for salmonids and other aquatic organisms. This work included: assessing how the impacts of upstream land use (logging and water diversions) have altered water delivery and water quality to the Lower River and estuary over time; characterizing the physical coastal and riverine processes controlling opening and closure of the estuary inlet and lagoon morphology; monitoring and characterizing real-time and seasonal changes in lagoon water level and water quality; and evaluating the sediment transport capacity and geomorphic condition of the lower river and estuary. Mr. Kamman took the lead in developing and editing a management plan for the lagoon, prescribing actions to preserve, protect and enhance ecological habitats (with emphasis on salmonids) within the lagoon and lower Gualala River.

This project was completed on-time and on-budget and demonstrates Mr. Kamman's ability to integrate physical, water quality and biological data and information into a coherent and understandable description of the interrelated processes controlling the aquatic ecology of a lagoon system. A big challenge on this project was completing a high-quality and defensible field monitoring program on a "shoe-string" budget. The outcome of this study provides important understanding on how and why steelhead are surviving in a heavily logged (95% private ownership) watershed. The management plan prescribes recommendations to preserve and protect the lagoon as primary rearing habitat for steelhead.

Suisun Bay Tidal Wetland Restoration Design, Contra Costa County, CA

East Bay Regional Park District and LSA Associates, 1999-2005

Mr. Kamman provided hydrologic design services to the restoration of a 55-acre tidal wetland on Suisun Bay. The design will maximize habitat for special status fish species, and (to the extent possible) habitat for other special status animal and plant species. Working with a multi-disciplinary design team, Mr. Kamman assisted in developing a design based on analysis of habitat needs, tidal hydrodynamic and geomorphic processes, sedimentation rates and soil characteristics. Project tasks included: a site analysis defining existing ecological and hydrologic conditions; a hydrologic and biological restoration opportunities and constraints analysis to define restoration and management objectives; and hydrodynamic and sedimentation modeling to evaluate design alternatives. The final restoration and management plan included a grading plan, landscape revegetation plan and monitoring and maintenance plans. This work again illustrates his capabilities in the characterization of physical site conditions, development and feasibility analysis of project alternatives, and preparation of preliminary designs of sufficient detail to allow for environmental compliance through the CEQA/NEPA process.

Santa Clara River Estuary and Lower River Assessment, Ventura County, CA

Nautilus Environmental on behalf of the City of Ventura, Public Works Department, 2003-2004

Mr. Kamman directed a hydrologic and geomorphic assessment of the lower Santa Clara River and estuary. This work was completed for prime contractor in an effort to assist with re-permitting of treated effluent discharges to the estuary. The proposed study entailed characterizing existing and historic hydrologic and physiographic conditions and an assessment of historic changes in inflow to the estuary. This task included a comprehensive review and evaluation of available hydrologic reports and flow data within the watershed to characterize changes in flow associated with development of numerous water projects within the Santa Clara River basin. The main deliverable from this analysis was the development of a historic unimpaired flow record to the estuary based on regional regression analyses and water operations modeling. Within the estuary, Mr. Kamman designed and conducted a multi-year monitoring program of water levels, water quality (temperature, dissolved oxygen, salinity, and pH), and sand-spit morphology in order to evaluate inlet opening/closure frequency and associated changes in aquatic habitat (esp. tidewater goby) and other ecologic communities. A considerable portion of this subtask included detailed coastal process analysis (including wave power analyses and littoral sand transport), which, considered with the inflow analysis, provides a basis to evaluate the seasonal cycle of barrier beach buildup and destruction.

This project illustrates Mr. Kamman's ability to complete a broad variety of hydrologic and coastal process analyses under strict regulatory oversight. A premier study completed on this project was the development of a detailed water and salinity budget model for the estuary to evaluate the impacts of a wide variety of proposed and modified estuary inflow regimes to determine potential future water level and salinity conditions in the lagoon and impact on frequency of inlet breaching. In addition to coordinating and implementing a variety field monitoring and surveys, Mr. Kamman also provided real-time information and input to informational and negotiation meetings with state resource and regulatory agencies.

Eden Landing Ecological Reserve Restoration, Alameda County, CA

East Bay Regional Park District, 2000-2003

Mr. Kamman developed and completed hydraulic and hydrodynamic modeling assessments for the design of an approximately 1000-acre tidal marsh restoration in former Cargil salt manufacturing ponds, located a mile inland of San Francisco Bay. The restoration goals required balancing the desires to restore tidal marsh conditions to the site, while maintaining and enhancing the open water and salt

SELECTED EXPERIENCE *(CONTINUED)*

panne habitats preferred by resident and migratory shorebirds. The restoration plan also needed to incorporate restoration objectives with remediation of high soil salinities resulting from past salt production, subsided ground elevations, dredging of new channels to the bay, existing infrastructure constraints, public access for the San Francisco Bay Trail, and preservation of several important cultural and historical sites. Hydraulic design objectives include maximizing both interior circulation and tidal exchange between the restoration parcel and the bay. A series of one-dimensional unsteady hydrodynamic models (MIKE11) were used to design the channel network, identify high velocity areas requiring erosion protection, and characterize expected habitat conditions. An important component of this design and feasibility assessment was to translate desired ecological habitat conditions identified in the EIR into specific hydrologic design criteria, considering channel velocities, scour, sediment transport, tidal water inundation frequencies and seasonality of ponding. Mr. Kamman worked closely with EBRPD civil engineers, assisting with the translation of hydraulic design criteria into final engineered drawings and specifications.

Wetland & Pond Projects

Design of California Red-Legged Frog Breeding Ponds, San Francisco Bay Area (various), CA
The National Park Service and Golden Gate National Parks Conservancy, 1997-present

Mr. Kamman has lead or provided hydrologic and engineering design assistance to the sighting and design of nearly two dozen breeding ponds for California red-legged frog throughout the San Francisco Bay Area. Work has been completed in Marin, Sonoma, Solano, Contra Costa, Alameda, and Santa Clara Counties under the auspices of numerous federal, state, and local county/city agencies. A common study approach consists of an initial site reconnaissance of watershed conditions and identification of potential sites. The reconnaissance is followed by a surface water hydrologic sufficiency analysis using available meteorologic and stream flow information. An important variable sought during pond sighting is the presence of migration corridors between known breeding areas and/or perennial water sources. Based on in-depth research and post-project monitoring, Mr. Kamman has refined or developed site-specific evapotranspiration estimates, which commonly do not match standard applied values. Accurate evapotranspiration rates are necessary if ponds are intended to periodically dry-down as a means to preclude undesired species such as bullfrog or mosquito fish. In many instances, a seasonal groundwater-monitoring program is implemented in order to better investigate and quantify potential and seasonal groundwater contributions. Other design challenges we commonly experience include: design of impermeable liners for ponds located in upland areas or highly permeable soils; hydraulic analyses and design of outfalls/spillways; sedimentation management/ maintenance approaches; and requirements of inoculum and water used to line and fill the pond, respectively.

Hydrologic Feasibility Assessment for Mana Plain Wetland Restoration Project, Kauai, HI
State of Hawaii Department of Land and Natural Resources, 2010-2019

Working on behalf of the Mana Plain Wetland Restoration Partnership, Mr. Kamman completed a hydrologic feasibility assessment for the Mana Plain Wetland Restoration Project proposed by the State of Hawaii Department of Land and Natural Resources (DLNR), Division of Forestry and Wildlife (DOFAW) on the island of Kauai. The Mana Plain Wetland Restoration Project site is approximately 105 acres of low-lying abandoned sugarcane fields immediately north of the Kawaiele Waterbird Sanctuary and east of the Pacific Missile Range Facility. The purpose of the Mana Plain Wetland Restoration Project is to maximize the area of constructed wetlands within the restoration site. Palustrine emergent wetlands within the project will create habitat for four species of endangered Hawaiian waterbirds and other sensitive species, including: Hawaiian stilts; Hawaiian ducks; Hawaiian coots; Hawaiian moorhen; migratory waterfowl; and migratory shorebirds. The Mana Plain is of vital importance for the recovery of endangered waterbirds species. This restoration project will be designed to provide important breeding and feeding wetland habitats on an island where; 1) wetlands have been severely degraded, and 2) mongoose, an introduced predator, have not been established.

Mr. Kamman's work on this project included technical assessments and development of proposed restoration alternatives. Analyses completed included: a synthesis of the physical site setting (topography, geology, hydrogeology and soil); reviewing available data to characterize site meteorology, surface water drainage, water quality, and groundwater conditions; preparing a detailed water budget to describe the characteristics and processes of surface water and groundwater movement into and through the project area; evaluating project feasibility, water supply alternatives and costs; and completing a flood hazard impact assessment to evaluate potential project benefits and impacts to local area flooding. Working with the project partners, Mr. Kamman developed a preferred project alternative and supported in preparation of the project Environmental Assessment document. Mr. Kamman's firm was also retained by the State of Hawaii to develop engineering designs of the project.

MacArthur Meadow Wetland Restoration, San Francisco County, CA
Presidio Trust, 2013-2016

Mr. Kamman has been working on over a dozen independent wetland and creek restoration planning and design efforts within the Presidio of San Francisco since 2001. Most recently (2016), he developed a wetland restoration grading plan for the MacArthur Meadow Wetland Restoration Project in the central portion of the Tennessee Hollow watershed. As part of the site assessment, Greg characterized and modeled surface and groundwater interactions and identified a unique opportunity to restore 4 acres of mixed meadow, natural wetlands and creek/riparian corridor. This was possible due to the discovery of shallow groundwater conditions beneath this historically disturbed landscape. Various design components were integrated into the grading plan in order to enhance groundwater recharge and storage in the Meadow, while retarding runoff and drainage out of the wetland, including: daylighting storm drain runoff into the Meadow; reconfiguring internal channel alignments to enhance channel habitat and groundwater recharge; creation of wetland depressions to retain and recharge surface water; and removal of fill material to decrease the depth to the water table. Notable challenges of this work include restoring heavily disturbed natural resources in an urban setting while integrating designs with archeology/ cultural resources, education and remediation programs.

Dragonfly Creek Restoration Project, San Francisco County, CA
Presidio Trust, 2007-2011

Mr. Kamman designed and managed hydrologic monitoring and analysis studies in support of planning and design for riparian and wetland habitat restoration along approximately 500-linear feet of the Dragonfly Creek corridor near Fort Scott of the Presidio of San Francisco. Work has included completing subsurface

SELECTED EXPERIENCE *(CONTINUED)*

investigations including the installation of shallow wells and a sharp-crested weir with recorder to gauge creek flows. Mr. Kamman assisted in the development and selection of a preferred project alternative, considering on-site cultural resource protection, education and resource management issues (including flood control). Mr. Kamman prepared permit applications. Major components of the project included removal of significant fill and building foundations and installation of a new creek road crossing that will maintain the historical alignment, function and architectural character of a culturally significant roadway. Mr. Kamman oversaw development of PS&E for this project, which will create mitigation wetlands for a highway earthquake retrofit project that passes through the Park.

This project illustrates Mr. Kamman's ability to complete a broad variety of hydrologic analyses, including: surface water and groundwater hydrologic monitoring to characterize and quantify existing hydrologic conditions; rainfall-runoff modeling; hydraulic modeling of flood and scour conditions (including road crossing); preservation of existing wetland habitat and vegetation communities; integration with other Presidio Trust programs; and contracting flexibility to assist in conceptual planning and environmental compliance without increasing project design costs.

Mori Point Sensitive Species Habitat Enhancement Project, San Mateo County, CA
Golden Gate National Recreation Area and Golden Gate National Parks Conservancy, 2005-2011

Mr. Kamman provided hydrologic analyses, sighting and engineering design (PS&E) for three California red-legged frog breading ponds within the 105-acre Mori Point area. These efforts were completed in association and collaboration with a larger Coastal Trail improvement and ecosystem restoration effort. Quarrying and off-road vehicle use have left this site heavily scarred. The focus of restoration work was to protect the endangered San Francisco garter snake and the threatened red-legged frog. Most of this work will be focused on invasive species removal and enhancing endangered species habitat. As part of species habitat improvement, Mr. Kamman worked with project ecologists to design the ponds to optimize breeding habitat for California red-legged frog.

Work started with an initial site reconnaissance and study of watershed conditions and identification of potential sites. The reconnaissance was followed by a surface water hydrologic sufficiency analysis using available meteorological and stream flow information and installation and monitoring of shallow piezometers to quantify the proximity and seasonal variability in depth to water table. An important variable sought during pond sighting was the presence of migration corridors between known breeding areas and/or perennial water sources. Based on in-depth research and post-project monitoring for other ponds they created in the San Francisco Bay area, Mr. Kamman refined site-specific evapotranspiration estimates. Accurate evapotranspiration rates are necessary if ponds are intended to periodically dry-down as a means to preclude undesired species such as bullfrog or mosquito fish.

Other design challenges experienced included: design of impermeable liners for ponds located in upland areas or highly permeable soils; hydraulic analysis and design of outfalls/spillways; sedimentation management/maintenance approaches; and requirements of inoculum and water used to line and fill the pond, respectively. Mr. Kamman has designed numerous ponds for the NPS and affiliates within the Bay Area, including Mori Point (constructed 2007), Banducci (constructed 2007) and Giacomini (Phase I and Phase II constructed in 2007 and 2008) project sites.

Hydrologic Assessment and Restoration Feasibility Study for Shadow Cliffs Regional Recreation Area, Alameda County, CA
East Bay Regional Park District, 2009-2010

Mr. Kamman developed and implemented an assessment to identify groundwater levels and supplemental water supplies that will sustain seasonal wetland restoration areas and riparian habitats under an altered future hydrologic regime. This work will inform a forthcoming Land Use Plan Amendment for park occupying a series of former gravel quarry pits. Work included: obtaining and synthesizing available surface water and groundwater data to characterize existing hydrologic and water supply conditions and seasonal variability; quantifying the likely changes in groundwater conditions and quarry pit lake levels in association with changes in regional water transmission and groundwater recharge operations; and identifying, developing and evaluating a suite of ecosystem restoration alternatives. Other important project objectives include: improving habitat for waterfowl and wildlife; broadening recreational use; enhancing visitor education and wildlife interpretation; improve park aesthetics. Mr. Kamman evaluated a preferred park and ecosystem enhancement alternative that involves diverting high winter flows from an adjacent arroyo. This project demonstrates Greg's ability to characterize hydrologic conditions and quantify the relationship between groundwater, surface water and wetland habitat conditions, both under existing conditions and in predicting future hydrologic and ecologic conditions under an altered hydrologic regime (i.e., lower groundwater table).

Laguna Salada Marsh and Horse Stable Pond Restoration Project, San Mateo County, CA
Tetra Tech, 2007-2009

Mr. Kamman provided technical hydrology and hydraulics support to the planning and conceptual restoration design of Laguna Salada marsh and Horse Stable Pond, located adjacent to Sharp Park Golf Course in the town of Pacifica, California. The primary objectives of the project are: to reduce flood impacts within the project vicinity; improve sustainable ecological habitat for the endangered San Francisco garter snake and the threatened California red-legged frog; better understand and characterize the hydrologic and water quality conditions/processes affecting flood and ecological habitat conditions within the project vicinity; provide an effective pumping operation plan to meet ecological objectives; and develop appropriate hydrologic analytical approaches and models to assist Tetra Tech and the San Francisco Recreation and Park Department in the planning and design for marsh, pond, and creek restoration. The project is also a unique opportunity to connect this resource with the California Coastal Trail, the Bay Area Ridge Trail, and the surrounding GGNRA lands.

Mr. Kamman's work included completing a comprehensive review of available hydrologic and site information and implementing selected field investigations to develop and calibrate an integrated hydrology-flood routing-pond water operations model that will quantify the volume and depth of water moving through the project system. The investigation will also further characterize shallow groundwater conditions and water quality with respect to effects on Laguna Salada and Horse Stable Pond. Analytical and numerical modeling tools are being used to better characterize existing hydrologic and water quality conditions and to assist in identifying project opportunities and constraints as well as evaluate potential restoration design components - all necessary to inform a sustainable

SELECTED EXPERIENCE *(CONTINUED)*

and successful restoration design.

Tolay Lake Restoration Feasibility Assessment, Sonoma County, CA
Sonoma County Agricultural Preservation and Open Space District, 2003

Mr. Kamman completed a detailed hydrologic feasibility analysis to evaluate a suite of potential freshwater lake and wetland restoration alternatives. Sites were evaluated under existing watershed land-use practices and under existing and forecasted water demands (in the form of existing water rights/applications). Analysis consisted of developing a detailed water budget model to simulate alternative restored lake inundation areas and depths under median and dry year conditions, as well as a 50-year historic period (1947-1997) displaying highly variable rainfall and runoff supplies. Three lake restoration alternatives were evaluated based on existing topography and likely historic lake configurations. The restoration alternatives include lakes with storage volumes equivalent to 136-, 1100-, and 2550-acre feet.

Haypress Pond Decommissioning and Riparian and Channel Restoration, Marin County, CA
Golden Gate National Recreation Area (GGNRA), 2001-2002

This project restored 170 meters of historic creek and riparian habitat through removal of Haypress Pond dam in Tennessee Valley within GGNRA. The goals of the project were to alleviate long-term maintenance needs and eliminate non-native bullfrog habitat threatening native California red-legged frog habitat in adjacent watersheds.

Working with the Park biologist, Mr. Kamman developed designs to decommission the dam and restore natural riparian and meadow habitat. This work included: characterization of existing topographic conditions; design of a channel profile through the proposed restoration project reach; preparation of a grading plan for the restoration project; and hydrologic and hydraulic analyses to evaluate the performance of the creek channel and flood plain below the former dam during a variety of flows. Challenges of this work included integrating sediment reuse into plans and construction phasing.

Damon Slough Site Seasonal Wetland Design, Alameda County, CA
Port of Oakland, 1999-2001

Working on behalf of the Port of Oakland, Mr. Kamman completed extensive surface and groundwater monitoring and data analyses to develop a detailed water budget to assist in the evaluation and design of a 7.5 acre seasonal freshwater wetland. Primary project objectives included a design that would provide shorebird/waterfowl roosting habitat, minimize impacts to existing seasonal wetland areas, and lengthen the duration of ponding through the end of April to promote use by migratory birds. In addition to developing hydrologic design criteria, responsibilities included development of grading plans to accommodate a local extension of the Bay Trail and wetland outlet works.

Water Quality Projects

Chicken Ranch Beach Soil and Groundwater Quality Investigation and Restoration Planning, Marin County, CA
Tomales Bay Watershed Council, 2007-present

Mr. Kamman is leading scientific and engineering efforts for a wetland and riparian corridor restoration project on Third Valley Creek and Chicken Ranch Beach in Inverness, California. The main project goals are to create a self-sustaining riparian and wetland system (requiring minimal operation and maintenance) and eliminate public exposure to high levels of bacteria that exist in a site drainage ditch discharging to the beach. The design will likely include establishing a blend of habitats, including: riparian stream corridor, seasonal/perennial freshwater marsh, and tidal/saltwater marsh.

Current efforts have included the development and implementation of a soil and groundwater quality investigation to delineate the source of elevated bacteria levels. This work includes: the collection and testing of depth-discrete soil samples; groundwater well installation, sampling and testing; and surface water sampling and testing; analysis of laboratory results; and reporting, including recommendations for further/expanded investigations. Mr. Kamman coordinated this time-sensitive sampling and analysis (six hour hold times) with Brulje and Race Laboratories in Santa Rosa.

Lower Miller Creek Channel Maintenance and Material Reuse Sampling Analysis Plan, Marin County, CA
Las Gallinas Valley Sanitary District, 2015

Mr. Kamman was commissioned to formulate and implement a plan for sediment removal and improved flood flow conveyance in the Lower Miller Creek channel. Accumulation of course sediment in the project reach had reduced discharge efficiencies at District outfalls. Miller Creek supports a population of federally listed Steelhead and adjacent wetland/marsh areas potentially support other state and federally listed special status species. Working with District Staff, Greg developed a suite of potential project alternatives and identified a preferred approach. Mr. Kamman completed all CEQA compliance (IS/MND), permitting and oversaw development of engineered plans and specifications.

In order to evaluate if reuse of excavated material from 2,655 feet of creek corridor in upland areas was feasible, Mr. Kamman developed and implemented a Sampling Analysis Plan (SAP) pursuant to U.S. Army Corps Guidance for Dredging Projects within the San Francisco District. Sample collection, sample handling, and analysis were performed in accordance with the SAP. Results for analytes were compared to a variety of screening criteria to determine the material's suitability for reuse in aquatic environments. A full suite of chemical and physical analyses were performed on soil samples collected from 16 locations, including: metals, PAHs, PCBs, pesticides, TOC, specific conductance, pH, sulfides, percent moisture and grain-size. Mr. Kamman managed all aspects of this effort including reporting and presentations/negotiations at multi-agency meetings through the Corps Dredge Materials Management Office (DMMO).

Lower Pitkin Marsh Hydrologic and Water Quality Monitoring, Sonoma County, CA
Sonoma Land Trust, 2008-2010

Mr. Kamman was retained to develop and implement a hydrologic and water quality monitoring program at Lower Pitkin Marsh outside of Forestville, California. The Pitkin Marsh area is one of the most valuable complexes of mixed riparian woodland and thicket, freshwater marsh, wet meadow, oak woodland and grassland in Sonoma County. The complex interaction of surface water, ground water, and scattered seeps and springs on the site creates unusual hydrologic conditions that promote a rare assemblage of plant species which includes several endemics. The primary objective of the hydrologic monitoring program was to understand the annual and season sources of both surface and ground water supplying wetlands. Hydrologic and water quality monitoring was

SELECTED EXPERIENCE *(CONTINUED)*

initiated during the winter wet season of 2008/09 and will be conducted for a 12-month period through the ensuing summer dry-down and into the following wet season. Understanding how groundwater levels, spring flow and creek flow rates recede from winter wet to summer dry conditions will provide an important understanding and quantification of the seasonal variability in water supplies feeding selected wetland types. General water quality parameters (temperature, pH, specific conductance, and ORP) are measured at all monitoring locations during each visit. Nutrients (N and P) are measured in selected surface water and groundwater samples collected during at least three monitoring events, including a winter high flow, spring high base flow and summer low baseflow.

Pescadero Lagoon Restoration and Enhancement, San Mateo County, CA
California State Coastal Conservancy, 2005-2006

Mr. Kamman was retained to support restoration and water quality enhancement planning efforts in Pescadero Lagoon. In 2005-2006, he completed a synthesis of available hydrologic and water quality information in responding to requests for development of a hydrodynamic and water quality model of the lagoon. This model was considered as a means to identify causes for repeated fish-kills in the lagoon that occurred during initial breaching of the inlet. Mr. Kamman assisted in preparing a synthesis and model development feasibility report from this effort.

Water Temperature Simulations for Trinity River Fish and Wildlife Restoration Project, Trinity County, CA
Trinity County Planning Department, 1994-2004

For over a decade, Mr. Kamman completed a number of hydrology and water quality investigations in support of alternative feasibility studies on the Trinity River Fish and Wildlife Restoration Project in direct support of the Trinity River Restoration EIR/EIS. Studies involve assessing the effects of proposed flow alternatives on water temperature within and downstream of Lewiston Reservoir. Mr. Kamman was responsible for data collection, processing, and flow/temperature modeling of Lewiston Reservoir as part of a coordinated evaluation including other Trinity River system models. Another study included evaluating how project operations could be implemented or modified to optimize Lewiston Lake release temperatures to meet downstream temperature criteria and compensate for increased warming of the river associated with side channel and feather edge restoration activities. Mr. Kamman continues to evaluate how more recent water projects (raising Shasta Dam, Sites Reservoir, and the Waterfix tunnels) consider and integrate with the Trinity Restoration Project.

Upper Eel River Unimpaired Flow and Water Temperature Assessments, Humboldt County, CA
CalTrout, 1997-1999

Mr. Kamman evaluated changes in the natural flow regime of the upper Eel River, and developed an Upper Eel River proposed release schedule to enhance downstream Chinook and Steelhead spawning and rearing habitat. This work was triggered by proposals set forth by PG&E as part of their Potter Valley Project FERC relicensing process. Work consisted of two main investigations. The first included reviewing results of a ten year PG&E study and development of multivariate regression and stream reach (SSTEMP) temperature models to assess the effects proposed flow alternatives would have on downstream temperatures. The second investigation consisted of characterizing unimpaired flow conditions and developing a daily unimpaired flow record for use in project operation models.

Subject:	Draft EIR Comments: SDC Specific Plan
Date:	Friday, August 19, 2022 12:09:33 PM

EXTERNAL

Dear Brian,

I am writing to express my concern for the recently released Draft and Environmental Impact Report and Draft Specific Plan for the Sonoma Developmental Center. The drafts' proposal for 1,000 residential units along with commercial development brings about great concern for the environmental impacts in an area where wildfire and drought continue to be of great concern. These issues rise to the forefront of concern due to their potential effects on human well being; for me, the impact on wildlife is also of great concern, though unfortunately in our current human-centric existence, the flora and fauna that are so important within the larger ecosystem seem to gain less of our attention. Overall, the loss of biodiversity, one of the greatest gifts of living in Northern California, will ultimately impact us all. This should be given great weight when determining land use and planning. C1-1

I am urging the county to engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. Furthermore, I am calling for a re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide. C1-2

I have dedicated myself to working with young children in the outdoors in efforts to cultivate their connection to nature and hopefully inspire them to act as individuals who seek to preserve it. I hope that you will consider the existence of the future generations and consider the impact such a project could have on the environment they will one day live. C1-3

Thank you for your time and consideration.

Sincerely,

Amanda Zangara

Please join Sonoma Land Trust in urging Sonoma County to engage in a meaningful planning process for the Sonoma Developmental Center (SDC).

On August 10, 2022, the County released its Draft Environmental Impact Report (EIR) and Draft Specific Plan for SDC. Despite the Board of Supervisor's direction to pursue a specific plan with fewer than 1,000 homes, the Drafts propose 1,000 residential units with extensive commercial development.

This disconnect highlights the inadequacy and inefficiency of our current approach to planning and development. The draft specific plan fails to respond to the challenges of our time—including wildfire, drought, and biodiversity loss.

Further, because the Specific Plan and EIR were released before the State selected a development proposal, the Specific Plan is hypothetical. Neither it nor the EIR

disclose the characteristics or environmental impacts of the proposal that will ultimately be accepted by the State.

Why this matters:
Aligning the Specific Plan and EIR with the State's RFP, would increase efficiency, save valuable taxpayer resources, and ensure thorough planning and environmental review. **Review of the Specific Plan and EIR must be paused pending completion of the RFP process.**

Take action now by sending a letter or email before August 24 to the County at: Brian.Oh@sonoma-county.org (Subject Line: "Draft EIR Comments: SDC Specific Plan"). Make sure to cc the Department of General Services at Gerald.McLaughlin@dgs.ca.gov

Urge the County to:

1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.
2. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

Mr. Oh,

Thank you for taking the time to read my email today.

C2-1

I would like to ask that the County engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. Because the Specific Plan and EIR were released before the State selected a development proposal, the Specific Plan is hypothetical. Neither it nor the EIR disclose the characteristics or environmental impacts of the proposal that will ultimately be accepted by the State.

C2-2

I also ask that for a re-drafting of the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

Thank you for your time and attention to this matter.

Sincerely,
Betsy Donnelly

Subject: SDC Draft EIR question
Date: Wednesday, August 24, 2022 9:35:36 PM

EXTERNAL

The DEIR doesn't seem to look at the impact on cyclists and pedestrians OUTSIDE the campus: it does acknowledge that VMT along Arnold Dr and Hwy 12 will increase and cannot be mitigated. Does the traffic impact analysis estimate the corresponding increase in the number of bicycle and pedestrian collisions along Arnold Drive and Hwy 12 both with and without bike and pedestrian infrastructure improvements? If so, what are those numbers? C3-1

It is not valid to assume that the County or Caltrans will make the needed improvements as part of future development: they have, to date, been unable to make ANY improvements on those roadways in the impacted area: both roadways have ZERO shoulder width sections which require cyclists and pedestrians to be in the vehicle lanes. C3-2

From: Brad McCarty
To: Brian Oh; Susan Gorin
Subject: SDC DEIR Emergency evacuation times
Date: Wednesday, August 31, 2022 8:21:45 AM

EXTERNAL

The SDC DEIR states that traffic modelling was done to estimate evacuation travel times throughout the Sonoma Valley during various emergency conditions. Its conclusion is that evacuation times are barely impacted at all (worse case less than a 2 minute additional delay I believe) by the addition of 1,000 new housing units and 2,000 residents. Obviously many of us who did evacuate during the 2017 wildfires found those results difficult to believe. C4-1

Well, yesterday afternoon (8/30/22) there was a single structure fire in Boyes Hot Springs which caused emergency responders to close Hwy 12 in both directions for about 1.5 hours. That closure snarled traffic throughout the valley and travel times WELL exceeded an additional 2 minutes over normal times. Arnold Dr, Agua Caliente Rd and Boyes Blvd were complete stand stills. Perhaps the impact was even greater due to the diverted Northbound and Southbound traffic from Hwy 12 intersecting each other at the roundabout on Arnold Dr. C4-2

This huge snarl was due to a single structure fire! This is why valley residents are VERY sceptical of the evacuation traffic impacts of the proposed plan.

Subject: Sonoma Developemental Center Specific Plan DEIR
Date: Thursday, September 1, 2022 4:19:23 PM

EXTERNAL

Hi,

I have the following concerns regarding the Sonoma Developmental Center Specific Plan C5-1

--The Specific Plan does not appear to address the issue of embodied carbon within existing buildings to be removed.

--The Specific Pan does not appear to address the environmental consequences of creating a high density development at a great distance from jobs and other facilities. specifically it doesn't adequately address commute and errand times. C5-2

In these times of global warming these concerns need to considered in the planning of any new development. Any development in this area needs to re-purpose existing buildings to the greatest degree possible without building any new buildings, and either be extremely limited in size, or be entirely self contained, having all of the industry and facilities needed to support the new community within the community. C5-3

Building removal and construction is a major contributor to global warming, and should only be done when clearly necessary. Sonoma County is into its sixth straight year of population decline. It is unclear as to why we would need to do a great deal of construction and development in such and out-of-the-way corner of the county. And such construction and development is clearly not consistent with our county's stated goal of reducing greenhouse gas emissions. C5-4

Thank you,

Brian Bollman

PLEASE protect the natural treasure of SDC!!!! The intricacies of what is being moved on by your agencies are difficult for the lay person to follow, but I do understand that the county has an opportunity to proceed in a respectful and environmentally protective fashion at SDC or not - and that your agencies are willing to manipulate the regulations and the process in order to circumvent environmental impact and protection, despite the desires of the Board of Supervisors and the constituencies they represent. I ask you to please have a conscience that includes longterm impacts for the quality of life and nature and the planet as a whole and protect the incredible resource of SDC. I ask that you do not exploit that space for gain and development, creating more damage and loss of the ecosystem and precious habitat that currently exists. Truly, those are not yours to squander, yet unfortunately, you apparently have the power and willingness to do. Please, as followed by the Sonoma Land Trust and the rest of us who care deeply about this very important issue, -until after October 24th- pause this review of the Specific Plan and EIR pending completion of the RFP process so that the county specific plan can be aligned with an environmental impact that respects the grave issue of the development of SDC. You may think that what you do is not crucial and that rationales of development and profit support your abuse of power, but we need leaders who are no longer motivated by exploitation, greed, and profit. Please act both consciously and conscientiously on this very important decision. If you are in a position of authority, you have a mandate to act responsibly and with conscience for the greater good.

Dear Brian Oh,

I am a 30 year resident of Sonoma Valley and I ride and hike the trails above SDC almost every week. C8-1

I feel the current plan of 1,000 homes and 900 on-site jobs will destroy the uncrowded and rural character of the area. This magical place will become just another crowded, housing place and it will be lost to all Sonomans now and into the future.

There just aren't places like this anymore and it would be a terrible loss to our community. Perhaps half the number of houses would be okay but even that is a risk.

Please work to align the Specific Plan and the EIR with the states RFP.

Thank you and sincerely,
Charles G. Tsegeletos

Subject: To Brian Oh--Draft EIR Comments: SDC Specific Plan

EXTERNAL

C9-1

Dear Mr. Oh,

The August Draft Specific Plan for Sonoma Developmental Center was released in advance of the State's RFP for selection of a developmental proposal, way too soon. Sonoma County should align the SDC Specific Plan with the State's RFP, not work completely independently before you know the parameters set by the State. You are putting the cart before the horse.

Sonoma County must engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR **only after the State announces the RFP selection** on October 24, 2022.

Please redraft the Specific Plan and the EIR to match and analyze the impacts of the **actual proposa**l that the State selects for this site! It only makes sense, and will help to make for a much smoother process.

Thank you,

Chris Gralapp
Bennett Valley

C9-2

PS: The SDC site cannot support 1000 residential units--adding that much would put massive pressure on Bennett Valley Road, which already has problems with traffic and a high accident rate. As a Bennett Valley homeowner, I cringe at the thought of multiple times the high speed traffic moving through our quiet valley.

Also, that much density would also disastrously impact the native environment. We have the chance of a lifetime to protect this stunning habitat, and link some significant corridors. Please reduce proposed population density. We know the state has mandated new housing, but it doesn't have to all be at SDC!

C10-1

I am horrified that a 1000 homes and commercial developments are proposed for the developmental property in Glen Ellen and especially because the proposal was released before the EIR. This is a precious area and I have lived here for 33 years and I know how fragile this environment is in everyway (water, traffic, wild life, recreation,population growth to mention a few). I worked for the county for many years and I know you can do better then this. For the sake of town and our county I implore you to carefully consider the impact these ideas and implementing them will have and will have forevermore.

Sincerely,
Christina Barasch

EXTERNAL

The board of supervisors directed staff to pursue an SDC specific plan with 750 residential units. Despite this, the main EIR project is for the 1000 residential unit plan. This provides less details about the environment impacts of a 750 unit plan, mainly just saying the impacts are less than the 1000 unit plan. If the 750 unit plan had been the main plan under review, more details regarding environmental mitigation would have been defined.

C11-1

The draft EIR does not take into account the full impact of the hotel for Vehicle miles traveled and Greenhouse gas emissions. Hotels with conference rooms, especially one in the SDC, would be a destination hotel and draw more visitors to the Sonoma Valley. The entire trip, door to door, needs to be counted, including visitors' travel to their airport, air travel, and the trip from the airport to the hotel at SDC. Many EIRs I have seen assume that a hotel would not bring any more visitors to Sonoma County, arguing that they are coming for other destinations within Sonoma, such as wineries. You need to look no further than MacArthur Place Hotel and Sonoma Mission Inn, which have business conferences during the week. These business conferences bring visitors to Sonoma Valley, who would not have traveled here if it were not for the conference.

C11-2

The estimate of increase in traffic times during wildfire evacuations is completely inadequate. In Oct 2017, wildfires started Sunday night. We did not need to evacuate immediately. But by Wednesday, with the Nunns fire spreading towards us from the north, and another spreading from the east, we left early that evening.
Arnold Drive southbound was back up almost to Boyes Blvd. It was stop and go to Watmaugh Road. It took us an additional hour or more to travel from Boyes Hot Springs to get to the intersection of Arnold Drive and Watmaugh Road, than usual. In order to get an accurate estimate of increased travel time during an evacuation, the DEIR must start with a valid base. At survey of residences' experiences evacuating from wildfires needs to be conducted.

I am not sure this is the place to send this email. But, I hope it finds someone who might listen. C12-1

1000 homes in SDC means at least 2000 people, 2 to 4000 cars, noise, lights, pollution, traffic, destruction of Sonoma's wild life corridor, to name a few concerns. People employed there would bring another 1000 cars to the now overcrowded Arnold Drive, more pollution, noise and destruction. A road cutting across to Hwy 12 will do nothing to alleviate the problem and destroy the beauty of this wild area.

Yes, at one time there were 3000 people living at SDC, but during that time, the population of Sonoma was way less. And, most of those people didn't drive!

Is anyone looking at where the water will come to supply the 1000 homes. Right now, everyone in Sonoma is counting each drop of water they use. I have heard no one addressing this problem. Plans are to take out the Pillsbury dam and end diverting water to the eel river which feeds into the Russian River where Sonoma gets 30% of its water. Where is more water going to come from? C12-2

And, what about evacuation if there is a fire? I am asking you to drive down Arnold Drive or Hwy 12 one of these weekday mornings or late afternoon. Bumper to bumper traffic on both roads. The intersection of Hwy 12 and Verano is at a standstill most days after 3pm. I cannot imagine what will happen if evacuation is required during commute times. C12-3

People died in Paradise when their city burned down, there was only one way out, and it could not handle all the people needing to get out.

Thank you for taking the time to read this.

To Mr. McLaughinWhom It May Concern,

The different proposals, some of which have true merit, must be weighed against what is sensible and feasible and not in a monetary calculation from a developers perspective but from a community perspective. C13-1

I was an employee of SDC for more than 37 years. My position was with work development as the Director of Sunrise Industries the Sheltered Workshop for the clients living at SDC. My 'dream' was to take the egress from Hwy 12 onto what is called the soccer field adjacent to the vineyards of the Teller family and make this an industrial site set up to do limited manufacturing for start up companies. This site would be leased by DGS to individuals living at SDC/community who would own and operate this manufacturing site aided by a Board to assist in helping to make decisions and how to grow. This, along with housing for the worker/owner of this company would be a hand and glove providing a true base for this population to become self-reliant and self-funded. Alas, this never came to be.

However, this email is not about what could have been but what it will become.

I am a very strong proponent of affordable housing, but not a strong proponent of attempting to solve this issue in one fell swoop dedicating it all to property at SDC. I understand that SDC's land is a perfect site for this sort of endeavor but to what degree is the meaningful question. Given all of the objections I am sure that you have received related to the proposal of allowing 1,000 housing units to the property should be strongly considered. A plan to set aside property for some housing is reasonable and should be competed in stages.

When you look at developments such as Oakmont and its process to develop their property should be an example of how SDC might be developed and also learn what they did wrong and how not to make the same mistakes. So many lessons to be learned from previous attempts that should not be over looked or reinvented.

C13-2 I would like to see, as I believe most locals, a dedicated pathway across this land for wildlife to use freely and without the threat of harm.

I would also like to see a scaled back version of quantity of affordable housing allowed. A caveat for future expansion if all goes well could be put into place to allow for controlled and limited growth with each phase and in turn each phase to be reviewed with the same conditional parameters and community input.

C13-3 A few of my essential worries is the ongoing drought and our ability to handle more housing with diminishing water supplies, traffic mitigation and how our roads would look, not if but when we have a repeat of the fire storm in 2017 let alone the daily traffic we will see increased with no possibility for widening any of the corridors, Hwy 12 or Arnold Dr. This is a major safety issue

Even though there appears to have been little to no consideration for any of the use plans with regard to the population that lived at SDC, it is a shame that some sort of accommodation for those that lived here and those in the community to avail themselves of some part in this development for their better good.

Thank you for taking the time to read my input...I hope it helps in some small way in making decisions on

what SDC will become tomorrow.

Cheers

C14-1

The addition of the road from SDC out to Highway 12 (highway 12 connection) would result in significant impact on wildlife. This area is a wildlife corridor. As wildlife currently traverse this area, the addition of vehicles in this area would disrupt the wildlife movement. This is especially true during construction. It is best not to add this road.

If the road is built, despite the significant impact, then the following mitigation measure can be taken to reduce the impact.

1. Limit construction of the road to certain hours and months, where wildlife movement through the corridor is less.
2. Make the road one-way only, east bound.
3. Close the road, except for emergency evacuation.

Technical Note

Toward Simulating Dire Wildfire Scenarios

Thomas J. Cova[1]; Dapeng Li[2]; Laura K. Siebeneck[3]; and Frank A. Drews[4]

Abstract: Recent extreme wildfires are motivating unprecedented evacuation planning. A critical need is to consider *dire scenarios* that allow less time to clear an area than required. Although these scenarios often begin with an ignition near a community, any scenario can become dire due to weather conditions, human response, technology, cascading events, and community design. Although research has widely addressed scenarios with ample time and favorable conditions, protecting people in dire scenarios is much more challenging. We provide a framework for generating dire scenarios that includes difficult starting conditions, delayed decision-making, variable fire spread rates, limited warning technology, and random adverse events. The goal is to move beyond favorable scenarios and generate challenging ones that inspire novel protective planning. A key finding is that minimizing losses in dire scenarios may involve disaster response elements not represented in current simulation models, including improvisation and altruism. **DOI: 10.1061/(ASCE)NH.1527-6996.0000474.** © *2021 American Society of Civil Engineers.*

Introduction

The 2018 Camp Fire in Paradise, California, began as a scenario that most residents would consider common based on previous experience. The town had experienced 13 near miss fires in the last two decades, some that resulted in stressful evacuations, but none that resulted in any major losses. However, as the Camp Fire advanced toward Paradise at an unprecedented rate, officials planning for a 2–3 h evacuation were unaware that homes on the north edge of town would ignite in less than 90 min (Mooallem 2019). The result was a dire scenario that garnered worldwide attention and motivated a new era in wildfire evacuation planning, which has historically been very scarce (Kano et al. 2011).

Dire scenarios have not been a focus of previous study. Researchers and planners prefer favorable ones with ample time and positive outcomes to highlight model and plan efficacy. The accepted approach is to set ignition points far enough from a community to allow sufficient time for the residents to clear a study area. However, favorable scenarios do not challenge emergency managers to identify novel protective plans for the most difficult cases that arise in real wildfires. Furthermore, these dire cases are becoming more common as drought leads to larger, faster-moving wildfires (Thompson 2020). The goal of this paper is to propose a framework for generating dire scenarios, highlight their value in evacuation planning, and identify research challenges and opportunities.

Dire Scenarios

We define a scenario as "dire" if the required time to clear an area is greater than the time available (i.e., lead time). Dire scenarios fall into the class of extreme events where important variables are located at the tail of their distribution (Tedim et al. 2018; Sanders 2005). *Evacuation time* and *lead time* are common metrics, where the former is the estimated time to clear an area of its population and the latter is the estimated time available to do so before hazard impact (Lindell et al. 2019). Here, we adopt a dynamic perspective and assume that both variables can be estimated at every point in time during a scenario. The estimate at time t represents the *remaining* lead time and evacuation time to move residents to safety. For example, if the estimated evacuation time is 1 h, and 20 min has transpired since it commenced, the remaining evacuation time is 40 min. We define a direness index that yields a score at time t across a scenario as

$$d_{ijt} = e_{ijt}/l_{ijt} - 1 \quad t = 0..T \tag{1}$$

where d_{ijt} = score for community i threatened by wildfire j at time t; e_{ijt} = time required to evacuate the remaining residents in community i from wildfire j at time t; and l_{ijt} = lead time at t before wildfire j impacts community i. This is a socioecological metric that integrates a human system variable (evacuation time) with a natural system one (lead time) (Moritz et al. 2017). Fig. 1 depicts a means to translate a score into a direness category ranging from "routine" to "extremely dire."

For example, assume that at 3:15 p.m. ($t = 0$), a community has 1 h to evacuate before a fire arrives at 4:15 p.m. ($l_{ijt} = 1.0$), and it will take 1.25 h to evacuate the residents ($e_{ijt} = 1.25$). Thus, the initial state of the scenario at time t is "dire" using Fig. 1 because evacuation time is 25% greater than lead time [$(1.25/1.0) - 1 = 0.25$]. Because this score is dynamic, a scenario can enter or exit a given dire category as events alter l_{ijt} and e_{ijt} (e.g., a blocked egress point at time t_1 that increases e_{ijt} or a change in wind direction at t_2 that increases or decreases l_{ijt}). In real wildfires, these variables are uncertain and so are a direness score and associated category. This means that a scenario that appears routine may turn out to be dire.

To provide an example, Fig. 2 depicts the anatomy of a routine scenario that turns dire due to a dramatic increase in a fire's

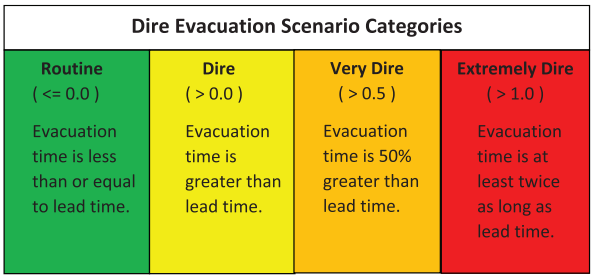

Fig. 1. (Color) Dire evacuation scenario categories based on a score.

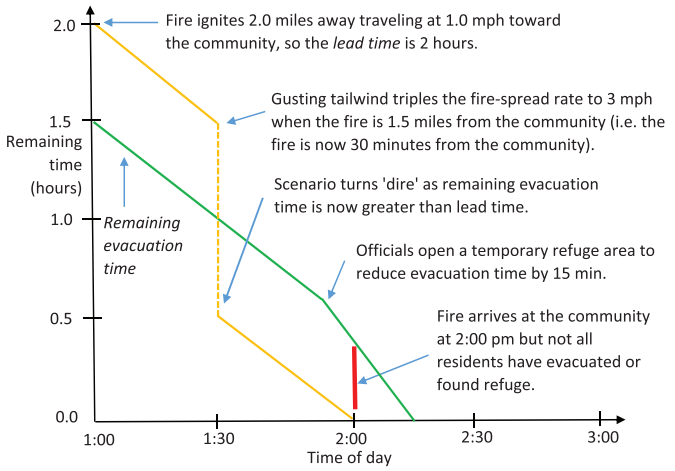

Fig. 2. (Color) Anatomy of a dire scenario due to a sudden increase in fire spread rate.

spread rate. At 1:00 p.m., a deputy reports a fire 2 mi from a community traveling 1 mph toward it, and officials estimate the initial lead time at 2 h. Evacuation time is estimated at 1.5 h, so the scenario is not initially dire ($1.5/2.0 - 1 = -0.25$). Officials warn the residents, and the plan is to have the area cleared by 2:30 p.m. At 1:30 p.m., a gusting tailwind triples the fire spread rate to 3 mph, and the lead time drops from 1.5 h to 0.5 h. Because the remaining evacuation time is 1 h, the scenario turns "very dire" ($1.0/0.5 - 1 = 1.0$). At 1:45 p.m., officials designate a temporary refuge area (TRA) to reduce the required time to protect the remaining residents by 15 min. Despite their best efforts, the fire enters the community at 2:00 p.m., but some residents have yet to clear the area or secure shelter, which could lead to casualties.

Dire Scenario Sources

Dire scenarios arise from a variety of sources. Foremost is a wildfire ignition point close to a community because this condition offers less time to respond than one further away. A second factor is detection time, which is usually brief because citizens rapidly report smoke plumes, but nighttime wildfires can go undetected longer when people are asleep. A third factor is official decision-making because emergency managers may delay the decision to alert or warn residents to avoid unnecessarily disrupting a community based on their threat assessment (Drews et al. 2014). This can lead to a dire scenario if officials subsequently issue a warning at the last minute (Cova et al. 2017). Notification systems can also affect a scenario if many residents do not receive an alert or warning in time (Lindell 2018; Doermann et al. 2021). Public response rates can affect scenario direness due to low-mobility households (e.g., age, disability, resources), a low warning compliance rate, or a tendency to adopt a wait-and-see approach (Dash and Gladwin 2007; McCaffrey et al. 2018; Edgeley and Paveglio 2019). Traffic factors can affect a scenario, as in the case where residents have difficulty finding a safe exit route (Brachman et al. 2019) or when many households depart at once and induce gridlock (Chen and Zhan 2008). Community design can affect a scenario if a road network cannot support rapid residential evacuation (e.g., many homes and few egress points).

There are many recent examples of dire wildfire scenarios. The 2018 Camp Fire is an iconic example because it includes many interacting factors. This case included a fast-moving fire that ignited near a low-egress community with many low-mobility residents. Furthermore, officials accustomed to prior near misses waited to assess the fire's direction and spread rate before ordering the first phased warning, and many residents did not receive a warning due to a low reverse-911 subscription rate (Todd et al. 2019). On the favorable side of the scenario, officials and residents were highly prepared and experienced with a state-of-the-art plan, and officials successfully reversed a lane on the main exit to increase the capacity of a key traffic bottleneck. Other examples of recent dire wildfire scenarios include the 2020 Almeda and Holiday Farm fires in Oregon, which both ignited close to a community and offered very little time to act. The 2017 Tubbs Fire in California was also dire given that it moved 12 mi in its first 3 h through populated areas on a Sunday night, and many residents reported not receiving a warning.

Modeling Dire Scenarios

To generate a dire scenario, a modeler can start with lead time less than evacuation time or design a scenario where the former falls below the latter at any point. Fig. 3 shows a scenario dashboard with factor categories (columns) to generate a dire scenario ranging from no impediment (green) to a minor impediment (yellow) to a major impediment (red). For example, Scenario 1 (row 1) includes minor impediments in the ignition location, fire spread rate, public response, and mobility. This scenario could be a proximal fire moving moderately fast toward households, some of whom voluntarily delay their decision to leave and others with low mobility. Scenario 3 has major impediments, including official decision-making, notification and warning, public response, and traffic congestion. In this scenario, the fire started far from the community, but delays and difficulties in warning residents ultimately led to a dire scenario with traffic congestion. Scenario 4 is the most challenging, with major impediments in all of the factor categories. Although Fig. 3 lists impedance categories in the columns, an analyst must provide the details for each category to create a realistic scenario.

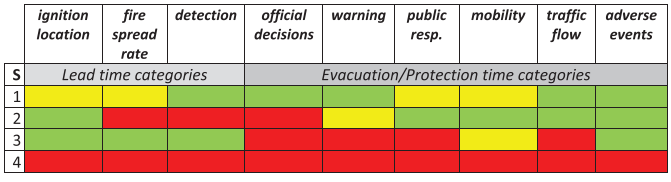

Fig. 3. (Color) Dire scenario dashboard where scenarios (rows) progress from routine to extremely dire (1–4) due to varying factor impediment levels (green, yellow, red).

Downloaded from ascelibrary.org by Thomas Cova on 04/21/21. Copyright ASCE. For personal use only; all rights reserved.

In addition to combining factors to create a dire scenario, we need new metrics to compare outcomes that may not be successful. Wolshon and Marchive (2007) provide one example: the number of vehicles that do not clear a community in time when the lead time is short. This does not mean that the fire will trap the remaining residents because recent events reveal that many evacuees safely navigate burning corridors. Beloglazov et al. (2016) also developed a valuable dynamic metric to estimate the population threatened throughout a wildfire scenario called the *exposure count*, which may rise or fall as scenario direness changes.

Reducing Scenario Direness

Dire scenarios can become less so due to natural and human factors that increase lead time, decrease evacuation time, or both. Factors that may increase lead time by reducing a fire's spread rate include weather (natural), as well as fuel management and fire suppression (human). Although fuel management and fire suppression refer to an array of techniques, modelers do not generally include their effects in coupled fire-evacuation model scenarios because of a lack of data on local fuel management actions. There are also limits on including structural fuels in fire models, which reduces the predictive accuracy of fire spread rate estimates through communities (Kaufman and Roston 2020).

Many factors can decrease evacuation time before and during a scenario. Examples include phased warnings (Li et al. 2015), lane reversal (Xie et al. 2010), and traffic signal optimization (Ren et al. 2013). To broaden the purview, *protection time* is preferable because there are other options. Fire shelters and safety zones are alternatives that have multiple benefits (Amideo et al. 2019). First, they can protect people who cannot leave in time due to low mobility or egress issues, and second, they can reduce traffic delays for residents who decide to leave (i.e., shorter travel times). Households and communities can construct or assign areas of refuge, which can be public or private and permanent or temporary. In the 2018 Camp Fire, parking lots and community buildings were designated as temporary refuge areas (i.e., improvised fire shelter and safety zones), and designating and constructing places of refuge is a growing need. Steer et al. (2017) and Shahparvari et al. (2016) provide representative examples of optimal plans that combine evacuation and refuge shelters to protect people.

Many facets of human response in an actual wildfire can be challenging to model. One example not represented in current models is improvised protective actions. However, improvisation and flexible decision-making is often required in responding to dire disaster scenarios (Webb and Chevreau 2006). One recent example is the use of military transport helicopters to rescue campers trapped by the 2020 Creek Fire in California (Fuller and Mervosh 2020). Altruism is another neglected factor, particularly for many individuals caught in uniquely dire circumstances. Altruism refers to self-selected individuals who demonstrate a willingness to help others address a problem (Batson and Powell 2003). Altruistic examples in wildfires include (1) citizens providing rides for others, (2) citizens providing temporary refuge shelter, (3) citizens providing information via social media, (4) individuals clearing blocked traffic, and (5) citizens aiding in relocating vulnerable populations (e.g., medical facilities, retirement homes, childcare centers). Altruism relates to social capital because communities with greater social cohesion are more likely to have residents help one another (Aldrich and Meyer 2014). One example in the 2018 Camp Fire was Joe Kennedy, who single-handedly cleared abandoned cars that blocked traffic with a bulldozer (Mooallem 2019). Modelers may not have considered altruistic behavior because the need only arises in very dire scenarios, and it is difficult to predict how much might be displayed or where. However, altruistic acts can also lead to losses if people take excessive risks in helping others. Thus, it represents a challenging research frontier in creating more realistic agent-based wildfire evacuation simulations (i.e., agents helping or cooperating with other agents).

Conclusion

Although dire wildfire scenarios have not been a focus of study or modeling, they hold potential to help emergency planners and communities cooperate and consider novel protective actions. Key questions for further research include:

1. What can we learn from studying and modeling dire scenarios over favorable ones?
2. How does the direness of a scenario vary geographically across a threat area?
3. What factors serve to make a scenario more or less dire at different scales?
4. How can we incorporate protective behavior found in real wildfires into simulation models (e.g., improvisation, altruism)?
5. How many places of refuge do we need, where should they be located, and what capacity should they have to reduce likely scenarios from dire to routine?
6. What advanced technologies can help reduce the likelihood of dire scenarios before one occurs (e.g., artificial intelligence, wireless emergency alerts, automated fire detection, real-time decision support) (Zhao et al. 2021)?
7. What technology can aid in responding to a dire scenario (e.g., rescue robots, protective fire suits, temporary fire shelter)?
8. How can we visualize the dynamics of dire scenarios, as well as the beneficial and adverse events that affect lead and evacuation time, to improve situational awareness and decision-making?

Studying and modeling dire scenarios are important because they are challenging and increasing in frequency (Schoennagel et al. 2017). The benefit of simulating them is that it may lead to better planning and outcomes in cases where more things go wrong than right. Modeling wildfire evacuation as a coupled natural-human system is challenging (Ronchi et al 2019; Li et al. 2019), and there are limitations to the framework presented herein due to human behavior and uncertainty. Although the science of simulation continues to advance, we still have a long way to go toward incorporating many events that occur in real wildfires.

Data Availability Statement

No data, models, or code were generated or used during the study.

Notation

The following symbols are used in this paper:

d_{ijt} = direness score for community i threatened by wildfire j at time t;
e_{ijt} = time required to evacuate remaining residents in community i from wildfire j at time t;
i = index of communities;
j = index wildfires;
l_{ijt} = lead time at t before wildfire j impacts community i; and
t = index of time.

Living Resiliently in the New Abnormal: The Future of Development in California's Most Fire Prone Regions

Speaker Kate Dargan: Former California State Fire Marshal ktdargan@gmail.com

Summary: Some areas of California may be too dangerous to build upon. But to know this, we first need to develop a systematic way of evaluating where those areas exist and what mitigations will reduce wildfire risk enough to be acceptable. This should include a trained body of professionals in land use, a clear risk model for mitigation requirements, and an approach that addresses both current buildings and new. The land use development process will substantially benefit from the following programs to enable this risk assessment. These are the gaps in the current wildfire resiliency planning process.

Critical Needs for Land Use Best Practices

1. **Educate and certify Land Use Planners, Building Officials, and Fire Marshals** – these are the 'first responders' of the development world and need better training, certification, and knowledge sharing than they currently have access to. These professionals approve the permitting, maps, development agreements, zoning, General Plans, Fire Protection Plans and other necessary enforcement provisions but do not have ready access to training, wildfire planning specialist certification, or continuing education.
   Action: Develop coursework and require certification in Wildland-Urban Interface Plan Review or equivalent and require at a minimum one-time certification.
   Value: Planners, builders, inspectors, and consultants across the state will develop consistent means and methods of designing, approving, and enforcing wildfire resilient communities because they share a common body of practice.

2. **Develop both a wildfire zoning overlay and parcel-based risk maps.** The FHSZ methodology accurately describes hazard and is suitable for a zoning overlay but it is not a risk analysis. To understand risk, you need to measure the fire hazard PLUS the mitigations that reduce the hazard. This combination is risk. This will become an increasingly apparent gap if development approvals become tied to fire hazard zones. Using CEQA as an example, consider the process of evaluating a development for environmental impact. The core of the CEQA decision is based on whether the project can meet a defined need for mitigation so that the project impact is either negligible or acceptable. To do this for wildfire, we must define the wildfire mitigations that result in negligible or acceptable risk to lives, homes, and communities. The FHSZ's do not have this capability but risk

assessment does. We need to extend the concept of fire hazard into the more mature evaluation of fire risk and this assessment must be enabled at the parcel scale to be useful for land use decision-making.
Action: Adopt a statewide wildfire zoning overlay. Direct CAL FIRE to develop a Wildfire Risk Assessment Model for state and local use in all aspects of wildfire resiliency planning, development, and mitigation.
Value: The quantifiable metrics of mitigations will take shape within a systematic risk framework that is predictable for land use development and will measure against fire mitigation effectiveness over time. This will drive improved outcomes.

3. **Build capacity for Hardened Home assessments at the local level.** Home Hardening includes BOTH ignition-resistant building construction and defensible space. Each must be present to harden the home to withstand the heat from fire in adjacent landscaping/ household items and the ember storm that threatens the home. Local community firesafe education groups, defensible space code enforcement, and the building community all need assistance to place boots on the ground to work with homeowners to both retrofit and maintain these fundamental mitigations that improve structural vulnerability.
Action: Assist local governments with funding for the first 3 years of home retrofit and defensible space enforcement efforts through 3-year block grants. Encourage collaborative approaches that link to land use best practices, parcel-based risk assessments, and resilient community actions.
Value: Creates a holistic set of practices that reinforce one another and leads to a more fully hardened community rather than one divided into new and old housing vulnerabilities.

Bio: Kate Dargan has been a firefighter, fire chief and the former State Fire Marshal (CAL FIRE) for California. She has responded to emergencies and disasters around the state and worked on boards, committees, councils, and task forces to advance wildland-urban interface fire safety. She chaired the State Board of Fire Services, co-chaired the Tahoe Fire Commission, served on the Napa County Watershed Board, and is a Board Member of the CA Firesafe Council and the United States Geospatial Intelligence Foundation. She has worked at the community, public agency, industry, and policy levels of the California fire service and is widely recognized for her consensus-building style and innovative approaches to old problems. She founded Intterra in 2010, a successful situational awareness and analytics software company for firefighters.

C15-1

Dear Planning Commissioners and Permit Sonoma,

SAFRR appreciates the opportunity to present our concerns regarding the Sonoma Developmental Center DEIR. If you have any comments or questions regarding this letter, please contact Deborah Eppstein by email (deppstein@gmail.com) or phone (801-556-5004).

The two articles referenced in the letter are also attached.

Thank you.

Sincerely,
Deborah Eppstein
Director
State Alliance for Firesafe Road Regulations (SAFRR)

Subject: Re: DEIR OF Sonoma Developmental Center Campus
Date: Wednesday, September 14, 2022 3:09:57 PM

EXTERNAL

Greetings,

I am ordinary citizen that is concerned about the future of Sonoma Developmental Center. I have lived on Marty Drive in the Glen Ellen neighborhood adjacent to SDC since 1976. I own my home. I worked at the Center for 33 years. I am not opposed to reasonable renovation, housing and development. I appreciate this opportunity to share my thoughts. C16-1

Overall, it has been disheartening and unbelievable to see this report indicate that this project, overall, would have less than significant impact in so many areas that seem directly related to quality of life and environmental issues. Already, since the facility has closed, the campus portion has been impacted by the lack of care and upkeep of the grounds as evidenced by overgrown foliage and dying and fallen trees.

Although I have reviewed parts of the DEIR, I make no claim to understanding everything, following the format or what some of the references to acronyms and regulations of this tool are. I am the first to admit my comprehension is minimal. I must trust the experts to address the impact of numerous outstanding water, light, noise, climate/environmental, fire safety, traffic, demolition, wildlife and habitat, etc. issues.

3.10-1 indicates this project as having no impact regarding dividing an established community and 3.12-1 speaks to the population growth as less than significant. C16-2

As I understand this document, a **separate** development of with 1000 homes, shops, adjacent buildings and businesses and over twice the number of vehicles appears to directly contradict the terms “no impact” and “less than significant”. As proposed, this development **would** divide an established community.

My concerns are primarily the number of homes and businesses that are being considered (along with other Sonoma Valley proposed developments at Hanna Boys Center and Elnoka Lane) and how this will impact evacuation throughout Sonoma Valley and our everyday life in Glen Ellen. As you are well aware, both

Arnold Drive and Highway 12 are one lane roads to/from Santa Rosa, Napa or Highway 37. Petaluma and Rohnert Park can only be reached by one lane roads, as well.

Please note that references to population and vehicles at Sonoma Developmental Center when it was an active community are skewed. Overall, the number of people that lived there at any time did not drive or own vehicles. They lived in congregate housing. The staff who worked there came in at least 3 separate shifts and were not on the roads at all times of day or simultaneously.

C16-3

Fire in this area has been a very real threat. Some tables in the original reports showed the fire line of the 2017 Nun's fire within the SDC grounds. In fact, the fire extended beyond the SDC grounds, burning a home on Burbank St. and continuing along the creek bordering several more homes. During that evacuation, cars were bumper to bumper, taking over two hours to get out of this end of the valley.

C16-4

Many questions have come up after reviewing pieces of this DEIR for Sonoma Developmental Center. I do have several simple questions that jumped out at me that I am hoping to get direct answers to.

C16-5

1) I would like to **NOTE** that the yellow area identified as Eldridge North area on pages 75-76 **DOES NOT** border on Eldridge South. It is part of Eldridge and the SDC campus. It **DOES** border on Martin St. which is part of the town of Glen Ellen. Labeling the Martin St., Burbank St., Cecilia Dr., Lorna Drive and Marty Drive as Eldridge has been a confusing and misleading misnomer and continued to not be addressed or corrected throughout the SDC planning documents.

Would you please consistently clarify the correct boundaries in ALL of the maps, tables

and ALL documents pertaining to this SDC.

2) **Will a barrier/fence remain in place between the the yellow area identified as Eldridge North on page 76 and the current Glen Ellen neighborhood where Martin St. and Burbank St. intersect? Will the proposed streets of Eldridge North merge onto Burbank St.?**

3) **Where exactly does the possible road from the SDC campus to Highway 12 come out at? How would the cars trying to merge onto Highway 12 be managed?**

I have personally tried merging on to Highway 12 past Temelec during an ordinary accident where traffic was at a lengthily, complete stop because of emergency vehicles (not threatened by fire) and other drivers were unwilling to let other cars onto the major thoroughfare.

4) Land Use Classifications indicates that the Institutional area-page 72- Walnut Circle identified in blue on page 76 could allow short term residential housing and events. **What is meant by short term residential housing? What type of additional events other than the types noted for the Historic Core (purple), Firehouse Commons (hot**

pink) and the Maker Place(coral) are intended? With these combined events, it is reasonable that a significant number of attendees/tourists/employees will need daily access and egress from the venues as well as convenient parking on campus. **How is this traffic generated by other than residential housing, being accounted for in terms of the single road/narrow bridge coming in and out of this campus?**

C16-6

5) There are references Paratransit/Dial-a- Ride options being presented. Although, they provide a great service, there are eligibility and time frame requirements that do not make it simply a matter of making an appointment whenever a ride is needed. **Whose oversight will the proposed Transportaion Management Association (TMA) be under?**

6) As a resident that lives very close to the proposed project and a retired employee that signed annual asbestos waivers, I am concerned how the asbestos issues will be contained during demolition. I see references to “should, may, could”, but no definitive “will or must” terms.

Who exactly will actually be monitoring and ensuring this process is carried out correctly?

I look forward to your responses.

Sincerely,

Denise

Hello Brian,
There is no mention of mercury contamination in the report, and the evaluation of numerous buildings, based on casual visual examination, is suspect. Many of these buildings deemed in good condition are not. As a historic restoration specialist I find the absence of mention of mercury very concerning, just as I find the minimal testing of actual building materials on the site concerning.
I appreciate the detail and depth of the report but must raise a flag for full disclosure and proper testing, thank you.

C19-1

Dear Brian Oh:

I am deeply concerned by the vague and misleading way that the SDC DEIR addresses the very real and growing risk of catastrophic wildfire and drought in Sonoma Valley. The current proposal to create a densely populated community (with low-ball estimates of the number of future residents—3,000+ is far more likely) on the SDC campus, under the guise of building much-needed affordable housing, is untenable. Such development will create a town with a population over 4 times the size of Glen Ellen, and nearly a third the size of Sonoma, on a relatively small parcel of land, with one way in and out. This ill-conceived development plan puts our community at tremendous risk in the event of an uncontained wildfire. During rush hour, it can take 3-5 minutes to safely merge onto Arnold Drive. Imagine thousands more vehicles on this two-lane country road, trying to flee a fast-moving fire. To the extent that the DEIR addresses the possibility of wildfire at all, it envisions an orderly evacuation with ample time for residents to get to safety—or, if that is not feasible, to "shelter in place." As a survivor of the 1991 Oakland Hills fire, I know that wildfire is neither orderly nor predictable. The 2018 Camp Fire that leveled the town of Paradise came upon the residents so quickly that hundreds of people—including children—were forced to abandon their gridlocked cars (bumper-to-bumper on a two-lane road) and "shelter in place" on a concrete pad for hours as propane tanks blew up around them. Those people survived, with severe PTSD; 85 others did not. It is beyond my comprehension that in 2022, in the midst of a years-long drought, knowing what we now know about wildfire risk in California, Sonoma County officials would put forth such an extravagant development plan without adequately considering the danger to its constituents, present and future. Insurance companies have stopped writing policies in high-risk fire areas; we feel lucky to have insurance, but the cost of our policy has doubled in the past year. The County of Sonoma owes its constituents responsible, realistic, honest, and thoughtful planning. This DEIR falls far short of that minimum standard.

Sincerely,

Elizabeth Crabtree

Good morning,
After reading the last SDC plans, I am reminded again that very little thought is given to water. If we are to triple the local population in the near future, where is the water to come from. As we are already restricted and have been off and on for a number years, it seems ludicrous to build hundreds of housing units and very little if any water for them. Please give some thoughts on how this problem will be solved.
Thank You
Fred Hodgson

Dear Brian,

C21-1

The recent proposal for development of the SDC contains a housing element and commercial space that is too dense for the area and is not in alignment with the community engagement process and proposals. The latest plan increases the extensive risks of congested traffic, inadequate evacuation routes, inadequate water sources, encroachment of wildlife corridors and watershed, and is basically just too big for this part of Sonoma County.

I live in Oakmont and dread the resulting additional daily traffic congestion along highway 12 and Arnold Drive as a result of over 1000 new homes and 900+ new jobs contained in this latest proposal, especially given our recent wildfire evacuations. This influx of new residents and workers will destroy the peaceful nature of our community. Let's be more creative with the use of SDC and keep in alignment with the community needs.

I urge the County to:

1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.
2. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

Respectfully,
Geri Brown

Valley of the Moon Water District Board Declares Stage Two Water Shortage

(Sonoma Valley, CA) - The Valley of the Moon Water District (District) Board of Directors passed Resolution number 210703 and Ordinance number 1013 enacting Stage Two of the District's 2020 Water Shortage Contingency Plan (WSCP), at the July 6, 2021, Board meeting. The new water use restrictions outlined, seek a 20% overall reduction in water use for the months of July through October as compared to the same period in 2020.

The action was brought on by the historic drought in the region and recent reduced allocations of water supply from the regional wholesaler, Sonoma Water. This, in combination with declining groundwater well production due to the lack of rainfall to recharge the aquifer over the last two years, has led the District to move from voluntary conservation to mandatory water use restrictions. Please see the specific restrictions/prohibitions below:

- Washing sidewalks, walkways, driveways, parking lots and other hard-surfaced areas by direct hosing is prohibited, unless necessary for public health and safety.
- Breaks or leaks must be corrected within 72 hours of discovery or notice from the District.
- Irrigation in a manner that allows excessive runoff of water, or unreasonably over-sprays the area of irrigation is prohibited.
- Use of potable water for non-recycling decorative water fountains is prohibited.
- Use of water for single pass evaporative cooling systems for air conditioning, for all connections installed after 6 June 2000, unless required for health or safety reasons is prohibited.
- Use of water for new, non-recirculating conveyor car wash systems is prohibited.
- Use of water for new non-recirculating industrial clothes wash systems is prohibited.
- Restaurants may only serve water upon request.
- Hotels and lodging establishments must offer a linen service opt-out.
- Irrigation of ornamental turf on public street medians with potable water is prohibited.
- Irrigation with potable water outside of newly constructed homes and buildings that is not delivered by drip or microspray systems is prohibited.
- Use of any garden or utility hose without a hose-end shut-off nozzle is prohibited.
- Irrigation is limited to three days per week: **Monday, Wednesday, and Friday and between the hours of 12 midnight to 6am.**
- Instead of using potable water, only recycled water may be used for construction dust control.
- Car washing shall be allowed only at facilities using recycled or recirculating water.
- Dedicated irrigation customers are required to conduct the District's irrigation survey.
- Use of water from a fire hydrant except for fighting fires is prohibited.

Hello Permit Sonoma and State DGS:

C22-1

I am a 28 year resident of Glen Ellen and lifelong resident of Sonoma County. My family has been in the County for over 100 years.

I have diligently participated in the SDC Specific Plan process with the local community. It is very apparent that the local community input, guaranteed to be included in the plan by Permit Sonoma and required by DGS, has been thoroughly ignored. The local community feels they have been placated to during this entire process and no longer can rely on Permit Sonoma to conduct a fair, honest and equitable EIR process.

Please engage the community in a meaningful planning process for SDC. The draft EIR and records of the community input substantiate that a meaningful and truthful planning process has not been undertaken. Align the County Specific Plan with the State's Request for Development Proposals and adhere to the General Plan, local zoning and historical preservation guidelines. It is very apparent that the County and State are not in sync on this process, which is obvious as the State awaits responses to the RFP due October 24, after the proposed adoption of the EIR.

C22-2

I understand that the County of Sonoma is under a State mandate to build many housing units and Permit Sonoma plans to force a large percentage of this housing into the historic village of Glen Ellen by tripling our population. It is the fault of Permit Sonoma and the negligence of our County leadership, that the County is in this dire housing situation due to years of ignorance, denial and favoritism to developers by Permit Sonoma and County leaders. So much so that now the village of Glen Ellen must bear the brunt of the County's woeful housing plans of the last decades. This is completely unacceptable. Would other historic Sonoma County villages, such as, Occidental, Bodega, Graton, Forestviille and others be subject to destruction by adding 1,000 homes?

We all agree that housing must be a part of the redevelopment of SDC but at a reasonable level of 400+/- units, with all being affordable. The Sonoma Valley does not have a need for a new commercial area as the existing commercial areas are not fully utilized.

We all agree that SDC is a unique property of great biodiversity and value to our environment. The destruction of this property, and the surrounding area by adding 1000 homes and thousands of people, is a violation of your personal commitments to protect the citizens of Sonoma County.

Below are some comments to the Draft EIR:

1. The entire Specific Plan process and the resulting EIR are negligent in their approach, rendering them hypothetical. I understand and appreciate that the State has allowed the County to develop a plan, however the County is woefully unprepared to conduct such a process, which I have witnessed very closely. Aligning the Specific Plan and EIR with the State's RFP, would increase efficiency, save valuable taxpayer resources, and ensure thorough planning and environmental review. Review of the Specific Plan and EIR must be paused pending completion of the RFP process. C22-3
2. We spent several hours trying to evacuate Glen Ellen in 2017, on our own accord as there was not notification. The Draft EIR states that only a minute or so would be added to the evacuation timeline with the addition of thousands of people at SDC. How can this be possible? The addition of an evacuation route to Hwy 12 is incomprehensible. History has proven that the fires will come out of the northeast and east and this evacuation route will send people into the face of the fire, rendering this route unusable in an emergency situation. This study is obviously flawed. C22-4
3. Building dense housing and commercial space in the wildland fire/urban interface is completely irresponsible. People will perish due to the negligence of this process. C22-5
4. We are under strict water controls in Sonoma Valley, see attached. The entire area is experiencing a severe drought. The Sonoma Valley water supply cannot support thousands of additional people. How can an entire new city be built in an area under severe water restrictions that are expected to remain in place indefinitely? The Draft EIR does not adequately address the water needs of the entire area. C22-6
5. Climate change is real and obvious in our area. Protecting biodiverse lands and precluding over development of areas such as the SDC campus are paramount to survival of the human race. C22-7
6. Approval and development according to the Specific Plan will result in the densest development in all of Sonoma Valley, completely out of scale with the surrounding area and not in accord with the General Plan C22-5
7. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide. C22-3
8. Over 700 market rate homes will not adequately address the dire housing situation created by Permit Sonoma and County leaders. C22-5
9. The total number of housing units the County must provide should not be the driving force of the Specific Plan. Simply evaluate the subject property based on the biodiversity and surrounding community. The housing need has extremely clouded this process.
10. The traffic study is erroneous and does not address the stress that will be created on Arnold Drive and Hwy 12. C22-8

11. Protection of the Wildlife Corridor is woefully understated. How can thousands of people live and work within yards of a critical wildlife corridor? C22-9

12. The Specific Plan and resulting Draft EIR are flawed, and the process must be re-started with preservation of the biodiversity of SDC and the existing community being paramount. C22-10

Please consider the community and the environment before pushing development on a pristine property.

Best Regards,
Greg Guerrazzi

Subject: Draft EIR Comments: SDC Specific Plan

The following letter was sent to Governor Gavin Newsom and the DGS via Gerald McLaughlin. This letter was also sent to the Sonoma County Board of Supervisors, Senators Mike McGuire and Bill Dodd, and the Sonoma Index Tribune. C23-1

This letter is written in support of the Sonoma Land Trust's request to engage in meaningful planning for the SDC by aligning the County Specific Plan with the State's request for development proposals. Stating that no specific plan has been selected and that no mitigations are available for water, traffic, and wildlife is not a viable EIR.

To the Office of Governor Gavin Newsom:

The Office of the California DGS has rescinded its earlier premature offering of the Sonoma Developmental Center to a developer prior to the completion of an EIR. The 894 acre property has been held as a public trust to benefit both the disabled and the community. It also serves as the major water recharge shed for Sonoma Valley and is directly in the path of Sonoma Creek which crosses Sonoma Valley and exits through Petaluma to the San Francisco Bay. The community recognizes the need for affordable housing, but the proposed 1,000+ home development with only 250 affordable units, a high end hotel, and visitor services as businesses on site ignores the public input and will be an environmental disaster for Sonoma Valley.

The EIR process was fast tracked when the DGS released the property for sale. This is against the law since no project has been designated by the Board of Supervisors nor had the EIR process even been started. The EIR findings were released with the following legal concerns:

1. Where is the Response to Public Comments in the Draft EIR? C23-2

2. Where in the DEIR are the actual Specific Plan mitigations listed? (Executive Summary refers to Appendix A, but mitigations are not included) C23-3

3. The county is using a "Self-Mitigating Plan" approach. What is the rationale for doing this? How will implementation of mitigations work, since they won't appear in the EIR itself but only as a "condition" of moving forward with development? C23-4

4. How, when, and through what mechanism will the open space lands at SDC be permanently protected and kept in public hands? C23-5

Also Permit Sonoma states: “Public participation identified three key areas of concern among the 16 areas studied: open space and wildlife, water, and wildfire risk and evacuation routes. The draft Environmental Impact Report finds that the proposed specific plan would not create significant and unavoidable impacts in these areas.” The problem is that the impacts are significant and unavoidable. C23-6

There is really no proposed specific plan. The traffic and water studies were done when the SDC was permanently closed by the state, so no impacts were shown due to low traffic and water use in the area. Permit Sonoma has done the EIR only allowing public comments via zoom and the US Mail with no responses to critical concerns. C23-7

Sonoma Valley is congested. It has two main roads and one of them had to evacuate 1,000s of Oakmont residents by bus during the last fire since there are no exit routes that can handle evacuation traffic. Three other major developments are now permitted between the city of Sonoma and Santa Rosa and in process along the Highway 12 corridor. Traffic in Sonoma Valley is already impacted, especially in the Boyes Springs area and the city of Sonoma with only one road out. People say that they no longer come to Sonoma because of the traffic. And Sonoma County has been sued for not meeting its own emission standards. C23-8

Sonoma Valley is already in a state mandated Groundwater Study with well restrictions in place for commercial growth and homeowners' wells being monitored throughout the valley. We have asked for a reduction to 450 homes and no hotel. Please intervene before this goes any further. We need the State of California to come forward to protect what makes Sonoma Valley the destination it is and to protect local resources. This development will add a new city to the valley floor, deplete our vanishing water sources, and create urban sprawl. Please consider resources and action to protect a California resource. C23-9

Thank you for being the Governor of California!

EXTERNAL

Good morning,

C24-1

My name is Heather Gallagher, I was born and raised in Sonoma, I now reside in Petaluma California. I have been following the recent planning proposals for the SDC. Since I was a little girl and still now as an adult, Every time I drive thru the SDC I feel a sence of magic. I remember looking out the windows of the car with my brothers as the car drove slowly thru the SDC in the morning or early hours of the evening, we would look for deer grazing on the grassy noles. We almost always saw them and if we didn't we were so sad. Since 1986. I have watched Sonoma county go through lots of changes. Over time things start to settle in and many of the changes years later have a lasting impact on the landscape and environmental impacts that are detrimental to the wild life, water ways and environmental impacts. I haven't seen the full scale of the plans for 1000 residential and commercial spaces planned for the SDC, but I know that if even half that amount were planned that it would be detrimental to the land, environment, wildlife, and the catastrophic effects on Sonomas water will be felt even before the first faucet is turned on in one of the homes.
In the 90's I was under the impression that Sonoma developed an act that nothing like this would happen, it seems the laws have changed on expending, and that California is turning a blind eye to the environmental impact. I thought the state adopted a 30 in 30 plan, where we use 30% less resources in 2030.
Without doing the research I know that this proposal isn't good enough for the SDC, I know that the detrimental building even half the proposal would be detrimental to the impact of our local city's and county, with demolitions environmental impacts, new water, gas and electricity lines, and all the carsongenis that will be released and pollute the land, the neighborhood and the water directly on the other side of the levee.

Please, employ you, to do the research, take the time and the resources to develop a new proposal for the land, get a land grant and work with the community to make better choices.

Thank you for taking the time to read this message and consideration your actions.

Heather Gallagher-

I find it incredulous that the EIR to put 1000 new homes on the SDC would not " significantly impact" the wildlife corridor, fire evacuate routes and water resources. As usual, it sounds like the County priorities the revenue it will receive by issuing permit fees and property taxes over the safety of current Valley residents and environmental protection.

EXTERNAL

I oppose this draft EIR 1,000 housing units in the heart of Sonoma Valley and in the middle of the Sonoma Valley Wildlife Corridor will have **significant** and **unavoidable** impact on these four main areas of concern: 1) open space/wildlife, 2) water, 3) wildfire risk/evacuation routes, 4) quality of life for all. C27-1

There is not enough land in the Draft EIR for protected open space. 1050 + acres should be considered, especially around the campus.

The only way to reduce impacts is to adopt a smaller project The “Historic Preservation Alternative” with only 200-300 low income homes. No market rate homes. Strict building guidelines to protect impact to the environment/wildlife.

The Draft plan does not speak to the hazards of fencing on the campus, which any kind would strongly affect wildlife movement as would the introduction of thousands of people and vehicles. C27-2

This draft is wrong for SDC.

What is needed

1- The protection of more lands than 700 acres

2- a plan to reuse and re-purpose current buildings and not to expand beyond the current foot prints. 200-300 low income home max. No market rate housing. C27-3

3- allow for non-profits/ trade schools/ oceanic research or other environmental friendly to come and residence, rather than housing.

4- To not allow fences of any kind as all prevent wildlife movement.

5- SDC should remain a park friendly campus with no commercial use or investment.

Please reject this Draft and find a smaller, kinder, more protective alternative.

Dear Brian,

Review of the Specific Plan and EIR must be paused pending completion of the RFP process.

C28-1

I am very concerned about this beautiful pristine area, extremely needed by wildlife. Also, Highway 12 cannot handle more traffic, especially during emergencies as wildfires, accidents, and earthquakes. there are few alternatives to move people and cars out of the area safely and quickly.

Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.
Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

Sincerely,

Janet Bosshard

Hi Brian,

We have lived at the address below for more than 20 years. We are happy with much of the SDC Plan however, we are vehemently opposed to putting 1000 residences on that property for two reasons: C31-1

1. Wildfire- There are only two roads out of this valley, Highway 12 and Arnold Drive. These roads are already heavily used. In the case of an evacuation I fear the added 2000 cars from these new residences could clog the roads and lead to life threatening situations.
2. Drought- How do you expect to provide the water for these additional residences with our dwindling water supplies? C31-2

Thank you,
Jeanette & Brett Newman

From: Jessica Strachan
To: Brian Oh
Subject: SDC plan draft comment.
Date: Tuesday, August 16, 2022 8:35:03 PM

EXTERNAL

Dear Brian,
Thank you for taking the time to read my email.
I have lived in Glen Ellen for the past 20 years, and have just finished reading the draft report on the SDC.

As a person that still walks in the SDC every day, raised my children adventuring at the SDC's farm, hikes Camp Via, went to every Halloween parade put on by the SDC residents (and cried and cheered as each house went by)- I am sincerely invested in what happens less than a mile from our family home.

We all realize that eventually there will be additional homes to take the place of where residents once lived.
However- those residents did not drive- or have multiple cars at their houses. And having the three shifts of the workers cut down on the number of cars that were ever on site at one time, of course- the fires weren't as prominent THEN.

In this vein I must tell you that I am very frightened of adding additional homes (cars)- when the fire risk is always high, and our lack of water is a problem.
In the past two decades, the environment has so substantially changed that fire season is year round.
AND adding houses and cars NOW- with the knowledge that we have, does not seem appropriate.

C32-1

I really enjoyed reading the dates of when each structure was built. I love each one.
I appreciate the research, although I am a little hesitant reading about the possibility of night construction.
Even if it were far away from humans- I don't think all of the animals that you listed would enjoy the vibration and sounds day and night.

C32-2

I would be happy to discuss any of these issues with you, or anyone else, when possible, but lastly- I have to ask this:

Please come and look at Glen Ellen.
It is not ready for a fire, and neither is the SDC.
Until it is- building any homes is a bad idea.

The MOST important part of the plan is the egress to highway 12.
It is listed as PROPOSED- but it has to be mandatory because the 2017 fire proved we did not have enough ways to leave Glen Ellen.

C32-1

Thanks again for your time.
Best,
Jessica Strachan

EXTERNAL

Dear Brian:

C34-1

The attached compressed PDF file illustrating Sonoma wildlife was created in a two-page horizontal book format. If you have an app that can view a PDF file in a two-page format that would be best. If not, it can be viewed page by page on a vertical basis (please ignore the blank pages in this format).

Having spent 18+ years documenting Sonoma Mountain wildlife and domesticated animals on ours and neighboring properties, I created a photographic summary of these beautiful creatures. It is my hope that you are able to utilize this information in helping preserve the wildlife corridors on Sonoma Mountain. These thoroughfares represent an extension of the SDC corridor as well as other connecting lands.

Please take a few minutes to marvel at the creatures that share Sonoma Mountain. These include an array of birds, mammals, reptiles and more. They deserve the protection of these land and water resources so that they may continue to survive.

Just in the last few months 19 acres of neighboring virgin land have been planted with grapes and new fences installed surrounding these acres, as well as cutting off access to a seasonal stream. These directly block the passage of many of these creatures on portions of this 90-acre property. Additional buildings are proposed

C34-1

and will block further areas. This, in addition, to other developing properties and **SDC** spell disaster for the animals.

If you would like to share this with others that are able to help in this fight to save these creatures please feel free to do so. I believe this is a one-of-a-kind visual history of this area.

Sincerely,

Joan Geary

Please note: The compression had a slight negative impact on the original quality of the book

Hi Brian,

C35-1

In response to your email requesting suggestions on how we can further protect the wildlife below are a few ideas:

-Require wildlife access to ALL seasonal and ongoing creeks, waterways, reservoirs/ponds

-Restrict/limit/ban development impacting free movement along wildlife corridors

-Require wildlife easements for all new developments (structural and agricultural)
Conduct ongoing reviews by Sonoma County to monitor that these easements are maintained.
For example, The Carriger Lane development (former Hanna Property) was required to include a wildlife easement. Was this established in the building plans and is it continued to be followed for compliance issues?

-Create a map of all wildlife corridors

-Limit/ban fencing that restricts free movement of wildlife

-Limit noise/lights in sensitive areas including, but not limited to, breeding and nesting.

Additional input:

-All recommendations from a biological assessment conducted in conjunction with a new vineyard or agriculture permit that are incorporated into the permit must be reviewed and enforced. For example, if fields are to be disturbed during nesting bird season and the property owner is required to conduct a survey 7 days in advance of any ground disturbance and that study should be submitted to either the Ag Commission or Permit Sonoma. There does not appear to be sufficient follow-up after initial biological assessments are filed by owners.

-Design review and planning for any new homes in the Taylor/Sonoma Mountain corridor should take into account wildlife needs when approving the location of buildings, setbacks from creeks, fencing and potential noise and lighting impacts.

Thank you for working to help protect these beautiful creatures.

Best,
Joan Geary

Introduction

C36-1

Almost without exception, the plan is opposed by very many individuals and organizations. This should be a sign that something is wrong, one would think. The County keeps pointing to the State as the one who is controlling the direction of the planning. Our State legislators chose not to do anything to improve the situation. This will have a massive impact upon our valley and it is wasting a great opportunity to make things better if it were not solely driven by what a developer would want. This is ass-backward as the saying goes.

I have contacted Governor Newsom about this with hopes that he can intervene. After all, the State has a huge surplus and using some of this would greatly improve the outcome of the plan. Let's think out of the box, please.

Specific Comments

With the understanding that we should not be confined to the boundaries of the present plan here are some of my additional comments:

- Look at this as a wonderful opportunity to do something great rather than sticking to the general formula of developing a plan that would be appealing to a developer. Perhaps set up a non-profit that would handle the project similar to what was done at the San Francisco Presidio. If we had spent the last 3 years developing such an entity, we would not be in the present situation.
- All new housing should be "affordable" as there is such a huge need for this not only in the Valley but in the entire state. The numbers of units should be dictated by what the area can broadly comfortably absorb (water capacity, sewer capacity, road capacity, fire safety and so on).

C36-2

- This should be seen as a opportunity to solve other problems such as training people for good-paying jobs. Perhaps the SRJC or some other educational organization could set up a satellite campus for this purpose?
- Perhaps there could be some high-tech businesses set up to bring in good paying jobs?
- Homeless services are a possibility, but are very controversial. To me, it is preferable to get people into homes so that these services would not be needed.

- Some of the state's huge budget surplus should be used to make the SDC responsive to the community's needs and the needs of average people who cannot afford to live here. This can also be a means of addressing homelessness as it is caused by the lack of affordably of housing in this area. We are spending millions of dollars on the homeless and not solving the problem. Let's take a bigger picture approach and, again, the SDC is a gift in this regard.

So, in general, I am not commenting on numbers of units, etc. but instead have concerns about the general direction this is heading.

Thanks

Joe Lieber
Sonoma

Comments on SDC Draft EIR

C37-1

Without getting into the weeds as the saying goes, the big picture is what concerns me. There are so many problems with the way this study has been conducted. Here are a few:

- It has been strongly driven by what a developer would want, not what the community wants. This is wrong! The County always points to the State as the driver of this. The State needs to be pressured to do the right thing. After all, the state works for us, right?
- This is a HUGE opportunity to address the state's and the country's affordable housing issues. The myopia of this study is numbing! From this standpoint, this is not only a local valley issue.
- Some of the state's huge budget surplus should be used to make the SDC responsive to the community's needs and the needs of average people who cannot afford to live here. This can also be a means of addressing homelessness as it is caused by the lack of affordably of housing in this area. We are spending millions of dollars on the homeless and not solving the problem. Let's take a bigger picture approach and, again, the SDC is a gift in this regard.
- Adding to the myopia issue, this project should not be viewed within its own bubble, but, instead it should be viewed within the context of the massive housing issues we have. Again, having this driven heavily by what a developer wants is not the right way to look at this. This should be seen as an opportunity to solve some significant problems in the area. Are there sources of funds that could subsidize the project so that it can be solely affordable housing, for example? After the tons of money that has been spent on checking the boxes (this study), let's instead step back and take a broader view of this.
- There does not seem to be any evidence of creative thought with this study. It is way too market driven for something that should be of a public benefit. After all, this is the taxpayer's property.

C38-1

Supervisor Gorin & Mr. Oh, I am writing this email in support of the Permit Sonoma plan which proposes building the most housing & work opportunities at SDC. SDC has been a source of employment and housing for this community since its inception and it is completely in line with the needs of our community to continue using it along those lines. Development at SDC will help our community in many ways, most importantly in providing housing, employment, and bolstering education opportunities at our schools.

I work in Sonoma Valley & live off Madrone Road with my wife & raised our 4 children there since 2003 when we sold our affordable housing unit off Broadway in Sonoma to buy a house in the Rancho Madrone housing tract. When we first moved up here 25 years ago, our first apartment was the large apartment complex on Madrone Road. This area is the right area for more housing, both affordable & for first time home buyers. The Rancho Madrone tract is a mix of relatively large apartments, smaller, ~1000sq. ft. homes like mine that are generally considered "starter" homes, and larger homes. The mix of the 1000 units planned for SDC seems to fit in perfectly with the character of the Rancho Madrone tract, probably SDC's closest neighborhood. When I first got a job up here in the Valley, the Madrone Apartments was one of the few places myself & my then pregnant wife could afford to live in. Later, when our family expanded to 6, the affordable housing units on Marcy Court allowed us to start to build equity and to be able to live and work in this community. After we built up equity, we were able to sell our affordable housing unit & buy one of the modest homes in the Rancho Madrone tract. The development of SDC will allow others to follow the same type of path we were fortunate enough to have.

C38-2

SDC is the perfect location for many jobs that seem to pay decently and be abundant in our area, especially warehouse & storage facilities jobs. During my 27 years living here in the Valley, I have been fortunate enough to be able to work closely to where I live, sometimes close enough to bike to work. Many SDC employees have lived in the Rancho Madrone tract over the years. Work opportunities at the new development at SDC will give many others that same opportunity. Assuming many of those jobs will be blue collar-type jobs, this is a tremendous opportunity for average working people. Many people in the Valley have a more "white collar" type job that might allow them to afford a larger house in this area and to have an office or work from home in this area, but that generally is not the case for many of the types of jobs that would be created at SDC, so having affordable housing there will be a great opportunity for them.

C38-3

Building more homes at SDC will give families a better chance of being able to afford to live in this Valley. Having raised 4 kids through the local public schools, it is no secret that this is not the type of area where young families start out and our schools generally reflect that with lower enrollment and parent participation, partially due to parents having to work further from where they live. Dunbar, the school closest to SDC, has seen both the decline of families living in its area & the "white flight" of many families there choosing to send their children up to the Kenwood School District, as Dunbar had to enlarge its boarders to find more children to fill its school as enrollment declined. Having more young families and allowing them to live where they work will create more opportunities for parents to be more active in their children's schools and bring more children to our schools.

Having development at SDC that can pay for itself is also the fair thing to do. While I enjoy the feeling of walking our dog around Lake Suttonfield in almost complete solitude, I can in

C38-3

no way say it is fair for the taxpayers of the State, County, or Valley pay for me to enjoy such privilege. People could choose to create a special district and tax themselves to keep SDC exactly as it is, but no one is willing to do that. It is only fair that the development, care & upkeep of the SDC area come from development at SDC. Our State & County have more pressing financial needs such as schools, roads, and homeless than to pay for a property in one of the more exclusive and valuable land areas in the State.

Those opposing having more people live in their backyard have thrown almost anything that they thought would stick against the wall to stop this development. They are well involved in the community, vocal and organized, but I do not feel they represent the best interest of our community on this issue, especially when you take into account how unaffordable it is to live in our community and state. I applaud you and Permit Sonoma for forging ahead with a plan that offers solid housing and working opportunities for all.

Thank you, Jon Greenslade

Subject:	Draft EIR Comments: SDC Specific Plan
Date:	Friday, August 19, 2022 8:54:48 AM

EXTERNAL

Dear Brian Oh,

C39-1

I am writing to ask you to urge Sonoma County to engage in meaningful planning for SDC - to align the County specific plan with the State's request for developmental proposals. Specifically, to re-draft the County Specific Plan and EIR to describe and analyze the impacts of the **actual** proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

As I understand it, earlier this month the County released its draft Environmental Impact Report and draft Specific Plan for SDC. And, despite the Board of Supervisor's direction to pursue a specific plan with **fewer** than 1,000 home, the drafts propose 1,000 residential units and extensive commercial development. : Align the County Specific Plan with the State's Request for Development Proposals

The draft specific plan fails to respond to the challenges of our time—including wildfire, drought, and biodiversity loss.

Further, because the Specific Plan and EIR were released **before** the State selected a development proposal, the Specific Plan is hypothetical. Neither it nor the EIR disclose the characteristics or environmental impacts of the proposal that will ultimately be accepted by the State.

I believe it is critical that review of the Specific Plan and EIR **must be paused** pending completion of the RFP process.

Aligning the Specific Plan and EIR with the State's RFP, would increase efficiency, save valuable taxpayer resources, and ensure thorough planning and environmental review.

Thank you in advance for your attention to this matter.

Hello,

C40-1

In 2000, the main building of the Sonoma Development Center was listed in the National Register of Historic Places. I am not sure if the new plans involve demolition of the building but just imagine if California had historical buildings like other interesting parts of the world instead of a bunch of lifeless, soulless money-comes-first structures. Just imagine for a moment.

Thanks,
Justin Beck

Good morning,

I am concerned about the proposal to build a substantial amount of homes and buildings at SDC. This site is a critical wildlife corridor, and protecting this corridor should be the top priority. These wildlife corridors are dwindling, but are so important and relied on by species we need to protect. Therefore, I urge the following: C42-1

1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.
2. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide. C42-2

Thank you for your consideration.

Brian,
I just finished watching the video of the joint CAC and MACs meeting on August 24th. That was a long one! I wanted to let you know that I thought your presentation was very professional and personal. I know you and others have done a LOT of work on this project and seem to be between a rock and a hard place....
Would it help if there was consensus among the community? If the community could get behind the "Historical option" with 450 units, could that "footprint" fly? Who wouldn't like it?
If it became the "Specific Plan", I understand that would be for 20 years... but how specific does the plan need to be? Could there be changes made as needed? There are always changes to the General Plan or other specific plans too...right?
So if the plan starts out on the smaller side (450 units) as a precautionary attitude, maybe after 10 -15 years it is shown that this number works and there may be a need for more units, could this be remedied up to 1000 in steps? We would be able to see how the water supply works, what kind of jobs might be on campus, setbacks from the creek and wildlife corridor could be increased initially and I believe that the 450 number of units is considered economically feasible...
This Historical option may also increase the possible re-use of existing buildings too.
What do you think?
Appreciate your answer.
Thank you,
Kathy Pons

Comments of Bennett Valley Citizens for a Ban on Commercial Marijuana Facilities

Commercial Cannabis Projects Violate the Bennett Valley Plan.

C44-1

The Board of Supervisors adopted the Bennett Valley Plan (BV Plan) in 1979 with a goal of preserving and protecting the traditional rural character and natural environment of Bennett Valley. The BV Plan was supported by a full environmental impact report. Its area-specific policy requirements were adopted to avoid significant environmental impacts within Bennett Valley. Policy LU-1a of the General Plan states:

> A Specific or Area Plan may establish more detailed policies affecting proposed development, but may not include policies that are in conflict with the General Plan. In any case where there appears to be a conflict between the General Plan and any Specific or Area Plan, the more restrictive policy or standard shall apply.

The BV Plan has three unique features that are pertinent to commercial cannabis development.

C44-2

1. **Commercial Marijuana Development Violates Land Use Policy 2 of the Bennett Valley Plan.**

Land Use Policy 2 of the BV Plan provides "**Commercial development** is not considered appropriate to the rural character of Bennett Valley (emphasis added)." U.S. Attorney McGregor Scott in Sacramento describes marijuana grows as "industrial agriculture."[1] The process involves manipulation and processing of plants as much as growing them. The Cannabis Ordinance, § 26-02-40, defines "cultivation" as **commercial** cannabis activity. A letter from Adam Brand, Sonoma County Deputy County Counsel, to Kevin Block (January 18, 2019, pp. 2-4) concluded that that any use permit is by law "**development**."

Growing cannabis commercially is obviously commercial development. This inevitable conclusion was drawn by Commissioner Greg Carr during the November 2019 BZA hearing for 4065 Grange Road. On April 10, 2018, Supervisor James Gore remarked at a Board of Supervisors meeting that a commercial cannabis operation on Lakeville Highway was "definitely **commercial industry** within a small area with a lot of neighborhood impact."[2]

Commercial cannabis operations are both in fact and in law commercial development, and violate Land Use Policy 2. They do not belong in Bennett Valley.

---

[1] Don Thompson, "Agents seize Northern California pot houses tied to Chinese" (April 4, 2018) https://www.vcstar.com/story/news/2018/04/04/agents-seize-northern-california-pot-houses-tied-chinese/488258002/

[2] http://sonoma-county.granicus.com/MediaPlayer.php?view_id=2&clip_id=816, at 6:22.

2. Under Land Use Policy 3 Commercial Marijuana Development Cannot Be Approved in Bennett Valley Without Enhanced Law Enforcement.

Under Land Use Policy 3 ("Development shall be coordinated with the public's ability to provide schools, fire, **police** and other needed services"), permitting commercial marijuana in Bennett Valley must be coordinated with improved law enforcement. Cannabis businesses attract crime, and § 26-02-140 of the Cannabis Ordinance notes that growing cannabis poses unique risks to the health, safety, and welfare of residents.[3] Home invasions related to marijuana grows are increasingly common in Sonoma County, and the risks of criminal activity is a major concern to Bennett Valley residents. Non-growing neighbors have been terrorized when the "wrong" home was invaded. Crime increases in the immediate neighborhood where cannabis businesses are located and in adjacent areas. While no one can predict which homes and individuals will be victimized, statistically, it is much more likely that residents of Bennett Valley will become crime victims if a commercial cannabis operation is located there. There are already insufficient sheriffs on duty, especially at night when home invasions tend to occur. It can take thirty to forty-five minutes for a sheriff to respond to a call.

C44-3

According to the Sheriff's office, since 2013 ten marijuana-related murders and 22 marijuana-related home invasions have been reported in the unincorporated areas of Sonoma County. During the past 18 months, 59 marijuana-related crimes were reported (five per month) that do not involve murder or home invasions. These numbers would increase substantially if data from the county's nine cities were included.

Commercial marijuana grows open the door to a dangerous activity in Bennett Valley that is inimical to the polices in the BV Plan. The county recognizes the dangers of marijuana cultivation when it comes to protecting its own employees. In eliminating the mandatory minimum 24-hour notice for an inspection of a cultivation, the code enforcement staff "for safety" will still call in advance so the visit is expected."[4] The county is rightfully concerned for the safety of its staff, but lacks concern for residents.

C44-4

The county has done nothing to improve public safety while inviting widespread commercial marijuana cultivation in Bennett Valley. For example, the county might establish a sheriff's substation in Bennett Valley at the fire station to reduce response time. The county might ban permits on properties located on shared access roads as a means to minimize home invasions of non-growers. Ordinary residents should not have to share milelong dead-end roads with growers.

[3] Those risks include criminal activity (Ordinance No. 6189, Findings, § I, subsections I, N, O and Q).

[4] Memo from Amy Lyle, Permit Sonoma, to Sonoma County Planning Commission, "Cannabis Ordinance Amendments, ORD18-0003 (September 6, 2018), p. 2 [sic]. Actually p. 3.

3. **Bennett Valley Plan's Development Guidelines Require Adequate Roads.**

The Planning Director must find for any development located in Bennett Valley that "private streets and driveways, **both existing and proposed**, are properly designed." Under the plain language of the BV Plan (p. 21), the requirements for existing and new streets are identical. Thus, the county's argument that developments on older, pre-1991 roads (but not driveways) are exempt from the CalFire SRA Fire-Safe Regulations does not apply to roads in Bennett Valley. Under the BV Plan, both existing private roads and driveways where development occurs must meet new road requirements. There is no exemption for commercial cannabis operations. Existing private roads that serve new development and are under 20 feet wide must be substantially upgraded to new street standards.

C44-5

4. There Are Too Many Commercial Marijuana Projects in Bennett Valley.

Since 2017, thirteen marijuana projects have been proposed in Bennett Valley (Table). Many, for now, are not going forward but could be resurrected.

C44-6

Table. Bennett Valley Marijuana Projects That Have Been Proposed.

APN	Address
049-130-015	4944 Bennett Valley Road
055-010-031	7170 Bennett Valley Road
049-150-005	4050 Grange Road
049-130-005	4065 Grange Road
049-071-054	4265 Sonoma Mountain Rd
049-030-090	5365 Sonoma Mountain Rd
136-201-004	6480 Eagle Ridge Road
055-150-018	3141 Matanzas Creek Lane
055-150-011	3220 Matanzas Creek Lane
055-150-010	3400 Matanzas Creek Lane
055-140-015	3575 Matanzas Creek Lane
055-140-006	3700 Matanzas Creek Lane
055-140-024	3803 Matanzas Creek Lane

Bennett Valley has about 1.3% of Sonoma County's land, and about 6% or more of the proposed commercial marijuana projects. This is far too many and reflects gross over-concentration.

Re: Sonoma Developmental Center

Dear Mr. Oh:

On behalf of the Bennett Valley Community Association (BVCA) and the residents of Bennett Valley, the BVCA Board of Directors wants to express its concerns about the Draft EIR and Specific Plan for the Sonoma Developmental Center (SDC). The BVCA was established in 1970 and is dedicated to promoting and preserving the rural, residential character and natural environment of Bennett Valley.

C45-1

Specific Plan Policies Do Not Provide Sufficient Protection.

The centerpiece of this planning effort is a specific plan, which is intended to adopt area-specific policy requirements to avoid or mitigate significant environmental impacts within the plan's boundaries. Bennett Valley residents are familiar with how the county implements such plans. The attached Bennett Valley Area Plan was adopted over 40 years ago and, like the SDC Specific Plan, was supported by an environmental impact report. Policy LU-1a of the General Plan states "a Specific or Area Plan may establish more detailed policies affecting proposed development . . . where there appears to be a conflict between the General Plan and any Specific or Area Plan, the more restrictive policy or standard shall apply.

Our experience in Bennett Valley is that the supposed protections offered in an area plan can be illusory and unenforced. Land Use Policy 2 in the Bennett Valley Area Plan provides "Commercial development is not considered appropriate to the rural character of Bennett Valley." Yet PRMD and county counsel distort the plain words and concluded that commercial cannabis development and operations are not "commercial development." In addition, any new structure must undergo design review to preserve scenic vistas and corridors. The county has decided that large and unsightly hoop houses that can be in place six months each year need not undergo design review. Residents who think the SDC Specific Plan contains policies that forbid or regulate certain activities may learn that the county has made a closed-door decision that is the opposite of any logical interpretation of the plan's provisions.

Evacuation Issues.

The BVCA endorses and incorporates by reference the comments filed by the State Alliance for Firesafe Road Regulations on September 13, 2022. About 30% of the land area of Sonoma County has burned since 2017, making wildlife and evacuation issues paramount. Although the DEIR acknowledges that 95% of wildfires are caused by human activity (p. 500), it fails to analyze the extent to which 2,500 new residents, new hotel guests, and new business patrons will exacerbate this risk. All four criteria from the CEQA checklist for Wildfire (XX) would create a significant impact. The DEIR ignores that areas downwind from or adjacent to high or very high fire hazard zones can be consumed by wildfires, as experienced recently in Sonoma County. The 2017 Nuns fire consumed areas near the SDC that are rated as moderate fire hazard, and this occurs across California. Hoping that much of the area is safe because it is only in a moderate fire hazard zone is not a strategy. The DEIR concludes that the proposal would increase wildfire risk to new residents and visitors, but only proposes policies for future consideration without requiring mitigation measures.

C45-2

The DEIR fails to describe existing wildfire hazards or properly analyze potential impacts. It is impossible to evaluate evacuation safety and the associated impacts on existing residents and employees when no baseline is provided for their evacuation utilizing the same routes. We know from the 2017 Nuns Canyon Fire, 2019 Kincaid Fire, and 2020 Glass Fire that Highway 12 was blocked, with traffic often at standstill for hours. The proposal jeopardizes the lives of Bennett Valley residents who need to flee from a fire driving east to Sonoma Valley using Route 12 or Arnold Drive. Moreover, because those routes are known bottlenecks, residents of Sonoma Valley might elect to escape a conflagration by driving west using Bennett Valley Road or even Sonoma Mountain Road. This could congest the escape routes for Bennett Valley residents who need to flee to the west.

The evacuation analysis for Bennett Valley needs to include the fact that during normal conditions Penngrove has become a chokepoint for traffic because of massive housing developments along Petaluma Hill Road. The Board of Supervisors has recognized this problem and recently approved the "Railroad Avenue traffic circulation study." The evacuation route for Bennett Valley residents via Petaluma Hill Road toward Penngrove is already compromised. The DEIR's lack of subregional traffic circulation studies to identify such problems, let alone mitigate them, jeopardizes not only Bennett Valley residents but also the thousands of others sharing these evacuation routes. This violates Public Safety Goal PS-3 of the Sonoma County General Plan ("prevent unnecessary exposure of people and property to risks of damage or injury from wildland and structural fires"), as well as Objective PS-3.2 (new development must minimize fire hazards to acceptable levels).

C45-3

The conclusion that the proposed development would not substantially impair an adopted emergency response plan or evacuation plan (p. 511) is unsupported and contradicted by experience. We know that Highway 12 already gets rapidly congested during mass evacuations, turning it into a parking lot for hours. Depending on the

direction of the fires, residents may either need to evacuate south, thus combining with traffic from Boyes Hot Springs and Sonoma, or north, with additional traffic from eastern Santa Rosa. To conclude that adding thousands more people would not impair existing evacuation is incomprehensible. Emergency alarm systems are now implemented (e.g., during the September 13, 2022 earthquake), and residents will flee simultaneously. Assuming that a maximum of 65% of residents would evacuate in the first hour (Figures 3.16-3 and 3.16-4) is unrealistic. The fire may be upon them within the hour.

A shelter-in-place facility is never a first choice; studies have shown that people want to flee a fire, not let it burn over them. Most fire professionals say that shelter-in-place is a last resort and emergency plans cannot rely upon it to mitigate fire risks. Fires kill people with smoke and oxygen deprivation, not just flames. The proposal has not mitigated the potentially significant impacts related to wildfire.

C45-3

Normal Traffic Circulation in Bennett Valley.

The proposal will force more traffic onto the few east-west arterial routes in Sonoma County, especially Bennett Valley Road and Sonoma Mountain Road. The most recent Bennett Valley Road study was done in 2011, when over 3,500 vehicle trips were recorded per day. There is no adequate sub-regional traffic circulation study of these impacts. Bennett Valley Road is notoriously tortuous, especially the section between Warm Springs Road and Walker Road. More traffic on this section would be especially dangerous. The portion of Bennett Valley Road that approaches Santa Rosa has had 5 investigated accidents during the last six months, and scores in recent years. The BVCA is very concerned about increases in these already unacceptable statistics. The DEIR concludes there will be significant and unavoidable impacts regarding increased traffic, and proposes no mitigation. This is unacceptable.

C45-4

Conclusion

The DEIR and Specific Plan ignore the unenforceability of specific plans and gives short shrift to evacuation issues and general traffic issues in Sonoma Valley and Bennett Valley. It must be revised to address them. The proposal risks not only the lives of future residents of the SDC, but also residents of Bennett Valley. The DEIR ignores current and potential wildfire risk factors and assessment methods, and bizarrely dismisses them as insignificant. We recommend drastically reducing the number of housing units and eliminating hotel and new businesses.

C45-5

Sincerely,
Chris Gralapp
Board of Directors,
Bennett Valley Community Association

cc: Supervisor Susan Gorin Susan.Gorin@sonoma-county.org

September 19, 2022

VIA ELECTRONIC MAIL to Brian.Oh@sonoma-county.org

Brian Oh
Planning Manager, Permit Sonoma

Re: DEIR for Sonoma Developmental Center

Dear Mr. Oh:

The proposed specific plan inherently fails to mitigate environmental impacts. In Bennett Valley the County arbitrarily refuses to implement our area plan, despite the requirement in Policy LU-1a of the General Plan whereby the more restrictive policies in a specific or area plan apply if there is a conflict with the General Plan. The Bennett Valley Area Plan forbids commercial development in Bennett Valley (Land Use Policy 2), yet the County supports and encourages commercial cannabis development and operations there. The plan also requires new structures to undergo design review to protect our bucolic viewsheds, but the County allows ugly hoop houses without design review because they are taken down during winter. Thus, according to the County, the viewsheds of Bennett Valley residents are protected only for 6 months of any year. This violates the plan and insults the intelligence of anyone who is not a county employee.

C46-1

For these reasons, any mitigations in the proposed Specific Plan for the Sonoma Developmental Center fail to meet the requirements of CEQA.

Sincerely,

Craig S. Harrison
For Bennett Valley Residents for Safe Development

EXTERNAL

The addition of the road from SDC out to Highway 12 (highway 12 connection) would result in significant impact on wildlife. This area is a wildlife corridor. As wildlife currently traverse this area, the addition of vehicles in this area would disrupt the wildlife movement. This is especially true during construction. It is best not to add this road.

C47-1

If the road is built, despite the significant impact, then the following mitigation measure can be taken to reduce the impact.

1. Limit construction of the road to certain hours and months, where wildlife movement through the corridor is less.
2. Make the road one-way only, east bound.
3. Close the road, except for emergency evacuation.

Regards,
David Eichar

Re: Sonoma Developmental Center Specific Plan Draft Environmental Impact Report ("DEIR")

Dear Mr. Oh and County of Sonoma Supervisors,

Thank you for the opportunity to comment on the recently issued Sonoma Developmental Center (SDC) Specific Plan and Program Environmental Impact Report (PEIR). The following comments are submitted on behalf of the SDC Campus Project.

1. Adequate Alternatives Analysis for Affordable Housing

C48-1

The SDC Campus Project has proposed the adaptive reuse of five of the existing residential buildings in the southeast corner of the SDC Campus for affordable co-housing. This would serve the needs of low wage workers currently forced to make long commutes to jobs in the Sonoma Valley due to housing costs and the needs of other people for basic housing. This proposal has been submitted to Permit Sonoma. Thus far the County has declined to give this proposal any consideration.

The buildings proposed by the SDC Campus Project for adaptive reuse are in the area designated as the Agrihood District on the Specific Plan maps. The Agrihood District is envisioned as a new neighborhood that is a nod to historic agricultural lands with physical and visual connections to the historic agricultural areas, low-impact development at a lower intensity, and a smooth visual

transition between higher intensities to the west and the agricultural open space at the east. The clear implication is that existing buildings in this area will be demolished. The adaptive reuse of the former residential buildings for affordable co-housing would be consistent with the vision for this area. Adaptive reuse of existing buildings is environmentally superior to new construction when the energy use and GHG emissions from the mining, processing, transportation and assembling of new materials are considered. Adaptive reuse can also be more cost effective if done properly by people with experience in this type of construction. Permit Sonoma should at least have provided some evaluation of this proposed alternative to new construction.

C48-1

An agency may not approve a project that will result in significant impacts unless it first finds that mitigation measures or alternatives are infeasible. (PRC section 21081; Guidelines 15091, 15093) The Supreme Court of California decided that considering alternatives is one of the most important functions of an EIR (*Wildlife Alive v. Chickering (*1976) 18 Cal.3d 190, 197) Without evidence why the alternatives are insufficient to meet the project or CEQA goals, meaningful analysis is impossible. An EIR must "explain in meaningful detail the reasons and facts supporting the conclusion." (*Marin Municipal Water Dist. V. KG Land Corp.* (1991)235 Cal.App.3d 1652,1664)

C48-2

The SDC Campus Project proposal will serve the goal of providing affordable housing, which was emphasized in State legislation as one of the primary objectives for the future use of the SDC site. The SDC Campus Project has presented a credible cost-benefits analysis of this adaptive reuse co-housing project. To comply with the requirement under CEQA that a lead agency must evaluate a reasonable range of alternatives, Permit Sonoma must either include the SDC Campus Project in its SDC Specific Plan or present evidence why this project is insufficient to meet the SDC Specific Plan or CEQA goals. The EIR must set forth the alternatives necessary to permit a reasoned choice and in a manner that will allow "meaningful evaluation". (Guidelines 15126.6(a),(d),(f); *San Bernardino Valley Audubon Soc. Inc. v. County of San Bernardino* (1984) 155 Cal.App.3d 738,750-751).)

Hi Brian,

Here are my comments on the Draft EIR for SDC.

As it states that the Historic Preservation Alternative is environmentally superior, why is it not considered in the DEIR? As there is really no definition of what is required for financial feasibility, how can any plan then be considered or analyzed with an EIR? The lack of what is required for this so called financial feasibility makes it hard to understand why an assumption of 1000 to possibly 1200 homes or residential units, and a very large tourist hotel are what is being spelled out as the basis for this EIR. The starting point seems to be that this much market rate housing and a large hotel must be the only plan and the only one addressed in the EIR, even though it is not known what the actual costs are and what a developer will want as a return on this project. And what about the state's financial responsibility for this site?

C49-1

The impacts on water use and needs are totally unrealistic. Planning and mitigation for a water shortage are just pushed to the future which is not allowed in an EIR. For a project this size the EIR does not take into account how much water will be needed for all the planned residents, tourists, employees. There is no analysis of what our local water districts have now and if they could support it. The EIR seems to rely on the two existing reservoirs. All you have to do is take a hike around them right now to see how low the water level is. Climate change is the new normal, more heat and less rain. Climate change is not factored into this EIR in relation to water usage. Why would an EIR not have the mitigation of recycling water in it right now? Should not all water be recycled and used on site be mandated in the EIR?

C49-2

Vehicle miles traveled is also given an unrealistic treatment. The simple fact that if you have a luxury hotel you will have hundreds of lower wage workers driving from other locations every day, in addition to the residents of the 1000 to 1200 homes, and any other employees of commercial use at SDC. As most people can not afford housing in the valley today, having only 25% of the housing as affordable in no way assures these employees will be housed on the SDC campus. It guarantees that they will be driving long distances from other locations. I see no real mitigation for these facts as it relates to VMT. Real measures would include mandated changes to public transportation, if the development is as large as planned. Or that actual affordable housing be included in the plan specifically for the low wage employees at the SDC site.

C49-3

The planned connector road to Highway 12 is shown as being needed for fire evacuation. This road would only be environmentally sound as it relates to the campus being a wild life corridor if it was a gravel

road, with no lighting and only used for fire evacuation and closed at all other times. Then there is the simple fact that it will be useless in a real fire. Simply routing two or three thousand people over to Highway 12 will do nothing if the fire behaves as it did in 2017, from east to west, in addition to from the north. And given what we have seen with wild fires since 2017, the situation could be even worse.

C49-3

I know that we are to keep our comments on the DEIR and not the Specific Plan, but it still baffles me why we have this plan, when almost no one in the valley wants, nor do we need an other large tourist hotel and another 700 or 800 units of market rate housing for wealthy or second home owners. Would we be not be better served economically and environmentally by adapting and saving what we have and creating all affordable housing for those that already live in the Sonoma Valley? And let's be realistic, market rate is not for the so called "missing middle". I have crunched the numbers based on actual real estate values and these market rate homes would have to sell for under $600,000 to be for those at 120% AMI. We all know that is not what two bedroom homes are selling for in the Sonoma Valley, nor would any for profit developer build with that as the selling price.

C49-4

Sincerely,

Josette Brose-Eichar

Subject:	Public Comment on SDC Specific Plan and DEIR
Date:	Thursday, September 15, 2022 2:37:22 PM

EXTERNAL

Sonoma County Planning Commissioners,

Please do not support the SDC Specific Plan or DEIR as proposed by Permit Sonoma. The DEIR does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by few actual requirements and many vague words such as “promote” or “encourage” or “if feasible.” The DEIR needs to be revised and the Conditions of Approval strengthened and moved into a legally enforceable Mitigation and Monitoring Program. Instead: C50-1

Scale back size of development to 450 or fewer homes and require that most or all of them be affordable to the majority of people who live in Sonoma Valley.

Eliminate the hotel, retail and commercial space that is already provided in Glen Ellen.

Protect Open Space by providing enforceable timeline, boundaries and actions for permanently preserving open space and keeping it in public hands. In the DEIR, analyze the impacts of and add enforceable measures to reduce impacts of proposed new uses in the open space including agriculture, agricultural processing, tasting rooms, farm stands, recreation, parking lots, geothermal development and sports facilities (see Table 4-3 of Specific Plan). Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed.

Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new county wildfire risk and hazard maps.

Revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as reusing and demolishing fewer buildings and providing transit.

Signed,

Lauren Reed

Certainly have some respect for the land and open space. We are in a serious drought situation and Sonoma County can only think about tax dollars, but that has always been the mantra of Sonoma county officials. We live in one of the most beautiful lands in California and that is a tribute to those in continue to fight, donate, and encourage the development of open space, trails and wildlife corridors. Stop the incessant development of mega homes and shopping areas and get outdoors.

EXTERNAL

Please do not rush the planning of the SDC. It could be a wonderful addition to our county but needs to be approached with a thorough, realistic and meaningful process that includes, amongst many considerations, wildfire, drought and bio-diversity.

Please engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.

C52-1

Also please re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

Subject: Draft EIR Comments: SDC Specific Plan
Date: Wednesday, August 24, 2022 4:59:33 PM

EXTERNAL

Congratulations on compiling alot of data and public feedback into SDC Specific Plan. Just a little confused at the magnitude of the housing element proposed as most of the community input I remember seeing/hearing said that 400-500 units is the maximum density tolerable to the existing community when considering impacts to traffics, schools and services. However, if 500 out of the 1000 units are going to be used as housing for those that were displaced from SDC or newer clients with similar needs, I think a high density structure that assumes residents that will neither drive or require individual cooking accommodations could be a possibility. In no case should the emphasis shift from low income housing to market rate mini mansions.

C53-1

Keeping the wildlife corridor intact and stream protections for Sonoma Creek can only enhance the health of the watershed and regional community. However, any plan must consider impacts on transient wildlife and one element had the Maker element positionned where wildlife would undoubtedly be disturbed by the noise and dust of any creative work. No point in having a corridor if you are going to scare wildlife away.

I am concerned that with the shift in State timeline for the RFP being extended to 9/9/22, the timeline for draft specific plan and EIR should be adjusted accordingly so that the documents can reflect the potential of qualified proposals for the facility. Less than 2 weeks for review of specific plan and EIR is too tight a schedule to allow the thorough review and careful consideration that many members of the community who have been involved thus far would need for comment. Why end comments for specific plan today and extend comments for EIR till 9/23? Why not pause the whole review process until the State selects qualified proposal so that we are talking about what is actually proposed for the site?

C53-2

I know I have only had time for specific plan review and that has been less than I would usually devote to a project of this magnitude. Sonoma Development Center is a jewel that has served Sonoma County and the State for over a century. After the careful collections of public concerns since 2018, it seems more than a little strange that there should be the last minute disconnect between county and state processes. Please get them back into tandem so that Sonoma County does not miss out on the biggest opportunity this generation will have for continuing our traditions of forward thinking, environmentally sensitive public planning while serving the State in relieving them of a burden. For goodness sake don't let the neglect that was shown in the Community Hospital property handoff be the model for this project. Too much is at stake.

Regards,
Linda Curry

The following letter was sent to the Governor Gavin Newsom and the DGS via Gerald McLaughlin. This letter was also sent to the Sonoma County Board of Supervisors, Senators Mike McGuire and Bill Dodd, and the Sonoma Index Tribune.

This letter is written in support of the Sonoma Land Trust's request to engage in meaningful planning for the SDC by aligning the County Specific Plan with the State's request for development proposals. Stating that no specific plan has been selected and that no mitigations are available for water, traffic, and wildlife is not a viable EIR. C54-1

To the Office of Governor Gavin Newsom:

The Office of the California DGS has rescinded its earlier premature offering of the Sonoma Developmental Center to a developer prior to the completion of an EIR. The 894 acre property has been held as a public trust to benefit both the disabled and the community. It also serves as the major water recharge shed for Sonoma Valley and is directly in the path of Sonoma Creek which crosses Sonoma Valley and exits through Petaluma to the San Francisco Bay. The community recognizes the need for affordable housing, but the proposed 1,000+ home development with only 250 affordable units, a high end hotel, and visitor services as businesses on site ignores the public input and will be an environmental disaster for Sonoma Valley.

The EIR process was fast tracked when the DGS released the property for sale. This is against the law since no project has been designated by the Board of Supervisors nor had the EIR process even been started. The EIR findings were released with the following legal concerns:

1. Where is the Response to Public Comments in the Draft EIR?

2. Where in the DEIR are the actual Specific Plan mitigations listed? (Executive Summary refers to Appendix A, but mitigations are not included)

3. The county is using a "Self-Mitigating Plan" approach. What is the rationale for doing this? How will implementation of mitigations work, since they won't appear in the EIR itself but only as a "condition" of moving forward with development?

4. How, when, and through what mechanism will the open space lands at SDC be permanently protected and kept in public hands?

Also Permit Sonoma states: "Public participation identified three key areas of concern among the 16 areas studied: open space and wildlife, water, and wildfire risk and evacuation routes. The draft Environmental Impact Report finds that the proposed specific plan would not create significant and unavoidable impacts in these areas." The problem is that the impacts are significant and unavoidable. C54-2

There is really no proposed specific plan. The traffic and water studies were done when the SDC was permanently closed by the state, so no impacts were shown due to low traffic and water use in the area. Permit Sonoma has done the EIR only allowing public comments via zoom and the US Mail with no responses to critical concerns.

Sonoma Valley is congested. It has two main roads and one of them had to evacuate 1,000s of Oakmont residents by bus during the last fire since there are no exit routes that can handle evacuation traffic. Three other major developments are now permitted between the city of Sonoma and Santa Rosa and in process along the Highway 12 corridor. Traffic in Sonoma Valley is already impacted, especially in the Boyes Springs area and the city of Sonoma with only one road out. People say that they no longer come to Sonoma because of the traffic. And Sonoma County has been sued for not meeting its own emission standards.

C54-3

Sonoma Valley is already in a state mandated Groundwater Study with well restrictions in place for commercial growth and homeowners' wells being monitored throughout the valley. We have asked for a reduction to 450 homes and no hotel. Please intervene before this goes any further. We need the State of California to come forward to protect what makes Sonoma Valley the destination it is and to protect local resources. This development will add a new city to the valley floor, deplete our vanishing water sources, and create urban sprawl. Please consider resources and action to protect a California resource.

Thank you for being the Governor of California!

Subject: DEIR
Date: Wednesday, September 14, 2022 11:09:41 AM

EXTERNAL

Following are a few specific comments on the content and intent of the SDC's DEIR prior to tomorrow's meeting:

Brian Oh & Staff:

I have specific concerns about information released in the DEIR regarding the land use, hydrology and water, and the methodology used and assumptions made.

C55-1

1) In Article 64 the DEIR states that the property is "located in a local voter-approved Community Separator overlay that preserves lands with low densities between communities....to maintain natural (rural) character and low intensities of development in open spaces between cities and communities."
The SDC traditionally served as a buffer between the communities of Sonoma, El Verano, and Glen Ellen because of the open space between buildings and the land available for clear vistas and access. As noted in the DEIR, voters approved the preservation of open space specifically here now and until renewal in 2036. How can "the high density of the development" as stated later in the report regarding buildings, businesses, parking lots, water runoff and paving throughout the development along with bus stops with lights, shelters, and concrete pads in any way meet the criteria for a Community Separator?

2) Nowhere under Hydrology and Methodology (39.3.2) is the current state mandated Groundwater Study mentioned. Sonoma Valley is currently at the limit of groundwater usage and Russian River resources for the city of Sonoma. Aquifers are not recharging and have reached historic lows. All local wells are now being monitored. The four wells mentioned on the SDC property are subject to the same drought conditions as all the other wells in the valley. Sonoma County just added new, stricter requirements for well permits. In this DEIR you state that "surface water diversions from local creeks supply the majority of water for domestic uses at the site such that groundwater supplies would not be interfered with substantially." How is this possible? Keep in mind that the reservoirs on the property are already earmarked by most water agencies four times over for emergency backup.

C55-2

3) Your methodology and assumptions made regarding groundwater supply, water bodies, impervious surfaces, and drainage patterns seem to imply that developers or homeowners will be responsible for creating "drainage, permeable pavements, and the use of porous concrete" by providing them with educational materials about these alternatives. This is not credible.

The restraints on water, traffic, and the impacts this development will have on the cities around it deserve a realistic plan. This DEIR points that out.

Thank you for responding to my questions,

Springs
Municipal Advisory Council

September 14, 2022

Sonoma County Board of Supervisors
575 Administration Drive
Room 102A
Santa Rosa, California 95403
Via email:

Dear Sonoma County Board of Supervisors:

The Springs Municipal Advisory Council (SMAC) approved on September 14, 2022, the following recommendation in response to the Draft Environmental Impact Report presentation received on August 24, 2022 for the future use of the Sonoma Developmental Center (SDC) in Eldridge, California.

C59-1

The following paragraph is an amendment to the previously submitted letter dated January 12, 2022

Affordable Housing:
That any future SDC housing development be affordable; either owner occupied or long-term rental units. Our recommendation is that housing be for people who work and/or live in Sonoma Valley. The development should be a phased project, incorporating multiple developers and should periodically evaluate the impact to fire, roads, climate, equity, and infrastructure. **Could the percentages of housing be reversed so that affordable housing is 75% in all its permutations and market rate housing be 25% of the ratio?**

Sincerely,

Maité Iturri
Chair, *Springs Municipal Advisory Council*

CC: Congressman Mike Thompson, Representative Cecilia Aguiar-Curry, Governor Gavin Newsom, Senator Mike McGuire, Senator Bill Dodd, Senator Diane Feinstein, Senator Alex Padilla, North Sonoma Valley Municipal Advisory Council, Generation Housing, Sonoma City Council, Luther Burbank Housing, MidPen Housing, Sonoma County Community Development Commission, Sonoma County Permit Sonoma, Sonoma Valley Citizens Advisory Commission, Sonoma Index Tribune, Press Democrat, Sonoma Sun, SAHA

Enclosure: SDC letter of support APPROVED 01.12.2022 signed

January 12, 2022

Sonoma County Board of Supervisors
575 Administration Drive
Room 102A
Santa Rosa, California 95403
Via email:

Dear Sonoma County Board of Supervisors:

The Springs Municipal Advisory Council (SMAC) approved on January 12, 2022 the following recommendation for the future use of the Sonoma Developmental Center (SDC) in Eldridge, California.

We want to urge the Board of Supervisors (BOS) to consider a fourth alternative that is inclusive of the ideas and vision of our Sonoma Valley community. The information provided by local organizations was not incorporated into the plans. There needs to be an effort to outreach to Latinx, low income elder communities, renters, disabled and other disenfranchised populations. Locally gathered information will be useful in addressing the recent, pressing and ongoing concerns not exclusive of but including drought and fire. As a guiding principle, we urge the BOS to require local knowledge and experience in formulating a fourth option. C59-2

We acknowledge that during a Global Pandemic, outreach can be challenging and for that reason alone, we request adequate time—up to a 2-year period—to find another alternative.

In addition, we urge the BOS to lobby the State of California to financially support the remediation and repair of the SDC campus.

We have heard the variety of interests regarding the development of SDC. Some are competing and others are complimentary. The following are some commonalities and agreements among the stakeholders that we represent:

Affordable Housing: C59-3
That any future SDC housing development be affordable; either owner occupied or long-term rental units. Our recommendation is that housing be for people who work and/or live in Sonoma Valley. The development should be a phased project, incorporating multiple

developers and should periodically evaluate the impact to fire, roads, climate, equity, and infrastructure.

Road Access and Transportation:
Consider and evaluate a second access to HWY 12 from the Eastside of SDC campus for emergency egress with the possibility of a permanent thoroughfare if modeling agrees. Provided that said road not have an impact on the wildlife corridor. Any plan should include a class 4 bike lane through the existing SDC and the new egress road.

Vegetation/wildlife/land Preservation:
Maintain the rural nature of our valley. Develop and plan to maintain the wildlife corridor while preserving in perpetuity the currently undeveloped/natural lands of the site.

C59-3

Community Services & Facilities:
That the development provide the following community services at the new SDC:

- Education and Employment Training facilities
- Community facilities that include: a plaza, community hall, park, and a performing arts theater
- Recreation: Swimming pools, sports fields, fitness classes
- Mental Health outreach or crisis center for youth and adults
- Community Health Center

Funding:
Explore creative funding from all levels of government and non-government organizations.

These suggestions were developed based upon information provided by the Springs Municipal Advisory Council members, Sonoma Valley Housing Group and community members. Thank you for your consideration.

Sincerely,

Maite Iturri
Chair, *Springs Municipal Advisory Council*

EXTERNAL

Dear Gentlemen:

I ask that you please review the Specific Plan as well as the EIR of the Sonoma Development Center. Taxpayer resources can be saved if aligned with the State's RFP. We must wait for completion of the RFP. Rushing to push through something without all parts being completed defeats the purpose of working together, plus not considering the importance of what environmental damage may occur.

C60-1

Thank you.

Sincerely,

Marcia Johnson

We've lived next to SDC for 44 years. The dramatic density increase proposed would forever transform us. Gone would be the pastoral small town setting we treasure. Even more importantly, please realize that our snail-paced, stop and go, vehicle-packed evacuation during the 2017 fires was absolutely terrifying and full of danger. So to add 1000 more homes with thousands of additional vehicles to our drought stricken, wildfire prone area is absurd! How can that make sense to anyone? In addition, the drought is serious and real. We're already not watering our gardens, limiting flushes, shortening showers, not washing cars, etc., etc. Adding thousands of people makes no sense since there's already not enough water for those currently here. Of major importance also is that our wildlife's survival depends on our intelligent and realistic planning ....the wildlife corridor must be much wider! Thank you for all the time and effort you are putting into this issue. It can't be easy to have the future of Sonoma Valley in your hands.

Dear Mr. Oh:

I am writing to express my disappointment with the County's August 10, 2022 Draft Specific Plan and Draft EIR for the future of SDC -- and to urge needed action to align the State and County processes.

While we need housing, SDC can't solve it all at once. The proposed addition of 1000 residential units is far too many and feels completely tone deaf to issues of wildfire and drought - much less traffic.

I strongly urge the county to engage in a truly meaningful planning process that aligns with the State's RFP process.

Draft the plan and EIR to effectively and thoroughly analyze the impacts of the proposal.

Listen to your constituents!

Thank you for your attention to this matter. A thoughtful and thorough process can result in a great outcome for the valley, for our safety and the welfare of generations of humans, animals and flora!

C62-1

Respectfully,
Marie Andel

To whom it may concern,

I just wanted to convey how important it is to preserve the open space, along with keeping a wildlife corridor available at the former SDC campus. We have all studied the maps and have seen how critical this area is to protecting wildlife in Sonoma/Marin county! To allow corporate greed to take over, and destroy this precious habitat we have in Glen Ellen would be very sad for mankind.

C63-1

Just the other day I saw two species cross the road in front of me on my way to Sonoma as I drove through the SDC campus. To choke them off through more development would be a mistake forever, and a true pity.

Thank you,

Sincerely:

Mark Speer, Glen Ellen.

EXTERNAL

As you know, Sonoma County released the Draft Environmental Impact Report (EIR) and Draft Specific Plan for Sonoma Developmental Center (SDC) on August 10, 2020.

I am submitting the following comments:

1. The Sonoma County Board of Supervisors gave direction to pursue a specific plan for SDC with fewer than 1,000 homes, yet the Drafts (EIR and SDC) propose 1,000 residential units with extensive commercial development. This leaves the drafts inadequate as the environmental impacts and challenges of today that include wildfire, drought, and biodiversity loss are not addressed. C64-1

2. Aligning the Specific Plan and EIR with the State's RFP selection process, would increase efficiency, save valuable taxpayer resources, and ensure thorough planning and environmental review. Review of the Draft Specific Plan and Draft EIR must be paused pending completion of the RFP process. The State is due to announce the RFP selection on October 24, 2022. C64-2

3. Re-draft the Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the Specific Plan and EIR provide the streamlined process they are designed to provide. C64-3

Thank you for the opportunity to comment.

RE: SDC Draft EIR and Specific Plan

To the Sonoma County Planning Commission:

We have lived within a mile of the Sonoma Developmental Center for over 20 years. We have raised our two children here, walking its streets and trails while appreciating the truly special place it is, from its diverse community of residents, to its rich wildlife population, and its verdant landscape. It is a unique resource for our community--- for the entire North Bay, that requires a well-considered, thoughtful approach to its transition.

C65-1

While the process may have started out this way, this push to approve an inadequate, nonspecific and unenforceable Draft EIR and Specific Plan is a dangerous and unconscionable rush to judgement. Undertaking this process simultaneous to the State's Request for Proposal is a waste of precious resources; these tools should react to a *specifc* development proposal that has yet to be produced. The Draft EIR and Specific Plan before you makes it clear the process is out of order. Simply, the cart has been placed before the horse.

Your overarching question has to be: What happens if the RFP generates a proposal that this Draft EIR and Specific Plan doesn't *specifically* address, or worse, is so broad that the room for interpretation allows a full range of unintended and unacceptable consequences? The requisite comprehensive detail

of this proposal mandates an EIR and Specific Plan that analyzes point by point all the merits and drawbacks of this enormously complicated project.

C65-1

3.4 Biological Resources

To bring development to the SDC necessitates adding additional roadways to handle the traffic associated with such an overload of residential and commercial units. A new Arnold Drive to Highway 12 connector is proposed—one that would cut a path right though the critical Valley of the Moon Wildlife Corridor. How can this have a "less than significant impact" on the black bears, mountain lions, bobcats, and dozens of other species that have all been documented in the area? If left undisturbed, studies have shown the Wildlife Corridor through the SDC can continue to provide critical connectivity. If development is more important to our environment, what is the plan to mitigate this unrecoverable loss?

C65-2

3.9 Hydrology and Water Quality

Where is the water coming from to support 2,400 new residents? The Draft EIR suggests there will be no impact on groundwater. For those who have been asked to conserve water because of a local dwindling supply, development on this scale makes no sense. How will this undeniable impact during a drought emergency be mitigated?

C65-3

3.10 Land Use and Planning

How can we know that "development under the Proposed Plan would not physically divide an established community" if the Draft EIR isn't even reacting to a specific development proposal? Those of us on the southside of Glen Ellen would argue any type of major development in the SDC corridor could sever our connection to the village on the north side of Glen Ellen. The project should work to unify, not divide, our historic community, but without specifics, we cannot know what impacts might occur and how they might be mitigated.

C65-4

3.12 Population and Housing

While we are aware how much Sonoma County needs affordable housing (with two sons who've regretfully had to settle elsewhere to afford their homes), using the SDC to resolve this issue is unrealistic. From a practical standpoint, this

C65-5

project's horizon is not even within ABAG's Regional Housing Needs Allocation time frame (2040 vs. 2023-2030). As broadly conceived as it is now, the Draft EIR and Specific Plan can't even ensure development that complies with the requirements that new housing be firesafe, reduce environmental impacts and traffic, and mitigates the drought emergency.

Right now, there are about 700 dwelling units in the Village and 350 in the concentrated southside. You don't need an expert to see that doubling—not to mention potentially tripling, the housing units in Glen Ellen by building them all in the acres between the two will have an impact. Even the lowest increase of 450 units in the Historic Preservation Plan would represent a 45% increase and have an impact of at least equal measure. Trying to solve Sonoma County's housing crisis all in one project located in a narrow Valley with one road in and out is poor planning pure and simple; *nothing* in this Draft EIR suggests how the attendant problems of this scale of development might be resolved.

C65-5

3.14 Transportation

Again: one road in, one road out. Then layer in at least one car in every new garage. Even in its heyday in the 1950's the SDC didn't have as much traffic as this scale of development will generate, and the Valley of the Moon, had a much lower surrounding population back then. Adding 1,000 homes could easily add as many cars, particularly given the limited public transportation and limited services in the area. These new residents will need cars and they will need a great deal more time for commuting when they are stuck on that one road in, one road out. Adding another crossing between Arnold Drive and Highway 12 will still place all these cars, a substantial increase, on two two-lane roads that are already heavily travelled—and have a devastating record for traffic fatalities in this very area. There will be a transportation impact regardless of the scope of the project—it must be comprehensively and specifically analyzed and the impacts duly mitigated.

C65-6

3.16 Wildfire

In 2017, we packed up our family and pets as we were ordered to evacuate our home due to the Nuns Fire and were stuck in gridlock on Arnold Drive for *hours* as we joined our neighbors attempting to flee the flames. The suggestion that

C65-7

adding 2,400 residents would not "not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan," would be laughable, if the consequences were not so frightening. The location proposed for an additional crossing between Arnold Drive and Highway 12? In 2017, it was *in flames.*

C65-7

We urge you to set this process aside and wait the short time until a development proposal has been chosen by the State. Then a Draft EIR and Specific Plan can be prepared to react to specific issues, impacts can be better analyzed and reasonable mitigation measures proposed. Please do not make a rush to judgement; this resource is too valuable to put at risk.

Sincerely,

Mary Poppic-Reeves

EXTERNAL

I am deeply concerned about the recently released Draft Environmental Impact Report (EIR) and Draft Specific Plan for the Sonoma Developmental Center (SDC). Initiating this review is premature as the California State's Request for Proposal (RFP) has not yet concluded. Spending time and resources reviewing hypotheticals is unnecessary and wasteful, particularly when predominant, critical issues of wildfire, drought and biodiversity loss are not even being addressed. Continuing the review process at this point would be irresponsible. I urge you to pause this process until such time that the Specific Plan and EIR can be aligned with the State's RFP. Specifically:

C66-1

1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.
2. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

Sincerely,

Mary Poppic-Reeves

From: Michael Lockert
To: Brian Oh; Susan Gorin; PlanningAgency
Subject: Response to DEIR and Specific Plan for SDC
Date: Saturday, September 10, 2022 11:32:34 AM

Dear Sonoma County Planning Commissioners,

As a 46 year resident of Sonoma Valley, I am infuriated by the total dismissal of public input and disregard for public safety reflected in the SDC Plan and Draft EIR. Virtually ALL of the public comments at various meetings over several years have been in support of a much smaller development, with a MAXIMUM of 400 (affordable) units, no hotel, little to no businesses, and honoring the historic significance of the site. The current proposal has so many problems I hardly know where to begin. C68-1

First and foremost, the impact on fire safety and emergency evacuation cannot be overstated. Valley residents well remember the 2017 wildfire which came into Glen Ellen, and forced the evacuation of hundreds of residents, who found themselves stuck in traffic, taking 2-3 hours just to get to Hwy 37. The idea that adding 2-3000 residents and their pets to the Eldridge area will not have a significant impact on that traffic would be laughable if it were not so potentially dangerous. Adding one connector between Arnold Drive and Hwy 12 will not seriously mitigate that problem. In my opinion, anybody approving the plan, as is, will have blood on their hands when the next wildfire happens. And it will.

Secondly, the impact on daily traffic is summarily dismissed as minimal, needing no mitigation whatsoever. I don't know where the authors of this report live, but it is not in Sonoma Valley. It's insane and ridiculous on its face. If we are adding 1000 units of housing, AND a hotel, we are talking about a daily increase of AT LEAST a couple thousand car trips daily without the hotel. The hotel will add who knows how many guests, and staff working 24/7. This will be true even if, decades from now, everyone will be driving electric cars. C68-2

Although that should lead us to a discussion of the Greenhouse Gas Emissions involved in such a plan, which are required to be considered by any EIR in California, I want to mention another factor that no one seems to be considering, namely the effect of all these residents having pets. There is an explosion of the number of people owning dogs and cats in the USA, and I presume this will be the case for any residents of this project. Inevitably, many of these will escape, having a huge impact on the current and proposed wildlife corridor. Since 1970, the songbird population in the US has declined by 30%, and according to the American Bird Conservancy, cats are the leading cause of direct, human-caused bird mortality. The International Union for Conservation of Nature (IUCN) lists domestic cats as one of the world's worst non-native invasive species.

Dogs, both on leash and off, will also have a negative impact on the wildlife corridor, but no one is even considering these impacts let alone recommending any mitigations.

Apparently, all of the meetings and requests for public input by the State and County have been a sham. Not one of our governmental representatives

has worked as public servants, taking the voice of the people to the halls of power. Not one of our state reps, for instance, has objected to the onerous burden of the estimated $100 million cost of cleaning up the neglected water system and other sources of pollution, caused by the State of California, sole owner of the property for over 100 years. Shame on the Department of Governmental Services and shame on all our state and county representatives for betraying the public trust.

C68-2

Yours sincerely,
Michael Lockert

Dear Mr. Oh,

I'm writing to you regarding the SDC plan for its future development.

First, I request the county please align the Specific Plan and EIR with the State's RFP, which would increase efficiency, save valuable taxpayer resources, and ensure thorough planning and environmental review. **Review of the Specific Plan and EIR must be paused pending completion of the RFP process.**

I urge the County to:

1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.
2. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

C70-1

Suggestions for alternative plans at SDC:

I request you please consider a much smaller housing footprint in this area, no more than 400 units. The proposed 1,000 units in that hard to access area is a very bad idea. The traffic would be terrible and our rural roads can't sustain this.

Why couldn't the county focus instead on beautifying and redeveloping the already developed areas all over Sonoma County, especially the Santa Rosa Ave corridor, the downtown mall and the admin center on Mendocino?

C70-2

Santa Rosa avenue is practically an urban blight. After decades of haphazard development from Rohnert Park up to Santa Rosa downtown, it's a hodgepodge with many undeveloped lots, businesses that seem on brink of closing, and overall it's an eyesore.

Instead, as other urban renewal projects have done very successfully, a long term plan for 1,000+ new housing units closer to our core, with better public transport and bike/walk paths lining a beatified tree lined boulevard from RP to SR would be the best plan for our County's future. This can be done in partnership with private sector developers and a voluntary program attractive to property owners in this corridor. Many of these owners might be happy to sell to a developer, especially with a creative program.

Imagine our future with a beautiful tree lined Santa Rosa Ave, with wide bike/walk path from

C70-3

RP to SR, along with small sitting/resting parks/gardens along the way. The area can include new housing units, some 5 stories high or higher, yet all along the boulevard the set backs would be tree lined and park like looking. With a model like this you could provide enough housing in Sonoma County for the next 50+ years.

Commercial and retail could remain and be integrated into this model, yet they should be more consolidated to take up less space, multi story retail mini malls integrated with shared work sites and housing as an example. It can be done, it would take a 25 year plan, but that is better than destroying the few open spaces we have left.

C70-3

The SDC is best developed as mostly a park like resource for Sonoma County, and something far less traffic creating or sprawl inducing. That land is far better left to very sparsely populated development, a small number of large private residential parcels, a few dense low/mid income units, and mostly a beautiful park like area with some land set aside as wildlife corridors to help sustain what we have left here of our native flora and fauna. This SDC area should have open space land set aside connecting the Sonoma Valley and Jack London State Park with the greater Mayacamas wildlife corridors.

Please, before it's too late, reconsider this Sonoma County knee jerk decision of sprawl everywhere. This will only cause more problems than it solves. At the very least, decrease the numbers of units to no more than 400.

Thank you,
Moira Jacobs
Bennett Valley

EXTERNAL

Dear Mr. Oh,

Why is the County pursuing its own agenda concerning the SDC before the State RFP process is complete? This seems like a waste of time and will only lead to confusion and great frustration for the residents affected by what happens to the SDC.

C71-1

Please wait until the State selects a speciic proposal so that the County Specific Plan and EIR will actually address the chosen developmental strategy.

We need to have this done correctly.

Sincerely,

Monica A Menco

Kenwood Resident and Property Owner

Sonoma County's Specific & EIR Plans should be working in tandem and in conjunction with the State's RFP, & both should address the threats of wildfires
drought, climate change & loss of wildlife habitat and biodiversity.
Commercial development of this unique property would be a travesty that would
profit a few developers & enrich County & State coffers with the resulting property taxes.
I encourage you to work together in designing a futuristic plan for SDC that will
preserve it's unique, pristine and natural beauty for the enjoyment and health of all the citizens of CA . **Once commercially developed this jewel, SDC, is gone forever, never to be replaced.**

Sonoma Developmental Center Site Planning Considerations for Housing Needs for Individuals with Developmental Disabilities

Introduction

The Sonoma Developmental Center site closure has affected many individuals with developmental disabilities. Many have been successfully integrated into their communities through the group home, supported living services, and enhanced behavioral support home (EBSH) models. This has allowed many individuals greater access to their community than may have been previously afforded to them. One population, individuals with developmental disabilities and high behavioral needs, have been less successful integrating into the new community model.

C73-1

What are the issues that are prohibitive to successful integration?

There are several issues that are prohibitive to successful integration. Individuals with high behavioral needs often display aggressive or disruptive behaviors in their neighborhoods while attempting to access natural walking paths or enter into staff vehicles. Even with trained behavioral staff, staff may at times need to implement restraint measures to assist an individual to a safe environment to emotionally regulate. An individual may yell, cuss, or attempt to kick or hit staff during an episode, as well as engage in self-injurious behaviors. In their residence and yards, individuals may yell, cuss, engage in self injury and property destruction. These behaviors can be alarming to neighbors who are unfamiliar with the population and neighbors often feel angry and resentful that an enhanced behavioral support (EBSH) home has been built in their neighborhood. Neighbors often rally together to prevent homes from being developed in their neighborhoods and to shut down existing homes, which has happened successfully in Sonoma County in 2022 when pressure from neighbors shut down a new EBSH home on Hunter Lane in Santa Rosa. As a result, it is currently slated as a home for medical clients with developmental disabilities.

C73-2

What is the current status of housing for individuals with high behavioral needs who cannot successfully enter into community?

C73-3

Many of these individuals are in and out of long-term crisis units when they are not successfully integrated into their communities. Many are warehoused outside of Sonoma County and away from their families and communities because there is more affordable access to acreage in less expensive counties.

What are the housing needs of this community that can be uniquely served by Sonoma Developmental Center Site planning committee?

Our community members with developmental disabilities and high behaviors previously served by Sonoma Developmental Center would benefit from the following structure:

1. Five parcels dedicated to enhanced behavioral support (EBSH) homes, and/or acute or long term (up to 13 months) crisis homes for individuals with developmental disabilities.
2. Homes would be developed on 1-2 acre parcels/and or parcels situated away from dense housing and busy commercial structures to allow for adequate space and privacy for individuals with high behavioral needs.

C73-3

State legislation mandates that the housing needs of individuals with developmental disabilities must take priority in planning measures. The above model is the most advantageous way to meet the needs of those who have not been served by the closure of the Sonoma Developmental Center and continue to have outstanding needs.

Subject:	Sonoma Development Center - Comments on the Draft EIR
Date:	Monday, September 19, 2022 12:13:29 PM

EXTERNAL

Dear Mr. Oh,

Please accept these comments on the Draft EIR for the Sonoma Development Center issued in August 2022. My partner and I are homeowners in Glen Ellen and will be adversely affected by the proposal to build over 1000 homes without taking into account the tremendous impact such a large for- profit development will be on the limited fire/police/highway/water infrastructure. C74-1

PROJECT SCALE and HOUSING

Why isn't the Preservation of Historic Resources and Balancing Redevelopment with Land Use (DEIR pages 5 and 6) which would allow for the largest project in Sonoma Valley – 450 new homes – being considered since it is consistent with the state's statutory objectives? Moreover, even the 450 homes are too many to support the existing infrastructure. During the 2017 fires, Highway 12, Arnold Road and Bennett Valley Road couldn't handle current traffic flow.

As many have already commented, scale is the best way to mitigate environmental and resource impact.

UTILITY INFRASTRUCTURE

PG&E has not been able to keep up with fire mitigation responsibilities with the current housing stock – it's unlikely that they will be able to handle 450, 1000 or 1200 more housing units. By way of example, we live on Warm Springs Road – the PG&E utility pole for our neighborhood has been slated for replacement for 4 years now due to safety and fire concerns. Will PG&E preference bringing utilities to a new hotel over maintaining its' existing infrastructure? C74-2

WILDLIFE CORRIDOR

Why is there no analysis of the impacts on the wildlife corridor through the campus? C74-3

POPULATION AND GROWTH ASSUMPTIONS

The proposed plan represents double or tripling of community housing numbers and an extraordinary increase in traffic on already crowded rural roads. The urban sprawl growth scenario is in direct conflict with climate change policies to encourage smart/dense growth near existing transit.

C71-3

FIRE/EMERGENCY PREPAREDNESS

Having experienced all the disruption of the 2017 fires, it's shocking that the DEIR did not consider a fire scenario where the fire comes from the West. It's also troubling that the DEIR does not take into account an evacuation scenario where the broadband and cell service is out (which would replicate the 2017 fires). Building on-site shelter (Section 16.1.3.4) makes no sense given how devastating fire can be in this area.

C74-4

During the 2017 fire it took between 1 and 2 hours for Oakmont residents to get onto Hwy 12 and it took our neighborhood (Glen Ellen near Kenwood) hours. Adding 450, 1000, or 1200 homes (and twice or 3x as many cars given the lack of public transportation in Sonoma) will create unprecedented traffic jams during a fire. The SR 12 connector road will only work if the fire doesn't cross the road (during the 2017 fires the fire jumped Hwy 12 and Bennett Valley Road in a number of places).

In sum, we strongly recommend that the DraftEIR be rejected and that instead of focusing on for profit housing and hotel development, that the County reopen the process for the development of the SDC to take into account fire, safety, community, wildlife, climate change considerations. My personal preference would be that the site be used to support nonprofits and nonprofit run temporary supportive housing for the homeless, those escaping sex trafficking, and the recently incarcerated at a scale more suitable to the space. The space could also be used for 30-60-90 day addiction treatment programs.

Best,

Pamela Merchant

Esteemed Planners of Sonoma County:

After decades of climate investigation and repeated and prolonged episodes of drought, I think it is vital for the county to engage in an alignment of the Specific Plan and EIR with the State's RFP. "Development," even for tax base purposes, is no longer defensible in this region, mostly owing to lack of water, but for many other environmental and traffic considerations. I need not elaborate, as these problems are already well known. I would only suggest that lack of water is a major factor in this case. I would also suggest that anyone involved in current planning leave their offices to visit the sad remains of Sonoma Creek and the lake at Jack London Park. What lake? The old era of expanding commercial and residential growth has ended. Conservation and preservation are essential.

C75-1

The SDC acreage is a gem of Sonoma County and even of northern California, an invaluable remnant of historical importance and wildlife sustainability. I grant that SDC property is owned by the State, but any State property also belongs to state residents and native wildlife. State ownership is more a matter of responsible guardianship than control for the sake of commercial exploitation.

On my personal involvement: As a longtime Glen Ellen property owner, I realize that any further reduction in ground water could result in the need to deepen my water well, which I could not afford. I trust we are all aware of the dire situation in Klamath County, Oregon, and other desert regions. Water is life and must be conserved, not depleted.

Thank you for considering my lengthy letter.

Patricia Spicer

Permit Sonoma
Attn: Brian Oh and Bradley Dunn
2550 Ventura Ave
Santa Rosa CA 95403

Questions **1-22** for SDC Specific Plan DEIR
Due Sept. 23, 2022

Definitions:
SDC – Sonoma Development Center
DEIR – Draft Environmental Impact Report
HCD – Dept. of Housing and Community Development
RHNA – Regional Housing Needs Assessment, issued by HCD

APPENDIX D WATER SUPPLY ASSESSMENT AND HYDROLOGY & WATER QUALITY

- (p. 469 of the DEIR) The DEIR claims that "The WSA concludes all future demands within its service area can be met, inclusive of the Proposed Project in normal and multiple dry hydrologic years from 2025 through 2045." This same DEIR only acknowledges the likelihood of "single dry years", rather than a concatenation of multiple dry years.
  1. **Recognizing that we are already in our second year of a severe drought in Sonoma County and are still under water restrictions that date back to 2014, what justification does Permit Sonoma use to assert that the only issues concerning water availability were for "single dry years?"**
  2. **Does Permit Sonoma accept that a) Climate Change is driving new drier, hotter climates worldwide, including that in Sonoma County, b) that these changes are man-made, and c) that they will continually worsen until the atmosphere's load of CO_2 diminishes significantly?**

C76-1

- (p. 15 of Appendix D) Climate Change as described by the UN Intergovernmental Panel on Climate Change is a cumulative phenomenon. The more CO_2 we place in the atmosphere, the more dry, warm years we will have, NOT LESS.
  3. **If Permit Sonoma accepts man-made Climate Change, and that our dry, warming pattern will only get worse, then why does it presume that there will "Rebound"**

C76-2

years, and why does it presume that the Rebound will be sufficient to make up for the dry years?

4. **In Appendix D, p. 41, your own model predicts that "starting in 2030, water demands will exceed water supplies due to Lake Sonoma declining below 100,000 Acre-Feet before July 15. For the last two years Lake Sonoma water supplies were below 130,000 Acre-Feet. With recognition that Climate Change is forcing even dryer conditions, how can Permit Sonoma glibly add more total hookups from not just the SDC Specific Plan (1000+ hookups), but also the Springs Specific Plan (480+ hookups), the Sonoma Airport Specific Plan --- with such a small margin of error regarding the water levels in Lake Sonoma?**
5. **The last option for Sonoma Water is to obtain water from its groundwater pumps. While capacity is high today, groundwater depends upon rainfall plus snowmelt, both of which will be diminishing for the foreseeable future. Where can I find your predictions of rainfall and snowmelt for the next two decades, and their comparison to the 2000-2010 decade?**
6. **Snowpack in the Northern Sierra's 8-Station Index fell to 61% of normal between 2019-2022. Santa Rosa has received only 55% of normal rainfall in the 2019-2022 period. <u>Using</u> these conditions, and given that they were not included in any estimate or calculation of water supplies in the DEIR, what is the Permit Sonoma prediction of expected water supplies for the Valley of the Moon Water District for the next decade?**

C76-2

- Table 13 of Appendix D attempts to show that even in multiple dry years the supply exceeds the demand. Yet on its face, this cannot be true. Multiple dry years imply that demand exceeds supply for several years in a row. This never occurs in Table 13. In fact supply remains exactly as it was during normal years.
  7. **How can the yearly supply not diminish during multiple dry years?**
  8. **Why is the VOMWD supply in a normal year 3200 AFY and in a multiple dry year still 3200 AFY?**
  9. **Where is there evidence of ANY dry year??**

C76-3

WILDFIRE EVACUATION

- The SDC Specific Plan DEIR utilized the study by Wong, Broader, and Shaheen to establish the fraction of the working and living population present during a wildfire evacuation.
  10. **Many if not most of the evacuations used in the Wong et al. study occurred at night, not during rush hours. How would your two scenarios' results change if a scenario had been provided at midnight?**
  11. **The Wong study was used to establish the number of people needing to evacuate. However, at the chosen time, rush hour, many residents would be returning home. Did the studied scenarios include the presence of residents returning against the evacuating traffic to retrieve their spouses and important documents?**

C76-4

12. Did your two scenarios include the neighborhoods of Glen Ellen, Kenwood, Oakmont, the Springs, and/or Sonoma?
13. Having seen multiple evacuations since 2017, it is typical that state and local police routinely force traffic to go ONLY in the evacuating direction. Was this included in the two utilized evacuation scenarios?
14. If such police action was not simulated, then how are your time results changed by such an addition of forced traffic directions?
15. All such evacuation/traffic computer codes require benchmark testing to establish their credibility. What benchmark evacuation was utilized to confirm your code's credibility?

C76-4

- **You have multiple individual experiences from the Nun's Fire of Oct. 8, 2017 that cascaded through Glen Ellen at 11:30PM. Participants can tell you exactly how long they took to evacuate. (Most times were in the hour range, not minutes as you O**

16. Why did you not use the Nun's fire as your benchmarking calculation?
17. What results would you get, if you ran your calculation for Glen Ellen at 11:30PM at night?

C76-5

- On Aug. 17, 2022 the Board of Forestry approved the updated Minimum Fire Safe Regulations, applicable state-wide.

15. How will the new regulations impact SDC Specific Plan housing density, road configurations, road widths, dead-end roads, etc. to maintain consistency with the new rules?

- Cal Fire Hazard Zone maps were last published in 2007. New maps are being redrawn to account for the many wildfires beginning in 2017 that are largely the result of a warming, drier climate. The map changes are mostly going from lower hazard levels to higher hazard levels and are expected to be published during the Fall 2022.

16. Did estimates of fire susceptibility of the SDC area take such changes into consideration?
17. Did estimates of fire susceptibility of the SDC area account for the wildfires of 2017 that penetrated Glen Ellen? Did they account for the multitude of wildfires in Sonoma County during 2018-2021?

C76-6

AIR QUALITY

- SDC DEIR p. 183 uses the same tired argument that since the Specific Plan VMT adds only 1.1% to the whole of Sonoma County, that thus its contribution is Less than Significant. This absurd argument is deafened by the observation that most auto trips are less than 5 miles in length, and thus the correct VMT for comparison is the local VMT, not the County VMT.

18. **Why did this calculation not compare the VMT added from the Specific Plan to that of existing Glen Ellen, where in fact this traffic will reside?**

C76-7

POPULATION AND HOUSING

- (p. 364 of DEIR) Sonoma County appealed its original RHNA for the unincorporated County, of which the Springs Specific Plan is a part. HCD did not accept the appeal and kept the RHNA at 3881 new dwelling units during 2023-2031. Within the RHNA Appeal Request, Sonoma County accepted the 7% growth estimate which has no factual basis. The HCD uses Population Projection data from the Dept of Finance Demographics Research Unit (DRU), whose data is presented below for Sonoma County:

C76-8

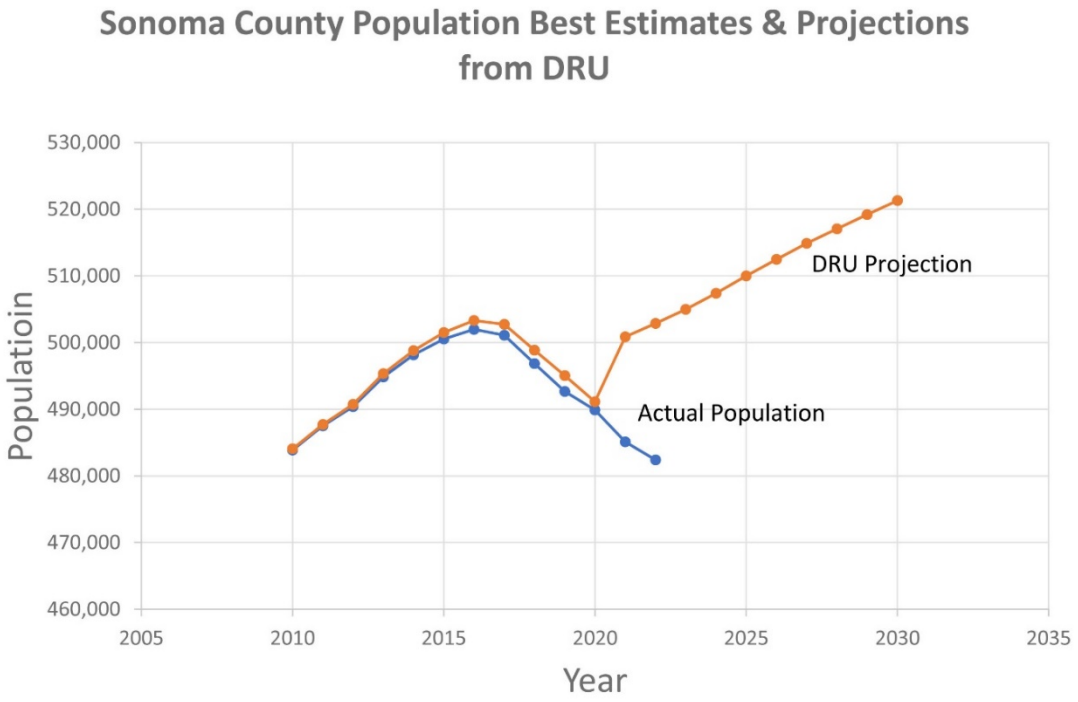

Figure 1

These data come directly from both DRU Estimates (actual census data plus births, deaths, DMV registrations, and more), and DRU Projections (based upon decades of prior history plus demographics). Their spreadsheets are available to all online from the Dept. of Finance and are attached to this email. Note the great difference between the speculation of the DRU Projection, when compared to the Actual DRU Population Estimates. The actual population of Sonoma County has been decreasing since 2016, continuously decreasing, and NOT INCREASING. Thus the push for added market-rate housing to accommodate a growing population is an unsupportable assumption. This DEIR on p. 364 blindly accepts their projections for population growth. Clearly the writers of this EIR did not read the source DRU data.

C76-8

19. Why did the DEIR accept the 9% growth rate, since County population has been decreasing from 2017 through Jan. 2022, based upon Dept. of Finance DRU data, and since there is no factual basis upon which to base the Projection?

20. How could the County rewrite the SDC Specific Plan to demonstrate the greater likelihood that County population will be static or slightly decreasing?

21. On p. 367 the SDC DEIR acknowledges that from 2010 to 2020 the Sonoma County total population increased by only 1.3% (also seen in plotted data above), however, they then, without evidence, presume that the total County population will INCREASE by 9% during 2020-2040. Since the actual on-the-ground evidence is that Sonoma County's population has been continuously decreasing, how does this DEIR justify its supposed population increase?

C76-8

22. Did the writers of this DEIR look at the <u>actual</u> County population data before writing this section on Population and Housing?

Table 1: E-4 Population Estimates for Counties and State 2021-2022 with 2020 Benchmark

COUNTY	4/1/2020	1/1/2021	1/1/2022

RE: The Sonoma Developmental Center, Elnoka and Housing

Dear U.S. Congressman, Senators, Sonoma County Planning Manager and Sonoma Board of Supervisors,

I'll get right to it:

Drought:

I am being asked to reduce my water by 20% while you are considering allowing the Sonoma Developmental Center to add hundreds of homes, commercial development and a hotel. You are also considering adding hundreds of new residences on the Elnoka Property next to Oakmont, where my residence is and where I live. The homes, commercial development, landscaping and other water use tells me that you are not drought conscience. Please consider the rest of us who rely on water and stop the development of the Sonoma Developmental Center and Elnoka and save us all water. You can't have it both ways, we are either in a drought and we need to save at least 20% or we aren't and development is OK.

C77-1

Fire Safety:

During the Nuns Fire, I was awakened on October 8, 2017 around 2:30 AM by a neighbor who said "Get out, get out now, a fire is approaching!" You cannot imagine the fear and

C77-2

worry as I got dressed, grabbed my medication and tried to leave my residence in Oakmont. It took 2 hours of trying to drive out and we all felt we were lucky not to burn in our cars. The backup on Highway 12 was miles long. When we finally were able to come home, 3 weeks later, the devastation along Highway 12 with burned out homes, cars, vegetation and anything that was in the fire's wake was horrifying. Oakmont lost 2 homes including Supervisor Susan Gorin's and a lot of vegetation. This is well documented.

On September 27th, 2020, the Glass Fire reared its ugly head and this time we were sent a voluntary evacuation notification and then a mandatory evacuation notification. The backup along Hwy 12 was again miles long even for those of us who evacuated when we got the voluntary notification. It took many of us another 2 hours to get out safely. Nine days later, I came home to 3 homes that burned to the ground within walking distance of me and Oakmont had a triplex that burned to the ground. I had damage as did my neighbors. This is well documented. C77-2

We have lost hundreds of homes due to these fires along Hwy 12 from Calistoga Rd through Sonoma. I feel that it is irresponsible to build on the Elnoka property, which is right next door to my sub-HOA in Oakmont and to build in the Sonoma Developmental Center due to the amount of traffic just on a normal day/night not to mention in a fire event and water usage.

It appears that widening Highway 12 is not a priority, so then stop more cars from using this highway by not building in this corridor.

Housing:

It is very important to build housing in Sonoma County, in due time. The wrong place to build is in the Valley of The Moon corridor from Elnoka through to Sonoma. Some of the brightest minds live in Sonoma County and I know that they can figure out how to properly balance housing, drought and fire corridors to come up with a better solution. Remember for every gallon of water used in new housing, landscaping and new hotels is one less gallon of water for the rest of us. C77-3

Sincerely,

cc: U.S Congressman Mike Thompson

State Senator Mike McGuire

State Senator Bill Dodd

Subject:	Formal Comment on SDC Specific Plan and Draft EIR
Date:	Monday, September 12, 2022 5:27:16 PM

EXTERNAL

As a retired professional historic preservationist for the National Park Service, I would like to submit my strong support for the Historic Preservation Alternative outlined in the Executive Summary Section ES.3.3 of the SDC Specific Plan Draft EIR (August 2022).

A loss of 28% of Contributing historic resources, combined with new, dense infill construction of 30' to 45' heights and alteration and reconstruction of remaining Contributing structures within the National & State Register-eligible Historic District is simply too great a loss of historic fabric to retain the district's historic feeling and character. This would cause the property to lose its eligibility for listing in the National and California Registers and as a California Historic Landmark. These impacts are described in the Draft EIR 3.5.3.4 (Impacts) as "significant because they would cause a substantial adverse change to the historical district as defined by CEQA Guidelines Section 15064.5." These Contributing structures provide much of the historic district's sense of place and honor the legacy of the Developmental Center's former uses and staff. The historic story can best be told with as much of the original character as possible, even with re-purposed original buildings. C78-1

The County's preferred alternative, outlined as the Specific Plan/Public Draft (August 2022), provides some very thoughtful preservation guidelines in the form of Goals and Policies in the Cultural, Historic, and Tribal Cultural Resources Chapter 3.5.3.3 (Relevant Policies and Implementing Actions). However, these don't go far enough to protect important contributing historic resources using words like "to the greatest extent feasible" (Policy 4-23) and "shall seek to avoid demolition" (Policy LU-1). These policies and actions "encourage" but do not guarantee the preservation of the historic character of the Core Campus. C78-2

I am a strong advocate for the overall project's mandated goal of creating affordable housing and housing for individuals with developmental disabilities, as well as other types of housing but feel that the Draft Specific Plan's proposal to create 1,000 units of housing is way too impactful. I feel the Historic Preservation Alternative's plan for 450 units is much more in keeping with the scale of the adjacent communities and minimizes additional traffic impacts. Likewise, I would like to see the idea of an additional connection to Highway 12 added to the Historic Preservation Alternative as a way of further minimizing traffic impacts. I don't understand why the Highway 12 connector idea wasn't included in the Historic Preservation Alternative as it would be outside the Historic District footprint.

I also feel that the concept of adding a small to medium-sized hotel could be accomplished with architectural sensitivity through the use of rehabilitated existing structures, perhaps the Historic Admin Building, the Sonoma House, or a cluster of the existing cottages. Otherwise, an Agritourism-type hotel could be accomplished as new construction as part of the Specific Plan's Agri-hood concept east of Arnold Drive, allowing its patrons to participate in the Agri-hood goals and practices as part of their stay, learning what makes the Sonoma Valley such a special place.

Thank you in advance for including my comments in the final evaluation for the future plan of the SDC property, a place of unparalleled beauty and historical significance.

Subject:	4 questions re SDC DEIR -hazardous materials, traffic, VMT, cumulative impacts
Date:	Thursday, September 15, 2022 10:08:54 AM

EXTERNAL

Planning Commissioners,

You have a lot coming at you on SDC for today's first meeting.on SDC. Rather adding detailed comments to the input load, I will just frame four questions that I hope you will ask of the DEIR sponsors.

1. Why did you (PS) not do Phase II environmental assessments re hazardous materials and substances in the gap areas of recognized environmental conditions (RECs) identified in the prior Phase I and Limited Phase II investigations?

C79-1

The Valley of the Moon Alliance Alliance (VOTMA) filed comments on the need for further environmental assessment work on March 24, 2022 in response for requests for comments in the NOP for the EIR. Those comments are included in pages 459-464 of the appendix to the DEIR. The DEIR acknowledged those comments on page 236 of Section 3.8 Hazards and Hazardous Waste.

But the subsequent portion of Section 3.8 of the DEIR does not add any new analysis of RECs that VOTMA referenced. Instead, the discussion for the most part addresses hazardous materials and substance issues that were identified as known or likely to exist in the Core Planning Area. The discussion acknowledged that the 2017 Limited Phase II report identified a variety of areas, both in the Core Planning Area (CPA) and in the lands outside of the CPA where "further investigation was needed." (pg DEIR 248; download, pg 425) For reason unexplained, it appears that no such further investigation was undertaken. Deferral of investigation and mitigation are not an allowed strategy under CEQA. The DEIR appears incomplete and defective on this issue.

Since the DEIR indicates at various points that the use of non-Core Planning Areas for agriculture, recreation and other uses is anticipated, it is reasonable to conclude that in developing facilities necessary for and in carrying out operations of that sort there will be the need for grading and other soil

disturbance that would upset and uncover hazardous material and substances. The DEIR's approach to study those situations at some time in the future and if they occur constitutes an inadequate and incomplete DEIR. Since the DIER here is likely intended to serve as the environmental review document that will cover the transfer of the preserved lands outside of the Core Planning Area this gap in analysis is problematic.

C79-1

The Planning Commission should ask why no further Phase II (see appendix page 464 for the list of areas that needed further assessment investigation) were undertaken, despite the specific call out in the Limited Phase II assessment for that word as needed.

2. Where is the W-Trans traffic operations analysis that you (PS) suggested in DEIR footnote 118 had been done?

The DEIR analysis of transportation, and specifically traffic issues is inadequate. VMT analysis is great for dense urban projects, but does not capture the nuance of rural transportation impacts. The requirement to use VMT and the adverse impact preclusion of LOS for projects CEQA analysis does no preclude the PC or The Board from requiring a traffic impact analysis to assist decision making for land use policy planning purposes and for assessing fire/flood/earthquake evacuation risk parameters.

C79-2

PS recognizes that reality and tries to avoid that issue by implying that W-Trans has done an LOS study. In the text associated and associated footnote 118, PS suggests that it has done a traffic impact analysis. When asked to provide that analysis referenced in fn 118, PS responded that the analysis was in Appendix F of the DEIR appendix. Appendix F at pg 748 consists of a one page set of "Traffic Volume Data."There is no text, no interpretation, no assumptions, no contextual analysis.

PS should explain why it did not use the Sonoma Valley Traffic Study done in connection with the winery events ordinance, and why it did not use the SCTA Traffic Demand Model to assess congestion associated with the preferred project.

3. Where is the stand-alone project specific VMT analysis for this project?

C79-3

Perhaps I missed it in the 3534 page appendices, but I did not see a stand-alone

VMT study that could be reviewed for assumptions and whether all the appropriate TAZ had been included, and the overall documents could have been reviewed for completeness. Appendix F is exactly one page and relates to the W-Trans non-analysis of traffic impacts.

The textual analysis in the DEIR itself is full of summary and conclusory statements. On its face the findings 1) on page 442 that traffic from Harney to Glen Ellen would be reduced from peak, 2) on pages 445-446 that household, employment, and total service VMT would be reduced by the project compared to peak, and 3) on page 451 that the project would not result in inadequate emergency access, all seem particularly unsupported, counter-intuitive, and problematic. It would seem relevant in that context for the PC to ask some simple foundational questions like where will the people working at SDC be coming from to work there, where will the people who live at SDC but work off site be traveling to, where would guests at the hotel be coming from, where is the nearest pharmacy, where is the nearest full service affordable market, where are the nearest medical and dental general and specialist services, where is the nearest medical complex, and what will be the impact on Highway 12 traffic of having another traffic signal at the new proposed connector? The answers to those questions are not obvious in the transportation segment of the DEIR.

C79-3

4. Where is the detailed cumulative impact analysis?

The DEIR basically dodges this requirement by saying that the cumulative impacts are already covered in relevant regional analyses.

C79-4

Overall, this is a very strange DEIR. Please require significant revisions and improvements in this DEIR so that community interests and concerns are fully addressed. Hold Permit Sonoma to the same standard of quality that it would hold private parties to meet.

Thank you.

EXTERNAL

Sent from my iPad

Dear Sir,

I read that the Draft Environmental Impact Report was released for the Sonoma Developmental Center on 10 August 2022 with a plan for at least 1,000 residential units and extensive commercial development. This report is premature because the State has not yet completed the RFP process. I request that you please wait to further this development until after the completion of the RFP Proposal.

I realize that there is a need for more housing in Sonoma County but, as a resident who has evacuated four times and came close to losing their home during the Tubbs fire I truly hope that the safety and possible evacuation of residents be taken into account. We know that there will be more fires and Highway 12 is just not equipped for the additional people that all of the proposed new developments (Oakmont, Skyhawk, Mahonia Glen etc) plus all of us who already live in this area. It is terrifying to be stuck in traffic when you know that a wildfire is heading towards you and adding so many new homes is nothing short of reckless and will potentially result in loss of life.

C80-1

Add to this the lack of available water for everyone due to the drought and the loss of wildfire habitat I ask that you seriously take all of these issues into account when making future decisions for the Developmental Center - lives will be endangered by poor decisions.

Sincerely,

Sandra Mauerhan

Subject: Draft EIR Comments: SDC Specific Plan
Date: Saturday, August 20, 2022 8:58:33 AM

EXTERNAL

Hello Brian,

I am a long-time Sonoma County resident who has been interested in and have been following the history of the Sonoma Development Center and the property it sits on, for decades--way before the sale from the State of California and the beginning of a redevelopment plan for it's new use.

I had understood that the State of California, the former owner of the property, was part of the developmental proposal process and that the sale and purchase of the land was intended to create a plan which would mitigate wildfire, drought and biodiversity loss, huge issues impacting our community currently and even more so in the future.

C81-1

I have now learned that you recently released a draft of an Environmental Impact Report and Specific Plan for SDC which has changed the intentions of the original vision to now include more than 1,000 residential units and extensive commercial development. I am very concerned that this recent draft is not aligned with the State's proposal and is not honoring the original intent of the sale and redevelopment plan.

I am asking that you re-draft your plan which was released on August 10, 2022. That you wait until after the State announces their RFP selection which I understand is to take place on October 24, 2022, and then revise your plan to incorporate their findings. And that in your revision, you include a description and an analysis of the impacts of the actual proposal that the State is selecting for this SDC property. From my prospective, it is important that Sonoma County's plans for this somewhat fragile wildlife corridor be aligned with the State's process and that the ultimate goal protects the land as well as serves the human endeavors which benefit from it.

C81-2

Thank you for your consideration.

Sincerely,

Sharon Bard

--[if !supportLists]-->• <!--[endif]--><u>**EVACUATIONS**</u>**.** Can you certify and provide documentation that the traffic model referenced in the DEIR included the ***<u>cumulative</u>*** impacts of <u>all</u> development (including those not yet built) impacting Highway 12 from Santa Rosa to Sonoma and Arnold Drive, including special events?

Claims that adding up to 1,000 housing units (2,400 residents) with an estimated 2 vehicles per household plus 940 jobs in the commercial area (and special events) would not impact our ability to evacuate during the next emergency are irresponsible. The "models" used defy common sense, ignore the already burdened two lane roads (Highway 12 and Arnold Drive), paint a rosy picture of available public transportation and thus demand for vehicles and are clearly a transparent attempt to move past this life or death matter. The draft EIR clearly has not sufficiently considered the ***<u>cumulative</u>*** impact of development at the SDC, the Highway 12 corridor (from Santa Rosa to Sonoma), and Arnold Drive, including special events, on our ability to evacuate. A Highway 12 connector would only serve to send people toward the fire in a futile circle which could make evacuation even worse and removes an obstacle to growth in protected areas which would further exacerbate our ability to evacuate during a wildfire. ***Note that the Elnoka Senior Community project on Highway 12 in Santa Rosa was recently reduced by 60% (from 676 units to 272 units) to address concerns raised by the community and to address potential traffic impacts.***

C82-1

"Shelter-in-place", seems like a death warrant, given the extreme devastation caused by wildfires. That concept would certainly reduce vehicles exiting for your models and would also likely increase deaths. Why not address this matter honestly now?

--[if !supportLists]-->• <!--[endif]--><u>**CLIMATE CHANGE**</u>. The Fire Hazard Severity Zone Map referenced in Figure 2.3-1 of the Specific Plan is undated—what is the date of the information you are relying upon?

C82-2

<u>Figure 2.3-1 of Specific Plan in inaccurate</u>. It does not reflect the fire damage along Sonoma Creek to the nursery on Trestle Glen or the loss of a home and other structures along Burbank Drive in the 2017 Nuns Fire.

CalFire is updating the Fire Hazard Severity Zones Maps for the first time since 2007. The

new maps are to be released before the end of the year. Have these been taken into consideration? Climate change is here and affecting us now, with forecasts to get much worse. This must be addressed!

C82-2

How can Risk Factor tell me that properties near Sonoma Creek have a MAJOR risk of flooding which is in direct conflict to the Statement in Section 2.3 of the draft Specific Plan and the 100-year flood plain in Figure 5.3-1 titled "Maximum Heights" that "all 100 year and 500 year floods can be accommodated within the banks of Sonoma Creek without additional flooding". What recent analysis has been performed on flood risk or are you using old data? Last October, per Sonoma Water, an Atmospheric River brought 9" of rain on Sonoma Mountain, causing waste water collections systems to overflow in several locations, including all along Sonoma Creek and notably, at Burbank Drive in Glen Ellen. Is that public health hazard being addressed? The fact that so much water fell at one time is another piece of data pointing to climate change and the potential for flooding along Sonoma Creek.

C82-3

--[if !supportLists]-->• <!--[endif]--><u>**PARKING**</u>. How will you ensure that our Glen Ellen neighborhood on the South side of the SDC will not have to support parking for those seeking free parking not available at the campus?

Parking policy 3-27 in the draft Specific Plan says there will be NO free parking within the campus. Further, the plan is to provide less parking than would typically be required, to encourage biking and walking. What a disaster for the neighborhood to the South! People will park and store vehicles along Martin, Lorna, Cecelia, Burbank, Sonoma Glen Circle and Marty due to lack of parking spaces and to avoid charges. In addition, the concept of shared parking between residential and commercial is not realistic in practice. This will clearly burden an existing neighborhood to allow for increased development and profit for the developer and pretend there are fewer vehicles. Unacceptable!

C82-4

--[if !supportLists]-->• <!--[endif]--><u>**GLEN ELLEN, NOT ELDRIDGE**</u>. PLEASE explain why the Glen Ellen neighborhood South of the SDC continues to be disrespected by calling us Eldridge? Are you unilaterally deciding to change our name from Glen Ellen to Eldridge so you don't have to acknowledge that you are in fact dividing our Glen Ellen community? Reference Table 4.5-1, Summary of Impacts for Alternatives, Page 575, Item 3.9-1 (sic) which

C82-5

is under 3.10 Land Use and Planning.

We are Glen Ellen. Our property tax bills say Glen Ellen, as do our driver's licenses and passports. Eldridge was the SDC campus only and they had their own post office. The SDC and post office are closed. As such, the SDC property is the donut hole of Glen Ellen and should be considered a part of Glen Ellen, not a new town to divide our Glen Ellen community. The development should be in scale that fits the character of the existing community and open space. The proposed scale is simply too much and would be appropriate for San Jose, not Glen Ellen.

C82-5

I participated in the outreach over the years, believing the County was listening to the Community and that the County would embrace a reasonable plan that the Community could support. Instead, you are pushing for the maximum and driving an incompatible plan. Despite pushing an overbuilt plan, you are failing to provide the amount of affordable housing we would support. Clearly there is another agenda which has nothing to do with our Community and affordable housing. I ask that you scale back and restore our faith in our County government.

C82-6

Thank you.

Sharon Church

Proud 30-year resident of Glen Ellen

Subject: SDC Comments

EXTERNAL

Susan, some preliminary comments below. We really need you to firmly step up and advocate that the scale of the proposed plan be reduced to something more appropriate for this area. We aren't NIMBY's and sensible development can take place at the SDC; however, there is no need to destroy our community for developer profit. Permit Sonoma is not representing the community.

C83-1

GLEN ELLEN, NOT ELDRIDGE. The area south of the SDC is Glen Ellen, not Eldridge. Eldridge was the SDC only and they had their own post office. The SDC and post office are closed. As such, the SDC property is the donut hole of Glen Ellen and should be considered a part of Glen Ellen, not a new urban area to divide our community. The development should be in scale that fits the character of the existing community and open space. The proposed scale is simply too much.

EVACUATIONS. Claims that adding up to 1,000 housing units (2,400 residents) with an estimated 2 vehicles per household plus 940 jobs in the commercial area would not impact our ability to evacuate during the next emergency are irresponsible. The "models" used defy common sense, ignore the already burdened two lane roads (Highway 12 and Arnold Drive)

C83-2

and are clearly a transparent attempt to move past this life or death matter. The draft EIR has not sufficiently considered the cumulative impact of development at the SDC, the Highway 12 corridor, and Arnold Drive on our ability to evacuate. A highway 12 connector would only serve to send people in a futile circle which could make evacuation even worse. Note that the Elnoka Senior Community project on Highway 12 in Santa Rosa was recently reduced by 60% (from 676 units to 272 units) to address concerns raised by the community and to address potential traffic impacts.

C83-2

CLIMATE CHANGE. CalFire is updating the Fire Hazard Severity Zones Maps for the first time since 2007. The new maps are to be released before the end of the year. Have these been taken into consideration? What analysis has been performed on flood risk? Risk Factor now lists properties near Sonoma Creek as having MAJOR risks of flooding. Last October, per Sonoma Water, 9" of rain fell on Sonoma Mountain, causing waste water collections systems to overflow in several locations, including all along Sonoma Creek and notably, at Burbank Drive in Glen Ellen. Climate change is here and affecting us now, with forecasts to get much worse. This must be addressed!

C83-3

PARKING. Parking policy 3-27 in the draft Specific Plan says there will be NO free parking within the campus. What a disaster for the neighborhood to the South! People will park and store vehicles along Martin, Lorna, Cecelia, Burbank, Sonoma Glen Circle and Marty due to lack of parking spaces and to avoid charges. In addition, the concept of shared parking between residential and commercial is not realistic in practice. This is clearly an attempt to burden an existing neighborhood to allow for increased development and profit for the developer. Unacceptable!

EXTERNAL

--[if !supportLists]-->• <!--[endif]--><u>**EVACUATIONS.**</u> Can you certify and provide documentation that the traffic model referenced in the DEIR included the ***cumulative*** impacts of <u>all</u> development (including those not yet built) impacting Highway 12 from Santa Rosa to Sonoma and Arnold Drive, including special events?

Claims that adding up to 1,000 housing units (2,400 residents) with an estimated 2 vehicles per household plus 940 jobs in the commercial area (and special events) would not impact our ability to evacuate during the next emergency are irresponsible. The "models" used defy common sense, ignore the already burdened two lane roads (Highway 12 and Arnold Drive), paint a rosy picture of available public transportation and thus demand for vehicles and are clearly a transparent attempt to move past this life or death matter. The draft EIR clearly has not sufficiently considered the ***cumulative*** impact of development at the SDC, the Highway 12 corridor (from Santa Rosa to Sonoma), and Arnold Drive, including special events, on our ability to evacuate. A Highway 12 connector would only serve to send people toward the fire in a futile circle which could make evacuation even worse and removes an obstacle to growth in protected areas which would further exacerbate our ability to evacuate during a wildfire. ***Note that the Elnoka Senior Community project on Highway 12 in Santa Rosa was recently reduced by 60% (from 676 units to 272 units) to address concerns raised by the community and to address potential traffic impacts.***

C84-1

"Shelter-in-place", seems like a death warrant, given the extreme devastation caused by wildfires. That concept would certainly reduce vehicles exiting for your models and would also likely increase deaths. Why not address this matter honestly now?

--[if !supportLists]-->• <!--[endif]--><u>**CLIMATE CHANGE**</u>. The Fire Hazard Severity Zone Map referenced in Figure 2.3-1 of the Specific Plan is undated—what is the date of the information you are relying upon?

C84-2

<u>Figure 2.3-1 of Specific Plan in inaccurate</u>. It does not reflect the fire damage along Sonoma Creek to the nursery on Trestle Glen or the loss of a home and other structures along Burbank Drive in the 2017 Nuns Fire.

CalFire is updating the Fire Hazard Severity Zones Maps for the first time since 2007. The

new maps are to be released before the end of the year. Have these been taken into consideration? Climate change is here and affecting us now, with forecasts to get much worse. This must be addressed!

C84-2

How can Risk Factor tell me that properties near Sonoma Creek have a MAJOR risk of flooding which is in direct conflict to the Statement in Section 2.3 of the draft Specific Plan and the 100-year flood plain in Figure 5.3-1 titled "Maximum Heights" that "all 100 year and 500 year floods can be accommodated within the banks of Sonoma Creek without additional flooding". What recent analysis has been performed on flood risk or are you using old data? Last October, per Sonoma Water, an Atmospheric River brought 9" of rain on Sonoma Mountain, causing waste water collections systems to overflow in several locations, including all along Sonoma Creek and notably, at Burbank Drive in Glen Ellen. Is that public health hazard being addressed? The fact that so much water fell at one time is another piece of data pointing to climate change and the potential for flooding along Sonoma Creek.

C84-3

--[if !supportLists]-->• <!--[endif]--><u>**PARKING**</u>. How will you ensure that our Glen Ellen neighborhood on the South side of the SDC will not have to support parking for those seeking free parking not available at the campus?

Parking policy 3-27 in the draft Specific Plan says there will be NO free parking within the campus. Further, the plan is to provide less parking than would typically be required, to encourage biking and walking. What a disaster for the neighborhood to the South! People will park and store vehicles along Martin, Lorna, Cecelia, Burbank, Sonoma Glen Circle and Marty due to lack of parking spaces and to avoid charges. In addition, the concept of shared parking between residential and commercial is not realistic in practice. This will clearly burden an existing neighborhood to allow for increased development and profit for the developer and pretend there are fewer vehicles. Unacceptable!

C84-4

--[if !supportLists]-->• <!--[endif]--><u>**GLEN ELLEN, NOT ELDRIDGE**</u>. PLEASE explain why the Glen Ellen neighborhood South of the SDC continues to be disrespected by calling us Eldridge? Are you unilaterally deciding to change our name from Glen Ellen to Eldridge so you don't have to acknowledge that you are in fact dividing our Glen Ellen community? Reference Table 4.5-1, Summary of Impacts for Alternatives, Page 575, Item 3.9-1 (sic) which

C84-5

is under 3.10 Land Use and Planning.

We are Glen Ellen. Our property tax bills say Glen Ellen, as do our driver's licenses and passports. Eldridge was the SDC campus only and they had their own post office. The SDC and post office are closed. As such, the SDC property is the donut hole of Glen Ellen and should be considered a part of Glen Ellen, not a new town to divide our Glen Ellen community. The development should be in scale that fits the character of the existing community and open space. The proposed scale is simply too much and would be appropriate for San Jose, not Glen Ellen.

C84-5

I participated in the outreach over the years, believing the County was listening to the Community and that the County would embrace a reasonable plan that the Community could support. Instead, you are pushing for the maximum and driving an incompatible plan. Despite pushing an overbuilt plan, you are failing to provide the amount of affordable housing we would support. Clearly there is another agenda which has nothing to do with our Community and affordable housing. I ask that you scale back and restore our faith in our County government.

C84-6

Thank you.

Sharon Church

Re: Draft Environmental Impact Report
Sonoma Developmental Center, 15000 Arnold Drive
Eldridge, CA APN: 054-090-001

Dear Mr. Oh,

I was a social worker at Sonoma State Hospital (SDC) from 1979-1981 when over 1,000 employees, including Psychiatric Technicians, worked at least 4 different shifts to provide services and care to over 1,000 residents with developmental disabilities.

I oppose the development of 1,000 new homes and a hotel in Eldridge. I support the transfer of 765 acres for open space conservation to protect the wildlife corridor, historic Eldridge Cemetery, two lakes, and Camp Via. This would help meet both the federal and state goals for land and water protection. Organizations, including the Sonoma Ecology Center and Sonoma Land Trust, have previously discussed concerns about preservation and I believe their experts will further address the issues of aligning the County Specific Plan process and EIR only after the State of California announces the RFP selection. C85-1

The driving force behind the Site Specific Plan is to be "fiscally feasible." (Bradley Dunn, *The Sonoma Index-Tribune*, 8/17/22, page A9) Fiscal feasibility is linked to the State of California's plan to pass along to a developer approximately $100 million in toxic clean-up costs at SDC.

The Site Specific Plan briefly mentions some of the past abuses to clients at SDC. Over 5,400 men, women, and children from ages 7 to 70 were sterilized without their consent. https://ec.ac.lsa.umich.edu The State apologized and offered $25,000 to sterilized victims. https://victims.ca.gov ; https://dredf.org If none of the SDC victims apply for and collect compensation, perhaps because none of them are alive, I suggest that California allocate the $100 million that should have compensated these victims to pay for the toxic clean-up at SDC. I don't know if the State apologized or compensated any clients for other violations of civil and legal rights and abuses at SDC during the past 100+ years. Another option might be to allocate $100 million for affordable and accessible housing and services for people with developmental disabilities at SDC and infill housing in urban areas.

Traffic: The EIR should fully address the impact of increased traffic. I see no reference to traffic patterns when SDC was open. I observed traffic slowdowns on Arnold Drive during shift changes. Stop signs on Arnold Drive and surrounding streets within Eldridge slowed down rush hour traffic. During shifts, most employees walked between buildings. Staff who commuted by bicycle along Arnold Drive to SDC risked getting hit by cars since there were no bicycle lanes. In the past 40 years, though various groups have lobbied for more and better bike lanes, the C85-2

County of Sonoma and Cal Trans haven't significantly improved Arnold Drive for bicyclists traveling between Glen Ellen and Boyes Hot Springs or on Highway 12.

The report recommends installing a new traffic light at Harney and Arnold in Eldridge, which might have reduced congestion during shift changes 40 years ago. Traffic lights are currently located at Arnold Drive and Highway 12 in Glen Ellen and a few miles down the road on Arnold Drive at Boyes Blvd in Boyes Hot Springs. A roundabout was installed at Aqua Caliente Road and Arnold Drive a few years ago. C85-2

During construction of new homes, businesses, etc. there are few mitigation measures suggested. Attached are photos of a construction site of what will be one new home on Chestnut Avenue in Aqua Caliente. Large trucks travel on several different narrow streets during the week. Neighbors hear the noise, dust is a problem, there's increased traffic, and a section of the road has been damaged. Imagine what Arnold Drive will be like if 1,000 homes are built in Eldridge.

3.6 Energy and Greenhouse Gas Emissions: The Summary of Impacts in the Draft EIR claims no mitigation measures are required for increased traffic and heavy equipment during construction, or when new buildings are completed. If each new home includes 1 car, the hotel is filled with over 100 guests, plus employees drive to work at the hotel and new businesses in Eldridge, unless everyone owns an electric vehicle or bicycles to the village, how can "none required" and "not applicable" be listed under the impact and mitigation measures for energy and greenhouse gas emissions? C85-3

3.7-1 Earthquake: "No mitigation measures required." I disagree. The report doesn't discuss the Rodgers Creek Fault in Sonoma County. Refer to https://usgs.gov which details a higher resolution map of this fault within the past few years. They predict a 33% chance of a "6.7 earthquake on the combined Rodgers Creek-Hayward fault system" sometime between now and 2043. p. 25, p. 203

To give an example of what might happen, during the October 17, 1989 Loma Prieta earthquake (magnitude of 6.9), 3,757 people reported injuries, 63 people died, buildings collapsed, infrastructure—pipelines, overpasses, bridges, and roadways—destroyed, and a World Series game stopped. C85-4

3.8-6 Emergency Response or emergency evacuation plan: I disagree that no mitigation measures are required. Eldridge is part of Evacuation Zone SON-6A5. In past public comments, I mentioned that during the Nuns Fire evacuations in 2017, my friends drove for over four hours from Agua Caliente to reach a hotel in Rohnert Park. The drive normally takes between 30-45 minutes. With approximately 2,000+ new residents in Eldridge, it would take more than an extra minute or two for residents and employees to evacuate safely from Arnold Drive north to Highway 12, west to Bennett Valley Road, or south to Highway 161. A new road from Arnold to Highway 12 might not reduce evacuation times since the fires of 1964 (Hanly Fire, Nuns Canyon Fire), 1966 (Cavedale Fire) and 2017 (Tubbs and Nuns Canyon Fires) spread from the hills and the wind blew and spread the fire west. Cal Fire and the County of Sonoma can provide more details on emergency evacuation routes and historical data about past fires. C85-5

3.8-7 Exposure to significant risk of loss, injury or death involving wildland fires
3.16 Wildfire: I disagree that no mitigation measures are required. If there's no risk, then why has my insurance more than tripled since 2017? Will new home owners in Eldridge be able to purchase fire insurance? Even if "affordable homes" are built at Eldridge, the insurance policies may not be affordable because companies, including CSAA, State Farm, etc. are well aware of the future risks of wildland fires to the destruction of homes and property in Eldridge.

C85-6

During the Nuns and Tubb Fires in 2017 and since then, residents have also been exposed to "pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire" each year. Climate change has increased risks throughout Sonoma Valley to the possibility of wildland fires in the future as well as smoke drifting into our region from fires in other areas of California.

3-14 Transportation: The County of Sonoma doesn't plan to increase bus service along Arnold Drive. There's no service overnight. Paratransit is an option for disabled residents, though not at night, on major holidays, and service is limited on other holidays.

C85-7

Any new resident of Eldridge who doesn't have a vehicle would be at increased risk of injury or death during a disaster or evacuation. Many of the residents who died during the Tubbs and Nuns fires were elderly or disabled.

Storm water and storm drain systems page 58: My father was an engineer for the Water Resources Division of the United States Geological Survey. He measured gauges along rivers, streams, and creeks, and was knowledgeable about flooding. When my friend decided to purchase a house in Glen Ellen, he asked my father to give an opinion about the possibility of Sonoma Creek flooding in the future. My dad walked the property and explained where the creek had risen in the past. It was his professional opinion, as a retired engineer, that there wouldn't be a "100 year" storm flooding Sonoma Creek. My father was wrong.

C85-8

In about 1997, Sonoma Creek flooded in Glen Ellen, then a catastrophic flood severely damaged my friend's home on New Year's Eve 2006/2007. He rebuilt. The *Sonoma Index-Tribune* followed the stories about the flooding. Supervisor Valerie Brown knew about this, as did the County of Sonoma Permit and Planning Department.

Any discussion about a possible "100-year storm" and Sonoma Creek not flooding is misguided because of Climate Change and past flooding in the region.

Storm drains are inadequate elsewhere in Sonoma Valley, including on Mountain Avenue. Homes have flooded and excess water pools on the street during heavy rainfall. Adding 1,000 homes, a hotel, and businesses will change both the surface and subsurface water flow in Eldridge. Infrastructure planning and construction needs to mitigate potential problems.

The USGS California Water Science Center and National Weather Service are perhaps the agencies most familiar with stream gauges along Sonoma Creek and the likelihood of flooding in the future.

Historic Properties: I oppose building a hotel on the site. Preserving historic properties at SDC could involve local labor and trade groups and nonprofits in providing Hands-On Preservation Experience (HOPE Crew) to young people interested in learning about preservation and historic trades. https://www.preservationpriorities.org

The Site Specific Plan suggests that the Historic Main Building might be part of a lobby within a new hotel. I doubt a developer would install a plaque on the Historic Main Building/the proposed hotel site explaining how the civil and legal rights of patients at SDC were violated for decades.

C85-9

An example of a historic site transformed into a luxury hotel is the façade of the St. Louis Hotel, built about 1838. A plaque installed at the Omni Royal Orleans Hotel in the French Quarter of New Orleans mentions its historical significance. Black men, women, and children were auctioned on the block in the rotunda at the St. Louis Hotel. I doubt that few Omni Hotel guests today read the plaque or realize what really happened at the site during the 1800s or that newspapers and posters advertised sales of enslaved people every day, except Sunday. The New Orleans Slave Trade Marker and Tour App; https://neworleanshistorical.org.items/show/926

In March 2021, the Glen Ellen Historical Society presented a proposal for an historic center at SDC. They nominated the Sonoma Developmental Center for listing on the National Register of Historic Places. The Adaptive Reuse Potential Evaluation March 2021 Report assessed SDC buildings listed in Appendix C of the Site Specific Plan. The state of Maryland transferred Crownsville State Hospital to Anne Arundel County for preservation. This is one example of how a state, county, nonprofits, and individuals are transforming a former state institution. (refer to National Trust for Historic Preservation. 8/4/22 article attached)

I hope the state, county, nonprofits, Regional Centers, disability rights groups, individuals with developmental disabilities and their families, and other interested organizations and individuals will help transform the SDC site into a place everyone might enjoy in the future.

Sincerely,
Sherry Smith, LCSW

Subject:	Our Public Comment on SDC Specific Plan and DEIR – Please SCALE IT BACK
Date:	Thursday, September 15, 2022 11:31:51 AM

EXTERNAL

Dear Sonoma County Planning Commissioners,

We live in Glen Ellen and are asking you to please ***not support the SDC Specific Plan or DEIR as proposed by Permit Sonoma***. Instead, please direct Permit Sonoma to:

1. **Scale Back Size of Development** to 450 or fewer homes and require that most of them be affordable to the majority of people who live in Sonoma Valley. Eliminate the hotel, retail and commercial space that is already provided in Glen Ellen.
2. **Support Historic Preservation Alternative** as it is the most environmentally sound.
3. **Protect Open Space** by providing enforceable timeline, boundaries and actions for permanently preserving open space and keeping it in public hands.
    a. In the DEIR, analyze the impacts of and add enforceable measures to reduce impacts of proposed new uses in the open space including agriculture, agricultural processing, tasting rooms, farm stands, recreation, parking lots, geothermal development and sports facilities (see Table 4-3 of Specific Plan).
    b. Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed.
4. **Wildfire:** Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives. Develop and add enforceable Conditions of Approval for Wildfire to reduce and prevent risk as there currently are none.
5. **Climate Crisis:** Given the County's Climate Crisis Resolution and commitments to reduce climate changing emissions (GHGS) from driving and other sources, revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as building fewer homes, reusing and demolishing fewer buildings, providing transit.
6. **DEIR is Inadequate** While the so-called self-mitigated Specific Plan contains many general policies, goals and conditions of approval to address environmental impacts, the DEIR falls short of CEQA requirements. The DEIR does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by few actual requirements and many vague words such as "promote" or "encourage" or "if feasible." The DEIR needs to be revised and the Conditions of Approval strengthened and moved into a legally enforceable Mitigation and Monitoring Program.

C86-1

We are asking this as residents whose home burned in the 2017 fires and who have rebuilt. Having had to flee the Nunn Canyon fire, we are intimately aware of the dangers posed by a greatly increased population here to evacuation, since there are only two roads leading out of the Valley to the south and one to the north. We are already concerned about our ability to have adequate water from our well due to the ongoing climate crisis-fueled drought. We are concerned about plans that would massively increase the population and traffic, leading to

C86-2

C86-2

dramatic changes to our town. Imagine if we proposed more than doubling the size of the town *you* lived in. And we are concerned about the ecological impact on our wildlife and watershed area.

Sincerely,

Stephanie, Tom, Julian, and Gioia Benthin

Subject:	Draft EIR Comments: SDC Specific Plan
Date:	Monday, August 22, 2022 5:43:50 PM

EXTERNAL

As a resident of Glen Ellen and, as a result, a neighbor of the Sonoma Development Center, we are writing to express our great concern over the lack of planning for the SDC being transferred from its present configuration and control.

C87-1

In spite of the Board of Supervisor's instructions to have a specific plan with fewer than 1,000 homes, the Drafts propose 1,000 residential units. In addition, substantial commercial development is proposed. Shouldn't we STOP and weigh the consequences of not having all the vital information related to the proposed SDC plan??

We think of the impact of 1,000 homes and commercial development with the potential population increase of between 2,000 and 4,000 people should make you take notice and consider the proposed change in the character of our community. This proposal will change the look and landscape of the entire Sonoma Valley. If this type of population density is permitted, it should take place among the already existing cities in our County.

We would also point out that the size of the proposed population increase would materially increase the traffic on Arnold Drive, downtown Glen Ellen and Highway 12. This could have a very serious impact on the ability of people to get out and emergency vehicles to get in whenever there was a fire or other emergency. I hope you will remember the traffic blockage at Oakmont that prevented people leaving at the time of the big 2017 & 2020 fires.

C87-2

Thank you for considering and passing on our concerns while taking action to prevent irreversible damage to our Sonoma Valley and its residents.

Steve Sherer & Betty B. Sherer
Morningside Mt. Road, Glen Ellen

Subject: Sonoma Developmental Center
Date: Monday, September 19, 2022 3:41:09 PM

EXTERNAL

Regarding the Proposal to develop the Sonoma Developmental Center, the following reasons demonstrate why this ill-conceived idea is not feasible:

Sonoma County has become heavily impacted by:

Increased traffic & congestion

Increased traffic violations & accidents – many of which go unnoticed & unprosecuted

Excessive speed & traffic on Hwy 12, Bennett Valley Road, Sonoma Mountain Road, Grange, Pressley Roads

Bikers cannot ride safely on Hwy 12, Bennett Valley Road, Pressley, Grange, Sonoma Mountain Roads – too much speed, too many cars, no enforcement – no one should risk their life on Bennett Valley Road!

Clogged access streets, arteries and highways – causing unsafe situations

Difficulty to access shopping centers, businesses & lack of parking

Inability for first responders to readily access emergencies due to excessive traffic

Inadequate funds for first responders, police, fire to handle the increasing volume of calls - if on the ballot, many people will not even contribute

No, we don't need more traffic lights! They only impede the already slow, congested traffic!

C88-1

More houses?

More high density living?

LESS WATER?? YOU'VE GOT TO BE KIDDING!

- We, in Bennett Valley & Rincon Valley, are already seeing our wells run dry; are being forced to move or drill new, more expensive, deeper wells, spending thousands and thousands of dollars to drill and maintain a small, private well system – while the developers, wineries and commercial growers should be paying their fair share! Talk about unfairness! The county could be making a fortune from those commercial developers and vineyards.. exactly like Sonoma Development Center!
- Where does the county actually think the necessary water supplies will come from by over-populating and over-building?
- Is it not the time to seriosuly prepare for the future?
- Is it not the time to be responsible and prepare for the global warming issues NOW?

C88-2

The excuse for allowing wildlife to more freely is an excuse for the handful of non-profits to channel private funds for collaring mountion lions and watching them roam onto private citizens/rancher properties for a free meal. This “political” issue should not be part of the decision to develop such a high density project. Wildlife management belongs to California Fish & Wildlife, not to those profiting from the wild animals that roam freely in Sonoma County!

As for “historic preservation” or a “more reasonable footprint” that will not provide more open space. Even those developments will clog more streets, highways, require more water and cause more havoc within the county. Look at Fountain Grove and Coffey Park. Those high density houses burned to the ground! They did not reduce wildfire risk at all.. and will not do so in the future.

C88-3

If anyone understands basic psychology, they’d understand that a few rats living in a box can survive.. but when you put far too many rats in a box, they cannot prosper or survive.

To many, this so-called “development” is, again.. all about money for the county and the rich & greedy developers!
The Sonoma Developmental Center will certainly not enhance the lives or happiness of the residents who chose to live here first!

Sincerely,
Sue Rankin

To:	Brian Oh
Cc:	Gerald.McLaughlin@dgs.ca.gov
Subject:	Draft EIR Comments: SDC Specific Plan
Date:	Saturday, August 20, 2022 1:30:18 PM

EXTERNAL

Dear Mr. Oh—

I sat in on the Zoom calls that were held prior to the development and release of the SDC Specific Plan and Draft Environmental Impact Report.

I appreciate that on the surface it was determined that the major concerns of the Community and the Board of Supervisor's were considered, but not deemed to be in conflict with the Report. However, having lived in this area for 14+ years, traveling on Hwy 12 and/or Arnold daily+, both two-lane "highways," that traffic flow will absolutely be impacted by the increase in of 1,000 homes (with potentially 2.5+ residents per home) —particularly if/when there is need for evacuation

C89-1

This disconnect highlights the inadequacy and inefficiency of our current approach to planning and development. The draft specific plan fails to respond to the challenges of our time—including wildfire, drought, and biodiversity loss.

As a resident I encourage you to:

- Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.

C89-2

- Re-draft in meaningful planning for SDC by aligning the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.

Thank you in advance for your consideration.

RE: Public Comment on SDC Specific Plan and DEIR – Scale it Back and Protect Open Space!!

Dear Sonoma County Planning Commissioners,

Please do not support the SDC Specific Plan or DEIR as proposed by Permit Sonoma. I will be submitting more detailed comments by the deadline. At this time, I urge you to please direct Permit Sonoma to:

1. **REVISE DEIR TO MEET CEQA**: Revise and strengthen the Draft Environmental Impact Report to meet the requirements of California Environmental Quality Act by analyzing and preventing or reducing all negative environmental impacts by scaling back project, avoiding impacts and providing legally enforceable mitigation measures in **a** Mitigation and Monitoring Program. As drafted the DEIR is not adequate to meet

C90-1

CEQA. It has zero mitigations for any environmental impacts, including two that are "significant and unavoidable:" historic preservation and VMTs.

C90-1

2. **REVISE SELF-MITIGATED SPECIFIC PLAN:** Revise and strengthen the Specific Plan Conditions of Approval to be legally enforceable requirements and recast as mitigation measures in the DEIR, as above. As drafted, the "self-mitigating" Specific Plan does not mitigate significant negative environmental impacts. The Conditions of Approval only apply to half of the environmental areas required for study under CEQA. And there are none for critical issues such as wildfire. Most of the C of As for biological resources apply only to construction, not operations or maintenance, and are based mostly on existing state law or Best Management Practices, which are not in statute.

   All Specific Plan Goals and Policies need to be specific, strong and enforceable. Otherwise, they are practically meaningless. Please remove vague words such as "promote" or "encourage" or "if feasible." Replace with "require", "shall" or "must." These strengthened Goals and Polices then need to be made Conditions of Approval and recast as Mitigations in the DEIR in a Mitigation and Monitoring Program.

C90-2

   If CofAs, policies or goals can't be made specific, then remove them as they do not mitigate environmental impacts. Having a Self-Mitigated Plan is not part of CEQA and does not necessarily meet CEQA; and certainly not in the case of the SDC Specific Plan and DEIR.

3. **SCALE BACK DEVELOPMENT AND CHANGE PREFERRED ALTERNATIVE: Scale back the development** to 450 or fewer homes and require that most of them be affordable to the majority of people who live in Sonoma Valley. Eliminate the hotel, retail and commercial space that is already provided in Glen Ellen. Change the Preferred Alternative to the Historic Preservation Alternative, which is the most environmentally sound.

C90-3

4. **DEVELOP A NEW ALTERNATIVE – Climate and Conservation:** All the alternatives are variations on a major mixed-use development that maximizes urban style use. In response to the public and elected officials, and to avoid and reduce significant environmental impacts per CEQA, the County of Sonoma must provide an alternative focused on keeping the entire property in public lands through donation or transfer to state or county parks, a non-profit, trust or other entity. This alternative would prioritize the permanent protection of the open space and the historic main campus to serve conservation, wildlife movement, natural resource protection, and climate benefits with no housing, no commercial development and no hotel or retail. The Marin Headlands and Presidio Trust are good examples of how public land was repurposed without overdevelopment.

C90-4

5. **PROVIDE SPECIFICS AND ADDRESS IMPACTS TO OPEN SPACE** – The Specific Plan and the DEIR mentions open space protection in general terms in several places, in various ways, but fails to provide a clear definition of "preserved open space," or to give the exact boundaries (other than in one general overlay map), or give details on how or when it will be protected, transferred or managed. Please direct Permit Sonoma to provide those details.

C90-5

   Preserved Open Space and Agriculture: The Specific Plan and DEIR make

sweeping statements about “historic agriculture” but do not explain the extend of past agriculture in terms of types or amount of acreage. The impacts of allowing agriculture on open space that is currently not in agriculture must be analyzed and the environmental impacts avoided or mitigated in the DEIR.

Unacceptable New Uses in Preserved Open Space: Table 4-3 (attached) of the Land Use Section of the Specific Plan outlines many new uses in “preserved open space” including wine tasting rooms, timber conversion, wholesale nurseries, sports facilities and several others that have not been analyzed under CEQA or addressed at all in the goals, policies or C of As of the Specific Plan. These “permitted” new uses in Preserved Open space must be analyzed, avoided or prevented and mitigated as required under CEQA and in my view NOT ALLOWED OR PERMITTED in Preserved Open Space.

SHOULD NOT ALLOW AS PROPOSED THESE USES IN PRESERVED OPEN SPACE TABLE 4-2 SPECIFIC PLAN

Agricultural Crop Production and Cultivation
Agricultural Processing
Animal Keeping: Beekeeping
Animal Keeping: Confined Farm Animals
Animal Keeping: Farm Animals
Animal Keeping: Pet Fancier -
Farm Retail Sales
Farm Stands
Indoor Crop Cultivation
Mushroom Farming
Nursery, Wholesale
Timberland Conversions, Minor
Nursery, Wholesale
Tasting Rooms

C90-5

SHOULD NOT ALLOW AS PROPOSED IN SPECIFIC PLAN WITH CONDITIONAL USE PERMIT
Recreation and Sports Facilities: Recreation Facility, Outdoor
Recreation and Sports Facilities: Rural
Sports and Recreation

6. **SONOMA VALLEY WILDLIRE CORRIDOR AND RIPARIAN SETBACKS:** Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed.

C90-6

7. **WILDFIRE:** Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives. Develop and add enforceable Conditions of Approval for Wildfire to reduce and prevent risk as there currently are none.

C90-7

8. **CLIMATE CRISIS:** Given the County's Climate Crisis Resolution and commitments to reduce climate changing emissions (GHGS) from driving and other sources, revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as building fewer homes, reusing and demolishing fewer buildings, providing transit. If the county is really serious about the climate emergency, it would not propose building a new town in the middle of open space and a high wildfire area. It should maintain its commitment to city-centered growth and open space protection.

C90-8

9. **STATE STATUTE:** The County of Sonoma needs to revisit its interpretation of the state statute in respect to the Specific Plan and EIR as follows:

Housing: State Statute says the following:
It is the intent of the Legislature that priority be given to affordable housing in the disposition of the Sonoma Developmental Center state real property.
The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be ***appropriate for the property*** *shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that* ***is deed restricted to provide housing for individuals with developmental disabilities.***

C90-9

Nowhere does the statute call for maximum urbanization of the SDC nor to create a new town, hotel, commercial or retail. The scale of housing and development is not appropriate for the rural property surrounded by ag land. Therefore, the County of Sonoma's Specific Plan and DEIR are not consistent with and misinterpret the state statute. Both need to be revised to align with state statute and public comment by scaling back the development, eliminating market rate housing and other development, and providing deed-restricted affordable housing to individuals with developmental disabilities.

Open Space: State Statute says the following:

The Department of General Services recognizes the exceptional open-space, natural resources, and wildlife habitat characteristics of the Sonoma Developmental Center.

It is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as ***public parkland and open space.***

C90-10

The disposition of the property or property interests shall provide for ***the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible*** *and shall be upon terms and conditions the director deems to* ***be in the best interests of the state.***

The state statute makes clear that the permanent protection of open space lands is for public parkland and natural resources as a public resource. The County's Specific Plan and DEIR are inconsistent with state statute as they propose introducing agriculture, sports fields and other uses without consider the negative environmental impacts of doing so.
However, the state statute also conditions protection of the open space "to the extent feasible" and to "be in the best interests of the state." That is why the county Specific Plan and DEIR must provide details on how, when and with what entities that the open space will be protected. If not, then the state legislature will need to act to ensure the protection of the open

space and that none of it is sold off for development or other inappropriate use.

C90-10

Economic Feasibility: State Statute says the following:

The planning process shall facilitate the disposition of the property by amending the general plan of the county and any appropriate zoning ordinances, completing any environmental review, and ***addressing the economic feasibility of future development****.*

C90-11

The County of Sonoma's entire Specific Plan and DEIR is tied to this one mention of economic feasibility to the exclusion of just about everything else. The state did not mandate that the project be economically feasible or financially feasible but to address it. Economic feasibility changes constantly with market conditions. Specific Plans and General Plans are written for long periods of time when economic feasibility is certain to change. The County is misinterpreting state statute to maximize urban development at the SDC site. The proposal could also be economically feasible if, for example, the state paid to clean up the site, then transferred it to state parks or another public conservation entity. A bond measure or initiative could be written. However, the County looked at only one option or alternative: making profits for a private developer. This lacks vision and is inconsistent with state statute and CEQA

The Planning Commission must direct Permit Sonoma to revise the Specific Plan and DEIR to be consistent with state statute and public comment and provide new alternatives that don't focus entirely on urbanization and developer profits.

Well, that's about it from me for now. Thanks for your consideration.

Sincerely yours,

TShoreSig.jpg

PUBLIC COMMENT - SDC DEIR AND SELF-MITIGATED SPECIFIC PLAN

Teri Shore – Environmentalist – 515 Hopkins St. Sonoma, CA 95476

August 24, 2022

Combined SVCAC – NVMAC – Springs MAC Special Meeting

Sonoma Developmental Center Draft Environmental Impact Report and Self-Mitigated Specific Plan

ORAL TESTIMONY

As two minutes isn't adequate time to make meaningful comments on the SDC Draft EIR and proposed Self-Mitigated Specific Plan regarding:

the preservation and transfer of the open space,

the proposed overdevelopment of the historic campus

or the significant and unavoidable environmental impacts that will increase driving and exacerbate the climate crisis,

prevent robust historic preservation,

degrade biodiversity and compromise the wildlife corridor,

increase wildfire risk and hazards and

that it will do little to address the housing crisis or increase equity in Sonoma Valley,

I will say that right now we members of the public and the community are overwhelmed and need professional legal advice to help us provide productive and detailed written comments. I urge the county, the city and elected officials to provide pro-bono legal advice now or help us fund raise to hire a legal advisor. I also call on interested members of the public to help us raise funds to hire an attorney with expertise in the California Environmental Quality Act. Please contact me at terishore@gmail.com and I will connect you with our SDC teams.

C91-1

INITIAL DRAFT WRITTEN COMMENTS

EIR MITIGATIONS VERSUS SELF-MITIGATED SPECIFIC PLAN

The County of Sonoma must immediately provide a detailed and legally accurate written explanation, description and rationale for preparing a DEIR with no environmental mitigations at all; and instead relying on a "Self-Mitigating" Specific Plan that contains goals, policies and a few "conditions of approval" that are based almost entirely on existing state laws as "mitigation."

C91-2

The county must explain the legal enforceability of the goals, policies and "conditions of approval."

My primary concern is that the goals and policies along with the Conditions of Approval that serve to "self-mitigate" the project do not meet the same level of legal and enforceable mitigation as in EIR mitigations and required Mitigation Monitoring and Reporting Programs.

A CEQA expert I recently talked to informally indicated no familiarity with the term "self-mitigated" projects under CEQA, and it does not appear in the current CEQA manual. C91-2

Other comments:

VMTs – Significant and Unavoidable: The DEIR finds that the proposed SDC Specific Plan will undermine local, regional and state policies and commitments to address the climate crisis as it found *significant and unavoidable impacts in the areas of vehicle miles traveled.* That means that there is NO WAY to offset or mitigate the extra driving generated by all the new housing, retail, commercial development proposed at SDC. ***The County must not approve this project as proposed with these impacts if it is serious about addressing the climate crisis.*** C91-3

PRESERVE OPEN SPACE: The DEIR and SDC Specific Plan states that the open space will be preserved in several places; and provides a general overlay map. There are also statements about "working with Sonoma County to preserve the Open Space" and several other general reference. However, it does not provide any specific information on exact open space boundaries or when or through what mechanism the preservation and transfer will occur. ***A timeline and approach for transferring and preserving the open space must be added to the DEIR and Specific Plan Conditions of Approval to ensure that the open space gets transferred to county parks, regional parks and/or a public conservation entity and does not get transferred to a developer or other private owner.*** C91-4

GENERAL PLAN AMENDMENT: If the county moves forward to approve the DEIR and Specific Plan as proposed, it will amend the General Plan to forever change the Zoning at SDC from public facilities to residential, commercial, retail and hotel even if the community opposes it; and even if the state fails to accept the Specific Plan. ***The county should not rezone the SDC lands and its land use and zoning until a final plan for SDC is adopted that is acceptable to the community and/or any lawsuits are resolved.*** C91-5

CONDITIONS OF APPROVAL: The Executive Summary states that the Conditions of Approval are listed in Appendix A. They are not or at least I can't find them with a search for "Conditions of Approval." It appears that they are scattered throughout the DEIR. ***They need to be listed together in one place***. Right now, the COA only apply to a few categories such as Biological Resources, Hazards, Air Quality and Geology. Most are boilerplate text from existing state laws that would be required anyway. That does not seem adequate to address the environmental impacts as required under CEQA. C91-6

WILDFIRE: There are no conditions of approval for wildfire; and the goals and policies are based on a future Emergency Response Plan that will be developed at some point. The Evacuation Time analysis seems unrealistic as it suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. It took people HOURS to evacuate from Kenwood and Sonoma Valley during recent fires. Also, the DEIR calls for the "requirement" for a shelter-in-place facility at SDC after 200 homes are built. There is no proven rationale for sheltering in place particularly in a High Fire Risk Area. ***The DEIR and Self-Mitigating SDC Specific Plan do not eliminate risk or wildfire hazard to insignificant levels.*** C91-7

HISTORIC ALTERNATIVE PREFERRED: If I had to choose one of the alternatives, I would choose the Historic Alternative as it is the environmentally preferred alternative. C91-8

NO PROJECT ALTERNATIVE: ***The DEIR fails to provide a true No Project Alternative which fails to meet CEQA.***

EXTERNAL

We keep encouraging more people to come into Sonoma County without any long range plans concerning transit, roads, water, energy and food (as we drive up the price of farmland).

300 new residences is plenty for SDC. Recondition present ones if possible.

C92-1

Regenerative grazing and wild animals and open space are compatible and exist in many parts of the world including the US. The sheep, cows or goats are within enclosed fields rotating from one to another, leaving plenty of open space where grasses and other feed have been consumed without destroying the plants which are recovering and getting ready for the next rotation. The upper part of SDC should be zoned for this.

Comments and Questions regarding the Draft EIR
Water: Water availability concerns are at a crisis level. What exactly is the the water source for 1000 new homes or even for 450 new homes in the draft EIR?
Housing versus Houses: Why is building new houses proposed when the SDC housed 3000 in existing structures? Why not renovate, restore and repurpose the historic, beautiful buildings on the SDC campus before any new construction? The EIR must be modified to insure the first use of existing buildings.
Fire Prevention: New home construction is a magnet for wild fires. What special fire resistant construction will be used if these homes are built? Will this include fire resistant tile roofs and heavy plaster walls like those found on most of the historic buildings which were built to last and have lasted?
Wildlife: The SDC campus is an extension of an important wildlife corridor and passage between Sonoma Mountain and the Mayacamas Range. The area must remain open to wildlife coming through Jack London Park and traveling to the Audubon and Oak Hill preserves. What plans insure wildlife safe passage?
We look forward to hearing your response to our concerns.
Thank you,

Permit Sonoma, Mr Brian Oh, Planning Manager, SDC

Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Preliminary EIR (EIR)

Aug 27, 2022

Dear : Too Whom This May Concern; for Preliminary Discussions,

Though Permit Sonoma worked hard, produced >4000pgs, & created many potential alternatives within their Specific Plan/EIR process, they have overshot the mark creating a plan for the past, "fighting the last war" as we often do, and not taking advantage of the opportunity to present a plan for the future.

Why does it appear the SDC EIR and associated Specific Plan (characterized by the County's preferred Proposed Project Alternative) have defined and committed the County of Sonoma, as Lead Agency under CEQA, to a series of specific decisions, plans, and/or alternatives without fully considering other acceptable plans (under legislation 14670.10.5), alternatives, mitigation measures, and the Null Project.

Please explain why the County (Permit Sonoma) has allowed the EIR to be produced which does not address the mitigatable cumulative effects of waste generated by the proposed alternative over the Null Project hypothesis, to the extent where recommended building demolition of ~1.2M sq-ft produces a minimum of 161,000 cy of debris equal to 67 years of operation of the Proposed Project Alternative in addition to the equal amount of debris produced by the eventual demolition of the Proposed 1.2M sq-ft Project (∑=322,000 cy, or 134 years at the rate of the Proposed Project at completion); together with the project waste there will be an average cumulative waste of 19.8 tons/day or 1.5% of daily averages (2016-2020, per SP pg 603) ? Since we are already transferring all our solid waste away from Sonoma County because we do not have local landfill capacity, and our waste charges ($135/ton) are double the charge for Hazardous Waste ($50.97/ton asbestos waste) taken to Kettleman Hills landfill, this must be considered a significant mitigatable impact by Reuse and Historic Preservation of the existing buildings. At the local waste costs, this represents >$960,000/yr = ~$65M over the 67 years, from these 3 sources.

C94-1

Why is no mention made in the EIR or SP of GHG's which were imbedded and carried within the existing constructed buildings which will be released into the atmosphere by their demolition, nor is any mention made of the GHG emissions which are imbedded in the production of the new materials and resources which are expected to replace the demolished SDC buildings, these are significant long term mitigatable cumulative effects? Why has the EIR not addressed either of these cumulative GHG effects, from demolition, neither the before demolition GHG emissions sequestered in the existing buildings which will be released, nor the GHG emissions released in the production of the replacement 1.2M sq-ft of buildings together with their own lifecycle emissions released upon their demolition? These GHG's must be considered a significant mitigatable impact by their Reuse.

C94-2

TCE FINANCIAL 154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com

Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish? C94-2

Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-of-the-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building? C94-3

Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to “In-Situ” mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the buildings? C94-4

Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, “a death by 1000 cuts” to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation? Can you explain how you are mitigating this neglect, in producing a cycle of demolition and reconstruction which has a cumulative effect on the environment due to exploitative expectations, the expectation that ‘everything I have should be new’, ‘we need the new’, ‘I need the new’? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis?

California State Department of General Services

Regarding: Sonoma Developmental Center (SDC) Sale to Galen's Gardens/Samaritan Housing Society

Aug 26, 2022

Dear : Too Whom This May Concern; for Preliminary Discussions,

Galen's Gardens/Samaritan Housing Society's offer [redacted] for "Improvements to the Environment" at Sonoma Developmental Center (SDC) to such an extent as to offset the value & price of any other offer.

The current process has gone off track, while Permit Sonoma's efforts at creating an EIR & Specific Plan process for development of SDC have produced Yeomen's effort of planning & exceptional avenues for creative visioning at SDC, they have shot clear past the demarcations of the community's desires/needs.

Galen's Gardens/Samaritan Housing Society offer is a "Null Hypothesis Project" proposal for "Improvement of the Environment" at SDC and Historic Restoration of the Historic main building ("Professional Education Building/PEC"), which exempts the proposal from CEQA. We in America suffer from a lack of vision, we have been convinced that the proper thing to do is to "Think Globally, but Act Locally" only. This is not correct, this is unscientific, it is anti-scientific and anti-American, we need to "Think Locally, and Act Globally", because that is scientific. What we want locally around us, we should want for all, and similarly with what we don't want near us. We've lost the Public will. See Appendix"A"Term Offer Sheet. C95-1

Our offer is simple: create a Climate Crisis Center; establish a Polytechnic Environmental Institute; reuse as many of the buildings and facilities as possible; prevent waste & GHG emissions in the demolition of the County Proposed Project Alternative (CPPA) of ~161,000 tons waste along with the replacement of these same buildings with another ~161,000 tons of future waste (∑=134yrs waste); establish 6-Agencies with 100units/ each of affordable housing, with each reserving 10 of these units for "short term rentals". We will use Camp Via as an RV site, and re-establish the water & waste treatment systems for wetlands. C95-2

The value of this proposal to the State is [redacted], and we would return all the property to the State at any time they wish (subject to the Housing & School Leases, and [redacted] Rehab Loan). Our only conditions for the creation of the Climate Crisis Center, the Polytechnic Environmental Institute and the affordable housing is [redacted] Endowment from California Coastal Conservancy, [redacted] Operating Budget ([redacted]) for the Polytechnic Institute, and the use of the property until it's return to the State. Please see attached Appendices for details.

Mr Brian Oh, Comprehensive Planning Manager, SDC
Permit Sonoma, County of Sonoma
2550 Ventura Ave.
Santa Rosa, CA 95403

Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Program DraftEIR (EIR) Comments 2

Sept 18, 2022

Dear : Brian Oh, & Too Whom This May Concern;

Why has County Staff/Consultants done the following, and what are your mitigation recommendations?:

The EIR & SP preparation violates BPC6731, without a Civil Engineer in responsible charge of Planning?

The EIR has committed the County to a course of action, new development, prior to EIR's Certification?
Historic Reuse appears proper, yet each price consequence results in expanded project impacts.
What is the economic obsolescence impact to the Springs/Glen Ellen of the proposed project?

The EIR and SP propose demolition of 1.2M sq-ft of buildings, along with the 1M+0.35M gal fresh water tanks, see Figure 4.3-1: "Historic Assets", without reference to local Wildfire protection. Why?

C96-1

The EIR & SP propose demolition of Historic Firehouse (c1932) without wildfire impact consideration?
EIR & SP neglect wildfire consideration, as not "High Fire Risk", though analysis excluded SDC?

Why does EIR & SP use uncalibrated (unrealistic) models, eg without reference to actual fire evacuation?

The EIR develops a series of conclusions as analysis, beginning after point in time of project completion?
The EIR assumes no cumulative effects to the proposed project; eg. GHG's and solid waste, but does not include project specific demolition, nor constructed lifecycle, GHG's & wastes? Why?

C96-2

The EIR assumes no cumulative effects from combining the proposed project wastewater into a down-stream waste treatment facility when a historic facility is located on site to recharge the wetlands/creek.

SDC is an Historic opportunity to propose and develop an integrated environmental & climate protective response to wildfire, in a traumatized and sensitized area, without which this proposal has a significant cumulative negative impact to the local & regional environment due to unrealized wildfire protections.

Why is EIR & SP preparation biased in favor of Standard-Operating-Procedure for new development?
There is, at great expense, no Professional caliber analysis within these documents, explain?

These GHG's must be considered a significant mitigatable impact by their (building) Reuse. C97-3

TCE ENGINEERING *154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com*

Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish? C97-3

Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-of-the-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building? C97-4

Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to “In-Situ” mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the housing, hospital, and office buildings? Lack of consideration of this impact has direct impacts of needlessly and costly filling existing hazardous waste landfills, both individually and cumulatively, though mitigatable. C97-5

Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, “a death by 1000 cuts” to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation (HP)? Can you explain how you are mitigating these neglected impacts which should be further compared to the environmentally preferred HP, in producing a cycle of demolition and reconstruction which has a cumulative effect due to volume of waste, and on the environment due to exploitative expectations, the expectation that ‘everything I have should be new’, ‘we need the new’, ‘I need the new’? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis? C97-6

Permit Sonoma, Mr Brian Oh, Planning Manager, SDC

Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Preliminary EIR (EIR) Comments 2

Aug 29, 2022

Dear : Too Whom This May Concern; for Preliminary Discussions,

Why has County Staff/Consultants done the following, and what are your mitigation recommendations?:

C98-1

The EIR & SP preparation violates BPC6731, without a Civil Engineer in responsible charge of Planning?

The EIR has committed the County to a course of action, new development, prior to EIR's Certification?
Historic Reuse appears proper, yet each price consequence results in expanded project impacts.
What is the economic obsolescence impact to the Springs/Glen Ellen of the proposed project?

The EIR and SP propose demolition of 1.2M sq-ft of buildings, along with the 1M+0.35M gal fresh water tanks, see Figure 4.3-1: "Historic Assets", without reference to local Wildfire protection. Why?

The EIR & SP propose demolition of Historic Firehouse (c1932) without wildfire impact consideration?
EIR & SP neglect wildfire consideration, as not "High Fire Risk", though analysis excluded SDC?

Why does EIR & SP use uncalibrated (unrealistic) models, eg without reference to actual fire evacuation?

The EIR develops a series of conclusions as analysis, beginning after point in time of project completion?
The EIR assumes no cumulative effects to the proposed project; eg. GHG's and solid waste, but does not include project specific demolition, nor constructed lifecycle, GHG's & wastes? Why?

C98-2

The EIR assumes no cumulative effects from combining the proposed project wastewater into a down-stream waste treatment facility when a historic facility is located on site to recharge the wetlands/creek.

SDC is an Historic opportunity to propose and develop an integrated environmental & climate protective response to wildfire, in a traumatized and sensitized area, without which this proposal has a significant cumulative negative impact to the local & regional environment due to unrealized wildfire protections.

Why is EIR & SP preparation biased in favor of Standard-Operating-Procedure for new development?
There is, at great expense, no Professional caliber analysis within these documents, explain?

Subject:	Draft EIR Comments: SDC Specific Plan
Date:	Wednesday, August 24, 2022 4:43:19 PM

EXTERNAL

Dear Mr. Oh,

I am writing to urge you to pause any further review or action on the Specific Plan and EIR for the Sonoma Developmental Center. This is necessary in order to ensure that:

1. The County Specific Plan process is aligned with the State's RFP process (i.e., after the State announces the RFP selection on October 24), and
2. The County Specific Plan and EIR describe and analyze the impacts of the actual proposal that the State selects rather than a hypothetical plan.

C99-1

Even though I live in West Sonoma County, I know that the SDC property is of vital importance as open space and as a critical part of a wildlife corridor, benefitting the entire county, region, and state. It would be disastrous and shameful for Sonoma County and the State of California to rush forward with a development plan that fails to adequately and meaningfully address climate change, wildfire, drought, and biodiversity loss.

Thank you for your consideration of my input.

Respectfully,

Tim Portwood

Sonoma County Planning Commissioners

RE: Preliminary Comments on Draft SDC Specific Plan and Draft EIR for 9/15/22 Meeting

Dear Planning Commissioners,

I am a land use planner and CEQA specialist in Sonoma County and have many concerns regarding the proposed large-scale SDC Specific Plan and the adequacy of the SDC Specific Plan Draft EIR. I am still reviewing the Plan and EIR and will submit detailed comments by the comment due date. However, I wanted to bring to your attention a few of the many issues that need to be addressed. Overall, the DEIR reflects a bias towards the proposed dense development and tends to dismiss the proposed plan's environmental disadvantages when comparing it to other reduced-scale alternatives. Substantial revisions are necessary to the EIR and Specific Plan to make the EIR adequate, under CEQA, and to create a plan that represents sound land use planning. C100-1

Specific Plan Scale

The planning process has failed to result in a plan that even remotely resembles a community-supported alternative. The promised community-driven process has not occurred. Despite widespread, valid public concerns about the proposed high-density plan and the Board of Supervisors direction to evaluate a plan with 450 to 800 residential units, the proposed Specific Plan still includes an extreme amount of development (1000 plus homes, 410,000 square feet of commercial), which is totally out of scale for this location outside of an urban growth boundary and in the middle of the semi-rural village of Glen Ellen. There is no project comparable to this size in the entire Sonoma Valley. This urban sprawl development, including a 120-room hotel and potential conference center, will, in effect, create a new city, in direct conflict with good land use planning principles and County growth policies. Yes, we need and want housing, but there must be a balanced approach that factors in site constraints, impacts, surrounding land uses, historic resource values, and limited transportation network. This balanced approach is even reflected in the plan's guiding principles (see DEIR page 5-6) but the plan fails to conform to these principles. Project objectives to "balance redevelopment with existing land uses" and "balance development with historic resource conservation" have been ignored. C100-2

The Draft EIR identifies significant, unavoidable impacts on historic resources and traffic from the proposed Specific Plan due to its size. There is no mitigation identified for destroying so many historic buildings and converting the site to a new urban development. These issues could be addressed with a smaller alternative.

Environmentally Superior Alternative

DEIR page 570 states: "Overall, the Historic Preservation Alternative is the environmentally superior alternative…" The text goes on to dismiss this alternative and minimize its environmental benefits. To say that the proposed plan's impacts are "largely comparable" to the impacts of smaller alternatives is false and misleading. The types of impacts may be the same, but the magnitude of impacts on traffic, climate change, historic resources, noise, biological resources, public services and land use would be much less with a reduced-scale alternative. The Historic Preservation Alternative is feasible and its size and scale should be pursued as the preferred plan. Some modifications to this alternative could be incorporated to further reduce impacts, such as even more adaptive reuse and more compact development design. It appears that some impact-reducing elements included in the proposed plan were arbitrarily excluded from this alternative (e.g., the road connection to Highway 12 for emergency access), thus making this alternative appear less environmentally advantageous. Also, there is no reason to conclude that this alternative couldn't achieve affordable housing goals. Compared to current and projected high construction costs for new development, adaptive reuse can be an effective strategy to reduce overall project **costs and impacts.**

C100-3

Deferral of Analysis

The Draft EIR defers analysis of impacts on some resources to a future time when individual projects are proposed. However, most if not all future projects will be exempt from CEQA under permit streamlining legislation so there will be no means to limit full buildout or implement much-needed future mitigation measures.

C100-4

Specific Plan Phasing

SDC Planning Advisory Team (PAT) members and public comments stressed the importance of project phasing to reduce impacts on the environment and on the community. There is only one requirement for phasing (Policy 4-3, which requires completion of at least 10,000 square feet of retail businesses and at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive) and this policy does not reduce any environmental impacts. The Specific Plan itself has a section on "Recommended Phasing" but these provisions are advisory and not mandatory. The EIR must identify phasing as mitigation to help further reduce traffic and other impacts.

C100-5

Need for Performance Standards

Project phasing should be based on performance standards adopted for each environmental issue area. In this way, impacts can be monitored and additional mitigation measures developed, as needed. For example, there is no certainty that massive demolition and construction activities, as well as the introduction of a large mobile population to the site, will not dramatically affect the surrounding open space resources. Before proceeding with full buildout, it should be proven that the site can actually accommodate the projected buildout.

C100-6

Specific Plan Policy Language and Enforceability

Many of the policies in the proposed plan are intended to reduce/avoid impacts but the wording is such that it is not mandatory and many policies are not carried forward to Appendix A, Standard Conditions of Approval.

C100-7

Thus, these policies cannot be relied on to be implemented and fully mitigate impacts. Any policy that does not have a strong "shall" statement is not enforceable. C100-7

Jobs/Housing Growth (DEIR Section 5.1.1.2)

It is completely inaccurate to say that the proposed job growth of 940 jobs outside of an urban growth boundary is a "modest" number. The number of jobs cannot be compared to the county-wide number – this methodology purposefully minimizes the impact. Compared to the rest of Sonoma Valley, which is a distinct planning region, the addition of 940 jobs is significant and is growth-inducing. Also, there is no documentation of the need for these jobs in Sonoma Valley. The market study conducted as part of the Specific Plan alternatives report (November 2021, see sdcspecificplan.com/documents) determined that non-residential development did not generate overall revenues and did not contribute to financial feasibility. The alternatives report states: "Commercial and industrial uses may support building construction costs but are unlikely to have a significantly positive impact on overall development feasibility." Also, the EIR (page 11) states: "…the market demand for non-residential uses (with the exception of a hotel) is limited and higher employment levels will reduce financial feasibility." C100-8

While there is a large demand for affordable housing in Sonoma Valley, creating over 700 market-rate homes is definitely a significant growth-inducing impact because there is no existing demand for this high number. These housing units will not serve the existing Sonoma Valley population – they will attract people from outside the valley and outside of Sonoma County.

Comparison to Previous Institutional Use

The EIR analysis, including the growth-inducing section as well as other sections, attempts to justify the large-scale plan by erroneously comparing the proposed plan population and employee growth to the previous institutional use and number of clients/employees. This comparison is invalid and should not be used as a basis for over-developing the site due to the fact that: C100-9

- As an institution, SDC tread very lightly on the environment and adjacent community. At its most populous, most of the residents of SDC did not leave the property. They did not drive cars, they didn't go offsite to schools, doctors, restaurants, etc.
- Vehicle trips were primarily limited to employees divided into three shifts so that traffic was spread out, rather than concentrated at peak hours. There were no retail commercial uses or a hotel to generate trips.
- Because of the limited outdoor activities and absence of constant vehicle traffic onsite, people and cars did not interfere with wildlife movement; the campus was open, peaceful, and not occupied with uses that generated a substantial amount of traffic (e.g., hotel, restaurants, etc.).
- Employment and resident numbers at SDC reached a peak during a time over 50 years ago when there was very little cumulative growth in Sonoma Valley and both Arnold Drive and Highway 12 were still well-functioning roadways.

Nor is it valid to compare existing building square footage to proposed square footage in an attempt to minimize impacts, as it is the proposed **use** of the buildings that drives most of the impacts.

EIR Traffic Assumptions

There is no guarantee that people who live onsite will work there. That cannot be assumed for purposes of analyzing traffic impacts. Also, it cannot be assumed that the roadway connection to Highway 12 will be developed. Therefore, the traffic impacts are substantially underestimated in the EIR. C100-10

Wildlife Corridor Impacts

Despite many scoping comments, impacts on wildlife movement **through** the campus are not addressed in the EIR. The campus itself is part of the wildlife corridor and must be acknowledged as such. Furthermore, there is no overall prohibition or restrictions on fencing within the campus (only prohibition on wooden fences) so wildlife will likely be blocked from movement through the campus . There will be significant impacts on wildlife movement from the introduction of thousands of people and vehicles, as well as fences. C100-11

No Project Alternative Definition

Under the No Project alternative, it cannot be assumed that the state will take control of the site and that the county will have no land use authority. If the state proceeds with sale of the property, any private developer would be subject to county land use controls. The RFP issued by the State clearly states that the property is being offered for sale. The RFP contains no reference to the possibility for a long-term ground lease with private developers. Therefore, this is not a reasonable assumption. C100-12

Financial Feasibility

Despite making references to financial considerations, there is no definition or accurate assessment of the financial feasibility of the proposed plan or alternatives. While financial feasibility is required, there is no mandate to maximize revenues at the cost of other resources and values, or at the cost of reasonable land use planning. C100-13

Thank you for considering my comments. Please feel free to contact me if you have any questions or need clarification on any of these comments.
Regards,

Vicki Hill, MPA

I previously sent you some excerpts from the body and Appendix of the DEIR regarding the treatment of the water situation (attached). The reason for my interest in this specific topic is 2-fold:

1. We are in a severe and long-term drought environment due to increasing temperature and climate changes
2. SDC is blessed with an abundance of water resources which is highly unusual for any new development.

The language in the water section uses term "assumes". You cannot assume anything about utility services. Without all clear & adequate utility services development is challenged.

Buried in the appendix is a definitive statement that VOMWD can serve the full buildout over the next 25 years so why is the Department not being crystal clear about this in the water section?

The bulk of the Water Study (Appendix and paid for by the State) concerns obtaining the State Water rights and the existing water facilities (reservoirs & presumably pipes/pumps) which have held 800 ac feet or more every year since records have been recorded. SDC needs only 340 at full build out so there is a surplus available for the district to mitigate the long-term drought scenarios. This benefits the whole County.

C101-1

Now I understand that the water facilities are "off-site" and not part of the core campus DEIR discussion so I think a declarative paragraph should state that rather than mixing up the "surface water" discussion between off-site and on-site is required.

There is no discussion of what it would take financially and personnel wise to operate the Water Treatment Plant ("WTP") so use of the actual water resources is still a very open question. As it stands publicly there are no plans to turn all that water into a potable resource for the district. If true, that should be stated.

It is just the weirdest discussion of a major utility for a major development that I have ever read so being clear and straightforward about it will aid the defense of the document and better inform the public.

Just one last thought: I wrote a letter to the editor of the Sonoma Index Tribune that was published this Wednesday that might interest you.

DEIR SDC Specific Plan

Pg. 465

The District's most recently adopted Urban Water Management Plan (UWMP) acknowledges the District's plans to annex and serve the Proposed Project site**. It is assumed the Planning Area will be served by local, on-site surface water sources, and the District will be the water service provider.**122

122 Water Supply Assessment for the SDC Specific Plan. EKI / VOTMWD July 2022.

C101-2

Pg 466

All riparian water rights shall remain with the property. The state owns riparian water rights and pre-1914 and post-1914 appropriative water rights and owns and operates a municipal water supply, treatment, and distribution system on the property**. These rights may be held by the state for existing and future domestic uses on the property.**

Pg 467

Raw water transmission lines from the Sonoma Creek diversion and pump house to Suttonfield Lake, the lakes to the treatment plant, and water transmission lines between transfer tanks may need to be replaced based on the age of the piping, however an assessment of their condition is needed to determine if they can continue to be used to serve the Planning Area. **The water treatment plant will be evaluated for re-use by the water system operator.**

Water Supply Assessment Sonoma Developmental Center Specific Plan Valley of the Moon Water District – July,2022

However, details of the Proposed Project were not known at the time that the 2020 UWMP was published, and thus the Proposed Project was not included in the 2020 UWMP demand and supply analyses. It **is assume**d that the Proposed Project will be served by local, on-site surface water sources, and VOMWD will be the water supplier for the Proposed Project.

C101-3

This WSA concludes that, provided that all surface water rights associated with the SDC Property are available to be utilized by VOMWD to serve the Proposed Project, the Proposed Project will not adversely affect water supply reliability within the VOMWD Service Area. Based on currently available information and conservative estimates of projected demand, the VOMWD expects to be able to meet all future demands within its existing service area, inclusive of the Proposed Project in normal and multiple dry hydrologic years from 2025 through 2045. The shortfalls that are currently projected during single dry years will be addressed through planned implementation of the VOMWD Water Shortage Contingency Plan (WSCP).

Specific Plan

6.2

it is anticipated that following the adoption of this Specific Plan the site will be served by the Valley of the Moon Water District (VOMWD). The majority of water distribution pipes in the Core Campus will need to be replaced, a cost assumed to be borne by the development

C101-4

6.3

The existing infrastructure is primarily located outside of the Core Campus, so determining the ongoing operations and ownership of the assets will be a critical discussion between the State, County, and eventual master developer or developers.

The State owns a variety of water rights associated with the SDC property, including riparian water rights and pre-1914 and post-1914 appropriative water rights. State legislation mandates that the riparian water rights—rights to the water that physically touches the land, such as from Sonoma Creek—remain with the property and limit water usage to within the site, and that the State may continue to hold the other rights for existing and future uses on the property.

Determining the ownership and use of these water rights will be another critical decision for SDC's water supply going forward.

GOALS 6-E Water Supplies:

Safeguard SDC's water supplies and water rights, ensuring adequate availability of water for residents, businesses, fire suppression needs, ecosystem services, and groundwater recharge.

EKI Stud 2207

"This WSA concludes that**, provided that all surface water rights associated with the SDC Property are available to be utilized by VOMWD to serve the Proposed Project, the Proposed Project will not adversely affect water supply reliability within the VOMWD Service Area**. . Based on currently available information and conservative estimates of projected demand, the VOMWD expects to be able to meet all future demands within its existing service area, inclusive of the Proposed Project in normal and multiple dry hydrologic years from 2025 through 2045. The shortfalls that are currently projected during single dry years will be addressed through planned implementation of the VOMWD Water Shortage Contingency Plan (WSCP)." C101-5

6.2.2 Surface Water Rights Associated with the SDC Property The State of California Department of Developmental Services - Sonoma Developmental Center holds several water rights at multiple PODs on the SDC Property. The watercourses and PODs present on the property are identified in Figure 4. As summarized in Table 7, the water rights associated with the SDC Property include two appropriative rights and three combined riparian rights and pre-1914 rights.7 Each water right includes specific temporal and/or volumetric restrictions, described further in Appendix B, which govern diversions at each respective POD. The restrictions associated with the water rights summarized in Table 7 govern how much water can be diverted from each POD on the Proposed Project site, when it can be diverted, and how the water can be beneficially used. The statements on the Hill/Mill Creek, Roulette Springs, and Asbury Creek (Applications #S019164, #S019167, #S019167) have claims to both riparian and pre-1914 use. The pre-1914 claim is currently being used to divert from Hill/Mill Creek and Asbury Creek to Fern Lake for regional fire storage. The other two sources are used pursuant to appropriative water rights (License #3082 and #2451). By actively managing the on-site water rights, the SDC has historically been able to provide reliable year-round domestic water supply to serve all uses on the SDC site at least up to the recorded peak historical demand of 1,143 AFY (Appendix A). In 2019, the State of California enacted Government Code Section 14670.10.5 (SDC Legislation) that outlines the State's goals and objectives for the SDC Property, including the language pertaining to the existing water rights. Paragraph (f) states the following: (f) All riparian water rights shall remain with the property. The state owns riparian water rights and pre-1914 and post-1914 appropriative water rights and owns and operates a municipal water supply, treatment, and distribution system on the property. These rights may be held by the state for existing and future domestic uses on the property. **Based on the SDC Legislation, this WSA assumes that the water rights associated with the SDC Property and associated water supply infrastructure will be available to be utilized by VOMWD to serve water demands associated with the Proposed Project** C101-6

As discussed above, this WSA assumes that all existing water rights and water supply infrastructure associated with the SDC Property will be available for use by VOMWD to serve the Proposed Project demands on the occasion that the SDC Property is annexed into VOMWD's service area. Given that the total annual water demand for the Proposed Project at full buildout and occupancy is estimated to be 342 AFY, it is assumed that the local surface water supplies at the SDC Property will be sufficient to meet the demands associated with the Proposed Project under all conditions (i.e., current and projected, and for normal, single dry, and multiple dry years including a five-year drought period) based on the estimated 100% reliable yield of 356 AFY

C101-7

6.6

<u>Thus, this WSA assumes that all existing water rights associated with the SDC will be available to be utilized by the VOMWD to serve the Proposed Project on the occasion that the SDC Property is annexed by the VOMWD.</u> As discussed in Section 6.2.3, the available volume of local surface water is conservatively estimated to be 356 AFY in all year types, which is assumed to be supplemental to the VOMWD's collective supply portfolio for purposes of serving the Proposed Project. VOMWD has no current plans to develop groundwater supplies on the SDC Property.

Table 11

Projected **Normal Year** Water Supply and Demand (Scenario C) Sonoma Developmental Center Specific Plan, Sonoma County, California Scenario C: Inclusive of Local SDC Supplies and Proposed Project Demands

Table 12

Comparison of **Single Dry Year** Water Supply and Demand (Scenario C) Sonoma Developmental Center Specific Plan, Sonoma County, California Scenario C: Inclusive of Local SDC Supplies and Proposed Project Demand

To: Brian Oh
Subject: SDC - DEIR Comment
Date: Monday, August 29, 2022 9:02:05 AM
Attachments: DEIR SDC Specific Plan Water Notes.docx

EXTERNAL

Brian you requested comments on the DEIR and I focused on what I believe to the one on the most important topics that is treated in a casual and unclear way. Attached are sections of the water discussion that requires clarification:

1. If Valley of the Moon Water District is committed to serving and capable of serving the full buildout of the Specific plan that should be clearly stated rather than being buried in the Appendix of a recent report.
2. "**. It is assumed the Planning Area will be served by local, on-site surface water sources, and the District will be the water service provider."**
    a. This is the wariest and vaguest statement I have ever read in in an EIR on such an important topic. EIR cannot "assume" utility services for a development site.
    b. What does "on-site water source's" mean? Are these sources limited to the project area – the 200-acre campus? If so, there are no such sources. If it means the 800+ acre feet stored off campus and the water rights that provide that water than that should be made clear that VOM is committed to develop that tremendous source of water.
        i. To me the later should happen: 1/3rd of the stored water can be sold to the core campus customers and 1/3 can be sold to existing customers leaving 1/3 to in reserve. This would decrease the burden on the SCWA aqueduct which provides most of VOM's water currently.
        ii. Utility District's can float revenue anticipation bonds for the upfront costs and after that it is long term revenue and a proven long-term source of water.
    c. The conclusion from the water discussion is that the treatment plant and transfer pipes/pumps are to be abandoned and possibly those reservoirs will be drained or left to silt up. If so be clear about it.
        i. There is no estimate of the cost to repair the treatment plant or distribution system outside of the core campus.
        ii. The likelihood that that the ultimate developer will be about to take on that responsibility is not discussed and probably unrealistic
    d. If as the State says that the water rights go with the "land" which land do they mean: core campus or future park property.
        i. I do not believe that any park district is going to want the responsibility of 2 reservoirs and certainly are not in the water rights business so why can this not be made clearer? So why not be clear or describe the options for any future buyer.
3. On the "straight face" test when the district report of July, 2022 says that they can serve the

C102-1

C102-2

C102-3

campus for the next 25 years I would appreciate it if I did not get threatening letters from them about the dire need to cut back irrigation to 3 days a week and only after midnight. Everybody knows we are going to have decades of drought going forward so this statement does not pass the “straight face” test unless SCWA steps ups and backs it up…

C102-3

My 2 cents.

Date: Thursday, September 15, 2022 5:17:43 PM

EXTERNAL

I am STRONGLY opposed to the selling of the Sonoma developmental Center to a developer. The land must be contributed to state or county Parks and protected for the public enjoyment and for a wildlife corridor.
The housing should be appropriate for a rural village setting with the smallest number of houses possible. I believe there is one proposal for 450 houses. The county roads CANNOT support the amount of traffic that will be generated by more housing.
I live on Bennett Valley Rd and there is already a dangerous amount of fast moving traffic and MANY accidents a year as you perfectly well know. The more traffic, the more deaths and they will be on your and the other officials that approve an out-scaled plan's hands. Your traffic analysis does not even include BVR which shows it's inadequacy because cars heading into Santa Rosa will divert onto BVR to avoid the traffic build up elsewhere.
The voices of the community must be heard.
Thank you

To: Brian Oh; PlanningAgency
Subject: SDC Public Zoom Meeting: Comments on the DEIR
Date: Monday, September 12, 2022 2:06:52 PM

In its official Specific Plan/ DEIR, Permit Sonoma is proposing the building of 1000 houses, plus a hotel, plus an indeterminate number of businesses at the former Sonoma Developmental Center. This means anywhere from 2500 to 3000 people living there. All these people will be using cars. All these people will be needing goods & services. How many of these commercial businesses will also be on the SDC land or travelled to by homeowners daily? Many of these people will have pets. I'd like to know how all these fine folks and their adorable animals will safely evacuate their homes at SDC? **In the 2017 wildfire in the City of Sonoma and its environs it took an hour and a half to two hours to go a few miles on Hwy. 12 and Arnold Drive (the *only* roads going south in and out of Sonoma Valley). That's not anecdotal, that's a plain fact.** In this same Specific Plan, it boldly states that these additional 3000 folks and their cars will add 1 to 2 minutes travel time in that evacuation from a raging wildfire.

C104-1

When questioned in a previous meeting about its projections about fire evacuation from the new town the county is proposing on Sonoma Mountain, its planners, Permit Sonoma, cite that its numbers and conclusions are all based on statistics they've compiled, regardless of the reality we have all experienced. So how does one logically argue with this?

This begs the question ... **why should we, the public, accept at face value anything stated in this Specific Plan, including their data regarding environmental impacts on the wildlife corridor, the traffic studies, the re-use of many buildings and the preservation of 750 acres of open space from future development?** In addition, how are our schools going to absorb another thousand or so students?

EXTERNAL

Dear Brian Oh

I live on Arnold Drive, just below the church. I have now read the SDC Specific Plan Draft Environmental Impact Report and am quite disturbed by many of the assumptions and conclusions included in the report. I was initially struck by how little the authors understood the impact this project will have on the community, by the cavalier statements about how this plan would "benefit local communities and residents." The authors disengenuously make claims about consulting the community to "better understand community priorities," but in fact little regard was given to the overarching concerns of most community members that this plan will adversely impact the character of the community and, more importantly, the safety of the residents due to the monumental scope of the proposed project. Although I am appalled by the thought of creating a new town at the SDC site that dwarfs Glen Ellen and rivals Sonoma itself, my chief concerns are how that new town will impact traffic, wildlife, water, and most importantly, fire evacuation plans. C105-1

The Vision and Guiding Principles are full of references to "well-planned evacuation routes" and "proactively planning for community safety in natural disasters," but in fact they somehow conclude that pouring a couple of thousand cars onto Arnold Drive in the event of a disastrous fire will somehow not have a significant impact on emergency evacuation plans. Oddly, the analysis of traffic during a massive explosive fire emergency focuses only on daily traffic patterns and employees and residents of the new town, but ignores the significantly increased volume of traffic that would occur from all the other residents of Glen Ellen and along Arnold Drive. The DEIR also does not take into account the guests at the proposed 120 room hotel or the visitors to the new commercial and recreational space they seek to build. I take little comfort in their conclusion that only 25% of the residents will flee when they get the first alert - it seems risky and irresponsible to bet the lives of so many people on that assumption, rather than assuming that there will most likely be widespread panic if disaster strikes, especially now that we all know about what happened in Paradise and other communities. C105-2

Despite these unrealistic assumptions, the authors conclude that travel time in the event of an evacuation will increase by only 1.2 minutes - actually, in my experience, even during normal traffic, sometimes it takes several minutes before I can even get onto Arnold Drive, so it seems unlikely that a huge influx of traffic C105-3

will delay me, and many others, no more than a minute. It seems that the DEIR overlooks the basic fact that Arnold Drive is a two lane country road with hundreds if not thousands of residents on either side if the road with no other escape route. The authors' decision to ignore the fire danger from the west is also hard to understand, since even the lower likelihood of a fire coming from the west is based on historical records that are less and less relevant given the impact of climate change. A fire from the west, through Jack London Park and down Sonoma Mountain, would hit the SDC with devastating force.

C105-3

Finally, the issue is not how the project impacts an approved Emergency Response Plan, but how it impacts the safety of the entire community in the event of a fire emergency and evacuation. All this is to say that this DEIR should not be approved until there is a serious evidentiary based Emergency Response Plan in place and only after there has been a comprehensive and objective study of how this project will impact public safety and traffic conditions on Arnold Drive during a fire emergency. Moreover, to save time and resources, the entire process should be delayed until the State of California completes its RFP and chooses a development proposal - the DEIR and the Specific Plan should then be aligned with the State's development plan,

C105-4

I have other concerns with the proposed plan, and seek specific details about the preservation of open space, more realistic analysis of water resources during times of ongoing drought, and serious consideration of the overall environmental impact due to increased VMT. I am especially concerned about the questionable conclusion that a smaller, less grandiose project would not be economically feasible. That is a highly dubious assumption, which seems to be self-serving and reductive. The various alternative plans - with reduced housing, lodging and commercial space - need to be more carefully analyzed and considered in light of the constant threat of a devastating fire and the public's need for a sensible and workable evacuation plan on Arnold Drive.

Thank you for your consideration of these comments.

Sincerely,

William B Hirsch
16528 Arnold Drive

EXTERNAL

ar Sonoma County Planning Commissioners,

Please do not support the SDC Specific Plan or DEIR as proposed by Permit Sonoma. Instead, please direct Permit Sonoma to:

1. **Scale Back Size of Development** to 450 or fewer homes and require that most of them be affordable to the majority of people who live in Sonoma Valley. Eliminate the hotel, retail and commercial space that is already provided in Glen Ellen.
2. **Support Historic Preservation Alternative** as it is the most environmentally sound.
3. **Protect Open Space** by providing enforceable timeline, boundaries and actions for permanently preserving open space and keeping it in public hands.
    a. In the DEIR, analyze the impacts of and add enforceable measures to reduce impacts of proposed new uses in the open space including agriculture, agricultural processing, tasting rooms, farm stands, recreation, parking lots, geothermal development and sports facilities (see Table 4-3 of Specific Plan).
    b. Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed.
4. **Wildfire:** Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives. Develop and add enforceable Conditions of Approval for Wildfire to reduce and prevent risk as there currently are none.
5. **Climate Crisis:** Given the County's Climate Crisis Resolution and commitments to reduce climate changing emissions (GHGS) from driving and other sources, revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as building fewer homes, reusing and demolishing fewer buildings, providing transit.
6. **DEIR is Inadequate** While the so-called self-mitigated Specific Plan contains many general policies, goals and conditions of approval to address environmental impacts, the DEIR falls short of CEQA requirements. The DEIR does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by few actual requirements and many vague words such as "promote" or "encourage" or "if feasible." The DEIR needs to be revised

Re: Sonoma Developmental Center Specific Plan Draft Environmental Impact Report

Dear Mr. Oh,

I am a thirty-three year resident of Glen Ellen and the owner of a small business. My wife Jill grew up in Glen Ellen and is a teacher. Together we raised our two children here. We lost our home in the 2017 fire and have subsequently rebuilt. I currently serve as the Chair of the North Sonoma Valley Municipal Advisory Council as well as the Vice Chair of Sonoma Mountain Preservation, a local non-profit.

C107-1

Despite their daunting page count, I believe the Draft Environmental Impact Report (DEIR) and Specific Plan for the redevelopment of Sonoma Developmental Center (SDC) are inadequate. They fail to fully evaluate and reasonably describe the severity and extent of impacts from the proposed project. Many of the DEIR's conclusions lack factual support and many of the Specific Plan policies intended to serve as mitigation measures are deferred and not enforceable.

In spite of soliciting extensive input, Permit Sonoma and the consultants have continued to push a proposal that does not have broad support in the community and ignores the well-documented preference of the public for a smaller project. This public recognizes the many significant site constraints on the development at SDC, including: the wildlife corridor, traffic, cultural resources, population, wildfire hazards and others.

Before commenting on specific aspects of the DEIR, I would like to make a request and an observation:

> I encourage Permit Sonoma and/or the Planning Commission to revise the DEIR and Specific Plan to **create a multi-phased project with a mitigation monitoring program**. The Specific Plan touches briefly on this idea (SP 4-22): of completing "at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive." No other phases are mentioned and there is no mention at all of a mitigation monitoring program. The DEIR analysis points to a lot of uncertainty in the impacts, making the proposed mitigations uncertain as well. Such uncertainty suggests the need for a robust monitoring program.
>
> **Downsizing provides the most obvious mitigation.** Impacts from wildfire hazards, traffic, the wildlife corridor and other issues are all improved with a smaller project. The DEIR states that "the Historic Preservation Alternative is the environmentally superior alternative." This was also the smallest project analyzed in the DEIR.

C107-2

Given time limitations, I will restrict my comments and questions to a few specific aspects of the DEIR and Specific Plan:

Project Description: 2.1.1 Regional Location

C107-3

It goes without saying that an Environmental Impact Report is site specific. A project's location is fundamental to the analysis of its impacts. A poorly framed site location potentially skews the impacts identified and analyzed in the EIR. This is as true for a site's human geography as it is for biological and other aspects.

Local residents have repeatedly affirmed the Planning Area analyzed in the Draft Environmental Impact Report (DEIR) is in the middle of Glen Ellen and completely surrounded by that community. Based on our shared geography, history and common interests, Glen Ellen as a 'place' forms a cohesive part of our community identity. Local citizens have supported this identification through numerous public comments and a petition circulated during the Specific Plan process. In response to the concerns of our citizens, the North Sonoma Valley Municipal Advisory Council (NSVMAC) passed a "Declaration of Glen Ellen Boundaries" in April of this year, affirming our historic and commonly recognized boundaries, which include the Planning Area.

The U.S. Census Bureau recognizes and supports this viewpoint, stating, "a commonly used community name and the geographic extent of its use by local residents is often the best identifier of the extent of a place." https://www.govinfo.gov/content/pkg/FR-2008-02-13/pdf/E8-2667.pdf

The DEIR consistently misplaces the project's location as "between the unincorporated communities of Glen Ellen and Eldridge" (e.g. Section 2.1.1, page 51). Eldridge is a 'census-designated place' (CDP) but does not exist as a community according to the Census definition. Glen Ellen is also the name of a CDP, but that CDP is only a small part of the much larger Glen Ellen community, as defined by local residents.

The Census Bureau defines CDPs as "statistical geographic entities" and, as stated above, leaves the question of the extent of named places to local citizens rather than to government agencies. It should "not be a name developed solely for planning or other purposes." https://www.federalregister.gov/documents/2018/11/13/2018-24571/census-designated-places-cdps-for-the-2020-census-final-criteria.

1. Why were the requests of citizens pertaining to the project's location, given in public comments, letters, a petition and a declaration by the Municipal Advisory Council, not incorporated into the Planning Area description in the Draft Environmental Impact Report?
2. Why was the more accurate term 'census-designated place' not used in the EIR? Why was this term replaced with the word 'community'?
3. Placing the project "between communities" suggests it is outside of an existing community. Did you make this assumption? If so, how did it affect the DEIR's analysis? If not, how did you avoid this bias in your analysis?

I strongly request that the project's location be accurately and consistently described in the Final EIR as: "Surrounded by the existing community of Glen Ellen as defined by local residents."

2.3.1.1 Vision Statement

C107-4

This section states that "New development complements" the surrounding community of Glen Ellen (p. 64). In this context, 'complement' appears to mean "adding to something in a way that enhances or improves it."

1. How was the 'complementary' nature of the new development evaluated? Please provide details about how this development will enhance or improve the existing local community.
2. What evidence (or metrics) on population, housing density, and community scale are being used to back up this statement?

3.16.1.2.2 Wildfire Hazards

The assessment of wildfire hazards in the DEIR appears to have a number of errors and omissions, the most serious of which lead to unwarranted conclusions that underestimate this hazard ("Impact 3.8-7 Implementation of the Proposed Plan would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. (Less than Significant)" p. 268).

Page 503: "Primary responsibility for preventing and suppressing wildland fires in Sonoma County is divided between local firefighting agencies and the State of California, Department of Forestry and Fire Protection. The SDC Planning Area is currently located in an area identified as a State Responsibility Area (SRA)."

1. The Planning Area "includes the approximately 180-acre SDC Core Campus…" (DEIR, pg. 51) According to the State Fire Marshall's map: https://osfm.fire.ca.gov/media/6822/fhszs_map49.pdf, the Core Campus is within a Local Responsibility Area (map on following page), not the State's. Is this correct?

C107-5

Page 503: "Under the Fire and Resources Assessment Program (FRAP) "the Planning Area…includes areas of high to very high Fire Hazard Severity Zones west of Highway 12, areas of high fire hazard severity in the hills, and areas of moderate fire hazards severity zones in the vicinity of Suttonfield Lake and Fern Lake (Figure 3.16-2). The Core Campus is not included in any of these FHSZs "

While it is true that "The Core Campus is not included in any of these FHSZs," the State Fire Marshall's final map is not intended to show moderate and high FHSZs within the Local Responsibility Area. The State's draft map (next page), however does show moderate and high FHSZs covering a substantial portion of the Core Campus. While not finalized, this appears to be the best available fire risk data for the Planning Area.

Goal PS-3 from the Sonoma County General Plan 2020 (DEIR, page 497), reads: "Prevent unnecessary exposure of people and property to risks of damage or injury from wildland and structural fires," with Objective PS-3.1 stating, "Continue to use complete data on wildland and urban fire hazards."

2. The Sonoma County General Plan How was the data gap between the SRA and the LRA within the Planning Area addressed during the DEIR's analysis of wildfire threat? What evidence was the statement about the Core Campus (DEIR, pg 503. See above) based on? Was this conclusion reached because there is data showing low fire risk there or because lack of data was equated with low risk?
3. The Fire Constraints map (13.16-2) shows the Core Campus being almost entirely outside of any Fire Severity Hazard Zones. How would the Fire Severity Hazard data for the Core Campus, shown in the State's draft map, change the analysis of fire hazards there? Does this change the calculus for significance under 16.1.3.1 Criterion 2: "Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire."?
4. In addition, the Sonoma County Community Wildfire Protection Plan Update 2022 states that: "Wildland fires that start in the woods and spread into adjacent areas with relatively dense housing often result in the greatest losses of property and life. Efforts to save lives and property will take precedence over losses of wildland resources, so firefighters' response must focus on protecting populated areas rather than fighting a fire in the most efficient way."
   Even if we assume there are no FHSZs within the Core Campus, this suggests that building dense housing at SDC adjacent to wildlands could result in high "losses of property and life."

C107-6

Responding to such a fire might prevent firefighters from efficiently working to prevent further fire spread. How was this scenario taken into account during the DEIR analysis?

C107-6

3.16.1.3.4. Wildfire Evacuation

The two scenarios chosen for evaluation accurately represent historical fire patterns.

However, the goals stated on page 507 include "Provide protections at the site against the growing risk of climate change exacerbated wildfire hazards and limit the potential impacts of wildfire to development through intelligent site and building design, and open space management."

If the 2017 Nunn's Fire (and other recent wildfires) is an indication, predicting future fire patterns is highly uncertain, given that many homes in moderate FHSZs (including my own), in places with no recorded history of wildfire, burned in that conflagration.

C107-7

1. How would a third scenario, with a fire starting in the Planning Area near the Core Campus, change the calculus for wildfire risk and evacuation? How would this change the calculus for wildfire risk and evacuation for the neighborhood between the Core Campus and Madrone Road, and the Rancho Madrone neighborhood (south of Madrone)?
2. Wildfire ignitions are known to increase with the size of a population. How was this relationship evaluated in the calculation of fire risk in the Planning Area?

Hazard zones below are from the State Fire Marshall's office: https://osfm.fire.ca.gov/divisions/community-wildfire-preparedness-and-mitigation/wildland-hazards-building-codes/fire-hazard-severity-zones-maps/

HAZARD ZONES: Yellow = moderate Orange = high Red = very high Dots = structures burned in 2017 (Sonoma County GIS)

>
> 1. SDC was created for the benefit of the vulnerable and should remain so.
>
> There was a time when State legislators saw their duty to protect the vulnerable. Frank Lanterman was a visionary in this regard. Now, it seems that Susan Gorin is the rare leader who understands the original purpose and true value of the Sonoma Development Center. She was joined by the SDC's Parent Hospital Association which fought to keep the center open, and by many others who are able to understand that there truly are people whose intellectual or developmental condition requires full time care.

C108-1

It should be clear to fair-minded people that this beautiful property was intended for the benefit of people with intellectual or developmental disabilities, or (at the least) retained for similar charitable purposes: housing for the homeless, for battered women, for our disabled veterans, for the mentally ill or for others in need. These vulnerable populations have been disenfranchised and ignored.

C108-1

The property is now at risk of being carved up by hungry property developers. I view the current potential transformation of Sonoma Development Center as a land grab that would make Christopher Columbus or Andrew Jackson proud.

This should outrage everyone.

2. <u>Safe places for our must vulnerable</u>

The word “institution” means a respected place that meets the needs of society. Universities are institutions. Courts of law are institutions. Somehow the meaning has changed when applied to institutions which house intellectually, developmentally or physically or mentally ill people. Such institutions are now seen differently. Robert Kennedy, who carried his own tragic understanding, described Willowbrook in New York as a "snake pit" because … it was. Smart solution to fix it? Fund it fully and staff it generously. Dumb solution? Close it and wishfully assume the residents have another place to go. We went dumb. Since the Nixon era, institutional care of the severely disabled has been steadily eliminated.

C108-2

Dark Joke:

Q. What were California’s homeless called before Ronald Reagan was Governor?

A. Patients!

Ha ha. Not funny. But, sadly, true.

And, as the joke says, the prior patients are now homeless. Estimates hold that 40% of the homeless are intellectually or developmentally disabled. People now living in the beautiful modern property development where Agnews Development Center once stood in San Jose, witness disoriented people with special needs occasionally wandering the streets looking for the home they once shared with others like them. These are the lucky ones. Those who are men are less likely to be raped each night than the women. They are alive and out of jail. A tragic fact is that jails have become warehouses for the mentally disabled and vulnerable.

As tragically, a significant portion of those killed by police – perhaps as many as one-quarter -- are people with intellectual or developmental disabilities, the very people once safely housed at SDC and other similar places. They are simply unable to read body language or respond appropriately to police demands. A young man with disabilities was recently confronted by a policeman who ordered him to raise his hands. The policeman squatted in a shooter's stance. The boy imitated him. The policeman wrongly assumed that the unarmed simple-minded boy was about to shoot… and shot him. Another was at the movies and tried to sneak into another multiplex theater, ignored requests to leave and was strangled to death by the security guard in the ensuing struggle (despite the fact that the boy's caregiver was there unsuccessfully attempting to intercede). The cold, mean streets of America are no place for such innocents – mature men and women with minds of three-year old's. The current concept that they can be better cared for on a one-on-one basis is simply not true – even if we could afford it, and even if there were sufficient numbers of trained caregivers.

C108-3

Frank Lanterman understood this and managed to get enough of his colleagues to agree to create the wonderful laws we now have that distinguish us (as do our universities) from the rest of the US.

Question: Does beautiful Sonoma County really need more McMansions, more nice shopping arcades, more golf courses? Or does it need a safe place for its vulnerable?

The answer seems easy. Doesn't it?

3. Babies and bathwater

Swept up with the noble but misguided believe that institutions were *per* se bad, California closed its Sonoma Development Center at the end of 2018. No longer would SDC provide shelter to the disabled. More than 300 residents were forced to leave. Food, clothing, care and comfort would be provided by the cold, cruel free market. Fat chance! Reliable estimates indicate that the mortality rate among medically fragile residents increased 500% once they left SDC. The babies were thrown out with the bathwater. The reality that many with I/DD were incapable of caring for themselves is clearly not understood by well-meaning people who have no direct experience with the severely disabled. *Post hoc* eugenics are now in play.

C108-4

How do we protect and care for our disabled? Civilizations have grappled with these issues since towns were first formed in the mists of pre-history. The intellectually, developmentally and physically disabled, the mentally ill, the dangerous, the walking wounded our many wars have produced, the old, the demented all need care. The way we care for our vulnerable, like our support for the arts, is the true measure of our civilization. California normally gets high marks.

Until recently, institutional settings were identified as ideal solutions to protect the vulnerable. These institutions provided a place for birds of a feather to flock together, impressive economies of scale, the ability to concentrate experts and the opportunity to create pleasant, comfortable, safe places for our vulnerable.

Families with disabled children once had the choice of caring for these vulnerable children as long as they could and then rely on friends or relatives or the state to take the job – or placing these children as wards of the court in fine, well established and well-run institutions like the Sonoma Development Center.

No longer! Using examples of bad apples (and there were plenty) to spoil the barrel (mostly good apples), California accepted the flawed thinking that institutions are pariah. Agnews Developmental Center serving people with developmental disabilities since1965 was closed in 2011. SDC has followed suit.

4. Brief history

C108-5

In 1883, the California Home for the Care and Training of Feeble Minded Children was established at White Sulphur Springs, near Vallejo. After a short stay in Alameda and then Santa Clara counties, the home moved to its current location in Eldridge in 1891. It became the Sonoma State Home in 1909, the Sonoma State Hospital in 1953and was finally rebranded as the Sonoma Developmental Center in 1986. I first visited it in 1960 and several times thereafter to meet the residents and give them presents collected from well-wishers in Alameda County. It was a nice place then. Residents were cared for by professionals. They were healthy, happy, fed, clothed, warm, safe and loved. Now all is changed. The zeitgeist no longer allows such safe places.

The Lanterman Developmental Disabilities Services Act was passed in 1969. This visionary California law establishes a service system to meet the needs of developmentally and intellectually disabled people (and their families). No other state in America has such a generous and comprehensive system; one that should make all Californians proud. For our brightest, our public and private university system is the best in the world. For our disabled, too, we have ourselves proud.

C108-5

Assembly member Frank D. Lanterman was a visionary. Would that we had more like him in Sacramento. His Mental Retardation Services Act (AB 225) became law in 1969 and mandated services and supports for individual with intellectual or developmental disabilities. This was followed by Lanterman Developmental Disabilities Act (AB 846) initially proposed in 1973 and passed in 1977. The Lanterman Act declares that persons with developmental disabilities(expanded to include persons with cerebral palsy, epilepsy, autism) are protected. "The State of California accepts a responsibility for persons with developmental disabilities and an obligation to them which it must discharge." Section 4501.

Susan Gorin, County Supervisor of District 1 where SDC is located, did her best to stop the Land Grab. She voted to keep SDC open. But she was out-voted. Public hearings have been few and far between. My efforts to reach appropriate state officials we ignored. I personally made numerous attempts to identify the time and location of public hearings, without success. I can provide numerous examples of my emails, most of which were not answered – except by others as frustrated as I am that this process was happening behind closed doors.

C108-6

5. Recommendations

A. Preserve this beautiful property for its intended use as a “home for life” for the vulnerable. Ensure permanent housing for those with I/DD (at a minimum), and possibly extended to include other vulnerable people who require housing and care (battered women, homeless, disabled veterans, mentally ill, etc.).

C108-6

B. If the Land Grabbing momentum is inexorable, then (at a minimum) reserve a significant portion of the property for its intended population, a large portion also for affordable housing in general, some for other civic uses, then retain title to the remaining property and lease it to commercial groups at a rate that provides full financial support to those with disability.

As Jack London, who knew the Sonoma State Home well and knew politics even better, once wrote: ***“An institution like this oughtn't to be run on politics.”***

With respect and a sense of urgency,

Alex Krem

Mr. Brian Oh, Comprehensive Planning Manager
Permit Sonoma County of Sonoma
2550 Ventura Avenue
Santa Rosa, CA 95403

Brian.Oh@sonoma-county.org

Dear Mr. Oh:

I have been asked to review and comment on the Sonoma Developmental Center (SDC) Specific Plan and associated Draft Environmental Impact Report (DEIR). I write this as a research scientist who has spent more than two decades studying wildfire science and fire ecology, global change, and conservation biology. From this perspective, I appreciate the intention to balance human welfare and economic development with plans for preservation of historical and natural resources in the area. Nevertheless, my review of the plan and DEIR have led me to conclude that many issues relative to wildfire risk have been overlooked. C109-1

The discussion of fire risk in the DEIR reflects several misconceptions concerning fire ecology, fire history, and the consequences and effectiveness of different fire mitigation strategies. The SDC property is situated within a highly fire-prone landscape, and based on evidence from the scientific literature, the Proposed Plan has high potential to significantly increase fire risk even further to new and existing structures at the SDC property as well as to the surrounding communities. A rise in human-caused ignitions due to increased population growth and expansion of human infrastructure could increase fire frequency to the point that wildfire would significantly affects public health, ecological functioning, and provision of ecological services (e.g., erosion and flood control). Unfortunately, research on recent destructive fires shows that the proposed mitigation strategies to reduce fire risk are unlikely to eliminate these significant impacts.

Below please find an explanation for my conclusions summarized in three main points.

RELIANCE UPON FIRE HAZARD SEVERITY ZONES IS INAPPROPRIATE FOR CONCLUDING THERE IS NO FIRE RISK.

The reliance upon existing Fire Hazard Severity Zones as the basis of the findings reflects a misunderstanding of the purpose of the maps, their scale of accuracy, and their potential for uncertainty at specific locations. They are also out of date. The Cal Fire maps were not designed with the intention of indicating precisely where structures are most at risk for wildfire. Instead, the objective for these maps is for use in *general* planning and policy guidance. For example, defensible space practices are only enforceable within high hazard zones; homeowners are required to disclose upon sale whether the property is in a in high hazard zone; and county governments can use the zones to enforce building codes or other fire safety measures. The maps C109-2

were developed in 2007 using a simple set of variables, map overlays, and general assumptions to delineate the relative degree of fire hazard across the landscape – that is, areas where fire behavior is likely to become extreme given a fire occurs.

In other words, the hazard areas shown on Fire Hazard Severity Zones are delineated in very broad classes and have limited precision. Given the uncertainty and coarse scale of these maps, they are not appropriate for predicting where buildings are likely to be destroyed. This is something that Cal Fire has been transparent about (Sapsis 2018), as the appropriate use of these maps has been misinterpreted elsewhere. C109-2

Part of the reason they are inappropriate to predict structure loss is that the location and behavior of fire is stochastic and unpredictable at any given time or location. Fire occurrence, behavior, spread, and eventual destruction of a house depends upon a large suite of random factors, such as where and when an ignition occurs; what the fire weather at the time of ignition is; what direction the wind is blowing; what the fuel and topography conditions are at the point of ignition; what kind of housing density and arrangement are in the surrounding area; whether any other fires are burning and the availability of firefighters, etc. This does not mean that the maps of fire hazard are useless. It means that they need to be interpreted with an understanding of what they can or cannot do; and that they are not completely accurate. C109-3

This is true of fire mapping in general. For example, a map delineating probability of ignition will look completely different than a map delineating probability of a large fire (e.g., Syphard et al. 2019). Unlike the Cal Fire maps, some maps are designed with the specific objective of delineating fire risk to structures (e.g. Syphard et al. 2012), but even these maps have substantial uncertainty given the random nature of wildfire. A study comparing maps of fire risk to structures in southern California with the Cal Fire maps in the same regions found significant differences in the areas mapped as high risk, and the Cal Fire maps performed poorly compared to the other maps (Syphard et al. 2012).

Another source of uncertainty in the Cal Fire maps is the assumption that hazard is likely to be governed by the same factors in the same way across the state. Science shows that the relative weighting and direction of variables that influence the locations of fire occurrence, size, and risk vary from region to region (e.g., Syphard et al. 2019). Therefore, accuracy of the Cal Fire maps is likely to vary from place to place, and there is no guarantee that the maps near the SDC are accurate, even in a general sense or for their intended purpose. There are examples of recent highly destructive fires where substantial structure loss occurred in areas not mapped as high risk in the Cal Fire maps (e.g., Coffee Park in the Tubbs Fire, Malibu City in the Woolsey Fire). This should serve as an important illustration of why the maps should not be the final word in a conclusion about fire risk to structures. C109-4

An important point is that the current maps - the ones used for the DEIR - were developed in 2007. The current landscape reflects very different environmental and housing conditions than those that were there 15 years ago. The factors used to create the 2007 the maps, such as fuel type, fire history, and housing, have all changed substantially. Cal Fire has been putting significant effort into updating their maps with new variables and assumptions, and these may be

more appropriate for future decisions. However, those maps are not available yet - and maps developed in 2007 should not be trusted to assess the fire risk for a development to be constructed after 2022.

C109-4

The Proposed Plan Is Likely To Increase Regional Fire Risk

Although the DEIR acknowledges that the location of the proposed development is in a fire-prone part of the landscape, it does not thoroughly establish the baseline conditions that this is an area with a long history of wildfires that have already resulted in serious impacts. It was only a few years ago that structures were destroyed by wildfire at this very site and many more structures were destroyed nearby. Even without the new residents and visitors proposed for the site, the evacuation situation has apparently been extremely problematical in recent fires - and evacuation is often the time when people lose their lives to wildfires. These baseline conditions have not been adequately described in the DEIR despite the need to establish them before assessing the impact of the project.

C109-5

Based on data regarding repeat fires in the same locations, there is reason to believe that the area proposed for development on the SDC site is susceptible to more wildfires in the future. There is also reason to believe that the SDC development will lead to an increase in the number of wildfires in the region, not only due to the potential for climate change to exacerbate fire risk, but also because of the probable increase in human-caused ignitions. In addition, the DEIR lacks a description of how the Proposed Project will not only be impacted by fire, but also how it will impact fire in the vicinity in the future.

As evidenced by the almost perfect overlap of the nearby 2017 Tubbs fire with the 1964 Hanley Fire (Keeley and Syphard 2020), fires often recur in the same locations. This is because certain locations are more fire-prone than others given their topography, location within a wind corridor, climate, and vegetation. Research on structure loss in California has demonstrated that structures located in areas with a history of recurring fire are among those that are most likely to be destroyed by fire (Syphard et al. 2012). Although the 1964 Hanley Fire occurred in nearly the same location as the 2017 Tubbs Fire, there were only about 100 structures lost, and there were no fatalities. However, in 2017, more than 5500 structures were destroyed and 22 people lost their lives. The difference is the rapid growth of human population and housing in the footprint of the fire during the interim.

C109-6

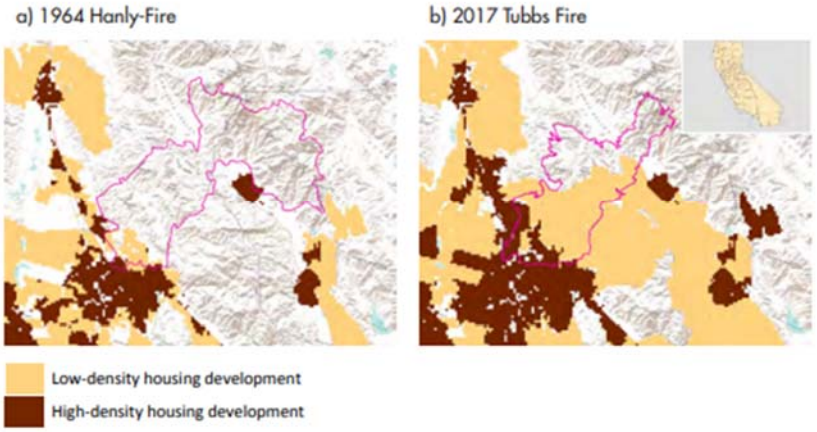

Figure 10. a) 1964 Hanly Fire perimeter in pink, and b) 2017 Tubbs Fire perimeter in pink, with changes in low density and high density housing *(from Keeley and Syphard 2019).*

The placement of new housing in fire-prone locations, like the proposed Project, not only increases the exposure of those structures to wildfire, but it also increases the likelihood of more fire occurring in the surrounding region due to human-caused ignitions. As recognized in the DEIR, humans cause more than 95% of the fire ignitions in Sonoma County, and studies repeatedly show that fire frequency is highest in low-intermediate-density development patterns, particularly when surrounded by wildland vegetation (i.e., the Wildland Urban Interface) (Syphard et al. 2007, Syphard et al. 2019, Radeloff et al. 2018). This is because, as low-medium density housing development expands (the kind proposed for this development), there is an increase in the number of people and opportunities for fires to ignite; and there is still ample continuous vegetation in the surrounding landscape for wildfires to spread. Larger numbers of people also increase the odds of fires starting during severe fire-weather conditions that lead to the most catastrophic outcomes. Recent research shows that human-caused ignitions are the top-ranking reason for area burned in Santa Ana wind-driven fires; and that human-caused fires have worse outcomes than lightning-caused fires.

C109-7

Extensive research also shows that the location of human ignitions tends to occur closest to roads and human infrastructure (Syphard et al. 2008, Molina et al. 2019, Chen and Jin 2022). Therefore, the addition of people coming into and out of the region because of the new development increases the likelihood of more fires starting near the area. The lack of public transport is a concern not only in terms of greenhouse gas emissions, but also in terms of ignitions and increasing fire risk. Given that the most likely form of transportation to and from the development is via automobiles, many more people will be on the roadways, and thus, many more opportunities will arise for fire ignitions to occur. The increased access to open space areas also would provide more opportunities for humans to unintentionally start fires.

C109-8

In turn, the type of low-medium density development proposed in the plan is not only where fire frequency tends to be highest, but this is also where structures are most likely to be destroyed by fire (Syphard et al. 2012, 2019, Kramer et al. 2018). Also, it is not just housing location and density that drives risk exposure; it is the overall location and pattern of development (Syphard

et al. 2012). Isolated or remote clusters of development are particularly vulnerable (Syphard et al. 2013).

In other words, fire risk is a multi-scale issue (Syphard and Keeley 2021), and the landscape context is critical. Developments surrounded by large amounts of continuous wildland vegetation, such as is the case here, are particularly dangerous because they are exposed to potential fire on all sides. This scenario is similar to what happened in the town of Paradise in the 2018 Camp Fire. To that end, "community separation" of urban areas seems like a risky design strategy in the proposed plan - that adds edge between development and wildland. As acknowledged in the EIR, the potential for destructive wildfires is increasing in many parts of California due to climate change. Recent research also shows that proximity to the WUI is the top explanation for why fires have become destructive in the project region (Syphard et al. 2022). C109-8

Policies For Mitigation Do Not Eliminate Fire Risk

Although studies show that community planning and fire-safe design and landscaping can significantly enhance fire resilience, statistics from recent wildfires indicate that these actions are not guaranteed to reduce impacts to less than significant levels (Syphard and Keeley 2019, Baylis and Boomhower 2022). While having a strong and well-enforced community wildfire resilience plan is critically important for reducing fire risk to the largest extent possible, constructing a significant number of residences and businesses will add more frequent ignitions to an already highly fire-prone region. This will exacerbate fire risk in the region regardless of the mitigation policies put in place. Therefore, although the DEIR relies on policies and mitigation measures to conclude that the project would not exacerbate wildfire risk, the initiation and enforcement of these measures do not ensure that significant impacts would be sufficiently mitigated. C109-9

Vegetation Management

One of the measures that the DEIR relies upon to claim no significant wildfire impacts is vegetation management to reduce fire risk. Vegetation management includes mechanical fuel breaks surrounding the development, clearance of woody shrublands or understory woody trees, defensible space, and controlled burning of vegetation. There are several common misconceptions about, and overestimations of the relative effectiveness of, these measures for reducing structure loss, especially during severe fire weather when most structures are destroyed. Fuel reduction through vegetation management is often viewed as a means of stopping or slowing the spread of fire; however, treatments typically only do this under mild weather conditions. In severe fire weather, with strong winds, vegetation treatments generally do not prevent or stop fires on their own. C109-10

Policy 2-31 would require construction and maintenance of a managed landscape buffer along western and eastern edges of the Core Campus to aid in fire defense, consisting of a shaded fuel break in wooded areas and grazed or mown grassland. The construction of these types of fuel breaks can be helpful for protecting communities, when done strategically, by providing safe fire-fighter access. They may also slow fire spread enough to buy time for defensive activities

(Syphard et al. 2011). Despite these benefits, the big issue with placing too much trust in fuel breaks and other forms of vegetation management is that most structures are destroyed because they are exposed to the millions of wind-borne embers that are generated during severe fire-weather. Although woody vegetation is the primary source of firebrands, wind-borne embers are known to fly kilometers ahead of a fire front, crossing vegetation treatments, and landing on or near structures. In fact, wind-borne embers often jump California's widest freeways. Therefore, although fuel breaks can facilitate safe firefighter access in some circumstances, they cannot prevent embers from flying past them. Furthermore, despite the role of fuel breaks for providing safe firefighter access, it is often unsafe for firefighters to be present during the worst fire-weather conditions. In a historical survey of fires and fuel breaks in southern California national forests, 22- 47% of fires stopped at fuel breaks when they encountered them (Syphard et al. 2011).

C109-11

The creation of defensible space around structures at the parcel level, as suggested in policies 2-34 and 2-36, is a mitigating policy proposed for the DEIR, and I concur that this should be implemented to increase community resilience. Studies show that properly created defensible space (https://www.fire.ca.gov/programs/communications/defensible-space-prc-4291/) can significantly reduce the probability of a structure being destroyed in a fire (although there is no additional benefit to extending the distance of defensible space beyond 100 feet (Syphard et al. 2014, Miner 2014)). Nevertheless, as with other vegetation treatments, defensible space should not be considered as something that can definitively prevent structure loss. Many embers directly penetrate a structure without vegetation playing a role, and many structures with well-designed defensible space have been destroyed in recent wildfires.

C109-12

If embers land near the property, they may ignite new fires depending upon the flammability of the surroundings. While the recommended reduction of biomass near the property lowers flame lengths and enhances firefighter safety, the fuel moisture of the vegetation in the vicinity of structures is often more important than the amount of vegetation. Evergreen shrubs and trees are often referred to as "ember catchers" because of this – because the embers may be extinguished if they land on green vegetation. This argues for retaining some green vegetation near the structure and across the landscape.

Research in Australia also shows significant protective effects of irrigated land (Gibbons et al. 2018). Thus, a concern I have about the vegetation management approach described in the DEIR is the proposal to remove chaparral and other woody shrublands and to allow establishment and expansion of grass. Although fire in grass has lower flame lengths, grass is the most flammable and easily ignitable vegetation type in California (Syphard and Schwartz 2021, Syphard et al. 2022). Grass is dryer for a much longer period in the year than chaparral, and when it does ignite, it is the fastest spreading vegetation type. Most firefighters who lose their lives in fires have been killed in grass fires. Therefore, while the practice of mowing or grazing grass can enhance fire safety (if mowing does not occur during severe fire weather), removing shrublands and converting them to grass is likely to make the landscape more flammable.

C109-13

Compliance With Fire-safe Building Codes

In addition to defensible space, the DEIR relies upon class A roof retrofits and the compliance with fire-safe building codes in the construction of new buildings to mitigate fire risk. Although fire-safe building practices, such as those required in new building codes, increase the possibility that structures will survive wildfires (Syphard and Keeley 2019), they also do not guarantee prevention of structure loss. The extent to which enforcement of building codes increases the rate of structure survival in wildfires is yet unknown. For example, one study shows that building codes that enforce fire-safe construction helped to decrease rates of structure loss compared to rates of loss before the codes were enforced (Baylis and Boomhower 2021). On the other hand, an analysis of the Camp Fire, where more than 18,000 structures were destroyed, showed that homes built before and after the enforcement of building codes were destroyed at roughly equal rates (Knapp et al. 2021). Therefore, as with defensible space, many new homes with fire-resilient construction have been destroyed in recent California wildfires.

C109-14

Although fire-safe building practices improve the odds of survival for new homes, these codes do not protect the existing homes at the site and in the surrounding areas. The increase in population and human activity in the region at large increases the odds for more human-caused fires to start, as people will be moving in and out of the area, engaging in more activities that could generate sparks, and spending more time recreating in flammable open-space areas. Given that humans are mobile, ignitions are numerically more likely to occur anywhere in the surrounding area that experiences an increase in human presence and activity, and this exposes more existing structures to wildfires at a landscape scale.

C109-15

In other words, because wildfires occur over large areas, with the most destructive wildfires becoming very large (Syphard et al. 2022), impacts can be expected to occur in areas much larger than the project footprint. Furthermore, new building codes will not benefit the older structures within the project footprint, some of which have significant historical and cultural value. Policy 2-38 suggests retrofits of new roofs, siding, and windows for existing structures, but this is not a complete list of needed retrofits for fire safety, and the details of this policy are vague. Would these retrofits be applied to all existing buildings, even the historical ones? They also would not apply to buildings outside of the SDC site.

Shelter in Place

The DEIR relies in part on proposed Policy 2-54, which requires the Project proponent to build or designate an on-site shelter-in-place facility. DEIR at pages 510 and 511. This alternative of sheltering in place is a dangerous proposition, as evidenced by the Black Saturday Fires in Australia in 2009. In those fires, 173 people lost their lives, and more than half of those people had been sheltering in place.
(https://www.sciencedirect.com/science/article/abs/pii/S221242091730050X). As a result of these fires, the Australians have now shifted thinking away from their stay and defend policy and now have a system in which all residents are encouraged to evacuate when weather conditions meet a “catastrophic threat” level. In short, buildings are replaceable, but human lives are not. While having a shelter-in-place facility may benefit those who are simply unable to evacuate,

C109-16

this should be a last resort, and the SDC project should not rely on this method as mitigation for wildfire risk related impact.

Finally, I question the enforceability and endurability of many of the proposed policies. Who is ultimately responsible for ensuring that the policies are followed? Activities such as fire-safe education, defensible space maintenance, or maintenance of buildings require ongoing, permanent attention. Who will ensure that these activities will continue after the structures have been built? Will a permanent staff position be created to ensure ongoing compliance? In short, people will move in and move out over time, but the houses and the landscape will remain.

C109-16

Conclusion

In conclusion, contrary to the assertions made in the DEIR, there is a strong likelihood that the proposed development, and its alternatives, will have significant impacts relative to wildfire. The potential for increased numbers of wildfires – and more wildfires during severe fire weather - are likely to significantly affect public health and ecological functioning. There are also likely to be increased economic costs for management and suppression, from damage/destruction to human infrastructure or agricultural lands, and from post-event hazards such as mudslides or debris flows. Sufficient homeowners insurance for wildfire, which is becoming increasingly expensive, will also be difficult to attain, particularly for the low-income residents that are supposed to be supported by this plan.

C109-17

Public health may be threatened not only from direct injury and mortality during a fire, but from smoke. The evacuation plans described in the DEIR only account for fires coming in two directions and spreading through other towns before reaching the project site. These analyses should also incorporate scenarios in which fires are spreading directly from the roads east of or from Sonoma Mountain west of the project site. In these cases, if the fire weather is severe and the fires are burning toward the project site, there would likely be less time for residents to evacuate, and this puts human lives at risk. Another potential impact to public health and safety is that, if fire frequency increases regionally due to additional opportunities for human-caused ignitions, secondary hazards may occur post-fire, such as flooding, landslides, runoff, or debris flows. Not only may these secondary events be potentially harmful during the event, but there may be subsequent impacts to water quality.

While my letter is aimed at explaining the wildfire-related potential and costs associated with the project, there are also ecological impacts that may result from the increased fire risk in the area. For example, there are ecological costs associated with vegetation management and construction of fuel breaks. There are also potential ecological impacts that will result from the potential for increased fire frequency in the area. Many vegetation types in the western USA are experiencing fire-driven conversion, often from native vegetation to invasive species (Guiterman et al. 2022). Therefore, the DEIR's conclusion that the project would result in no potential loss of forest is inaccurate because it fails to account for the potential effects of increased wildfire.

C109-18

While the policies to reduce fire risk at the site may work to lessen some of these impacts, the proposed policies are unlikely to offset the increase in fire risk to the property and surrounding area that results from the project. Fire hazards will nevertheless likely be significant.

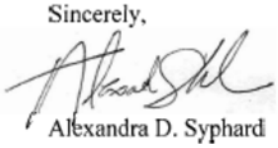
Finally, in my reading of the DEIR, I was unable to understand some of the statements. Therefore, it would be helpful to have additional clarification on the following questions:

1) Why does the plan state that the Historic Preservation Alternative leads to higher fire risk? Based on its reduced population and housing, the Historic Preservation alternative appears to be more fire-safe than the proposed project or its other alternatives.
2) On what basis does the DEIR assume that low-lying creeks and riparian areas would increase fire safety? While these areas are less flammable in general, they do not appear to be close to the proposed housing. Also, when riparian areas dry out, they can burn rapidly at high intensity.
3) On what basis does the DEIR assume that the housing in low-elevation or flat areas would not be at high risk? While it is true that topographically complex areas can often have highly erratic fire behavior, many structures are lost in low-elevation, low-relief areas (Syphard et al. 2021).

C109-19

Thank you for your time in considering my review. Please let me know if you have any questions.

Sincerely,



Alexandra D. Syphard

VIA ELECTRONIC MAIL to Brian.Oh@sonoma-county.org

Brian Oh
Planning Manager, Permit Sonoma

Re: Specific Plan and DEIR for Sonoma Developmental Center

Dear Mr. Oh:

Participation in the grassroots effort to shape the future of the SDC has opened our eyes to the fact that, like an intricate spiderweb, the strength of our community lies in our interconnectivity. While frame threads connect multiple anchor points and give the spiderweb its shape, it is the radius threads, from center to frame, that hold the web together, give it strength, and make it a home. Like radius threads, every heartfelt action taken to further the cause of protecting the SDC, no matter how small, has made this movement that much stronger and helped define a vision for a future Eldridge that, if realized, we can all be proud of.

C110-1

Unfortunately, given overwhelming community opposition to the inclusion of 1,000 housing units and a boutique hotel in the preferred alternative, Permit Sonoma's proposed SDC Specific Plan including these very things can hardly be seen as an action of which anyone involved in this years-long process can be proud. Furthermore, and continuing with the spiderweb metaphor, the Draft EIR appears to be wielded by Permit Sonoma as if it were a broom with which bureaucrats and planners hope to simply destroy the entire web with one swift stroke: no significant or unavoidable impacts here, let's just sweep this mess away, spiders be damned.

But, like the industrious legion of determined web spinners that we are, Permit Sonoma can rest assured - community opposition to this faulty plan is not going away. We will not scamper for the exits in the face of hollow threats of the State taking over the property and cramming even more housing units down our throats. We will not be mollified by offers of counterintuitive wildfire shelter-in-place facilities. We will not be placated by the touting of low-wage hospitality jobs in a boutique hotel that those hoping to occupy the plan's paltry percentage of affordable housing units could ill afford to book a room. Nor will we be tempted by bright shiny objects such as the

C110-2

grandiose growth-inducing Climate Center for which Permit Sonoma just received a timely $250,000 grant to carve out a space on the SDC core campus. Until Permit Sonoma comes up with a scaled-down plan around which we can all rally, we will continue to spin our web of community opposition, and that is something of which we are and will forever be incredibly proud.

C110-2

We were disheartened to learn that verbal comments submitted during the 8/24/22 special meeting of the NSVMAC, Springs MAC, and SVCAC will not be accepted as comments to which Permit Sonoma is legally obligated to respond in the Final EIR. To that end, it is our understanding that submission of said comments in the form of this link to the digital recording of that meeting, will suffice as official submittal, thus requiring response from Permit Sonoma in the Final EIR: https://www.youtube.com/watch?v=LvE6dSvf9Yg&t=3s

Some key points we would like planners to re-examine:

1) Apply all of the financial tools listed as part of the preferred specific plan to the Historic Preservation alternative, which has been identified as the environmentally superior alternative and most closely resembles the scale of development advocated for by the North Sonoma Valley Municipal Advisory Council and other stakeholders.
2) Fix the Figure 1.1-3 in the preferred Specific Plan document so that it shows the Eldridge Cemetery in the correct location by the curve of Orchard Road near its base, not up by the water treatment facility.
3) Require any developer/property owner, now and in the future, to ensure public access to the surrounding open space both during construction and after.
4) Re-examine the traffic analysis, particularly in view of wildfire evacuation. It makes absolutely no sense that adding 2,000 cars to the property would add only a minute of extra evacuation time. Minimizing the impacts of adding that many vehicles to the roadways no matter a connection between Arnold Drive and Highway 12 is potentially a death sentence and certainly guarantees a good deal of post-traumatic stress, for the people who will be inside those cars as they attempt to flee disaster.

C110-3

We agree with and support the comments submitted by the Sonoma Land Trust (SLT). We also agree with and support the comments identified in the North Sonoma Valley MAC comment letter. In addition to the issues identified in those two letters, we agree with comments identified by Sonoma Mountain Preservation (SMP), the Sonoma County Transportation & Land-Use Coalition (SCTLC) the State Alliance for Firesafe Road Regulations (SAFRR), the Bennet Valley Community Association (BVCA), Vicki Hill (Environmental Land-Use Planner), and Teri Shore (Environmentalist) among others, all of which have been submitted to Permit Sonoma and posted on eldridgeforall.org: https://eldridgeforall.org/?p=%26-deir-talking-points

C110-4

In closing, as our logo proclaims, the Glen Ellen Forum SDC Committee is collaborative, determined, and hopeful. Time and time again, we have shown up, we have participated, and we

have persisted in our efforts to educate and mobilize our community for the creation of an acceptable SDC Specific Plan and to act in good faith for the greater good. We will continue to do so, and we urge Permit Sonoma to commit to doing the same.

C110-4

Sincerely,
Glen Ellen Forum SDC Committee, Co-Chairs

Dear Planning Commissioners,

As Chair of the North Sonoma Valley MAC I'm attaching the letter and appendix that was approved by our council and sent to the Supervisors in January pertaining to SDC. This letter details the community's vision for SDC, which has remained quite consistent since the first large community meeting in 2015 and represents years of thinking and work by hundreds of people. Its broad support has been demonstrated by a petition circulated early in the year, which at the time (January) had been signed by a thousand people, the vast majority in Sonoma Valley and elsewhere in the County. It now has over 2500 signatures.

C111-2

The MAC is intended to serve as our community's voice and this is a strong and clear expression of that voice. Thank you for taking this letter under serious consideration as you deliberate the Sonoma Developmental Center Specific Plan and EIR.

Sincerely,

Arthur Dawson, Chair
North Sonoma Valley Municipal Advisory Council

EXTERNAL

Dear Mr. Oh,

On behalf of the North Sonoma Valley Municipal Advisory Council (NSV MAC), I respectfully submit the attached comments pertaining to the Public Review Draft of the Sonoma Developmental Center (SDC) Specific Plan (Proposed Plan) and the SDC Specific Plan Draft Environmental Report (DEIR), issued in August 2022.

As the NSV MAC serves as the voice of the community within county government, we intend this letter to be reflective of community input. However, it is not intended to be exhaustive or to take the place of individual comments from community members and other interested parties.

C112-1

As you will read in the attachments, we do not believe this DEIR adequately and completely evaluates the environmental and safety impacts of the Proposed Plan. Furthermore, we remain committed to the Sonoma Valley community's consistent input calling for both affordable housing and a lower density plan alternative. A plan closer to the Historic Preservation Alternative – determined as "environmentally preferred" in the DEIR analysis – successfully meets the project objectives and the established Guiding Principles for this project and should be given strong consideration.

Thank you for your attention to the issues raised. We look forward to your response.

Sincerely,

Arthur Dawson, Chair
North Sonoma Valley Municipal Advisory Council

Mr. Brian Oh, Comprehensive Planning Manager
Permit Sonoma County of Sonoma
2550 Ventura Avenue
Santa Rosa, CA 95403

Dear Mr. Oh,

On behalf of the North Sonoma Valley Municipal Advisory Council (NSV MAC), we respectfully submit the following comments pertaining to the Public Review Draft of the Sonoma Developmental Center (SDC) Specific Plan (Proposed Plan) and the SDC Specific Plan Draft Environmental Report (DEIR), as issued by Sonoma County in August 2022. While this letter is reflective of community input, it is not intended to be exhaustive or to take the place of individual comments from community members and other interested parties.

Given the tremendous amount of input from Sonoma Valley residents and business owners concerned about the project size and its impacts, as well as this MAC's own request and the Board of Supervisors' direction to scale back the Specific Plan, it is surprising that the proposed Specific Plan still contains over 1,000 homes and approximately 940 jobs. It appears that the DEIR fails to disclose the full extent of impacts that will result throughout Sonoma Valley from this large-scale development outside of an urban growth area, as is further detailed in this letter. C113-1

The Specific Plan represents one of the largest, if not THE largest, developments in the history of Sonoma Valley and is in conflict with County General Plan policies calling for city-centered growth. Furthermore, the proposed plan is inconsistent with its own guiding principles calling for a balance between redevelopment and historic preservation; the plan will destroy the very qualities that make the historic SDC site unique and its implementation will have far-reaching, significant adverse impacts on Sonoma Valley residents.

With this in mind, we provide the following comments, by general category. Please explain the following inconsistencies in the DEIR:

PROJECT SCALE & HOUSING

Increasing the supply of affordable and workforce housing is broadly supported by the Sonoma Valley Community, but not at any cost to the environment and the health and safety of Sonoma Valley residents. Our understanding is that the DEIR should help the community better understand the scale of the environmental impacts of the Specific Plan, how they will be mitigated, what options were considered, and why these options were dismissed. We do not believe the DEIR has yet met these objectives. C113-2

For example, the DEIR identifies the smaller-scale Historic Preservation Alternative (Historic Alternative) as the environmentally superior alternative. It is not ruled out in the DEIR because it meets the required objectives, but it is dismissed from full consideration. Why?

If this alternative is environmentally superior and substantially reduces impacts of the proposed plan; if it more effectively meets some of the fundamental project objectives as outlined in the Specific Plan guiding principles, including Preservation of Historic Resources and Balancing Redevelopment with Land Use (DEIR pages 5 and 6); if it provides 450 new homes (still the largest project in Sonoma Valley); and meets the state's statutory objectives regarding the disposition of the SDC site, why is this alternative (or a version of it that addresses some of the issues identified) not being put forward as the proposed plan?

C113-3

"Overall, the Historic Preservation Alternative is the environmentally superior alternative, although significant impacts of the Proposed Plan and the two alternatives are largely comparable, and the Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks. Additionally, this alternative would not support key project objectives related to increased housing supply, varied housing opportunities, community vibrancy, and long-term fiscal stability to the same degree as the Proposed Plan." (DEIR page 14)

We do not find adequate data in the DEIR that supports the "less superior" distinctions above, or any reason why these couldn't be readily addressed. There is no requirement that maximum housing be developed, especially if it means significant impacts in several issue areas. In terms of biological resources, the analyses on page 563 of the DEIR indicates that the Historic Preservation Alternative would be "similar or slightly better" than the Specific Plan. In terms of energy use, the older historic buildings are presumed to be less energy efficient, but it's not clear how the net calculation was made since "energy use" is also cited in conjunction with construction and demolition GHGs, which would be significantly higher in the Specific Plan. The increased wildfire risk with this lower density plan is presumably solely because of the arbitrary exclusion of the Hwy 12 connector road in this alternative. **How would the proposed Specific Plan fare in comparison to the Historic Preservation alternative if it also excluded the Hwy 12 connector road, or if both included the Hwy 12 connection?**

C113-4

Scale is the most obvious way to mitigate impact. While the types of impacts of the Historic and proposed Specific Plans may be the same, they are not equal in magnitude.

FEASIBILITY

If the Historic Preservation alternative was dismissed because of an assumption that feasibility will require higher development densities, **how is a feasibility analysis considered in the DEIR and shouldn't this be more transparently addressed in the Proposed Plan?**

C113-5

Since it's unclear what "economic feasibility" means for the SDC campus at this time, **shouldn't there be an economic feasibility analysis as part of this evaluation process?** The market demand study that was prepared for the alternatives report does not fill this need (and is inconsistent with the Specific Plan in any case in that it reports little demand for non-residential uses).

MITIGATION MONITORING / PERFORMANCE STANDARDS

It's of concern to the community that most of the policies in the proposed Specific Plan are not enforceable, generally because of the use of "should" in the descriptive language rather than "shall" in many instances. Terms such as "if feasible" and "assumed" are also used repeatedly and the DEIR analysis acknowledges considerable uncertainly in the impacts and thus in the mitigation measures as well.

C113-6

Will the policies and conditions of the approval of the Specific Plan be put into a mitigation monitoring plan or program to ensure mitigation compliance for the project?

Given the scale of the proposed Specific Plan and absence of any phasing requirements, it's critical that performance standards be developed and tied into the phasing of the project, especially since the DEIR calls for future studies and mitigations that are not yet identified. **Will performance standards be put into place, potentially to consider impacts that might include Traffic, Wildlife Function, Resources, Noise?**

C113-6

HOUSING NUMBERS

The Specific Plan states that it will result in 1,000 units and the DEIR uses that assumption, but as noted in Specific Plan Table 4.2 more units are suggested, even without likely density bonuses. That means that most of the environmental impacts in the DEIR are underestimated for the number of units permitted. If the analysis is limited to 1,000 units, why is the possibility of 1,100 or more of units included in the Specific Plan?

C113-7

CULTURAL RESOURCES / HISTORIC PRESERVATION

Isn't it true that the Historic Alternative meets the fundamental project objectives listed on pages 5-6 of the DEIR? Isn't it true that the proposed Specific Plan is inconsistent with the fundamental project objective calling for balancing development with historic resource conservation?

Regarding policies and impacts on cultural resources, isn't it true that the DEIR does not specifically address impacts on Contributing Resources. Please amend the EIR to include such impacts in its own section, not embedded in the discussion of impacts on the district as a whole or explain why not. Isn't it violative of CEQA for the EIR to assume that the project will be approved as proposed, without mitigations and alternatives to reduce impacts on historic resources having been determined feasible or infeasible? Wouldn't the loss of eligibility for the National Register of Historic Places remove protections for contributory resources? What environmental impacts would attend such losses of eligibility? What mitigations could avoid that loss? Please consider and analyze the benefits of the pending efforts to list SDC in the National Register.

C113-8

What are the performance-based standards to determine which buildings can feasibly be restored or adaptively reused? How is demolition of any building to be decided? What type of analysis and performance-based standards will be applied to permit demolition under the Specific Plan? Please amend the Specific Plan so that demolition of any qualified historic resource will require a Plan amendment based on codified criteria. If not, why not? Isn't protection of National Register eligibility required by CEQA if feasible?

C113-9

Regarding the Sonoma House and the main building, Specific Plan Policy 2-47 uses terms like "consider" and "if feasible." How will feasibility be determined? In light of significant impacts, why are mitigation measures not identified or analyzed? Doesn't CEQA disallow deferral of analysis and mitigation of the Specific Plan's foreseeable impacts on historic resources? Isn't it true that projects consistent with the Specific Plan, including those involving demolition of currently listed or eligible historic resources will not be subject to discretionary CEQA review? If not, under what circumstances would CEQA review be required?

UTILITY INFRASTRUCTURE

The Valley of the Moon Water District (VOMWD) consistently contacts customers requesting a 20% reduction in water use, further stating that penalties will be assessed if the reduction is not met. Yet, for the purposes of the DEIR and the water assessment section, the DEIR and VOMWD assert they have the resources to serve the SDC project. What assumptions underpin this assertion?

There are contradictions that should be addressed in the DEIR. For example: VOMWD's own estimates for future water deliveries and shortages are based upon single dry years, not the multiple dry year shortfalls we are already experiencing. Additionally, the Sonoma Valley Groundwater Sustainability Agency has made increasing projections for the need for groundwater re-charge throughout the Sonoma Valley, but the VOMWD has not estimated its own required contribution to groundwater re-charge and has maintained an increased groundwater "draw down" in the SDC water assessment report. What are the groundwater re-charge assumptions for the SDC site and are they included in the DEIR? C113-10

Additional areas of the water assessment report that require clarification in the DEIR:

- The report assumes the planning area will be served by local, on-site surface water sources. However, for Fern and Suttonfield Lakes, the treatment plant and the pipes/infrastructure are not a part of the core campus development. For the purposes of the DEIR and water assessment, those resources do not exist.

- What, specifically are the surface water sources the DEIR is stating are available for use?
- What becomes of those "non-available" water sources (the lakes, treatment plant)?
- Who is responsible for the evaluation of the dams that contain all of that water?
- Are the lakes going to be drained, filled in, maintained?

C113-11

- The riparian rights contradict the findings of both the Sonoma Ecology Center and the Sonoma Valley Water Sustainability study that urges an elimination of riparian water rights in order to provide groundwater recharge to diminishing Sonoma Valley aquifers.

- Who maintains the riparian water rights? The VOMWD, the state, the developer?

- The SDC water treatment plan has not been licensed for operation in many years. The DEIR states it will be evaluated for re-use by the water system operator.

- Who will pay for the evaluation? If the plant requires re-construction, or is not salvageable, who pays for these updates?
- Where, on the Specific Plan, will it be located?

ENERGY MICROGRIDS:

The DEIR language is vague in the section that pertains to an electrical microgrid. By definition, a microgrid is a locally controlled and maintained electrical grid with defined electrical boundaries. It is able to operate in both a grid-connected and "island" mode. A stand-alone or isolated microgrid only operates off-the-grid and cannot be connected to a wider electric power system. C113-12

- Which type of system is being proposed, grid-connected or stand alone?

- Will the system have localized generating capacity?
- Where is the dedicated space on the Specific Plan for any proposed generation?
- Who pays for it and maintains it?
- Where is the electrical use projection data for microgrid design?

C113-12

VEHICLE MILES TRAVELED (VMT)

The Specific Plan indicates that there will be no free parking on campus. Has the DEIR studied the VMT and traffic safety impacts of this policy with respect to visitor vehicle trips to find parking off-site; the impacts on the narrow streets in the adjacent neighborhoods, particularly the Glen Ellen streets south of the SDC (Martin, Lorna, Burbank, Sonoma Glen Circle, Marty and Madrone) where parking is free; or the public safety or emergency evacuation impacts of this policy? Has the potential limit on public access been evaluated?

C113-13

In addition, was there analysis done on the safety implications of increased VMT on the routes used by cyclists and commuters to travel from Glen Ellen to other county locations (Santa Rosa and Rohnert Park), specifically Warm Springs and Bennett Valley Roads. These narrow, winding roads are commonly traveled at relatively high speeds; their road shoulders are significantly deteriorated (no shoulder at all for significant portions). The safety implications on these roads due to the increased VMT in the Proposed Plan must be considered in the DEIR.

There is no evidence at this juncture that anyone living on the SDC site will be employed at the site so this cannot be assumed. Has the DEIR considered this in one of its VMT scenarios? On a related note, while it's noted that institutional uses associated with the former SDC have been removed from the SCTM19 model's existing land use database (DEIR page 426), historical VMT numbers are still cited in the Historical Use section (DEIR 427-428) and implied to be relevant. VMT under the Proposed Plan will not be directly comparable to the historic SDC site in terms of either resident (non-driving) or single-employer shift work VMT per capita; any assumptions made pertaining to historical VMT need to be made clearer in the DEIR analysis and narrative. Finally, the DEIR cites a VMT increase of ~631, with the existing VMT at 59,654, and the Proposed Plan VMT at 60,285 in 2040 (DEIR, page 183). How can this be accurate based on the anticipated population and the VMT summaries cited throughout the DEIR?

C113-14

The DEIR's Project trip generation estimate was developed using the SCTM19 travel demand forecasting model maintained by the Sonoma County Transportation Authority (SCTA). The specific trip generation factors are not included in the DEIR. Thus, it is impossible to evaluate the reasonableness of either those factors or the resulting trip generation numbers.

Can the DEIR appropriately consider the completion of the Sonoma Valley Trail multi-use path, connecting the SDC site with Santa Rosa, as part of the SDC site VMT mitigation if this is a Caltrans controlled project?

C113-15

Why is the downscaling or elimination of the hotel not considered part of VMT mitigation? The hotel is no identified as a priority in the state legislation pertaining to the SDC site and will contribute significantly to VMT.

In Table ES-2, the DEIR determines that VMT reduction measures cannot be guaranteed, and they may be insufficient to reduce VMT per capita below the applicable significance threshold or fully offset the effect of induced VMT. "There are no other feasible mitigation measures available." Why is this an allowed conclusion when there are certainly mitigation measures available that might justifiably be

considered, even if reductions might not reduce impacts to levels that are less than significant? Examples of mitigation include a reduced scale alternative or elimination (or reduction of size) of the hotel or other commercial development. C113-15

WILDLIFE CORRIDOR

There is no analysis of the impacts on the wildlife corridor through the campus and no acknowledgement of the fact that animals currently use the campus and will be impacted. Also, there is no assessment of the impacts of fencing on wildlife. (Only wooden fences are prohibited on the campus.) The fencing policies appear to apply only to the open space and human/wildlife interface areas, not the campus. C113-16

LAND USE IMPACTS

The proposed Specific Plan is both inconsistent with several project objectives, as noted above, and inconsistent with existing County General Plan policies encouraging growth in transit-oriented, urban areas. It is also inconsistent with General Plan policies calling for an overall reduction in VMT since it introduces urban uses in a non-urban area; this will necessarily increase vehicle trips to reach services in either Sonoma or Santa Rosa. C113-17

COMMERCIAL SPACE / JOB CREATION

There appears to be no policy saying that the hotel can't be built first. Is there anything in the proposed Specific Plan requiring the developer to build housing first? C113-18

Why is such a large-scale hotel being proposed when it's not a defined project objective, and when VMT is listed as a challenge?

POPULATION and GROWTH ASSUMPTIONS

The DEIR analysis of growth-inducing impacts is based on a comparison of the project size to county-wide population and employment numbers, which is an unrealistic and invalid comparison. As a distinct planning unit, Sonoma Valley should be the region of comparison. Given the relatively small population of Sonoma Valley, the proposed plan represents a substantial growth-inducing project. Alone, it will double (triple?) the community housing numbers and draw population and employees from other parts of the county as well as from outside the county. Given its location away from necessary goods and services, it will generate pressure for additional urban land uses on surrounding and nearby unincorporated lands. This urban sprawl growth scenario is in direct conflict with climate change policies to encourage compact, in-city growth. C113-19

IMPACTS ON NEIGHBORHOODS SOUTH OF SDC

The Glen Ellen neighborhoods adjacent to SDC will take the brunt of both the construction and operation impacts – not to mention the ongoing impacts of traffic and safety related to parking if there is no free parking on the SDC campus. The over 200 apartments and small lot single family homes directly south of the SDC property will be subject to the aggregate effects of noise, traffic, air emissions, and visual effects. These residents' daily routines will be disrupted during a very long-term construction period. This area is home to many low to moderate-income families who have arguably not had an adequate voice in this planning process. C113-20

Has the DEIR adequately studied the effect of the Specific Plan on this neighborhood, to include the narrow Glen Ellen streets from Martin Street south to Madrone Road and along Madrone Road?

CUMULATIVE EFFECTS

There are several foreseeable projects within 15 miles of the SDC site that will contribute to cumulative growth and related impacts, including but not limited to: the Graywood Ranch Hotel, Elnoka Village Senior Citizens housing project, Milestone Siesta Senior Citizens housing project, Donald Street housing development project, Verano hotel and housing project, Hanna Boys Center residential development program, and the proposed ~70% membership license increase at the Sonoma Golf Club. C113-21

In the Transportation Methodology section (page 432), the DEIR states," The model's 2040 cumulative year includes growth that is consistent with adopted general plans within the County and with regional projections contained in Plan Bay Area 2040." Were the above-mentioned projects, and any additional foreseeable projects, considered either in the general plans or by Plan Bay Area 2040? Is Permit Sonoma able to share what was included in the model?

FIRE / EMERGENCY PREPAREDNESS

The DEIR did not consider a fire scenario in which the fire comes in from the west, down from Sonoma Mountain. "Historically, a fire approaching from the west may be less likely, and therefore did not warrant further specific analysis" (DEIR page 515). We know that fires are now burning in ways that are outside of historical precedent due to climate change and related impacts, and that this area has not burned in recent history. With this in mind, we believe a west-approaching fire scenario west must be considered. C113-22

Did the DEIR consider an evacuation scenario where broadband and/or cell service is out, or is unreliable, affecting receipt of alerts? This occurred in both the 2017 and 2020 fires – land lines and cell service were knocked out or overloaded and people had limited information to guide evacuation.

In Section 16.1.3.4 (page 511), the DEIR states that to further mitigate potential impacts, Policy 2-54 requires that the project sponsor proactively plan for emergency wildfire safety by building or designating an on-site shelter-in-place facility, to be open to both SDC residents and the general public. In our community conversations to date, Sonoma County fire and emergency experts have not condoned or recommended this as appropriate for the SDC site, so we question this as an appropriate mitigation measure.

The DEIR indicates no significant increases in evacuation times with the Specific Plan. Tables show evacuation times in the order of 15-20 minutes, with and without the proposed project. The Evacuation Time analysis suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. These hypothetical scenarios defy residents' reality and the actual evacuation times experienced during recent fires: Nuns Canyon fire (2017) resulted in evacuation times out of Sonoma Valley of 1 hour or more; Glass Fire (2020) resulted in evacuation times from nearby Oakmont onto Hwy 12 of one to two hours; evacuations from Kenwood during recent fires took hours, not minutes; adding thousands of vehicles will exacerbate the problem. C113-23

Page 520 of the DEIR states that, "The additional SR 12 connector road will provide additional fire access and evacuation routes." However, during a wildfire, it's quite possible that residents and workers in the proposed project area will not be able to take this connector route east toward highway 12 due to the high probability of a wildfire advancing from the highway 12 direction (see Specific Plan, figure 2.3-1). Has this possibility been considered in the DEIR analysis of evacuation times? Also, can the analysis

assume the Hwy 12 roadway connection when it will be subject to a separate CalTrans review and approval process and might not be approved?

C113-23

The DEIR indicates that the SDC core campus is in the Local Responsibility Area (LRA) versus the State Responsibility Area (SRA) with respect to fire-related development governance. In Figure 3.16-2, it appears that the LRAs are outside of any fire hazard severity zone. However, given that parts of the LRA are immediately adjacent to medium, high and very high fire hazard severity potential zones (FHSZs), can this be accurate?

The assessment of wildfire hazards in the DEIR appears to have a number of errors and omissions, the most serious of which lead to unwarranted conclusions that underestimate this hazard ("Impact 3.8-7 Implementation of the Proposed Plan would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. (Less than Significant)" p. 268).

C113-24

Page 503: "Primary responsibility for preventing and suppressing wildland fires in Sonoma County is divided between local firefighting agencies and the State of California, Department of Forestry and Fire Protection. The SDC Planning Area is currently located in an area identified as a State Responsibility Area (SRA)."

1. The Planning Area "includes the approximately 180-acre SDC Core Campus…" (DEIR, pg. 51) According to the State Fire Marshall's map: https://osfm.fire.ca.gov/media/6822/fhszs_map49.pdf, the Core Campus is within a Local Responsibility Area (LRA. See map on page 4), not the State's. Is this correct?

Page 503: "Under the Fire and Resources Assessment Program (FRAP) "the Planning Area…includes areas of high to very high Fire Hazard Severity Zones west of Highway 12, areas of high fire hazard severity in the hills, and areas of moderate fire hazards severity zones in the vicinity of Suttonfield Lake and Fern Lake (Figure 3.16-2). The Core Campus is not included in any of these FHSZs. "

The State Fire Marshall's final map is not intended to show moderate and high FHSZs within the Local Responsibility Area. The State's draft map (page 4), however does show moderate and high FHSZs covering a substantial portion of the Core Campus. While not finalized, this appears to be the best available fire risk data for the Planning Area.

Goal PS-3 from the Sonoma County General Plan 2020 (DEIR, page 497), reads: "Prevent unnecessary exposure of people and property to risks of damage or injury from wildland and structural fires," with Objective PS-3.1 stating, "Continue to use complete data on wildland and urban fire hazards."

2. How was the data gap between the SRA and the LRA within the Planning Area addressed during the DEIR's analysis of wildfire threat? What evidence was the statement about the Core Campus (DEIR, pg 503. See above) based on? Was this conclusion reached because there is data showing low fire risk there or because lack of data was equated with low risk?

C113-25

3. The Fire Constraints map (13.16-2) shows the Core Campus being almost entirely outside of any Fire Severity Hazard Zones. How would the Fire Severity Hazard data for the Core Campus, shown in the State's draft map, change the analysis of fire hazards there? Does this change the calculus for significance under 16.1.3.1 Criterion 2: "Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire."?

4. In addition, the Sonoma County Community Wildfire Protection Plan Update 2022 (referenced in the DEIR, 16.1.1.3. Regional and Local Regulations, p. 496) states that: "Wildland fires that start in the woods and spread into adjacent areas with relatively dense housing often result in the greatest losses of property and life. Efforts to save lives and property will take precedence over losses of wildland resources, so firefighters' response must focus on protecting populated areas rather than fighting a fire in the most efficient way."
   Even if we assume there are no FHSZs within the Core Campus, this suggests that building dense housing at SDC adjacent to wildlands could result in high "losses of property and life." Responding to such a fire might prevent firefighters from efficiently working to prevent further fire spread. How was this scenario taken into account during the DEIR analysis?

C113-26

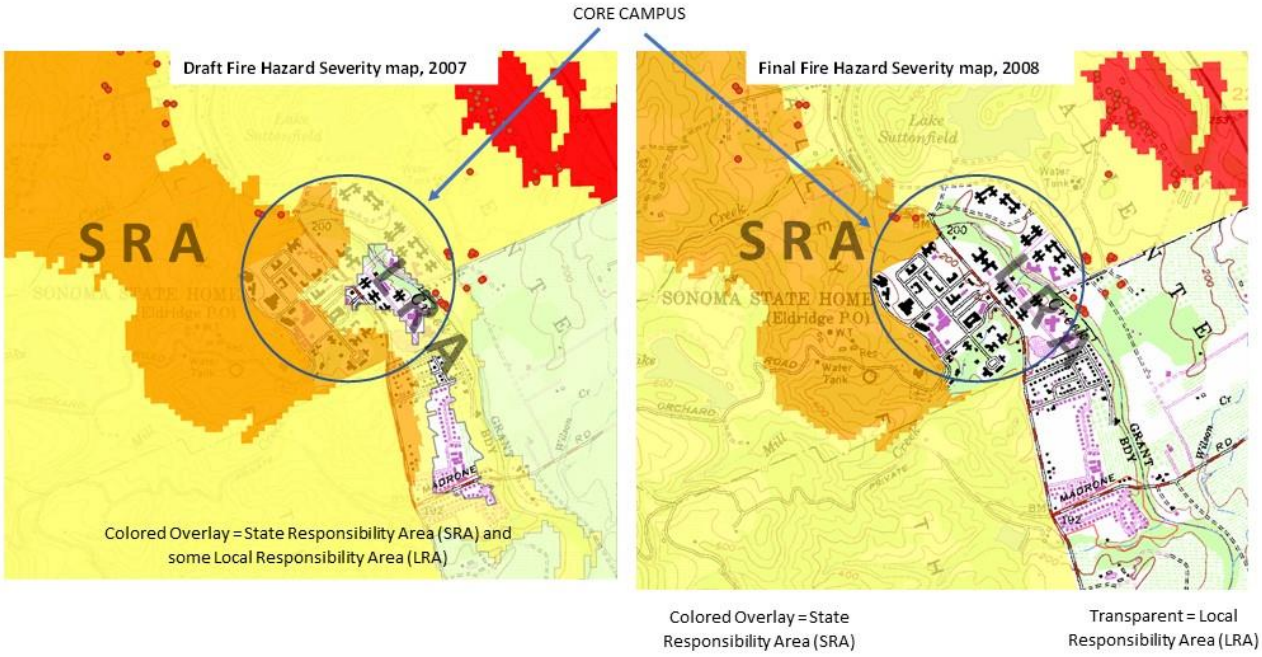
3.16.1.3.4. Wildfire Evacuation

1. Wildfire ignitions are known to increase with the size of a population. How was this relationship evaluated in the calculation of fire risk in the Planning Area?

C113-27

Hazard zones below are from the State Fire Marshall's office: https://osfm.fire.ca.gov/divisions/community-wildfire-preparedness-and-mitigation/wildland-hazards-building-codes/fire-hazard-severity-zones-maps/

HAZARD ZONES: Yellow = moderate Orange = high Red = very high Dots = structures burned in 2017 (Sonoma County GIS)



CLOSING COMMENTS

As evidenced through the comments above, we do not believe this DEIR yet adequately and completely evaluates the environmental and safety impacts of the Proposed Plan. Furthermore, we remain committed to the Sonoma Valley community's consistent input calling for both affordable housing and a lower density plan alternative. A plan closer to the Historic Preservation Alternative – determined as "environmentally preferred" in the DEIR analysis – successfully meets the project objectives and the established Guiding Principles for this project and should be given strong consideration.

C113-27

We remain committed to a plan that we can all support and appreciate this opportunity to provide comment. The NSV MAC letter process did not allow to adequately address all topic areas. Please respond to the public comments in the attached addendum that we received in advance of the NSV MAC meeting on 9/21/22, relating to the Specific Plan and the DEIR, which we are incorporating by reference, and give them full consideration.

Sincerely,

Arthur Dawson

Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Program DraftEIR (EIR) Comments 2

Sept 18, 2022

County's evidentiary record is anecdotal @best. Sonoma Valley represents a national treasure, as described as, "The Valley of the Moon". Sonoma is the Native Indigenous American name for the valley. When White settlers asked what Sonoma meant, Natives pointed to the trace of the Moon setting and rising behind the eastern ridgetops during certain times of the year, the White's interpretation was that "Sonoma" meant 'the valley that the Moon touches' ("The Valley of the Moon"). My Anthropology studies and linguistic avocation has taught me to hear the phonetic sounds (the basic phonemes), particularly for significant language words, words that have cultural, spiritual, or international usage, such as words which are adopted into a language from another. The basis of this study is Multi-critical analysis as opposed to diacritical analysis. Typically there will be very little understanding of the actual meaning of an adopted word. Then, if it retains a high referential standing, it indicates it's an adopted word, not merely a forgotten word. Typical adopted words with high Referential standing and forgotten meanings are: Alleluia, precious, and Amen.

In this case we have Sonoma: what are the phonemes for "Sonoma", they are "Tsu" (not Tso) & "Noma"; so in this case our supposition is correct, because these are two very important international words. "Tsu" or "Tzu" represents the name given by the Chinese to one of their greatest Philosophers, "LaoTzu" the founder of Taoism (from UCI Anthropology studies "Chinese, Taoism & Confucianism", 1983), "LaoTzu" was originally named "LoTzu", meaning "Man-Master" (Philosopher) and when he was older it was changed to "LaoTzu", meaning "Old-Man-Master" (or Great Philosopher): Therefore "Tzu" means "Master". "Noma" is the Aramaic word for 'name' establishing the identity and essence of a thing and thereby giving man control over the substance, and in the Greek "Nomo" means "law or control", again, in Western parlance the essence is unknowable but the manifestation is controllable by the 'name': so control and name are the same thing, therefore "Noma" means "name" (from participation in Antiochian and Greek culture, which develops from a multi-critical analysis as opposed to diacritical).

"Sonoma" therefore means "The Master's Name", and in a Spiritual sense, it means the highest name above all names. "The Master's Holy Name", in an Eastern Spiritual sense describing God's, the Creator's, or Great Spirit's control over the location by the Moon's contact with the Earth, not Man's control over God by invocation of the Name. This we hear many times from Joseph Campbell, man's search for control vs man's search for God.

Also, in another form of Transcendence, both “Tsu” and “Noma” mean “control”, so they are like conjoined twins, in a simple manifestation of the “Rosetta Stone”. Looked at separately, we call this a “Translation”, but conjoining them is a form of transcendence in the physical plane of existence. The name “Sonoma” appears to be used as a descriptive tool, by connecting physical transcendence (translation of place) with the location of a Spiritual Transcendence (in reference to the verticality of the Moon’s touching the Earth), it again mirrors the “Rosetta Stone” representing two kinds of Transcendence, with the Earthly “T” crossing the Spiritual vertical demarcation.

More than the mere analysis of the word and its application to the space, is the significance of "Sonoma" in the cross-cultural linguistic representation of deification using ancient language references from across the sea, and linked only by many thousands of years. There is no other place name which connects so perfectly the unity of man, the Name itself transcends both the ages and the seas, thus we have the essence of a World Heritage Cultural Site. Like many other UNESCO World Heritage Sites, which are in disrepair and in danger of destruction, Sonoma's "Valley of the Moon" is suffering an existential threat from the Proposed Project Alternative. Located at near the exact geographic center of Sonoma Valley, 10 miles from it's head along Hwy 12, and 12 miles from it's outlet at Skagg's Island. And transected by a vital Wildlife Corridor connecting 2 Mountain Parks: Sugarloaf/Hood and Jack London Parks; no discussion or analysis has been given to the significance of this World Heritage Cultural Site, or the impacts or any mitigation from the significantly new, taller, and dense construction within the Program Draft EIR-SP Project analysis (cursory discussion was given to light pollution, but none to the physicality of the presence of tall, dense, populous village construction in the midst of an Historic Treasure, McDonalds centered in Teotihuacan).

The significance of this Spiritual location was not lost on those who created the Sonoma Developmental Center for a healing center for their developmentally disabled children. We should hope that at this more enlightened time, and consistent with CEQA, the Historical Preservation Act, and the 50th Anniversary of the World Heritage Convention (Sept 17, 2022), we should be prepared to preserve both the content and the context, as much as is physically possible, for this National Treasure, "The Valley of the Moon". Under the UNESCO World Heritage Convention, which the United States was signatory (though withdrawn from 2018), we should "strengthen Credibility of the World Heritage List, ensure Conservation of World Heritage properties, promote Capacity-building measures, increase public awareness, involvement and support for World Heritage, and enhance the role of Communities in implementation of the World Heritage Convention". What has been done here appears to be the opposite, a complete neglect of not only Native American cultural values, but World Heritage Convention values.

Analysis of EIR Historical Asset discussion:

The Program Draft EIR is silent on the above discussion, while reporting Environmental Impact Report - County Summary "5.3 Significant and Unavoidable Impacts: According to CEQA Guidelines 15126.2(b), an EIR must discuss any significant environmental impacts that cannot be avoided under full implementation of the proposed program...However the Proposed Plan aims to be self-mitigating. Thus, all proposed policies aim to address environmental impacts (to the, sic) to the greatest extent feasible and no mitigation measures are required. The analysis in Chapter 3 determined that the Proposed Plan would result in significant impacts to the cultural/historic resources and transportation (home-based work trip vehicle miles traveled per capita) that, even with implementation of mitigation measures, would remain significant and unavoidable". This language neglects real analysis of the Null Hypothesis Project, and only considers the Proposed Plan impacts which it states (along with all other alternatives) have similar impacts [without discernment as to avoidable, mitigatable, or unmitigatable], which is entirely untrue in the Null Hypothesis case.

Continuing; "5.3.1 Cultural, Historic, and Tribal Resources: new construction under the Proposed Plan has the potential to disconnect the remaining contributing resources in the Core Campus from those in the Community Separator and Regional Parks lands to the east and west, disrupting the SSHHD's overall integrity to the point that it would no longer be eligible for listing in the National Register of Historic Places, CRHR, or as a California Historic Landmark. This impact, in addition to demolition of the aforementioned resources would result in a substantial adverse change to the significance of the historic district such that the significance of the historic district would be materially impaired pursuant to Section 15064.5. Implementation of goals 2-I and 2-J and policies 4-20 through 4-32 as well as Standard Conditions of Approval (LU1 through LU6) would partially compensate for the impact associated with the demolition of historically contributing resources and physical alteration of the historic district to the maximum extent practicable; however, because these measures would not be enough to avoid or reduce the impact completely, the Proposed Plan's impact would remain significant and unavoidable". No mention is made of the Tribal Resources, because no artifacts remain or they could be recovered in a project excavation, but this does not address the transcendent value of the space and place name as a World Heritage Cultural Site, which can be subsumed in the potential Project construct, where we have heard discussed 2-3Msf of Commercial Construction.

Again, the Program Draft EIR's considerations of the impacts, mitigations, and alternatives appear limited to the Proposed Plan Project Alternative, and do not address the Alternatives, nor the Null Hypothesis Project, continuing a foregone conclusion (see 2-3Msf of Commercial Construction discussed above, is that unmitigatable?).

Please see the following analysis of project conceptual iteration for planning and design.

TCE ***ENGINEERING*** *154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com*

Please see pg4 p3 San Mateo Gardens, re "substantial evidence in the record, is a predominantly factual question...for the agency...drawing on its particular expertise"; here we are bringing your attention to the word “expertise”.

Friends of the College of San Mateo Gardens v. San Mateo County Community College District

https://law.justia.com/cases/california/court-of-appeal/2017/a135892.html

We want to accept the presumption of legal operation, but we must also accept and correct the illegal condition when evidence is presented to the contrary. In a County system, Engineering is not conducted without Accounting. But if the Accounting fails such as for Northwestern Pacific Railroad, the sad evidence must be accepted, and correction immediately made or we suffer the loss of funding or function. No one was there to accept the Trucker's weighmaster's tickets when the washout deliveries were made in the upper NWP line, none could be found, none ever delivered, no NWP.

The reason we approach the initial determination of a project this way, using California Supreme Court’s remand for San Mateo Gardens, is, here we equate the Court EIR analysis process to the Engineering process, in that there are a sequence of iterative steps involved. This process is best exemplified from the CA Supreme Court's remand expressed in San Mateo Gardens, where a series of back-and-forth evaluations and propositions are made in analyzing a project (one such method is CPM,Critical Path Method), which is the same process we use in conceptual design or planning.

A comparison is made by question; does the "initial concept" with its features fit the need and the existing space, then we may have to adjust the concept's features to the needs, or to the space? Conceptual planning designs forward & backward many times.

This comparison is not to decry the effort expended or the information obtained through Planning education or product, but a marathon runner prepares for a marathon, not Law or Engineering. Preparation for a marathon may be great preparation for someone wanting to become a Lawyer, Doctor, or Engineer, but by itself does not make one a Lawyer, Doctor, or Engineer. Nor is an Urban Planner a qualified Civil Engineer, and therefore is unable to make professional judgments in respect to the Planning of "fixed works" identified in BPC 6731.

[See Licensing BPC 6730-6730.2(a); 6731; 6734; 6735(a). See also Administrative Mandamus case, Morris v Harper (2001) 94 Cal.App.4th 52 . “After all, ‘“‘[i]t is the refusal or neglect to perform an act which is enjoined by the law as a present duty that serves as the very foundation for the [mandamus] proceeding.’ ” (Morris v. Harper, supra, at p. 60.)"]

San Mateo Gardens; "Instead of resting on whether a project is new “in an abstract sense,” the “decision to proceed under CEQA’s subsequent review provisions must . . . necessarily rest on a determination—whether implicit or explicit—that the original environmental document retains some informational value.” (Id. at p. 951.) Such an inquiry “is a predominantly factual question . . . for the agency to answer in the first instance, drawing on its particular expertise.” (Id. at p. 953.)"

From where does this “expertise” derive, Planners require no Science education?

The EIR standard is, if/when there are significant environmental impacts, then a review of impacts and mitigations must obtain (other than stating overriding or unmitigatable conditions), and a "judicial review must reflect the exacting standard that an agency must apply". San Mateo (ibid) pg 8.

What this is referring to is, that the evidence must be prepared to a very high standard, from the beginning, in order for it to be considered "substantial evidence in the record". Where is the “exacting Standard” & “expertise”?

According to the National Society of Professional Engineers code of ethics, Professional Engineers may disagree without a single outcome obtained, but must remain decorous.

["The Supreme Court in San Mateo Gardens provided guidance for how to apply the subsequent review provisions. It explained that whether “major revisions” will be

required as a result of project changes “necessarily depends on the nature of the original environmental document,” i.e., whether it was an EIR or a negative declaration. (San Mateo Gardens, supra, 1 Cal.5th at p. 958.) It further explained that the appropriate standard of review also depends on the nature of the original environmental document. Although an agency’s determination of whether major revisions are required is reviewed for substantial evidence, “judicial review must reflect the exacting standard that an agency must apply when changes are made to a project that has been approved via a negative declaration,” as opposed to the deferential standard that applies when the project was originally approved by an EIR. (Id. at p. 953; see Committee for Re-Evaluation of TLine Loop v. San Francisco Municipal Transportation Agency (2016) 6 Cal.App.5th 1237, 1247, 1251-1252 [applying San Mateo Gardens in case where project originally approved by EIR]; Latinos Unidos de Napa v. City of Napa (2013) 221 Cal.App.4th 192,"]

In planning, we have said, the process is intensely exhaustive and iterative, and what is described as the Court EIR review process is also exhaustive and iterative.

The Court ceding competency to the local agency is similar to the process of presenting a case to a Court of Competent Jurisdiction. A Court of Competent Jurisdiction is composed firstly of a trained lawyer, either by a Law School or by preparation and passing the Baby Bar. Then of course, the prospectant Judge must pass the National Bar Exam locally administered, next the Judge must practice law for a minimum of 10 years. At some point the Judge is appointed or runs for election, and finally, the Judge is selected to hear a case by the Chief Judge. The Court itself must also be of Competent Jurisdiction, meaning it is the proper venue, as established by our system of Jurisprudence. These are significant tests.

If someone went to College and studied English or Political Science, they could learn a lot of laws, but they would not be presumed to know how to practice Law,

And they did not go to Law School or pass the Baby Bar, and they have not prepared to be a Lawyer, let alone a Judge.

TCE ***ENGINEERING*** *154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com*

Engineering is one of the most complex problems in supply & demand, as evidenced by the number of divorces in custom home remodeling and construction, and why Public Works requires Licensed Civil Engineers.

Our critique is not meant to characterize the work of any Engineers having completed reports for the SDC EIR-SP, since we do not know what instructions they were given.

But we contend that recommended demolition for over 1.2Msf without analysis of 400,000sf, and recommended demolition of ~75,000sf of Hospital Treatment Building rated at "not requiring any updates", represents an incomplete analysis at best, and certainly a neglect of the impacts on the resources being analyzed.

As we spoke of backward-and-forward analysis in design, this is required in Planning as well, unless a truncated process is employed. It is far easier to make the facts fit the design, than to make the design fit the facts. If your timeline is short, it is far easier for you to establish the Project, and make the analysis fit the Project by not addressing impacts except in a standard way, such as, "(h)owever the Proposed Plan aims to be self-mitigating". “from Program Draft EIR 5.3 Significant and Unavoidable Impacts”

Subsequent to the very specific State Law being passed to sell SDC, incorporating significant intent for community participation, many meetings were held with studied interest and good comments. Comments were sent to Permit Sonoma and the Planners involved in SDC's NOP of Program Draft EIR & SP, but these comments were not incorporated in the evaluation nor in the Proposed Alternative Project SP, nor were they forwarded to the Planning Commission, nor were they provided to other participants or commenters to the EIR & SP.

This is not standard practice, and violates CEQA Code 15300(a)&(b)(1)-(3); “(a) Before granting any approval of a project subject to CEQA, every lead agency or responsible agency shall consider a final EIR or negative declaration or another document authorized by these guidelines…(b) Choosing the precise time for CEQA compliance involves a balancing of competing factors, EIR’s and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment.”

(b)(1) "With public projects, at the earliest feasible time, project sponsors shall incorporate environmental considerations into project conceptualization".

The timeframe window for "cumulative impacts" evaluation was limited to after Proposed Alternative Project completion, leaving out the demolition and construction of the entire project, let alone the life cycle embedded costs, GHG’s and energy to be demolished as a consequence from the new construction.

This time frame results in unsubstantiated conclusions for the Proposed Project Alternative in ES.3 Alternatives to the Proposed Plan, “As discussed in Impacts 3.6-2, the Proposed Plan would thus support and reflect the increasingly stringent State and local goals and regulations that seek to increase energy efficiency, reduce energy consumption, and prioritize renewable energy – reinforcing that the Proposed

Plan would not result in cumulatively considerable impact with respect to wasteful, inefficient, or unnecessary consumption of energy resources." They left out 161,000 tons of waste.

15300 (b)(3), "With private projects, the Lead Agency shall encourage the project proponent to incorporate environmental considerations into project conceptualization, design, and planning at the earliest feasible time."

This truncated analysis appears to be the type that establishes priorities, goals, and objectives before the certification of the EIR is complete, therefore "limiting alternatives or mitigation measures".

This truncated analysis would violate CEQA Code 15300 (b)(2), "public agencies shall not undertake actions concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance";"and for example, agencies shall not:(b)(2)(B)", "Otherwise take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project".

Given that Permit Sonoma will only provide the public's comments to the Planning Commission upon final EIR Certification, and a series of comments have been made to the SDC Comprehensive Planning Manager which has not incorporated the public's comments into the Proposed Project Alternative, "at the earliest feasible time", they appear to have violated Sec's 15300(a)&(b)(1)-(3), inclusive.

What we contend here is, that the proper "back-and-forth" process has not occurred, as within the planning process proper, within the design process proper, within the EIR process, as would be the same within the Court's evaluation of the EIR process itself, from San Mateo Gardens remand from the California State Supreme Court, which constitutes proper Authority to all jurisdictions within California.

We also contend that "particular expertise" and "the exacting standard that an agency must apply" is not available to the review that the "judicial review must reflect", without a Licensed Civil Engineering in Responsible Charge of "Fixed Works" Planning, BPC 6731.

EXTERNAL

Dear Chair Dawson, NSVMAC, Sup. Gorin and Hannah,

Please consider adding this section on open space to the NSVMAC letter regarding SDC at your September 21, 2022 meeting, Agenda Item 8.

It is important to go on record requesting more details in the DEIR and Specific Plan about the open space, as without it we will face more uncertainty as the SDC project progresses over the years and the players change.

Please see below and attached suggested text.

Thanks for your consideration.

Teri Shore
515 Hopkins St.
Sonoma, CA 95476

SUGGESTED TEXT ADDITION TO NSVMAC LETTER ON SDC

Submitted by Teri Shore

PRESERVED OPEN SPACE/PARKLANDS

While we recognize that it is the intent of the County of Sonoma and the State of California to protect the open space lands around the historic campus at SDC, the DEIR and Specific Plan are inconsistent and inadequate regarding the description, protection and disposition of 755 acres of open space outside the core campus.

Neither the DEIR or Specific Plan gives the exact boundaries (other than in one general overlay map in the Land Use Section of the Specific Plan) or give details on how or when open space lands will be protected, transferred, or managed; or analyze or mitigate the impacts to those lands from the development of the historic campus.

These inadequacies need to be resolved in the DEIR and Specific Plan by adding clear descriptions of the open space lands with exact boundaries; likely mechanisms for transferring the lands and to what possible entities or types of entities; a timeline; and how the lands will be managed and under what authority. Environmental impacts and mitigations for impacts to the open space lands from development of the campus and ongoing operations must be provided.

A major concern is that multiple new agricultural uses including tasting rooms and agricultural processing that have never occurred at SDC are proposed to be permitted in the “Preserved Open Space” in the Land Use Section of the Specific Plan. These as well as new conditional land uses in the open space including geothermal development, sports facilities, and parking

facilities are never mentioned or analyzed in the DEIR. See Table 4.3 of the Specific Plan, attached. The DEIR needs to be revised to eliminate these sues and/or to analyze and mitigate environmental impacts on the open space and natural resource.

Vague Goals and Policies contained the Specific Plan and DEIR do not suffice, such as "*future developers at the site must work with the County to ensure proper management and stewardship*" and "*Work with Sonoma County to dedicate the preserved open space as regional parkland*." Not resolving these issues is likely to create confusion and conflict later for all involved, as elected officials, agency staff and developers change over time.

Lastly, the DEIR and Specific Plan cannot rely on state statute to protect the open space lands as that language is vague, only as "feasible" and in the "best interests of the state."[1]

---

[1] *The disposition of the property or property interests shall provide for* ***the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible*** *and shall be upon terms and conditions the director deems to* ***be in the best interests of the state.***

Hi Hannah, Arielle, and Karina,

I have attached the letter from Sonoma Mountain Preservation addressing the draft environmental impact report and preferred specific plan for the Sonoma Developmental Center. While I apologize for the redundancy, since I've already copied you on the original email with its cc list, I would like to make sure the letter is received by all members of the North Sonoma Valley Municipal Advisory Council, the Springs Advisory Council, and the Sonoma Valley Citizens Advisory Commission.

I appreciate your assistance with this request. Thank you for all you do.

Kindly, Tracy

RE: Draft Environmental Impact Report and Preferred Specific Plan for redevelopment of the Sonoma Developmental Center in Glen Ellen

Dear Mr. Oh,

We appreciate this opportunity to comment on the draft environmental impact report (DEIR) and preferred Specific Plan for redevelopment of the Sonoma Developmental Center (SDC).

While we acknowledge the conflicting directives laid out in the legislation authorizing the specific planning process for the property and recognize the difficulty of making meaningful connections with stakeholders in pandemic times, we must express our overall disappointment with the DEIR and Preferred Plan, which do not reflect community input as we've witnessed in public meetings and in letters over the years-long planning process. The scale of proposed redevelopment of the 180-acre core campus is fundamentally incompatible with the rural character of the surrounding community and the north Sonoma Valley, presents a clear danger to the safety of current and future residents of the Valley in the inevitable event of wildfire, and threatens the integrity of Sonoma Mountain's irreplaceable natural resources — habitats for keystone flora and fauna, the health of the Sonoma Valley Wildlife Corridor, water quality, air quality, recreational opportunities, and historic, tribal, and modern cultural values.

The DEIR fails to adequately or clearly describe meaningful, enforceable mitigations for the environmental impacts of redevelopment at the scale proposed, as required by the California Environmental Quality Act (CEQA). It fails to clearly delineate cumulative

impacts. It does not provide sufficient analysis to give decision-makers all the information they need to satisfactorily draw conclusions about the environmental consequences of the Preferred Plan. It is our hope that by addressing the questions that follow, applicable, effective, enforceable mitigations will be identified and instituted that materially decrease or eliminate those impacts.

General concerns/questions

The DEIR indicates that, across the board, the environmental impacts of the Preferred Plan and the Historic Preservation Alternative (HPA), which is acknowledged as environmentally superior per CEQA, are "largely comparable." The DEIR also states that the HPA is less superior in terms of energy use, biological resources, and wildfire risk (ES.4.2). Given the significant differences in scale of the two alternatives — the HPA is half the size of the Preferred Plan — these conclusions defy logic.

1) Please explain how construction of 1,000 homes occupied by 2,500 people has the same environmental impact across virtually every category studied in the DEIR as does providing 450 homes occupied by 1,125 people (a 55% reduction)? Which studies support this finding?

2) Please explain how providing workspace for 900 people has the same environmental impact across virtually every category studied in the DEIR as does providing workspace for 600 people (a 33.3% reduction). Which studies support this finding?

3) Please explain how the HPA—which translates to less demolition through adaptive reuse of historic structures, less construction, fewer vehicle miles traveled, and fewer people on the property—uses more energy, has a greater impact on biological resources, and increases wildfire risk than the Preferred Plan, as stated in the DEIR (ES 4.2). Which studies support this finding?

Impacts specific to Sonoma Mountain

The entire 945-acre SDC property, including the developed core campus, is located within one of the last rural regions on the Sonoma Valley floor, with the mostly undeveloped slopes of Sonoma Mountain forming the entire western boundary and serving as a viewshed/mountain backdrop; as an informal natural reserve/safe haven for native flora and fauna; and as an informal recreational resource for hikers, cyclists, and equestrians from throughout Sonoma County and beyond. Further, historic residential use of the SDC by individuals with developmental disabilities and their caregivers had minimal human-caused environmental impacts on the property's open spaces. Redevelopment at the scale in the Preferred Plan creates an urban footprint within this

historically rural zone, significantly increasing human-caused environmental impacts on a number of areas identified under CEQA (i.e., Aesthetics [3.1]; Biological Resources [3.4], and Public Services and Recreation [3.13], to name a few). To mitigate impacts of any redevelopment on the historic, minimal-impact, rural quality of the property, and to ensure the viewscape is preserved, we request that:

1) The DEIR include mitigation measures to compensate for the loss of the rural attributes of the property at its current baseline, or a baseline that dates back no further than 10 years. Please specify which measures in the current DEIR address these impacts, and which studies support them.

2) Please study, provide mitigation measures, and document how incorporating adaptive reuse of buildings into the HPA proposal, with its smaller human footprint, would impact environmental goals.

3) The SDC's open space currently sees frequent use by recreationalists from all over Sonoma County and beyond. That use increased markedly during the pandemic, despite restrictions on travel. The level of use has remained high as the pandemic has waned. The addition of 2,500 residents, 900 workers, visitors to the proposed hotel and conference center, and their friends and family, as outlined in the Preferred Plan, will add an exponential burden on the property's open space, much of which is on the skirts of Sonoma Mountain. Please analyze what that increase in recreational use means for aesthetics, biological resources, cultural, tribal, and historic resources, and water and air quality, and identify mitigations for those impacts.

4) Please analyze the cumulative impacts and potential degradation of floral and faunal habitats, groundwater supply, and riparian zones across the site, including the 750+ acres identified as open space, caused by the increased housing density, noise, construction, traffic, and demolition proposed under the Preferred Plan. Please provide analysis of the impacts of redevelopment on migratory fish species, such as coho salmon. Please also analyze whether these impacts would be mitigated by a smaller redevelopment such as the HPA.

5) The intent to preserve and protect the 750+ acres of open space surrounding the 180-acre core campus has been codified by the state in its enabling legislation and has been promised by the county in the Preferred Plan. However, neither the Preferred Plan and nor the DEIR delineate clear boundaries for the open space to be transferred, identify a mechanism of transfer, clearly identify the entities that a developer must work with to facilitate transfer, or explicitly require a developer to ensure that redevelopment of the core campus be done in such a way, and with sufficient buffers, as to protect the natural values of the open space. Please add specific, enforceable guidelines for the open space

transfers, specifying acreages and minimum boundaries on both the east and west sides of Arnold Drive, and limiting allowed uses on these acreages to passive recreational uses such as hiking, mountain biking, horseback riding, photography, etc.

6) Agricultural and commercial uses should not be permitted in open space intended to be parkland. Please clarify that uses such as those identified in Table 4.3 will not be permitted in open space identified for transfer to park agencies, and that mitigations for such uses on other open space parcels are identified and enforceable.

Thank you for the time and effort you have put into developing the DEIR and preferred Specific Plan for the property. We look forward to receiving Permit Sonoma's responses to our concerns, and hope the final plan and EIR presented to the Planning Commission for comment and to the Board of Supervisors for approval reflect substantive changes that ensure the integrity of the natural values of Sonoma Mountain, and the communities that surround it, remain intact.

Respectfully,

Meg Beeler, Chairperson
Sonoma Mountain Preservation
Traditional territory of Southern Pomo, Wappo, Patwin, and Coast Miwok

On behalf of Sonoma Mountain Preservation's Board of Directors
Kim Batchelder, Bob Bowler, Arthur Dawson, Avery Hellman, Nancy Kirwan, Larry Modell, Tracy Salcedo, Teri Shore, Helen Bates, Mickey Cooke, Marilyn Goode, David Hansen, and Lucy Kortum

EXTERNAL

An excellent start to this response. I have noted a few very small grammatical items; nothing substantive.

Draft letter only – Draft to be edited and reviewed for potential approval at the NSV MAC meeting of 9/21/22.

September 13, 2022

Mr. Brian Oh
Permit Sonoma
Address / Email

Dear Mr. Oh,

On behalf of the North Sonoma Valley Municipal Advisory Council (NSV MAC), I respectfully submit the following comments pertaining to the Public Review Draft of the Sonoma Developmental Center (SDC) Specific Plan (Proposed Plan) and the SDC Specific Plan Draft Environmental Report (DEIR), as issued by Sonoma County in August 2022. While this letter is reflective of community input, it is not intended to be exhaustive or to take the place of individual comments from community members and other interested parties.

Given the tremendous amount of input from Sonoma Valley residents and business owners concerned about the project size and its impacts, as well as this MAC's own request and the Board of Supervisors' direction to scale back the Specific Plan, it is surprising that the proposed Specific Plan still contains over 1,000 homes and approximately 940 jobs. It appears that the DEIR fails to disclose the full extent of impacts that will result throughout Sonoma Valley from this large-scale development outside of an urban growth area, as is further detailed in this letter.

The Specific Plan represents one of the largest, if not THE largest, developments in the history of Sonoma Valley and is in conflict with County General Plan policies calling for city-centered growth. Furthermore, the proposed plan is inconsistent with its own guiding principles calling for a balance between redevelopment and historic preservation; the plan will destroy the very qualities that make the historic SDC site unique and its implementation will have far-reaching, significant adverse impacts on Sonoma Valley residents.

With this in mind, we provide the following comments, by general category:

PROJECT SCALE & HOUSING

Increasing the supply of affordable and workforce housing is broadly supported by the Sonoma Valley Community, but not at any cost to the environment and the health and safety of Sonoma Valley residents. Our understanding is that the DEIR should help the community better understand the scale of the environmental impacts of the Specific Plan, how they will be mitigated, what options were considered, and why these options were dismissed. We do not believe the DEIR has yet met these objectives.

For example, the DEIR identifies the smaller-scale Historic Preservation Alternative (Historic Alternative) as the environmentally superior alternative. It is not ruled out in the DEIR because it meets the required objectives, but it is dismissed from full consideration. Why?

DRAFT ONLY

If this alternative is environmentally superior and substantially reduces impacts of the proposed plan; if it more effectively meets some of the fundamental project objectives as outlined in the Specific Plan guiding principles, including Preservation of Historic Resources and Balancing Redevelopment with Land Use (DEIR pages 5 and 6); if it provides 450 new homes (still the largest project in Sonoma Valley); and meets the state's statutory objectives regarding the disposition of the SDC site, why is this alternative (or a version of it that addresses some of the issues identified) not being put forward as the proposed plan?

"Overall, the Historic Preservation Alternative is the environmentally superior alternative, although significant impacts of the Proposed Plan and the two alternatives are largely comparable, and the Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks. Additionally, this alternative would not support key project objectives related to increased housing supply, varied housing opportunities, community vibrancy, and long-term fiscal stability to the same degree as the Proposed Plan." (DEIR page 14)

We do not find adequate data in the DEIR that supports the "less superior" distinctions above, or any reason why these couldn't be readily addressed. There is no requirement that maximum housing be developed, especially if it means significant impacts in several issue areas. In terms of biological resources, the analyses on page 563 of the DEIR indicates that the Historic Preservation Alternative would be "similar or slightly better" than the Specific Plan. In terms of energy use, the older historic buildings are presumed to be less energy efficient, but it's not clear how the net calculation was made since "energy use" is also cited in conjunction with construction and demolition GHGs, which would be significantly higher in the Specific Plan. The increased wildfire risk with this lower density plan is presumably solely because of the arbitrary exclusion of the Hwy 12 connector road in this alternative. **How would the proposed Specific Plan fare in comparison to the Historic Preservation alternative if it also excluded the Hwy 12 connector road, or if both included the Hwy 12 connection?**

Scale is the most obvious way to mitigate impact. While the types of impacts of the Historic and proposed Specific Plans may be the same, they are not equal in magnitude.

FEASIBILITY

If the Historic Preservation alternative was dismissed because of an assumption that feasibility will require higher development densities, **how is a feasibility analysis considered in the DEIR and shouldn't this be more transparently addressed in the Proposed Plan?**

Since it's unclear what "economic feasibility" means for the SDC campus at this time, **shouldn't there be an economic feasibility analysis as part of this evaluation process?** The market demand study that was prepared for the alternatives report does not fill this need (and is inconsistent with the Specific Plan in any case in that it reports little demand for non-residential uses).

MITIGATION MONITORING / PERFORMANCE STANDARDS

It's of concern to the community that most of the policies in the proposed Specific Plan are not enforceable, generally because of the use of "should" in the descriptive language rather than "shall" in many instances. Terms such as "if feasible" and "assumed" are also used repeatedly and the DEIR analysis acknowledges considerable uncertainly in the impacts and thus in the mitigation measures as well.

DRAFT ONLY

Will the policies and conditions of the approval of the Specific Plan be put into a mitigation monitoring plan or program to ensure mitigation compliance for the project?

Given the scale of the proposed Specific Plan and absence of any phasing requirements, it's critical that performance standards be developed and tied into the phasing of the project, especially since the DEIR calls for future studies and mitigations that are not yet identified. **Will performance standards be put into place, potentially to consider impacts that might include Traffic, Wildlife Function, Resources, Noise?**

HOUSING NUMBERS

The Specific Plan states that it will result in 1,000 units and the DEIR uses that assumption, but as noted in Specific Plan Table 4.2 there could be closer to 1,210 units, even without likely density bonuses. That means that most of the environmental impacts in the DEIR are underestimated for the number of units permitted.

CULTURAL RESOURCES / HISTORIC PRESERVATION

The Historic Alternative meets the fundamental project objectives listed on pages 5-6 of the DEIR, unlike the proposed Specific Plan that is inconsistent with the fundamental project objective calling for balancing development with historic resource conservation.

Regarding policies and impacts on cultural resources, the DEIR does not specifically address impacts on Contributing Resources. This should be its own section, not embedded in the discussion of impacts on the district as a whole. For example, if impacts on the integrity of the historic district are considered unavoidable and this would result in removing its eligibility for the National Historic Register, under CEQA that means there are no contributing resources because there is nothing to contribute to, and that all Conditions of Approval referring to contributing resources are effectively moot and not applicable. This seems to be the rationale used under Policy 4-25, but we'd like further detail as to how this is applied.

What are the criteria to determine which building are saved, reused, or demolished? Criteria and standards are mentioned, but we don't find any specific documentation, policy or analysis to properly guide this determination in the Specific Plan. Also, the loss of eligibility for the National Register listing would have additional significant impacts. *(Detail to be confirmed.)*

Regarding the Sonoma House and the main building, Specific Plan Policy 2-47 uses terms like "consider" and "if feasible." Where is the text describing how these determinations will be applied? Why is this not explained through explicit mitigation measures, of which there are currently none? Analysis of impacts on individually significant historic resources are deferred to a time when individual projects are proposed. However, since many future projects will not be subject to CEQA, doesn't this analysis have to be done as part of the Specific Plan EIR with mitigation measures identified, not deferred?

Neither the proposed Specific Plan nor the Draft EIR acknowledges the community effort to get the SDC listed in the National Register as an Historic District. Why is this not mentioned?

UTILITY INFRASTRUCTURE (Comments to come)

CLIMATE CHANGE Comments to come)

DRAFT ONLY

VEHICLE MILES TRAVELED (VMT)

The Specific Plan indicates that there will be no free parking on campus. Has the DEIR studied the VMT and traffic safety impacts of this policy with respect to visitor vehicle trips to find parking off-site; the impacts on the narrow streets in the adjacent neighborhoods, particularly the Glen Ellen streets south of the SDC (Martin, Lorna, Burbank, Sonoma Glen Circle, Marty and Madrone) where parking is free; or the public safety or emergency evacuation impacts of this policy? Has the potential limit on public access been evaluated?

There is no evidence at this juncture that anyone living on the SDC site will be employed at the site so this cannot be assumed. Has the DEIR considered this in one of its VMT scenarios?

Can the DEIR appropriately consider the completion of the Sonoma Valley Trail multi-use path, connecting the SDC site with Santa Rosa, as part of the SDC site VMT mitigation if this is a Caltrans controlled project?

Why is the downscaling or elimination of the hotel not considered part of VMT mitigation? The hotel is no identified as a priority in the state legislation pertaining to the SDC site and will contribute significantly to VMT.

In Table ES-2, the DEIR determines that VMT reduction measures cannot be guaranteed, and they may be insufficient to reduce VMT per capita below the applicable significance threshold or fully offset the effect of induced VMT. “There are no other feasible mitigation measures available.” Why is this an allowed conclusion when there are certainly mitigation measures available that might justifiably be considered, even if reductions might not reduce impacts to levels that are less than significant? Examples of mitigation include a reduced scale alternative or elimination (or reduction of size) of the hotel or other commercial development.

WILDLIFE CORRIDOR

There is no analysis of the impacts on the wildlife corridor through the campus and no acknowledgement of the fact that animals currently use the campus and will be impacted. Also, there is no assessment of the impacts of fencing on wildlife. (Only wooden fences are prohibited on the campus.) The fencing policies appear to apply only to the open space and human/wildlife interface areas, not the campus.

LAND USE IMPACTS

The proposed Specific Plan is both inconsistent with several project objectives, as noted above, and inconsistent with existing County General Plan policies encouraging growth in transit-oriented, urban areas. It is also inconsistent with General Plan policies calling for an overall reduction in VMT since it introduces urban uses in a non-urban area; this will necessarily increase vehicle trips to reach services in either Sonoma or Santa Rosa.

COMMERCIAL SPACE / JOB CREATION

There appears to be no policy saying that the hotel can’t be built first. Is there anything in the proposed Specific Plan requiring the developer to build housing first?

Why is such a large-scale hotel being proposed when it’s not a defined project objective, and when VMT is listed as a challenge?

DRAFT ONLY

POPULATION and GROWTH ASSUMPTIONS

The DEIR analysis of growth-inducing impacts is based on a comparison of the project size to county-wide population and employment numbers, which is an unrealistic and invalid comparison. As a distinct planning unit, Sonoma Valley should be the region of comparison. Given the relatively small population of Sonoma Valley, the proposed plan represents a substantial growth-inducing project. Alone, it will double (triple?) the community housing numbers and draw population and employees from other parts of the county as well as from outside the county. Given its location away from necessary goods and services, it will generate pressure for additional urban land uses on surrounding and nearby unincorporated lands. This urban sprawl growth scenario is in direct conflict with climate change policies to encourage compact, in-city growth.

IMPACTS ON NEIGHBORHOODS SOUTH OF SDC

The Glen Ellen neighborhoods adjacent to SDC will take the brunt of both the construction and operation impacts – not to mention the ongoing impacts of traffic and safety related to parking if there is no free parking on the SDC campus. The over 200 apartments and small lot single family homes directly south of the SDC property will be subject to the aggregate effects of noise, traffic, air emissions, and visual effects. These residents' daily routines will be disrupted during a very long-term construction period. This area is home to many low to moderate-income families who have arguably not had an adequate voice in this planning process.

Has the DEIR adequately studied the effect of the Specific Plan on this neighborhood, to include the narrow Glen Ellen streets from Martin Street south to Madrone Road and along Madrone Road?

CUMULATIVE EFFECTS

There are several foreseeable projects within 15 miles of the SDC site that will contribute to cumulative growth and related impacts, including but not limited to: the Graywood Ranch Hotel, Elnoka Village Senior Citizens housing project, Milestone Siesta Senior Citizens housing project, Donald Street housing development project, Verano hotel and housing project, Hanna Boys Center residential development program, and the proposed ~70% membership license increase at the Sonoma Golf Club.

In the Transportation Methodology section (page 432), the DEIR states," The model's 2040 cumulative year includes growth that is consistent with adopted general plans within the County and with regional projections contained in Plan Bay Area 2040." Were the above-mentioned projects, and any additional foreseeable projects, considered either in the general plans or by Plan Bay Area 2040? Is Permit Sonoma able to share what was included in the model?

FIRE / EMERGENCY PREPAREDNESS

The DEIR did not consider a fire scenario in which the fire comes in from the west, down from Sonoma Mountain. "Historically, a fire approaching from the west may be less likely, and therefore did not warrant further specific analysis" (DEIR page 515). We know that fires are now burning in ways that are outside of historical precedent due to climate change and related impacts, and that this area has not burned in recent history. With this in mind, we believe a west-approaching fire scenario west must be considered.

Did the DEIR consider an evacuation scenario where broadband and/or cell service is out, or is unreliable, affecting receipt of alerts? This occurred in both the 2017 and 2020 fires – land lines and cell service were knocked out or overloaded and people had limited information to guide evacuation.

DRAFT ONLY

In Section 16.1.3.4 (page 511), the DEIR states that to further mitigate potential impacts, Policy 2-54 requires that the project sponsor proactively plan for emergency wildfire safety by building or designating an on-site shelter-in-place facility, to be open to both SDC residents and the general public. In our community conversations to date, Sonoma County fire and emergency experts have not condoned or recommended this as appropriate for the SDC site, so we question this as an appropriate mitigation measure.

The DEIR indicates no significant increases in evacuation times with the Specific Plan. Tables show evacuation times in the order of 15-20 minutes, with and without the proposed project. The Evacuation Time analysis suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. These hypothetical scenarios defy residents' reality and the actual evacuation times experienced during recent fires: Nuns Canyon fire (2017) resulted in evacuation times out of Sonoma Valley of 1 hour or more; Glass Fire (2020) resulted in evacuation times from nearby Oakmont onto Hwy 12 of one to two hours; evacuations from Kenwood during recent fires took hours, not minutes; adding thousands of vehicles will exacerbate the problem.

Page 520 of the DEIR states that, "The additional SR 12 connector road will provide additional fire access and evacuation routes." However, during a wildfire, it's quite possible that residents and workers in the proposed project area will not be able to take this connector route east toward highway 12 due to the high probability of a wildfire advancing from the highway 12 direction (see Specific Plan, figure 2.3-1). Has this possibility been considered in the DEIR analysis of evacuation times? Also, can the analysis assume the Hwy 12 roadway connection when it will be subject to a separate CalTrans review and approval process and might not be approved?

The DEIR indicates that the SDC core campus is in the Local Responsibility Area (LRA) versus the State Responsibility Area (SRA) with respect to fire-related development governance. In Figure 3.16-2, it appears that the LRAs are outside of any fire hazard severity zone. However, given that parts of the LRA are immediately adjacent to medium, high and very high fire hazard severity potential zones (FHSZs), can this be accurate?

CLOSING COMMENTS (to come)

Sincerely,
North Sonoma Valley Municipal Advisory Council

EXTERNAL

Hi Hannah,

Thank you for sending this. I will not be able to attend the North Sonoma Valley MAC meeting on 9-21. But, if you could please pass on to the members of the MAC and Supervisor Gorin, how fabulous I think this letter is. The North Sonoma Valley MAC, has so much technical knowledge and expertise, for which I am so grateful. They have covered all the areas that must be addressed in this very vague and almost useless draft EIR. I fully support everything they have so far and the level of detail is outstanding. As I can not attend the meeting, I urge them to approve the final version and get it to PRMD. I will be attending the PRMD meeting tomorrow and then will work on my own letter, but it will never have the level of detail and understanding of all the issues that this draft letter has.

Thank you and sincerely,

Josette Brose-Eichar

Dear Planning Commissioners,

As Chair of the North Sonoma Valley MAC I'm attaching the letter and appendix that was approved by our council and sent to the Supervisors in January pertaining to SDC. This letter details the community's vision for SDC, which has remained quite consistent since the first large community meeting in 2015 and represents years of thinking and work by hundreds of people. Its broad support has been demonstrated by a petition circulated early in the year, which at the time (January) had been signed by a thousand people, the vast majority in Sonoma Valley and elsewhere in the County. It now has over 2500 signatures.

The MAC is intended to serve as our community's voice and this is a strong and clear expression of that voice. Thank you for taking this letter under serious consideration as you deliberate the Sonoma Developmental Center Specific Plan and EIR.

Sincerely,

Arthur Dawson, Chair
North Sonoma Valley Municipal Advisory Council
(707) 509-9427; (707) 996-9967

Dear Planning Commission,

In view of your meeting on the Sonoma Developmental Center Specific Plan draft EIR tomorrow, I would like to share a link to the comment letter being drafted by the North Sonoma Valley Municipal Advisory Council in response to this document. This is a draft and will be finalized at our next meeting on September 21:

https://sonomacounty.ca.gov/Main%20County%20Site/Administrative%20Support%20%26%20Fisca

l%20Services/BoS/BCCs/Documents/NSV%20Municipal%20Advisory%20Council/September%202022/NSV-MAC-DEIR-Comment-Letter-Draft4-09-12-22.pdf

Given the timely nature of this letter we wanted to make sure you could review our draft. Once finalized I will submit our letter to Permit Sonoma and include the Planning Commission as a recipient.

Sincerely,

Arthur Dawson, Chair
North Sonoma Valley Municipal Advisory Council

January 6, 2022

Sonoma County Board of Supervisors
575 Administration Drive, Room 102A
Santa Rosa, California
Via email:

Dear Sonoma County Board of Supervisors:

The North Sonoma Valley Municipal Advisory Council (NSV MAC) has prepared this letter for consideration by the Board of Supervisors (Board) and Sonoma County planning staff regarding the proposed land use and design alternatives for the SDC Specific Plan. The primary purpose of this letter is to summarize public input received by the NSV MAC in response to the SDC Specific Plan Alternatives Report prepared by Dyett & Bhatia and published by the County in early November 2021.

This letter incorporates the extensive community input from public meetings on November 17, 2021, December 15, 2021 and January 5, 2022, the Sonoma Valley community survey, as well as written correspondence and NSV MAC comments, and synthesizes this information into several main themes to create the framework for a community-supported land use alternative. **The intent of this exercise is to provide sufficient information to enable the Board to direct Permit Sonoma staff to develop a preferred alternative that truly reflects the community vision for SDC as articulated in the January 2021 Draft Vision and Guiding Principles.**

C114-1

As reflected in the hundreds of comments received since publication of the Alternatives Report, the Sonoma Valley community does not support any of the three alternatives proposed by the County; 71% of participants rejected all three alternatives when polled during the SDC Alternatives Workshop on November 13, 2021. We also reference a non-affiliated Sonoma Valley survey (community survey) conducted by Sonoma Valley resident Dr. Shannon Lee, Biology Department Faculty at Sonoma State University in December 2021. The survey received 672 responses, 95% of which were from Sonoma Valley and Sonoma County residents. The SDC is not suitable as an "urban infill site" and the community's rejection of the proposed alternatives reflects the incompatibility of the scale of proposed development with the adjacent Glen Ellen communities and the site's environmental constraints.

C114-2

Request for Community-Driven Process for Preferred Alternative

On behalf of the community, the NSV MAC requests the Board to delay the initiation of the California Environmental Quality Act (CEQA) process to prepare an Environmental Impact Report (EIR) for a preferred alternative until after a new alternative reflective of site constraints and community input is developed as promised in the December 17, 2019 agreement between the State of California and Sonoma County. The NSV MAC requests the Board to direct staff to pursue this new alternative as outlined in this letter.

C114-3

Community Input as Framework for a Preferred Alternative

The community continues to support the January 2021 Vision and Guiding Principles that have underpinned community workshops, Sonoma County requests for proposals for preparation of the Specific Plan, and related efforts during this multi-year SDC redevelopment process. These principles are most recently expressed on pages 10-11 of the Specific Plan Alternatives Report. The community feedback conveyed in this letter reflects these principles through an integrated vision of development at an appropriate scale, with an intention to balance affordable, inclusive housing and related commercial development with the protection of SDC's open space (a California public trust resource), the Sonoma Valley Wildlife Corridor, the historic district portions of the SDC campus, fire safety and climate resiliency, and the rural character of the surrounding region. An alternative with substantially reduced

C114-4

density is necessary to ensure that the negative impacts of development on traffic, public safety, wildlife corridors, water/water treatment, and related issues do not cause environmental and social harm.

The nine community priorities are summarized below and detailed in the Appendix to this letter.
OPEN SPACE. Community input consistently emphasizes the singular opportunity the SDC campus represents in terms of protecting the open space and wildlife corridor in the context of a vibrant, sustainable community. Over 90% of community survey respondents ranked "preservation of open space" as the highest priority; this is consistent with the state's 30x30 goals. C114-5

This concern goes beyond setting aside open space lands and creating creek and sensitive habitat setbacks. The density of development planned within the SDC campus must not exceed the carrying capacity of the site's resources. In other words, it must not result in overuse of open space resources or interference with wildlife movement and permeability.

HOUSING DENSITY. The community unequivocally supports the creation of additional housing on the SDC site, particularly affordable housing, however at a lower density (450 or fewer housing units) than that included in any of the alternatives published to date. Higher housing density will move the surrounding communities from a "rural" to "urban" designation based on current U.S. census definitions (see Appendix) and is a primary driver of unacceptable impacts, including environmental, infrastructure, traffic and related public safety issues. C114-6

AFFORDABLE HOUSING. The community supports a considerably higher percentage of affordable housing than the approximately 25% included in the published alternatives, **with 76% of community survey respondents indicating a preference for 50-75% (or more) affordable units.** Use of available funding mechanisms and incentives—including revisiting the State's obligations for SDC site cleanup and remediation—must be included in the financial feasibility assumptions to maximize the affordable housing percentage (see Site Governance / Funding below). C114-7

ADAPTIVE REUSE OF EXISTING BUILDINGS. Public and NSV MAC member comments indicate that the County should revisit the potential reuse of existing buildings to satisfy some of the housing needs on the East Side of the SDC campus.

UTILITY INFRASTRUCTURE. An energy sustainability plan, including a microgrid design, should accompany any SDC development, as should a thorough review of the potential benefits of an on-site sewage treatment facility in light of the challenges to the existing Sonoma Valley infrastructure.

FIRE SAFETY/ CLIMATE RESILIENCY: Fire safety and climate resiliency will be impacted by the other elements of the site plan—water use/recycling, energy grids, housing density—and their impacts on traffic and public safety. These interconnected factors must be more intentionally considered in any preferred alternative for this site. The Sonoma Valley community has expressed particular concern that fire risk, evacuations and related community preparations have evolved significantly during the course of the SDC re-development process. 71% of community survey respondents indicated that the County has not adequately addressed fire hazard, traffic and other impacts to the community in the proposed alternatives. C114-8

HISTORIC PRESERVATION. The community recognizes the importance of preserving the historic, architectural, and aesthetic character of the SDC campus, and envisions permanent protection, preservation and management of selected buildings and structures within the historic district. More specifically, the community has consistently supported the preservation of an historic district on the C114-9

west side of the SDC campus which could include a museum, library, research hub and visitor center, all of which would be linked with the cemetery and open space.

COMMERCIAL SPACE / JOB CREATION: The community supports innovative use of commercial space (education, training, research) and inclusive job creation at a scale suitable for this semi-rural site. In addition, the community wants to see commercial space set aside for **COMMUNITY**-oriented functions, e.g., a community center or school, and is prepared to explore funding options for these uses. C114-9

SITE GOVERNANCE / FINANCING: Many members of the public have requested consideration of establishing a trust or similar management entity to oversee redevelopment and implementation of the Specific Plan rather than a private developer. A trust mechanism would open opportunities for public financing and site management that would broaden the potential for successful redevelopment AND community compatibility. In fact, the Board's April 2019 resolution "Supporting a Land Use Planning process and considerations for disposition of the Sonoma Developmental Center Site," states:

> *"Be it further resolved that the Board may also consider in the future a Joint Powers Authority, Trust or other mechanism to facilitate the disposition and transition of the site to meet the desired outcomes."*

C114-10

Community members have clearly articulated the conflict inherent in creating a plan that is both appropriate for Sonoma Valley and financially feasible, with these economics driven in large part by the dilapidated infrastructure and environmental cleanup liabilities left by the State. The State must help defray the significant costs to clean up the site that it has left in poor condition to ensure that the plan is not merely driven by economic factors. 89% of community residents surveyed believe that the State should be responsible for clean-up and other remedial maintenance of the site.

Conclusions

The Sonoma Valley community's reasons for rejection of the proposed alternative plans are aligned and consistent. The alternatives do not reflect the themes heard over and over in multiple Valley-wide workshops regarding the appropriate size and scale of development, and adequate protection of the wildlife corridor and surrounding open space. None of the current alternatives reflect the many environmental constraints on the site, nor do any strike a balance between financial interests, affordable housing, and environmental and community well-being. C114-11

The community has spoken clearly. On its behalf, the NSV MAC respectfully reiterates its request that the Sonoma County Board of Supervisors direct staff to work with the community to develop an alternative using the framework as outlined above and detailed in the accompanying Appendix.

Sincerely,

Arthur Dawson

EXTERNAL

Dear Mr. Oh,

On behalf of the North Sonoma Valley Municipal Advisory Council (NSV MAC), I respectfully submit the attached comments pertaining to the Public Review Draft of the Sonoma Developmental Center (SDC) Specific Plan (Proposed Plan) and the SDC Specific Plan Draft Environmental Report (DEIR), issued in August 2022.

As the NSV MAC serves as the voice of the community within county government, we intend this letter to be reflective of community input. However, it is not intended to be exhaustive or to take the place of individual comments from community members and other interested parties.

As you will read in the attachments, we do not believe this DEIR adequately and completely evaluates the environmental and safety impacts of the Proposed Plan. Furthermore, we remain committed to the Sonoma Valley community's consistent input calling for both affordable housing and a lower density plan alternative. A plan closer to the Historic Preservation Alternative – determined as "environmentally preferred" in the DEIR analysis – successfully meets the project objectives and the established Guiding Principles for this project and should be given strong consideration.

Thank you for your attention to the issues raised. We look forward to your response.

Sincerely,

Arthur Dawson, Chair
North Sonoma Valley Municipal Advisory Council
(707) 509-9427; (707) 996-9967

Date: Sunday, September 25, 2022 10:56:58 PM

EXTERNAL

Dear Mr. Oh:

it is disappointing that in spite of the grave issues for the Glen Ellen community, the DEIR essentially dismisses any creative way to achieve a reasonable balance of additional housing with the rural nature of the area. The majority of residents and Sonoma Valley groups favor a 450 housing unit plan and yet it is tied to the Historic Preservation Alternative which the DEIR rejects, however, no attempt is made to pattern that density with a modified preservation model which could be a reasonable plan. The document is clearly biased toward a plan that has been consistently rejected by the populace. A main tenet when this process began was for it to "complement" the surrounding community. In as much as, according to ABAG, the entire County is to supply 3881 housing units by 2031, it is not reasonable to put 1000 of them in tiny rural Glen Ellen. C115-1

Under Aesthetics 3.1
LU3 is to locate future growth using infill parcels. Building a city in the middle of the Glen Ellen community is not infill.
Table2.5-3 indicates a hotel which has also been soundly rejected by the residents of the Valley as inappropriate and growth inducing.

Biological 3.4
OSRC-7.5 Maintain connectivity between natural habitats. Who bears responsibility in perpetuity for maintaining and enforcing the "mitigating policies" once the units are sold?

Hydrology 3.9
The Plan states it does not use groundwater. How is this possible in that Sonoma Creek does draw groundwater from the Shallow Aquifer and the Plan diverts water from Sonoma Creek? How is it determined that the water rights (to divert water from various creeks) which are sought to be safeguarded are not affecting groundwater gaining into the creeks?
SDC has 4 groundwater wells which are not currently drawing. Where is the guarantee that they will never be reactivated?
3.9.3.3 item 6D and 6E seek to ensure water to the Plan residents and safeguard SDC water rights. What safeguards are in place for the existing residents whose water supply are also tied to creek and stream flow as affected by SDC diversions?
630 says the diversions cannot result in a net increase of withdrawals or diversions from various springs and streams including the four main sources used by SDC during low-flow periods including summer, fall, and drought conditions or as "annual averages". Please define "annual averages" as used here. Averages over drought years differs from non drought years and also years where climate change has caused a heavy but short-lived precipitation that drains away before being absorbed. C115-2

Land Use 3.10
The Plan conflicts with Land Use Policy, which calls for growth utilizing vacant parcels in urban areas. It is a manipulative definition of infill to describe building 100 housing units where few exist, as "infill". Physical Barrier: While it may not be what the DEIR calls a "typical reference", how is building a city in the middle of the Glen Ellen community in its entirety, not, in fact, a "physical barrier"? C115-3

Housing 3.12
Again, it is not against reasonable County Housing Element policy which references "Fair Share" distribution to support 1000 units of the ABAG figure of 3881 units in rural Glen Ellen?
The Plan claims it does not induce substantial population growth. Please explain and justfy how virtually C115-4

doubling by adding 2400 people to a community of 2542 is not inducing substantial population growth. C115-4

Transportation 3.14
The Plan hopes that residents will not use their cars. The Plan hopes that residents will not work off site. How does the Plan justify figures based on hopes?
How will no free parking on site impact existing neighborhood streets and the existing rural Glen Ellen community which the Plan hopes to entice with recreation etc?
Emergency access only addresses emergencies within the site. C115-5

Wildfire 3.16
The DEIR continues to deal with this issue, as with others, as if the SDC core was somehow not in the middle of a rural community and that what happens on site does not impact the surrounding area.
Evacuation Issues. Historical first-hand information from those who have evacuated from multiple wildfires in recent years does not support the time figures used in this report. Again, the planning treats the situation as if only SDC needs to evacuate. Experienced survivors know that 1.2 minutes of extra evacuation time is not realistic. Most evacuees have spent hours on clogged roads. A wildfire evacuation entails residents from all the areas possibly in the shifting track of fire. Furthermore, assumptions seem to be made that everyone in the path gets instant notification, which has not been the case as both land line and cell communications may easily be compromised. As the County knows, wildfire is swift and unpredictable. How are these time frames justified as they do not reflect real time experience? C115-6

Sincerely,
Barbara Roy

Subject:	Comments on SDC Specific Plan Draft EIR
Date:	Thursday, September 22, 2022 8:12:32 AM

EXTERNAL

Hello Mr. Oh,

Thank you for taking the time to read and respond to my comments. I am confused and hope you can help clarify several statements in the EIR that seem contradictory. On the one hand it says there will be no significant impact on wildlife species yet on the other hand for each species and each special project a biologist will do an environmental assessment prior to the start of each special project. Also, no new field studies were done for the EIR because existing resources contained enough detail for a program level environmental assessment and yet the EIR states that operations could result in loss of habitat or harm species if they are present.

C116-1

Another thing I am unclear about, is that I was under the impression that environmental impact was not allowed to be deferred, but relying on the "future studies" seems to be doing just that.

Here are just a handful of the statements in the EIR that seem to contradict each other.

From section 3.4.3.2: No new field studies were conducted for the preparation of this EIR, because existing resources contained information on pertinent aspects of biological resources in the Planning Area at level of detail appropriate for a program level environmental assessment. Future project specific detailed biological surveys will be necessary to confirm presence or absence of sensitive resources on future development sites. Cumulative impacts related to biological resources are discussed in Chapter 5: CEQA Required Conclusions.

C116-2

Page 241-242: In terms of potential operations and maintenance related impacts, some increased risk to special-status species may result from increased vehicular traffic, increased recreational use, and domestic pets. Direct impacts to streams and surrounding habitat could result in the loss of suitable habitat or harm of these species if they are present

Page 221: Lack of information in the CNDDB and other reports about a species or an area does not imply that the species does not occur or that there is a lack of diversity in that area. This lack of information may reflect a lack of Project or reporting more than absence of special-status species. Thus, there may be additional occurrences of special-status species within this area that have not yet been surveyed and/or mapped.

C116-3

BIO-1 Prior to the commencement of the approval of any specific project in the

Proposed Plan area, Project Sponsors shall contract a qualified biologist to conduct studies identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level.

C116-4

Thank you again for you time and attention and for working with the community to help reach a solution we can all agree on.

Sincerely,

Betsy Donnelly

Date: Monday, September 26, 2022 1:44:38 PM

EXTERNAL

Comment: The statements underlined in the analysis below do not provide substantial evidence for these statements.
Energy use can be initiated just as well as the Proposed Plan and biological resources preserved as well. No proof of the statements below are included in the analysis.
Wildfires risks would be much less with the Historic Preservation Alternative since 1500 to 1700 less vehicles would be evacuating. The environmental features of wildlife protection would be enhanced with less housing, noise, lights,
intrusion of their habitat.
This analysis of the Historic Preservation Alternative is incomplete and makes unsubstantiated remarks.

C117-1

ES.4.2 Identification of Environmentally Superior Alternative

"Overall, the Historic Preservation Alternative is the environmentally superior alternative, although significant impacts of the Proposed Plan and the two alternatives are largely comparable, and the Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks."

Subject: SDC DEIR Comment/Transportation/Historic Alternative
Date: Monday, September 26, 2022 12:41:01 PM

EXTERNAL

Transportation Impact 3.14-2

ES 2.2

"This EIR conservatively assumes that VMT reduction due to implementation of these strategies would be inadequate to reduce residential VMT per capita and induced VMT to less-than significant levels, resulting in significant and unavoidable impacts, with no other feasible mitigation measures available. These impacts would also be cumulatively considerable."

C118-1

Comment: Because of these significant and unavoidable traffic impacts which are cumulatively considerable in the Proposed Plan, the Historic Preservation Alternative is the Environmentally Superior Alternative. Lower housing numbers and development will result in VMT reduction to a level safer and acceptable to the community and not destroy the safety or quality of life of current residents of Sonoma Valley. The density of housing in the Historic Preservation Alternative is the one requested by Supervisor Gorin, with support by other supervisors.

The analysis of the Historic Preservation Alternative in the DEIR is insufficient and incomplete for these reasons.
There is no analysis of financial feasibility in this alternative or benefit to the community and beyond.

From:	Bonnie Brown
To:	Brian Oh
Subject:	SDC DEIR comment/Wildfire Evacuation
Date:	Monday, September 26, 2022 12:56:27 PM

EXTERNAL

Comment: There is no substantial evidence given in the below analysis in chapter 3.8 of the DEIR, page 268, that 1500 to 1700 more vehicles, as planned by the Proposed Plan in the SDC Specific Plan. evacuating from a wildfire will not impair, physically interfere, or endanger the lives of current residents attempting to evacuate during a wildfire emergency. My personal experience shows these to be false statements.

I evacuated from the 2017 fires from my home at Verano Avenue and Arnold Drive. Vehicles were moving at a snail's pace. It took me an hour and one half to reach a location in south Sonoma Valley where I was meeting my daughter and could spend the night where evacuation was not required and I felt somewhat safe. If the fires had progressed farther south from Glen Ellen, the Springs and all of Sonoma would have been engulfed, which was a possibility and the reason for all of the valley to be ordered to evacuate.
In the 2020 evacuation of just Oakmont, I witnessed traffic going south on both Highway 12 and Arnold Drive. Both evacuation routes were just as impacted as the 2017 fires, and that was just Oakmont residents.

C119-1

To claim that the additional vehicles of 1500 to 1700 in the Proposed Plan would only increase evacuation time by less than a minute is completely false and relies on an unsubstantiated opinion. It does not take into account actual experience.

Clearly, from my actual experience during evacuations, it is evident that adding 1500 to 1700 vehicles to a wildfire evacuation in Sonoma Valley will cause extreme danger to current residents and significant risk of loss, injury or death involving wild land fires. When a wildfire is approaching, no County Emergency Operations Plan will help "to the extent feasible". People will evacuate when they feel in danger. This is NOT less than significant.

For this reason, the Historic Preservation Alternative is the Environmentally Superior Alternative. It lessens housing numbers and traffic impacts to the extent that evacuations can be safer.

Comment: The statements in red below do not give substantial evidence and bear no semblance to the actual conditions that local people have experienced during evacuations.
"Compliance with existing State and local codes and regulations as well as proposed policies...and structures to the extent feasible" go out the window when people fear for their lives.

C119-2

Chapter 3.8: Hazards and Hazardous Materials
"Impact 3.8-6 Implementation of the Proposed Plan would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. (Less than Significant)"

"In addition, see Impact 3.16-1 in Section 3.16: Wildfire for further analysis. The County's Emergency Operations Plan establishes the emergency management organization for emergency response, establishes operational concepts associated with emergency management, and provides a flexible platform for planning emergency response in the

county. Development facilitated by the Proposed Plan would be constructed in accordance with federal, state, regional, and local requirements, which are intended to ensure the safety of county residents and structures to the extent feasible. Compliance with these standard regulations would be consistent with the County's Emergency Operations Plan. Thus, implementation of the Proposed Plan would not impair an emergency response or emergency evacuation plan and impacts would be less than significant.
Mitigation Measures
None required".

"Impact 3.8-7 Implementation of the Proposed Plan would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. (Less than Significant)
See Impacts 3.16-1 and 3.16-2 in Section 3.16: Wildfire for analysis on this impact. Compliance with existing State and local codes and regulations as well as proposed policies would reduce impacts to a less-than-significant level related to exacerbating wildfire risks during construction, operation, and implementation of the Proposed Plan.
Mitigation Measures
None required".

To: Brian Oh
Subject: SDC DEIR Comments/ Historic Resources
Date: Monday, September 26, 2022 12:47:39 PM

EXTERNAL

Historic Resources Impact 3.5-2

Comment: The analysis of the Historic Preservation Alternative is inadequate and does not provide substantial evidence in its statements. In the statement below, **ES.3.3**, there are no facts to verify that development would be more constrained than with the Proposed Plan. If the assumption is that adaptive reuse would not be successful and used for future development, then that is in conflict with the statement in **4.3 Historic Resources.**
It also does not give substantial evidence that there would be fewer jobs. Adaptive reuse of existing buildings can provide space for jobs, with the possibility of that near the Proposed Plan. The number of jobs estimated in the analysis is speculative and no evidence is provided.

C120-1

ES.3.3 Historic Preservation Alternative

"Further, because the historic character of the existing buildings
within the Sonoma State Home Historic District would be retained as much as possible, intensity and density of future development would be more constrained than with the Proposed Plan. As a result, overall development would be less than that of the Proposed Plan…..roughly 340 fewer jobs than envisioned by the Proposed Plan."

4.3 Historic Resources

"There are several compelling reasons for striving to reuse contributing buildings in the SSHHD (Sonoma State Home Historic District), to the greatest extent practical**. Adaptive reuse is recognized as a highly sustainable approach to construction.**"

"The Historic Preservation Alternative also does not include a new connection to Highway 12."

Comment: This is a benefit of the Historic Preservation Alternative and its proposed elimination was not analyzed in this alternative, thus the analysis is inadequate This connector road would cause oil and gas run-off in the open space, cause wildlife road kill, especially at night, necessitate a stop light on Highway 12, and bisect the open space that was promised to be preserved. Any drivers who attempt to go from Arnold Drive to Highway 12 or vise versa during an evacuation will find the exact same vehicle back-up as on the other route. There is an existing wide EW connector road three block south of SDC: Madrone Road. To not add a new road through the open space would preserve the historic open space. This was not analyzed in this Alternative, making it inadequate.

C120-2

THIS EMAIL ORIGINATED OUTSIDE OF THE SONOMA COUNTY EMAIL SYSTEM.

Date: Monday, September 26, 2022 12:45:19 PM

EXTERNAL

"The Proposed Plan would result in significant and unavoidable impacts related to transportation (Impact 3.14-2),
and historic resources (Impact 3.5-2)."

4.3 Historic Resources

"There are several compelling reasons for striving to reuse contributing buildings in the SSHHD (Sonoma State Home Historic District), to the greatest extent practical**. Adaptive reuse is recognized as a highly sustainable approach to construction.** Additionally, SDC is a fixture in the Sonoma Valley, reinforced by strong collective community memory. The sense of place, complete with historic buildings and mature landscape, offers an established location for the campus's next life. The SDC site also offers an existing sense of community that is respected and can be reinforced through a mixture of adaptively reused historic buildings and contextually responsive new buildings. **The level of detail and design present on the SDC site is not easily replicated with modern building practice and economics."**

C121-1

Footnote page 533:

"141 Rehabilitation and adaptive reuse at SDC is generally more expensive than new construction.
See Alternatives Report, November 2021 (Updated), available at
https://www.sdcspecificplan.com/documents"

Comment: Regarding the footnote statement above and information in the Alternatives Report, November 2021, the conclusions are not based on substantial evidence. No proof of the statement is given. Adaptive reuse is being successfully done all over this country. Community Housing Sonoma County (Keith Christopherson) has adaptively reused buildings in Sonoma County for veterans housing, even an old firehouse. The reason it is not done is because of developers' lack of imagination and will to develop anything except with demolition and new construction. There is no evidence of proof that adaptive reuse is more expensive than new construction. To re-quote other statements is not proof. Substantial evidence is required.

"Impact 3.5-2 - Implementation of the Proposed Plan would cause a substantial adverse change to the significance of a historic district, as defined as physical demolition, destruction, relocation, or alteration of the historic district or its immediate surroundings such that the significance of the historic district would be materially impaired pursuant to § 15064.5. (Significant and Unavoidable)"

C121-2

Page 296 -" Implementation of future development
and redevelopment permitted under the Proposed Plan would allow more dense new development adjacent to contributing resources, as well as alteration and reconstruction of contributing resources in the Core Campus area. New construction has the potential to disconnect the remaining contributing resources in the Core Campus from those in

Community Separator and Regional Parks lands to the east and west, consequently disrupting the feeling and character within the historic district. This would affect the cohesiveness of SSHHD's overall integrity to the point that it would no longer be eligible for listing in the NRHP, CRHR, or as a California Historic Landmark. The impact of such activities is considered significant because they would cause a substantial adverse change to the historical district as defined by CEQA Guidelines Section 15064.5.
While proposed policies noted above and the Standard Conditions of Approval (LU-1, LU-2, LU-3, LU-4, LU-5, and LU-6) would help reduce these impacts to the maximum extent practicable, there are no mitigation measures available to avoid impacts entirely. As such, this impact would remain significant and unavoidable.
Mitigation Measures
None required."

C121-2

Comment: Because of these significant and unavoidable impacts to the Historic District of SDC in the Specific Plan's Proposed Plan, it is clear that the **Historic Preservation Alternative is the Environmentally Superior Alternative** and should be adopted by the Board of Supervisors. Its density was requested by Supervisor Gorin and other Board members agreed.
This alternative was not studied in detail and does not include substantial evidence of its analysis.

EXTERNAL

Footnote page 533:

"141 Rehabilitation and adaptive reuse at SDC is generally more expensive than new construction. See Alternatives Report, November 2021 (Updated), available at https://www.sdcspecificplan.com/documents"

Comment: This statement provides no substantial evidence and conflicts with Hazardous Materials study documents by Van Brunt Associates in the WRT report and reiterated by consultants for the Specific Plan, as
quoted below.

The last paragraph is significant: All hazardous materials must be removed before demolition. Then the building is demolished and all of that is transported to landfills, some to hazardous landfills out of state since some hazardous materials may be left in the rubble. Then the costs of labor and new materials for new construction are added. C122-1

No study of the total costs of all of the processes required for demolition and new construction have been substantially studied and compiled to make the statement that adaptive reuse is more expensive than demolition and new construction. And the GHG emitted by demolition and new construction were not studied or included, as requested in my original comments to the DEIR, and no substantial evidence was given.
This is especially important since all of the buildings east of Arnold Drive, constructed of cement and tile roofs, are planned to be demolished in the Proposed Plan.

Van Brunt Associates/WRT Report:

"Prior to any construction or demolition, all of these hazardous and potentially hazardous materials will be inspected, sampled, or inventoried. The ultimate goal for this work is to ensure workers and the environment is protected during building repairs, renovations, or demolition."

"The presence of most hazardous materials in buildings is not necessarily illegal or dangerous. Most potentially hazardous building components in good condition may be left in place. Upgrades involving new finishes such as paint and floor coverings may not trigger expensive abatement and remediation actions. If a building is planned for renovation, the extent and scope of renovation determines which hazardous materials must be abated, removed, stabilized, or even left in place." C122-1

"Building demolition would trigger the most costly hazardous materials abatement program. Generally speaking, all hazardous materials must be removed in order to demolish a building."

Sonoma Developmental Center

I have done a preliminary examination of the draft Specific Plan prepared and just released by the County for the Sonoma Developmental Center

SOME POINTS OF REVIEW –

- Of the approximately 1100 housing units proposed, only 283, at most, will be affordable to households at an AMI of 80% or less.
- At the presumptive density of 20 units per acre, that means only 14 acres out of 180 acres in the core area are dedicated to affordable housing
- The Plan falsely claims that housing for the "Missing Middle" is for households at 120-160% of AMI. Nobody uses that range – the Missing Middle is usually defined as 80-120% of AMI C123-1
- 75% of the housing proposed is essentially market rate, with unrestricted sale and resale prices. No residency requirements. *These units are designed for absentee investors and second homeowners.*
- The bulk of all housing is to be on the East side of Arnold – however, it is forbidden for that to start construction until the non-residential West side is well underway
- There is no discussion of ADU's as an affordable housing resource.
- Entire portions of buildable land within the core 180 acres are set aside for "Open Space", even though the SDC is surrounded by thousands of acres of open space.
- The Specific Plan and EIR is vague on the "Arnold to Highway 12" connector, which is essential for a project of this scope.

<u>Continued reference is made to the need for "financial sustainability" as the reason for so much market rate housing. Yet we have seen no financial projections justifying that.</u>

<u>NOTE:</u> I continue to maintain that the denial of affordable housing, and the preponderance of market rate housing, is being driven by the need to pay for the infrastructure for the non-residential component of the SDC Specific Plan, including the 120 unit hotel (which nobody wants); and the proposed "conference center", which is completely undefined as to size and scope, and is the pet project of an environmentalist lobby which has been so influential over this process from behind the scenes going back a decade. C123-2

I see violations of State and Federal Law in this proposed Specific Plan, leading to prolonged litigation to either modify the affordable housing componenet or deny the entire flawed Specific Plan:

1) Failure to comply with the State guidelines implementing the SDC conversion which mandate a meaningful emphasis on affordable housing; (SB 82 Government Code 14670.10.5/Governor's Executive Order N-06-19)
2) A clear failure to Affirmatively Advance Fair Housing (a HUD federal requirement) by targeting higher income, predominantly non-minority households leading to increased racial, ethnic and family status exclusion.
3) The obvious failure to implement Sonoma County RHNA allocations for affordable housing in a sincere and meaningful manner to address Sonoma County's worsening housing crisis..

C123-3

In my opinion, the plan is designed to create a "cash cow" for the yet unspecified private, for-profit developer. This is not the plan the public wants, yet it just keeps moving ahead in disregard of public opinion.

Thank You

More comments on the Draft EIR and SDC Specific Plan.
The DEIR overstates the GHG and VMT. This is partially due to the assumption at least 50% of the housing units will be for the "missing middle." As shown below, most teachers and firefighters will not be able to afford the "missing middle" housing units. As a result, these housing units will go to higher income families. Studies have shown that higher income families drive more and take public transportation less.

C124-1

From the SDC Specific Plan:
"Missing Middle Income households make
between 121 percent and 160 percent of Sonoma County AMI,
- too much to qualify for Affordable Housing , but not enough to buy a median priced home. Missing middle housing will make up 50 percent of the total market rate housing at the site. These homes will be accessible for Sonoma County's middle income workforce, such as teachers and firefighters, to help keep these professionals from being priced out of Sonoma Valley"

Sonoma County AMI, Effective June 15, 2022

Persons in Household	Median Income (100% Area Median Income)	Moderate Income (120% Area Median Income)	Calculated 160%
1	$78,950	$94,750	$126,320
2	$90,250	$108,300	$144,400
3	$101,500	$121,800	$162,400
4	$112,800	$135,350	$180,480
5	$121,800	$146,200	$194,880
6	$130,850	$157,000	$209,360

source: https://sonomacounty.ca.gov/incomelimits

"with these two increases, the average teacher salary would be $91,935, the beginning teacher salary would be $58,557 and the highest base pay would be $103,959."
https://www.sonomanews.com/article/news/95-of-teachers-authorize-strike-due-to-budget-impasse/

"The average Firefighter/EMT II salary in Sonoma, CA is **$69,590** as of August 29, 2022, but the range typically falls between **$64,560** and **$87,550**."
https://www.salary.com/research/salary/alternate/firefighter-emt-ii-salary/sonoma-ca

C124-2

As you can see, only single teachers making the maximum salary, which very few do will be in the 121%-160% AMI. Teachers and firefighters salaries are below 120% AMI. Therefore, teachers and firefighters would not be able to afford the "missing middle" housing, thus

needing deed restricted Affordable Housing; otherwise GHG and VMT will be greater. This means much more than the 25% of units need to be deed restricted Affordable Housing. This should be 100% Affordable Housing.

C124-2

EXTERNAL

September 18, 2022

To: Sonoma County Planning Commission, Permit Sonoma and Board of Supervisors

RE: Public Comment on SDC Specific Plan and DEIR

Dear Sonoma County Planning Commissioners,

Please do not support the SDC Specific Plan or DEIR as proposed by Permit Sonoma.

Instead, please direct Permit Sonoma to support the ***Historic Preservation Alternative*** as "it is the most environmentally sound" and reflects largely what the public, NVMAC, Springs MAC, and Sonoma Land Trust has repletely imputed as an alternative to Permit Sonoma.

Specifically, please direct Permit Sonoma to take these steps:
1. Reduce the size of development to 450 or fewer homes and require that the majority of them be affordable ***for the people who already actually live and work in Sonoma Valley*** and for ***people with disabilities***. Eliminate the hotel, and do not duplicate retail and commercial space that is already provided in Glen Ellen. Keep in mind, this is ***a rural community.*** C125-1

2. Riparian areas are crucial when it comes to Open Space. Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed.

3. Protect Open Space by providing enforceable timeline, boundaries and actions ***for permanently preserving open space and keeping it in public hands***.

In the DEIR, analyze the impacts of and ***add enforceable measures*** to reduce impacts of proposed new uses in the open space including but not limited to agriculture, agricultural processing, tasting rooms, farm stands, recreation, parking lots, geothermal development and sports facilities. C125-2
4. Wildfire: Revise wildfire evacuation impacts to reflect actual experiences which occurred during recent wildfires using new county wildfire risk and hazard maps. Adding 11/2 minutes

to the timeline of evacuation is meaningless!

5. Climate Crisis: Think 30X30 Initiative, which California embraces.
Given the County's Climate Crisis Resolution and commitments to reduce climate changing emissions (GHGS) from driving and other sources, ***revise the Specific Plan and DEIR with legally enforceable measures*** to reduce climate emissions, such as building fewer homes, reusing and demolishing fewer buildings, providing transit and permanently securing the maximum amount of Open Space.
6. The DEIR falls short of CEQA requirements. The DEIR is inadequate and the so-called self-mitigated Specific Plan contains ***many weak*** general policies, goals and conditions of approval, to address the environmental impacts.

C125-2

The DEIR does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied ***as evidenced by few actual requirements and many vague words*** such as "should" or "could occur" "may result" or "if feasible."

The DEIR needs to be revised and the Conditions of Approval strengthened and moved into a legally enforceable Mitigation and Monitoring Program.

C125-3

There is still so much work to do with the Specific Plan and the DEIR.

I support Commissioner Carr's request (Planning Commissioners Meeting 9/15/22) for additional time to get this right. He repeatedly stated that in order for the Planning Commission to do their job with integrity, they would need addition time to go page by page. This was even at the expense of more frequent meetings to accomplish the task, getting it to the Board of Supervisors as soon as is possible. There is a willingness to do the hard work, we just need the courage to take the bold steps, and do the right thing for the future.

Sincerely,

RE: Sonoma Developmental Center: Best Use Planning Means Enrichment Planning For A Sustainable Future For All!

Dear Supervisors, Staff, and Consultants:

We have been asked to select from the three options laid out in the SDC Alternatives Report released just a few weeks ago (November 1, 2021). Each offering little realistically plausible beyond an audacious open door for upscale developers to bring in projects bound to fail if past is prologue (i.e., Rohnert Park's Sonoma Mountain Village]aka Hewlett-Packard] and Petaluma's telecom boom (and bust). Beyond some open space promises (with little detail), the rest in no way addresses the very real and urgent needs of Sonoma County residents. C126-1

More tourist-serving accommodations? This valley has been decimated by the county's cash-cow (Transient Occupancy Tax), converting units built for, zoned for, subsidized for, intended for - residents to live in - now operating as disruptive commercial enterprises in residential neighborhoods. The costs to our communities are innumerable. It is clear we have been sold out by our civic leaders. Any further moves toward "tourist-trapping" our community will not go down well. Forget the hotel! Give us back our housing stock!

Industrial parks? For which segment of our undereducated population? According to The Sonoma County Workforce Investment Board's draft Local Workforce Development Plan 2021 – 2024:

> Over the next five years, the following are the top five occupations that will be in-demand for Sonoma County:
> 1. Office and Administrative Support
> 2. Sales
> 3. Food Preparation and Serving
> 4. Transportations and Material Moving
> 5. Management

C126-2

Unless Sonoma County changes course, opting for a more enriching, visionary future, these will be the jobs of tomorrow. I see no reason to settle, to offer so little to our children, to our community. My vision is one calling for opportunity, advancement, growth, fulfillment in work and play.

The people of Sonoma County have been told there must be a plan covering how anything we ask for will be paid for. Curiously, I see no such level of detail in this consultant's report. Why the dichotomy? Maybe it's time to get real, to try a bit more transparency, to actually explore feasible options that will bring to the county what residents so urgently need, with top of the list being decent affordable housing for agricultural workers, students, developmentally disabled, the unhoused, and others most sorely in need. This housing might well be thought of as that needed to replace the hundreds of homes lost to the vacation rental industry as well as to the fires of 2017 - 2020.

Sonoma County may not have fulfilled its promise of a community-driven process, but the people of Glen Ellen and beyond are stepping up on their own. For my part, I am pushing past what some say is the line of possible to envision the day students live, learn, and work on SDC's campus. Imagine SDC as a place flourishing with innovation, preserving history, expanding its role to enrich the surrounding community with lifelong learning opportunities, special needs housing and education, visiting professor lecture series, and all while graduating people prepared with the skills essential for fulfilling, well-paying careers, ably set to meet and exceed the demands of today and the future. C126-3

I am in full agreement with the thoughts and recommendations sent to you by the Sonoma Land Trust concerning the need to preserve the wildlife corridor. Therefore, the remainder of my comments will pertain to the built portion of the campus.

To start, I have to say that the prospect of jamming together thousands of homes in the southern end of SDC is appalling. How does such a banal idea enrich the quality of life for Sonoma County residents? As a housing advocate clocking in more than 30 years, I endorse incorporating housing into SDC's future, especially special needs housing. To do so well will require far more thought than we see here. Questions remain as to how many homes can safely be added to the this part of the valley, how the units would be protected from further loss to Sonoma County's Vacation Rental Conversion Program or to any other misuse. As well, I need to see much more detail regarding the intended population. C126-4

As others have said (and I concur), "The alternatives do not provide for adequate emergency egress in the event of wildfire, are not compatible with the rural character of the surrounding communities within the Sonoma Valley, and do not realistically address impacts on infrastructure, such as water recharge, inadequate roadways, sewage system capacity, etc."

Too often Sonoma County officials have ignored what is needed for what is easiest, furthering the human toll. I've seen it all. The matter of public safety became alarmingly clear as a planning oversight when we learned, through the series of meetings held within a single week earlier this month (11/13/21, 11/16/21, 11/17/21), that the consultants did not meet with CalTrans when developing their traffic outline, yet calculated traffic flow by comparing apples and oranges. C126-5

Able-bodied drivers (2,000-4,000 new local residents, those traveling into Glen Ellen for work, tourists, and others are likely not comparable to developmentally disabled people who have never driven. Their traffic pattern predictions would be laughable if they weren't also potentially deadly (as we have seen when residents attempting to escape the Paradise fire and who were incinerated while desperately fighting to escape the flames).

A related shock, we also learned the consultants never met with local fire agencies. Simply appalling comes nowhere close to my outrage that Sonoma County is, once more, cashing in at the expense, at an ultimate cost of the very lives of the people who live and work here.

Yes, the pressures for change have arrived. Sonoma County's needs are:

- Development (commercial: housing imbalance) - We need to plan for a rebalancing;
- Poverty escalation due to promotion of industrial sectors paying less than living wages (hospitality, tourism, and agriculture) must be addressed by accepting nothing less than **living wage jobs**. We need to prepare our young people for a brighter future;
- Economic collapse following the housing bust;
- Brain drain: SDS closure, the relocation of well-paying industries (telecommunications, Hewlett-Packard, etc.;
- An insatiable hunger for revenue derived from new sources such as recreational drug production and sales, vacation rental conversion of thousands of Sonoma County homes;
- A growing homeless population;
- Escalating real estate prices - pricing most local residents out of the market;
- Housing codes prejudicing construction of large homes over more modest sized units;
- The impact of a collapsing infrastructure (fires, contaminated drinking water, unkept electrical systems);
- The decline of our professional and degreed populace;
- Climate change;
- Questionable practices at the county level (planning, code enforcement, zoning, emergency services);
- Student housing shortage: Santa Rosa Junior College opted to use bond revenue for the construction of an elaborate parking structure instead of desperately needed student housing - resulting in thousands of students now sleeping in their cars (some in that very parking structure [PD article about JC students living in their cars]);
- Low to middle income and special needs housing loss due to VACATION RENTAL industry & lack of building;
- Shortage of skilled tradespersons: Sonoma County lacks cutting-edge jobs training for a sorely-needed workforce - one able to meet national trades workforce shortage.

C126-6

What is the best possible use for SDC as one answer to the issues listed above? Let's start with the dilapidated SDC structures. Their condition is undoubtedly the result of the state's neglect. Therefore, it is incumbent upon Sonoma County to insist that the state acknowledge it is theirs to repair.

C126-7

Not only must the restoration be paid for by the state, we have recently learned that California has a revenue surplus to cover those costs. And those resources have attached to them some stringent guidelines as to how the reported surplus can be spent. Lucky for us infrastructure and colleges are among the options:

> "California is — once again — overflowing with money, and will likely have a $31 billion budget surplus next year, according to a Wednesday report from the independent Legislative Analyst's Office. And because the state is forbidden from spending more tax dollars per Californian than it did in 1978, once adjusted for inflation, it only has a few options for handling most of the cash windfall: slashing taxes; issuing tax rebates; funneling it to schools and community colleges; or earmarking it for certain purposes, such as infrastructure." (Hoeven, 11/18/21)

As indicated above, Sonoma County's workforce predictions are not encouraging. They mirror a sad national trend wherein opting out of college are also coming up short on the skills needed to succeed in the workplace:

C126-8

Two-thirds of Americans over 25 don't have a bachelor's degree or higher. A Harvard study uncovers inconsistent efforts to give these workers skills for economic mobility and calls for improving the problem.

C126-8

Academic work on training programs has been somewhat static, says Rachel Lipson, director of the Harvard Project on Workforce. A paper from 30 years ago might not look much different from one published today. "There's been a lot of attention on K-12 quality and college access and completion, but a lot less on the types of educational and training pathways that sit in between high school and four-year college," she says.

These pathways are critical to the future of economic mobility, and the Project on Workforce hopes to raise the research community's interest in them. "The plurality of the U.S. labor force does not have a four-year college degree," says Lipson. "We can't throw up our hands and say four-year colleges are the only answer." (Smith, 2021)

Answers:

Having outlined the need and some substantial financial avenues, I will now outline how to put SDC to work for the betterment of the people of Sonoma County. Instead of continuing to produce cooks and tourism graduates, we need to give our kids a better future, one promising living wage opportunities, not a serf's subsistence; one grounded in an understanding of California's history as essential to knowing how best to go forward!

Some Educational & Housing Models As Best Fits For The SDC Campus:

C126-9

- High Tech "Trade Tech College" -
- Satellite Junior College Campus: Vocational Tech!
- Berea College: I have learned that Berea is interested in expanding to develop this unique college model in every state: Every student attends tuition-free! Every student works on campus, putting to work the lessons learned in the classroom. Majors include education, agriculture, the trades, the arts, and much more.
- The University of Oregon, Phil and Penny Knight Campus for Accelerating Scientific Impact: a 160,000-square-foot campus built to accelerate groundbreaking scientific discovery and development in a collaborative multidisciplinary environment <https://inhabitat.com/leed-gold-targeted-knight-campus-advances-scientific-innovation/>
- Career Technical Education, (Sonoma County) also referred to as CTE, is a multi-year sequence of courses that integrates core academic knowledge with technical and occupational knowledge to provide students with a pathway to post-secondary education and careers. CTE programs deliver an enriched educational experience that promotes student interest and academic success while developing technical and career readiness skills necessary for the workplace of the future. Graduates of today's rigorous and relevant CTE programs are better prepared for high-wage, high-skill and high demand careers.
- "State-supported technical college" - Clark Howard 9/13/18 show
- "Upskilling For Today & Tomorrow" - The Hill Event: Streamed Live 9/22/21 <https://youtu.be/ph9f1Z_P45c>
~~~~~~~~~~~~~~~~~~~

I would add that it is entirely feasible within these models to:

- Incorporate an affordable housing component, including special needs housing, into the campus plan;
- Offer on-site housing for students, staff, faculty which will reduce traffic impacts and provide additional incentives to prospective applicants;
- Training/Educational offerings might include an emphasis on high tech (environmental sciences, construction trades - including 3-D printing for housing production, modern firefighting and law enforcement courses, certificate programs in mental health, special education, & so much more);
- Traditional Trades (Carpenter, electrician, plumber, telecommunications engineer, auto mechanics, fire fighting, law enforcement - emphasizing community policing!, ecological land/resource management, nursery management [plant propagation, marketing, shipping], etc.), w/emphasis on high tech tools;
- LEED Certification program;
- Environmental Sciences: building in internships around campus grounds care (maintenance, repairs, upgrades, etc.) - Forestry, Firefighting technology, Alternative Energy Program;
- Sustainable Farming Program;
- Indigenous People's Program: History & Culture;
- Health/Medical: Psych techs, med techs;
- Arts & Crafts Program (including student work program, sale to the public of hand-made goods);
- Retail Management: (w/training to include time spent running on-campus market);
- Day school for students with developmental disabilities (plug in tech students for "on-the-job" psych tech training aspect);
- Carve-outs for Crisis Management Clinic for Developmentally Disabled in need of care beyond that available in their community settings;
- Permanent Supportive Housing: See as a model Sweetwater Spectrum, Fifth Street West, Sonoma - a "mini-community" for autistic adults (Kory Stradinger, Executive Director);
- Community Center & History Museum: Oversight of cemetery, Sports/Playing Fields, Historic Preservation (Cemetery, buildings, overall site);
- Emphasis on: Economic and Racial Diversity.

From: Dianne Brinson
To: Brian Oh
Subject: Comments on DEIR for the SDC Specific Plan
Date: Sunday, September 25, 2022 9:08:29 AM

EXTERNAL

Dear Mr. Oh,
I have a few comments about aspects of the DEIR.

AESTHETICS (Light and Glare)
Development at the level provided for in the Specific Plan — up to 1000 residences, a hotel, a conference center, employment centers — will create an urban village in a semi-rural area (Glen Elle, Eldridge). The development would create a new source of substantial light which would adversely affect both nighttime views and wildlife movement.

At night, a considerable amount of street lighting will be required for the safety of the residents, hotel guests, and employees leaving their workplaces after dark. Light will be spilling out of residence windows, hotel rooms, the conference center— and, in the winter, workplaces. The DEIR says that thick vegetation and compliance with dark-sky requirements will buffer wildlife from exposure to human activities. I don't think so.

Are the building going to be single-story? No. How can thickly-planted trees and shrubs block light from second-story (or higher) windows? Newly-planted vegetation is unlikely to be tall enough to block even first-floor window light.

Who will decide if the vegetation is sufficiently thick — the developer? Policies 5-32, 5-39, and 5-43 are vague, making meaningful enforcement— to protect views and wildlife — unlikely.

I often walk in Oakmont as dawn is breaking. There is considerable light spillage from windows of early-rising residents. Take a walk through a developed neighborhood early some morning to see what light spillage from home windows looks like.

C127-1

BIOLOGICAL RESOURCES
The DEIR states that the wildlife corridor is 3/4 of a mile wide. Where's the support for that statement? If the wildlife corridor is wider than that, then the statement that the "southern edge SLIGHLTLY (emphasis added) infringes into the northern portion of the Core Campus" is incorrect. All planned buildings and lighting could be closer to the wildlife corridor. The conclusion that no mitigation is required (Impact 3.4-4 on 254) needs another look, once the width of the wildlife corridor is established.

C127-2

WILDFIRE EVACUATION
The DEIR considers two potential fire scenarios — fire from the NE, fire from the SE. What if a fire comes from the north or northwest (Sugarloaf, Hood Mountain, Calistoga) — as the 2020 Glass Fire did? If the fire comes from the north or northwest, vehicles of 5000 Oakmonters will be added to the flow of vehicles fleeing the area. Evacuation times will be slower if Oakmonters are added.

When I evacuated from Oakmont in September of 2020, I was only allowed to go toward Kenwood. It took me a while to get out of Oakmont, but once I reached 12, I made my way smoothly to Madrone Road to Arnold Drive and south to a San Francisco hotel. However, if the vehicles of 2400 residents and 120-plus hotel guests from the SDC area had needed to evacuate, they would have gotten there before me and choked the route.

C127-3

ALTERNATIVES (Choice of)
All of the Alternatives that were considered provide for at least 750 housing units. The DEIR concludes that

C127-4

dropping the number of housing units from 1000 to 750 would mean a less economically viable project because of the high level of infrastructure and other costs involved.

C127-4

Those costs include cleaning up asbestos, lead, and pesticides left behind by the State of California. The assumption, I assume, is that the developer will have huge expenses to clean up the property and so must be allowed to build a huge number of housing units in order to recover those costs and make a profit. The State should be putting money in for clean-up. Otherwise, existing residents of this area (not just Glen Ellen and Eldridge, but Oakmont/Rincon Valley/Bennett Valley) are going to suffer from increased traffic, increased lighting, and slower fire evacuations so that the cleanup costs can be absorbed by the developer.

Could we look at a combination of low density (400 units) plus a public/institutional use such as a climate research center?

Dianne Brinson

QUESTIONS:

1) Traffic on Arnold Drive is already insufferable. The additional thousands and thousands of daily vehicles will increase traffic jams especially at known choke points getting in and out of Sonoma heading to the Bay Area or Petaluma.

QUESTION: Will funding for this project include improvements to these locations that already back up and the additional traffic will warrant a stoplight.

- Arnold and Carneros Hwy (121).
- Stage Gulch Road (116) and Old Adobe Road - When returning for the Bay Area you often get routed this way.

C127-1

2) Electricity -We are already told to conserve electricity and have impending rolling power outages.
QUESTION: Where is the additional electricity coming from?

3) Water - We are already told to conserve water and droughts are getting worse.
QUESTION: Where is the additional water coming from?

Dear Mr. Oh,

I am the owner of Old Hill Ranch. Our property shares approximately a half mile border with the Sonoma Developmental Center property from Butler Creek to Trestle Glen Drive. You have already received my comments dated 4/7/2022 regarding the "3 alternatives." In my comments I expressed my concern regarding the proposed road between the Proposed Development and Hwy 12.

C129-1

The Proposed Plan acknowledges that the connection to Highway 12 as a "known controversy." While it is true, as stated, that some community members felt that the proposed connection would improve traffic conditions and wildfire evacuations, my experience of the many meetings I attended was most community members stated that the road was not essential and that it would be detrimental to wildlife habitat and the wildlife corridor.

Furthermore, the Draft EIR states no mitigation is required because "Implementation of the Proposed Plan would not have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

C129-2

And furthermore, the Draft EIR indicates that potential special status wildlife are, among others, the Golden Eagle considered to be a state species of special concern and protected by the Bald and Golden Eagle Act.

And Furthermore table 3.4-2 states that "The species has not been documented in or immediately near the Planning Area." I would like to draw attention to my letter sent to Brian.Oh@sonoma-county.org on 4/7/22 that stated I had recently seen a pair of Golden Eagles on the SDC property along the proposed road. Furthermore, I direct you to my Instagram account @willbuckzin to a post that is dated November 6th 2021 with 4 photos clearly identifying these majestic birds. Over the next two months I witnessed them on at least 6 different occasions, two of which they were situated in the trees along the proposed road.

C129-3

My question is, if the Eagles were hunting along the proposed access road, doesn't that suggest that the proposed road would have a potentially adverse effect on this special status species?

Another area of concern regarding the proposed road as it relates to Biological Resources. 3.4-1 of the Draft EIR states no mitigation is required because "Implementation of the Proposed Plan would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites."

This statement is false and I would you to address my concerns. Can you please help me understand why no mitigation would be necessary in the event the proposed road was built across Butler Creek? C129-4

For example, just last month on September 9th I was contacted by Jacob Harvey who works for the Audubon Canyon Ranch and "Living with Lions." P13, a collared lion that they monitor had been prowling our ranch. (See detailed map enclosed.) The lion had traversed through the SDC campus, across the proposed Hwy 12 access road onto our ranch to take a deer. The map of P13's movements are attached.

Furthermore, in 2019, for over a year, the Audubon Canyon Ranch hosted a wild life camera on Butler Creek, approximately 10 feet from the Developmental Center property. The quantity and scope of wildlife photographed was remarkable with Mt Lions, Bobcats, Racoons, skunks and squirrels being plentiful. I personally know of a Coyote who has raised her litter besides Butler Creek every year since I can remember. I have seen Western Pond Turtles on our access road traversing into SDC property. There are numerous Horned and Barn Owls. I have heard Spotted owls there too. C129-5

A direct connection between the Proposed Development and Hwy 12 will scare, kill, and maim wildlife and would interfere substantially with the movement of native resident species.

Sincerely,

William Bucklin

EIR public comment

Hello, my public comments in the past two rounds have **not** been addressed. I had high hopes the EIR would require direct samples and studies of the buildings on site, whether for adaptive re-use or demolition. Let me make this clear, I do not trust your analysis because you have done no studies on the actual buildings and report the condition of various buildings incorrectly.

C130-1

How can you say there will be LESS THAN SIGNIFICANT hazard when you do not know what the hazards are? See the copy below from text* following Figure 3.8-2, below. There is no mention of mercury, asbestos, cadmium, or other prevalent building materials used in construction prior to 1979. Remediation and encapsulation options for adaptive reuse are not reviewed herein at all.

As a professional in historic restoration I find this report suspect and tailored to drive conclusions to a predetermined outcome, an outcome that is fraudulently substantiated.

Here is my public comment: TEST THE BUILDINGS AND THE INFRASTRUCTURE throughout the footprint for building materials and conditions that affect the adaptive re-use and the demolition that would ultimately transform the site. Make the testing plan and the findings known to the public ASAP. Respond as promised.

Elisa Stancil Levine

Glen Ellen, CA 95442

Impact 3.8-1 Implementation of the Proposed Plan would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. (Less than Significant) Construction activities during the redevelopment of the Core Campus and SR 12 connector may involve the transportation, use, or disposal of hazardous materials. Items such as paint, oil, or solvents used in construction would be subject to regulations from RCRA, OSHA, the US DOT, and others. These regulations cover matters pertaining to hazardous materials such as personal protective equipment, handling, recording keeping, and disposal of hazardous materials. Common construction materials such as paints, oils, greases, and fuels will likely be transported, used, and disposed of but these items do not pose a significant hazard. Any accidental spill of common construction materials would be contained and cleaned according to OSHA guidelines. Staff and construction

workers should implement OSHA standards that require employee training for an emergency response.2 Sonoma Developmental Center Specific Plan DRAFT Environmental Impact Report 265 If more than one (1) acre of soil is disturbed as part of the project, coverage under the National Pollutant Discharge Elimination System (NPDES) would be required under the NPDES General Construction Permit. The Construction General Permit requires a Stormwater Pollution Prevention Plan to be prepared and Best Management Practices for control of pollutant discharges to be implemented. Some BMP examples include maintenance of equipment, controls to reduce pollutant, and proper waste disposal procedures. Development could also involve the transport, use, storage, generation, and disposal of hazardous materials, including lead and asbestos from building materials and chemicals from commercial and industrial uses. As described in the Environmental Setting, there are several sites within the Planning Area that previously stored hazardous materials, which require regulatory oversight to protect human health and the environment. Future site remediation activities in areas with underground storage tanks, aboveground storage tanks, equipment and facilities that may require removal in the future would also utilize the transportation corridors. Transportation of hazardous materials on major streets and highways is regulated by USDOT, Caltrans, and the California Highway Patrol. The requirements of existing regulatory programs would reduce the potential of an accidental release of hazardous materials to a less than significant level. Upon implementation of the plan and regular Operations of the site, the regulations for hauling hazardous substances would continue to reduce the potential of an accidental release of hazardous materials to a less than significant level. Mitigation Measures None required. Impact 3.8-2 Implementation of the Proposed Plan would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. (Less than Significant) There is the possibility that there is a future accident in which there is a release of hazardous materials into the environment. There have been numerous accidental releases of varying quantities in the past at the Planning Area. However, existing regulatory programs associated with handling hazardous materials during construction and operation of the site would decrease potential impacts. Following the correct procedures outlined by governing bodies would decrease the chance of an accidental Chapter 3.8: Hazards and Hazardous Materials 266 release to a less than significant level. Furthermore, proposed uses will likely have less likelihood of these larger accidental releases than the former institutional use of the site. Hazardous materials at the Planning Area discussed above have the potential to be released into the environment. In such an occurrence several Federal, State, or local agencies such as the EPA, SF Bay Regional Water Quality Control Board, DTSC, or Sonoma County will provide oversight in remediation. Additionally, proper abatement procedures will be followed when renovating any of the structures that have lead-based paint or asbestos. Further testing as part of Phase II Environmental Site Assessments will also provide more information on the proper mitigation techniques in areas identified with historic contamination. Compliance with the Standard Conditions of Approval Measure HAZ-3 and existing regulations would reduce impacts related to the release of hazardous materials due to foreseeable upset or accident conditions to less than significant.

There are no actual studies done and all the conclusions about hazards on the site are unsubstantiated. C130-1

Brian Oh, Comprehensive Planning Manager
Permit Sonoma

Re: SDC Specific Site Plan/DEIR

Dear Brian Oh:

My husband and I live about two miles south of the SDC site, on a lane off Arnold Drive. As survivors of the Oakland Hills fire in 1991 and the Nuns fire in 2017, we have intimate knowledge of how unpredictable and destructive fast-moving wildfires can be. Thus, we are deeply concerned about the proposal of the SDC Specific Plan that will put 2,500+ new vehicles on a two-lane country road that is already inadequate for traffic at peak hours, and the DEIR's conclusion that this will have no significant impact on fire evacuation plans. C131-1

When trying to determine accurate traffic data, it is common practice to commission a comprehensive study of traffic patterns. DEIR Appendix F, Traffic Model Data, raises far more questions than it answers. How was that information gathered? Was a study conducted that counted vehicles on multiple days at peak hours to establish an accurate baseline upon which to build projections for evacuation time in the event of a fast-moving wildfire? When was this study done? The data included in Appendix F as presented is virtually meaningless.

Between Madrone and Petaluma streets, Arnold Drive is lined with over 20 non-through roads, many of which connect to other non-through roads, whose only access out is Arnold Drive. This includes the relatively densely populated Grove, Sobre Vista, Carriger and Morningside Mountain/Vigilante roads, along with multiple smaller roads and lanes. How was the existing population accounted for when the DEIR assessed the proposed time it would take to evacuate in a wildfire emergency? When determining proposed evacuation times (DEIR, Table 3.16-1, p. 517), were people fleeing wildfire in the Mayacamas on the east side of Sonoma, for whom Arnold Drive would likely be the only escape route, considered? Answering each of these questions with the best information possible is essential to determining accurate evacuation data. C131-2

Further, the SDC DEIR envisions a plan that, in the event of approaching wildfire, encourages residents "to shelter in place." (DEIR, p. 511). I urge you to view the 2019 documentary film "Fire in Paradise" (Netflix) that clearly shows the human cost of minimizing wildfire danger in favor of development. During the 2018 catastrophic Camp Fire in Paradise, CA dozens of residents were forced to shelter in place as a last resort or risk dying in their cars trying to flee on a two-lane road engulfed in fire. They huddled for hours on a concrete pad as propane tanks exploded around them. They survived, but the trauma they experienced will likely stay with them forever. To propose "sheltering in place" as a reasonable option, rather than a last-chance way to survive catastrophic wildfire, is highly irresponsible.

C131-3

Regarding the day-to-day impact of adding 2500+ cars to traffic on Arnold Drive, the Specific Plan notes a goal to "Ensure that new development takes into consideration resultant traffic and levels of transportation activity from when SDC was operational." The SDC was operational throughout the 20th and into the 21st century. Which period when the SDC was operational does the Specific Plan refer to? And where will that data come from? As SDC residents didn't use Arnold Drive, it can be assumed it means the employees of the SDC. It was a 24-hour facility; any data used should reflect that, as well as take into consideration that Arnold Drive—especially south of the SDC—is far busier now than it was when the SDC was at peak operation. I drive Arnold Drive every day, and at peak hours, traffic between the rotary and Petaluma Street is sometimes bumper-to-bumper.

C131-4

In the Aug.24 meeting, Mr. Oh noted that he envisioned the SDC proposed development as a vibrant activity hub for locals and visitors alike, akin to, in his words, "Sonoma Square." There is a key difference**:** the town of Sonoma, with its approximately 12,000 residents, is a community spread across thousands of acres with a complex grid of roads and streets. There are seven through streets that intersect Sonoma Square, including four-lane Broadway. The SDC Specific Plan proposes to build a community with a population far larger than neighboring Glen Ellen, including a hotel and a significant amount of commercial space, on a single two-lane country road with a possible connector to another two-lane road. Arnold Drive cannot reasonably support traffic for the kind of community hub that the Specific Plan proposes.

C131-5

I understand that the proposed SDC Specific Plan will bring significant financial benefits to the County of Sonoma. However, to disregard the solicited input of the majority of local residents and community organizations about its visions and hopes for the site, when we will have to live with its day-to-day consequences, is extremely poor governance.

Thank you, and I look forward to receiving your answers to the questions above.

Sincerely,

Elizabeth Crabtree

C132-1

Attached images are the trackings of a mountain lion P-13 seen to have been all over the SDC as well as on our property, right where the proposed HWY 12 connector road would be. Also included is a photo taken by a wildlife camera on our property at Butler Creek.

To: Mr. B. Oh, Comprehensive Planning Manager

Permit Sonoma County of Sonoma

2550 Ventura Ave.

Santa Rosa, CA 95403

From: Elizabeth Pastore

15081 Trestle Glen Dr.

Glen Ellen, CA 95442

415-577-3504

Dear Mr. Oh,

Thank you for reading my comments. My husband and I live on the land adjacent to the John Mesa soccer fields/Regional Park off of Trestle Glen. We are the 40-acre parcel (vineyard) between BR Cohn and the Regional Park. In other words, we are SDC's next-door neighbors, literally.

C132-2

While we are pro-housing, we have MANY concerns about this development's scope and size. While I have numerous concerns about water, fire, night sky pollution…I will focus primarily on the connector road between the SDC and Hwy 12, which as proposed in the figures in your plans, basically parallels our dirt driveway, appearing to be mere feet away from our property line and would forever disrupt a critical part of the wildlife corridor that folks don't seem to know about.

I will begin with a positive comment.

Point 1. Re: Page 11—"*ES.3.2 Reduced Development Alternative*"

I am a **big fan of the Reduced Development Alternative**. I am pro-housing, but am more pro-wildlife, safety, and common sense. A population increase of 3000 individuals, a road bisecting an important wild-lands corridor, and many thousands of cars and visitors to this precious area is frightening and would alter not only the beauty of the land, but endanger the entire wildlife population. Nature must be part of our community, not separate from it. Both my husband and I had given input for the Hwy 12 connector road to be for **emergency use only**, and we continue to think this would be an excellent compromise given the importance of this land to the local wildlife, who would be displaced with cars. Even with bikes and pedestrians, they will still suffer. I support reduced development because it is more respectful of the wild-lands and wildlife.

C132-3

Point 2. The DEIC has no mitigation measures. Rather, you have "Goals" and "Policies." **Please explain in detail, why and how this plan is "self-mitigating" and how the community can trust that SP (Specific Plan) will meet requirements for mitigation? Who is overseeing the process of your policies being met?** What assurance is there that your "goals and policies" will be honored and met? My understanding is that CEQA requires specific mitigation measures for environmental impacts. You offer none.

C132-4

Point 3. On page 417 of the EIC, "*Arnold Drive–South of Proposed Plan Area*

To the south of the Proposed Plan area between Harney Street and Madrone Road, daily volumes in 2021 were approximately 6,200 vehicles, as compared to approximately 7,100" *…??*

C132-5

This section appears incomplete and I'd like to know what the rest of the paragraph says. It is incomplete. "7,100…??"

Point 4. Re: Section "*3.14.4.2 Methodology and Assumptions*"

"*Land Use and Transportation Network Assumptions Consistent with Chapter 2: Project Description, the analysis presented in this section is based on* ***an assumption*** *that implementation of the Proposed Plan would result in 1,000 residential units with State and County density bonuses, including 435 single family units, 345 multifamily units, and 220 senior housing units. The Proposed Plan also includes 40,000 square feet of commercial/retail space, 190,000 square feet of office uses (likely including a mix of office, research and development, and other employment-based functions), 70,000 square feet of institutional uses (including work and meeting spaces including a conference center), a 120-room hotel, and 12.1 acres of recreational uses. In total, build out of the Proposed Plan is estimated to result in an added population of 2,400 persons and 940 jobs at buildout.ad*"

C132-6

How many cars are you estimating will be on the roads? My estimate, conservatively, is 1 to 2 cars per household, 1 car for each job held, 1 car for each hotel guest room, plus at least 500-1000 more cars for guests, tourists, shoppers. Are you calculating traffic estimates and driving times for just the population or the workers too? **Are we looking at over 4,000 more cars in this tiny area per day?**

Point 5. Please elaborate on the "Goals and Policies" section *3.14.4.3*. Some of them seem overly optimistic: "no gaps in the sidewalk networks," "limit vehicle speeds," "work with Sonoma County Transit," "Fare-free bus rides," "Require development to reduce vehicle trips by 15%," but you have **not included mitigation plans** and have NO assurances that your "Goals" and "Policies" will succeed, let alone even be enacted. What if your "Goals" and "Policies" fail? Who is responsible? Why should we take your word that your "Goals" and "Policies" will even be considered and enacted by the developers? How does this suffice in an EIR? My understanding is that there must be stated mitigation measures to satisfy CEQA. **Please explain and ensure to me that "goals and policies" are sufficient and mitigation is waived.**

C132-7

Point 6. *"Proposed Hwy 12 Connection"*

Figures 3.14-3 and 3.14.4

And Policy 3.5 (page 437)

"***Reuse existing street network to the greatest extent feasible****. Improve multi-modal access from the SDC to SR 12 by exploring the feasibility of providing an additional east-west emergency access connection from the site that includes high quality pedestrian and bicycle facilities*"

C132-8

As diagramed in figures 3.14-3 and 4, the "proposed Hwy 12 connection" is situated within feet of our existing driveway as we live on the land immediately adjacent to the soccer fields of John Mesa Dr. We live on Trestle Glen. It appears that no one has actually walked this land (have you?) and observed the beautiful and important wildlife lands that exist there along with hilly terrain, a creek

that the road would have to cross midway, and where our wildlife camera has just this past year snapped shots of mountain lions, bobcats, deer, fox, turkeys, really, every animal you could imagine being here. My husband photographed a pair of Golden Eagles this year on the SDC. This little corner of the property is an important and overlooked part of the wildlife corridor.

C132-8

A road here would utterly upend this precious corridor and change the land forever.

My question to you is this, where will the animals go? How do you account for more pavement, cars, noise, pollution, speeding, and danger? There are already paved roads in this section, and the above "Policy 3.5" suggests "using existing street network to the greatest extent possible," yet you have a road going in a straight line parallel to our property line, ignoring the existing roads already present. If someone had actually walked this area, they would see it as an illogical place to construct a road, it's hilly and there is a creek it would have to cross. Has someone actually walked this site? I am formally inviting you to come. I'll state our suggestion again, if you must construct another road, use the existing roads already present, and please keep it a bike/pedestrian roadway only and **only open it to cars for emergency usage**..

Point 7: RE: page 580 "*While the Planning Area currently has no residents, historically SDC was home to over 3,500 patients. With the Proposed Plan, the Planning Area would accommodate a total population of approximately 2,400 people.*"

C132-9

I question the continued comparison of the population of *patients* at the SDC vs the expected population of the SP's project, and I'd like you to explain to me why you think comparing the population of a group of patients who lived full-time in an institution with no interaction with the local community is equivalent to a population of people living in individual housing who all drive cars and will directly interact with our community at all times of the day and night. **The SDC's clients were stationary patients, not one of them owned or drove a car!** They didn't drive to the market, receive countless items from Amazon delivery trucks every day, take extra-long showers, buy plastic water bottles and litter them, or waste water washing their hair every day. The SDC was a fairly self-contained organization. Furthermore, most of the workers at the SDC worked in shifts that did not interfere with commute traffic/rush hours. I know this, because I have lived next door to the SDC since 2002! **I also see discrepancies in the SP's projection of the total population of residents, in some parts of the SP you say 3000 people and in others, such as above, you say 2400. Please explain that disparity.**

I could question 100 more items in the EIC but I'll leave it there. Please listen to the community, and remember that ***our wildlife neighbors do not have a voice***. They were here long before we were and it's up to us to do right by them. I know we need more housing, but we must do everything possible to care for this sacred land and honor the foxes, big cats, and even the lowly skunks and lizards' right to exist here.

Thank you,

Elizabeth Pastore

Sonoma Developmental Center Specific Plan Draft Environmental Impact Report

SCH # 2022020222; August 2022

Comments from Greg Carr:

1. Please revise all determinations of "less than significant" to "significant and unavoidable" for impacts where the effectiveness of mitigation measures is uncertain. The following impact analyses include mitigation measures that either postpone analysis to future studies or contain "feasibility" qualifiers in their application. Since these measures cannot be relied upon to fully reduce these impacts, it is misleading to suggest that they do so. C133-1

Aesthetics: 3.1-1, 3.1-2

Air Quality: 3.3-1, 3.3-2, 3.3-3

Biological Resources: 3.4-1, 3.4-2, 3.4-3

Cultural, Historic, and Tribal Cultural Resources: 3.5-1, 3.5-3

Energy and Greenhouse Gas Emissions: 3.6-1, 3.6-2, 3.6-3, 3.6-4

Geology, Soils, and Mineral Resources: 3.7-1

Hazards and Hazardous Materials: 3.8-2, 3.8-4

Hydrology an Water Quality: 3.9-1, 3.9-4

Noise: 3.11-1

Public Services and Recreation: 3.13-1, 3.13-3

Utilities and Service Systems: 3.15-1, 3.15-3

Wildfire: 3.16-1, 3.16-2

2. In addition to the above changes, the EIR should identify changes in the Proposed Plan that would further mitigate the significance of impacts, including a lesser level of development, a fully fleshed out financial plan, and more firm and effective policies. C131-2

3. A major omission in the Draft EIR is the lack of analysis of potential impacts of future uses of the Preserved Open Space Area. Since the project description includes agricultural and recreational uses, the impact analysis should identify the likely impacts, at least at a programmatic level of specificity. While the DEIR is correct in suggesting that these uses would be speculative in nature, the likely impacts are easily predictable and, like the analyses of C133-3

development in the Core Campus, can be described with some accuracy. Please include these analyses, particularly in the discussions of Agriculture and Forestry Resources; Biological Resources; Cultural, Historical, and Tribal Cultural Resources; Energy and Greenhouse Gas Emissions; Geologic, Soil, and Mineral Resources; Hydrology and Water Quality; Noise; Public Services and Recreation; and Transportation.

C133-3

In addition, under Impact 3.4-1, the DEIR identifies Measure 2-12 limiting development in the wildlife corridor to limited trails/paths. Does this limitation apply to future agriculture use?...to future park use? Also, the Impact 3.13-2 analysis states that park and recreation uses would be limited to urban and built-up lands.

Please clarify the above and make corrections as needed.

4. The DEIR lacks a complete analysis of the consistency of the Proposed Plan with the County General Plan. First, the project description does not identify the proposed General Plan land use and zoning designations necessary to achieve consistency. Second, the DEIR lacks the analysis of General Plan objectives and policies that are applicable to the proposed plan, including the Circulation and Transit Element (Objectives CT-4.1, 4.2, and 4.3 and related policies), the Open Space and Resource Conservation Element (Objectives OSRC-7.1 and OSRC-8.1 and 8.2 and related policies), and the Land Use Element (Objective LU-3.1 and related policies as well as Policy LU-20ff).

C133-4

Third, the DEIR statement under Impact 3.10-2 that the Specific Plan is generally consistent with the General Plan is incorrect in as much as "some updates" are necessary. Finally, Impact 3.12-1 fails to analyze population and housing growth enabled by the proposed plan in relation to the County General Plan, incorrectly asserting consistency in light of Bay Area growth rather than planned growth in the local area, the Sonoma Valley, and the County. Please include the appropriate analyses and corrections in the EIR.

5. In general, the analysis of alternatives lacks objective comparisons of the relative impacts and instead arbitrarily defends the proposed plan as superior. Please provide objective substantiated comparisons.

C133-5

6. Section 2.5 of the Project Description (Project Buildout) provides for flexibility in the level and profile of development allowed in each of the proposed subareas/districts. This flexibility leads to greater uncertainty in the significance of the Plan's impacts. More certainty and more effective mitigation would result from capping future development (#units, square footage, etc) in each subarea/district in phases. These caps could be accompanied by a provision in the monitoring program requiring periodic reports at the predetermined phases. These reports would include important parameters such as traffic and service capacities prior to the next phase of development.

C133-6

7. Please clarify the applicability of Public Resources Code 21080.7 and Govt Code 65457 with respect to processing of future housing and non-residential project applications. This discussion should distinguish between environmental review and review for policy compliance for different types of projects. C133-7

8. Several sections are unclear with respect to the Hwy 12 connector. Goal 3-B suggests that the proposed connector to Hwy 12 would reduce air quality impacts. If the collector is not included in the plan, would air quality impacts be significant and unavoidable…or is there substitute mitigation available to minimize these impacts? Similarly, would GHG emissions be more or less significant without the connector? Third, the focused traffic analysis states that traffic levels of service in Glen Ellen would be improved with the connector, but did not analyze the levels without the connector. C133-8

9. Table 3.6-2 estimates existing mobile energy consumption at 176,922 million BTUs per year. What is the source of this figure? Please provide the calculations. C133-9

10. As mentioned above, the DEIR does not address the Plan's consistency with level of service objectives in the General Plan Circulation and Transit Element. Nonetheless, the County commissioned a focused traffic study in order to establish future levels of service for area roadways and intersections. Notwithstanding the fact that LOS is not a CEQA impact, these results should be presented and discussed in the EIR and the recommended mitigation measures, such as a signal at Arnold and Harney, should be included. C133-10

11. In the discussion of the impacts of the Reduced Development Alternative, the statement is made that State Law stipulates that the plan must ensure financial feasibility. This is not true. Please include the exact language from the legislation enabling the County to develop a specific plan for SDC. C133-11

12. In spite of the fact that CEQA allows the option of addressing cumulative impacts based upon future development under the County General Plan, the fact that there are two major land use initiatives underway involving amendments to the General Plan suggest that this is not the best approach. The Draft Springs Specific Plan calls for significant additional growth in the SDC vicinity and the Draft Housing Sites Rezoning calls for establishing additional affordable housing sites in the valley. The Public Review Drafts and DEIRs for these two plans have been released and should be included in this analysis. C133-12

13. In general, it appears that the preparers of the DEIR have used the comparison of the alternatives to rationalize approval of the proposed plan rather than to describe the differences among them, particularly in the discussion of the cumulative impacts of growth enabled by the plan. C133-13

Sonoma County Planning Commission and Board of Supervisors and State Senators:

I am a 28 year resident of Glen Ellen and lifelong resident of Sonoma County. My family has been in the County for over 100 years. C134-1

Please do not support the SDC Specific Plan or Draft EIR, which are woefully inadequate and inaccurate.

The County is legally required to respond to the below Draft EIR comments.

Specifically, the traffic analysis lacks basis and is unrealistic. The size of the re-development must be scaled back to a realistic number of housing and commercial units to allow for an orderly and safe evacuation, such as proposed in the Historic Preservation Alternative.

1. On the night of October 8 & 9 it took us over an hour to evacuate Glen Ellen due to the Nuns Fire. Arnold Drive was gridlocked with cars, trucks and trailers shrouded in smoke. Hwy 12 was closed as the fire jumped the Hwy into Glen Ellen.
2. It is completely irresponsible to consider an emergency exit route from Arnold Drive to Hwy 12, as historically every wildfire has come from the east which where this "escape route" would lead residents to a wall of flames and gridlock due to the likely evacuation of Oakmont. C134-2
3. Proposing to shelter in place at the SDC campus is ridiculous as the wildfire will consume the new development as was the case in Glen Ellen and many Santa Rosa neighborhoods.
4. The Draft EIR does not adequately address the Vehicle Miles Travelled for the people and support required for 1,000 homes and 940 jobs, as this amount of traffic will overwhelm the two lane roads of Arnold Drive, Hwy 12, Bennett Valley and Warm Springs Roads.
5. How will evacuation and safety measure put in place since the 2017 and 2020 fires even begin to protect the lives of 5,000 additional people?
6. The Draft EIR does not adequately address the above items.

Environmental & Climate Impacts

1. The Draft EIR does not meet CEQA requirements.
2. The Draft EIR does not have conditions that will be legally enforceable such as a Mitigation and Monitoring Program. C134-3
3. The Draft EIR must be revised to align with the County's own Climate Crisis Resolution.
4. The Draft EIR lacks realistic mitigation measures and conditions to address the environmental and climate impacts of 1,000 homes and 940 jobs in a rural, wildlife corridor, setting.

Historic Preservation Alternative ("Historic Alt")

1. The Draft EIR must be revised to adequately address the Historic Alt, as it is identified as "the environmentally superior alternative".
2. The Historic Alt meet the state's statutory objectives. The Draft EIR must be revised to include a detailed analysis of this alternative.
3. The Historic Alt is the plan the community supports and the County has been specifically directed by the State to follow community input and secure community support.

C134-4

Cumulative Impacts

1. The Draft EIR does not adequately assess the future impact of the Elnoka Development.
2. The Draft EIR does not adequately assess the Sonoma Valley infill housing.
3. The Draft EIR does not adequately assess the future development in Rincon Valley, such as the new development at Hwy 12 and Calistoga Road.
4. All of these above projects and more will increase traffic in the Hwy 12 Glen Ellen corridor especially during an emergency evacuation.

C134-5

Water & Power

1. The Valley of the Moon Water District has contacted me to advise we must reduce or water consumption by 20%. The Draft EIR must be revised to address how the water demand of 1,000 homes and 940 jobs will impact the current users.
2. The Draft EIR must be revised to specifically analyze the water sources to be utilized to support 1,000 homes and 940 jobs/commercial activities during a wild fire event.
3. The Draft EIR must be revised to fully evaluate the assumptions made to assert that the water resources are available for this size of development. If they are why and I being asked to reduce my use by 20%?
4. During the recent heat wave, we were instructed to not use electrical power between 3 PM and 10 PM and this situation will recur. The Draft EIR does not adequately address how the power grid can accommodate 1,000 homes and 940 jobs/commercial activities without impacting the existing residents and commercial uses.

C134-6

Wildlife Corridor & Sonoma Creek

1. The Draft EIR does not adequately address, and it must be revised as to how 1,000 homes and extensive commercial activity will impact a crucial wildlife corridor.
2. The Draft EIR does not adequately address, and it must be revised as to how 1,000 homes and extensive commercial activity will impact the crucial water source of Sonoma Creek for wildlife and salmon restoration.

C134-7

Ultimately the Draft EIR will need to be revised to address the project selected by the State for redevelopment of SDC.

The Historic Alt must be analyzed as the most likely scenario.

Thank you.

Best Regards,

Greg Guerrazzi

Subject: Review of Draft Environmental Impact Report (DEIR) (SCH# 2022020222)
Sonoma Developmental Center Specific Plan, Sonoma County, California

Dear Mr. Oh:

I am a hydrologist with over thirty years of technical and consulting experience in the fields of hydrology, geology, and hydrogeology. I have been providing professional hydrology and geomorphology services in California since 1989 and routinely manage projects in the areas of surface- and groundwater hydrology, water supply, water quality assessments, water resources management, and geomorphology. Most of my work has been in the Coast Range watersheds of California. My areas of expertise include: characterizing and modeling watershed-scale hydrologic and geomorphic processes; evaluating surface- and ground-water resources/quality and their interaction; assessing hydrologic, geomorphic, and water quality responses to land-use changes in watersheds and causes of stream channel instability; assisting and leading in the development of CEQA environmental compliance documents and project environmental permits; and designing and implementing field investigations characterizing surface and subsurface hydrologic and water quality conditions. I earned a Master of Science degree in Geology, specializing in sedimentology and hydrogeology as well as an A.B. in Geology from Miami University, Oxford, Ohio. I am a Certified Hydrogeologist (CHG #360) and a registered Professional Geologist (PG #5737) in the state of California. A copy of my resume is attached.

C135-1

I have reviewed the Draft Environmental Impact Report (DEIR) for the Sonoma Developmental Center Specific Plan in Sonoma County, California, and evaluated if the project may impact surrounding properties and the environment. Specifically, I have reviewed the DEIR and technical appendices. Based

C135-2

on my review of these materials, it is my professional opinion that the DEIR is inadequate in evaluating the potential significant impacts of project actions on hydrology, water quality and biological resources. The rationale for this opinion is based on multiple findings presented below.

C135-2

1. There are several local and state regulations applicable to the SDC Specific Plan that are not included in the Hydrology/Water Quality Regulatory Setting section (3.9.1 on pg. 270) of the DEIR. These include the following.

    a. Sonoma County General Plan 2020 Policy C-WR-2f, which states, "*Discretionary projects in Urban Service Areas, where the density of development thus extent of impervious surface area is greater than in Rural Communities, shall be required to maintain the site's pre-development recharge of groundwater to the maximum extent practicable/feasible. Develop voluntary guidelines for development in Rural Communities that would accomplish the same purpose. (GP2020 Revised)*".
    b. Sonoma County General Plan 2020 Policy C-WR-4b, which states, "*Use water effectively and reduce water demand by developing programs to: (1) Increase water conserving design and equipment in new construction, including the use of design and technologies based on green building principles; (2) Educate water users on water conserving landscaping and other conservation measures; (3) Encourage retrofitting with water conserving devices; (4) Design wastewater collection systems to minimize inflow and infiltration; and (5) Reduce impervious surfaces to minimize runoff and increase groundwater recharge. (GP2020)*".
    c. Sonoma County General Plan 2020 Policy C-WR-4f, which states, "*To minimize generation of wastewater and encourage conservation of Coastal water resources, require use of water saving devices as prescribed by the local water provider in all new developments. (New)*".
    d. California statutes and regulations (e.g., California Code, Division 3. Dams and Reservoirs) related to dam safety.

C135-3

    As elaborated below, the missing County policies and state regulations are directly relevant to the water supply and flood hazard assessments for the project as elaborated below.

2. The DEIR Project Description is not detailed enough to evaluate potential impacts on hydrology and the environment. The DEIR does not contain a project plan with sufficient detail about land use change to complete the necessary hydrologic and water quality assessments to determine impacts from the project. Due to the lack of an adequate Project Description, I don't agree with the DEIR determinations that potential hydrologic and water quality impacts are less than significant and that no mitigation measures will be required for the following reasons.

C135-4

a. Impact 3.9-1 - The DEIR states that potential impacts to federal, state, and local water quality standards are less than significant. However, the DEIR has not analyzed how changes in site runoff and associated erosion potential will change. Based on my experience, this analysis would require detailed hydrologic and hydraulic modeling that incorporates all changes in land use (esp. impervious surfaces) and runoff estimates to determine where and by how much flow rates (and erosion potential) may impact receiving waterways both on- and off-site. BMPs and other measures would then be designed correctly to mitigate these impacts. This is the primary way the DEIR can address the significance of the impact before and after mitigation.

C135-5

b. Impact 3.9-2 - The DEIR states that the project will not interfere with groundwater recharge such that the project may impede sustainable groundwater management of the basin and associated potential impacts are less than significant. However, the DEIR does not contain any detailed technical analysis of how the project development will alter groundwater recharge. The DEIR has an obligation to describe any potential changes in recharge. Simply stating that BMPs that support groundwater recharge will be integrated into the Project does not demonstrate that they will be sufficient to mitigate potential impacts.

C135-5

c. Impact 3.9-3 - The DEIR states that Project development would not substantially alter the existing drainage patterns or result in substantial erosion and flooding on- or off-site or contribute runoff that would exceed the capacity of existing or planned storm drain systems. Thus, the DEIR concludes that associated impacts are less than significant. These conclusions are not substantiated as the DEIR does not present results from any hydrologic on hydraulic analyses to demonstrate to what degree the project may increase runoff rates and erosion potential from new or improved development. The assumption that adhering to County mandated BMPs will reduce flooding and erosion impact to below significant has not been demonstrated. Instead, the DEIR defers analysis and mitigations for hydrologic and water quality impacts.

C135-6

d. Impact 3.9-4 – The DEIR states that the potential to expose people and structures to significant risk or loss, injury or death involving flooding from dam failure is less than significant. However, this is completely contrary to the California Division of Safety of Dams (DSOD) conclusions about Project dam safety presented in Section 3.9.2.5 (Flooding – Flooding from Dam Failure, pg. 286-287) of the DEIR. Page 286 of the DEIR states, "The DSOD has classified the downstream hazard of a failure at Fern Lake as high". On page 287, the DEIR states, "*The DSOD has classified the downstream hazard of a failure at Suttonfield Lake as extremely high*." These statements alone suggest this potential impact is not "less than significant". The DEIR does present inundation maps associated with these failures but provides no further analysis on how these potential impacts will be mitigated apart from the statement (pg. 287) "*Specific geotechnical investigations of the dams at Fern and Suttonfield Lakes would need to be conducted to determine their potential for failure*." However, this is a deferred analysis, which does

C135-7

not support the findings of "less than significant" impacts and "not applicable" mitigations.

e. Impact 3.9-5 - The DEIR states that implementation of the Project would not conflict or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Thus, the DEIR concludes that associated impacts are less than significant. However, for the same reasons presented above (items 2a. – 2c.), the DEIR does not present any technical justification for this determination and should be considered inadequate and incomplete. C135-8

3. An important analysis of the SDC project is the determination if there are sufficient water supplies to meet proposed project water demands. Appendix D of the DEIR presents the results of this analysis. Based on my review of Appendix D, I've identified several mistakes and other issues that suggest the DEIR does not demonstrate there is sufficient water supply to meet future (2045 full buildout) demands. C135-9

   Table 2 (pg. 14) of Appendix D indicates that estimated Project annual water demands by the year 2045 will be 342 acre-feet per year (AFY). Table 9 (pg. 31) of Appendix D indicates that available annual supply that will be 100% reliable for the period 2030-2045 is 356 AFY. Comparison of available and reliable water supply (356 AFY) to full buildout demands (342 AFY) suggest there is very little margin for error in terms of future water supply management. The DEIR supply estimate is also concerning to me in that the historic (1969-2007) water use (demands) for the SDC averaged 622 AFY and peaked at 1,143 AFY in 1986 (pg. 12, Appendix D). I'm suspect that the historic SDC water use is nearly twice the volume of estimated future full buildout (2045) Project water demands, especially when the Project proposes to build an additional 1000 residential units and hotel and reoccupy and/or expand the commercial and industrial uses (see Table 1, pg. 13 of Appendix D). Even with conservation measures, I would expect that Project water demands would be similar to if not larger than historic use. The next paragraphs elucidate this opinion.

   In reviewing and cross-checking the data and information presented in Tables 1 and 2 of Appendix D, I identified several questionable results that suggest the DEIR water demands are significantly underestimated. These findings are as follows.

   a. Table 2 (pg. 16 of Appendix D) only provides employee water use estimates for the proposed hotel. Water use by guests staying in the 100,000 square foot hotel is not accounted for in the annual water demand estimate. Incorporating guest water use into the demand estimate could easily result in total annual project demands greater than reliable supply. C135-10

   b. To better evaluate the DEIR demand estimates, I created Table A (below), which merges data from Tables 1 and 2 in DEIR Appendix D. In doing this exercise, I identified a significant math error in the DEIR demand estimates for General Commercial, Office, Public/Industrial, and Research & Development land uses presented in Table 2 of

Appendix D. When independently calculating water demands using the 2045 land use areas and Water Use Factors provided in Appendix D, the respective 2045 water demands for the General Commercial, Office, Public/Industrial, and Research & Development land uses result in values that are two orders of magnitude higher than those reported, which results in an increased annual Project water demand of 9846 AFY (see Table A). C135-11

c. The Permit Sonoma website[1] provides guidelines (8-2-1 Water Supply, Use and Conservation Assessment Guidelines) for the preparation of Water Supply Assessments. The purpose of this policy is to provide guidance to applicants and their representatives on how to prepare a Water Supply, Use, and Conservation Assessment (henceforth, the "Assessment"). The Assessment may be a standalone document, or supplemental to a hydrogeologic study, Zero Net Use report, or other water supply related report. These guidelines are intended for discretionary and ministerial projects. Discretionary projects that are dependent on groundwater or surface water will typically require an Assessment with the use permit application. The Assessment will inform the environmental review process and conditions of approval. The authority of the Assessment falls under Sonoma County General Plan, Water Resource Element Goals WR-2 and WR-4, Objective WR-4.1, WR-4.2, and WR-4.3, and Policies[2] WR-2c, WR-2d, WR-2e, WR-4b, and WR-4f. Therefore, the DEIR Water Supply Assessment (Appendix D) should adhere to County Guidelines. Appendix A to the County's Guidelines has water use estimates for residential, landscape, agricultural, and Commercial and Industrial uses that are greater than those factors presented in Table 2 of Appendix D (see Table B). Applying the Sonoma County water use estimates to Project water demand estimates results in higher residential and irrigated area water demands than presented in the DEIR (see Table B below). C135-12

In summary, correcting math errors and applying the Sonoma County guidelines water use estimates to the DEIR demand estimate tables results in a total annual Project water demand of 10,231 AFY, a values three times higher than reported reliable supply (356 AFY). This annual total demand will be even higher when hotel guest water use is considered.

[1] https://permitsonoma.org/policiesandprocedures/8-2-1watersupplyuseandconservationassessmentguidelines

[2] Note: these policies are not included in Hydrology/Water Quality Regulatory Setting section (3.9.1 on pg. 270) of the DEIR. See Comment 1 above.

TABLE A: Corrected DEIR Water Demand Estimates

Land Use	Total Land Use	Land Use Units	Water Use Factor	Water Use Factor Units	DEIR Est. Water Use (AFY) - 2045	Corrected DEIR Est. Water Use (AFY) - 2045
Single Family Residential	250	du	244	gpd/du	68	68
Multi-Family Residential	500	du	100	gpd/du	56	56

Environ International Corporation, Princeton, NJ, Sr. Staff Geologist/Hydrogeologist, 1989-1991

Miami University, Oxford, OH, Field Camp Instructor and Research Assistant, 1986-1989

Greg Kamman is a professional geologist and certified hydrogeologist with over 30 years of technical and consulting experience in the fields of geology, hydrology, and hydrogeology. He specializes in directing and managing projects in the areas of surface and groundwater hydrology, stream and tidal wetland habitat restoration, water supply and water quality assessments, water resources management, and geomorphology. Mr. Kamman has worked extensively throughout California's coastal watersheds and estuaries, and on multiple projects in Oregon and Hawaii.

Mr. Kamman's experience and expertise includes evaluating surface and groundwater resources and their interaction, stream and wetland habitat restoration assessments and design, characterizing and modeling basin-scale hydrologic and geologic processes, assessing watershed hydraulic and geomorphic responses to land-use change , and designing and conducting field investigations characterizing surface and subsurface hydrologic and water quality conditions. Greg commonly works on projects that revolve around sensitive fishery, wetland, wildlife, and/or riparian habitat enhancement within urban and rural environments. Mr. Kamman performs many of these projects in response to local, state (CEQA) and federal statutes (NEPA, ESA), and other regulatory frameworks. Mr. Kamman frequently applies this knowledge to the review and expert testimony on state and federal water operation plan EIR/EIS reports, Groundwater Sustainability Plans, Habitat Conservation Plans, and biological assessments.

Mr. Kamman is accustomed to working multi-objective projects as part of an interdisciplinary team including biologists, engineers, planners, architects, lawyers, and resource and regulatory agency staff. Mr. Kamman is a prime or contributing author to over 360 technical publications and reports in the discipline of hydrology, the majority pertaining to the protection and enhancement of aquatic resources. Mr. Kamman has taught the following courses: stream restoration through U.C. Berkeley Extension (2001-2008); wetland hydrology through San Francisco State University's Romberg Tiburon Center (2007 and 2012-2014); and presented webinars (2020) to California Water Boards staff on hydrologic and hydraulic modeling. He has devoted his career to the protection, enhancement and sustainable management of water resources and associated ecosystems.

SELECTED EXPERIENCE

Floodplain Management Projects

Flood Reduction, Mitigation Planning, and Design on Yreka Creek, Siskiyou County, CA
City of Yreka as subcontractor to WRA, Inc., 2008-2010

Mr. Kamman completed a series of field and hydraulic model investigations for restoration planning and design along Yreka Creek to reduce flood hazards and potential damage to the City's water treatment plant and disposal field infrastructure. This work also addresses and satisfies dike repair mitigation conditions stipulated by state resource agencies. While achieving these goals, Mr. Kamman tailored analyses and study objectives to assist the City in: enhancing the ecological floodplain restoration along Yreka Creek; providing opportunities for expanded public access and trail planning consistent with the goals of the Yreka Creek Greenway Project; and improving the water quality of Yreka Creek.

Key elements of this work included: review and synthesize existing information; identify and analyze the feasibility for three conceptual alternatives; and conceptual design and report preparation. Funding for implementation of restoration work over such a large area was a significant concern to the City. Therefore, designs identify and define phasing in a fashion that gives the City flexibility in implementation.

SELECTED EXPERIENCE *(CONTINUED)*

West Creek Drainage Improvement Assessment, Marin County, CA
Marin County Flood Control, 2006-2008

Mr. Kamman prepared a study focused on characterizing existing flood conditions and developing and evaluating flood reduction measures along West Creek in Tiburon. The work was completed through the implementation of hydrologic and hydraulic feasibility and design assessments. The conceptual design and analysis of potential flood reduction strategies (alternatives) was completed through the development of a HEC-RAS hydraulic model that simulates historic, existing and proposed project flood conditions. It was intended that the conceptual design developed under this scope of work would be of sufficient detail and quality to initiate project permitting and the environmental compliance process and documentation. Opportunities for riparian corridor and aquatic habitat enhancement were also considered and integrated into the conceptual design. Mr. Kamman also developed and assessed six alternative flood hazard reduction measures. The hydraulic model results for each alternative were compared against baseline conditions in order to evaluate their ability to alleviate flood hazards.

Gallinas Creek Restoration Feasibility Assessment, Marin County, CA
San Francisco Bay Institute, 2003-2005

Mr. Kamman completed a feasibility assessment for restoration of Gallinas Creek in northern San Rafael. Restoration will require removal of a concrete trapezoidal flood control channel and replacement with an earthen channel and floodplain in a “green belt” type corridor. Work included the collection of field data and development of a HEC-RAS hydraulic model to evaluate and compare existing and proposed project conditions. Designs must continue to provide adequate flood protection to the surrounding community. The study also includes and evaluation of existing habitat values, potential habitat values, and restoration opportunities and constraints.

Hydrologic and Hydraulic Evaluation for Trinity County Bridge Replacement, Trinity County, CA
Trinity County Planning Department, 2002

Mr. Kamman completed technical peer review of peak flow estimates and hydraulic design parameters associated with the replacement of 4 bridges across the upper Trinity River in Trinity County, California. A primary study component was accurately predicting the magnitude and frequency of flood releases from Trinity Dam. Numerous flood frequency analytical approaches were evaluated and used throughout this study.

Restoration of Lower Redwood Creek Floodway and Estuary, Humboldt County, CA
California State Coastal Conservancy and Humboldt County DPW, 2002-2003

Mr. Kamman provided technical review for the development of a hydraulic model to evaluate river and estuary restoration alternatives along the lower portions of Redwood Creek between Orrick (Highway 1) and the Pacific Ocean. This work was completed to evaluate the feasibility for creek/estuary restoration alternatives developed by the County, and effects on flood hazards along this flood-prone reach.

In order to better address and evaluate the current flood hazards along the entire floodway and identify potential flood hazard reduction measures, Mr. Kamman was retained to update HEC-2 models previously prepared by the Army Corps, and to evaluate the impacts of vegetation encroachment (increased roughness) and sediment deposition on floodway conveyance. Mr. Kamman expanded the Corps hydraulic model with newly completed channel surveys and channel roughness observations. The impetus for this work was to assist the County in identifying mutually beneficial strategies for ecosystem restoration and flood hazard reduction. Technical work was completed under close coordination and communication with county engineers. Study results and findings were presented at public meetings of local area landowners and stakeholders.

Tembladero Slough Small Community Flood Assessment, Monterey County, CA
Phillip Williams & Associates, Ltd., 1997

Mr. Kamman completed a flood information study of Tembladero Slough near Castroville on behalf of the San Francisco District Corps of Engineers. The purpose of this work was to identify and document local flood risks existing in the community and propose potential floodplain management solutions as part of the Corps 1995/1997-flood recovery process. Work centered on conducting a field reconnaissance, reviewing available historical data, and conducting discussions/interviews with local landowners and agency personnel.

Fluvial Projects

Muir Woods National Monument Bank Stabilization Plan for Conlon Creek, Marin County, CA
Golden Gate National Parks Conservancy (GGNPC), 2018-present

Mr. Kamman developed a grading and drainage plan for the Conlon Avenue Parking Lot, located adjacent to Redwood Creek and sensitive Coho salmon habitat. More recently, he has assisted GGNPC and the NPS in assessing the planning and design for creek bank stabilization and ecological enhancement at a failed culvert on a tributary channel at the project site. This work includes constructing a HEC-RAS model to evaluate: culvert removal and channel design; fish passage; and water quality impacts. Work is currently in development of 50% engineering design.

Hydrology and Hydraulic Assessments for Design of Butte Sink Mitigation Bank Project, Colusa County, CA
WRA, Inc., 2017-2018

Mr. Kamman was retained to provide hydrology and hydraulic modeling support in the development of design and Draft Prospectus for the Butte Sink Mitigation Bank (Bank). This work entailed developing the necessary hydrology information, hydraulic model and documentation to support further design, environmental compliance and agency approvals/permitting of the Bank. The main objective of work was to develop a design that provides the necessary ecological conditions and functions for successful establishment and operation of the Bank.

Lagunitas Creek Salmonid Winter Habitat Enhancement Project, Marin County, CA
Marin Municipal Water District, 2013-2018

Mr. Kamman designed and led a study to evaluate opportunities to enhance winter habitat for coho and other salmonids in Lagunitas Creek and its largest tributary - Olema Creek. This work was done as a two-phase assessment and design effort. The first phase (completed in 2013) included a winter habitat assessment to evaluate existing juvenile salmonid winter habitat in Lagunitas Creek and lower Olema Creek. The results of this assessment were used to prioritize winter habitat needs, and identify opportunities for winter habitat enhancement to increase

SELECTED EXPERIENCE *(CONTINUED)*

the winter carrying capacity of coho salmon and steelhead. The second phase (completed in 2017) consisted of a designing winter habitat enhancements. These enhancements focused on restoring floodplain and in-channel habitat structures. Winter habitat enhancement work also needed to consider potential impacts to or benefits for California freshwater shrimp (Syncaris pacifica), a federally endangered species.

This work included field reconnaissance, topographic surveys and the preparation of final design drawings at nine different project sites. An overall self-maintaining design approach was developed to guide individual project plan, with minimal earthwork and disturbance to existing riparian and wetland habitat. Self-sustained, natural evolution of a multi-thread channel within a more active floodplain is a desired outcome of project actions. Design elements and structures are intended to enhance or restore natural hydrologic processes to promote geomorphic evolution of more active high flow (side) channels and floodplain. Design elements include construction of 24 individual log structures.

Lower Miller Creek Management and Channel Maintenance, Marin County, CA
Las Gallinas Valley Sanitary District, 2013-2015

Mr. Kamman was commissioned to formulate and implement a plan for sediment removal and improved flood flow conveyance in the Lower Miller Creek channel. The need for improved flood and sediment conveyance is driven by the following factors. Progressive accumulation of course sediment in the project reach had reduced area wide discharge efficiencies along Miller Creek and at District outfalls. The District had an immediate need to dredge Lower Miller Creek to protect existing operations and facilities. Miller Creek supports a population of federally listed Steelhead, and adjacent wetland areas potentially support other state and federally listed special status species. Therefore, permitting requirements and cost efficiency required minimizing the extent and frequency of channel excavation/maintenance that may adversely impact habitats in the wetland and riparian corridor.

The design objective of the project was to define and optimize an integrated channel maintenance, flood, and sediment management plan, that protects existing facilities from stream and coastal flood hazards. The plan's objective was to minimize costs and ecological impacts of future anticipated and designed maintenance activities required under District operations. Working with District Staff, Mr. Kamman developed a suite of potential project alternatives and identified a preferred approach. Mr. Kamman completed all CEQA compliance (IS/MND) and permitting. Mr. Kamman also managed and directed development of engineered drawings and assisted in bid document preparation.

Mr. Kamman provided site assessment, long term management planning and channel maintenance support to the Sanitary District to maintain flood conveyance, manage sediment aggrading at District outfalls, and improve ecological values in the intertidal Bayland reaches of Miller Creek. The creek supports multiple federal and state listed endangered species. Initial work included completing hydraulic and geomorphic assessments to characterize causes of channel aggradation, and quantify sediment yields. Assessments included evaluation of climate change impacts on habitat and flood hazards, and water quality modeling of District outfalls to quantify tidal exchange and dilution. Based on this analysis and supporting biological resource assessments, Mr. Kamman identified alternatives for channel maintenance, performed a cost benefit assessment of dredging alternatives, and is assisted the District in developing short and long term management objectives. Mr.Kamman also led a multidisciplinary design team in the preparation of engineering plans and specifications as well as permits and environmental compliance documents.

Vineyard Creek Channel Enhancement Project, Marin County, CA
Marin County Department of Public Works, 2007-2013

Mr. Kamman managed the preparation of designs and specifications for a flood conveyance and fish habitat and passage improvement project on Vineyard Creek. Creek corridor modifications included replacing the box culvert at the Center Road crossing with a free span bridge or bottomless arch culvert (civil and structural design by others), providing modifications to the bed and bank to eliminate erosion risks to adjacent properties and improve water quality, promoting active channel conveyance of both water and sediment, and providing improved low and highflow fish passage, improved low flow channel form and enhanced in-stream habitat, repairing eroding banks, and expanding/enhancing adjacent channel floodplains. The riparian corridor was replanted to provide a low-density native understory, "soft" bank erosion protection, and increased tree canopy along the tops of banks. Mr. Kamman prepared the JARPA for the project and conducted permit compliance and negotiations with all participating resource agencies. Designs and permitting also address the known presence of Native American artifacts. This work was contracted under an expedited design schedule and phased construction was initiated the summer of 2008 and continued the summer of 2009.

Bear Valley Creek Watershed and Fish Passage Enhancement Project, Marin County, CA
The National Park Service and Point Reyes National Seashore Association, 2005-2013

Working on behalf of the NPS and PRNSA, Mr. Kamman completed a watershed assessment and fish passage inventory and assessment for Bear Valley Creek. Work included a geomorphic watershed assessment and completing field surveys and hydraulic modeling (including flood simulations) of ten road/trail crossings to identify and prioritize creek and watershed restoration efforts while considering and addressing current flooding problems at Park Headquarters – a major constraint to channel restoration efforts that would likely exacerbate flooding. Mr. Kamman also completed a suite of conceptual restoration designs (Phase 1) including: the replacement of two county road culvert crossings with bridges; channel creation through a ponded freshwater marsh (former tidal marsh); and replacement of 4 trail culverts with prefabricated bridges; and associated in-channel grade control and fishway structures. Engineered drawings and specifications were also developed for some of these sites to assist PORE with emergency culvert replacements after damages sustained during the New Year's Eve flood of 2005. Mr. Kamman also directed geotechnical, structural and civil design of project components.

Two projects were completed in 2006 on emergency repair basis resulting from flood damages suffered during the New Year's Eve storm of 2005. The two most recent projects were constructed in 2013, consisting of a large bank repair and adjacent to main access road/trail and culvert replacement further upstream on same road. The bank repair utilized bioengineering approaches including engineered log revetments and log diversion vanes.

SELECTED EXPERIENCE *(CONTINUED)*

Kellogg Creek Restoration Project, Contra Costa County, CA
Olberding Environmental on behalf of the Contra Costa County Water District, 2012-2013

Mr. Kamman led the development of PS&E to restore 3,000 linear feet of riparian and associated creek corridor habitat. Project was designed as compensatory mitigation for direct and indirect impacts to jurisdictional waters from the Los Vaqueros Reservoir Expansion Project that Contra Costa Water District. Work included field investigations and data analysis to characterize hydrologic/geomorphic conditions and numerical modeling to optimize desired inundation and hydroperiods. Work was completed under subcontract to.

Miller Creek Sanitary Sewer Easement Restoration, Marin County, CA
Las Gallinas Valley Sanitary District, 2010

Working on behalf of the District, Mr. Kamman completed field surveys and technical feasibility studies to develop engineering plans and specifications for a stream bank restoration project to protect an exposed sanitary sewer pipeline, stabilize incised banks, and promote an ecologically healthy stream corridor along an approximately 50 linear foot damaged reach of Miller Creek. The design includes backfill and materials to accommodate construction of a vegetated stabilized slope. The eroded bank repair included design of a 1:1 Envirolok vegetated slope with geogrid reinforced soil lifts extending eight to ten feet back from the slope face. One-quarter-ton rock will be placed in front of the Envirolok wall at the toe of the reconstructed bank to provide added scour protection. In order to perform the work, the project site will be dewatered. An existing felled tree perpendicular to the creek flow will be relocated and secured into the right creek bank with root wad remaining in active channel. All work on the bank and within the creek bed must be completed pursuant to project permits due to presence of steelhead trout.

California Coastal Trail Planning and Design at Fitzgerald Marine Reserve, San Mateo County, CA
WRA, Inc., 2008-2009

Mr. Kamman provided hydrology and hydraulics expertise in the planning and design for the 0.25-mile segment of the California Coastal Trail at the Fitzgerald Marine Reserve. The project was overseen by the San Mateo County Parks Department. This segment of Coastal Trail provides improved access from the trailhead to the beach as well as a free span bride over Vicente Creek. Greg completed the field surveys and hydraulic modeling to assist an interdisciplinary team to design the project. Understanding the hydrology of Vicente Creek and quantifying flood conditions was critical to successfully designing and constructing the free span bridge. He also evaluated how creek hydrology and coastal wave processes interact at the beach outfall in order to identify opportunities and constraints to beach access improvements (which will include crossing the creek on the beach) during both wet and dry season conditions in order to evaluate both permanent and seasonal crossing design alternatives.

Hydrologic Assessment and Conceptual Design for Conservation and Wetland Mitigation Bank Project, Stanislaus County, CA
WRA, Inc., 2009

Working as a subcontractor to WRA, Inc., Mr. Kamman provided hydrology, geomorphology and engineering support for the planning and design for a Conservation and Wetland Mitigation Bank on the San Joaquin River, in the Central Valley near Newman, California. The property is currently owned by the Borba Dairy Farms. The primary objective of the study was to characterize the hydrologic and geomorphic controls on the spatial distribution of habitat types. To meet this objective, Mr. Kamman's assessment included: (1) collecting and synthesizing hydrologic data to characterize existing and historic streamflow, geomorphic and shallow groundwater conditions; (2) filling a data gap by collecting topographic data of hydrologic features; (3) developing a hydraulic model capable of predicting water surface profiles for a range of design flows; and (4) quantifying the linkage between surface water/groundwater conditions and specific vegetation communities and habitat types through implementation of reference site assessments. Mr. Kamman also provided conceptual design and permitting support in evaluating habitat enhancement and creation opportunities on the site.

Redwood Creek Floodplain and Salmonid Habitat Restoration, Marin County, CA
Golden Gate National Recreation Area and Golden Gate Parks Conservancy, 2005-2008

Mr. Kamman lead development of a preferred project alternative and final project design drawings and specifications for a floodplain and creek restoration and riparian corridor enhancement effort on lower Redwood Creek above Muir Beach at the Banducci Site. A primary objectives of the project was to: improve salmonid passage/rearing/refugia habitat; riparian corridor development to host breeding by migratory song birds; and wetland/pond construction to host endangered red-legged frog. The preferred design includes: excavation along the creek banks to create an incised flood terrace; engineered log deflector vanes; removing and setting back (constructing) approximately 400-feet of levee; creating in- and off-channel salmonid rearing and refugia habitat; reconnecting tributary channels to the floodplain; and creating California red-legged frog breeding ponds. Designs were completed in 2007 and the project constructed in the summer of 2007.

Considerable hydraulic modeling was completed to evaluate and develop means to help reduce chronic flood hazards to surrounding roadways and properties. Alternatives that included set-back levees and road raising were developed and evaluated. Detailed and careful hydraulic (force-balance) analyses and computations were completed as part of engineered log deflector designs. These were unique and custom designed structures, building on past project efforts and in consultation with other design professionals.

This project demonstrates Mr. Kamman's ability to work closely with the project stakeholders to develop a preferred restoration alternative in a focused, cost-effective and expedited fashion. This was achieved through close coordination with the NPS and the effective and timely use of design charrette-type meetings to reach consensus with participating stakeholders. Conceptual through full PS&E were completed on-time and on-budget in 2007 and was project constructed in the fall of 2007. Mr. Kamman worked closely with NPS staff to "field fit" the project, by modifying grading plans to protect existing riparian habitat. Mr. Kamman also provided construction management and oversight to floodplain grading and installation of engineered log structures. Based on field observations, the project is performing and functioning as desired.

Pilarcitos Creek Bank Stabilization Project, San Mateo County, CA
TRC Essex, 2006-2007

Mr. Kamman directed field surveys and technical modeling analyses to develop restoration design alternatives for a Bank Stabilization Project on Pilarcitos Creek

SELECTED EXPERIENCE *(CONTINUED)*

in unincorporated San Mateo County, California. This work included hydrology and hydraulic design and preparation of plan sheets and technical specifications as well as a revegetation plan. Due to the importance of protecting an existing gas mainline, the design package will be completed in close coordination with TRC Essex geotechnical staff and revegetation subcontractor and PG&E civil staff. Design feasibility analyses focused on developing hydraulic design criteria for the project, including: estimates of design flood flow magnitudes (2-, 5-, 10-, 25-, 50- and 100-year floods); water surface elevation estimates for a suite of design floods; associated average channel velocities and shear stresses; and estimates for riprap sizing for channel bank toe protection. Plan sheets, technical specifications and cost estimates were provided for review and approval.

Watershed Assessments

Evaluation of Project Impacts on Oregon Spotted Frog, Klamath County, OR
Oregon Water Watch and Earthjustice, 2016-2019

Mr. Kamman designed a suite of hydrologic, hydraulic and geomorphic studies to evaluate proposed change operations of the Crane Prairie, Wickiup and Crescent Lake dams and reservoirs as related to harm to Oregon spotted frogs. Work began with analyzing impacts associated with proposed water delivery operations and developing a proposed alternative prioritizing protection and enhancement of frog habitat. This work followed with a technical review and critique of the USFWS's Biological Assessment. Work included preparation of four declarations for the clients.

Tennessee Hollow Creek Riparian Corridor Restoration, San Francisco County, CA
Presidio Trust, 2001-present

Mr. Kamman has been leading and assisting the Trust and Golden Gate National Recreation Area (GGNRA) in the planning and design on over a dozen multi-objective riparian corridor restoration and watershed management projects in the Tennessee Hollow/Crissy Marsh watershed since 2001. Specific project objectives include: daylighting creeks; riparian corridor restoration; expanding Crissy Marsh; enhancing recreation, education, archeological, and cultural resource opportunities; improving water quality discharges to San Francisco Bay; and remediation of numerous landfills within the watershed. Typical initial phases of work focus on characterizing surface and groundwater conditions within each project area and identifying opportunities and constraints to restoration of natural wetlands and creek/riparian corridors. Notable challenges of this work include restoring heavily disturbed natural resources in an urban setting while integrating designs with recreation, archeology/cultural resources, education and remediation programs. Mr. Kamman has acted as lead hydrologist and designer on eight separate reaches in the 271-acre Tennessee Hollow Creek watershed and several other projects within and in the vicinity of Mountain Lake.

All task authorizations under these on-call and individual design contracts and included hydrology and water quality assessments and conceptual restoration planning and design. The project areas overlapped both the Presidio Trust and NPS-GGNRA management areas. Preliminary construction cost estimates for project alternatives within the Tennessee Hollow watershed range from $10- to $20- million. Several restoration projects are also tied to providing mitigation for the current San Francisco Airport expansion and Doyle Drive Seismic Improvement projects. Several projects have been constructed since 2012 (Thompson's Reach, El Polin Loop), two projects (East Arm Mtn. Lake and YMCA Reach) were constructed in 2014, and MacArthur Meadow restoration in 2016.

This work illustrates the Mr. Kamman's ability to complete a broad variety of hydrologic analyses, including: multiple years of rigorous and thorough surface water and groundwater hydrologic and water quality monitoring throughout the entire watershed to characterize and quantify existing hydrologic conditions; development of a detailed watershed-scale water budget for existing and proposed land-used conditions (capturing existing and proposed vegetation cover types and land use activities) to calculate groundwater recharge estimates input into the numerical watershed model; preparation of EA sections on water resources and water quality (NEPA compliance) regarding Environmental Conditions, proposed Impacts, and Proposed Mitigations associated with the project; preparing detailed alternative plans; and coordination and preparation of engineered plans/specifications for construction. All work was completed on budget and in a timely fashion.

Mountain Lake Water Budget, San Francisco County, CA
Presidio Trust, 2012-2017

Mr. Kamman was retained to develop a water balance model for Mountain Lake in the Presidio of San Francisco. Through development of a water balance model, the Trust seeks to understand: the major source(s) of inflow to both Mountain Lake; anticipated seasonal (monthly) changes in water level relative to various outflow assumptions; and the relationship of surface and groundwater interaction. This information gained from this study will be used to: 1) better understand and manage lake levels for ecological habitats; 2) identify flood storage capacity of Mountain Lake and fluctuations in lake level under various storm conditions; 3) better understand and maintain wetland habitat in the east arm; and 4) complete mass balance calculations to assess water quality in and feeding into the lake.

To implement this study, Mr. Kamman developed a water budget model to identify and quantify the primary water inputs and outputs to the lake and determine major controls over water storage. Primary water budget variables analyzed includes: precipitation; evaporation/evapotranspiration; groundwater exchange; and surface runoff. This study also included a long-term field investigation completed between 2012 and 2016 to: identify all point source inputs such as culverts and drainage outlets; identify diffused surface runoff inputs from surrounding lands, including a golf course; better characterizing the function and performance of the primary lake outfall structure; monitor groundwater levels surrounding the lake; and continuously monitor lake water level and storage over a mult9i-year period. These data were used to quantify water budget variables used to build the water budget model. Precipitation and barometric pressure data used in the model was provided by the Trust maintained weather station. Model daily evaporation estimates came from a variety of local area gauges maintained by state agencies.

The water budget model developed for this study is successful in accurately simulating historic water level conditions. The model using a daily time-step appears more accurate than model using a weekly time-step, but both provide reasonable agreement with observed conditions. The model is highly sensitive to groundwater exchange with the lake. The water budget is also a proven useful tool for the design and analysis of improvements to the lake outfall structure and establishing flood storage needs to protect the adjacent highway.

SELECTED EXPERIENCE *(CONTINUED)*

Cordilleras Creek Hydrologic Assessment, San Mateo County, CA
City of Redwood City, 2002-2003

Mr. Kamman assisted the Cordilleras Creek Watershed Coordinator in planning, seeking funding, and implementing a hydrologic and biologic assessment of the Cordilleras Creek watershed. Work completed included completing a full creek reconnaissance and channel stability assessment, preparation of a watershed assessment work plan, presentations at public meetings, and study/review of flooding issues in the watershed. Challenges faced in this predominantly privately owned watershed include removal of numerous fish passage barriers and educating/coordinating property owners.

Capay Valley Hydrologic and Geomorphic Watershed Assessment, Yolo County, CA
Yolo County RCD, 2008-2010

Mr. Kamman designed and supervised a hydrologic, geomorphic watershed assessment, and conceptual restoration design for the Capay Valley segment of Lower Cache Creek . Funding for the project was from a CALFED Watershed Program grant. The Capay Valley reach of Cache Creek experiences considerable stream bank erosion, which contributes to downstream sedimentation. The channel instability also threatens adjacent homes and can negatively impact the riparian habitat along the creek that functions as an important wildlife corridor from the Western Coastal Range to the Yolo Bypass. Additionally, a significant proportion of methylmercury transported into the Bay-Delta originates from the Cache Creek watershed. The main goal of this proposed study is to address both the causes and the aforementioned consequences of bank erosion.

The assessment was designed to evaluate and quantify changes in hydrologic and geomorphic conditions in response to historical changes in land-use and water development (e.g., diversions, reservoir construction, groundwater pumping, etc.). This assessment also evaluated how historic human induced changes in hydrologic and geomorphic conditions affect riparian ecology in terms of the lost or altered floodplain area, character, and inundation frequency. A key product of this assessment was to distinguish between “natural” and “accelerated” bank erosion, and to identify the underlying causes (both natural and anthropogenic) so that appropriate solutions can be developed. Desired outcomes of the study included: reduce bank erosion by developing restoration designs for typical trouble sites; produce a ranking system to prioritize sites for stabilization and restoration; contribute to community education through watershed science education and the Yolo STREAM Project outreach program; improve water quality through reduction in accelerated erosion; and contribute to riparian corridor restoration and support the RCD’s Wildlife Conservation Board funded efforts to remove non-native tamarisk and around from the creek corridor. Work was completed through a broad spectrum of field and analytical investigations that received close review by the RCD, stakeholders, and a Technical Advisory Committee.

Ventura River Unimpaired Flow and Habitat Assessment, Ventura County, CA
City of Buenaventura and Nautilus Environmental, 2006-2007

Mr. Kamman completed a hydrology feasibility assessments as part of evaluating the reuse of Ojai Valley Sanitary District (OVSD) effluent for other beneficial uses. Currently, OVSD discharges treatment plant effluent to the lower Ventura River. The City and OVSD recognize that the reduction in the discharge of treated effluent to the Ventura River could have an environmental effect on sensitive and endangered species. In light of these concerns, this study was conducted to determine if a reuse project is feasible without significant environmental harm.

The assessment included hydrologic and geomorphic field and analytical assessments of past (unimpaired), current and proposed surface and groundwater flow conditions over a wide range of dry- through wet water year-types. The main objective if these analyses was to determine the linkage to water quality and aquatic habitat conditions including: flow durations; extent of gaining vs. losing reaches; low flow inundation/wetted area; and influence on barrier beach dynamics. Mr. Kamman collaborated with a team of other professionals to prepare a facility plan documenting the analyses and conclusions of respective water recycling investigations.

Hydrologic Analysis of FERC Minimum Flows on Conway Ranch Water Rights, Mono County, CA
Law Office of Donald Mooney, 2001-2002

Mr. Kamman completed a hydrologic analysis to evaluate if FERC’s proposed Minimum Flow Plan for Mill Creek would interfere with the exercise of the Conway Ranch’s water rights from Mill Creek. The approach to this analysis was to quantify the duration of time the Conway Water right was met under historic gaged and simulated proposed Minimum Flow Plan conditions. The primary objective of the analysis was to evaluate impacts during the winter period when flows are typically limited due to water storage as snow pack. Minimum Flow Plan conditions were simulated by developing a spreadsheet model that redistributes actual (historic) Lundy Lake releases in a fashion that maintains a minimum flow of 4 cfs to Mill Creek to accommodate the downstream Southern California Edison’s (SCE) power plant. The analysis period for both historic and simulated Minimum Flow Plan conditions consisted of water years (WY) 1990 through 1998 to capture an exceptionally diverse range of wet and dry year-types.

The primary method used to quantify changes in flow between historical and simulated Minimum Flow Plan conditions was to prepare and compare flow duration curves for each condition during both the winter and summer periods during a variety of water year types. Model results were tabulated for each conditions to determine the differences in the percentage of time target flows were equaled or exceeded. Based on these findings, Greg was contracted to complete more in-depth monthly modeling.

Groundwater Management Projects

Assessments of Groundwater-Surface Water Interaction, Stanislaus County, CA
The Law Offices of Thomas N. Lippe, APC and California Sportfishing Protection Alliance, 2015-present

Since 2015, Mr. Kamman has been assessing groundwater conditions within Stanislaus County and evaluating potential impacts of groundwater pumping on surface water flow and aquatic habitat of the Stanislaus, Tuolumne and San Joaquin Rivers. Mr. Kamman completed a comprehensive review and synthesis report of available groundwater and interconnected surface water (ISW) reports and data. Using available soils, geology and hydrology information, Mr. Kamman also delineated and mapped subterranean streams and Potential Stream Depletion Areas (PSDAs) to identify stream corridors susceptible to adverse impacts from groundwater pumping. This information is intended to help Groundwater Sustainability Agencies identify potential impacts to ISW.

SELECTED EXPERIENCE *(CONTINUED)*

Most recently, Mr. Kamman has been retained to review and comment on 7 Groundwater Sustainability Plans (GSPs) for critically overdraft groundwater subbasins within or adjacent to Stanislaus County. This review focused on how GSPs address Groundwater Dependent Ecosystems (GDE) and ISW. Comments included recommendations on monitoring and study plans to identify and quantify impacts of groundwater pumping on stream flow rates and associated ecological habitats.

Assessment of Surface Water-Groundwater Interaction, Humboldt County, CA
Friends of the Eel River (FOER), 2020-present

Mr. Kamman is currently providing technical assistance in understanding surface water-groundwater interactions in the Lower Eel River Valley. Work includes reviewing and synthesizing available reports and hydrologic data and providing a science-based opinion on the role groundwater plays in supporting stream flow and aquatic habitats. This analysis addresses conditions and changes associated with seasonal and long-term wet-dry cycles. Data gaps will be identified and documented during the analysis.

This work is being completed to support FOER efforts at protecting aquatic resources within the framework of current water management practices and the public trust doctrine under California law. Additionally, this work includes providing hydrologic and hydrogeologic review, comment and recommendations during development of the basin's Groundwater Sustainability Plan (GSP) under the California Sustainable Groundwater Management Act (SGMA).

Scott Valley Subbasin Technical Hydrogeologist Assistance, Siskiyou County, CA
Klamath Tribal Water Quality Consortium and Quartz Valley Indian Reservation, 2019-present

Mr. Kamman is providing technical review and comment on the groundwater models and associated studies in the Scott Valley groundwater subbasin under the Sustainable Groundwater Management Act (SGMA) process. Work includes: review of groundwater models; synthesis and review of available groundwater quality data; assisting to identify constituents of concern; and review of the planning and technical studies being used to develop a basin Groundwater Sustainability Plan (GSP).

Middle Russian River Valley Shallow Groundwater Storage Enhancement Study, Sonoma County, CA
Friends of the Eel River, 2016

Working on behalf of Friends of the Eel River, Mr. Kamman completed a study to identify and quantify the volume of recoverable aquifer storage along two independent 6-mile reaches within the alluvial fill valley of the Russian River. The approach to this study was to quantify how channel incision has reduced shallow groundwater levels and quantify how much aquifer storage can be increased if channel bed elevations are restored to historic levels. The goal of this investigation was to identify feasible approaches to increase groundwater storage that would off-set losses associated with the termination of out-of-basin diversions from the Eel River. This work was completed through: intensive review and mapping of available groundwater level data; quantification of aquifer hydraulic properties; and calculating the shallow aquifer storage volume. In total, reclaiming the shallow aquifers within these two areas yield a total added storage volume of over 20,000 AF.

Green Gulch Farm (GGF)/Zen Center Water Resources Investigation, Marin County, CA
Green Gulch Farm, 1998-2019

Mr. Kamman completed a multi-phase study to evaluate the short- and long-term water uses and resources at GGF. Work was initiated by developing comprehensive water usage/consumption estimates and assessing available water resources, including spring, surface water, and ground water sources. Water demand estimates included quantifying potable and agricultural water usage/demands. Once reliable water supplies were identified and water usage/demand figures calculated, Mr. Kamman provided recommendation for improvements to water storage and distribution systems, land-use practices, conservation measures, treatment methods, waste disposal, and stream and habitat restoration. The initial phase of work included: in-depth review of available reports and data; review of geology maps and aerial photography; review of water rights and historic land use records; field reconnaissance including year-round spring flow monitoring; mapping and quantifying existing runoff storage ponds; and surface water peak- and base-flow estimates.

The second phase of work included identification of possible groundwater sources and siting and installation of production wells. This included sighting three drilling locations, obtaining County and State well drilling permits for a domestic water supply; coordination and oversight of driller; and directing final well construction. Upon completion of a well, Mr. Kamman directed a well pumping yield test and the collection and analysis of water quality samples (including Title 22) for small water supply system use. The final phase of work included assisting GGF with water treatment system options at the well head and integration of the groundwater supply into an existing ultra-violet light treatment system servicing spring water sources. Work was completed in 2000 with a budget of approximately $25,000, including all driller and laboratory subcontracting fees.

Stanford Groundwater Assessments, Santa Clara County, CA
Stanford University Real Estate Division, 2012-2016

Mr. Kamman provided technical hydrogeologic services to evaluate groundwater conditions and drainage requirements associated with the construction of several new facilities on or near Page Mill Road. The main objective of this study is to determine the seasonal depth to groundwater beneath the project site under existing and potential future conditions and provide an opinion on if the project is required to comply with the City of Palo Alto, Public Works Engineering Basement Exterior Drainage Policy (effective October 1, 2006). This work included obtaining and reviewing available technical reports, maps and literature pertaining to groundwater conditions in the project vicinity. Based on this review, we have prepared a letter report of findings and recommendations.

Bodega Bay Wetland Water Supply, Sonoma County, CA
Friends of Bodega Bay, 2007

Mr. Kamman Conducted an evaluation of the groundwater underflow feeding a large coastal wetland in Bodega Bay and recommended mitigation measures for potential losses in supply associated with proposed residential development in recharge areas. Work included: long-term monitoring of ground water quality and supply; monitoring surface water and spring flow and water quality; assessing and characterizing the interaction between surface and subsurface water sources during different seasons and water year-types; developing a detailed water budget for the site to assess impacts to recharge areas; and developing a number of physical solutions to mitigate for recharge losses.

SELECTED EXPERIENCE *(CONTINUED)*

L.A. Department of Water and Power, Groundwater Recharge Facility Operation Study, Los Angeles County, CA
ICF Consulting, 2006

Working as a subcontractor to ICF Consulting of Laguna Niguel, California, Mr. Kamman provided technical assistance in the hydraulic modeling of sediment accumulation in selected spreading ground facilities owned and operated by the Los Angeles Department of Public Works. The object of this work is to evaluate changes in infiltration and groundwater recharge rates over time within the spreading grounds in association with sediment accumulation from turbid waters.

Corde Valle Golf Club Surface-Groundwater Interaction Study, Santa Clara County, CA
LSA Associates, 2004

On behalf of LSA Associates of Pt. Richmond, CA, Mr. Kamman completed a 3rd party independent review of available reports and data sets (boring logs, well water levels, groundwater quality, aquifer pump-test, and surface water monitoring) to evaluate if pumping of the Corde Valle irrigation well is adversely impacting flow in West Llagas Creek. This investigation was implemented in response to a concern expressed by California Department of Fish and Game staff regarding the potential for differential drying of the West Branch of Llagas Creek along Highland Avenue. The analysis was also complicated by the likely effects of pumping from surrounding off-site wells.

Aquifer Testing for Tennessee Hollow Watershed Project, San Francisco County, CA
Presidio Trust, 2002

The Mr. Kamman assisted in the design and implementation of an aquifer test at the Presidio of San Francisco. We prepared an aquifer test work plan and conducted step-drawdown and constant-rate aquifer tests at the site using both manual and electronic data collection methods. This work included interpretation of the aquifer test results using software-based solution methods and prepared a written summary of methods and findings. In addition, Mr. Kamman located, coordinated and managed a drilling effort for the logging and installation of several groundwater monitoring wells in the project area to address identified data gaps.

San Joaquin River Riparian Corridor Restoration Project, San Joaquin Valley, CA
McBain-Trush, 2002

Mr. Kamman completed an assessment of historic and existing shallow groundwater conditions beneath and adjacent to the San Joaquin River between Friant Dam and the Merced River. This work focused on reviewing available reports and flow/groundwater- level data to characterize surface water and groundwater interaction and implications for riparian vegetation, water quality and fishery habitat restoration. Hydrologic analyses were performed to identify the location and seasonal evolution of losing and gaining reaches an implication on future restoration planning and design efforts. The main deliverable for this analysis was a report section focused on describing the historical changes in regional and local groundwater conditions in the San Joaquin Valley and evolution of anthropogenic activities (e.g., groundwater withdrawals, irrigation drainage systems and return flows, development of diversion structures, changes in land-use; and introduction of CVP/State Water Project deliveries) and associated impacts on deep/shallow groundwater levels, surface water flows, and surface and groundwater quality.

Tidal, Estuarine & Coastal Projects

Quartermaster Reach Wetland Restoration Project, San Francisco County, CA
Presidio Trust, 2006-present

Mr. Kamman was retained in 2006 as part of a multi-disciplinary team to develop restoration alternative designs for a 10-acre filled and paved site marking the historic confluence of Tennessee Hollow Creek and Crissy Marsh adjacent to San Francisco Bay. The Trust's planning documents define the main objectives for Tennessee Hollow restoration as: a) "Restoration [of Tennessee Hollow] will expand riparian habitat and allow for an integrated system of freshwater streams and freshwater, brackish, and tidal marsh, re-establishing a connection to Crissy Marsh" and b) "Restore and protect Tennessee Hollow as a vibrant ecological corridor". The project is located within the setting of a National Park and a National Historic Landmark District. Thus, another goal for the project is to protect the area's historic buildings and sensitive cultural and archeological resources to the extent possible, to enhance visitor experience to the area, and to integrate creek restoration with other urban land uses.

Mr. Kamman provided H&H technical input and consultation to the design team to develop a restoration project consisting of a creek-brackish marsh-salt marsh interface and associated upland habitats. His work included evaluating surface water, groundwater and tidal sources. In addition, the development of a hydrodynamic model has informed and guided a preferred project design, including evaluation of storm surge, road crossing and Tsunami impacts to the project. A technical challenge addressed with the use of the model included predicting and quantifying salt/brackish marsh habitat zones within the restored wetland in response to periodically but prolonged closed-inlet conditions to Crissy Marsh - a water body that serves as the downstream connection to the proposed project.

Another unique challenge to this project includes integrating restoration planning and design efforts with the replacement and retrofit of Doyle Drive, the main on/off-ramp for the Golden Gate Bridge, being replaced along the entire northern boundary of the Presidio. Mr. Kamman is providing long-term technical review of this project to the Trust with respect to impacts to water resources and associated existing ecological habitats. The Quartermaster project also falls within the managerial jurisdiction of both the Presidio Trust and NPS-GGNRA, requiring work in close cooperation with both Presidio Trust and National Park Service (NPS) staff.

Salt River Ecosystem Restoration Project, Humboldt County, CA
Humboldt County RCD, 2005-2019

Mr. Kamman provided hydrology, engineering and environmental compliance services towards the planning and design of river and tidal wetland restoration on the Salt River (Eel River Delta plain) near Ferndale, California, in Humboldt County. The purpose of the Salt River Ecosystem Restoration Project (SRERP) is to restore historic processes and functions to the Salt River watershed. These processes and functions are necessary for re-establishing a functioning riverine, riparian, wetland and estuarine ecosystem as part of a land use, flood alleviation, and watershed management program. The Salt River Project has three components: 1) dredging the lower Salt River and lower Francis Creek from near the Wastewater Treatment Plant downstream for 2.5 miles; 2) restoring 247 acres of wetland estuary habitat in the lower Salt River within the 440-acre former

SELECTED EXPERIENCE *(CONTINUED)*

dairy; and 3) reducing sediment inputs from tributary watersheds. The Salt River Project was designed using an "ecosystem approach" to address hydrology, sedimentation, and fish and wildlife habitat.

As part of project feasibility assessment, Mr. Kamman completed a hydrologic and water quality monitoring program, and developed a MIKE11 hydrodynamic model of the lower Salt River and Eel River estuary in Humboldt County, for the Humboldt County RCD. The purpose of this work was to complete a hydrologic, geomorphic, and hydraulic modeling assessments of the character and dominant physical processes controlling flow of water and sediment through the lower Salt River. Land use changes in the area have caused significant aggradation and infilling of the Salt River, significantly reducing tidal exchange, fish passage, and exacerbating flooding in upland areas. A primary goal of this study is to evaluate the feasibility of proposed restoration elements intended to increase tidal prism and exchange and in-channel sediment scour and transport. The desired outcome is a sustained increase in river conveyance capacity to improve drainage of surrounding flood-prone lands and improve aquatic, wetland, and riparian habitat.

As part of project development and feasibility assessment, Mr. Kamman completed a hydrologic and water quality monitoring program and MIKE11 hydrodynamic model development of the lower Salt River and Eel River estuary in Humboldt County for the Humboldt County RCD. The purpose of this work is to complete a hydrologic, geomorphic, and hydraulic modeling assessments of the character and dominant physical processes controlling flow of water and sediment through the lower Salt River. Land use changes in the area have caused significant aggradation and infilling of the Salt River, significantly reducing tidal exchange, fish passage, and exacerbating flooding in upland areas. A primary goal of this study is to evaluate the feasibility of proposed restoration elements intended to increase tidal prism and exchange and in-channel sediment scour and transport. The desired outcome is a sustained increase in river conveyance capacity to improve drainage of surrounding flood-prone lands and improve aquatic, wetland and riparian habitat.

Western Stege Marsh Restoration Project, Contra Costa County, CA
Tetra Tech, 2008-2010

Mr. Kamman provided technical hydrology and wetland hydraulics support to post-project monitoring of the Western Stege Marsh Restoration Project. His involvement began by providing an independent technical review of previous year's hydrologic monitoring results to evaluate the proposed monitoring success criteria and the rationale used to develop these criteria. This work entailed reviewing historic monitoring data and available natural slough channel geometry data-sets for San Francisco Bay area marshes. Mr. Kamman's study approach was to independently develop desired and sustainable channel geometry relationships for natural, healthy San Francisco Bay salt-marshes and compare them to the published success criteria. Greg was also retained to implement the Year 4 post-project hydrologic monitoring, with modifications to aid in better linking hydrologic processes to ecological conditions and function within the restored marsh. This work consisted of completing more targeted water level monitoring and channel geometry surveys in reference marsh areas containing desired physical and ecological attributes. These data were used to develop geomorphic success criteria (target channel geometry) more tailored to the project marsh and augment the criteria provided in available literature. Working closely with the project team of scientists, Mr. Kamman compared these hydrologic monitoring results to available vegetation surveys to better assess the overall success and evolutionary trend of the marsh.

Giacomini Wetland Restoration Project, Marin County, CA
The National Park Service and Point Reyes National Seashore Association, 2003-2012

Mr. Kamman managed a multi-year project for the NPS in the design and feasibility analysis of a tidal wetland, riparian, and freshwater marsh complex, on the 500-acre Giacomini Dairy Ranch, at the south end of Tomales Bay. The project began in 2003 and included hydraulic, hydrologic, and geomorphic assessments to characterize existing physical conditions, developing restoration alternatives, and completing hydrologic feasibility analyses. Restoration alternatives evaluated creation of a mosaic of subtidal through upland wetland and riparian habitat zones, as well as improvements to salmonid passage, red-legged frog habitat, tidewater goby habitat, and clapper-rail habitat. Emphasis was placed on completing detailed studies to quantify project-induced changes in flood frequency, magnitude and duration, impacts on water quality to local groundwater supply wells, and changes in sediment and water quality conditions in Tomales Bay.

Beginning in 2006, Mr. Kamman managed and assisted design engineers, preparing plans, specification, and cost estimates for a three phased construction schedule, that was completed in the summer of 2008. This project illustrates Mr. Kamman's ability to complete a broad variety of hydrologic feasibility analyses, including flood frequency analyses for contributing watersheds, reproducing historic flood events through numerical modeling, flow duration analysis and evaluation of environmental flow regimes, development of a water budget for created freshwater marsh and frog breeding ponds, sediment yield estimates, completing field monitoring (flow, water level, groundwater level, sediment, and water quality monitoring) to characterize existing site hydrologic and geomorphic conditions (fluvial and tidal), wind-wave setup and run-up for levee stability determination and construction design, coordinating and performing topographic and hydrographic surveys, performing hydrodynamic and water quality modeling of existing and alternative conditions, developing detailed construction cost estimates preparation of technical reports and design drawings and specifications in support of NEPA/CEQA environmental compliance, and public meeting presentation and participation. In addition, Mr. Kamman managed staff in the generation of DEM and TIN models of the existing site and all action alternatives. All work was completed on budget and in a timely fashion, despite repeated expansions to the project boundary and last minute changes driven by endangered species issues.

Critical Dune Habitat Restoration to Protect Threatened and Endangered Species, Marin County, CA
The National Park Service, 2009-2010

Mr. Kamman provided and managed engineering, design, and implementation planning support for the restoration of 300 acres of critical dune habitat at Abbots Lagoon within the NPS Point Reyes National Seashore. He developed engineered drawings, technical specifications and engineer's cost estimates, and assisted NPS in defining a range of methodologies suitable to local conditions and sensitive flora and fauna. This area of the park supports the best remaining intact dune habitat, including some of the largest remaining expanses of two rare native plant communities: American dune grass (Leymus mollis) foredunes, and beach pea (Lathyrus littoralis). European beach grass and iceplant were removed from

SELECTED EXPERIENCE *(CONTINUED)*

the project site using mechanical removal and hand removal techniques. The project goal was to remove these invasive species from approximately 135 acres of prime dune habitat in the 300-acre project site, while not impacting sensitive species and habitats. The intended result was to remobilize this historic dune field and restore their natural form and migratory processes.

This project illustrates Mr. Kamman's ability to work closely with NPS staff to balance habitat protection and restoration across the landscape. As part of project design, he developed grading plans, and specified work flow, equipment movement and access routes which minimize impacts to special status species. Extensive fencing and exclusions zone planning was required to protect existing native habitats, and minimize tracking of plant stock to or through restored sties. In addition work elements had to be structured and prioritized to maximize ground work subject to budgetary constraints and work flow uncertainties. All work has been completed on budget and in a timely fashion, even with repeated expansions to the project boundary and affected area and last minute changes driven by endangered species issues.

Lower Gualala River and Estuary Assessment and Management Plan, Mendocino County, CA

California State Coastal Conservancy and Gualala River Watershed Council, and Sotoyome RCD, 2002-2005

Mr. Kamman worked with fisheries biologists to evaluate the hydrologic and water quality conditions in the lower Gualala River and estuary and identify and evaluate potential impacts to summer rearing habitat for salmonids and other aquatic organisms. This work included: assessing how the impacts of upstream land use (logging and water diversions) have altered water delivery and water quality to the Lower River and estuary over time; characterizing the physical coastal and riverine processes controlling opening and closure of the estuary inlet and lagoon morphology; monitoring and characterizing real-time and seasonal changes in lagoon water level and water quality; and evaluating the sediment transport capacity and geomorphic condition of the lower river and estuary. Mr. Kamman took the lead in developing and editing a management plan for the lagoon, prescribing actions to preserve, protect and enhance ecological habitats (with emphasis on salmonids) within the lagoon and lower Gualala River.

This project was completed on-time and on-budget and demonstrates Mr. Kamman's ability to integrate physical, water quality and biological data and information into a coherent and understandable description of the interrelated processes controlling the aquatic ecology of a lagoon system. A big challenge on this project was completing a high-quality and defensible field monitoring program on a "shoe-string" budget. The outcome of this study provides important understanding on how and why steelhead are surviving in a heavily logged (95% private ownership) watershed. The management plan prescribes recommendations to preserve and protect the lagoon as primary rearing habitat for steelhead.

Suisun Bay Tidal Wetland Restoration Design, Contra Costa County, CA

East Bay Regional Park District and LSA Associates, 1999-2005

Mr. Kamman provided hydrologic design services to the restoration of a 55-acre tidal wetland on Suisun Bay. The design will maximize habitat for special status fish species, and (to the extent possible) habitat for other special status animal and plant species. Working with a multi-disciplinary design team, Mr. Kamman assisted in developing a design based on analysis of habitat needs, tidal hydrodynamic and geomorphic processes, sedimentation rates and soil characteristics. Project tasks included: a site analysis defining existing ecological and hydrologic conditions; a hydrologic and biological restoration opportunities and constraints analysis to define restoration and management objectives; and hydrodynamic and sedimentation modeling to evaluate design alternatives. The final restoration and management plan included a grading plan, landscape revegetation plan and monitoring and maintenance plans. This work again illustrates his capabilities in the characterization of physical site conditions, development and feasibility analysis of project alternatives, and preparation of preliminary designs of sufficient detail to allow for environmental compliance through the CEQA/NEPA process.

Santa Clara River Estuary and Lower River Assessment, Ventura County, CA

Nautilus Environmental on behalf of the City of Ventura, Public Works Department, 2003-2004

Mr. Kamman directed a hydrologic and geomorphic assessment of the lower Santa Clara River and estuary. This work was completed for prime contractor in an effort to assist with re-permitting of treated effluent discharges to the estuary. The proposed study entailed characterizing existing and historic hydrologic and physiographic conditions and an assessment of historic changes in inflow to the estuary. This task included a comprehensive review and evaluation of available hydrologic reports and flow data within the watershed to characterize changes in flow associated with development of numerous water projects within the Santa Clara River basin. The main deliverable from this analysis was the development of a historic unimpaired flow record to the estuary based on regional regression analyses and water operations modeling. Within the estuary, Mr. Kamman designed and conducted a multi-year monitoring program of water levels, water quality (temperature, dissolved oxygen, salinity, and pH), and sand-spit morphology in order to evaluate inlet opening/closure frequency and associated changes in aquatic habitat (esp. tidewater goby) and other ecologic communities. A considerable portion of this subtask included detailed coastal process analysis (including wave power analyses and littoral sand transport), which, considered with the inflow analysis, provides a basis to evaluate the seasonal cycle of barrier beach buildup and destruction.

This project illustrates Mr. Kamman's ability to complete a broad variety of hydrologic and coastal process analyses under strict regulatory oversight. A premier study completed on this project was the development of a detailed water and salinity budget model for the estuary to evaluate the impacts of a wide variety of proposed and modified estuary inflow regimes to determine potential future water level and salinity conditions in the lagoon and impact on frequency of inlet breaching. In addition to coordinating and implementing a variety field monitoring and surveys, Mr. Kamman also provided real-time information and input to informational and negotiation meetings with state resource and regulatory agencies.

Eden Landing Ecological Reserve Restoration, Alameda County, CA

East Bay Regional Park District, 2000-2003

Mr. Kamman developed and completed hydraulic and hydrodynamic modeling assessments for the design of an approximately 1000-acre tidal marsh restoration in former Cargil salt manufacturing ponds, located a mile inland of San Francisco Bay. The restoration goals required balancing the desires to restore tidal marsh conditions to the site, while maintaining and enhancing the open water and salt

SELECTED EXPERIENCE *(CONTINUED)*

panne habitats preferred by resident and migratory shorebirds. The restoration plan also needed to incorporate restoration objectives with remediation of high soil salinities resulting from past salt production, subsided ground elevations, dredging of new channels to the bay, existing infrastructure constraints, public access for the San Francisco Bay Trail, and preservation of several important cultural and historical sites. Hydraulic design objectives include maximizing both interior circulation and tidal exchange between the restoration parcel and the bay. A series of one-dimensional unsteady hydrodynamic models (MIKE11) were used to design the channel network, identify high velocity areas requiring erosion protection, and characterize expected habitat conditions. An important component of this design and feasibility assessment was to translate desired ecological habitat conditions identified in the EIR into specific hydrologic design criteria, considering channel velocities, scour, sediment transport, tidal water inundation frequencies and seasonality of ponding. Mr. Kamman worked closely with EBRPD civil engineers, assisting with the translation of hydraulic design criteria into final engineered drawings and specifications.

Wetland & Pond Projects

Design of California Red-Legged Frog Breeding Ponds, San Francisco Bay Area (various), CA
The National Park Service and Golden Gate National Parks Conservancy, 1997-present

Mr. Kamman has lead or provided hydrologic and engineering design assistance to the sighting and design of nearly two dozen breeding ponds for California red-legged frog throughout the San Francisco Bay Area. Work has been completed in Marin, Sonoma, Solano, Contra Costa, Alameda, and Santa Clara Counties under the auspices of numerous federal, state, and local county/city agencies. A common study approach consists of an initial site reconnaissance of watershed conditions and identification of potential sites. The reconnaissance is followed by a surface water hydrologic sufficiency analysis using available meteorologic and stream flow information. An important variable sought during pond sighting is the presence of migration corridors between known breeding areas and/or perennial water sources. Based on in-depth research and post-project monitoring, Mr. Kamman has refined or developed site-specific evapotranspiration estimates, which commonly do not match standard applied values. Accurate evapotranspiration rates are necessary if ponds are intended to periodically dry-down as a means to preclude undesired species such as bullfrog or mosquito fish. In many instances, a seasonal groundwater-monitoring program is implemented in order to better investigate and quantify potential and seasonal groundwater contributions. Other design challenges we commonly experience include: design of impermeable liners for ponds located in upland areas or highly permeable soils; hydraulic analyses and design of outfalls/spillways; sedimentation management/ maintenance approaches; and requirements of inoculum and water used to line and fill the pond, respectively.

Hydrologic Feasibility Assessment for Mana Plain Wetland Restoration Project, Kauai, HI
State of Hawaii Department of Land and Natural Resources, 2010-2019

Working on behalf of the Mana Plain Wetland Restoration Partnership, Mr. Kamman completed a hydrologic feasibility assessment for the Mana Plain Wetland Restoration Project proposed by the State of Hawaii Department of Land and Natural Resources (DLNR), Division of Forestry and Wildlife (DOFAW) on the island of Kauai. The Mana Plain Wetland Restoration Project site is approximately 105 acres of low-lying abandoned sugarcane fields immediately north of the Kawaiele Waterbird Sanctuary and east of the Pacific Missile Range Facility. The purpose of the Mana Plain Wetland Restoration Project is to maximize the area of constructed wetlands within the restoration site. Palustrine emergent wetlands within the project will create habitat for four species of endangered Hawaiian waterbirds and other sensitive species, including: Hawaiian stilts; Hawaiian ducks; Hawaiian coots; Hawaiian moorhen; migratory waterfowl; and migratory shorebirds. The Mana Plain is of vital importance for the recovery of endangered waterbirds species. This restoration project will be designed to provide important breeding and feeding wetland habitats on an island where; 1) wetlands have been severely degraded, and 2) mongoose, an introduced predator, have not been established.

Mr. Kamman's work on this project included technical assessments and development of proposed restoration alternatives. Analyses completed included: a synthesis of the physical site setting (topography, geology, hydrogeology and soil); reviewing available data to characterize site meteorology, surface water drainage, water quality, and groundwater conditions; preparing a detailed water budget to describe the characteristics and processes of surface water and groundwater movement into and through the project area; evaluating project feasibility, water supply alternatives and costs; and completing a flood hazard impact assessment to evaluate potential project benefits and impacts to local area flooding. Working with the project partners, Mr. Kamman developed a preferred project alternative and supported in preparation of the project Environmental Assessment document. Mr. Kamman's firm was also retained by the State of Hawaii to develop engineering designs of the project.

MacArthur Meadow Wetland Restoration, San Francisco County, CA
Presidio Trust, 2013-2016

Mr. Kamman has been working on over a dozen independent wetland and creek restoration planning and design efforts within the Presidio of San Francisco since 2001. Most recently (2016), he developed a wetland restoration grading plan for the MacArthur Meadow Wetland Restoration Project in the central portion of the Tennessee Hollow watershed. As part of the site assessment, Greg characterized and modeled surface and groundwater interactions and identified a unique opportunity to restore 4 acres of mixed meadow, natural wetlands and creek/riparian corridor. This was possible due to the discovery of shallow groundwater conditions beneath this historically disturbed landscape. Various design components were integrated into the grading plan in order to enhance groundwater recharge and storage in the Meadow, while retarding runoff and drainage out of the wetland, including: daylighting storm drain runoff into the Meadow; reconfiguring internal channel alignments to enhance channel habitat and groundwater recharge; creation of wetland depressions to retain and recharge surface water; and removal of fill material to decrease the depth to the water table. Notable challenges of this work include restoring heavily disturbed natural resources in an urban setting while integrating designs with archeology/ cultural resources, education and remediation programs.

Dragonfly Creek Restoration Project, San Francisco County, CA
Presidio Trust, 2007-2011

Mr. Kamman designed and managed hydrologic monitoring and analysis studies in support of planning and design for riparian and wetland habitat restoration along approximately 500-linear feet of the Dragonfly Creek corridor near Fort Scott of the Presidio of San Francisco. Work has included completing subsurface

SELECTED EXPERIENCE *(CONTINUED)*

investigations including the installation of shallow wells and a sharp-crested weir with recorder to gauge creek flows. Mr. Kamman assisted in the development and selection of a preferred project alternative, considering on-site cultural resource protection, education and resource management issues (including flood control). Mr. Kamman prepared permit applications. Major components of the project included removal of significant fill and building foundations and installation of a new creek road crossing that will maintain the historical alignment, function and architectural character of a culturally significant roadway. Mr. Kamman oversaw development of PS&E for this project, which will create mitigation wetlands for a highway earthquake retrofit project that passes through the Park.

This project illustrates Mr. Kamman's ability to complete a broad variety of hydrologic analyses, including: surface water and groundwater hydrologic monitoring to characterize and quantify existing hydrologic conditions; rainfall-runoff modeling; hydraulic modeling of flood and scour conditions (including road crossing); preservation of existing wetland habitat and vegetation communities; integration with other Presidio Trust programs; and contracting flexibility to assist in conceptual planning and environmental compliance without increasing project design costs.

Mori Point Sensitive Species Habitat Enhancement Project, San Mateo County, CA
Golden Gate National Recreation Area and Golden Gate National Parks Conservancy, 2005-2011

Mr. Kamman provided hydrologic analyses, sighting and engineering design (PS&E) for three California red-legged frog breading ponds within the 105-acre Mori Point area. These efforts were completed in association and collaboration with a larger Coastal Trail improvement and ecosystem restoration effort. Quarrying and off-road vehicle use have left this site heavily scarred. The focus of restoration work was to protect the endangered San Francisco garter snake and the threatened red-legged frog. Most of this work will be focused on invasive species removal and enhancing endangered species habitat. As part of species habitat improvement, Mr. Kamman worked with project ecologists to design the ponds to optimize breeding habitat for California red-legged frog.

Work started with an initial site reconnaissance and study of watershed conditions and identification of potential sites. The reconnaissance was followed by a surface water hydrologic sufficiency analysis using available meteorological and stream flow information and installation and monitoring of shallow piezometers to quantify the proximity and seasonal variability in depth to water table. An important variable sought during pond sighting was the presence of migration corridors between known breeding areas and/or perennial water sources. Based on in-depth research and post-project monitoring for other ponds they created in the San Francisco Bay area, Mr. Kamman refined site-specific evapotranspiration estimates. Accurate evapotranspiration rates are necessary if ponds are intended to periodically dry-down as a means to preclude undesired species such as bullfrog or mosquito fish.

Other design challenges experienced included: design of impermeable liners for ponds located in upland areas or highly permeable soils; hydraulic analysis and design of outfalls/spillways; sedimentation management/maintenance approaches; and requirements of inoculum and water used to line and fill the pond, respectively. Mr. Kamman has designed numerous ponds for the NPS and affiliates within the Bay Area, including Mori Point (constructed 2007), Banducci (constructed 2007) and Giacomini (Phase I and Phase II constructed in 2007 and 2008) project sites.

Hydrologic Assessment and Restoration Feasibility Study for Shadow Cliffs Regional Recreation Area, Alameda County, CA
East Bay Regional Park District, 2009-2010

Mr. Kamman developed and implemented an assessment to identify groundwater levels and supplemental water supplies that will sustain seasonal wetland restoration areas and riparian habitats under an altered future hydrologic regime. This work will inform a forthcoming Land Use Plan Amendment for park occupying a series of former gravel quarry pits. Work included: obtaining and synthesizing available surface water and groundwater data to characterize existing hydrologic and water supply conditions and seasonal variability; quantifying the likely changes in groundwater conditions and quarry pit lake levels in association with changes in regional water transmission and groundwater recharge operations; and identifying, developing and evaluating a suite of ecosystem restoration alternatives. Other important project objectives include: improving habitat for waterfowl and wildlife; broadening recreational use; enhancing visitor education and wildlife interpretation; improve park aesthetics. Mr. Kamman evaluated a preferred park and ecosystem enhancement alternative that involves diverting high winter flows from an adjacent arroyo. This project demonstrates Greg's ability to characterize hydrologic conditions and quantify the relationship between groundwater, surface water and wetland habitat conditions, both under existing conditions and in predicting future hydrologic and ecologic conditions under an altered hydrologic regime (i.e., lower groundwater table).

Laguna Salada Marsh and Horse Stable Pond Restoration Project, San Mateo County, CA
Tetra Tech, 2007-2009

Mr. Kamman provided technical hydrology and hydraulics support to the planning and conceptual restoration design of Laguna Salada marsh and Horse Stable Pond, located adjacent to Sharp Park Golf Course in the town of Pacifica, California. The primary objectives of the project are: to reduce flood impacts within the project vicinity; improve sustainable ecological habitat for the endangered San Francisco garter snake and the threatened California red-legged frog; better understand and characterize the hydrologic and water quality conditions/processes affecting flood and ecological habitat conditions within the project vicinity; provide an effective pumping operation plan to meet ecological objectives; and develop appropriate hydrologic analytical approaches and models to assist Tetra Tech and the San Francisco Recreation and Park Department in the planning and design for marsh, pond, and creek restoration. The project is also a unique opportunity to connect this resource with the California Coastal Trail, the Bay Area Ridge Trail, and the surrounding GGNRA lands.

Mr. Kamman's work included completing a comprehensive review of available hydrologic and site information and implementing selected field investigations to develop and calibrate an integrated hydrology-flood routing-pond water operations model that will quantify the volume and depth of water moving through the project system. The investigation will also further characterize shallow groundwater conditions and water quality with respect to effects on Laguna Salada and Horse Stable Pond. Analytical and numerical modeling tools are being used to better characterize existing hydrologic and water quality conditions and to assist in identifying project opportunities and constraints as well as evaluate potential restoration design components - all necessary to inform a sustainable

SELECTED EXPERIENCE *(CONTINUED)*

and successful restoration design.

Tolay Lake Restoration Feasibility Assessment, Sonoma County, CA
Sonoma County Agricultural Preservation and Open Space District, 2003

Mr. Kamman completed a detailed hydrologic feasibility analysis to evaluate a suite of potential freshwater lake and wetland restoration alternatives. Sites were evaluated under existing watershed land-use practices and under existing and forecasted water demands (in the form of existing water rights/applications). Analysis consisted of developing a detailed water budget model to simulate alternative restored lake inundation areas and depths under median and dry year conditions, as well as a 50-year historic period (1947-1997) displaying highly variable rainfall and runoff supplies. Three lake restoration alternatives were evaluated based on existing topography and likely historic lake configurations. The restoration alternatives include lakes with storage volumes equivalent to 136-, 1100-, and 2550-acre feet.

Haypress Pond Decommissioning and Riparian and Channel Restoration, Marin County, CA
Golden Gate National Recreation Area (GGNRA), 2001-2002

This project restored 170 meters of historic creek and riparian habitat through removal of Haypress Pond dam in Tennessee Valley within GGNRA. The goals of the project were to alleviate long-term maintenance needs and eliminate non-native bullfrog habitat threatening native California red-legged frog habitat in adjacent watersheds.

Working with the Park biologist, Mr. Kamman developed designs to decommission the dam and restore natural riparian and meadow habitat. This work included: characterization of existing topographic conditions; design of a channel profile through the proposed restoration project reach; preparation of a grading plan for the restoration project; and hydrologic and hydraulic analyses to evaluate the performance of the creek channel and flood plain below the former dam during a variety of flows. Challenges of this work included integrating sediment reuse into plans and construction phasing.

Damon Slough Site Seasonal Wetland Design, Alameda County, CA
Port of Oakland, 1999-2001

Working on behalf of the Port of Oakland, Mr. Kamman completed extensive surface and groundwater monitoring and data analyses to develop a detailed water budget to assist in the evaluation and design of a 7.5 acre seasonal freshwater wetland. Primary project objectives included a design that would provide shorebird/waterfowl roosting habitat, minimize impacts to existing seasonal wetland areas, and lengthen the duration of ponding through the end of April to promote use by migratory birds. In addition to developing hydrologic design criteria, responsibilities included development of grading plans to accommodate a local extension of the Bay Trail and wetland outlet works.

Water Quality Projects

Chicken Ranch Beach Soil and Groundwater Quality Investigation and Restoration Planning, Marin County, CA
Tomales Bay Watershed Council, 2007-present

Mr. Kamman is leading scientific and engineering efforts for a wetland and riparian corridor restoration project on Third Valley Creek and Chicken Ranch Beach in Inverness, California. The main project goals are to create a self-sustaining riparian and wetland system (requiring minimal operation and maintenance) and eliminate public exposure to high levels of bacteria that exist in a site drainage ditch discharging to the beach. The design will likely include establishing a blend of habitats, including: riparian stream corridor, seasonal/perennial freshwater marsh, and tidal/saltwater marsh.

Current efforts have included the development and implementation of a soil and groundwater quality investigation to delineate the source of elevated bacteria levels. This work includes: the collection and testing of depth-discrete soil samples; groundwater well installation, sampling and testing; and surface water sampling and testing; analysis of laboratory results; and reporting, including recommendations for further/expanded investigations. Mr. Kamman coordinated this time-sensitive sampling and analysis (six hour hold times) with Brulje and Race Laboratories in Santa Rosa.

Lower Miller Creek Channel Maintenance and Material Reuse Sampling Analysis Plan, Marin County, CA
Las Gallinas Valley Sanitary District, 2015

Mr. Kamman was commissioned to formulate and implement a plan for sediment removal and improved flood flow conveyance in the Lower Miller Creek channel. Accumulation of course sediment in the project reach had reduced discharge efficiencies at District outfalls. Miller Creek supports a population of federally listed Steelhead and adjacent wetland/marsh areas potentially support other state and federally listed special status species. Working with District Staff, Greg developed a suite of potential project alternatives and identified a preferred approach. Mr. Kamman completed all CEQA compliance (IS/MND), permitting and oversaw development of engineered plans and specifications.

In order to evaluate if reuse of excavated material from 2,655 feet of creek corridor in upland areas was feasible, Mr. Kamman developed and implemented a Sampling Analysis Plan (SAP) pursuant to U.S. Army Corps Guidance for Dredging Projects within the San Francisco District. Sample collection, sample handling, and analysis were performed in accordance with the SAP. Results for analytes were compared to a variety of screening criteria to determine the material's suitability for reuse in aquatic environments. A full suite of chemical and physical analyses were performed on soil samples collected from 16 locations, including: metals, PAHs, PCBs, pesticides, TOC, specific conductance, pH, sulfides, percent moisture and grain-size. Mr. Kamman managed all aspects of this effort including reporting and presentations/negotiations at multi-agency meetings through the Corps Dredge Materials Management Office (DMMO).

Lower Pitkin Marsh Hydrologic and Water Quality Monitoring, Sonoma County, CA
Sonoma Land Trust, 2008-2010

Mr. Kamman was retained to develop and implement a hydrologic and water quality monitoring program at Lower Pitkin Marsh outside of Forestville, California. The Pitkin Marsh area is one of the most valuable complexes of mixed riparian woodland and thicket, freshwater marsh, wet meadow, oak woodland and grassland in Sonoma County. The complex interaction of surface water, ground water, and scattered seeps and springs on the site creates unusual hydrologic conditions that promote a rare assemblage of plant species which includes several endemics. The primary objective of the hydrologic monitoring program was to understand the annual and season sources of both surface and ground water supplying wetlands. Hydrologic and water quality monitoring was

SELECTED EXPERIENCE *(CONTINUED)*

initiated during the winter wet season of 2008/09 and will be conducted for a 12-month period through the ensuing summer dry-down and into the following wet season. Understanding how groundwater levels, spring flow and creek flow rates recede from winter wet to summer dry conditions will provide an important understanding and quantification of the seasonal variability in water supplies feeding selected wetland types. General water quality parameters (temperature, pH, specific conductance, and ORP) are measured at all monitoring locations during each visit. Nutrients (N and P) are measured in selected surface water and groundwater samples collected during at least three monitoring events, including a winter high flow, spring high base flow and summer low baseflow.

Pescadero Lagoon Restoration and Enhancement, San Mateo County, CA
California State Coastal Conservancy, 2005-2006

Mr. Kamman was retained to support restoration and water quality enhancement planning efforts in Pescadero Lagoon. In 2005-2006, he completed a synthesis of available hydrologic and water quality information in responding to requests for development of a hydrodynamic and water quality model of the lagoon. This model was considered as a means to identify causes for repeated fish-kills in the lagoon that occurred during initial breaching of the inlet. Mr. Kamman assisted in preparing a synthesis and model development feasibility report from this effort.

Water Temperature Simulations for Trinity River Fish and Wildlife Restoration Project, Trinity County, CA
Trinity County Planning Department, 1994-2004

For over a decade, Mr. Kamman completed a number of hydrology and water quality investigations in support of alternative feasibility studies on the Trinity River Fish and Wildlife Restoration Project in direct support of the Trinity River Restoration EIR/EIS. Studies involve assessing the effects of proposed flow alternatives on water temperature within and downstream of Lewiston Reservoir. Mr. Kamman was responsible for data collection, processing, and flow/temperature modeling of Lewiston Reservoir as part of a coordinated evaluation including other Trinity River system models. Another study included evaluating how project operations could be implemented or modified to optimize Lewiston Lake release temperatures to meet downstream temperature criteria and compensate for increased warming of the river associated with side channel and feather edge restoration activities. Mr. Kamman continues to evaluate how more recent water projects (raising Shasta Dam, Sites Reservoir, and the Waterfix tunnels) consider and integrate with the Trinity Restoration Project.

Upper Eel River Unimpaired Flow and Water Temperature Assessments, Humboldt County, CA
CalTrout, 1997-1999

Mr. Kamman evaluated changes in the natural flow regime of the upper Eel River, and developed an Upper Eel River proposed release schedule to enhance downstream Chinook and Steelhead spawning and rearing habitat. This work was triggered by proposals set forth by PG&E as part of their Potter Valley Project FERC relicensing process. Work consisted of two main investigations. The first included reviewing results of a ten year PG&E study and development of multivariate regression and stream reach (SSTEMP) temperature models to assess the effects proposed flow alternatives would have on downstream temperatures. The second investigation consisted of characterizing unimpaired flow conditions and developing a daily unimpaired flow record for use in project operation models.

Mr. Brian Oh,

Sonoma County, California

brian.oh@sonoma-county.org

Dear Mr. Oh,

By way of introduction, VOR – A Voice Of Reason - is a national non-profit founded in 1983. For nearly forty years, we have been advocating for high quality care and human rights for all individuals with intellectual and developmental disabilities (I/DD).

I write you today on behalf of those individuals with the most severe and profound I/DD and autism in California, in regard to the county's plans for the property that was once home and community for many of our loved ones with I/DD at the Sonoma Development Center. It is my understanding that the property is being divided and parceled out to property developers and investors.

We would like to ask that you please keep a substantial portion of the property available to providers of services for those individuals most deeply impacted by I/DD and autism, in keeping with the original intent of those who first developed this property.

C136-1

Sonoma County is known around the world for its beauty, its amazing vineyards, and for its people. Forest fires may change the landscape. Drought may ruin a season of grapes. But the people of Sonoma County have a chance to retain their heart, their soul, and their dignity, by determining to continue to provide for California's most vulnerable citizens.

Business schools used to teach about the value of "Goodwill". You cannot set a price on it, but it is an asset that can bring greater value to all of the other assets a business, or a county, holds. We urge the Sonoma County commissioners to bring that unique and rare value to their community, and to maintain the goodwill that they have considered one of the many blessings that have long graced Sonoma County and its families.

Thank you for your time and consideration,

Hugo Dwyer – Executive Director

Joanne St. Amand - President

Questions About the Draft EIR

Demolition Impact: Assessment needed of the considerable cost and environmental impact of turning all the buildings on the east side of Arnold Drive into rubble and hauling it away. Where will the tile roofs and fire resistant plaster walls garbage go ? What is the impact of hundreds of tons of this material in the land fill? Reuse , renovation and repurpose are the future on planet earth which is being covered with discarded garbage!!

Water: Water availability concerns are at a crisis level. What exactly is the the water source for 1000 new homes or even for 450 new homes in the draft EIR?

Housing versus Houses: Why is building new houses proposed when the SDC housed 3000 in existing structures? Why not renovate, restore and repurpose the historic, beautiful buildings on the SDC campus before any new construction? The EIR must be modified to insure the first use of existing buildings.

Fire Prevention: New home construction is a magnet for wild fires. What special fire resistant construction will be used if these homes are built? Will this include fire resistant tile roofs and heavy plaster walls like those found on most of the historic buildings which were built to last and have lasted?

C137-1

Wildlife: The SDC campus is an extension of an important wildlife corridor and passage between Sonoma Mountain and the Mayacamas Range. The area must remain open to wildlife coming through Jack London Park and traveling to the Audubon and Oak Hill preserves.
We look forward to hearing your response to these concerns.
Thank you, J.E. Airey 1280 Craig Ave, Sonoma 95476

Hello!

I have a comment on the accessibility of the open space during construction. How will this work and will there be access throughout the building process from Arnold drive to the open spaces on the west side of the campus? For example the parking spaces on Wilson which many cyclists use as their starting point.

C138-1

This is a crucial entry point for plenty of folks who do not wish to park at Jack London and enter from the other side, as well as the current residents of the Glen Ellen/Eldridge neighbourhood.

Re: Sonoma Developmental Center Specific Plan and Draft Environmental Impact Report ("DEIR")

Dear Mr. Oh and County of Sonoma Supervisors,

Thank you for the opportunity to submit further comments on the recently issued Sonoma Developmental Center (SDC) Specific Plan and Program Environmental Impact Report (PEIR). The following comments are submitted on behalf of the SDC Campus Project

1. **Permitted Uses in Preserved Open Space**

It has come to our attention that in the Draft Specific Plan, Table 4-3, Permitted Uses, under Preserved Open Space, the following uses are included as P, permitted:

Agricultural Crop Production and Cultivation
Agricultural Processing
Animal Keeping: Confined Farm Animals
Animal Keeping: Farm Animals
Farm Retail Sales
Farm Stands
Indoor Crop Cultivation
Mushroom Farming
Nursery, Wholesale

C140-1

Timberland Conversions, Minor
Tasting Rooms

In the Draft EIR, Section 3.4.3.4 Impacts:

"Summary of Proposed Plan
The Proposed Plan would include residential development in the following districts: Marker Place, Core North Residential, Historic Core, Fire House Commons, Core South Residential, Creek West Residential, Agrihood, and Eldridge North. Approximately 1,000 housing units are planned to be developed throughout these districts as well as commercial, institutional, and public land uses and an Highway 12 connector road. The existing undeveloped portions of the Planning Area would be designated as Preserved Open Space land use. **Development is not proposed to occur within Preserved Open Space, where current daytime recreational uses would continue."** (emphasis added)

C140-1

The DEIR concludes as follows: "3.4-1 Impact.
Implementation of the Proposed Plan would not have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. (Less than Significant)" (DEIR p.241)

While residential development is not proposed within Preserved Open Space, the permitted uses identified in Table 4-3, including Agricultural Crop Production and Cultivation and Timberland Conversions, clearly contemplate vineyard development. Vineyard development involves deep soil disturbance, vegetation and tree removal, with likely significant habitat impacts for Special Status Species Yellow Legged Frog and California Giant Salamander, listed as present on SDC land in DEIR Table 3.4-1. The deep ripping of the soil to plant grape vines will be especially harmful to salamanders, who live part of their lives in underground tunnels.

C140-2

"Agricultural Processing" likely is meant to permit wineries. This reading is supported by permitting tasting rooms. These uses, in addition to habitat

C140-3

destruction, will also involve construction activities, vehicular traffic. Farm retail sales will generate vehicular traffic. Keeping farm animals raises concerns about impacts on wildlife. The Relevant Policies and Implementing Actions listed in Section 3.3.3.3 of the DEIR, do not adequately address the reasonably foreseeable significant impacts on wildlife likely to result from these permitted uses. Allowing these permitted uses is not consistent with the reasonable understanding by the public of what is meant by protecting the preserved open space.

C140-3

While the SDC Campus Project supports organic food crop agriculture in a specifically designated approximately five -acre area in the southern end of the east open space, we do not support the permitted activities in the Preserved Open Space listed in Draft Specific Plan Table 4-3. Food agriculture in this limited area will provide a public benefit without significant impacts on biological resources.

Respectfully submitted by,

Jerry Bernhaut

Dear Permit Sonoma, Board of Supervisors and Sonoma County Planning Commission,

I have lived in the Springs of Sonoma Valley since 2008 when my late wife Pamela and I moved to the Sonoma Valley. I am a homeowner, a Viet Nam era Army veteran and a graduate of UC Santa Cruz with degrees in Economics and Planning and Public Policy in Environmental Studies. I'm also a member the Sonoma Land Trust and and avid hiker of the Sonoma Valley Parks and Jack London State Park as well as the lands of the SDC currently owned by the State. I have a love of this land and place as well as the people of this community that I call home. The SDC is a public treasure that demands our best efforts at preservation and protection. That said, I support the North Valley Municipal Advisory Council's vision for future development at the SDC. I do not support the Sonoma Developmental Center (SDC) Specific Plan as proposed by Permit Sonoma and find that the DEIR is inadequate to meet the requirements of the California Environmental Quality Act. While I'm not a resident of Glen Ellen, I nonetheless have been actively following the advocacy the North Valley Municipal Advisory Council have performed on behalf of the citizens of Glen Ellen and all of Sonoma Valley and I strongly urge you to follow their recommendations. C141-1

I will confine my comment to one important issue that I have not seen addressed in the DEIR:

<u>The conflicts created by domestic animals that a population of ~ 2,400 people and their pets will have on the wildlife corridor and other native species.</u>

Questions:

1) What specific empirical studies has Permit Sonoma and/or their consultants conducted to determine the probable effects of domestic animals (specifically cats, dogs, reptiles, amphibians) on the wildlife known to use the corridor and other native wildlife know to inhabit the SDC and environs? C141-2
2) If such studies have been conducted where are they available for review?
3) If such studies have been conducted what mitigating measures have been identified for each species of domestic animal studies?
4) In the Specific Plan, it has been suggested that cat owners will be required to keep their cats on leashes as a mitigating measure. At what specific locations in California has this strategy been implemented? What studies have been done to suggest that such a stratagem works? How would this be enforced and by whom? What penalties will the cat owner face for not following the mitigation measure? Can these measures be overturned by subsequent Homeowners Associations that might be expected to be constituted at a later date? How do you ensure these measures in perpetuity? C141-3

5) Cats are know to carry disease that may have ill effects on our native mountain lions and bobcats that are known to frequent the corridor and the environment in and around the SDC. What specific diseases has the DEIR considered? What specific mitigating measures are recommended to keep our wild cats safe from these diseases?
6) In my own experience, dogs have a keen sense of hearing a smell and it is not unusual for them to bark at wildlife that strays onto their owner's property. What studies has the DEIR relied upon to inform them of the probable effects that domestic dogs will have on the wildlife corridor? What mitigating measures have proven effective at preventing domestic dogs from barking at wildlife expected to use the wildlife corridor? How and who will be responsible for enforcing your recommended mitigating measures?
7) What diseases do domestic dogs carry that may be threat to native animals that are know to use the wildlife corridor? What mitigating measures have proven effective are preventing the spread of these diseases to the wildlife know to use the corridor?

C141-3

8) Domestic reptiles and amphibians are known to carry diseases that may have deleterious effects on native species. What studies have been done to identify these diseases? What mitigating measures are recommended to prevent the transfer of these diseases to native species? What enforcement measures are contemplated? How and who will be responsible for endorsement?
9) Light pollution may have a negative impact on the wildlife corridor. What light mitigation measures are contemplated at the core campus to limit these effects? What science is/or will Permit Sonoma and/or their consultant use to identify and mitigate these effects?
10) Lions and Bears are native to the SDC. There is a strong probability that domestic animals may be considered food by these apex predators. What protocols will be put into place to ensure native apex predators are not euthanized because they kill domestic animals? What measure will human pet owners be required to follow to mitigate domestic animals from falling pray to apex predators? How and who will be responsible for enforcement of these protocols/laws?

C141-4

Thank you for addressing my specific questions.

Best regards, — Jim Price, Homeowner and Resident of the Springs, Sonoma, CA.

RE: Comment Letter on the Adequacy of the Sonoma Developmental Center Specific Plan Draft Environmental Impact Report

Introduction

Please address the following questions and issues regarding the analyses contained in the Sonoma Developmental Center Specific Plan Draft Environmental Impact Report (DEIR) and its compliance with the California Environmental Quality Act (CEQA).

Project Description

While the DEIR may satisfy Section 15124 of the CEQA Guidelines under Section 2 Project Description, the project description is the foundation upon which environmental analysis is constructed and the DEIR project description is inadequate.

The DEIR project description does not contain enough detailed information or all of the components of the project as identified in the Specific Plan as required by CEQA provisions and case law to allow the public, reader, or decision makers to understand thoroughly the components of the project and the types and intensities of the project's environmental effects and impacts. C142-1

How does the DEIR adequately address all the components and potential environmental impacts of the project as the DEIR project description contains only conceptual and board-stroked project concepts?

Explain why most of the DEIR project description refers to historical facilities, data, infrastructure, conditions and assumptions, including, but not limited to: e.g.

2.1.2.2 Transportation: Does not include any project description for proposed or additional local or regional public transportation to serve the proposed total buildout of approximately 2,400 residents and 940 jobs – approximately twice the population of current Glen Ellen, CA.

2.1.2.4 Utility Infrastructure: C142-2

Wastewater: ends with "assuming that additional connections can be made to the main sewer line at the south side of the site" with no verifiable conclusions;

Stormwater: refers to "additional measures will ensure" is speculative without describing what those measures are or would be;

Natural Gas and Electricity: refers to a system of distributed energy resourced (DERS) that could include solar, wind, geothermal, and methane gas co-generation is speculative without specifics; such facilities as wind machines, solar arrays, and geothermal systems cannot be evaluated, quantified, or analyzed.

C142-2

2.1.3.1 SDC Core Campus: If all new development is proposed to be located in the already previously developed Core Campus, where in the project description are activities associated with demolition including a demolition plan, travel routes for off-haul, disposable sites, recycling, etc.?

The DEIR does not have sufficient information in the project description about the actions and activities that would occur under the proposed project and is misleading and incomplete to enable the public and decision makers to understand the logic and facts that link the proposed project to the intensity of the project and the environmental impact conclusions contained in the DEIR.

When is construction of the proposed project expected to be initiated; how long will it take to complete construction; when would project operations, occupancy, use begin?

C142-3

What is the quantitative measure of the intensity of each component? e.g.

- square footage of commercial space;
- width and linear feet of new roadways;
- number and size of windmills or solar arrays;
- limits and quantities of grading, including material imported or exported

What is the expected schedule and details for the phases of build-out?

Hotel Overly Zone Allowing for a 120-room Hotel

Where in the DEIR is the project description and analysis of the proposed 120-room hotel, including, but not necessarily limited to:

C142-4

VMT Analysis: The DEIR states: “Given the programmatic nature of the Proposed Plan, all potential future development within the Proposed Plan boundaries is included in the VMT analysis.” Where is the analysis and data for tourist traffic?

Housing Allocations and Build-out Population

The DEIR states: “According to the Final 2023-2031 RHNA, ABAG has determined that unincorporated Sonoma County’s fair share of regional housing needs for the 2023 to 2331 period would be 3,881 units. Approximately 1,632 of these units would be allocated as housing affordable to very low- and low-income households.” This is a ratio of approximately 42% of housing needs allocated to very low- and low-income households as determined by ABAG.

C142-5

The Specific Plan proposes a total buildout of 1,000 housing units, but it appears that only 283 units are designated as low-income housing units or a ratio of approximately 28% units are low-income housing units. How does the DEIR justify this allocation given the counties need for housing very low- and low-income households?

How does the DEIR justify a build-out population of 2,400, twice the size of the current population of Glen Ellen?

Future and Additional Environmental Review Analysis Under CEQA Provisions with Mitigation Measures and a Verifiable Mitigation Monitoring Plan

The proposed Sonoma Developmental Center Specific Plan provides a vision for the future possibilities of development in the defined planning area and utilizes a Programmatic EIR. While Government Code section 65457 may exempt from further CEQA requirements, subject to certain exceptions, residential development projects if they are consistent with a specific plan for which an EIR has been certified, it does not exempt other types of development such as commercial and recreational development.

C142-6

What additional environmental review will be required for all the commercial, retail, educational, medical, office, administration, tourist-serving, and recreational development components as proposed in the Sonoma Developmental Center Specific Plan?

Provisions and Analyses of Adequate Alternatives to the Project,

While CEQA establishes no categorical legal imperative as to the scope of alternatives to be analyzed, an EIR must describe a reasonable range of alternatives to the project that could feasibly attain most of the basic objectives of the project while avoiding or substantially lessening any of the significant effects of the project. The DEIR fails to provide and evaluate a reasonable range of alternatives with meaningful detail analysis.

Why is an alternative project that best fits the Glen Ellen and Sonoma Valley communities not evaluated? This would consist of a smaller project with a more robust equation of affordable housing units over market-rate housing, elimination of any hotel project and reducing commercial development as these types of development exist in nearby communities.

C142-7

While tourism may seem to have a positive impact on employment opportunities and revenue to governmental jurisdiction coffers, the effects of the tourist industry as it regards the distribution of revenue among the different social groups must be analyzed. The DEIR fails to analyze the impacts of tourism on the environment, the wildlife resources and income inequality.

An Alternative Project must be presented and analyzed with more educational and community facilities and benefits resulting in higher-paying job opportunities with the goal of effective economic distribution policies designed to improve the living standards of the work force.

How does the DEIR justify a development model, which consists primarily of lower-income paying jobs with no provisions that ensure employee housing on the Sonoma Development Center campus and would require those workers to live outside of the community and commute long distances, as a worthy or sustainable model.

Why are not:

C142-8

- a reduced Development Alternative project with a minimum of 50% affordable housing; and
- an Historic Preservation Alternative Project

prepared with a sufficient degree of analyses to provide decision makers with information that enables them to evaluate and review environmental, aesthetic and community-oriented superior projects thoroughly? Where is the substantiated, quantifiable, and verifiable evidence, data, and analyses in the DEIR that the project objectives cannot be met with reduced development and robust historic preservation of the existing campus?

Are not the outlined objectives broad enough that a reasonable, less impacting range of alternative projects can be analyzed?

C142-8

Travel Demand Management Plan (TDMP)

Transportation Mobility and Access Goal 3-1 and Policy 3-4.2 are totally inadequate to address the provisions for an effective TDMP.

The DEIR does not provide an adequate and verifiable Travel Demand Management Plan (TDMP) with Best Employer-Based Practices and Implementations as encouraged by Caltrans to significantly reduce Vehicle Miles Traveled (VMT) and reduce green-house gases and improve air quality by providing employees with:

- Financial incentives such as transit passes for using Sonoma County Transit routes;
- Transportation information;
- Employer-provided shuttle buses and vanpools;
- Ride-sharing opportunities;
- Transportation options;
- Dedicated employee on-site parking spaces for carpoolers;
- Staggered work hours and flexible scheduling;
- Compressed workweek;
- Commute during off-peak times of day;
- Affordable employee on-site housing;
- Secure workplace parking for bikes, as well as shower and locker facilities for those who bike and walk to work; and
- Guaranteed-ride-home for unplanned trips home.

C142-9

Evaluation of Vehicle Miles Traveled (VMT) for Hotel Visitors

The Technical Advisory on Evaluating Transportation Impacts in CEQA (April 2018) makes a clear distinction between “Trip-based” and “Tour-based” assessments of Vehicle Miles Traveled (VMT). The DEIR fails to assess VMT of Hotel Visitors. “A tour-based assessment counts the entire home-back-to-home tour that includes the project… a tour-based assessment of VMT is a more complete characterization of a project’s effect on VMT. The DEIR fails to make any attempt to use such “tour-based” methods for hotel visitors.

C142-10

Because the proposed Specific Plan would enable a new hotel project, the DEIR must include and analyze all visitor trips from their beginning, ending at the hotel, and back home, as these trips are 100% “project induced”.

The DEIR fails to address the job-housing-vehicle miles traveled crises of Sonoma Valley, which is an example of why the State passed in 2013, SB743. It reflects a State Legislative mandate to more appropriately address the regional picture of traffic congestion management related to development and reduction of GHG emissions because of Vehicle Miles Traveled.

The DEIR fails to analyze Vehicle Miles Traveled (VMT) and promote the State's smart mobility goals, thereby aligning with the County's long-range transportation plans and reduction of greenhouse gases. C142-10

The DEIR fails to analyze traffic and the increase in VMT in sync with Caltrans' mission, vision, and goals to reduce statewide vehicle miles traveled (VMT) and to promote the State's smart mobility goals with only the availability of Arnold Drive, which bisects the Town of Glen Ellen.

Conclusion

The DEIR does not adhere to the basic principal of CEQA, which is simple: design, shape, and analyze the total project and sufficient alternatives to avoid significant impacts before deciding to certify an EIR and subsequently approve a project. C142-11

The DEIR fails CEQA provisions which require the analysis and shaping of a project in quantifiable terms, not assumptions. Figuring it out later after certification of an EIR is neither a sound approach for the decision makers, the Lead Agency, the State, nor likely a defensible approach under CEQA.

Thank you for your consideration and responses.

Respectfully submitted,

Johanna M. Patri

Subject: Comment regarding SDC Specific Plan
Date: Monday, September 26, 2022 7:29:52 AM

EXTERNAL

Although the State mandates changes to the SDC, the recommended changes in this Specific Plan and the DEIR go far beyond what is desirable or wise. The increased **groundwater usage** due to additional population in an increasingly dry and hot climate; the **increased traffic** as new residents travel to Santa Rosa or Sonoma for goods and services, which will necessitate more roads, infrastructure, and **vehicle miles traveled** and will add to the **difficulty and danger** of driving on narrow, curvy, two-lane roads such as Bennett Valley and Warm Springs Roads and Arnold Drive (especially during **evacuations**); the addition of people and structures placed at risk due to more and larger **wildfires**; and the impacts on the **rural nature** of the area, will **negatively affect *everyone* in the Sonoma Valley**. **The Proposed Plan is *not* the environmentally superior alternative.**

C143-1

In 3.8-7, the DEIR specifically states that "the Proposed Plan would not expose people or structures to significant risk of loss, injury, or death involving wildland fires." **This is patently not possible with the addition of thousands of new residents and buildings to the area!**

In 3.14-4, "Implementation of the Proposed Plan *would not* result in inadequate emergency access". **This defies the experience of many in the Tubbs and Glass fires.**

In 3.16-1 and 3.16-2, the comments here are entirely **understating the current and future wildfire risks and challenges of emergency response or evacuation plans.**

Having evacuated in 2017 and 2020 from Oakmont in the Tubbs and Glass Fires and in each case, virtually being parked on the two-lane Highway 12 for hours in traffic while flames wrapped around us, we know beyond any doubt that more people feeding out to Highway 12 in an emergency will be a massive problem. There are already insufficient ways to leave the area, whether going towards Sonoma or Santa Rosa. Building more roads and emergency egress/access will take years and add to the fossil fuel usage/emissions, if these roads can *ever* be built (note that nothing has changed around Oakmont since the Tubbs fire to fix the egress concerns). Adding cars will only make things worse, risking more lives and increasing liability for the governmental parties involved in this decision. **It seems this EIR was written without regard to how challenging and dangerous it is to live here.**

C143-2

In 3.9-2 "Implementation...*would not* substantially deplete groundwater supplies…" Wells in the area are already going dry and as yet, there is no monitoring of them by the County or water agencies. Adding 1000 + residents, new businesses, possibly including wineries (already heavy water users), hotels, and restaurants, will increase the draw on groundwater. **The Specific Plan will deplete existing local residents' water availability at what is already a critical time of shortage.**

Why we are qualified to make these statements:

We are ten-year residents of Oakmont. We lived in a house adjacent to the SDC property for a year while our Oakmont home was being remodeled. We walked daily on the grounds of the SDC and beyond and became acquainted with the natural beauty, charm and character of this rural area. Julie worked at the former Valley of the Moon Winery (now Abbot's Passage) and was a volunteer and then an employee of the former Quarryhill Botanical Garden (now

C143-3

Sonoma Botanical Garden). All of these experiences deepened our knowledge, understanding, and appreciation of the natural treasures of the area. Having lived in 17 towns and traveled to many parts of the world, we say with enthusiasm that the Sonoma Valley is unique for its history, scenery, and rural nature and **must be preserved to the greatest extent possible**.

Accepting this Specific Plan at the Proposed Plan level would be disastrous for Sonoma Valley. **The EIR needs to be updated** based on climate change, wildfires, and water scarcity that have gotten worse since this one was written. Putting 1000-2400 additional residents in the area, no matter whether the homes are affordable or not, will create environmental damage and risk of the lives of the entire population of existing and new residents.

C143-3

If this Plan is in any way accepted, it should be at the lowest population increase level, "Historic Preservation Alternative", which will still create the significant issues highlighted above.

September 23, 2022

Dear Sonoma County Board of Supervisors, Planning Commission, Permit Sonoma, Advisory Team and Consultant Team,

My name is Kaitlyn Garfield, I am Housing Administrator at Housing Land Trust of Sonoma County (HLT). This letter represents HLT's public comments on the SDC Specific Plan draft. Thank you for all your time and hard work on creating this plan and we look forward to seeing the final result. C144-1

HLT supports the plan's 25% inclusionary requirement for ownership units. We ask that ownership units at a variety of income levels are created, at values based on the economic framework and affordable housing needs at the time of project construction. HLT also supports the opportunity for developers to use density bonuses to increase the overall housing stock created.

HLT strongly supports the requirement that all inclusionary units must be built onsite of the SDC campus and must be fully integrated into the community. Inclusionary units should be scattered not clustered together, and co-located with the market rate units. Inclusionary units should also be built concurrently with market rate units and be comparable in size, basic finish options, construction quality, and exterior design to adjacent market rate units. Onsite and integrated inclusionary housing has been shown to produce a host of individual and social benefits, including equality of access to resources, a more cohesive community of diverse citizens, less stigma and pushback, and greater upward mobility and wealth building for residents. C144-2

HLT also strongly supports the requirement that all affordable units must be affordable in perpetuity. There is no benefit to short term affordability covenants on affordable homeownership units: the developer has the same cost, the city will either eventually lose or must fight to keep an affordable unit, and the community will inevitably end up with a smaller housing stock than they would with permanent affordability. A model that creates affordability in perpetuity by design without any future re-upping should be used.

Thank you again for your time and effort on this important project.

Regards,

Kaitlyn Garfield
Housing Administrator

Brian Oh
Comprehensive Planning Manager
Permit Sonoma, County of Sonoma

RE: SONOMA DEVELOPMENT CENTER SPECIFIC PLAN AND DRAFT EIR

Dear Mr. Oh:

I write as a Glen Ellen homeowner and a water policy expert. I served as Executive Director of the Arizona Groundwater Management Study Commission, Director and Chief Counsel of the Arizona Department of Water Resources, and Executive Director of the Arizona Municipal Water Users Association. I am currently a Senior Research Fellow at the Kyl Center for Water Policy at Arizona State University. C145-1

As explained below, the Draft Environmental Impact Report (EIR) for the Sonoma Development Center Specific Plan (Project) inadequately evaluates the potential hydrologic and water supply impacts of the Project.

The potential impacts on groundwater are not fully examined.

The Project and Valley of the Moon Water District (VOMWD) are located within the Sonoma Valley Subbasin that is designated under the California Sustainable Groundwater Management Act as a high priority basin because of the density of wells, groundwater reliance and documented impacts of declining groundwater levels.[1] Water users in the Subbasin have already reported wells going dry and many residents are concerned about the long-term sustainability of the Subbasin's groundwater.[2] As water levels drop and wells dry up, some Sonoma County officials have suggested a moratorium of new well drilling may be needed.[3] Following a ruling by the California Court of Appeals, Sonoma County must now adopt C145-2

[1] Draft EIS, Appendix D at 35.
[2] https://www.sonomamag.com/as-wells-run-dry-sonoma-valley-reckons-with-new-water-regulations
[3] Id.

standards for new well permits to ensure that new wells "do not harm resources that belong to everyone, including future generations."[4]

The Draft EIR acknowledges at page 296 that "there could be a significant impact on groundwater if it were drawn to serve the needs of new residents, visitors, and businesses in a way that would substantially impede with groundwater recharge." But the potential impacts are dismissed because "future development at SDC would use surface water . . . and not be reliant on groundwater." Yet the Draft EIR fails to analyze what might happen to those surface water supplies as drought and climate change continue. Additionally, because the Project is not well-defined, it is impossible to know if its development will impede groundwater recharge. Impacts on the fragile Sonoma Creek seem all but ignored. C145-2

The Planning Area is insufficient to consider the impacts of the Project.

The Draft EIR limits its evaluation to the 945-acre SDC Specific Plan Planning Area. But water supplies for the Sonoma Valley are inter-related. As the Sonoma County Civil Grand Jury advised in 2020:

> "Today there are more water users in the Valley than ever. Valley residents still depend on surface and groundwater resources throughout the Valley. *These resources are not sufficient to sustain current population without importing additional water from the Russian River.* Water resource planning, development, regulation and use take place primarily in four local organizations: the City of Sonoma, the Valley of the Moon Water District, the Sonoma Developmental Center, and Sonoma Water. *These are separate entities, but they all depend on the same limited resources. The actions of each affect all the others.*"[5] (*Emphasis added*)

C145-3

Estimated water use and impacts on VOMWD are not fully considered.

The projected water use of the Project, 342 acre-feet per year at build-out, seems significantly underestimated for 1,000 dwelling units, 940 employees and 390,000 square feet of commercial, hotel, office, public and institutional space. For example, the Proposed Plan contemplates a population of 2,400 at build-out, with an estimated residential water use of 172 acre-feet per year, which amounts to about 64 gallons per capita per day (GPCD). However, VOMWD had a potable water use of 102 GPCD in 2020[6] and there is no explanation why the estimated residential per capita water use for the Project would be 38 gallons per capita less than VOMWD's 2020 GPCD. C145-4

[4] https://permitsonoma.org/sonomacountyproposesrulechangesforwellpermitstoprotecthealthoflocalwaterways
[5] http://sonoma.courts.ca.gov/sites/all/assets/pdfs/general-info/grand-jury/2019-2020/FinalConsolidatedGrandJuryReport2019-2020.pdf, at 72-73
[6] https://www.vomwd.org/_files/ugd/f7204b_928f2c92199b4ad389bc930ec96ffc95.pdf

Of concern is that the Draft EIR admits that VOMWD will see "shortfalls" in being able to meet future demands within its service area during "single dry years," which VOMWD will address through its Water Shortage contingency Plan—meaning existing customers will bear the brunt of these shortages. Even under current conditions, VOMWD has already declared a Phase 2 shortage seeking a 20 percent cut in water usage.[7]

Further, the Draft EIR Water Supply Assessment looks at projected water demand only from 2025 through 2045, a mere 20 years. That might be all that the law requires, but it is not an acceptable standard for sustainable large-scale planning in a time of increasing water scarcity. What's more, the Water Supply Assessment conclusion—that sufficient water is estimated to be available to the VOMWD to meet future demands within its service area and the Project—is based on past water supplies available to VOMWD and several assumptions, including future supply augmentation and increasing state-mandated efficiency and drought requirements. This is not a confidence-building conclusion given the questionable nature of these assumptions and the likelihood that water supplies will be reduced going forward.

C145-4

The recent drying of the Colorado River has painfully illustrated that it is unwise to base our projections of future water supplies on the past. Climate change, mega-droughts, aridification, and overuse have radically altered the Colorado River, which now is freefalling towards "dead pool" when no water can be released from Lakes Powell and Mead. In the space of less than a year, Colorado River water managers have crossed the divide from "we have this handled" to "our Colorado River water may be cut off completely." This and other stark realities must alter how we look at managing our finite and threatened water supplies moving forward.

C145-5

I urge Sonoma County to take the time necessary to conduct an in-depth assessment of how development of the SDC will affect the entire Sonoma Valley's water resources in the long-term (100 years), considering the impacts of climate change, population increases, groundwater overdraft, and other stresses on our finite and inter-related water supplies. This is a time to be cautious and conservative about the level of development our threatened water supplies can support, as the crisis of the Colorado River has proved to us all.

Thank you for considering my concerns.

Sincerely,
/s/ Kathleen Ferris

3.9-2 Implementation of the Proposed Plan would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin.	Provided that the entire project be under management of the Sonoma Valley Groundwater Management Plan	C146-1
3.9-3 Implementation of the Proposed Plan would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would result in substantial erosion, siltation, or flooding on- or offsite; substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or impede or redirect flood flows.	Increased runoff from impervious surfaces of the project will increase downstream flow to areas at approximatley18 feet above sea level of Sonoma Creek Schell Creek Arroyo Seco	C146-2
3.9-5 Implementation of the Proposed Plan would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.	Provided that the entire project be under management of the Sonoma Valley Groundwater Management Plan	C146-3
3.13-3 Development under the Proposed Plan would not require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.	The proposed project would decrease recreational activity due to the loss of the existing softball diamond on the project site	C146-4
3.15-2 Development under the Proposed Plan would have sufficient water supplies available to serve the Planning Area and reasonably foreseeable future development during normal, dry and multiple dry years.	Provided that the entire project be under management of the Sonoma Valley Groundwater Management Plan	C146-5

EXTERNAL

I continue to be stunned and appalled at the plan to add 1,000 homes to the rural site of SDC.
> 1. What happened to the green belts we have consistently voted for?
> 2. What about our abysmal public transit? In CA, statistics show that 1 home means 3 cars, adding pollution and traffic in a rural area.
> 3. Evacuation in emergency? Already a problem in our valley. Add 3,000 cars? Death trap.
> 4. While additional housing is needed, adding single family dwellings is foolhardy. If housing must be placed here, make it a reduced number of multi family units, clustered only along the road and have funding and plans in place to offer robust, frequent, affordable public transportation.
> 5. Reject any plans for a resort hotel. This unavoidably degrades the environment, doesn't benefit valley residents and further complicates evacuation in emergencies. Currently it's rare for valley hotels and vacation rentals to be fully booked. If more hotel rooms are needed, let current properties add rooms by building upward.
> 5. This land is a rare and precious wildlife corridor. The tiny sliver allocated in the plan is woefully inadequate. Putting housing there will inevitably put more animals into contact with residents or their cars resulting in injuries and/or death to threatened species.
> 6. The suggestion that new residents will find employment onsite in new retail shops or restaurants is ludicrous on its face. Glen Ellen has numerous commercial spaces that sit empty or turn over frequently because the community can't support the current businesses. Adding more just adds to the problem.
> Wrong plan, wrong place.
> From Marina Abbott

Please distribute to the Sonoma County Board of Supervisors, the Sonoma County Planning Commission and Permit Sonoma

RE: Public Comment on SDC Specific Plan and DEIR

C148-1

The DEIR is inadequate and does not define a specific project, nor does it adequately analyze, prevent or reduce the environmental impacts – specifically wildfire, evacuation and the existing wildlife corridor.

1) There is no analysis of the impacts on the wildlife corridor through the campus and acknowledgement of the fact that animals currently use the campus and will be severely impacted by any development. The property and the campus itself are part of the **WILDLIFE CORRIDOR** and must be acknowledged as such. (Page 8 DEIR)

   - What mitigation measures will be required and enforced to protect and preserve this critical **WILDLIFE CORRIDOR** that was established by the late, prominent environmentalists and Sonoma Valley residents, Otto & Ann Teller prior to the closing of the Sonoma Developmental Center? Will performance standards be put into place to consider the impacts of traffic on wildlife function, resources, light and noise if, or when, an intermediary road cuts through the heart of the corridor to mitigate wildfire evacuation?
   - Will the wildlife corridor be considered essential or will the development of the "open space" have priority? What comes first? The cart or the horse?

2) The DEIR needs to be revised with conditions of approval strengthened and moved into a legally enforceable mitigation and monitoring program. It fails to disclose the full extent of impacts that will result throughout Sonoma Valley from this large-scale development in an area currently zoned AG and Rural Residential and outside of the **urban growth area**. Employment and resident numbers at SDC reached a peak over 50 years ago when both primary traffic arteries in the Valley were still well-functioning roads. Vehicle trips were limited to employees with the VMT were spread out over the period of the work day.

C148-2

   - Why is a large-scale hotel being proposed when it's not a defined project objective, and when VMT is listed as a significant challenge?

3) The current plan will destroy the very qualities that make the historic SDC site unique and the environmental impacts of the Specific Plan – what is the intended scale of the project?

C148-3

   - Why has the **Historic Alternative** been dismissed even though it is identified as the "**superior alternative**"? (DEIR page 14).
   - What mitigation measures will be required and included?
   - What are the other options were considered and why was this option dismissed?

4) The DEIR has failed to describe existing fire hazards and risks nor does it properly address the increased frequency, severity, intensity and spreading speed of wildfires due to climate change. Fire evacuation is a current and future concern for **ALL** residents of Sonoma Valley.

C148-4

- What mitigation measures will be required to ensure the safety of the residents of Sonoma Valley during future wildfires should this AG-Rural Residential property be fully developed as proposed?
- How will any mitigation measures be enforced?

5) The DEIR (pg. 515) dismissed "a fire approaching from the west (Sonoma Mountain) may be less likely, and did not warrant further specific analysis". The residents of Sonoma Valley lived through several major fires within the last 60 years and know that possibility must be considered in the DEIR. The DEIR states that "the additional SR12 connector will provide additional fire access and evacuation routes." (pg. 520)

C148-5

- Has the DEIR considered that previous fires have approached Sonoma Valley from the SR12 direction to the EAST? During recent wildfires the primary road arteries were clogged with traffic for 24 - 48 hours in the valley, thus creating dangerous conditions.

The DEIR has presented no project alternative reflecting the community values of the residents of Sonoma Valley neither as an educational, cultural or recreational campus for the **residents** of Sonoma Valley. The current DEIR does not meet these objectives and the concerns that have been voiced by the residents of the of Sonoma Valley throughout the process.

The DEIR has failed to acknowledge and address these and other primary issues that must be included in any future development at the Sonoma Developmental Center property in Sonoma Valley, California.

Please answer all questions and concerns before the final DEIR is adopted.

Respectfully Submitted,

Mary Martinez

RE: SDC Draft EIR and Specific Plan

To the Sonoma County Planning Commission:

We have lived within a mile of the Sonoma Developmental Center for over 20 years. We have raised our two children here, walking its streets and trails while appreciating the truly special place it is, from its diverse community of residents, to its rich wildlife population, and its verdant landscape. It is a unique resource for our community--- for the entire North Bay, that requires a well-considered, thoughtful approach to its transition.

C149-1

While the process may have started out this way, this push to approve an inadequate, nonspecific and unenforceable Draft EIR and Specific Plan is a dangerous and unconscionable rush to judgement. Undertaking this process simultaneous to the State's Request for Proposal is a waste of precious resources; these tools should react to a *specifc* development proposal that has yet to be produced. The Draft EIR and Specific Plan before you makes it clear the process is out of order. Simply, the cart has been placed before the horse.

Your overarching question has to be: What happens if the RFP generates a proposal that this Draft EIR and Specific Plan doesn't *specifically* address, or worse, is so broad that the room for interpretation allows a full range of unintended and unacceptable consequences? The requisite comprehensive detail

of this proposal mandates an EIR and Specific Plan that analyzes point by point all the merits and drawbacks of this enormously complicated project.

C149-1

3.4 Biological Resources

To bring development to the SDC necessitates adding additional roadways to handle the traffic associated with such an overload of residential and commercial units. A new Arnold Drive to Highway 12 connector is proposed—one that would cut a path right though the critical Valley of the Moon Wildlife Corridor. How can this have a "less than significant impact" on the black bears, mountain lions, bobcats, and dozens of other species that have all been documented in the area? If left undisturbed, studies have shown the Wildlife Corridor through the SDC can continue to provide critical connectivity. If development is more important to our environment, what is the plan to mitigate this unrecoverable loss?

C149-2

3.9 Hydrology and Water Quality

Where is the water coming from to support 2,400 new residents? The Draft EIR suggests there will be no impact on groundwater. For those who have been asked to conserve water because of a local dwindling supply, development on this scale makes no sense. How will this undeniable impact during a drought emergency be mitigated?

C149-3

3.10 Land Use and Planning

How can we know that "development under the Proposed Plan would not physically divide an established community" if the Draft EIR isn't even reacting to a specific development proposal? Those of us on the southside of Glen Ellen would argue any type of major development in the SDC corridor could sever our connection to the village on the north side of Glen Ellen. The project should work to unify, not divide, our historic community, but without specifics, we cannot know what impacts might occur and how they might be mitigated.

C149-4

3.12 Population and Housing

While we are aware how much Sonoma County needs affordable housing (with two sons who've regretfully had to settle elsewhere to afford their homes), using the SDC to resolve this issue is unrealistic. From a practical standpoint, this

C149-5

project's horizon is not even within ABAG's Regional Housing Needs Allocation time frame (2040 vs. 2023-2030). As broadly conceived as it is now, the Draft EIR and Specific Plan can't even ensure development that complies with the requirements that new housing be firesafe, reduce environmental impacts and traffic, and mitigates the drought emergency.

C149-5

Right now, there are about 700 dwelling units in the Village and 350 in the concentrated southside. You don't need an expert to see that doubling—not to mention potentially tripling, the housing units in Glen Ellen by building them all in the acres between the two will have an impact. Even the lowest increase of 450 units in the Historic Preservation Plan would represent a 45% increase and have an impact of at least equal measure. Trying to solve Sonoma County's housing crisis all in one project located in a narrow Valley with one road in and out is poor planning pure and simple; *nothing* in this Draft EIR suggests how the attendant problems of this scale of development might be resolved.

3.14 Transportation

Again: one road in, one road out. Then layer in at least one car in every new garage. Even in its heyday in the 1950's the SDC didn't have as much traffic as this scale of development will generate, and the Valley of the Moon, had a much lower surrounding population back then. Adding 1,000 homes could easily add as many cars, particularly given the limited public transportation and limited services in the area. These new residents will need cars and they will need a great deal more time for commuting when they are stuck on that one road in, one road out. Adding another crossing between Arnold Drive and Highway 12 will still place all these cars, a substantial increase, on two two-lane roads that are already heavily travelled—and have a devastating record for traffic fatalities in this very area. There will be a transportation impact regardless of the scope of the project—it must be comprehensively and specifically analyzed and the impacts duly mitigated.

C149-6

3.16 Wildfire

In 2017, we packed up our family and pets as we were ordered to evacuate our home due to the Nuns Fire and were stuck in gridlock on Arnold Drive for *hours* as we joined our neighbors attempting to flee the flames. The suggestion that

C149-7

adding 2,400 residents would not "not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan," would be laughable, if the consequences were not so frightening. The location proposed for an additional crossing between Arnold Drive and Highway 12? In 2017, it was *in flames.*

C149-7

We urge you to set this process aside and wait the short time until a development proposal has been chosen by the State. Then a Draft EIR and Specific Plan can be prepared to react to specific issues, impacts can be better analyzed and reasonable mitigation measures proposed. Please do not make a rush to judgement; this resource is too valuable to put at risk.

Sincerely,

Mary Poppic-Reeves

Brian Reeves

Mr. Oh,

Please accept our correspondence into the record for the Sonoma County Planning Commission's consideration of the Sonoma Developmental Center Draft EIR and Specific Plan. Feel free to reach out if you have questions.

C150-1

Sincerely,

Mary Poppic-Reeves and Brian Reeves

Dear Brian:

Chapter 3.3 "Air Quality and Environmental Impact " manages to defer any decision about autos to PG&E and Sonoma Electrical. This is not acceptable. As early as 2025, we are required to operate a large number of electrical vehicles. In other words, property owners will need access to charging stations. It would be ecologically correct to encourage auto owners to have charging stations connected to their home el system. Whether they decide to install el panels or not! In addition the shopping center should have a number of charging stations.

C151-1

Eager to make money, I presume, that you would exempt the hotel complex from parking fees on campus.

The authors of the Environmental impact study do not live in this area. They appear to have no knowledge of the fact that workers in the construction or remodeling, or repair industry very often commute over an 1 hour away from SDC. Just as in the wine industry, staff are expected to arrive on the job, wherever, by their own auto. Housing is outside their budget. This is one reason, why we have asked for more low income housing. The first people to be allowed to get temporary or purchase housing should be in the construction business. Then you could limit some of the trucks on Arnold Drive.

C151-2

We currently have 1 bus line between Sonoma and Sta Rosa every 45 minutes. It looks as if you have preferred to defer this problem to others!

In most households in the age bracket of 23-65 you will find that 2 grown up persons are working outside the home. Calculating that retired people have no need for vehicle transportation(???) nor would people in the housing for mentally disturbed. You still only calculate that there will be rather low income jobs on the campus for 700+ people. As the construction costs are around $725/sq/ft in this area, one person in each family would have to work outside the Campus. With the jobs that you outline, people can't afford those single family homes. Dreams are wonderful! It is easy in a large city to limit auto transportation as buses, etc. are available. Around Glen Ellen, that is not possible. I would like to see the people over 70 who would volunteer to hop on a scooter to go shopping.

C151-3

As to construction a new connection between Arnold Drive and Highway 12 - this makes no sense, as Highway 12 is more blocked on a regular basis than Arnold Drive. Plus that road would have got run right through the current wild life corridor.

Dear Brian:

Chapter 3.3 "Air Quality and Environmental Impact " manages to defer any decision about autos to PG&E and Sonoma Clean Power. This is not acceptable. As early as 2025, we are required to operate a large number of electrical vehicles. In other words, property owners will need access to charging stations. It would be ecologically correct to encourage auto owners to have charging stations connected to their home el system. Whether they decide to install solar panels or not! In addition the shopping center should have a number of charging stations. Any "public" parking area for residents, etc. should be covered by solar panels, and parking stations.

C152-1

Eager to make money, I presume, that the hotel complex would receive an exemption from parking fees on campus. Neither the grocery store on Madrone nor in the center of Glen Ellen use parking meters. In other words, it would make it more difficult for the local grocery store to make money, as people may shop elsewhere.

The authors of the Environmental impact study do not live in this area. They appear to have no knowledge of the fact that workers in the construction or remodeling, or repair industry very often commute over an 1 hour away from SDC. Just as in the wine industry, staff are expected to arrive on the job, wherever, by their own auto. Local housing is above their budget. This is one reason, why we have asked for more low income housing. The first people to be allowed to get temporary or purchase housing should be in the construction business. Then you could limit some of the trucks on Arnold Drive. Since the 2017 Fires, homeowners have often housed contractor and staff in trailers on their land. Contractors have arrived from Nevada, etc.

C152-2

We currently have 1 bus line between Sonoma and Sta Rosa every 45 minutes. It looks as if you have preferred to defer this problem to others!

In most households in the age bracket of 23-65 you will find that 2 grown up persons are working outside the home. Calculating that retired people have no need for vehicle transportation(???) nor would people in the housing for mentally disturbed. You still only calculate that there will be rather low income jobs on the campus for 700+ people. As the construction costs are around $725/sq/ft in this area, one person in each family would have to work outside the Campus. With the jobs on campus that you outline, people can't afford those single family homes. Dreams are wonderful! It is easy in a large city to limit auto transportation as buses, etc. are available. Around Glen Ellen, that is not possible. I would like to see the people over 70 who would volunteer to hop on a scooter to go shopping.

C152-3

The word Microgrid is dropped as a Goal. Chapter 3.6-19 This concept should be developed, and not just listed as a 20-year Goal. It is clear that the authors are clueless about solar/wind etc. energy usage. If you try to reduce pollution, how can you then ignore looking deeper into the needs for solar panels? They obviously know more about composting. Ah - I may be able to sell worms!

C152-4

As to construction of a new connection between Arnold Drive and Highway 12 - this makes no sense, as Highway 12 is more blocked on a regular basis, and ha higher average traffic than Arnold Drive. Plus that road would have to run right through the current wild life corridor. Besides Madrone has bicycle lanes, and is very nearby! What is needed is widening of Arnold Drive so that people may walk, or bicycle along that road.

C152-5

Construction crews will all arrive in gas or diesel operated autos. I wonder how many people will want to buy a home at the SDC campus, if they are told they cannot operate an auto, nor connect an electrical auto to their own garage/parking space attached to their million dollar home? At what prices is the developer going to be able to sell? The Air Quality Station in Sebastopol clearly has difficulty in measuring from the SDC campus!

C152-6

You are trying to please some people by setting a 30' height limit for new construction. You state that existing construction is often above this height. Setting the limit to 35' would make more sense from an architectural point of view. That slight flexibility would allow for more interesting design of 3-story buildings for low income housing. Yes, you do want to make that housing attractive and pleasant for the $1 million plus owners to look at.

C152-7

While you tear down and/or remodel housing you could be intelligent and get some prefab housing. There are now some great companies that could ship in 20'x20' units for $50,000 with kitchen and bath all ready to connect. Later on, you could move them, stack them, etc. and create some great low income housing. Sorry for that idea, cuts into the profit of the developer!

The present design has a road and lights too close to the creek. Wild life is not considered in the Report, only humans. I object!

It is obvious, that the single family homes and the hotel are just there, to attract a developer. None of those are what is needed. All the housing should be low income housing, at different levels.

C152-8

I object to the intention to make 1 person rich at the benefit of so many hardworking people, who have to live over an hour away from their jobs, because of the cost of construction.

Re: Comments on Draft EIR and Specific Plan for SDC

Dear Mr. Oh,

Like many in the community, I believe the County has a once in a lifetime opportunity to stand out and lead at SDC in these times of climate crisis.

Yet the DEIR fails in significant ways to offer clear goals and standards (policies) for protecting the riparian corridors, the rights of nature, and our precious natural resources. In fact, *there are no stated goals for the creeks, wetlands, or beautiful lakes on the property*, and minimal policies are included. The DEIR needs *significant* modifications to be used as a tool for systematic implementation, *as required by the State*. I'd like your help with this. C153-1

I am commenting as a neighbor (living five minutes south of campus), a long-time hiker and passionate defender of the property, and a participant in the planning process for nearly 10 years in my role as Chair of Sonoma Mountain Preservation. Thank you for the opportunity.

Water is life, and *by setting goals and policies* to protect wetlands and riparian zones as a resource and respite for the community, and to protect migrating Coho and Steelhead, *both the DEIR and Specific Plan can be enhanced, set precedent, and lead the State.* Two specific goal-setting areas are central: Elevate creek protection and wildlife corridor flexibility by expanding buffers significantly; and enhance and protect rare, vulnerable wetlands and species there through setting them aside and abandoning the road through them. Just because buildings and asphalt were placed too close to the creeks in the past, there is no justifiable reason to continue outmoded practices. We know better, and the lack of studies done during this process is no excuse either. C153-2

If there were goals and policies that supported wetlands, there would be no proposed new road from Arnold Drive to Highway 12**.** A road will create substantive, adverse effects: on the protected wetlands that support documented endangered species, the wildlife corridor, and fire egress in the face of Diablo winds coming from the East (the road will be in the direct path of 2017 fires.)[1] **These impacts are not mentioned or addressed in the DEIR; goals do not support the wetlands, and "best practices" do not address the cumulative effects of such a road; or the fact that roads and wildlife corridors do not mix well**. The approach of "We'll do needed studies later" gives developers no clear direction up front, and does not guarantee wetland and species protection or mitigation policy.

Riparian zone protection also lacks goals and policies to prioritize riparian protection.

The DEIR ignores current studies that say *creek setbacks should be up to 325 feet*.[2] In addition, the DEIR and Specific Plan are in conflict. Sometimes they propose a 50-foot setback next to Sonoma Creek; sometimes they refer to existing County standards of 30-foot setbacks; sometimes they ignore Mill Creek setbacks entirely (P 41 people/wildlife interface policies). In fact, some of the proposed "Institutional development" (map 2.4-1) is right on top of Mill Creek. C153-3

I request that you please:

1) Analyze current studies relating to riparian protection, wetlands protection, and related groundwater sustainability to conform to State and County climate goals and best environmental practices.
2) Set goals and policies for protection.
3) Cite studies used to support your decisions on creek buffers, wetlands incursions, wildlife travel, and lake protection.
4) Analyze the cumulative impacts and potential degradation of floral and faunal habitats, groundwater supply, and riparian zones caused by the increased housing density, noise, construction, traffic, and demolition proposed under the Preferred Plan. Provide analysis of the impacts of redevelopment on migratory fish species, such as coho and steelhead salmon. Also analyze whether these impacts would be mitigated by a smaller redevelopment such as the HPA.
5) In the DEIR, add creeks/riparian zones and wetlands to goals, significance criteria, and section 3.1.3.3 relevant policies, implementing actions, and policies. Note that in section 3.4.1.3, local land use regulations, Sonoma County General Plan 2020, the DEIR mentions policy LU10-a for establishing maximum densities and siting standards for wetlands, sensitive natural communities, and areas of essential habitat connectivity, yet the same DEIR offers none of these.
6) Adhering to the above studies, delineate—in both the Preferred Plan and the DEIR—clear boundaries for riparian setbacks, identify the entities that a developer must work with to facilitate creek and wetland protection, or explicitly require a developer to ensure that redevelopment of the core campus be done in such a way, and with sufficient buffers, as to protect the natural values of the open space.
7) Add specific, enforceable guidelines for riparian and wetland protections, specifying acreages and minimum boundaries on both the east and west sides of Arnold Drive, and limit allowed uses on these acreages to passive recreational uses such as hiking, mountain biking, horseback riding, photography, etc. If agricultural or commercial uses are permitted, ensure mitigations are identified and enforceable.
8) Please make sure that policies in the Specific Plan are consistent in Wildlife Corridor Policies (p40), People/Wildlife Interface (p 41), and policy 2-25 (p 42).
9) Please ensure that policies in the DEIR, notably policies 2-21, 2-23, 2-25, 2-27, and 2-30 are consistent.

C153-4

I appreciate the work done to date. As a private citizen reading the documents and preparing this letter, I have recently spent over ten hours, so I fully support Commissioner Carr's imperative that more time is needed for the Planning Commission to do its job. I know that with the political will to make this project right, in line with community values, we can succeed together. C153-5

Sincerely,

Meg Beeler

A literature review found that recommended buffers around aquatic resources for wildlife often far exceeded 100 meters (~325 feet), well beyond the largest buffers implemented in practice (Robins, 2002). For example, Kilgo et al. (1998) recommend more than 1,600 feet of riparian buffer to sustain bird diversity. In addition, amphibians, which are considered environmental health indicators, have been found to migrate over 1,000 feet between aquatic and terrestrial habitats through multiple life stages (Cushman, 2006; Fellers & Kleeman, 2007; Semlitsch & Bodie, 2003; Trenham & Shaffer, 2005). For example, California red-legged frogs have been found to migrate about 600 feet between breeding ponds and non-breeding upland habitat and streams, with some individuals roaming over 4,500 feet from the water (Fellers & Kleeman, 2007). Newts have been documented traveling up to a mile from breeding ponds (Trenham, 1998). Western pond turtle nests have been found up to 1,919 feet from aquatic habitats and individuals have been documented to move regularly between aquatic habitats with long-distance movements of up to 2,018 feet (Sloan, 2012). Accommodating the more long-range dispersers is vital for continued survival of species populations and/or recolonization following a local extinction (Cushman, 2006; Semlitsch & Bodie, 2003).

In addition, more extensive buffers provide resiliency in the face of climate change-driven alterations to these habitats, which will cause shifts in species ranges and distributions (Cushman et al., 2013; Heller & Zavaleta, 2009; Warren et al., 2011). This emphasizes the need for sizeable upland buffers around streams and other aquatic resources, as well as connectivity corridors between heterogeneous habitats. Again, the EIR must adequately assess and mitigate impacts to local, regional, and global wildlife movement and habitat connectivity.

From: Michael Gill, Glen Ellen resident

Thank you for the preparation of the DEIR and Specific Plan and earlier documents and for the opportunity to review and comment on them. I certainly am aware that outlining a future path for this valuable property is not easy, but we all need to get it right before redevelopment starts. My comments result from my experiences of working with environmental cleanup and land reuse issues at closed military bases around the Bay Area, as well as living part time in Glen Ellen.

C155-1

I look forward to receiving Permit Sonoma's responses to my comments and hope the final documents presented to the County are modified to reflect what I see is a very consistent call for a reduction in scope of the project. These changes will ensure that the open space is protected and the nearby small communities retain their charm and value, while meeting the goals of adding some needed housing.

Specific Plan General Comments.

SP-1. Reduce the Scale. I understand the State of California drivers for the turnover and redevelopment of this property (housing and financial stability). It is a valuable piece of land, which makes sense to reuse to help alleviate the shortage of housing stock for our residents. The question is how to most appropriately mesh it with the existing neighborhoods of Glen Ellen.

C155-2

According to wikipedia, the population of Glen Ellen is less than 1000 people (2010 census showed 784, in 2000 it was 992 people). If the proposal to build 1000 new residences happens, the estimate in the Specific Plan is that the town will grow by 2400 people. Or even more for the "High Development" alternative (1250 residences and 3000 people). This does not even include the 900+ workers. Given the current population and semi-rural makeup of the area, that growth will totally change Glen Ellen. Growth is predictably inevitable in most of California, but this kind of growth would strain existing services and from what I've read, isn't palatable for the existing residents. Given the need for housing, perhaps a more acceptable number of residences would be 300 units here, while other parts of the Sonoma County can share the load to provide additional housing. This would still amount to about 720 new residents, which almost doubles the current population. That alone is a challenge for all of the resource needs covered in the

Specific Plan and EIR (water supply, schools, utilities and services, roads, fire access/egress, etc.), but much less so than 1000 new units.

C155-2

A visual tool that Permit Sonoma could use to better illustrate what "x" residences looks like would be to provide a map overlay example of an existing neighborhood where 300 or 1000 or whatever housing units already exists. This is something people can envision and get a better idea of what the proposed numbers really mean.

One example is University Village in Albany, CA, which is a residential neighborhood of dense homes. This is the development where many UC Berkeley married grad students reside. It has 974 units (multi-family attached townhouse style) on 77 acres (per wikipedia). I'm uncertain of the population. Locally, an example might highlight the Madrone or Grove Apartments in Eldridge or the "Springs" area along Hwy 12. How many people reside in those homes over how many acres? Those comparisons could offer readers something tangible to envision what this proposal means for SDC.

C155-3

SP-2. Adjust the Mix. Understandably, there is a need to provide housing and that the plan be financially sustainable. To achieve that, I would propose that the SDC management more closely mimic the Presidio model in San Francisco. That is, a “Trust” would be created to oversee the mix of non-profits and some businesses that would co-exist with housing on the 200 acres. I would also propose that all housing be "affordable" housing, as that would provide a bigger dent than the current proposal. Three hundred affordable homes meet more need than 250 affordable homes (25% of 1000). They could be of medium/flex density as outlined in the Plan. Those people with the financial ability can still buy property in the Valley of the Moon. But they don't need the SDC. SDC housing should fill a bigger need and provide affordable housing.

C155-4

Part of the guiding principles in the Plan call for a mixed use scenario. I'd propose putting more weight on non-profits and small businesses than housing to utilize the existing 200 acres and keep the population lower. With today's world tending towards more work-at-home than in-office work for white collar jobs, less space per non-profit would be needed, therefore offering a quieter campus feel than what would have been possible pre-pandemic to support the venture.

Non-profits should be encouraged to put forth plans, not just a housing developer.

SP-3. Power. I'm glad to see that renewable energy is to be used on site, as mentioned in Section 6.2. Perhaps implicit in the text, it should be noted more clearly that current California construction rules require new homes in California to install solar as part of the project. The text should state that requirement for the SDC residential development. This "California Solar Mandate" took effect January 1, 2020.

C155-5

SP-4. Water. Water supplies are noted in Section 6.3, but it appears that the issue is not really settled. The text states:

"Determining the ownership and use of these water rights will be another critical decision for SDC's water supply going forward."

This is a huge challenge and needs early resolution. This could be a deal breaker and needs to be settled before approval of any plans. Has anyone from Permit Sonoma asked the VOMWD for data about water use and/or availability? VOMWD allows local residents to track our water use by the hour and this helps detect leaks. We are also asked to be diligent with our irrigation uses. It's clear they are concerned about limited supply due to the drought. Even with grey water and recycled water as part of the mix (Policy 6-10), can VOMWD actually supply enough water for the proposed development??

C155-6

SP-5. Open Space. I totally agree with the plan's protection of the 700+ open space acres. It is a valuable space that I have enjoyed many times and hope to in the future.

_____

Draft Environmental Impact Report Comments

DEIR-1. Safe Cycling. In both the Specific Plan and DEIR, multi-modal transportation alternatives are discussed often, including high quality bicycle facilities. This is a good thing, given the increased population and little new road infrastructure. The current roads are small and sometimes already busy. It is an important part of the transportation equation and very welcome. But any details and "regulatory teeth" to actually make this happen seem missing. Many of the improvement plans have been around for 10 years or more (e.g., 2010 Sonoma County Bicycle and Pedestrian Master Plan). They are outlined in Section 3-14.3 and include the Sonoma Valley Trail, Class II bike lanes along the entirety of Arnold Drive between Glen Ellen and Highway 116, and more. While implementing these plans would go a long way to making cycling safer in the SDC area, how will the SDC project actually make these proposals a reality? It's not difficult to envision waiting more years for the County and State to take action, which will result in longer term unsafe cycling from new traffic growth around SDC.

C155-7

The real safety improvements necessary are beyond the north/south borders of SDC. If the developer is serious about making SDC multi-modal, then bike routes north and south of SDC must be safe. It's not just about riding on the 200 acres. It needs to go beyond the borders. People will rides their bikes to and from SDC if it's safe. Maybe the SDC redevelopment can be the catalyst to get these projects rolling!

DEIR-2. Existing Bike Trails. These two policies are from the DEIR (page 438) and they appear elsewhere as well:

3-15 Establish a new community bikeway connecting Railroad in Eldridge to Carmel Avenue in Glen Ellen by removing barriers and installing appropriate signage and crossings.

3-16 Create a multi- use creek trail running parallel to Arnold Drive that connects to a greater Glen Ellen-Eldridge community bikeway.

I would note that this bikeway already exists. While a little work still needs to be done (open a gate and add signs), the Specific Plan isn't really presenting anything new here. Please recognize what's already there and don't take credit for something that is already done.

C155-8

DEIR-3. Support for Additional Comments. In addition to my cycling related comments above, I agree with the DEIR analysis provided by the following entities, who are much more articulate than me on many topics. I would defer to them for additional comments on the DEIR. We are consistent in concluding that no one wants the kind of proposed large-scale growth from the redevelopment of SDC. Some housing and other uses are needed and inevitable, but not the proposed amount. What they say makes total sense and I wish to add my voice to the comments from the following groups, which appear on the Save Our Space website.

RE: Draft Environmental Impact Report and Preferred Specific Plan for redevelopment of the Sonoma Developmental Center in Glen Ellen

Dear Mr. Oh,

We appreciate this opportunity to comment on the draft environmental impact report (DEIR) and preferred Specific Plan for redevelopment of the Sonoma Developmental Center (SDC).

While we acknowledge the conflicting directives laid out in the legislation authorizing the specific planning process for the property and recognize the difficulty of making meaningful connections with stakeholders in pandemic times, we must express our overall disappointment with the DEIR and Preferred Plan, which do not reflect community input as we've witnessed in public meetings and in letters over the years-long planning process. The scale of proposed redevelopment of the 180-acre core campus is fundamentally incompatible with the rural character of the surrounding community and the north Sonoma Valley, presents a clear danger to the safety of current and future residents of the Valley in the inevitable event of wildfire, and threatens the integrity of Sonoma Mountain's irreplaceable natural resources — habitats for keystone flora and fauna, the health of the Sonoma Valley Wildlife Corridor, water quality, air quality, recreational opportunities, and historic, tribal, and modern cultural values.

C156-1

The DEIR fails to adequately or clearly describe meaningful, enforceable mitigations for the environmental impacts of redevelopment at the scale proposed, as required by the California Environmental Quality Act (CEQA). It fails to clearly delineate cumulative

C156-2

impacts. It does not provide sufficient analysis to give decision-makers all the information they need to satisfactorily draw conclusions about the environmental consequences of the Preferred Plan. It is our hope that by addressing the questions that follow, applicable, effective, enforceable mitigations will be identified and instituted that materially decrease or eliminate those impacts.

C156-2

General concerns/questions

The DEIR indicates that, across the board, the environmental impacts of the Preferred Plan and the Historic Preservation Alternative (HPA), which is acknowledged as environmentally superior per CEQA, are "largely comparable." The DEIR also states that the HPA is less superior in terms of energy use, biological resources, and wildfire risk (ES.4.2). Given the significant differences in scale of the two alternatives — the HPA is half the size of the Preferred Plan — these conclusions defy logic.

C156-3

1) Please explain how construction of 1,000 homes occupied by 2,500 people has the same environmental impact across virtually every category studied in the DEIR as does providing 450 homes occupied by 1,125 people (a 55% reduction)? Which studies support this finding?

2) Please explain how providing workspace for 900 people has the same environmental impact across virtually every category studied in the DEIR as does providing workspace for 600 people (a 33.3% reduction). Which studies support this finding?

3) Please explain how the HPA—which translates to less demolition through adaptive reuse of historic structures, less construction, fewer vehicle miles traveled, and fewer people on the property—uses more energy, has a greater impact on biological resources, and increases wildfire risk than the Preferred Plan, as stated in the DEIR (ES 4.2). Which studies support this finding?

Impacts specific to Sonoma Mountain

The entire 945-acre SDC property, including the developed core campus, is located within one of the last rural regions on the Sonoma Valley floor, with the mostly undeveloped slopes of Sonoma Mountain forming the entire western boundary and serving as a viewshed/mountain backdrop; as an informal natural reserve/safe haven for native flora and fauna; and as an informal recreational resource for hikers, cyclists, and equestrians from throughout Sonoma County and beyond. Further, historic residential use of the SDC by individuals with developmental disabilities and their caregivers had minimal human-caused environmental impacts on the property's open spaces. Redevelopment at the scale in the Preferred Plan creates an urban footprint within this

C156-4

historically rural zone, significantly increasing human-caused environmental impacts on a number of areas identified under CEQA (i.e., Aesthetics [3.1]; Biological Resources [3.4], and Public Services and Recreation [3.13], to name a few). To mitigate impacts of any redevelopment on the historic, minimal-impact, rural quality of the property, and to ensure the viewscape is preserved, we request that:

C156-4

1) The DEIR include mitigation measures to compensate for the loss of the rural attributes of the property at its current baseline, or a baseline that dates back no further than 10 years. Please specify which measures in the current DEIR address these impacts, and which studies support them.

C156-5

2) Please study, provide mitigation measures, and document how incorporating adaptive reuse of buildings into the HPA proposal, with its smaller human footprint, would impact environmental goals.

3) The SDC's open space currently sees frequent use by recreationalists from all over Sonoma County and beyond. That use increased markedly during the pandemic, despite restrictions on travel. The level of use has remained high as the pandemic has waned. The addition of 2,500 residents, 900 workers, visitors to the proposed hotel and conference center, and their friends and family, as outlined in the Preferred Plan, will add an exponential burden on the property's open space, much of which is on the skirts of Sonoma Mountain. Please analyze what that increase in recreational use means for aesthetics, biological resources, cultural, tribal, and historic resources, and water and air quality, and identify mitigations for those impacts.

C156-6

4) Please analyze the cumulative impacts and potential degradation of floral and faunal habitats, groundwater supply, and riparian zones across the site, including the 750+ acres identified as open space, caused by the increased housing density, noise, construction, traffic, and demolition proposed under the Preferred Plan. Please provide analysis of the impacts of redevelopment on migratory fish species, such as coho salmon. Please also analyze whether these impacts would be mitigated by a smaller redevelopment such as the HPA.

C156-7

5) The intent to preserve and protect the 750+ acres of open space surrounding the 180-acre core campus has been codified by the state in its enabling legislation and has been promised by the county in the Preferred Plan. However, neither the Preferred Plan and nor the DEIR delineate clear boundaries for the open space to be transferred, identify a mechanism of transfer, clearly identify the entities that a developer must work with to facilitate transfer, or explicitly require a developer to ensure that redevelopment of the core campus be done in such a way, and with sufficient buffers, as to protect the natural values of the open space. Please add specific, enforceable guidelines for the open space

C156-8

transfers, specifying acreages and minimum boundaries on both the east and west sides of Arnold Drive, and limiting allowed uses on these acreages to passive recreational uses such as hiking, mountain biking, horseback riding, photography, etc.

C156-8

6) Agricultural and commercial uses should not be permitted in open space intended to be parkland. Please clarify that uses such as those identified in Table 4.3 will not be permitted in open space identified for transfer to park agencies, and that mitigations for such uses on other open space parcels are identified and enforceable.

C156-9

Thank you for the time and effort you have put into developing the DEIR and preferred Specific Plan for the property. We look forward to receiving Permit Sonoma's responses to our concerns, and hope the final plan and EIR presented to the Planning Commission for comment and to the Board of Supervisors for approval reflect substantive changes that ensure the integrity of the natural values of Sonoma Mountain, and the communities that surround it, remain intact.

Respectfully,

Meg Beeler, Chairperson

EXTERNAL

Thank you Tracy for your hard work, time and effort in putting this comment together for Sonoma Mountain Preservation. We are all hopeful that Permit Sonoma will in fact take community input seriously and consider the amount of oft repeated volunteer effort and informed and educated thought that went into most all the comments. After all it is our lives that will be impacted by this misconceived and miscalculated DEIR and Specific Plan.
Gratefully,
Nancy Kirwan

Subject: ***Review of Draft Environmental Impact Report Transportation Analysis***
Sonoma Developmental Center Specific Plan, Sonoma County, California

Dear Mr. Oh:

Griffin Cove Transportation Consulting, PLLC (GCTC) has completed a review of the transportation analysis completed with respect to the proposed Sonoma Developmental Center Specific Plan project (Project) in Sonoma County, California. Details regarding the Project are presented in the *Sonoma Developmental Center Specific Plan Public Review Draft* (Dyett & Bhatia, August 2022).

The proposed Project is the subject of a Draft Environmental Impact Report (DEIR) prepared for the County of Sonoma (Reference: Dyett & Bhatia, *Sonoma Developmental Center Specific Plan Draft Environmental Impact Report*, August 2022). Section 3.14 of the DEIR presents the transportation analysis. No separate technical report was prepared, although Appendix F to the DEIR is labeled "Traffic Model Data." We should note, however, that no traffic model data are actually presented in that appendix; instead, it simply provides a table that is virtually identical to DEIR Table 3.14-3: Projected Traffic Volumes in Plan Area. (DEIR p. 441)

C158-1

Our review focused on the technical adequacy of the transportation analysis presented in DEIR Section 3.14, including the detailed procedures and conclusions documented there.

BACKGROUND

The proposed Sonoma Developmental Center (SDC) Specific Plan project involves the potential redevelopment of the 180-acre "Core Campus" within the overall SDC site. According to the DEIR Executive Summary (p. 7), the Project would result in buildout of 1,000 housing units, 2,400 residents, and 940 jobs. More specific development plans are described in DEIR Section 3.14 – Transportation, as follows:

C158-2

- 435 single-family residential units,
- 345 multifamily residential units,
- 220 senior residential units,
- 40,000 square feet (SF) of commercial/retail space,
- 190,000 SF of office space,
- 70,000 SF of institutional space (described in DEIR Table 2.5-3 – Planning Area Non-Residential and Employment Buildout Summary (p. 80) as 30,000 SF of public space and 40,000 SF of institutional space),
- 120 hotel rooms, and
- 12.1 acres of recreational uses.

We note that the specific breakdown of housing unit types addressed in the transportation analysis is not presented in either the DEIR Project Description or in the Specific Plan document. Questions regarding the specific development plan are discussed in our comments below. C158-2

TRANSPORTATION ANALYSIS REVIEW

Our review of the DEIR transportation analysis for the proposed Sonoma Developmental Center Specific Plan project revealed several issues that must be addressed prior to certification of the environmental document and approval of the project by the County of Sonoma. These issues are presented below.

1. ***Flawed Analysis of Plan Consistency*** – Impact 3.14.4.5 (DEIR p. 443) addresses the issue of potential Project-related conflicts with "a program, plan, ordinance, or policy addressing the circulation system." Among the plans considered here is the Sonoma County General Plan 2020. The DEIR states that: C158-3

   > *Objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan pertain to upholding vehicle level of service standards. As individual development projects occurring within the Proposed Plan complete traffic impact studies as required by the Sonoma County Department of Transportation and Public Works (DTPW), the potential exists for identification of locations where LOS* [Level of Service] *targets would be exceeded.*

   The General Plan objectives referenced here require operation at LOS C on roadway segments (except where exceptions have been adopted) and LOS D at intersections. Attachment 1 contains an excerpt from the General Plan, including the figure illustrating where LOS exceptions have been approved.

   The DEIR (p. 444) goes on to state:

   > *. . . while traffic congestion effects of the Proposed Plan or development of individual sites within the Planning Area may not comply with the LOS targets established in Sonoma County General Plan Objectives CT-4.1 and CT-4.2, for the purposes of the Proposed Plan's CEQA assessment this would not be considered an adverse environmental impact.* C158-4

   We believe this conclusion is erroneous. In fact, we believe that the failure to conform to level of service standards established within the County's adopted General Plan constitutes a clear "conflict with a program, plan, ordinance, or policy addressing the circulation system." Further, the failure to include any documentation within the DEIR regarding conformance to the General Plan LOS objectives is a significant deficiency.

   We note that a detailed traffic impact analysis has been conducted for the Project, although that document has not been included in the DEIR. Specifically, Footnote 118 (DEIR p. 410) references the *Focused Traffic Operations Analysis for the SDC Specific Plan* (W-Trans, August 2022 [actually July 6, 2022]). Although the traffic analysis is not part of the DEIR, we reviewed it to establish whether the Project conforms to General Plan Objectives CT-4.1 and CT-4.2. Our review revealed that the W-Trans report (p. 3) states: C158-5

   > *Under future conditions with implementation of the SDC Specific Plan, two intersections are projected to operate unacceptably if no modifications to the current roadway configurations are made. The intersection at Arnold Drive/Harney Street would operate unacceptably at*

> *LOS F during the p.m. peak hour . . . The future new intersection on SR 12 at the new SDC Connector Road would have unacceptable LOS E operation on the stop-controlled connector road approach . . .*

C158-5

Although improvements are identified that would remedy these deficiencies, no assurance is provided that those measures would be implemented.

The focused traffic study (p. 5) also says:

> *With the additional traffic generated by the buildout of the SDC Specific Plan, the segment of SR 12 between Arnold Drive and Trinity Road would continue to operate below the County's standard at LOS D, as would the segment of Arnold Drive between SDC and Madrone Road.*

C158-6

Although these road segments are also identified as falling short of the County LOS standard without the Project, no mitigation measures were proposed to allow operation at an acceptable LOS. In any event, it is clear that these two roadway segments will fail to meet the County LOS standard upon completion of the Project, thereby violating the General Plan objectives.

In conclusion, the information necessary to address conformance with General Plan Objective CT-4.1 and CT-4.2 exists, but was not included within the DEIR, which would have allowed public review. As described here, that information indicates that the Project fails to conform to the County's LOS standard, as two intersections and two road segments will operate at unacceptable levels of service upon completion of the Project, and no assurance was provided that these deficiencies will be remedied. Thus, a significant impact exists with respect to conflicts with the adopted General Plan.

Finally, the focused traffic study must be incorporated into the DEIR. The provision of this new information within the DEIR provides grounds for recirculation of the document.

2. ***Project Trip Generation is Underestimated*** – The DEIR (p. 440) states that the Project will generate 5,736 daily trips. Of that total, 1,398 of those trips (i.e., 24.4 percent of the total) will be "captured within the campus itself," resulting in net external trip generation of 4,338 trips. We believe the DEIR has substantially underestimated the volume of traffic associated with the Project.

   The DEIR's Project trip generation estimate was developed using the SCTM19 travel demand forecasting model maintained by the Sonoma County Transportation Authority (SCTA). The specific trip generation factors employed were not revealed in the DEIR. Consequently, it is impossible for the reviewing public to evaluate the reasonableness of either those factors or the resulting trip generation estimates.

C158-7

   Traffic impact analyses for proposed development projects commonly use information presented in the Institute of Transportation Engineers (ITE) document *Trip Generation Manual* (Eleventh Edition, 2021) to develop project-related trip generation estimates. Although we acknowledge that the ITE trip rates often differ from corresponding rates contained within travel demand forecasting models such as the SCTM19 model, comparison of an estimate based on the ITE information versus the estimate documented in the DEIR provides a valuable perspective on the credibility of the DEIR Project's transportation analysis.

Two scenarios are addressed here. The first employs the Project plan as described in DEIR Section 3.14 - Transportation, and the second considers a maximum residential development scenario based on information in the Specific Plan document.

DEIR Section 3.14 – Transportation Project Plan Scenario

Table 1 provides a trip generation estimate for the Project based on the plan as described in DEIR Section 3.14 - Transportation and on commonly-accepted procedures documented in the ITE *Trip Generation Manual*. That estimate reflects the following parameters:

- The land use values described in DEIR Section 3.14 – Transportation, including the specific housing type breakdown, were evaluated.
- The ITE *Trip Generation Manual* typically provides two methods to develop an estimate of project-related traffic: one using an average rate and one using a fitted curve equation. For this analysis, we have reported whichever of those two methods provides a lower value, so as to provide a conservative estimate of Project trips. The trip generation data sheets for this estimate are presented in Attachment 2.
- Within each housing type, it was assumed that 25 percent of the residential units would be inclusionary income-restricted units, in order to conform to Specific Plan Policy 4-14 (Specific Plan, p. 4-25). Because these units generally produce lower volumes of traffic, this assumption again results in a conservative trip generation estimate.
- Because the specific uses included within the public/institutional land use are not currently well-defined, no trip generation estimate was included for that land use category.

As shown in Table 1, the Project is estimated to generate 12,253 daily trips. This is obviously substantially (i.e., 114 percent) greater than the DEIR estimate of 5,736 daily trips. As we stated above, model-based trip generation factors often differ from the ITE trip rates. However, a difference of this magnitude is exceptional and is greater than we have ever seen. Consequently, we question the validity of the DEIR trip generation estimate.

C158-8

Table 1
Daily Trip Generation[1]
1,000 Dwelling Units (25 Percent Inclusionary Income-Restricted)

Land Use		Size	Daily Trips
Residential			
Single-Family Residential	Market Rate	326 DU[2]	2,993
	Affordable[3]	109 DU	524[4]
Multifamily Residential	Market Rate	259 DU	1,736
	Affordable	86 DU	414
Senior Residential	Market Rate	165 DU	711[5]
	Affordable	55 DU	178[6]
Residential Subtotal		1,000 DU	6,556
Non-residential			
Commercial		40,000 SF[7]	2,701
Hotel		120 Rooms	959
Office		190,000 SF	2,028
Public/Institutional		70,000 SF	--[8]
Recreation		12.1 Acres	9
Non-residential Subtotal			5,697
		TOTAL	**12,253**

Notes:
1 Reference: Institute of Transportation Engineers, *Trip Generation Manual,* 11th Edition, 2021.
2 Dwelling unit.
3 Affordable housing assumed to be 25 percent of all residential types.
4 Based on ITE Land Use Code 223 – Affordable Housing – Income Limits, which is defined as including only multifamily housing. This represents a conservative assumption regarding trip generation for this land use category.
5 Based on ITE Land Use Code 251 – Senior Adult Housing – Single Family.
6 Based on ITE Land Use Code 251 – Senior Adult Housing – Multifamily. This rate is conservative, since "Affordable Housing" rate is 48 percent higher than this.
7 Square feet.
8 No estimate is possible, given the lack of information regarding specific land uses in this category.

Maximum Residential Development Scenario

As we indicated above, we have questions regarding certain aspects of the proposed development plan. One such question concerns how many residential units will be constructed. Although the DEIR transportation analysis addresses development of 1,000 residential units, the Specific Plan indicates that a greater number of units is possible.

Table 4-2: Minimum and Maximum Housing Units by District (Specific Plan, p. 4-12) provides detailed information regarding how many housing units could be constructed within various subareas of the Project. That table reveals that the maximum number of housing units that could potentially be built is 1,210. Further, the notes to the table state that "[u]p to 10% deviations from the minimum and maximum by district are subject to approval by the Community Development Director." If such a deviation from the maximum values were to be approved, the total number of residential units would increase to 1,331 (1,210 X 1.10 = 1,331).

C158-9

To assess the impacts of this maximum development scenario with respect to the volume of traffic associated with the Project we have performed a second trip generation analysis, as summarized in Table 2. The basic parameters of this analysis are similar to those described above for the Table 1 analysis. Attachment 3 contains the data sheets for the residential uses; the non-residential data sheets are unchanged from the previous analysis.

With consideration of the larger number of residential units, the Project's total daily trip generation increases to 14,290. This is 149 percent greater than the value claimed in the DEIR.

Summary

The analysis presented here indicates that the Project's daily trip generation has been substantially underestimated. This finding relates directly to the Project's impact with respect to vehicle-miles traveled (VMT). The DEIR acknowledges the relationship between trips and VMT at p. 447, where it says:

C158-10

> *. . . trip reductions should in theory translate to roughly equivalent VMT reductions.*

Thus, trip increases, as we have described, will similarly translate to roughly equivalent increases in VMT. Further, as described at DEIR p. 425, the calculation of VMT:

> *. . . is based on the estimated number of vehicles* [actually, vehicle-trips] *multiplied by the distance traveled by each vehicle.*

If, as we have found, the number of vehicle trips is 2.14 – 2.49 times greater than the value considered in the DEIR, then the VMT values associated with the Project will also be 2.14 – 2.49 times greater than the DEIR findings.

Although the DEIR has already concluded that the Project's VMT impact will be significant and unavoidable, it has failed to accurately portray the magnitude of that impact. This is a serious deficiency in the DEIR, which suggests a need to reevaluate the Project's impact and recirculate the DEIR for further public review.

Table 2
Daily Trip Generation[1]
1,331 Dwelling Units (25 Percent Inclusionary Income-Restricted)

Land Use		Size	Daily Trips
Residential			
Single-Family Residential	Market Rate	434 DU[2]	3,894

1 Reference: Institute of Transportation Engineers, *Trip Generation Manual,* 11th Edition, 2021.
2 Dwelling unit.
3 Affordable housing assumed to be 25 percent of all residential types.
4 Based on ITE Land Use Code 223 – Affordable Housing – Income Limits, which is defined as including only multifamily housing. This represents a conservative assumption regarding trip generation for this land use category.
5 Based on ITE Land Use Code 251 – Senior Adult Housing – Single Family.
6 Based on ITE Land Use Code 251 – Senior Adult Housing – Multifamily. This rate is conservative, since "Affordable Housing" rate is 48 percent higher than this.
7 Square feet.
7 No estimate is possible, given the lack of information regarding specific land uses in this category.

3. ***Internal Trips are Substantially Overestimated*** – As described above, the DEIR transportation analysis (p. 440) claims that 1,398 of the Project's total 5,736 daily trips will occur completely within the Project site. In other words, 24.4 percent of the vehicle-trips resulting from the Project would never leave the Project site. These trips, which are typically referred to as internal trips, would have no impact on any element of the transportation system beyond the Project boundaries. Because this a substantial percentage, it seemed appropriate to test the validity of this claim.

C158-11

Various tools are available to develop estimates of internal tripmaking at mixed-use developments such as the proposed Project. Three such tools have been employed here:

- Institute of Transportation Engineers/NCHRP 684 Internal Trip Capture Estimation Tool – As described in the ITE *Trip Generation Handbook* (Third Edition, September 2017, p. 46), this approach is based on procedures documented in National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Trip Capture Estimation for Mixed-Use Developments. That report documents the extensive research, data collection, and analysis undertaken in developing and validating the recommended procedure.
- U.S. Environmental Protection Agency (EPA) Mixed Use Trip Generation Model – As described at the EPA website (https://www.epa.gov/smartgrowth/mixed-use-trip-generation-model), this model was developed cooperatively between EPA and ITE. Six metropolitan regions were evaluated in detail and the resulting model was validated against actual traffic counts at mixed-use developments across the country. This model is in use in California, Washington, and New Mexico, and according to EPA the model has been adopted as a statewide standard by the Virginia Department of Transportation.

C158-12

- San Diego Association of Governments (SANDAG) Smart Growth Trip Generation Spreadsheet Tool – Similar to the EPA method, this tool employs trip generation rates specific to the San Diego region. Although the trip rates vary from the ITE rates, the internal trip capture results should be representative of a development similar to the proposed Project.

The results of these analyses are summarized below.

C158-13

ITE/NCHRP 684 Internal Trip Capture Estimation Spreadsheet Tool

Attachment 4 contains a copy of the spreadsheet illustrating the results of this analysis procedure. Although the spreadsheet tool allows for adjustments to be made to reflect transit usage and changes to vehicle occupancy, no such modifications were made. Doing so would simply reduce the number of vehicle-trips estimated (internal, external, and total) with no effect on the resulting internal trip percentages.

As shown in Attachment 4, the model projects an internal capture percentage of nine percent (actually 8.8 percent). The gross total of 12,256 daily trips would be reduced to 11,180, with 1,076 internal trips estimated. (Note that three of the individual daily trip totals were rounded up to ensure equal numbers of entering and exiting daily trips in the spreadsheet. Thus, the total trip generation in the model is 12,256 instead of the 12,253 described earlier.)

EPA Mixed Use Trip Generation Model

C158-14

The results of this analysis are presented in Attachment 5. According to the EPA tool, the Project's 12,253 daily trips would be reduced to 11,291 external vehicle-trips (a difference of 962 trips). Those 962 internal trips include 796 vehicle-trips, 114 external walking trips, and 53 external transit trips.

Considering only vehicle-trips (and ignoring external walking and transit trips), the 796 internal vehicle-trips represent an internal capture rate of 6.5 percent.

SANDAG Smart Growth Trip Generation Spreadsheet Tool

C158-15

As described above, the SANDAG tool is very similar to the EPA tool, but with minor modifications to reflect local San Diego conditions. Nonetheless, it is believed to provide valuable perspective regarding the level of internal tripmaking at the proposed Project. The SANDAG results are provided in Attachment 6.

The SANDAG model estimates that a total of 996 trips will be in the form of 821 internal vehicle-trips, 120 external walking trips, and 55 external transit trips. The 821 internal vehicle-trips constitute 6.7 percent of the 12,253 gross total daily trips.

Summary

C158-16

The internal trip values derived from the three models presented here range from 6.5 to 8.8 percent, and all are substantially lower than the 24.4 percent value employed in the DEIR analysis. By substantially overstating the volume of traffic to be captured within the Project site, the number of external trips was excessively reduced. Consequently, the DEIR analysis has failed to accurately assess the off-site impacts of the Project.

Specifically, by underestimating the number of external trips, the analysis has similarly understated the Project-related VMT, which serves as basis for determining the significance of the Project's transportation impact. In short, the Project's transportation impact has been greatly understated due to a failure to provide an accurate estimate of the volume of traffic resulting from the Project.

Table 3
Internal Vehicle-Trip Percentage Summary

Source	Total Trips	Internal Vehicle-Trips	Net External Vehicle-Trips	Internal Vehicle-Trip Percentage
DEIR	5,736	1,398	4,338	24.4%
ITE Spreadsheet Tool	12,256	1,076	11,180	8.8%
EPA Mixed Use Trip Generation Model	12,253	796[1]	11,291	6.5%
SANDAG Smart Growth Trip Generation Spreadsheet Tool	12,253	821[2]	11,257	6.7%

Notes:
[1] EPA model also projects 114 external walking trips and 53 external transit trips.
[2] SANDAG model also projects 120 external walking trips and 55 external transit trips.

4. ***Flawed Project Traffic Assignment*** – DEIR Table 3.14-3: Projected Traffic Volumes in Plan Area (DEIR p. 441) presents traffic volume information for the three road segments that provide access to the site – Arnold Drive north and south of the site and the proposed Highway 12 connector. (Orchard Road connects to Jack London State Park to the west of the site, but would not be expected to carry a meaningful volume of Project traffic. That road is not included in the DEIR analysis.) Information is presented for various scenarios, both with and without the Project and with and without the Highway 12 connector. Based on this information, it is possible to derive the Project traffic assignment – that is, how many of the Project's claimed 4,338 external daily trips are estimated to be added to each of these three road segments. Table 4 below summarizes that information. (We should note that we were unable to confirm all of the existing traffic volumes, as DEIR p. 419, which apparently includes some of that information, was missing from the document that was available for downloading from the county website.)

C158-17

   In each scenario analyzed, the volume of Project traffic assigned to the regional access roads falls substantially short of the 4,338 external trips claimed to be generated by the Project. In both scenarios involving implementation of the Highway 12 connector, the volume of traffic projected on Arnold Drive between Harney and Glen Ellen is actually shown to be reduced upon completion of the Project, which seems unlikely. The volume of Project traffic and its relationship to the claimed Project trip generation is summarized as follows:

   - Existing + Project (With Highway 12 Connector): 4,070 Daily Trips (93.8% of Project trips)
   - Existing + Project (No Highway 12 Connector): 3,410 Daily Trips (78.6% of Project trips)
   - Future + Project (With Highway 12 Connector): 3,320 Daily Trips (76.5% of Project trips)
   - Future + Project (No Highway 12 Connector): 2,650 Daily Trips (61.1% of Project trips)

   The DEIR analysis apparently fails to include a substantial portion of the Project traffic. Oftentimes, this sort of oddity is described as being due to existing or "background" traffic being diverted to other routes when the Project traffic demand is added to the study area roads. This can occur in a travel demand forecasting model when the added traffic causes a particular route to become congested and have high travel times, so the model redirects traffic to other, less congested routes so as to create an equilibrium condition on the study area road network with respect to travel time.

C158-18

   In this case, though, no such alternative routes are available, so this explanation would not apply. The only explanation that does seem to apply is that the analysis is defective, and that it fails to accurately account for the full volume of Project traffic. The significance of this deficiency is magnified by the fact that the DEIR analysis only includes about 38 percent of the actual volume of Project traffic (i.e., 4,338 external trips compared to the corrected values of 11,180 – 11,291 documented in Table 3).

   The transportation analysis must be revised to remedy these substantial deficiencies, and the new analysis must recirculated for public review.

Table 4 **Project Traffic Assignment Summary**			
	Daily Vehicle-Trips		
Scenario	Arnold Drive – Harney to Glen Ellen	Arnold Drive – Harney to Madrone Rd.	Highway 12 Connector
Existing Conditions with Highway 12 Connector			
Existing No Project	6,330	7,150	--
Existing + Project	6,220	9,940	1,390
Project Only	-110	2,790	1,390
TOTAL PROJECT TRAFFIC	**4,070**		
Existing Conditions - No Highway 12 Connector			
Existing No Project	6,330	7,150	--
Existing + Project	7,400	9,490	--
Project Only	1,070	2,340	--
TOTAL PROJECT TRAFFIC	**3,410**		
Future Conditions with Highway 12 Connector			
Future No Project	6,730	7,670	--
Future + Project	6,310	9,960	1,450
Project Only	-420	2,290	1,450
TOTAL PROJECT TRAFFIC	**3,320**		
Future Conditions - No Highway 12 Connector			
Future No Project	6,730	7,670	--
Future + Project	7,410	9,640	--
Project Only	680	1,970	--
TOTAL PROJECT TRAFFIC	**2,650**

5. ***Defective Vehicles-Miles Traveled Analysis*** – The analysis of VMT impacts (Impact 3.14-2, DEIR p. 445) indicates that the Project will have a significant and unavoidable impact, with a significant impact relative to Household VMT and less than significant impacts regarding Employment VMT and Total VMT per Service Population. A significant impact was also found with respect to induced VMT associated with the proposed connector to Highway 12 (which is described as an "east-west emergency access connection from the site"). (DEIR p. 447)

C158-19

We believe the VMT analysis is flawed, as described in the following sections.

<u>*Transportation Demand Management Effects*</u>

C158-20

The VMT analysis is summarized in DEIR Table 3.14-4: Planning Area VMT Metrics. (DEIR p. 446) That table includes a section labeled "Proposed Plan with 15% TDM Reduction," which is described as being for informational purposes and "reflect[s] a theoretical 15% reduction in VMT associated with required TDM measures." We believe this information is misleading, as no support is provided with respect to the feasibility of actually achieving a 15 percent reduction in VMT. Further, based on this "theoretical" information the DEIR makes the questionable and conclusory statement that (DEIR p. 447):

. . . it is likely that actual VMT will be less than the projections above.

Our analysis has suggested that, to the contrary, the actual VMT will be substantially greater than those projections. In fact, only one paragraph later the DEIR contradicts itself and recognizes the questionable nature of the suggested TDM benefits (DEIR p. 447):

C158-20

> *However, the ability for individual development projects to achieve a 15 percent reduction in VMT is uncertain.*

Clearly, any statement regarding the potential benefits of implementing TDM measures at the Project must be taken with a sizable grain of salt.

Employment VMT Analysis

C158-21

As noted above, the DEIR analysis found a less than significant impact with respect to Employment VMT (also referred to as "Home-Work VMT per Worker" in the DEIR), with a finding of 4.8 home-based commute VMT per worker. (DEIR p. 445) Table 3.14-4 lists values for other pertinent geographical areas near the Project, as follows:

- Planning Area Baseline Average: 7.1 home-based commute VMT per worker,
- Countywide Baseline Average: 12.4 home-based commute VMT per worker, and
- Regional Baseline Average: 16.9 home-based commute VMT per worker.

These values raise questions regarding the validity of the DEIR's employment VMT finding of 4.8 home-based commute VMT per worker. This value is about 67 percent of the corresponding value for the Planning Area, 39 percent of the Countywide value, and only 28 percent of the Bay Area Region value. Without further substantiation of the DEIR's VMT analysis procedures and background parameters and inputs, it is difficult to readily accept that the Project's VMT result would be so vastly different from the other areas referenced above.

Unfortunately, the reviewing public is expected to blindly accept the output of the SCTM19 travel demand forecasting model even though, as described above, the model has obvious flaws with respect to its ability to estimate Project-related traffic volumes. In short, we question whether the employment VMT value derived for the Project is credible.

Proposed Policies Reducing VMT Impact

C158-22

In recognition of the Project's significant and unavoidable VMT impact, the DEIR addresses ways to reduce that impact. The primary approach to achieving this goal is apparently Specific Plan Policy 3-41, which states, in part (Specific Plan p. 3-12):

> *Require all development to reduce vehicle trips by at least 15 percent below rates listed by the Institute of Transportation Engineers Trip Generation manual using transportation demand management strategies.*

As we described above, however, the Project's supposed trip generation, as reflected in Section 3.14 – Transportation, is already extremely low. According to the DEIR, the total daily trip generation is 5,736 trips/day. This includes trips associated with 1,000 residential dwelling units and substantial

non-residential development types although, unfortunately, no trip generation breakdown is provided between the residential and non-residential land uses.

C158-22

For perspective, if we totally ignore the non-residential development (a frankly ridiculous notion, given that this ignores 190,000 SF of office space and 40,000 SF of commercial space), the Project's trip generation rate would be 5.736 trips per dwelling unit (i.e., 5,736 trips / 1,000 DU = 5.736). If the non-residential land uses were included, the overall Project trip rate would be substantially lower.

For comparison, the current ITE daily trip generation rates for various types of residential uses that are potentially applicable to the Project are as follows:

C158-23

- Single-Family Detached Housing: 9.43 daily trips/dwelling unit,
- Single-Family Attached Housing: 7.20 daily trips/dwelling unit,
- Multifamily Housing (Low Rise – Not Close to Rail Transit): 6.74 daily trips/dwelling unit.

Therefore, it appears that, if the Project's trip generation estimate is to be believed, the Project trip rate is already substantially less than 15 percent below the ITE trip rates. Two conclusions can be derived from this information:

- The Project's trip generation as presented in the DEIR is not to be believed, and
- Specific Plan Policy 3-14 is specious.

Summary

C158-24

As we have described above, the DEIR transportation analysis is significantly flawed and those flaws relate directly to the validity of the VMT analysis. To briefly summarize:

- The Project trip generation estimate substantially understates the volume of traffic that will result from the Project.
- The internal trip capture rate is excessive, resulting in further reduction of the Project's traffic volumes.
- Only a portion of the Project's trips have actually been assigned to the study area roads.
- The purported benefits of implementation of TDM strategies are unlikely to be realized.
- The Project's derived Employment VMT value is highly questionable, when viewed in light of corresponding values for nearby geographical areas.
- Specific Plan Policy 3-41, which is claimed as a means to reduce Project VMT, is virtually meaningless, unless the Project's trip generation estimate is substantially modified to reflect reality.

The VMT analysis must be modified to correct the deficiencies described above. Upon completion of that revised VMT analysis, the DEIR must be recirculated for further public review.

C158-25

CONCLUSION

Our review of the transportation analysis presented in the Draft Environmental Impact Report for the proposed Sonoma Developmental Center Specific Plan project in Sonoma County, California revealed several issues affecting the validity of the conclusions presented in that document. Particular deficiencies were identified with respect to the volume of traffic associated with the Project, how much of that traffic will be captured internally, the assignment of that traffic to the study area roads, and the validity of the estimate of Project-related vehicle-miles traveled. These issues must be addressed prior to approval of the proposed project and its environmental documentation by the County of Sonoma.

Sincerely,

GRIFFIN COVE TRANSPORTATION CONSULTING, PLLC

Neal K. Liddicoat, P.E.
Principal

Circulation and Transit Element

Sonoma County General Plan 2020

CIRCULATION AND TRANSIT ELEMENT

Sonoma County Permit and Resource Management Department
2550 Ventura Avenue
Santa Rosa, CA 95403

Adopted by Resolution No. 08-0808
of the Sonoma County Board of Supervisors
September 23, 2008

Amended by Resolution No. 10-0636 on August 24, 2010
Amended by Resolution No. 16-0283 on August 2, 2016

Policy CT-3ggg: Educate motorists, bicyclists, and pedestrians with regard to safety, rights, and responsibilities associated with use of the County transportation system.*

Policy CT-3hhh: Support constructive efforts from advocacy groups to address bicycle and pedestrian transportation issues.

Policy CT-3iii: Provide the option of flexible work schedules to County employees in order to accommodate commuting by bicycle, walking, or transit.*

Policy CT-3jjj: Develop a Guaranteed Ride Program for County workers and employees of other employers with participating programs who regularly bicycle, walk, vanpool, carpool, or use transit for their trip to work. The program would encourage use of alternative transportation modes by providing free transportation in the event of personal emergencies, illness, or unscheduled overtime.*

Policy CT-3kkk: Consider establishing greenhouse gas impact fees for new development. Use a portion of this fee to fund planning, design, and construction of bikeways and pedestrian facilities*.

Policy CT-3lll: Work with Federal, State, regional, and local agencies and any other available public or private funding sources to secure funding for bikeways and pedestrian facilities*.

Policy CT-3mmm: Encourage multi-jurisdictional funding applications for design, construction and maintenance of bikeways and pedestrian facilities that provide regional connectivity*.

Policy CT-3nnn: Develop a long range strategy to provide long term funding necessary to maintain and operate the Class I bikeway network*.

2.6 COUNTYWIDE HIGHWAY SYSTEM

GOAL CT-4:	**Provide and maintain a highway system capacity that serves projected highway travel demand at acceptable levels of service in keeping with the character of rural and urban communities.**
Objective CT-4.1:	Maintain LOS C or better on roadway segments unless a lower LOS has been adopted as shown on Figure CT-3.
Objective CT-4.2:	Maintain LOS D or better at roadway intersections.*
Objective CT-4.3:	Allow the above levels of service to be exceeded if it is determined to be acceptable due to environmental or community values, or if the project(s) has an overriding public benefit that outweighs lower

Footnote: *Mitigating Policy

levels of service and increased congestion.*

Objective CT-4.4: Utilize the American Association of State Highway Transportation Officials (AASHTO) functional classification system and guidelines for geometric design for the highway network.*

Objective CT-4.5: Consider developing a Heritage Road Program for Sonoma County. Heritage Roads would be subject to special design guidelines protecting their unique character, while meeting accepted AASHTO safety standards.

Objective CT-4.6: In recognition of the responsibility of the Cities and the County to contribute their fair share toward the mobility of County residents, coordinate with the Cities in the review of proposed development projects to identify a nexus between the project and impacts to the County transportation system, and to ensure that adequate mitigation is provided for impacts on the County transportation system.

Objective CT-4.7: Prioritize planned capacity improvements on Highways 101, 12, and 116 in recognition of the primary role that these highways play in providing mobility between communities. Prioritize capacity improvements to arterials over those for collector and local roads.

The following policies shall be used to achieve these objectives:

Figure CT - 3

Level of Service (LOS) Objectives

Level of Service (LOS) *

Level of Service D

Level of Service E

Level of Service F

* All other County roadway segments are LOS C or better during Weekday PM Peak Hour.

Comments for Planning Commission meeting re SDC EIR

Re Historical Alternative in the DEIR:

Comments on Historic Alternative appear to be written as a put-down to downgrade the Historic Alternative and boost the Preferred Plan, with comments prepared by the same author as proposed the Plan.

C159-1

Not appropriate to EIR process. Supposed to be dispassionate examination. Best done by a third party.

References to the "community alternative" are to the approach and plan in the proposal presented to DGS on September 9, 2022 by the community in Glen Ellen and the Sonoma Valley most affected by the impacts of the proposed Plan.

Comments/questions:

On page 561: assumes "a preference for more large lot, single family home to maximize financial feasibility". Based on what analysis or precedent? In fact community's alternative does not rely on large lot, single family homes, but contains a mix of all types of housing in a village community setting.

C159-2

On page 561: "open space available within the Core Campus would be less than in Proposed Plan due to lower densities in existing buildings and the location of buildings within areas reclaimed as open space in Proposed Plan". Based on what analysis? In fact, the community's alternative has more open space than the Proposed Plan and buildings do not interfere with open space.

On page 562, paragraph 2: Refers to "lower financial feasibility" of Historic Alternative. Based on what evidence? Community's plan shows more financial feasibility based on compact smaller scale layout rather than sprawling layout in Preferred Plan.

On page 562 Para 2: "lower potential for well designed active gathering spaces". Based on what analysis? Community plan has equal or more spaces for active gathering.

On Page 563, Para 2: "area available for habitat and movement would be … lower than the Proposed Plan". Based on what analysis? Community plan shows increase in space for wildlife habitat and movement over Preferred Plan.
"

C159-3

On Page 564, Para 2 & 4: "lower inefficiency of historic buildings for heating and cooling and difficulty of updating energy systems in existing buildings". Based on what evidence and what studies? Old fashioned thinking. Not true in light of European and US experience where existing buildings are often brought up to modern standards, producing an efficient, net zero, low carbon footprint using fossil fuel free heat pumps and "second skin" technologies like those suggested in the community plan.

On Page 564,, Para 4. "Would provide less support for an expanded transit system in the area". On what evidence? In fact there is virtually no transit system in the area. The community's plan

includes one, owned and operated by local people, part of the local community at village scale, connecting to County system and even SMART in its present and future service configurations. C159-3

On Page 565, Para 1: "Compared to the Proposed Plan, the Historic Alternative would have a similar degree of (energy and greenhouse gas emission) impacts". On what evidence or studies? In fact, a smaller village plan with a mix of adaptive use of existing buildings would have a smaller degree of impacts in those area than the massive 1000 or more unit and commercial space plan proposed as "preferred" in the draft EIR. C159-4

On page 565, Para 3: "somewhat greater exposure to hazardous materials, result in hazardous waste materials". Based on what evidence or analyses? With aging infrastructure left in the ground and "second skin" technologies sealing in old materials and replacing plumbing and electrical with new, the exposure is likely to be lower as evidenced by technologies cited here

On page 565, Para 4: "impacts on hydrology, drainage and water quality similar to Proposed Plan due to demolition still required for demolition of existing buildings". Again, based on what analysis and evidence? The Historic Alternative would, as in the community plan, result in less demolition and deconstruction where appropriate, resulting in lower impacts on the resources listed

On Page 566, Para 1: "Larger areas of Core Campus would likely remain developed with creek buffers and wildlife corridors maintaining their current areas instead of expanding as in the Proposed Plan." Again full of suppositions, and based upon what study or evidence? "Likely" is not a term that is appropriate to an evaluation under CEQA (argumentative and imprecise). In the community plan, the wildlife corridor and creek buffers arte greatly expanded and placement of a community of 2500 people in 1000 units with 1500 cars immediately adjacent to those sensitive amenities is avoided. C159-5

On Page 566, Para 2, Land Use and Planning: "Historical Alternative would reduce affordable housing, maximize historic preservation, focus on single-family detached residential units rather than other typologies of residential in order to support the high costs associated with the adaptive use of historic buildings, and limit stores, services and community amenities on the site". Based on what evidence, research or studies? Again, old fashioned thinking, when the community plan, while admittedly reusing historic buildings (a good thing), will increase the affordable housing available, provide a vibrant mix of types of housing and supporting uses (though in a rural village setting at a scale smaller than the PP), and will handle the supposed "high costs" by innovative means available to anyone who puts his mind to it.

On page 566, Para 3 & following page: "the opportunities (for enhancing th streetscape, improving bicycle facilities, and providing a network of paseos, parks and open spaces within the Core Campus) would be limited in this Alternative due to the increase in historic buildings retained which would limit the possible changes in the streetscape" and "alternative would have significantly less housing available for working families, students, seniors and households with low, very low, and extremely low incomes".

Again, where is the evidence to support this statement? Or is it supposition by the author stated to support the Proposed Plan? The community's plan has as many as 470 units of affordable housing able to support those residents while the Proposed Plan has 250 (maybe 275) – a 60% increase, and available to all of the mix referred to in the EIR. The village, even though smaller C159-6

in scale, would avoid the problem of squeezing all 1,000 units into the same space, likely reducing the opportunities for the amenities listed in the Proposed Plan.

On page 570. Para 2 Wildfire: “Impact from Wildfire would be greater than the Proposed Plan, longer evacuation time in certain scenarios”. Again, based on what evidence? Nor substantiated in fact. The Historic Alternative would add a substantially smaller population to the area, resulting in fewer dangers and impacts in a wildfire than the more than 1000 units added in the Proposed Plan. The Historic Alternative would function with or without the escape route to Hwy 12 included in other alternatives in the EIR and, with a smaller number of peole needing to escape, would shorten the evacuation time in case of a wildfire rather making it longer as claimed. C159-6

On page 570-572: “Significant impacts of the Proposed Plan and the Historic Alternative are largely comparable, but the HA would be less superior in environmental features such as energy use, biological resources, and wildfire risks, and would not support key objectives related to increased housing supply, varied housing opportunities, community vibrancy, and long term fiscal sustainability to the same degree as the proposed plan”. Where is the evidence for any of these claims? Evidence has been provided to the contrary in each of the categories in the EIR. Each of the summary claims is speculative, without supporting data or findings, and seemingly has been presented by the author to support his/her Proposed Plan. Not appropriate for a CEQA evaluation. C159-7

The draft EIR states “Overall, the Historic Preservation Alternative is the environmentally superior alternative”.

We agree, and we urge the Planning Commission to adopt it as the Preferred Alterative and Proposed Plan under the Final EIR. Thank you for the opportunity to testify.

TO: Brian Oh @ Permit Sonoma, Board of Supervisors and So.Co. Planning Commission
SENT VIA EMAIL to all parties listed below

Brian.Oh@sonoma-county.org; PlanningAgency@sonoma-county.org; Susan.Gorin@sonoma-county.org; district3@sonoma-county.org; District4@sonoma-county.org; David.Rabbitt@sonoma-county.org; Lynda.Hopkins@sonoma-county.org; Senator.Dodd@senate.ca.gov; Senator.McGuire@senate.ca.gov

RE: Public Comment on SDC Specific Plan and DEIR….SCALE IT BACK AND GET IT RIGHT!

I do not support any of the proposals submitted by Permit Sonoma for development of the SDC Specific Plan. It is MUCH TOO LARGE of a project to be sandwiched in between rural Glen Ellen. The proposals need to be SCALED BACK. Consider the North Sonoma Valley MAC proposal, which included Historic Preservation, increased protection of the wildlife corridor and reduced housing numbers. We need a proposal with fewer significant negative impacts on the surround communities of Glen Ellen, Kenwood and the Sonoma Valley. Why does it seem that you have not heard the majority of people that have spoken out against the huge overreach of the current proposal? C160-2

I would, however, support a development of 450 or fewer low-income and affordable homes (NOT market rate), especially if many of the buildings could be adaptively reused, and the Historic District preserved.

The inclusion of a hotel in this project is wrong for so many reasons. It would only exacerbate traffic and the need for low-income workers to be traveling long distances for work…we are supposed to be CUTTING BACK on traffic and our carbon imprint, not exacerbating it. Plus, the water use needed for a hotel is FAR beyond that of residences. We are already experiencing drought conditions and water levels/supply issues with multiple dry years affects our diminishing water supply. A large development (1000 C160-3

homes plus a hotel) would certainly dangerously diminish our water supply. The only reason to include a hotel in the project is its profitability enticement for a developer, and that is not compelling enough, considering the negative impacts of VMT and traffic that would create.

C160-3

Wildfire evacuations would be significantly negatively impacted with the addition of 1,000 new homes and 2,000+ additional vehicles. It is laughable to say that the impact would be insignificant! For those of us who were caught in real-time long traffic delays during previous evacuations, we would strongly disagree. Why are you ignoring the reality of the impact of overdeveloping this site will have on our small rural community?

C160-4

Why have you not considered or pursued outside or alternative funding sources or implementation of a public trust option?

Why is the state not being held responsible for the condition they are leaving the buildings, property and infrastructure in? Their neglect and the cleanup costs associated with developing the site seem to be a big factor in your feeling the need to significantly overdevelop the property in order to offset these costs which should not be the responsibility of our local community to absorb.

C160-5

Please consider all of the important points that so many have brought to you and do not accept this current plan.

Thank you,

Ritch Foster, Glen Ellen resident for 47 years

Hello Brian:

No, no, no. Do not proceed another step with the current plan. The SDC property is worth far more to Glen Ellen, Sonoma Valley, the migrating wild life and the county than any development will ever be.

C161-1

The plan would alter the character of the entire area. I do not understand how our supervisors and permitting department could ever seriously consider such a plan. It is directly opposite to our own 2020 General plan.

Our Supervisors and voters just voted to extend the very nature of our beautiful county for another 20 year. Then they approve of this? No we do not.

There are dozens of examples of this in the 2020 plan, for example:

Policy OSRC-1a: Avoid amendments to increase residential density in Community Separators, since these densities were established based upon the policies set forth in other elements of this plan as well as the open space, separation and visual considerations identified in this section. The integrity of Community Separators cannot be maintained at densities in excess of one unit per ten acres. However, under no circumstances shall this policy be used to justify an increase in density from that designated on the land use map.

C161-2

How can the current plan be approved if we as a county have vigorously made it known that this plan is not wanted.

I haven't even mentioned the strain this would put on the infrastructure etc.

Thanks.

Hello Sonoma County Planning Agency,

My name is Rowan, I live in El Verano and I have some concerns about pushing the SDC Project in a for-profit direction and I have a potential alternative.

You have done a great job weighing community and environmental needs.
As someone who lives downstream near the Sonoma Creek, the care and attention brought to this project is very comforting.

C162-1

The broader social and economic goals of creating a new gathering place is inspiring.

I fear that the wonderful plan put forward in the SDC Public Review Draft will be compromised in its execution.

The execution of the plan will reflect its funding; if a developer assumes responsibility for this project they will be compelled to complete it in the most profitable manner.
Construction would follow conventional production methodologies and produce a space with the heart and character of an outdoor mall.

C162-2

The quality and ethic of the execution of this project will ripple through Sonoma Valley and Sonoma County.
This land being left for profit would further entrench us in systems that do not provide the freedom to adequately respond to rising social inequality and changing climates.

I believe there is an opportunity for a different ethic to emerge: an attitude of respect and generosity already apparent in the Public Review Draft.

If we were to use the cooperative legal structure, we could create an entity more capable of representing the needs of Sonoma Valley and her people.

C162-3

The members of the cooperative would be the different organizations interested in engaging with the space.
These organizations would be responsible for funding the projects they were interested in, as well as contributing to the collective maintenance of the property.
Citizens of the Valley would have the opportunity to patronize the projects they are most

passionate about, creating a direct democracy measured in dollars.

C162-3

There are several opportunities such an undertaking would facilitate:

1. The ancestral keepers of this land could be invited to participate in the decision making process. This particular land has been a place of intercultural relations prior to European arrival. This is a unique opportunity to honor the people who so masterfully tended this land and be able to build something new together.

2. It could provide a central organizing system for the various philanthropic, socially and environmentally active groups of Sonoma Valley. So much good work is being done here but it is scattered.

C162-4

3. The property could be developed as needed. This would lower upfront costs as well as reduce the strain on local roadways by construction workers. This would give the property a much more organic and welcoming atmosphere and allow it greater flexibility to precisely meet the needs of its residents.

4. The creation of a Library/Community information center. This center could provide local cloud storage and more equitable access to high powered computers. There are many young people who have been sucked into the internet, especially after the pandemic. Making a space for people to come together to work, learn and play would allow for these activities to be less inherently anti-social while making them easier to regulate.

5. A weekly open air market/festival showcasing craft and food from throughout the Bay Area. A blend between the Sonoma Farmers Market and the Plein Air Art Show, this would give local artisans greater opportunities while further distinguishing Sonoma Valley as a center of the arts.

6. A venue for hosting performances, from musical guests to local performers such as the Avalon Players, Broadway Under the Stars and Rhoten Productions.

The problems facing the SDC and Sonoma Valley are not unique.
Everywhere people are facing water shortages that force us to rethink how we use our resources and produce our food.
Our farmers need the most support so they can have the freedom to innovate, they are severely limited in their capacity to do this when their survival depends on profitability.
A rising cost of living prevents people from purchasing in line with their ethics and ideals, forcing them to choose the cheapest (and most exploitative) products.

C162-5

This cost of living is forcing young people like myself out of this region.

I (along with some peers) am starting an organization to be able to address these kinds of problems.
Broadly speaking, we are committed to learning how to adapt technologies to satisfy a particular use case.
I have spent quite a bit of time familiarizing myself with the cooperative structure in that endeavor, hence the enthusiasm about its potential application in this setting.
The first technology we are setting out to master is the personal computer.
We are not trying to innovate or redesign anything, just know what technologies are available and help people end up with the tools they actually need and make sure they know how to use and maintain them.
The goal of this organization is to be able to build the capacity to address some of the larger issues outlined above, naturally that will take quite a bit of time.

C162-6

Still, as someone who is very passionate about the Sonoma Creek, I cannot help pondering this issue of what technologies are needed to meet the needs of this valley.
The idea of a single entity providing the investment for the SDC project makes me deeply uneasy about the level of influence they would have in that situation.

Much of my family still farms and I am very acutely aware of the pressing need for our food system to evolve if my future children are going to be well fed.
It seems foolish to me to not draw on the wisdom cultivated over centuries and millennia for coexisting and thriving with this land, but all too often it seems that wisdom and those practices are flaunted by European Legacy institutions with no connection to the people who actually practice and developed it.

C162-7

I know it is likely far too late for such a proposal to be considered for this project, especially in such an undeveloped form.
If there is any chance of such an organization emerging I would gladly contribute in any way possible.

Thank you for taking the time to engage with my concerns, your responsibility and service is greatly appreciated.

Re: Sonoma Developmental Center Specific Plan
Comments on the Draft Environmental Impact Report

Dear Mr. Oh:

This letter will provide limited comments about the Draft Environmental Impact Report (DEIR) prepared for the Sonoma Developmental Center (SDC) Specific Plan.

C163-1

This letter is not intended to be an inclusive examination of the DEIR, but is intended to address key deficiencies in the DEIR, and specifically includes a comment about one unacceptable purported "policy"/"action."

Specific Plan Standard Conditions of Approval

The DEIR prepared for the SDC Specific Plan is a "self-mitigating" DEIR, and relies on the SDC Specific Plan's "Standard Conditions of Approval," as well as other federal, state and local regulations, rules, laws and policies[1] for other "conditions" that will allegedly be required of any future development, instead of proposing mitigation measures and a mitigation monitoring program.

This is unacceptable for multiple reasons.

C163-2

First, there appears to be no framework requiring that the Specific Plan Standard Conditions of Approval (hereinafter "Conditions") actually be undertaken, or requiring compliance with any existing federal, state and local regulations, rules, laws and policies (hereinafter "Policies"), and there certainly is no way for any interested member of the public to monitor whether those Conditions/Policies have been demanded of any future development, since there is no required reporting process.

[1] Reliance throughout the within DEIR on Sonoma County's expired General Plan is unacceptable. Among many issues is that mitigation measures required in the FEIR prepared for that General Plan have been eliminated/removed over years of extensive amendments to that General Plan, rendering that General Plan – at best – noncompliant with CEQA.

Second, there is no way to evaluate whether any of those Conditions/Policies are feasible, will have the purported result reported in the EIR and/or are enforceable.

Third, many of those Conditions/Policies defer analysis to some later future time, which is impermissible under the California Environmental Quality Act (CEQA), particularly since some or all proposed developments on SDC may not require any future CEQA review. This could lead to a result where the CEQA required analysis of both impacts and cumulative impacts will never have been completed prior to development on the SDC property.

C163-2

Finally, it's astounding to me that many of the Conditions that the DEIR relies on to make its findings – most of which indicate either "less than significant" impact or "no impact" – are NOT included in the required Standard Conditions of Approval. This means, of course, that those missing Conditions are not actually required, and therefore that any reliance on those Conditions to somehow mitigate impacts, resulting in those findings of "less than significant" impact or "no impact," is contrary to the purpose of CEQA, and renders the DEIR worthless.

Future Analysis Conditions:

Some of the many Conditions contained Exhibit A of the SDC Specific Plan that defer analysis to some later future time include, but are not limited to:

1. Almost all of the Utility Conditions, including "UTIL-3 Complete an analysis of the capacity of SVCSD trunk sewer to serve the SDC at full buildout." Obviously, this future analysis could result in information that the proposed future development would overload the SVCSD trunk sewer, which would be a significant impact requiring specific mitigation, if possible, and/or would cause significant unmitigatable impacts.

C163-3

2. Many of the Biological Conditions. For instance, the future required analysis of "presence of special-status species and sensitive habitats at proposed development sites" must be conducted now, as part of the DEIR, as that information would inform whether there are significant unmitigatable impacts of the proposed Specific Plan.

Missing Conditions:

As just one example of missing Conditions, in DEIR Section 16.1.3.3 "Relevant Policies and Implementing Actions" regarding Wildfire Hazards, the DEIR lists a number of "implementing actions" (hereinafter Actions) that are not contained In the Specific Plan Standard Conditions of Approval, and are not otherwise required by other Federal, State or local regulations, rules, policies, etc., including, but not limited to:

C163-4

Policies 2-31, 2-34, 2-35, 2-37, 2-39, 2-42, 2-54, 6-1, 6-19. 6-21, and 6-27

If there are Federal, State or local regulations, rules, policies, etc. that require[2] that any of the Actions listed in the DEIR, including those listed above, be implemented, specifically set forth the exact regulations, rules, policies, etc. for each said Action.

C163-4

To make matters worse, some of the Actions relied on by the DEIR in its finding of "less than significant" impact or "no impact" are vague and unenforceable, including but not limited to by leaving significant discretion to individuals/jurisdictions considering future approvals (which means that any given individual/jurisdiction in the future could make a decision that the Action required by the DEIR doesn't have to be met). This, of course, would render the DEIR's findings of "less than significant" impact or "no impact," which required the Action to be taken to make said finding, worthless, and would require reevaluation of the DEIR's findings and conclusions.

There is no question that these Conditions/Actions must be implemented for the DEIR's findings to be accurate and for the DEIR to be considered adequate. Because there is no requirement for these Conditions/Actions to be implemented, there is a very real possibility that they will be neglected or disregarded, which renders this DEIR fatally flawed.

C163-5

The DEIR's conclusions of "less than significant" impact and/or "no impact" either hangs together as a whole, with every Condition/Policy/Action required to be met, or those conclusions fail if any one single Condition/Policy/Action is not met.

One specific Policy/Action that has no basis in law and cannot be accomplished is the allegedly required "Shelter-In-Place" facility, discussed below.

C163-6

"Required" Shelter- in-Place Facility

In Chapter 3.16: Wildfire, the DEIR contains the allegedly required Action that:

> 2-54 Ensure that the project sponsor proactively plans for emergency wildfire safety by:
> . . . .
> b. Building or designating an on-site shelter-in-place facility, to be open to both SDC residents and the general public, prior to construction of the 200th housing unit, with specifications for the facility to be included as part of the Emergency Preparedness and Evacuation Plan;
> . . . .

In spite of the laundry list of Federal, State and location regulations, rules, policies, etc. listed in Section 3.16 Wildfire preamble, according to my research there is not one single United States or California regulation, rule, policy, or ANY other specific guidance about shelter-in-place facilities with regard to wildfires.[3] This complete lack of law and guidance renders this alleged required Action impossible to meet.

[2] Any such Federal, State and/or local regulation, rule, policy, etc. that either is "recommended" or allows discretion in the decision making as to whether to require compliance cannot be relied on by the DEIR to make its legally required findings.

[3] Australia has multiple regulations, rules, policies, etc. about shelter-in-place, etc. with regard to wildfires, as well as significant experience to rely on. Needless to say, CEQA does not allow reliance on a foreign country's regulations, rules, policies, etc.

Specifically, at the Federal level, there are materials covering shelter-in-place for hurricanes, tornadoes, high wind events, chemical attacks and other chemical issues, and similar situations, but not a single direction regarding shelter-in-place facilities for wildfires.

C163-7

Further, this complete lack of regulations, rules, policies, etc., let alone any guidance whatsoever, is true at both the California State and local Sonoma County level.[4]

It is clear that this Action is "required" because it will be – after construction of 200 residences – impossible to safely evacuate everyone living/working on the SDC site, requiring them to "shelter-in-place" to attempt to survive a wildfire impacting the area. However, given the complete lack of a California definition of shelter-in-place during wildfires (as well as any rules/regulations/guidance about how a shelter-in-place facility for wildfire should be constructed/utilized, etc.), I have no idea how this purported facility will save lives. Perhaps this proposal should actually be for a "temporary refuge" or for a "refuge of last resort," although that clearly is not what is being proposed.

Please state explicitly what allegedly required "specifications" for this shelter-in-place facility would render it an acceptable "mitigation measure" allowing findings of "less than significant" impact in this Wildfire section of the DEIR. Because, frankly, there is literally no evidence that specifications exist, except in a foreign country – Australia, specifically. Clearly California, and the United States, have not adopted any of Australia's rules, regulations and policies regarding shelter-in-place, stay and defend, refuge of last resort, etc.[5]

C163-8

Since this is one essential required Action for the Wildfire section of the DEIR, and there are no standards or any evidence that it mitigates evacuation during a wildfire, it cannot be achieved, and therefore every conclusion of "less than significant" impact is rendered meaningless, causing the DEIR to fail with regard to the Wildfire section.

Attached for your information please find information I gathered about shelter-in-place earlier this year.

Additional comments about Section 3.16 Wildfires:

C163-9

1. In Impact 3.16-1, the DEIR states that any future project:

> [W]ould also explore the feasibility of providing an additional east-west emergency access connection from the site to SR 12 in order to improve access to the emergency evacuation route (Policy 3-5).

[4] In response to this specific comment, I demand that the response include each and every Federal, State and local regulation, rule, policy, etc. that provides proof that the proposed shelter-in-place facility will in any way mitigate anything with regard to the wildfires that are inevitable in this property's future. I further demand that the response include each and every Federal, State and local regulation, rule, policy, etc. that provides direction and/or guidance on construction of and use of a shelter-in-place facility during wildfires. Reliance on a foreign country's regulations, rules, policies, etc., and/or experience is impermissible.

[5] Apparently California was considering "stay and defend" as a possibly acceptable policy for wildfire evacuation mitigation until the death of 173 people in Australia in 2009 who were sheltering in place, etc. and California then abandoned any consideration of same. See, among other sources: https://laist.com/news/climate-environment/this-is-why-fire-officials-dont-want-you-to-stay-and-defend-your-home

Policy 3-5 states:

> Reuse existing street network to the greatest extent feasible. Improve multi-modal access from the SDC to SR 12 by exploring the feasibility of providing an additional east-west emergency access connection from the site that includes high quality pedestrian and bicycle facilities.

C163-9

(Curiously, in Section ES.2 "Areas of Known Controversy" of the DEIR, it is stated that "The Proposed Plan features a new connection from SDC to Highway 12," which is flatly untrue – the DEIR only proposes "exploring" if said connection is "feasible.")

Again, this is a proposed "mitigation measure" Action that relies on some future possible Action that may never happen or may not be feasible (clearly the use of the word "explore" in this proposed policy does not require any action), and therefore this is an impermissible deferral of analysis to some future time.

2. The evacuation times listed in Table 3.16-1 would be hilarious if the consequences of their gross underestimate weren't so potentially dire.

C163-10

While I have never evacuated in the Sonoma Valley, I had to evacuate in the very early morning during the Tubbs fire in 2017 in Santa Rosa. It took me over 10 minutes to just drive three blocks.

There is not a chance that the evacuation times listed in Table 3.16-1 are an accurate reflection of reality during a wildfire disaster.

Please state what modeling evaluation methods were used to arrive at the DEIR's evacuation times. The purported "evacuation analysis for this EIR prepared by Kittelson & Associates" will apparently not be made available for public review; I explicitly requested that analysis and my request was denied. This renders it impossible for any decision maker or member of the public to adequately evaluate this analysis and comment effectively.

After receiving this denial, I did a little research on Kittelson & Associates, learning that of all the many listings on their website of work they have performed/ideas they have, only two items had anything to do with evacuations: "Capacity and Strategy Assessment of North Carolina Hurricane Evacuation Routes" and "Emergency Evacuation Strategies for Every Community." The first item is categorized as "work," and the second item as "ideas."

C163-11

In the description of the first item, which obviously isn't relevant except in the most general sense, since it's discussing freeway behavior and there's generally a great deal of advance notice of hurricanes, Kittelson's website states that they modified the analysis tool Freeval with North Carolina Department of Transportation tools and strategies to evaluate reversal of North Carolina's freeway lanes to allow evacuation during a hurricane. Freeval's website states that it is "powerful macroscopic freeway analysis tool based on Highway Capacity Manual (HCM)." The Freeval website also only lists the North Carolina freeways as a specific use.

Did Kittelson use Freeval to evaluate evacuation from SDC during a wildfire event? I have no idea.

For Kittelson's "Ideas" listing about emergency evacuations in general, their website states that they partnered with Stephen Wong, Ph.D., who does research on (among other things) emergency evacuation strategies.

C163-12

Interestingly, in a 2022 paper co-authored by Dr. Wong on California wildfire evacuee behavior, the following statement is made:

> While extensive research has been conducted on hurricane evacuation behavior, little is known about wildfire evacuation behavior.
>
> https://scholar.google.com/citations?view_op=view_citation&hl=en&user=Y7LlCiAAAAAJ&citation_for_view=Y7LlCiAAAAAJ:Tyk-4Ss8FVUC

Did Kittelson partner with Stephen Wong to evaluate evacuation from SDC during a wildfire event? I have no idea.

It is unacceptable to not release the actual Kittelson & Associates evacuation analysis. Because of this refusal to release this analysis, the public has had no opportunity to evaluate same and provide comments. It's not the public's job to provide an alternative analysis; it's the DEIR's job to prove that its analysis is accurate, and in this regard the DEIR has failed.

3. The DEIR is internally inconsistent with regard to its conclusions of "less than significant" impact regarding Impact 3.16-1. As stated above, and by other commenters, the alleged "additional east-west emergency access connection" is not required by the DEIR, and is only to be "explored" for possible feasibility of same. However, Impact 3.16-1 clearly states that a condition for the finding of "less than significant" impact is that the project must:

C163-13

> "[Ensure] that every parcel within the Core Campus has two routes for ingress and egress during an emergency"

Without the additional access to the property, I believe this is impossible to accomplish. If you believe that every parcel will have two means of ingress/egress without the possible "additional east-west emergency access connection," please explicitly show how that will be accomplished.

4. Also in Impact 3.16-1, the following is stated:

> "Historically, a fire approaching from the west may be less likely, and therefore did not warrant further specific analysis."

C163-14

While a fire approaching the SDC site from the west "may" be less likely, that is not an adequate reason for not evaluating and analyzing the impacts therefrom. If the DEIR had stated that this possibility "is" less likely, perhaps the conclusion that no analysis was needed could have been reached, but "may" certainly implies that it is possible, and therefore the possibility should have been addressed and evaluated.

Thank you for your consideration. Please do not hesitate to contact me if you have any questions.

Very truly yours,

Sonia E. Taylor

8 March 2022

SHOULD "SHELTER-IN-PLACE" DURING WILDFIRES EVER BE CONSIDERED AN ALERNATIVE TO EVACUATION AND/OR AS AN ACCEPTABLE MITIGATION MEASURE?

C163-15

The short answer is an emphatic "no."

I'm starting to hear people talk about "Shelter-In-Place" as an equivalent alternative to wildfire evacuations, or even as a CEQA mitigation measure to allow development in fire prone communities.

Sheltering in place during a wildfire conflagration should never be a first choice, as review of information from communities who have Shelter-In-Place policies and experience makes clear, and that is backed up by the opinion of experienced fire professionals. Everyone agrees that while sometimes it can be the only solution for people who have waited too long to evacuate or who are caught with a wind driven wildfire bearing down when it could be even more dangerous to attempt to drive out, it should never be considered the first choice. Ever.

In fact, Shelter-In-Place is the last resort.

Critical Experience-Driven Shelter-In-Place Lessons:

C163-16

1. There is no guarantee of safety or survival while sheltering in place.
2. Shelter-In-Place is not a passive experience; instead it requires physical, mental and emotional fitness, and those who Shelter-In-Place must actively work hard to survive.
3. Shelter-In-Place comes with high risks and should always be a last resort.

Locations with Shelter-In-Place Experience:

In California, there are two locations with Shelter-In-Place experience: Rancho Santa Fe in San Diego County and Pepperdine University in Malibu. Australia also has many years of Shelter-In-Place experience. I'll discuss each location's policies, recommendations, experiences and the unintended consequences, below.

<u>Rancho Santa Fe</u>

Rancho Santa Fe, in San Diego County, is often brought up as an example of how "Shelter-In-Place" is an alternative to providing adequate evacuation routes and planning.

C163-17

Nothing could be further from the truth. In Rancho Santa Fe, the community was built to have the best odds possible of surviving wildfires – although it was built to 2003-04 Building/Fire Codes, and we know much more now than we did then, raising the question of whether the community is still adequately protected.

Moreover, Shelter-In-Place is **not** considered the first or safest choice for residents, as the Rancho Santa Fe Fire Department made clear on December 7, 2017:

C163-17

> "Clarification for our Shelter-in-Place communities: While your communities were built to a specific standard designed to withstand wildfires, they will still be evacuated if a wildfire is threatening. **If evacuation orders are issued for your community, please evacuate and evacuate early. That is still the safest scenario for residents and emergency personnel.** Only if you are unable to do so **may** it be safer to stay in your home, or shelter-in-place, than to evacuate under hazardous conditions." (Emphasis added)
>
> https://www.rsf-fire.org/shelter-in-place/

Further, the materials distributed to residents of Rancho Santa Fe's "Shelter-In-Place" communities make clear that evacuation is still the best option, and that sheltering in place is not. (https://www.rsf-fire.org/wp-content/uploads/2016/09/SIP_for_web.pdf)

Following is the checklist distributed to residents in these communities considering whether to evacuate or Shelter-In-Place:

C163-18

> "Should I stay or should I go Quiz":
>
> - Are you physically fit to fight spot fires in and around your home for up to *10 hours or more*?
> - Are you and your family members mentally, physically and emotionally able to cope with the intense smoke, heat, stress and noise of a wildfire while defending your home?
> - Can you protect your home while also caring for members of your family, pets, etc.?
> - Do you have the necessary resources, training, and properly maintained equipment to effectively fight a fire?
> - Does your home have defensible space of at least 100 feet and is it cleared of flammable materials and vegetation?
> - Is your home constructed of ignition resistant materials?
>
> If you answered "No" to *any* of these questions, then plan to *evacuate early*.

In addition, CalFire's "Ready Set Go Plan" reiterates multiple times that you should **evacuate**, not "Shelter-In-Place," and has a section titled "If You Are Trapped – Survival Tips." That checklist for people who are trapped includes "Patrol inside your home for spot fires and extinguish them," and "Patrol your property and extinguish small fires." (https://www.fire.ca.gov/media/4996/readysetgo_plan.pdf)

C163-19

Obviously, sheltering in place is NOT a passive experience. Individuals/families can't remain in their house and just safely wait for the fire to pass. Individuals must be able to fight spot fires, be mentally, emotionally and physically fit, and have adequate resources and training to have a chance of surviving sheltering in place (and even then, there are no guarantees). Having a structure built to the best fire safety codes, even with "perfect" defensible space, is not enough.

During a life threatening event, most people are not going to have the training, physical, mental and/or emotional endurance, or the resources and abilities to be able to cope with sheltering in place, which will not only be dangerous for those individuals, but for the Fire Department, who will likely be called in to rescue them.

C163-19

Sheltering in place should never be the first choice, should never be considered an acceptable substitute for safe and sufficient evacuation routes and planning, and should never be considered an acceptable CEQA mitigation measure in lieu of adequate evacuation routes and planning.

Australia

Australia historically had a "Prepare, Stay and Defend or Leave Early" policy, which has undergone significant reevaluation after the 2009 Black Saturday fires, when people died in their homes while sheltering in place. Currently the Australian policy is known as "Prepare. Act. Survive." and promotes evacuation as the safest option – well before a fire is a threat.

C163-20

The genesis of Australia's policy is that oftentimes their fires are explosive and unpredictable, leaving residents with no time to evacuate. They have identified "Bushfire Safer Places" and "Bushfire Last Resort Refuges" for those emergency situations.

A "safer place" is a "place of relative safety," that "may save your life but they do not guarantee safety," and may be subject to "sparks, embers and smoke which may start secondary fires in vegetation, gardens and structures." A "last resort refuge" is to be used "only if you cannot reach a Bushfire Safer Place," and is "not suitable for extended use," providing only limited protection, with no guarantee of safety. (See, as one example of many, https://www.cfs.sa.gov.au/prepare-for-a-fire/be-prepared/bushfire-safer-places/)

Because of Australia's development patterns, and because of human nature (which is unpredictable, at best), Australia's policy for the times when residents either will not or cannot evacuate called "Prepare. Act. Survive.", which is essentially "Shelter-In-Place."

C163-21

To stay in a building during a fire, however, is acknowledged by Australian officials as requiring significant preparation, including a written and practiced bushfire plan, as well as available water with pumps and hoses and a power source. Of course, the first crucial decision about whether to Shelter-In-Place involves ensuring that the building has been constructed for best survival probabilities during a fire, along with having perfect defensible space. After that, though, the Australian literature for "Prepare. Act. Survive." emphasizes similar issues as does Rancho Santa Fe.

The first priority is always to evacuate early. Only if you get "caught" should you stay, and if you stay, you should be prepared, with a plan. The recommended preparation includes being mentally, emotionally and physically capable, because individuals will likely experience spot fires, smoke, heat and darkness. Individuals will also likely not have power or running water, and may not have Internet or cell phone connections.

C163-22

Prior to the arrival of the fire, Australian materials state that individuals sheltering in place will have to fight spot fires, prepare their home, and patrol inside and outside extinguishing embers and fires. When the fire arrives, individuals sheltering in place will have to take shelter inside the house, while also patrolling inside the house putting out embers and fires. After the fire has passed, individuals sheltering

C163-22

in place are told they will have to continue to put out spot fires, continue patrols inside and outside their house, and hose down the house as needed.

Australia has multiple resources about bushfires, including at https://www.dfes.wa.gov.au/site/ and https://www.abc.net.au/emergency/plan-for-emergency-bushfire/12412042 plus many more (It's important not to refer to anything dated 2010 or earlier, since policies changed after 2009).

In other words, Australia does not consider sheltering in place to be a passive activity. "Being in a bushfire could be the most traumatic experience of your life. You may have to fight spot fires for hours, even days at a time." Their bottom line recommendation is: "The best way to survive a bushfire and avoid radiant heat is to leave early and be away from the threat."

Pepperdine University

C163-23

When Californians cite Shelter-In-Place policies, Malibu's Pepperdine University comes up most frequently, since some of their students sheltered in place during the 2018 Woolsey fire. Unfortunately, I see little evidence that Pepperdine's policy is a realistic one that should be applied elsewhere.

Pepperdine allegedly has a "detailed shelter-in-place plan," but I have been unable to find any evidence of said detailed plan – all I can find are general policies. Pepperdine's 2010-11 Emergency Preparedness Guide discusses their Shelter-In-Place policy in general terms (it is not the "detailed plan"), but also states:

> "Have an evacuation plan in place and identify two exit routes from your neighborhood. If you are asked to evacuate by fire or police officials, do so immediately."

(the 2020-21 Guide is apparently only available to students, requiring student ID to review)

The President's August 2020 letter states: "Through diligent training, equipping, studying, staffing, and commitment, we are prepared to be our own first responders **until** local and state agencies reach campus." (emphasis added)

C163-24

Clearly Pepperdine's Shelter-In-Place plan relies on the LA Fire Department's assistance on the Malibu Pepperdine campus, which is confirmed in their web-based general policies. Pepperdine's own firefighting resources are two "fire trucks" and their " expertly trained staff" "able to respond 24/7" (https://pepemergency.files.wordpress.com/2020/09/fy21-presidents-letter.pdf), but their general web-based policies state that Pepperdine will "host the Los Angeles County Fire Department's Incident Command Post (ICP) on the Malibu campus for wildfires in the area." Further, their Emergency plans state: "University officials maintain and develop relationships with first responders, government officials, utility providers, and others who could assist the University during emergencies." (See, https://emergency.pepperdine.edu/brush-fires/, https://emergency.pepperdine.edu/emergency-operations-committee-eoc/, https://emergency.pepperdine.edu/shelter-in-place/)

This makes clear that Pepperdine is "hoping" that the LA Fire Department will be on the campus pursuant to the relationships Pepperdine has with them, so Pepperdine won't have to rely on their own staff for protection of life and property, or at least only until the Fire Department arrives on site.

Although Malibu has prepared an August 2020 Mass Evacuation Plan, Malibu's General Plan is dated 1995, and I presume the associated FEIR/DEIR is equally old (it's not readily available online). This means that Malibu doesn't have a city-wide EIR that complies with current CEQA requirements to evaluate potential impacts to existing wildfire evacuation plans, which I consider a significant problem, because all of Malibu is designated as a Very High Fire Hazard Severity Zone. C163-25

Malibu's 2020 Mass Evacuation Plan unfortunately mentions Shelter-In-Place as if it's a "safe" option, without any discussion of the critical difficulties with doing so, or any indication of when orders to Shelter-In-Place might be issued. The Plan also identifies "Safe Refuge Areas," all of which are on Malibu's beaches – Pepperdine's campus is apparently not considered a "Safe Refuge Area." The Plan makes clear, however, that these areas, no matter how named, are not necessarily "safe" and that evacuation may be necessary:

> "Safe Refuge Areas are temporary staging areas in a mandatory evacuation. They may also be used to help move traffic off the road to speed up the movement of people out of the immediate danger area. Residents seeking refuge in a Safe Refuge Area will be notified that the Safe Refuge Area is not a 'hard or permanent shelter' and in the event, the evacuation order involves the Safe Refuge Area, those residents will be required to evacuate."
>
> (https://www.malibucity.org/DocumentCenter/View/26832/FINAL-Evacuation-Plan-8192020)

I grew up in Malibu, so am familiar with Malibu in general, as well as the Pepperdine campus. Pepperdine established their Shelter-In-Place policies because: 1) Pepperdine is – for Malibu – in a relatively "open space," 2) their 3000 +/- students may not have the ability to evacuate (many don't have individual vehicles on site), and 3) any significant wildfire in Malibu will likely cause gridlock on the 2 lanes each way Pacific Coast Highway (the only real way to evacuate away from a typical wildfire). Notwithstanding these reasons, I believe Pepperdine's Shelter-In-Place policy has significant downsides. C163-26

First, any Fire Department will always default to protecting people over buildings, and when people are sheltering in place, that will divert Fire Department resources to protect those people, as appears to have happened during the 2018 Woolsey fire (I've reviewed multiple newspaper articles about the Woolsey fire, as well has had personal communications with Malibu residents). Second, even though Pepperdine is (relatively) open space and has (relatively) fire safe buildings, that cannot protect students from smoke inhalation, from radiant heat, from fear, or from the possibility that they might have to run for their lives if a fire conflagration were to invade the campus. C163-27

There also is no available evidence about who will take the necessary active roles required during Shelter-In-Place. While the University has two "fire trucks" (the photo online is not of full size fire engines), there is no indication of the number of staff assigned to those trucks or about their training, and, frankly, since the campus is 830 acres, there is no possibility that those two trucks could effectively put out all embers and spot fires, or effectively respond should a more significant fire start or enter the property. Unless, of course, the LA Fire Department is already also on site doing that actual work, which seems to be Pepperdine's assumption. C163-28

There is also no discussion of whether the students and staff sheltering in place are physically, mentally and/or emotionally capable of doing so.

In fact, in spite of Pepperdine's 30+ year old Shelter-In-Place policy, during the 2018 Woolsey Fire apparently many of the students did evacuate. And, as a result of the Woolsey Fire, it appears that there will be a reevaluation of Pepperdine's Shelter-In-Place policies, although there is no evidence I can find of any such reevaluation to date. C163-29

As we've seen around the state, when faced with a life threatening situation such as a wildfire, the odds that residents and personnel will behave in a logical fashion is decreased, oftentimes substantially, and when a large portion of the population consists of very young adults, it should not be surprising when things don't go as planned.

Shelter-In-Place can be a "tool" in the "tool kit," but should never be the first choice. It should only be used when evacuation has become impossible. I believe Pepperdine should be required to keep adequate buses, with trained employees available to drive them, to fully evacuate the entire campus as early as possible, and should keep their Shelter-In-Place policy only for instances where there is not adequate time to evacuate. C163-30

I will be watching closely to see how Pepperdine will prepare for a future of wildfires with their University full of young adults in a very high fire danger zone now that fire season is 12 months long, and will be watching to see how they change their Emergency plans.

I can find no evidence that Pepperdine has a realistic Shelter-In-Place policy, and do not believe their policy should be used as an example for any other situations.

Conclusion:

Shelter-In-Place is not an appropriate solution for most people. C163-31

As one Australian website states: "Being in a bushfire could be the most traumatic experience of your life. You may have to fight spot fires for hours, even days at a time." (https://mybushfireplan.wa.gov.au/stay-and-defend)

If California communities, or California in general, want to consider using Shelter-In-Place as an tool for what is now our Climate Change driven year-round fire seasons, they should first carefully consider the realities and requirements of Shelter-In-Place.

Shelter-In-Place as a Mitigation Measure:

C163-32

Shelter-In-Place should never be considered an acceptable mitigation measure to allow the construction of buildings or location of businesses in high/very high fire danger areas without adequate evacuation routes, personnel and planning.

Shelter-In-Place requires each individual to assess their own personal physical, mental and emotional fitness and their ability to fight spot fires, survive darkness, heavy smoke and heat, and more. Therefore, no development can either require or assume that the residents/employees and visitors will qualify to Shelter-In-Place.

As an example, let's assume that a development of homes is permitted in a high fire danger zone, but only one means of egress is required, and that road is narrow, because instead of requiring the

development to be constructed so everyone can safely evacuate in an emergency, the project approval instead permits the development to have one or more locations where the residents will Shelter-In-Place.

C163-32

These are the questions that logically arise: Do all purchasers/renters of the homes have to guarantee that they are physically, mentally and emotionally capable of sheltering in place, will do so during any fire, and will always remain capable? What happens if a resident is injured, develops an illness, or just gets older – would they then be required to move out of the development? What if someone has one or more children – would they be required to move because the children couldn't qualify as capable? What about visitors or employees at the development – would they also be required to agree that they are physically, mentally and emotionally capable of sheltering in place before they visit or take a job in the development?

C163-33

> "Do not underestimate what is required to maintain your house as a place of safety during a bushfire. Actively defending your property will take huge physical and mental effort for many hours before, during and after the fire, as conditions will be unbearably hot. You need the right equipment, protective clothing for all your family or household members, and a property prepared to the highest level."
>
> https://www.parliament.wa.gov.au/publications/tabledpapers.nsf/displaypaper/3814042a195d0712a147f5514825791a00045feb/$file/4042.pdf

As it would be legally impossible to require any individual to be capable of sheltering in place at any time – again, it is an **active** activity, not a passive activity – Shelter-In-Place should never be used as a mitigation measure.

Shelter-In-Place as a "Tool":

Currently, California courts are starting to issue decisions requiring adequate evacuations and planning, supported by California's Attorney General, and I believe that's where we should be focusing our time and attention – on safe evacuations and evacuation planning.

C163-34

However, if California communities want to consider using Shelter-In-Place as a tool, in addition to evacuation, It would be wise for them to thoroughly educate themselves about what Shelter-In-Place actually consists of. As is made obvious above, sheltering in place requires a building – and all surrounding buildings – constructed to the highest fire resistant standards with perfect defensible space. Then, the individuals sheltering in place will be physically, mentally and emotionally challenged for many hours, with no guarantee of their survival or safety.

Identification of "Safer Places" and/or "Last Resort Refuges" may make sense to give people a place to go if they have attempted to Shelter-In-Place but then have to run, or for people who are caught because they wait too long to evacuate, but there's no question that those areas should only be used if absolutely necessary. Therefore, those areas – if identified – would need to be explicitly identified as areas where people's safety is not guaranteed, and where they might, in fact, have to run for their lives.

C163-35

If identification of those locations will make individuals feel like they don't really "have" to evacuate, I believe their identification would be a disaster in the making. With human nature the way it is, I have

deep concerns that identification of “Safer Places” and even “Last Resort Refuges” would make individuals complacent and less likely to evacuate when requested to do so.

C163-35

While firefighters will always try to first protect against loss of life, I believe that adding to their burdens by putting individuals in what are really unsafe locations, instead of focusing on safe evacuations, is a very bad idea. Sheltering in place puts not just the individuals sheltering in danger, but also the firefighters, and is very likely to delay essential fire suppression efforts. Time spent rescuing people just allows wildfires to grow larger.

The bottom line is that as Climate Change impacts cause more intense, frequent and fast moving wildfires, with devastating losses to lives and property, we should be focused on data-supported analyses of existing road capacity and impacts to evacuation response times during wildfire emergencies. We must – instead of trying to find a magic bullet to allow more development in high fire danger areas – mitigate existing evacuation hazards and ensure adequate evacuation routes and planning, not create new evacuation hazards that will likely result in loss of lives.

C163-36

I believe that Shelter-In-Place is a terrible idea, and should only ever be used as an absolute last resort.

SCTLC

SONOMA COUNTY TRANSPORTATION & LAND-USE COALITION

September 23,2022

Mr. Brian Oh
Comprehensive Planning Manager
Permit Sonoma
2550 Ventura Ave.
Santa Rosa, CA 95403

Via email to Brian.Oh@sonoma-county.org

Re: Sonoma Development Center Draft Specific Plan and Environmental Impact Report

Dear Mr. Oh —

The Sonoma County Transportation and Land-Use Coalition Appreciates this opportunity to comment on the Draft Specific Plan for the Sonoma Development Center (SDC) and to raise questions regarding its Draft Environmental Impact Report (DEIR). Our comments come in the shadow of legislation recently signed by the Governor to address the Climate Crisis by reaching state-wide carbon neutrality, and improvements in available funding for this purpose. We also note that the goal of the Sonoma County Regional Climate Protection Authority is to reach net zero greenhouse gas emissions by 2030. C164-1

We have queries and concerns about two issues in the Specific Plan and DEIR:

How seriously would construction of a thousand new housing units at the SDC impact greenhouse gas emissions and the County's plans to reach carbon neutrality?

State law (SB 375 - Steinberg - 2008) calls for reductions in driving (VMT) in order to address the climate crisis. The draft environmental analysis finds that the SDC plan to reduce driving by 15% is <u>not</u> likely to succeed. Sonoma County's Regional Climate Protection Authority aims to reach carbon neutrality by the year 2030, which will require annual reductions in driving at a rate of up to 6% per year. (Please respond to the attached detailed discussion) C164-2

How does the plan to demolish SDC structures impact greenhouse gas emissions at the SDC, as compared with reuse?

Although the reconstruction of a building may be proportionately more labor intensive than its replacement, the resulting GHG emissions may be significantly increased. (Please respond to the attached detailed discussions) C164-3

SCTLC, 55 Ridgway Ave., Suite A, Santa Rosa, CA 95401-4777
Address correspondence to willard@sonic.net

Authors of the DEIR note that failure to deliver a specific plan to the Department of General Services within the next few months might upset the effort to retain local control of the future of the property. However, much has changed recently. The State is now committing $54 billion over the next five years to address the climate crisis. This funding is to be matched by $9 billion per year of federal climate investments in California.

C164-4

In the light of these changes in the fiscal outlook, shouldn't the State Department of General Services be much less concerned about the need to fund $100 million worth of remediations to the existing SDC property?

Wouldn't proposed project alternative units at the SDC affect the environment in cumulative ways not yet discussed in the Program DEIR, such as the potential redevelopment of the nearby Hanna Boy's Center and other North Sonoma Valley projects currently in the permitting process or planned within Permit Sonoma? The County's concerns should now be focused on limiting suburban sprawl, and salvaging existing structures wherever possible.

C164-5

For these reasons the SCTLC recommends that Sonoma County act now to develop the environmentally superior project, which is Historic Preservation/Reuse. The timeline should be re-negotiated, and the Specific Plan for the SDC should be refocused on reducing greenhouse gas emissions, HISTORIC PRESERVATION AND REUSE, and on protection of the site from wildfire risks.

If you wish to discuss any of these issues, please contact me at scbaffirm@gmail.com, or call me at 707-5766632.

Cordially,

Steve Birdlebough, Chair,
Sonoma County Transportation and Land-Use Coalition

cc: Senator Mike McGuire
Supervisor Susan Gorin
Commissioner Jacquelynne Ocana

WHY IS A PLAN PROPOSED THAT IS INCONSISTENT WITH LONG-ESTABLISHED COUNTY AND VOTER APPROVED COMPACT GROWTH POLICIES THAT PROTECT THE ENVIRONMENT?

The DEIR is inadequate, because it fails to recognize that the Proposed Plan is inconsistent with the County's long-standing land use and open space protection policies, with its compact development goals, and with its voter-approved urban growth boundaries. The DEIR fails to justify a major reversal of the County's existing land use policies that have served to maintain its rural character and protect the environment. C164-6

Page 14 of the DEIR does acknowledge that: "Overall, the Historic Preservation Alternative is the environmentally superior alternative." However, without being specific, it goes on to assert that the environmentally superior alternative "would not support key project objectives related to increased housing supply . . . and *long-term fiscal stability* to the same degree as the Proposed Plan." What is meant by "fiscal stability?"

The DEIR fails to mention that there are nine cities and many urbanized areas in Sonoma County that offer more environmentally beneficial housing sites than the SDC. Why does the DEIR fail to admit that the Proposed Plan is in grave conflict with established Sonoma County policies to direct major residential developments into its cities and urbanized communities? The history of these policies is described on the Permit Sonoma web page as follows: C164-7

"The 1978 General Plan included land use policies intended to focus development within the urban areas, which included the eight incorporated cities. The concept of "community separators" was also first introduced in the 1978 General Plan, which maintained open space between the cities and preserve their distinct community identities along the Highway 101 corridor. A total of 9,300 acres of land considered under pressure for development were designated as community separators: areas north of Santa Rosa; areas north of Rohnert Park and south of Santa Rosa; and Meachum Hill, just north of Petaluma."

"The primary focus of the 1989 General Plan was the preservation of the County's agricultural and resource lands that form the scenic resources of the County. Additional policies were added to the Open Space Element for the protection of designated streams. Community separator policies were strengthened and additional Scenic Resources protections were added to include designated Scenic Landscape Units and Scenic Corridors. Allowable densities were reduced in rural areas while other areas identified as unincorporated communities were allowed higher densities." C164-8

"In 1996, the Community Separator policies became the genesis of the Community Separator ballot measures that required voter approval of any changes in land use density or intensity if the cities had adopted urban growth boundaries. In 1998, an amendment to the General Plan was adopted adding another Community Separator south of Petaluma."

"The County's efforts in preserving rural landscapes had a profound effect of encouraging the cities to adopt urban growth boundaries (UGBs) as part of their General Plan updates. Today all nine cities have adopted urban growth boundaries that were subsequently enacted by voter

initiatives. The Local Agency Formation Commission has followed the County's lead by adopting policies that mirror the city-centered growth policies of the Sonoma County General Plan."

C164-8

"GP 2020 continued the principals of city- and community-centered growth, with compact boundaries and community separators, and protecting agricultural land. GP 2020 includes robust policies preventing the expansion of urban services. The Agricultural Resources Element precludes converting agricultural lands to nonagricultural uses and establishes policies to increase the economic viability of agricultural properties. The Circulation Element emphasizes alternative modes to automobiles. GP 2020 also updated eight area plans and called for repealing all others where policies have already been implemented or could be incorporated into the General Plan. Sonoma County currently has eight specific and area plans that remain in effect as follows, and one that is currently being developed: - Airport Industrial Area Specific Plan (update in progress) - Bennett Valley Area Plan - Franz Valley Area Plan - Penngrove Area Plan -Petaluma Dairy Belt Area Plan -The Springs Specific Plan (draft) - Sonoma Mountain Area Plan - South Santa Rosa Area Plan - West Petaluma Area Plan." [1]

C164-9

WHY IS A PLAN PROPOSED THAT IS INCONSISTENT WITH SONOMA COUNTY GOALS TO ADDRESS THE CLIMATE CRISIS BY REDUCING VEHICLE MILES TRAVELED?

Sonoma County has been a leader in efforts to reduce greenhouse gas emissions, and at page 218, the DEIR recognizes that in 2021 the County's Regional Climate Protection Authority (RCPA) has set a goal of carbon neutrality by the year 2030. This Is an ambitious goal, and California law recognizes that success will depend strongly on reduced driving as well as shifts to electric vehicles.[2]

According to the Authority, the transportation sector is responsible for 60% of the county's GHG emissions.[3]

C164-10

The DEIR also acknowledges that Sonoma County Resolution 18-0166 calls for reductions in greenhouse gas emissions, and that "reducing travel demand through focused growth" is the second-identified strategy for such reductions. (DEIR, p. 217) Why does the DEIR neglect to explain the need for the SDC project to actually accomplish significant reductions in vehicle miles traveled (VMT).

The DEIR "conservatively" states that despite the extensive discussion of VMT reduction goals and policies in the Proposed Plan, it must be assumed that the construction of one thousand

---

[1] https://permitsonoma.org/longrangeplans/proposedlong-rangeplans/generalplanupdate/generalplanhistory

[2] See SB 375 - Steinberg - 2008, Sec.1. (c) "Greenhouse gas emissions from automobiles and light trucks can be substantially reduced by new vehicle technology and by the increased use of low carbon fuel. However, even taking these measures into account, it will be necessary to achieve significant additional greenhouse gas reductions from changed land use patterns and improved transportation. Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32."

[3] See, https://rcpa.ca.gov/wp-content/uploads/2020/12/Sonoma-Climate-Mobilization-Strategy-Adopted-2021-03-08.pdf at page 9)

dwelling units on the SED's rural landscape would result in significant and unavoidable increases in VMT. It finds that "no other feasible mitigation measures are available," and, "These impacts would also be cumulatively considerable." (DEIR, p. 9)

C164-10

Three years ago, agencies in Sonoma County began announcing climate emergency goals that focused on 2030 as a target year to reach "carbon neutrality." More recently, an analysis of Sonoma County driving habits by the County Transportation Authority has revealed that merely providing bicycle-pedestrian trails and bridges are not sufficient to reach those goals. We will need changes in culture as great as those of the recent pandemic.[4]

C164-11

The DEIR shows that the policies and the proposed SDC Specific Plan will undermine local, regional and state policies and commitments to address the climate crisis due to the significant and unavoidable *increases* in VMT. The DEIR shows no way to offset or mitigate the extra driving generated by the new housing, retail, and commercial development proposed for the SDC. The County must not approve this project as proposed with these impacts if it is serious about addressing the climate crisis.

Taking this approach would fail to meet the standards contained in CEQA because an increase in VMTs *can* be avoided by focusing the construction of new housing in existing compact communities rather than building many housing units at the SDC, and renovating all of the useable existing buildings, The DEIR and Specific Plan must be revised to provide for steady reductions in VMT, consistent with

Our pre-COVID driving habits caused transportation to become the largest source of the greenhouse gas emissions (GHGs) that feed the climate crisis. Long commutes in single-occupant vehicles have been a major source of GHGs, although most car trips are less than 5 miles.

C164-12

Please describe the justifications for the Proposed Plan, which would locate a thousand families in a sprawling suburban landscape that would hamper all of the above efforts.

State Route 12 is already at capacity, and Caltrans has commented that it does not support an additional road connecting Arnold Drive and SR-12. Please describe the effects of a failure to provide this connection.

---

[4] The *Mobilization Strategy*, *id,* at page 14 states: "To address the land use challenges, the municipalities and County will need to continue to focus development near transit and in Priority Development Areas. For example, Santa Rosa's recent update to its Downtown Station Area Plan was designed to facilitate more development in its downtown core."

WHY ARE EMBEDDED GREENHOUSE GAS EMISSIONS IN EXISTING STRUCTURES AT THE SONOMA DEVELOPMENT CENTER LEFT OUT OF THE ENVIRONMENTAL CALCULATIONS?

C164-13

Why has County Staff/Consultants done the following, and what are your mitigation recommendations?:

The EIR & SP preparation violates BPC6731, without a Civil Engineer in responsible charge of Planning?

The EIR has committed the County to a course of action, new development, prior to EIR's Certification?
Historic Reuse appears proper, yet each price consequence results in expanded project impacts.
What is the economic obsolescence impact to the Springs/Glen Ellen of the proposed project?

The EIR and SP propose demolition of 1.2M sq-ft of buildings, along with the 1M+0.35M gal fresh water tanks, see Figure 4.3-1: "Historic Assets", without reference to local Wildfire protection. Why?

The EIR & SP propose demolition of Historic Firehouse (c1932) without wildfire impact consideration?
EIR & SP neglect wildfire consideration, as not "High Fire Risk", though analysis excluded SDC?

Why does EIR & SP use uncalibrated (unrealistic) models, eg without reference to actual fire evacuation?

C164-14

The EIR develops a series of conclusions as analysis, beginning after point in time of project completion?
The EIR assumes no cumulative effects to the proposed project; eg. GHG's and solid waste, but does not include project specific demolition, nor constructed lifecycle, GHG's & wastes? Why?

The EIR assumes no cumulative effects from combining the proposed project wastewater into a down-stream waste treatment facility when a historic facility is located on site to recharge the wetlands/creek.

SDC is an Historic opportunity to propose and develop an integrated environmental & climate protective response to wildfire, in a traumatized and sensitized area, without which this proposal has a significant cumulative negative impact to the local & regional environment due to unrealized wildfire protections.

Why is EIR & SP preparation biased in favor of Standard-Operating-Procedure for new development?

Why does it appear the SDC EIR and associated Specific Plan (characterized by the County's preferred Proposed Project Alternative) have defined and committed the County of Sonoma, as Lead Agency under CEQA, to a series of specific decisions, plans, and/or alternatives without fully considering other acceptable plans (under legislation 14670.10.5), alternatives, mitigation measures, and the Null Project.

C164-15

Please explain why the County (Permit Sonoma) has allowed the EIR to be produced which does not address the mitigatable cumulative effects of waste generated by the proposed alternative over the Null Project hypothesis, to the extent where recommended building demolition of ~1.2M sq-ft produces a minimum of 161,000 cy of debris equal to 67 years of operation of the Proposed Project Alternative in addition to the equal amount of debris produced by the eventual demolition of the Proposed 1.2M sq-ft Project (∑=322,000 cy, or 134 years at the rate of the Proposed Project at completion); together with the project waste there will be an average cumulative waste of 19.8 tons/day or 1.5% of daily averages

C164-16

(2016-2020, per SP pg 603) ? Since we are already transferring all our solid waste away from Sonoma County because we do not have local landfill capacity, and our waste charges ($135/ton) are double the charge for Hazardous Waste ($50.97/ton asbestos waste) taken to Kettleman Hills landfill, this must be considered a significant mitigatable impact by Reuse and Historic Preservation of the existing buildings. At the local waste costs, this represents >$960,000/yr = ~$65M over the 67 years, from these 3 sources. C164-16

Why is no mention made in the EIR or SP of GHG's which were imbedded and carried within the existing constructed buildings which will be released into the atmosphere by their demolition, nor is any mention made of the GHG emissions which are imbedded in the production of the new materials and resources which are expected to replace the demolished SDC buildings, these are significant long term mitigatable cumulative effects? Why has the EIR not addressed either of these cumulative GHG effects, from demolition, neither the before demolition GHG emissions sequestered in the existing buildings which will be released, nor the GHG emissions released in the production of the replacement 1.2M sq-ft of buildings together with their own lifecycle emissions released upon their demolition? These GHG's must be considered a significant mitigatable impact by their Reuse. C164-17

Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish?

Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-of-the-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building? C164-18

Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to "In-Situ" mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the buildings? C164-19

Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, "a death by 1000 cuts" to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation? Can you explain how you are mitigating this neglect, in producing a cycle of C164-20

demolition and reconstruction which has a cumulative effect on the environment due to exploitative expectations, the expectation that 'everything I have should be new', 'we need the new', 'I need the new'? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis? C164-20

County's evidentiary record is anecdotal @best. Sonoma Valley represents a national treasure, as described as, "The Valley of the Moon". Sonoma is the Native Indigenous American name for the valley. When White settlers asked what Sonoma meant, Natives pointed to the trace of the Moon setting and rising behind the eastern ridgetops during certain times of the year, the White's interpretation was that "Sonoma" meant 'the valley that the Moon touches' ("The Valley of the Moon"). My Anthropology studies and linguistic avocation has taught me to hear the phonetic sounds (the basic phonemes), particularly for significant language words, words that have cultural, spiritual, or international usage, such as words which are adopted into a language from another. The basis of this study is Multi-critical analysis as opposed to diacritical analysis. Typically there will be very little understanding of the actual meaning of an adopted word. Then, if it retains a high referential standing, it indicates it's an adopted word, not merely a forgotten word. Typical adopted words with high Referential standing and forgotten meanings are: Alleluia, precious, and Amen. C164-21

In this case we have Sonoma: what are the phonemes for "Sonoma", they are "Tsu" (not Tso) & "Noma"; so in this case our supposition is correct, because these are two very important international words. "Tsu" or "Tzu" represents the name given by the Chinese to one of their greatest Philosophers, "LaoTzu" the founder of Taoism (from UCI Anthropology studies "Chinese, Taoism & Confucianism", 1983), "LaoTzu" was originally named "LoTzu", meaning "Man-Master" (Philosopher) and when he was older it was changed to "LaoTzu", meaning "Old-Man-Master" (or Great Philosopher): Therefore "Tzu" means "Master". "Noma" is the Aramaic word for 'name' establishing the identity and essence of a thing and thereby giving man control over the substance, and in the Greek "Nomo" means "law or control", again, in Western parlance the essence is unknowable but the manifestation is controllable by the 'name': so control and name are the same thing, therefore "Noma" means "name" (from participation in Antiochian and Greek culture, which develops from a multi-critical analysis as opposed to diacritical).

"Sonoma" therefore means "The Master's Name", and in a Spiritual sense, it means the highest name above all names. "The Master's Holy Name", in an Eastern Spiritual sense describing God's, the Creator's, or Great Spirit's control over the location by the Moon's contact with the Earth, not Man's control over God by invocation of the Name. This we hear many times from Joseph Campbell, man's search for control vs man's search for God.

Analysis of EIR Historical Asset discussion:

The Program Draft EIR is silent on the above discussion, while reporting Environmental Impact Report - County Summary "5.3 Significant and Unavoidable Impacts: According to CEQA Guidelines 15126.2(b), an EIR must discuss any significant environmental impacts that cannot be avoided under full implementation of the proposed program...However the Proposed Plan aims to be self-mitigating. Thus, all proposed policies aim to address environmental impacts (to the, sic) to the greatest extent feasible and no mitigation measures are required. The analysis in Chapter 3 determined that the Proposed Plan would result in significant impacts to the cultural/historic resources and transportation (home-based work trip vehicle miles traveled per capita) that, even with implementation of mitigation measures, would remain significant and unavoidable". This language neglects real analysis of the Null Hypothesis Project, and only considers the Proposed Plan impacts which it states (along with all other alternatives) have similar impacts [without discernment as to avoidable, mitigatable, or unmitigatable], which is entirely untrue in the Null Hypothesis case.

C164-22

Continuing; "5.3.1 Cultural, Historic, and Tribal Resources: new construction under the Proposed Plan has the potential to disconnect the remaining contributing resources in the Core Campus from those in the Community Separator and Regional Parks lands to the east and west, disrupting the SSHHD's overall integrity to the point that it would no longer be eligible for listing in the National Register of Historic Places, CRHR, or as a California Historic Landmark. This impact, in addition to demolition of the aforementioned resources would result in a substantial adverse change to the significance of the historic district such that the significance of the historic district would be materially impaired pursuant to Section 15064.5. Implementation of goals 2-I and 2-J and policies 4-20 through 4-32 as well as Standard Conditions of Approval (LU1 through LU6) would partially compensate for the impact associated with the demolition of historically contributing resources and physical alteration of the historic district to the maximum extent practicable; however, because these measures would not be enough to avoid or reduce the impact completely, the Proposed Plan's impact would remain significant and unavoidable". No mention is made of the Tribal Resources, because no artifacts remain or they could be recovered in a project excavation, but this does not address the transcendent value of the space and place name as a World Heritage Cultural Site, which can be subsumed in the potential Project construct, where we have heard discussed 2-3Msf of Commercial Construction.

C164-23

Again, the Program Draft EIR's considerations of the impacts, mitigations, and alternatives appear limited to the Proposed Plan Project Alternative, and do not address the Alternatives, nor the Null Hypothesis Project, continuing a foregone conclusion (see 2-3Msf of Commercial Construction discussed above, is that unmitigatable?).

C164-24

Please see the following analysis of project conceptual iteration for planning and design.

Please see pg4 p3 San Mateo Gardens, re "substantial evidence in the record, is a predominantly factual question...for the agency...drawing on its particular expertise"; here we are bringing your attention to the word "expertise".

C164-24

Friends of the College of San Mateo Gardens v. San Mateo County Community College District

https://law.justia.com/cases/california/court-of-appeal/2017/a135892.html

We want to accept the presumption of legal operation, but we must also accept and correct the illegal condition when evidence is presented to the contrary. In a County system, Engineering is not conducted without Accounting. But if the Accounting fails such as for Northwestern Pacific Railroad, the sad evidence must be accepted, and correction immediately made or we suffer the loss of funding or function. No one was there to accept the Trucker's weighmaster's tickets when the washout deliveries were made in the upper NWP line, none could be found, none ever delivered, no NWP.

The reason we approach the initial determination of a project this way, using California Supreme Court's remand for San Mateo Gardens, is, here we equate the Court EIR analysis process to the Engineering process, in that there are a sequence of iterative steps involved. This process is best exemplified from the CA Supreme Court's remand expressed in San Mateo Gardens, where a series of back-and-forth evaluations and propositions are made in analyzing a project (one such method is CPM,Critical Path Method), which is the same process we use in conceptual design or planning.

A comparison is made by question; does the "initial concept" with its features fit the need and the existing space, then we may have to adjust the concept's features to the needs, or to the space? Conceptual planning designs forward & backward many times.

This comparison is not to decry the effort expended or the information obtained through Planning education or product, but a marathon runner prepares for a marathon, not Law or Engineering. Preparation for a marathon may be great preparation for someone wanting to become a Lawyer, Doctor, or Engineer, but by itself does not make one a Lawyer, Doctor, or Engineer. Nor is an Urban Planner a qualified Civil Engineer, and therefore is unable to make professional judgments in respect to the Planning of "fixed works" identified in BPC 6731.

C164-25

[See Licensing BPC 6730-6730.2(a); 6731; 6734; 6735(a). See also Administrative Mandamus case, Morris v Harper (2001) 94 Cal.App.4th 52 . "After all, '"'[i]t is the refusal or neglect to perform an act which is enjoined by the law as a present duty that serves as the very foundation for the [mandamus] proceeding.' " (Morris v. Harper, supra, at p. 60.)"]

San Mateo Gardens; "Instead of resting on whether a project is new "in an abstract sense," the "decision to proceed under CEQA's subsequent review provisions must . . . necessarily rest on a determination—whether implicit or explicit—that the original environmental document retains some informational value." (Id. at p. 951.) Such an inquiry "is a predominantly factual question . . . for the agency to answer in the first instance, drawing on its particular expertise." (Id. at p. 953.)"

From where does this "expertise" derive, Planners require no Science education?

The EIR standard is, if/when there are significant environmental impacts, then a review of impacts and mitigations must obtain (other than stating overriding or unmitigatable conditions), and a "judicial review must reflect the exacting standard that an agency must apply". San Mateo (ibid) pg 8.

C164-26

What this is referring to is, that the evidence must be prepared to a very high standard, from the beginning, in order for it to be considered "substantial evidence in the record". Where is the “exacting Standard” & “expertise”?

According to the National Society of Professional Engineers code of ethics, Professional Engineers may disagree without a single outcome obtained, but must remain decorous.

["The Supreme Court in San Mateo Gardens provided guidance for how to apply the subsequent review provisions. It explained that whether “major revisions” will be

required as a result of project changes “necessarily depends on the nature of the original environmental document,” i.e., whether it was an EIR or a negative declaration. (San Mateo Gardens, supra, 1 Cal.5th at p. 958.) It further explained that the appropriate standard of review also depends on the nature of the original environmental document. Although an agency’s determination of whether major revisions are required is reviewed for substantial evidence, “judicial review must reflect the exacting standard that an agency must apply when changes are made to a project that has been approved via a negative declaration,” as opposed to the deferential standard that applies when the project was originally approved by an EIR. (Id. at p. 953; see Committee for Re-Evaluation of TLine Loop v. San Francisco Municipal Transportation Agency (2016) 6 Cal.App.5th 1237, 1247, 1251-1252 [applying San Mateo Gardens in case where project originally approved by EIR]; Latinos Unidos de Napa v. City of Napa (2013) 221 Cal.App.4th 192,"]

In planning, we have said, the process is intensely exhaustive and iterative, and what is described as the Court EIR review process is also exhaustive and iterative.

C164-27

The Court ceding competency to the local agency is similar to the process of presenting a case to a Court of Competent Jurisdiction. A Court of Competent Jurisdiction is composed firstly of a trained lawyer, either by a Law School or by preparation and passing the Baby Bar. Then of course, the prospectant Judge must pass the National Bar Exam locally administered, next the Judge must practice law for a minimum of 10 years. At some point the Judge is appointed or runs for election, and finally, the Judge is selected to hear a case by the Chief Judge. The Court itself must also be of Competent Jurisdiction, meaning it is the proper venue, as established by our system of Jurisprudence. These are significant tests.

If someone went to College and studied English or Political Science, they could learn a lot of laws, but they would not be presumed to know how to practice Law,

And they did not go to Law School or pass the Baby Bar, and they have not prepared to be a Lawyer, let alone a Judge.

Engineering is one of the most complex problems in supply & demand, as evidenced by the number of divorces in custom home remodeling and construction, and why Public Works requires Licensed Civil Engineers.

C164-28

Our critique is not meant to characterize the work of any Engineers having completed reports for the SDC EIR-SP, since we do not know what instructions they were given.

But we contend that recommended demolition for over 1.2Msf without analysis of 400,000sf, and recommended demolition of ~75,000sf of Hospital Treatment Building rated at "not requiring any updates", represents an incomplete analysis at best, and certainly a neglect of the impacts on the resources being analyzed.

As we spoke of backward-and-forward analysis in design, this is required in Planning as well, unless a truncated process is employed. It is far easier to make the facts fit the design, than to make the design fit the facts. If your timeline is short, it is far easier for you to establish the Project, and make the analysis fit the Project by not addressing impacts except in a standard way, such as, "(h)owever the Proposed Plan aims to be self-mitigating". "from Program Draft EIR 5.3 Significant and Unavoidable Impacts"

Subsequent to the very specific State Law being passed to sell SDC, incorporating significant intent for community participation, many meetings were held with studied interest and good comments. Comments were sent to Permit Sonoma and the Planners involved in SDC's NOP of Program Draft EIR & SP, but these comments were not incorporated in the evaluation nor in the Proposed Alternative Project SP, nor were they forwarded to the Planning Commission, nor were they provided to other participants or commenters to the EIR & SP.

C164-29

This is not standard practice, and violates CEQA Code 15300(a)&(b)(1)-(3); "(a) Before granting any approval of a project subject to CEQA, every lead agency or responsible agency shall consider a final EIR or negative declaration or another document authorized by these guidelines...(b) Choosing the precise time for CEQA compliance involves a balancing of competing factors, EIR's and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment."

(b)(1) "With public projects, at the earliest feasible time, project sponsors shall incorporate environmental considerations into project conceptualization".

C164-30

The timeframe window for "cumulative impacts" evaluation was limited to after Proposed Alternative Project completion, leaving out the demolition and construction of the entire project, let alone the life cycle embedded costs, GHG's and energy to be demolished as a consequence from the new construction.

This time frame results in unsubstantiated conclusions for the Proposed Project Alternative in ES.3 Alternatives to the Proposed Plan, "As discussed in Impacts 3.6-2, the Proposed Plan would thus support and reflect the increasingly stringent State and local goals and regulations that seek to increase energy efficiency, reduce energy consumption, and prioritize renewable energy – reinforcing that the Proposed

Plan would not result in cumulatively considerable impact with respect to wasteful, inefficient, or unnecessary consumption of energy resources." They left out 161,000 tons of waste.

C164-30

15300 (b)(3), "With private projects, the Lead Agency shall encourage the project proponent to incorporate environmental considerations into project conceptualization, design, and planning at the earliest feasible time."

This truncated analysis appears to be the type that establishes priorities, goals, and objectives before the certification of the EIR is complete, therefore "limiting alternatives or mitigation measures".

C164-31

This truncated analysis would violate CEQA Code 15300 (b)(2), "public agencies shall not undertake actions concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance";"and for example, agencies shall not:(b)(2)(B)", "Otherwise take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project".

Given that Permit Sonoma will only provide the public's comments to the Planning Commission upon final EIR Certification, and a series of comments have been made to the SDC Comprehensive Planning Manager which has not incorporated the public's comments into the Proposed Project Alternative, "at the earliest feasible time", they appear to have violated Sec's 15300(a)&(b)(1)-(3), inclusive.

What we contend here is, that the proper "back-and-forth" process has not occurred, as within the planning process proper, within the design process proper, within the EIR process, as would be the same within the Court's evaluation of the EIR process itself, from San Mateo Gardens remand from the California State Supreme Court, which constitutes proper Authority to all jurisdictions within California.

C164-32

We also contend that "particular expertise" and "the exacting standard that an agency must apply" is not available to the review that the "judicial review must reflect", without a Licensed Civil Engineering in Responsible Charge of "Fixed Works" Planning, BPC 6731.

Also, in another form of Transcendence, both "Tsu" and "Noma" mean "control", so they are like conjoined twins, in a simple manifestation of the "Rosetta Stone". Looked at separately, we call this a "Translation", but conjoining them is a form of transcendence in the physical plane of existence. The name "Sonoma" appears to be used as a descriptive tool, by connecting physical transcendence (translation of place) with the location of a Spiritual Transcendence (in reference to the verticality of the Moon's touching the Earth), it again mirrors the "Rosetta Stone" representing two kinds of Transcendence, with the Earthly "T" crossing the Spiritual vertical demarcation.

C164-33

More than the mere analysis of the word and its application to the space, is the significance of "Sonoma" in the cross-cultural linguistic representation of deification using ancient language references from across the sea, and linked only by many thousands of years. There is no other place name which connects so perfectly the unity of man, the Name itself transcends both the ages and the seas, thus we have the essence of a World Heritage Cultural Site. Like many other UNESCO World Heritage Sites, which are in disrepair and in danger of destruction, Sonoma's "Valley of the Moon" is suffering an existential threat from the Proposed Project Alternative. Located at near the exact geographic center of Sonoma Valley, 10 miles from it's head along Hwy 12, and 12 miles from it's outlet at Skagg's Island. And transected by a vital Wildlife Corridor connecting 2 Mountain Parks: Sugarloaf/Hood and Jack London Parks; no discussion or analysis has been given to the significance of this World Heritage Cultural Site, or the impacts or any mitigation from the significantly new, taller, and dense construction within the Program Draft EIR-SP Project analysis (cursory discussion was given to light pollution, but none to the physicality of the presence of tall, dense, populous village construction in the midst of an Historic Treasure, McDonalds centered in Teotihuacan).

C164-34

The significance of this Spiritual location was not lost on those who created the Sonoma Developmental Center for a healing center for their developmentally disabled children. We should hope that at this more enlightened time, and consistent with CEQA, the Historical Preservation Act, and the 50th Anniversary of the World Heritage Convention (Sept 17, 2022), we should be prepared to preserve both the content and the context, as much as is physically possible, for this National Treasure, "The Valley of the Moon". Under the UNESCO World Heritage Convention, which the United States was signatory (though withdrawn from 2018), we should "strengthen Credibility of the World Heritage List, ensure Conservation of World Heritage properties, promote Capacity-building measures, increase public awareness, involvement and support for World Heritage, and enhance the role of Communities in implementation of the World Heritage Convention". What has been done here appears to be the opposite, a complete neglect of not only Native American cultural values, but World Heritage Convention values.

RE: Public Comment on SDC Specific Plan and DEIR

Dear Mr. Oh:

We are writing today following our review of the draft environmental impact report pertaining to the Sonoma Developmental Center's (SDC) future.

As most following this planning process, including Sonoma County Planning Commissioner Greg Carr, have stated (repeatedly, loudly, emphatically) – we find that this report fails, either in part or in total, to account for several environmental impacts essential to any meaningful understanding of the ways in which the public's safety, true protections for the natural environment, and the many human needs are to be addressed. And so, with but a few scant weeks to pour through a 789 page report that bases its assessments, conclusions, and recommendations on the previous "Plan" - and so is itself deeply flawed and grossly inadequate, we will once more *howl into the void*. C165-1

Others with more advanced professional qualifications have pinpointed the flaws in those sections of the report pertaining to the natural environment, historic preservation, public safety, and traffic. We will restrict our comments to concerns for the future housing uses of SDC's Core Campus - and to a planning process that appears to have now gone off the rails – disappearing into the abyss of railroaded transparency!

The first of our issues concerns the so-called "SDC Specific Plan" and the "reasonable range of alternatives to the Proposed Plan" - as required by CEQA in an EIR. Is it just us? We find that the community's input is nowhere to be seen in either of these deeply deficient reports.

To illustrate, we and others have proposed, as one reasonable alternative, using SDC's built footprint, referred to elsewhere as its "historical 180-acre built area," as a campus for those seeking training in the trades, in the applied sciences, public service occupations, and other professions of financial and social benefit to the students, their families, and the entire state.

We see no evidence that this invaluable, desperately needed (see any number of actual empirical studies) educational use was given a moment of consideration. Remarkably shortsighted given that use of SDC's Core Campus as a campus would come with fewer vehicle miles travelled, allocations for affordable housing, to name but a few of the benefits, in part because students, staff, and educators could be offered housing within the campus. Please see the attached letter sent to the Sonoma County Board of Supervisors on November 21, 2021 as it offers a deeply researched look at just such a use. C165-2

Further, the Draft EIR ignores the county's dire need for affordable housing, calling instead for allocating 90% of the 1,000 proposed new houses as market rate homes. This in defiance of **The Final Regional Housing Needs Allocation (RHNA) Plan**, adopted in December 2021 which determined that Sonoma County's fair share of regional housing would be 3,881 units, with 1,632 allocated as housing affordable to very low- and low-income

households. That would be about half the homes to be built, not 10% as this draft EIR calls for! Just a disgraceful display of the preference throughout the draft for meeting the needs of the wealthy over the rest of us.

C165-2

> "SDC Core Campus: Consists primarily of residential buildings, with medical, educational, recreational, and administrative buildings interspersed. A cluster of utility and support buildings, and fire station sit at the western edge of the Core Campus. On the eastern portion of the site, historic agriculture uses…"
>
> Government Code Section 14670.10.5 (c) (4): The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be appropriate for the property shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that is deed restricted to provide housing for individuals with developmental disabilities.

To this end, we propose developing cottage clusters throughout the campus designed to meet specific needs such as supportive housing for individuals with disabilities, older adults, agricultural workers, and young families in need of starter homes. As an enriching environment affording access to the educational, recreational, social, health, and support resources, all on this technical college campus, all bringing full circle the many necessities of life - all without segregating this campus from the rest of Glen Ellen - what could be better?

It is outrageous to propose 100 of the 1,000 housing units might be deemed affordable, especially when communities such as Glen Ellen have been ravaged for Tourist Occupancy Taxes since Sonoma County's Vacation Rental Ordinance went into effect more than a decade ago. One hundred units doesn't begin to make up for the hundreds of homes converted into commercial tourist traps over these years. We need to actually, truly, add to our housing stock. By "add to" we mean in addition to recovering, by some means, those dwelling units sacrificed for profit, private and public. The proposed housing outline comes nowhere near to meeting the documented need for affordable housing in Sonoma County.

C165-3

Although state housing element law is cited in Chapter 3.1.2: Population and Housing, we believe that, beyond this scant mention, it ignores state law and the Sonoma County Housing Element. Certainly, it does not begin to touch on the county's requirement to provide for its burgeoning homeless population, a significant aging population unable to live on its paltry retirement income, or an agricultural community ignored in this process - as usual.

Our second point also concerns process. While the people of Sonoma County, of the State of California have been encouraged to participate in a planning process sold to us as public, above board, and time constrained, we have just learned of another process (see attached 9/23/22 Index-Tribune article). This one private, ongoing, underhanded, free of transparency, a play for SDC by a real estate developer and his business partner - both with lengthy histories of questionable business ethics. This time, having sufficiently inserted themselves into the state system, carrying satchels of cash, of many millions of tax dollars, all offered to Sonoma County in exchange for a deal requiring NO Environmental Impact Report and benefitting only the few, the wealthiest schemers.

> "Public records reveal that two Sonoma County businessmen — Darius Anderson and Doug Bosco — played central roles in the backdoor negotiations for the easement sales" in a sham process meant to deflect the public's attention away from the dealmaking between a little-known state agency headed by the same man working to bring coal through Sonoma County on the Sonoma-Marin Area Rail Transit district — SMART line (see two attached 2021 Bohemian articles)

Former congressman Doug Bosco is the CEO of the private freight company Northwestern Pacific Railroad Company (NWP Co.). Along with his business partner, real estate developer (e.g., Treasure Island: Radioactive debris) and owner of the powerful Platinum Advisors political consulting firm, Darius Anderson, they leveraged their influence to lobby state and federal lawmakers for the right to transport coal, among other commodities on the SMART rail line. Although most of their plans failed to pan out, through a series of complex loans and contracts (according to The Bohemian's 2021 report), a publicly chartered rail agency, North Coast Railroad Authority (NCRA), now owes NWP Co. millions of dollars. And today they continue running freight on the SMART rails.

C165-4

It should be noted that Anderson and Bosco are founding members of Sonoma Media Investments, which owns most of the print media in Sonoma County including the Press Democrat, Sonoma Index-Tribune, Sonoma County Gazette, Petaluma Argus-Courier, North Bay Business Journal, Sonoma Magazine, and La Prensa.

C165-4

So it's business as usual as the high rollers operate behind the scenes, leveraging millions of tax dollars in a play for possession of a community resource. Doug Bosco believes he and he alone can secure SDC, work around the usual requirements for an EIR, and buy off Sonoma County to create his next dream project.

When Supervisor Gorin spoke at last week's (September 21) meeting of the North Sonoma Valley Municipal Advisory Council, there was no mention of the Bosco/Ocean Conservancy deal. Nor did County Planner Oh indicate that he was negotiating a deal with Doug Bosco when he addressed the Sonoma County Planning Commission at its September 15 meeting.

The public is entitled to an explanation - NOW! This planning process must be halted until those who will pay (in oh so many ways) are fully informed of the facts.

And now, one final point that cannot be ignored: The Sonoma Developmental Center, Eldridge, the neighborhoods south of SDC - WE ARE ONE! We are Glen Ellen. We will not stand for further planning hellbent on separating our neighborhoods by this or any other planning process!

With earnest sincerity,

EXTERNAL

Dear Sonoma County Board of Supervisors, Planning Commissioners, Permit Sonoma (with copies to state elected officials),

Please find below and attached my official detailed public comments on the SDC Draft Environmental Report and Specific Plan to be entered into the public record and administrative record. Looking forward to the county's responses.

C166-1

It consists of 12 pages of a letter; 20 pages of a table with comments; and 8 pages of an article. Please include all.

Thanks for your consideration.

RE: Public Comments on Sonoma Developmental Center Draft Environmental Impact Report (DEIR) and Specific Plan – Revise EIR to Meet CEQA, Scale it Back and Protect Open Space!!

Dear Permit Sonoma, Board of Supervisors and Sonoma County Planning Commission,

As a long-time resident of Sonoma Valley who cares deeply about the lands, wildlife and people who live here, I do not support the Sonoma Developmental Center (SDC) Specific Plan as proposed by Permit Sonoma and find that the DEIR is inadequate to meet the requirements of the California Environmental Quality Act. Please see my general comments followed by comments on the DEIR and a detailed table with more detailed comments.

GENERAL COMMENTS on SDC DEIR, Specific Plan and Planning Process

Reversal of County Land Use Policies: The proposed SDC Specific Plan and DEIR comprise a complete reversal on decades of city centered growth and open space protection in Sonoma County. Instead of providing a visionary plan that addresses climate change and environmental protection while providing appropriate affordable housing, the County of Sonoma is deciding to forever urbanize the heart of rural and agricultural Sonoma Valley. Whether or not the Specific Plan is implemented or not, the rezoning of these lands for residential, hotel, commercial, retail and other new land uses will forever transform these lands.

C166-2

Public Land for Public Good: This public land has always served the public good. For decades, everyone from local residents to county elected officials to open space agencies and the general public have envisioned these lands for protected open space and serving the needs of people with developmental disabilities and others who may need housing and services. So, it is extremely heartbreaking to realize that the county is instead intent on building a giant new subdivision here despite the many other options that have been forwarded by the community and stakeholders. The state statute is being willfully misinterpreted by the County of Sonoma to the detriment of the people of California who own these lands. Turning public lands over to private developers for profit is simply wrong when there are many models for repurposing public lands without doing so, such as Marin Headlands, Presidio Trust, and Mare Island.

C166-3

Open Space: My comments are primarily focused on the open space lands surrounding the campus. These lands are critical for conservation, biodiversity and habitat linkage at a regional and state level. These lands qualify for and are prioritized for recognition in Governor Newsom's 30 X 30 Executive Order among environmental leaders such as Sierra Club, Sonoma Land Trust and Sonoma Mountain Preservation.

C166-4

It is unfortunate that the DEIR and Specific Plan do not give these treasured lands the level of analysis and protection as the development on the historic campus. Definitions are unclear and there are no requirements or details on how, when or through what process the open space will be permanently protected in public ownership.

No doubt it is because the primary focus has been on urban planning. It might be a very good urban plan for a town or city but not for the center of the Sonoma Valley Wildlife Corridor and open space that provides easy access to nature and quiet recreation for all, across the income spectrum. Here the urban plan constitutes old fashioned sprawl.

Housing: While we all recognize the need for affordable housing, we also know that we can't build our way out of it. Just look to the rest of the Bay Area and places like Los Angeles where affordable housing is even more scarce. There is room in existing cities and towns to provide affordable housing for the people who need it. But of course, we need to change the way we provide housing; build-baby-build isn't it. The SDC lands are the wrong place for massive housing development comprised primarily of market rate housing. This will simply create another high-end wine country enclave and profits for private developers.

C166-5

Timeline: While I don't have any confidence that the county intends to change course, I do request that the county provides the public, Planning Commission and Board of Supervisors adequate and appropriate time to revies and finalized the DEIR and Specific Plan. The County must ask the State of California for more time to accomplish this important planning process. The County and State should not adopt a plan just to meet an arbitrary deadline. There is no rush given that the SDC property will be in transition for decades to come.

DEIR COMMENTS

C166-6

1. **REVISE DEIR TO MEET CEQA**: Revise and strengthen the Draft Environmental Impact Report to meet the requirements of California Environmental Quality Act by

analyzing and preventing or reducing all negative environmental impacts generated by the proposed Specific Plan by scaling back project, avoiding impacts and providing legally enforceable mitigation measures in a Mitigation and Monitoring Program. As drafted the DEIR is not adequate to meet CEQA. It has zero mitigations for any environmental impacts, including two that are "significant and unavoidable:" historic preservation and VMTs.

C166-6

2. **REVISE SELF-MITIGATED SPECIFIC PLAN:** Revise and strengthen the Specific Plan Conditions of Approval to be legally enforceable requirements and recast as mitigation measures in the DEIR, as above. As drafted, the "self-mitigating" Specific Plan does not mitigate significant negative environmental impacts. The Conditions of Approval (CofAs) only apply to half of the environmental areas required for study under CEQA. And there are none for critical issues such as wildfire. Most of the CofAs for biological resources apply only to construction, not operations or maintenance, and are based mostly on existing state law or Best Management Practices, which are not in statute and therefore not legally enforceable.

All Specific Plan Goals and Policies need to be specific, strong and enforceable. Otherwise, they are practically meaningless. Please remove vague words such as "promote" or "encourage" or "if feasible." Replace with "require", "shall" or "must." These strengthened Goals and Polices then need to be made Conditions of Approval and recast as Mitigations in the DEIR in a Mitigation and Monitoring Program.

If CofAs, policies or goals can't be made specific, then remove them as they do not mitigate environmental impacts. Having a Self-Mitigated Plan is not part of CEQA and does not necessarily meet CEQA; and certainly not in the case of the SDC Specific Plan and DEIR.

3. **SCALE BACK DEVELOPMENT AND CHANGE PREFERRED ALTERNATIVE:** Scale back the development to 450 or fewer homes in scale with the rural character of the property; utilize existing buildings, preserve historic features. Require that 100 percent of the homes be affordable to low, very low- and moderate-income working people and to individuals with developmental disabilities. Require that all homes and buildings meet Visitability Standards for access by Americans with Disabilities (ADA), prioritizing those who currently live in Sonoma Valley.

C166-7

- Eliminate the hotel, retail and commercial space that is not needed as those services already exist nearby in Sonoma Valley.
- Change the Preferred Alternative to the Historic Preservation Alternative, which is the most environmentally sound, and amend to reflect the requirements above.

4. **ANALYZE OPEN SPACE AND PUBLIC INSTITUTUION ALTERNATIVES:** All the alternatives studied by the County of Sonoma are variations on a major mixed-use development that maximizes urban style use. The scaled back Historic Alternative is the closest to what the public and community has asked for over the years. However, the Open Space and Public Institution Alternatives that were dismissed by the County of Sonoma offer significantly difference alternatives that deserve further analysis. The Marin Headlands and Presidio Trust are good examples of how public land was repurposed without overdevelopment that could be analyzed further in the Open Space Alternative.

C166-8

Providing more details on the Historic, Open Space and Public Institution Alternatives will

serve to meet CEQA criteria to provide the public and decisionmakers with a true range of alternatives.

C166-8

While the DEIR claims that these alternatives were dismissed due lack of consistency with state statute, I would argue that the various development alternatives that were presented are too narrow and also inconsistent with state statute. State statute calls for housing as appropriate on the SDC site and to prioritize affordable housing and housing for developmentally disabled individuals. What's present is very much out of scale and not appropriate for rural land. In addition, the DEIR and Specific Plan calls for the introduction of commercial agriculture throughout the preserved open space areas, which was never mentioned in state statute. Many other new land uses never mentioned in state statute are also proposed.
In there any legal, statutory or other reason why County of Sonoma should not analyze and provide more details on the Historic, Open Space and Public Institution Alternatives?

5. **PROVIDE SPECIFICS AND ADDRESS IMPACTS TO OPEN SPACE** – The Specific Plan and the DEIR mentions open space protection in general terms in several places, in various ways, but fails to provide a clear definition of "preserved open space," or to give the exact boundaries (other than in one general overlay map), or give details on how or when it will be protected, transferred or managed.

C166-9

Vague Goals and Policies contained the Specific Plan and DEIR do not suffice, such as *"future developers at the site must work with the County to ensure proper management and stewardship"* and *"Work with Sonoma County to dedicate the preserved open space as regional parkland."* Not resolving these issues is likely to create confusion and conflict later for all involved, as elected officials, agency staff and developers change over time.

The DEIR and Specific Plan cannot rely on state statute to protect the open space lands as that language is vague, only as "feasible" and in the "best interests of the state."[1]

These inadequacies need to be resolved in the DEIR and Specific Plan by adding clear descriptions of the open space lands with exact boundaries; likely mechanisms for transferring the lands and to what possible entities or types of entities; a timeline; and how the lands will be managed and under what authority. Environmental impacts and mitigations for impacts to the open space lands from development of the campus and ongoing operations must be provided.

Preserved Open Space and Agriculture: The Specific Plan and DEIR make sweeping statements about "historic agriculture" but do not explain the extent of past agriculture in terms of types or amount of acreage. The impacts of allowing commercial agriculture on open space that is currently not in agriculture must be analyzed and the environmental impacts avoided or mitigated in the DEIR.

C166-10

Unacceptable New Uses in Preserved Open Space: Table 4-3 (attached) of the Land Use Section of the Specific Plan outlines many new uses in "preserved open space" including wine tasting rooms, timber conversion, wholesale nurseries, sports facilities and several others that have not been analyzed under CEQA or addressed at all in the

goals, policies or CofAs of the Specific Plan. These "permitted" new uses in Preserved Open space must be analyzed, avoided or prevented and mitigated as required under CEQA and in my view NOT ALLOWED OR PERMITTED in Preserved Open Space.

C166-10

SHOULD NOT ALLOW AS PROPOSED THESE USES IN PRESERVED OPEN SPACE TABLE 4-2 SPECIFIC PLAN

Agricultural Crop Production and Cultivation
Agricultural Processing
Animal Keeping: Beekeeping
Animal Keeping: Confined Farm Animals
Animal Keeping: Farm Animals
Animal Keeping: Pet Fancier -
Farm Retail Sales
Farm Stands
Indoor Crop Cultivation
Mushroom Farming
Nursery, Wholesale
Timberland Conversions, Minor
Nursery, Wholesale
Tasting Rooms

SHOULD NOT ALLOW AS PROPOSED IN SPECIFIC PLAN WITH CONDITIONAL USE PERMIT
Recreation and Sports Facilities: Recreation Facility, Outdoor
Recreation and Sports Facilities: Rural
Sports and Recreation

6. **SONOMA VALLEY WILDLIRE CORRIDOR MAPPING AND RIPARIAN SETBACKS:** Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed. Explain why 50 feet is adequate to protect riparian areas and the wildlife corridor. In this section, I will defer to comments by the experts, including the Sonoma Land Trust and Center for Biological Diversity.

C166-11

Mapping: Neither the DEIR nor the Specific Plan provides an accurate map of the Sonoma Valley Wildlife Corridor. The DEIR refers to Figure 1.6-3, which does not appear in the DEIR. The Specific Plan Figure 1.6-3 is a map of Existing Vegetation.

In the Specific Plan Figure 1.6-2 titled "Wildlife Constraints," something that appears to represent the Sonoma Wildlife Corridor consists of two wavy green lines labeled as "Critical Wildlife Linkage Marin Blue Ridge." However, that term is not defined, does not contain the words "Sonoma Valley Wildlife Corridor" and is never used anywhere else in the Specific Plan or DEIR. And, in fact, the Sonoma Valley Wildlife Corridor does not appear to be specifically mapped anywhere in the Specific Plan or DEIR that I could find.

To meet CEQA by providing the public and decisionmakers with accurate information, the Sonoma Wildlife Corridor needs to be clearly mapped and defined with consistent terms. You must revise the DEIR and Specific Plan to specifically map and describe the boundaries of the Sonoma Valley Wildlife Corridor. C166-11

7. **WILDFIRE:** There are no mitigation conditions of approval for wildfire; and the goals and policies are based on a future Emergency Response Plan that will be developed at some point. This is inadequate under CEQA. The DEIR and Self-Mitigating SDC Specific Plan do not eliminate risk or wildfire hazard to insignificant levels. Develop and add enforceable Mitigations in the DEIR and Conditions of Approval in the Specific Plan for Wildfire to reduce and prevent risk as there currently are none. C166-12

The Evacuation Time analysis seems unrealistic and not based on fact as it suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. It took people HOURS to evacuate from Kenwood and Sonoma Valley during recent fires.

Also, the DEIR calls for the "requirement" for a shelter-in-place facility at SDC after 200 homes are built. There is no proven rationale for sheltering in place particularly in a High Fire Risk Area. Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new state and county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives.

The DEIR and Specific Plan must also consider a wildfire mitigation that includes retreat from wildfire areas. Please see attached article in Bay Nature from experts on land use and wildfire which explains why developing in high wildfire areas is no longer appropriate or safe.

Please include by reference the comments on wildfire and evacuation from the State Alliance for Firesafe Road Regulations and other commenters with expertise on these issues.

8. **CLIMATE CRISIS and VMTs:** The DEIR finds that the proposed Specific Plan will produce "significant and unavoidable" environmental impacts due to huge increases in Vehicle Miles Traveled that will be generated primarily by new residents driving to and from the SDC site. The DEIR offers no mitigations or conditions of approval to reduce or avoid the amount of driving. C166-13

The DEIR finds that the proposed SDC Specific Plan will undermine local, regional and state policies and commitments to address the climate crisis as it found significant and unavoidable impacts in the areas of vehicle miles traveled. That means that there is NO WAY to offset or mitigate the extra driving generated by all the new housing, retail, commercial development proposed at SDC. The County must not approve this project as proposed with these impacts if it is serious about addressing the climate crisis.

Taking this approach fails to meet the standards contained in CEQA because VMTs can be avoided and reduced by building fewer homes, reusing and demolishing fewer buildings, requiring public transit, and other measures that were never considered. The DEIR and Specific Plan must be revised to analyze and provide mitigations and measures to reduce VMTs.

9. CONFLICTS WITH EXISTING COUNTY AND VOTER APPROVED POLICIES: Statements in the DEIR and Specific Plan that the proposals do not conflict C166-14

with existing county policies are inaccurate. The proposed Specific Plan is a complete reversal of land use policy in the County of Sonoma dating back to the original General Plan in 1989. It constitutes urbanization of rural and open space lands not seen since the 1970s; and the type of development that paved over places such as Silicon Valley.

C166-14

As proposed, the DEIR and Specific Plan violates decades of city-centered growth policies adopted and supported by the voters of Sonoma County and contained in the General Plan. Until now, the County of Sonoma has mostly upheld policies to grow inside existing cities and towns, honor voter-approve Urban Growth Boundaries, protect greenbelts and open space, and respect voter-approved community separators. The voters of Sonoma County have taxed themselves to create the Ag + Open Space District, the SMART Train, and provide expanded funding to Sonoma County Regional Parks.

The DEIR must analyze and mitigate the impacts to these long-standing land use and open space protection policies and voter-approved measures from the proposed Specific Plan and complete reversal of land use policy in order to comply with CEQA.

10. **HOUSING AND POPULATION**

C166-15

New housing at SDC is not required or necessary for the County of Sonoma to meet its state mandated Regional Housing Needs Allocation of 3,881 housing units for the next 8-year cycle (2023-2031), as cited in the DEIR.[2] In fact, housing at SDC was never considered as part of the RHNA process because the property's future remains uncertain and is currently zoned for public facilities, not housing.

The DEIR cites the Association of Bay Area Governments (which also assigns RHNA numbers) that between 2020 and 2040, the number of housing units in Sonoma County will grow by 15 percent, while the population grows by 9 percent. These facts indicate that adequate housing units will be provided if housing units grow twice as fast as population. These projections of housing and population indicate that housing needs are likely to be met without building 1,000 units at SDC. In addition, the DEIR discloses that unincorporated Sonoma County is in fact losing population.

It is clear that the housing numbers proposed in the Specific Plan and analyzed in the DEIR do not reflect actual official population or housing needs. It is based solely on Permit Sonoma's assumptions about how to make the development profitable for developer. This is the wrong baseline and approach.

The DEIR fails to consider that Sonoma County Transportation Authority has previously determined that the county and cities could build at least 30,000 new and rebuilt (post fire) housing units without expanding outside of UGBs or existing USAs. SDC was neither referenced nor considered as a location for housing.[3]

The DEIR fails to make note that the City of Sonoma has adequate room to meet and exceed its RHNA allocations for the next 8-year cycle; or that according to the Springs Specific Plan Notice of Preparation of an EIR, there is potential for 700 new housing units there. The county Housing Rezone EIR has also identified parcels for higher density housing in the Springs and around the unincorporated county which would result in additional housing.

With these facts in mind, the DEIR must analyze and mitigate the growth inducing impacts of adding 1,000 extra housing units to Sonoma Valley and the County of Sonoma. One alternative the DEIR should consider is putting those 1,000 units into existing towns and cities, possible through a Transfer of Development Rights agreement with cities and the county of Sonoma itself.

C166-15

11. ENDANGERED, THREATENED SPECIES

C166-16

The DEIR and Specific Plan fail to adequately analyze or mitigate the negative environmental impacts to endangered and threatened species on the SDC lands. The mitigations, goals, policies and Conditions of Approval are inadequate because they are weak with unenforceable actions, rely primarily on existing laws that have to be followed anyway, and/or rely on future studies and assessments as assessments – all of which fail to meet CEQA.

In addition, the DEIR and Specific Plan fail to provide any analysis or even discuss the fact that mountain lions and bears and other predators utilize the SDC lands; or any of the research on this wildlife and others that is published or available. The DEIR and Specific Plan must recognize and provide details on this wildlife and provide analysis and mitigations to reduce negative environmental impacts; and prevent human-wildlife interactions – at the least.

I will defer to comments on this section to the experts including Center for Biological Diversity and Sonoma Land Trust.

12. COMMUNITY BENEFITS AGREEMENTS

The DEIR and Specific Plan need to consider and analyze the benefits of the use of a Community Benefits Agreements at SDC with the community, labor, and public and appropriate stakeholders as a way to provide certainty that the mitigations and measures to protect the environment and community are upheld over the decades as SDC is being transformed.

C166-17

For example, county residents, particularly in the Sonoma Valley could determine what is most important based on community needs and particulars of the project once a property owner or manager is identified. For example, we could require the property owner or manager to commit to high levels of affordable and workforce housing, good, living wage jobs, protecting wildlife corridors, supportive and accessible housing for disabled people, and much more. We could fill in the gaps that the DEIR and Specific Plan don't provide, particularly if the state choose a different plan and/or the county never adopts or implements the Specific Plan.

13. **STATE STATUTE:** The County of Sonoma needs to revisit its interpretation of the state statute in respect to the Specific Plan and EIR as follows:

C166-18

Housing: State Statute says the following:
It is the intent of the Legislature that priority be given to affordable housing in the disposition of the Sonoma Developmental Center state real property.
The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be ***appropriate for the property*** *shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that* ***is deed restricted to provide housing for individuals with developmental disabilities.***

Nowhere does the statute call for maximum urbanization of the SDC nor

to create a new town, hotel, commercial or retail. The scale of housing and development is not appropriate for the rural property surrounded by ag land. Therefore, the County of Sonoma's Specific Plan and DEIR are not consistent with and misinterpret the state statute. Both need to be revised to align with state statute and public comment by scaling back the development, eliminating market rate housing and other development, and providing deed-restricted affordable housing to individuals with developmental disabilities.

C166-18

Open Space: State Statute says the following:

The Department of General Services recognizes the exceptional open-space, natural resources, and wildlife habitat characteristics of the Sonoma Developmental Center.

It is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as ***public parkland and open space.***

The disposition of the property or property interests shall provide for ***the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible*** *and shall be upon terms and conditions the director deems to* ***be in the best interests of the state.***

The state statute makes clear that the permanent protection of open space lands is for public parkland and natural resources as a public resource. The County's Specific Plan and DEIR are inconsistent with state statute as they propose introducing agriculture, sports fields and other uses without consider the negative environmental impacts of doing so.
However, the state statute also conditions protection of the open space "to the extent feasible" and to "be in the best interests of the state." That is why the county Specific Plan and DEIR must provide details on how, when and with what entities that the open space will be protected. If not, then the state legislature will need to act to ensure the protection of the open space and that none of it is sold off for development or other inappropriate use.

C166-19

Economic Feasibility: State Statute says the following:

The planning process shall facilitate the disposition of the property by amending the general plan of the county and any appropriate zoning ordinances, completing any environmental review, and ***addressing the economic feasibility of future development****.*

The County of Sonoma's entire Specific Plan and DEIR is tied to this one mention of economic feasibility to the exclusion of just about everything else. The state did not mandate that the project be economically feasible or financially feasible but to address it. Economic feasibility changes constantly with market conditions. Specific Plans and General Plans are written for long periods of time when economic feasibility is certain to change. The County is misinterpreting state statute to maximize urban development at the SDC site. The proposal could also be economically feasible if, for example, the state paid to clean up the site, then transferred it to state parks or another public conservation entity. A bond measure or initiative could be written. However, the County looked at only one option

C166-20

or alternative: making profits for a private developer. This lacks vision and is inconsistent with state statute and CEQA

C166-20

The Planning Commission must direct Permit Sonoma to revise the Specific Plan and DEIR to be consistent with state statute and public comment and provide new alternatives that don't focus entirely on urbanization and developer profits.

There are many other concerns that I have regarding the DEIR and Specific Plan, but these are what I am able to provide with the time and energy that I have at this time.

PLEASE SEE DETAILED TABLE OF COMMENTS BELOW AS WELL AS ARTICLE MENTIONED ABOUT WILDFIRE RETREAT.

Sincerely yours,

Teri Shore
terishore@gmail.com

Shore Detailed Comments Focused on Open Space Related Definitions, Goals, Policies and CofAs from DEIR

DEIR		Comment or Question	Action Requested
Open Space Related Definitions, Goals, Policies and CofAs from DEIR		The permanent preservation of open space lands in public ownership in perpetuity is not fully addressed nor the impacts to those lands adequately analyzed or mitigated by the DEIR and Specific Plan. While there is extensive discussion of the core campus, the open space is treated with vague and conflicting terms; even though it comprises the most acreage in the Specific Plan at 755 acres. Open Space definitions inconsistent, confusing. Agriculture is included in	1. Fully address, analyze and mitigate impacts to prioritized preservation of open space lands in public ownership in perpetuity as priority in the DEIR and Specific Plan, where now very little if any attention is given to the 755 acres outside the core campus development. 2. Provide clear, consistent definition for open space, preserved open space, permanent protections, open

		some places, not others, and never clearly defined in DEIR. Neither state nor community ever envisioned commercial agriculture in protected public open space. State statute never mentions agriculture or commercial agriculture. How when and by what mechanisms the open space lands will be permanently protected in public hands is never adequately described.	space in core campus, parks, paseos. 3. Open space should be defined as all the lands outside the core campus that will be permanently protected for natural resources, wildlife habitat, the Sonoma Wildlife Corridor, riparian corridors, wetlands, passive recreation and no development; other than maintaining and operating existing dams and improving trails. 4. Open space definition needs to include terms “public lands” as in “permanently protected as public lands in public hands for the public good.” Make clear that open space will not be in developer or other private hands. 5. Remove agriculture and commercial agricultural uses from definition of open space; and/or conduct analysis of impacts to open space from new commercial agricultural land uses that is now completely missing from DEIR. 6. Provide details on how, when and by what mechanisms the open space lands will be protected in perpetuity in public ownership.

Page 3 – ES 1.1	755 acres of contiguous open space, and the 11-acre non-contiguous Camp Via grounds within Jack London State Historic Park.	Is 11-acre Camp Via part of open space? Seems it should have a separate definition as a former camp. Unless intention is to remove and restore camp.	Define Camp Via as separate from public open space; or analyze impacts from removing and restoring as open space and deeding to Jack London State Park.
	Open space includes many acres of valuable wildlife habitat, former agricultural land, recreational uses, and the Eldridge Cemetery, as well as an existing network of trails and access roads	Here open space includes agriculture and the cemetery. The extent of historic agriculture is never defined. Commercial agriculture never existed on site, only for food for facility clients and staff. Cemetery is separate entity. State statute never mentions agriculture or commercial agriculture.	Remove agriculture from definition of public open space; or conduct analysis of impacts to open space from new commercial agricultural land uses that is now completely missing from DEIR. Define actual uses and acreage of historic agricultural uses; and commercial ag if it existed. Define Cemetery separately from open space.
Page 5 – ES3.1	preserved open space and parkland	Here preserved open space and parkland and mentioned together, but not defined. What parkland? Where?	Provide clear definition of preserved open space and parkland.
Page 10 ES 3.1	open space in the Core Campus	What? Open space in the Core Campus? Does that count toward the 755 acres of open space? Very confusing.	Define open space in the Core Campus as something other than open space to avoid confusion; and because a park next to buildings is not really open space but more like a park.
Page 11 ES3.1	preserved open space	Needs to be defined.	Define; remove agriculture from definition per above.
Page 11 ES3.2	Active open space areas (parks, paseos).	Active open space area is a new term introduced here with no definition. Same for parks and paseos.	Define active open space areas, parks, paseos.
Page 12 ES3.3	reclaimed as open space	What? This suggests that buildings will be removed and reclaimed as open space. That would not be open space. Maybe a park or greenspace?	Define reclaimed areas where buildings have been removed other than as open space.
Page 55 2.1.2.3	contiguous open space		Define what you mean by contiguous open space.

Page 55 2.1.2.3	Open space includes former agricultural land, recreational uses, the Eldridge Cemetery, and many acres of valuable wildlife habitat.	Here open space includes agriculture and the cemetery. The extent of historic agriculture is never defined. Commercial agriculture never existed on site, only for food for facility clients and staff. State statute never mentions agriculture or commercial agriculture. Cemetery is separate entity.	Remove agriculture from definition of public open space; or conduct analysis of impacts to public open space from new commercial agricultural land uses that is now completely missing from DEIR. Define Cemetery separately from open space.
	Embedded in the open space is an existing network of trails and access roads as well as a water system consisting of two surface water reservoirs, aqueducts, spring head, storage tanks, treatment plant, pipelines and a water intake in Sonoma Creek.		Analyze and mitigate how maintenance and operations of existing infrastructure in open space as described will impact the open space, habitat, wetlands and other natural resources.
Page 61 2.2.1	The legislation recognizes the exceptional open-space, natural resources, and wildlife characteristics of SDC, and it is the intent of the legislature that the lands outside of the core developed campus and its related infrastructure be preserved as public parkland and opens space.	Here for the first time the DEIR uses the terms "preserved as public parkland and opens space." Is open space the same as parkland? How much will be open space and how much parkland?	Define preserved open space as above; and define public parkland. Describe how much land will be open space and how much parkland. My recommendation is that all open space be designated as parkland.
Page 63 2.3	surrounding open space, recreational, and agricultural areas,	Here open space, recreation and agriculture are lumped together as if one. State statute never mentions agriculture or commercial agriculture.	Remove agriculture and define separately. If the intention is to allow commercial agriculture, then analyze and mitigate the impacts and provide land use and zoning over areas that county wants open to ag.
	The surrounding open spaces flourish as natural habitats and	Here open space, recreation and agriculture are lumped together as if	Remove agriculture and define separately. If the intention is to allow

	as agricultural and recreational land linked to regional parks and open space systems.	one. State statute never mentions agriculture or commercial agriculture.	commercial agriculture, then analyze and mitigate the impacts and provide land use and zoning over areas that county wants open to ag. Analyze and mitigate the impacts to introducing ag into open space.
	vast protected open space of oak woodlands, native grasslands, wetlands, forests, creeks, and lakes that provide habitats and wildlife movement corridors; agricultural land; and recreational open space integrated with the surrounding park systems.	This seems to be a more accurate definition for preserved open space, except for reference to agriculture.	Remove agriculture and define separately. If the intention is to allow commercial agriculture, then analyze and mitigate the impacts and provide land use and zoning over areas that county wants open to ag. Analyze and mitigate the impacts to introducing ag into open space.
Page 68 2.4.3 Key Planning Strategies	Further, the campus will be surrounded by a vast network of permanently preserved open spaces.	Yes, this is the most accurate and correct description. But doesn't define permanently protected or by what means.	Define permanently preserved open spaces and describe by what means they will be permanently protected.
Page 70 2.4.3.1 Land Use Classifications	**Single-Family Detached.** Single-family units that are detached from any other buildings (with the exception of accessory dwelling units) and have open space on all four sides.	Inaccurate use of open space. The green spaces between dwelling units are typically called yards. If it is for communal use, then use and define an appropriate term such as green space, park, pocket park or something.	Define areas around buildings as yards, green space, park, pocket park or something other than open space, which refers to the lands outside the core campus.
Page 72	The Institutional designation accommodates adaptive reuse and new construction of a retreat/conference center located at the southern terminus of Sonoma Avenue, this area is envisioned as making use of the open spaces and scenic setting to support a conference center.	Not clear what open space is being referred to here. If it is green areas between buildings, then define and describe as above. Or if the conference and retreat center is making use of public open space.	Clarify use of public open space by private retreat or conference center; and/or redefine area around buildings in core campus as parks, greenways or appropriate term.
	Parks and Recreation	Does Parks and	Clarify that Parks and

	The Parks and Recreation designation provides for parks, recreation fields, and landscaped trails and pathways, and associated infrastructure structures. Park spaces may be active or passive, and could include dog parks, play areas, and other uses. These areas are intended to primarily consist of outdoor spaces, but they may contain support structures such as restrooms or small utility buildings. Park and recreation areas may have a secondary function as stormwater treatment and infiltration areas.	Recreation designation apply only in core campus? Please make clear. It should not apply to public open space.	Recreation designation does not apply in public open space.
	Buffer Open Space The Buffer Open Space designation encompasses managed open space areas that create transitions between open space habitat and development. Along the edges of the Core Campus, the Buffer Open Space is intended as a defensible fire buffer area, with fire resilient landscaping that protects buildings from fire, along the creeks, the Buffer Open Space creates floodable areas for stormwater management and ensures adequate riparian corridors for wildlife movement. Agricultural and active recreation uses are allowed within this designation as long as they are located further than 50 feet away from the top of Sonoma Creek's	Agriculture is allowed in Buffer Open Space, but the impacts are never analyzed or mitigated. Why is 50 feet adequate to protect riparian areas from agriculture? Why isn't 100 feet a more adequate setback. Why not mitigate by prohibiting agriculture in open space buffer. Does Open Space Buffer overlap with preserved public open space? Agriculture is never mentioned in state statute.	Analyze and mitigate impacts of introducing agriculture into Open Space Buffer Areas. Explain whether this new land use and land use designation overlaps with preserved public open space; and mitigate and analyze the impacts.

	banks. Within the Buffer Open Space areas, built elements should be limited to trails and planters, permeable fencing, and informational signage.		
	Preserved Open Space The Preserved Open Space designation is intended to preserve open spaces outside of the Core Campus for habitat, recreation, ecological services, water resources, and agricultural uses. This space also contains some infrastructure, including water infrastructure, that is important for the continued functioning of local water systems.	Neither state nor community ever envisioned commercial agriculture in protected public open space. State statute never mentions agriculture or commercial agriculture.	Remove agriculture and commercial agricultural uses from definition of open space; and/or conduct analysis of impacts to open space from new commercial agricultural land uses that is now completely missing from DEIR.
Page 75	**western open space**	What is this? First time that term is used.	Define western open space.
Page 76	*Agrihood* The Agrihood District is envisioned as a new neighborhood that is a nod to historic agricultural lands, with physical and visual connections to the historic agricultural areas, low-impact development at a lower intensity, and a smooth visual transition between higher intensities to the west and the agricultural open space at the east.	See comments above about agriculture. The Agrihood appears to overlap with preserved public open space and community separator lands. What the heck is agricultural open space?????	Conduct analysis and mitigate impacts to preserved public open space from new commercial agricultural land uses that is now completely missing from DEIR. Conduct analysis and mitigate impacts to preserved public open space from new "agrihood." Describe how the agrihood overlaps with community separators; and how a vote of the people is likely to be required as it intensifies development. Define this new term: agricultural open space.

Goals and Policies	Open Space Related	Comment or Question	Action Requested
Page 94 3.1.3.3 Relevant Policies and Implementing Actions			
Pg 94, 131 Open Space and Resources and Hazards	2-A Open Space: Preserve the open space surrounding the core campus in public ownership in perpetuity, preventing further development in undeveloped areas and ensuring ongoing stewardship in partnership with neighboring State and regional parks and other institutions and organizations.	While I support this, there is no analysis, description or detail or how or when this will be accomplished. This language is far too vague to provide adequate mitigation. It needs to be more detailed and added to Conditions of Approval. The DEIR needs to provide specifics such as naming prioritized entities such as California State Parks, Sonoma County Regional Parks, Sonoma County Open Space District, California Coastal Conservancy and other "conservation" institutions and "non-profit" and "public" organizations. How will it be accomplished, such as through conservation easements, fee-title, inter-agency transfer or other mechanisms. A timeline, such as within three years of the adoption of the DEIR. Right now, there is nothing in writing; and the state statute is vague, conditional on "feasibility."	Add specific details for how, when and through what mechanisms the preservation of the open space in public ownership in perpetuity will be accomplished, and provide detailed options, as well as a timeline. Preservation of open space in public ownership in perpetuity needs to be added as a DEIR Mitigation and a Condition of Approval in the Specific Plan.
	2-B Balance: Promote a balance of habitat conservation, agriculture, and recreational open space, reflecting the recent historic use of the surrounding open space.	Balance and Promotion is not an action or requirement. Does not serve as an enforceable mitigation or condition of approval. Agriculture needs to be removed or analyzed and mitigated as a new land use. Define historic use. Recreational	Either remove this entirely as "balance" and "promote" have no enforceability to serve as a mitigation or condition of approval; or change to "require habitat conservation and protection of natural resources of open space in

		use is another new term introduced here without definition.	public ownership in perpetuity." Remove agriculture. Remove or define "historic use." Remove or define "recreational open space."
	Policies 2-1 Work with Sonoma County to dedicate the preserved open space as regional parkland.	Work with is vague and meaningless. Who is supposed to work with Sonoma County? Isn't this a Sonoma County document? This needs detailed description of how, when and by what mechanisms that the preserved open space will dedicated for public ownership in perpetuity. Here you say it will be parkland. In other places you say it will be agriculture. I support making it all parkland. But what does regional parkland mean? Does that prevent the land from going to state parks?	Add specific details for how, when and through what mechanisms the preservation of the open space in public ownership in perpetuity will be accomplished, and provide detailed options, as well as a timeline. Preservation of open space in public ownership in perpetuity needs to be added as a DEIR Mitigation and a Condition of Approval in the Specific Plan. Define what you mean by "regional parkland."
	2-7 Prohibit lights within the wildlife corridor and along the creek corridor.	Support.	
	2-11 Implement "dark skies" standards for all public realm lighting and all new buildings on the site, including by requiring that all outdoor fixtures are fully shielded, that outdoor lights have a color temperature of no more than 3,000 Kelvins, and that lighting for outdoor recreational facilities be prohibited after 11pm.	Support.	
Page 95	2-20 Require that new development preserve existing trees to the fullest extent feasible. Locate new construction and public	Inadequate. "As feasible" is unenforceable. This does nothing to save a single tree, nor does it provide any information	The DEIR needs a full assessment of the trees and tree canopy; and needs to require protection of mature trees

	realm improvements around existing landscaping features.	on the tree canopy that exists at SDC or the conservation or climate benefits they provide.	and by size and species and historic value. The conservation ad climate values of the existing trees need to be analyzed.
	2-20 Require that new development preserve existing trees to the ***fullest extent feasible.*** Locate new construction and public realm improvements around existing landscaping features.	Inadequate. "Fullest extent feasible" is unenforceable. The use of the word "require" is meaningless here.	The DEIR needs a full assessment of the trees and tree canopy; and needs to require protection of mature trees and by size and species and historic value. The conservation ad climate values of the existing trees need to be analyzed.
Pg 101 *Standard Conditions of Approval*	MOB-2 Construction of the Highway 12 connector should avoid damage to scenic and open space resources such as trees, rock outcroppings, and historic buildings to the **greatest extent feasible.**	Inadequate. "Fullest extent feasible" is unenforceable. The use of the word "require" is meaningless here.	Provide actual requirements and conditions of approval to prevent damage to scenic and open space resources such as trees, rock outcroppings and historic buildings.
Page 102	Preserved Open Space land use designation is intended to preserve open spaces outside of the Core Campus for habitat, recreation, and agricultural uses.	Remove agriculture from definition of preserved open space. Agriculture is never mentioned in state statute.	Remove agriculture from definition of preserved open space; and/or conduct analysis and mitigations for introducing ag into open space, and land use designations as described above.
Page 105	preserving the site's open space framework	Define open space framework. Is that just a map?	Define and describe the open space framework.
Page 123 3.2.2.4 Planning Area Overview			
Agricultural Resources	The Planning Area is a located in a rural setting within the vastly agricultural area of unincorporated Sonoma County. Parcels immediately to the south of the Planning Area in the eastern portions are	Inadequate. Vague. Unclear.	Define amount of acreage and actual agriculture uses at SDC. Clarify whether they are commercial ag uses or just for growing food for residents and staff at SDC.

	currently being used as vineyards. In this rural context, there is some land within SDC that was historically used for agriculture within the Planning Area.		
	This area contained historic agriculture uses, including animal husbandry and grazing, orchards, vineyards, crop production and the former Sunrise Industries farm.	Inadequate. Vague.	Define amount of acreage and actual agriculture uses at SDC. Clarify whether they are commercial ag uses or just for growing food for residents and staff at SDC.
	The presence of rich soils and the mandate to preserve open space on the SDC site suggests that agricultural uses could again become an important land use on the SDC site.	Commercial agriculture as the Specific Plan and DEIR propose is a new land use compared to the food and farming conducted at SDC for residents and staff.	As above, either remove agriculture or conduct an analysis of the impacts of introducing commercial agriculture into open space. Define amount of acreage and actual agriculture uses at SDC. Clarify whether they are commercial ag uses or just for growing food for residents and staff at SDC.
Page 124	Approximately 610 acres within the Planning Area is designated as Grazing Land and 98 acres is designated as Farmland of Local Importance.	Yes, but there is no commercial grazing or agriculture being conducted on site; and it is unlikely there ever was.	See above.
	However, there are no current grazing activities occurring within the Planning Area.	Exactly.	Introduction of grazing is a new land use that requires analysis and mitigation in the DEIR.
	No land within the Planning Area is currently zoned as Agricultural in the Sonoma County General Plan; the entire Planning Area is currently zoned as Public Facilities. The only agricultural and resource-based land use permitted in	Exactly.	Introduction of new commercial agricultural uses as proposed requires analysis and mitigation in the EIR.

	this zone is beekeeping, and agricultural processing is conditionally permitted.		
Page 131 3.2.3.3 Relevant Policies and Implementing Actions **The following relevant policies and implementing actions of the Proposed Plan address agriculture and forestry resources:**	2-D Biological Resources: Promote conservation of existing habitat, including creeks, groundwater recharge areas, and open spaces, through intentional water and energy conservation, sustainable food production, top-tier sustainable building practices, and aggressive waste reduction strategies in order to protect natural resources and critical wildlife habitat, maintain wildlife linkages, and foster environmental stewardship.	Inadequate. Promote is not adequate to protect or mitigate environmental harm to biological resources.	Change promote to "require" and provide some actual mitigations.
	Policies 2-1 Work with Sonoma County to dedicate the preserved open space as regional parkland.	Inadequate. Vague. Unclear. "Work with" has no clear definition. Given this is one of the most important assets and elements of the Specific Plan and state statute, the DEIR needs to provide far more detail and actual requirements, mitigations and enforceable measures and conditions of approval to meet CEQA.	Add specific details for how, when and through what mechanisms the preservation of the open space in public ownership in perpetuity will be accomplished, and provide detailed options, as well as a timeline. Preservation of open space in public ownership in perpetuity needs to be added as a DEIR Mitigation and a Condition of Approval in the Specific Plan.
	2-2 Work with agricultural community partners and local farmers to reintroduce agricultural uses in the agrihood and within the managed landscape buffer to promote local production and regenerative farming practices, honoring the site's history and enhancing the site's connection to the land.	As above, "work with" is an inadequate term to meet CEQA mitigation requirements. New land uses including the agrihood and agriculture need to be analyzed and mitigated. If the intent is to prioritize regenerative farming and local production, that needs to be made clear. Commercial agriculture is not that.	Analyze and mitigate impacts to open space lands from new land use of "agrihood." See comments above about agrihood, community separators and agriculture in general.

	2-21 Preserve and enhance the wetlands east of the core campus as a fire break, groundwater recharge, and habitat area.	Required by law to protect wetlands. Therefore, this is not a mitigation.	Analyze and mitigate impacts to wetlands as use as fire break and groundwater recharge area, which are new land uses for wetlands that are protected by federal law.
	2-26 Prohibit the use of all pesticides, rodenticides, and poisons in materials and procedures used in landscaping, construction, and site maintenance within the Planning Area. This restriction should be included in all Declarations of Covenants, Conditions and Restrictions (CC&Rs) to ensure that future homeowners are aware of the requirements.	Support.	Support.
	The proposed Agrihood District (Goal 5-M) would support new agricultural uses, with physical and visual connections to the historic agricultural areas, low-impact development at a lower intensity, and a smooth visual transition between higher intensities to the west and the agricultural open space at the east. It is also noted that the County's Zoning Code would be concurrently amended to incorporate the Proposed Plan's new and modified land use districts and overlays, use and development standards, and density and intensity limits, if the Proposed Plan is adopted.	Exactly. And the impacts of this have not been analyzed or mitigated in the DIER.	Analyze and mitigate impacts of Agrihood on open space lands that is currently missing from DEIR.
	Given that the Proposed	This is nonsensical	Explain.

	Plan supports agricultural uses as permitted by existing zoning and that the Planning Area does not include any Williamson Act contract lands, this impact would be less than significant	conclusion. What does it even mean?	
Page 136	The Proposed Plan would introduce new and modified land use districts and overlays that will accommodate proposed land use classifications including residential, employment center, flex zone, institutional, utilities, parks and recreation, buffer open space, preserved open space, and a hotel overlay zone.	Exactly. And the impacts from all that on open space lands are not adequately analyzed or mitigated.	Fully analyze and mitigate all the environmental impacts to open space lands and Sonoma Valley from Proposed Specific Plan, which has not been adequately done in the DEIR, as comments show.
	In addition, the proposed Agrihood District (Goal 5-M) is planned on the eastern side of the Core Campus and would support new agricultural uses in recognition of the Farmland of Local Importance, which historically supported agricultural uses on the eastern portion of the site.	New land use.	See above on agriculture as a new land use at SDC and on open space lands.
	In addition, the proposed Agrihood District (Goal 5-M) is planned on the eastern side of the Core Campus and would support new agricultural uses in recognition of the Farmland of Local Importance, which historically supported agricultural uses on the eastern portion of the site.	New land use.	As above, new land use needs to be analyzed and mitigated in DEIR.
Page 196 3.3 Air	It is noted that quantified	Inadequate analysis. This	Analyze and mitigate

Quality	operational emissions do not include potential agricultural uses that would be allowed in the Agrihood district and Buffer Open Space and Permanent Open Space designations of the Proposed Plan. However, as discussed in the Methodology and Assumptions section above, these uses would be located away from future sensitive uses including residential areas (i.e., outside the Core Campus), and permitted agricultural activities are unlikely to occur on a scale that would result in daily operational emissions of the Proposed Plan (**Table 3.3-8**) exceeding BAAQMD's thresholds for particulate matter.	is giant leap. The DEIR needs to analyze and mitigate, not make giant assumptions based on no facts or evidence.	impacts of potential new ag uses on open space and SDC property, future and current residents of the area. Provide actual mitigations that are enforceable.
	Limited agricultural uses would be allowed in the Agrihood district as well as the Buffer Open Space and Preserved Open Space areas outside of the Core Campus.	What are the limited agriculture uses.	Analyze and mitigate new agriculture uses.
Page 237 3.4.3.3 Relevant Policies and Implementing Actions ***Open Space and Resources and Hazards***	Goals 2-D Biological Resources: Promote conservation of existing habitat, including creeks, groundwater recharge areas, and open spaces, through intentional water and energy conservation, sustainable food production, top-tier sustainable building practices, and aggressive waste reduction strategies in order to protect natural	Promote is not an adequate mitigation.	See comments above to require actual requirements and mitigations, replace "promote" with actionable and enforceable measures.

	resources and critical wildlife habitat, maintain wildlife linkages, and foster environmental stewardship.		
	2-E Wildlife Corridor: Maintain and enhance the size and permeability of the Sonoma Valley Wildlife Corridor (as shown in Figure 1.6-3) by ensuring a compact development footprint at the SDC site and by minimizing impacts to wildlife movement and safety from human activity and development at the campus.	Inadequate. How exactly will impacts be minimized to wildlife movement and safety from human activity and development at the campus.	Provide adequate analysis and mitigations for minimizing impacts to wildlife movement and safety from human activity and development at the campus.
	2-7 Prohibit lights within the wildlife corridor and along the creek corridor.	Support.	Support
	2-8 Maintain wildlife crossing structures by periodically checking for and clearing debris, vegetation overgrowth, and other blockages from culvert and bridge crossing structures; within the Core Campus, the Project Sponsor should develop and execute a maintenance	Inadequate. What does periodically mean? Who will do the checking? How is a project sponsor equipped to develop and execute a maintenance program? The word should needs to be "shall."	Provide an enforceable requirement for maintaining wildlife crossing structures.
	2-9 Within the wildlife corridor, meet but do not exceed the defensible space requirements of the County Fire Department to maintain wildlife habitat while maximizing fire safety.	Inadequate. What the heck does this mean exactly?	Explain and define what this means exactly; and who would be responsible.
	2-14 Prohibit all unleashed outdoor cats, and restrict off-leash dogs and other domestic animals to private fenced yards and designated areas.	Support.	Support.

	2-15 Collaborate with local wildlife protection groups to create and distribute educational information and regulations for residents and employees to guide safe interactions with wildlife onsite. Materials should be accessible to all ages and abilities and could include posted signs, disclosures, fliers, or informational sessions, among other things.	Inadequate. Collaborate does not constitute and enforceable mitigation.	Change collaborate to "require SDC property owner and open space managers to ….."
	2-17 Adhere to residential nighttime noise standards to the extent feasible.	Inadequate. Meaningless.	Provide actual enforceable noise mitigations.
	2-20 Require that new development preserve existing trees to the fullest extent feasible. Locate new construction and	Inadequate. Meaningless.	Provide actual enforceable tree preservation mitigations.
Page 239	2-25 Include protective buffers of at least 50 feet along Sonoma and Mill creeks, as measured from the top-of-bank and as shown on Figure 2.2-1: Open Space Framework, to protect wildlife habitat and species diversity, facilitate movement of stream flows and ground water recharge, improve water quality, and maintain the integrity and permeability of the Sonoma Valley Wildlife Corridor, and the ability of wildlife to use and disperse through the SDC site. Manage protective buffers so that they support continuous stands of healthy native plant communities.	Inadequate. Why does 50 feet provide adequate protection? Why not 100 feet? What is the Open Space Framework? Just a map? Manage how?	Provide adequate analysis and mitigations for protective buffers, define and describe open space framework, and explain how protective buffers will be managed.

	2-27 Ensure that all development adheres to Sonoma County Municipal Code Sec 26-65 on riparian corridor protection.	Following existing law is not a mitigation or measure. It is required by law. How will you ensure it is followed?	How will county ensure that the riparian corridor protection regulations will be followed and enforced; and by whom?
	2-28 Prior to the commencement of the approval of any specific project in the Proposed Plan area, Project Sponsors shall contract a qualified biologist to conduct studies identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level.	Inadequate. Future studies do not provide mitigation.	Inadequate.
Page 240 3.4.3.4 Impacts *Summary of Proposed Plan*	The existing undeveloped portions of the Planning Area would be designated as Preserved Open Space land use. Development is not proposed to occur within Preserved Open Space, where current daytime recreational uses would continue. Impact 3.4-1 Implementation of the Proposed Plan would not	So here the DIER states that the Preserved Open Space Land Use would remain undeveloped and not be developed, except for recreational daytime uses. Agricultural use and development are not mentioned here. I support that, but it is inconsistent with other parts of the DEIR and Specific Plan. Remove agriculture to be consistent. You can't say there is no impact when the impacts of agriculture haven't been analyzed.	Remove agriculture from preserved open space.
Page 242	Outside of the developed areas, the Proposed Plan establishes dedicated open space areas. Managed open space in these areas would preserve and, in some cases,	Support, but needs more detail and explanation on how the open space will be managed and how it will enhance habitats and wildlife. I agree that preservation would be	Reconcile definition and use of preserved open space throughout DEIR and Specific Plan; remove agriculture.

	enhance the quality of sensitive habitats such as wetlands, native grasslands and oak woodlands. Several special-status wildlife and some plant species would be positively impacted by the preservation of these habitats. The open space would preserve the Sonoma Valley Wildlife Corridor and maintain its permeability for the movement of wildlife at a regional scale.	beneficial. But once again, the issue of agriculture is not addressed, which could be extremely harmful to everything here.	
Page 254	The Proposed Plan is intended to contain development within the already developed area (Core Area) and protect open space for recreational and preservation uses. The	Exactly. No agriculture.	See previous comments on agriculture.
Page 255	Because the Proposed Plan preserves the overwhelming majority of the SDC parcel in open space, it ensures continuation of regional connectivity for wildlife, serving as a conduit for transit of wildlife between significant habitat blocks to the east and west.	Inadequate. Just preserving the 755 acres of open space in itself does not protect the natural resources or ensure connectivity for wildlife. Plus, there is a huge amount of inconsistency on how open space is defined and a lack of specificity on how it will be preserved.	Explain in detail how the Proposed Plan ensures continuation of regional connectivity for wildlife, serving as a conduit for transit of wildlife between significant habitat blocks to the east and west.
Page 257	Moreover, the 750 acres of Planning Area that will be preserved as open space will help offset some of the emissions generated by development under the Proposed Plan, though not necessarily on a magnitude sufficient to achieve carbon neutrality for the Planning Area. Nevertheless, this	What? Please provide detailed analysis and assumptions on this point. Looks like another great leap. Particularly since there is no plan for protecting trees, and there is no analysis of the impacts of introducing commercial agriculture.	Please provide detailed analysis and assumptions on this point. Looks like another great leap with very little actual evidence.

	significant source of carbon sequestration supports the 2022 Scoping Plan's emphasis on natural and working lands.		
Page 307 3.10.1.1 Historical Land Use	SDC operations made use of the significant open space for recreation and agriculture, with programs that made use of the land to support the clients. Institutional decline in the 1970s and 1980s led to the eventual transfer of several hundred acres of what was identified as surplus land to the county and state park system, including approximately 600 acres that were transferred to the adjacent Jack London State Historic Park in 2002. With its remaining 945 acres, the SDC continued to operate agriculture and recreation programs on the property and kept much of the land in active use until the State announced closure of developmental centers in 2015 and closed the SDC in late 2018.		
Page 319	As described in the Biological Resources Chapter, the campus will be surrounded by a vast network of permanently preserved open spaces to protect natural resources, foster environmental stewardship, and maintain and enhance the permeability of the Sonoma Valley Wildlife Corridor for safe wildlife	It is not clear how the Specific Plan and DEIR will adequately accomplish this.	

	movement throughout the site.		
Page 396	Policies 2-1 Work with Sonoma County to dedicate the preserved open space as regional parkland. 2-4 Streamline the existing trail system by mapping, improving, and clearly marking designated trails for recreational use in order to minimize negative effects on the open space from recreational use.	As above, "work with" is not an enforceable mitigation. How will streamlining the trail system improve and mitigate impacts from recreation use?	See comments above about this policy and use of term "work with." Explain how streamlining the trail system will improve and mitigate impacts from recreation use.
	2-5 Consider creating a designated area for water recreation at Suttonfield Lake, such as an access point near the trail from Arnold Drive with rail fencing and clearly marked signage and rules for swimming, dogs, and non-motorized boating.	Not a good idea. That will require a huge amount of supervision, new fences and roads, lighting and all kinds of things that are not conducive to preserving open space, natural resources and wildlife habitat. Plus, it is drinking water.	Remove this concept.
Page 397 *Community Design*	5-16 Develop a cohesive and integrated system of parks and open spaces, to fulfill the active and passive recreational needs of the community, building on the overall framework outlined in Figure 5.1-1.	Is the entire framework based on one map? How, who and when will a cohesive and integrated system of parks and open spaces, to fulfill the active and passive recreational needs of the community be accomplished?	Explain the framework. Describe in detail how, who and when will a cohesive and integrated system of parks and open spaces, to fulfill the active and passive recreational needs of the community be accomplished.
Page 403	Moreover, 755 acres of the Planning Area will be retained as open space that will be publicly accessible and integrated into the regional parks system (proposed Policy 2-1).	Yes. Support, but many elements of the Specific Plan and DEIR conflict with this and fail to address impacts from new land uses such as agriculture. Also, why limit to regional park system? What about state?	Explain why regional parks and not state parks? Explain how the 755 acres of open space will be "retained" and by whom, when and by what mechanisms.
Page 524	Full Open Space and Public/Institutional Use alternatives were also	While I appreciate that these alternatives were considered, they could	Provide more analysis and detail on the Full Open Space and

	considered; however, for reasons discussed in Section 4.3, these alternatives were determined to be inconsistent with project objectives and infeasible, and therefore not analyzed in detail.	have been more fully analyzed and evaluated to provide public and decision makers with another option for the SDC property. While it is true that this option is not specifically mentioned in state statute, when it comes to housing, it states “as appropriate.” The Specific Plan goes far beyond “appropriate” for housing. It also introduces agriculture which was never mentioned in state statute.	Public/Institutional Use alternatives to provide the public and decision makers with additional options for the future of SDC.

More than
90 large fi res
were burning across the parched Western U.S. landscape in mid-September 2022 following a record-setting heat wave, and thousands of people were underevacuation orders. One wildfi re had
burned about 100 homes
and buildings in the NorthernCalifornia town of Weed. As fi re risk rises, is it time to consider managed retreat? Th reeenvironmental design and sustainability experts explore the options.
A case for retreat in the age of fi re
Wildfi res in the American West are getting
larger, more frequent and more severe
. Althougheff orts are underway to create fi re-adapted communities, it's important to realize that wecannot simply design our way out of wildfi re – some communities will need to begin planning aretreat.
Paradise, California,
worked for decades to reduce
its fi re risk by removing dry grasses, brushand forest overgrowth in the surrounding wildlands. It built fi rebreaks to prevent fi res fromspreading, and
promoted defensible space
around homes.
But in 2018, a fi re sparked by wind-damaged power lines swept up the ravine and destroyedover 18,800 structures.
Eighty-fi ve people died
. It's just one example.
Across the America West and in other fi re-risk countries, thousands of communities likeParadise
are at risk. Many, if not most, are in the wildland-urban interface, a zone betweenundeveloped land and urban areas where both wildfi res and unchecked growth are common.From 1990 to 2010, new housing in the wildland-urban interface in the continental U.S.
grew by41%
. By 2020,
more than 16
million homes
were in fi re-prone areas in the West.
Whether in the form of large, master-planned communities or incremental, house-by-houseconstruction, developers have been placing new homes in danger zones.
Assesses fire risk at the local level can help communities understand and prepare. The map reflects theprobability wildfire will occur in an area in 2022.
First Street Foundation Wildfire Model
It has been nearly four years since the Paradise fi re, and the town's population is now
less than30% of what it once was
. Th is makes Paradise one of the fi rst documented cases of voluntaryretreat in the face of wildfi re risk. And while the notion of wildfi re retreat is controversial,politically fraught and not yet endorsed by the general public, as experts in urban planning andenvironmental design, we believe the necessity for retreat will become increasinglyunavoidable.
But retreat isn't only about wholesale moving. Here are four forms of retreat being used to keeppeople out of harm's way.
Limiting future development
On one end of the wildfi re retreat spectrum are development-limiting policies that

createstricter standards for new construction. Th ese might be employed in moderate-risk areas or
communities disinclined to change.
An example is San Diego's steep hillside guidelines that restrict construction in areas withsignifi cant grade change, as wildfi res burn faster uphill. In the guidelines, steep hillsides have agradient of at least 25% and a vertical elevation of at least 50 feet. In most cases, new buildingscannot encroach into this zone and must be located
at least 30 feet from the hillside
.
While development-limiting policies like this prevent new construction in some of the mosthazardous conditions, they often cannot eliminate fi re risk.
Development-limiting policies can include stricter construction standards. The illustration shows thedifference between a home on a steep, wooded hillside that is hard to defend from fire and one fartherfrom the slope. Emily Schlickman
Halting new construction
Further along the spectrum are construction-halting measures, which prevent newconstruction to manage growth in high-risk parts of the wildland-urban interface.
Th
ese fi rst two levels of action could both be implemented using basic urban planning tools,starting with county and city general plans and zoning, and subdivision ordinances. Forexample, Los Angeles County recently updated its
general plan to limit new sprawl in wildfi rehazard zones
. Urban growth boundaries could also be adopted locally, as many suburbancommunities north of San Francisco have done, or could be mandated by states,
as Oregon didin 1973
.
Halting construction and managing growth in high-risk parts of the wildland-urban interface is anotherretreat tool. Emily Schlickman
To assist the process, states and the federal government could designate
fi
re-risk areas
, similarto Federal Emergency Management Agency fl ood maps.
California already designates zones
with three levels of fi re risk: moderate, high and very high.
Th
ey could also develop fi re-prone landscape zoning acts, similar to legislation that has helped limit new development along coasts
,
on wetlands
and
along earthquake faults
.
Incentives for local governments to adopt these frameworks could be provided throughplanning and technical assistance grants or preference for infrastructure funding. At the sametime, states or federal agencies could refuse funding for local authorities that enabledevelopment in severe-risk areas.
In some cases, state offi cials
might turn to the courts
to stop county-approved projects toprevent loss of life and property and reduce the costs that taxpayers might pay to maintain andprotect at-risk properties

Th
ree
high-profi le
projects
in California's wildland-urban interface have been stopped in thecourts because their environmental impact reports fail to adequately address the increasedwildfi re risk that the projects create. (Full disclosure: For a short time in 2018, one of us, EmilySchlickman, worked as a design consultant on one of these – an experience that inspired thisarticle.)

Incentives to encourage people to relocate

In severe risk areas, the technique of "incentivized relocating" could be tested to help peoplemove out of wildfi re's way through programs such as voluntary buyouts. Similar programs havebeen used after fl oods.

Local governments would work with FEMA to off er eligible homeowners the pre-disaster valueof their home
in exchange for not rebuilding
. To date, this type of federally backed buyoutprogram has yet to be implemented for wildfi re areas, but some vulnerable communities havedeveloped their own.

Th
e city of Paradise created a buyout program funded with nonprofi t grant money anddonations. However, only
300 acres of patchworked parcels have been acquired
, suggestingthat stronger incentives and more funding may be required.

Removing government-backed fi re insurance plans or instituting variable fi re insurance ratesbased on risk could also encourage people to avoid high-risk areas.

Another potential tool is a "transferable development rights" framework. Under such aframework, developers wishing to build more intensively in lower-risk town centers couldpurchase development rights from landowners in rural areas where fi re-prone land is to bepreserved or returned to unbuilt status. Th e rural landowners are thus compensated for the lostuse of their property. Th ese frameworks have been used for growth management purposes inMontgomery County, Maryland
, and in
Massachusetts
and
Colorado
.

Incentivized relocating can be used in severe risk areas by subsidizing the movement of some people outof wildfire's way. The illustrations show what before and after might look like.

Emily Schlickman

Miiiihll

Moving entire communities, wholesale

Vulnerable communities may want to relocate but don't want to leave neighbors and friends."Wholesale moving" involves managing the entire resettlement of a vulnerable community.

While this technique has yet to be implemented for wildfi re-prone areas, there is a long historyof its use
after catastrophic fl oods
. One place it is currently being used is Isle de Jean Charles,Louisiana, which has
lost 98% of its landmass since 1955 because of erosion and sea levelrise
. In 2016, the community received a federal grant to plan a retreat to higher ground,including the design of a

new community center
40 miles north and upland of the island.
Th
is technique, though, has drawbacks – from the complicated logistics and support needed tomove an entire community to the time frame needed to develop a resettlement plan topotentially overloading existing communities with those displaced.
In extreme risk areas, wholesale moving could be an approach – managing the resettlement of an entirevulnerable community to a safer area. Emily Schlickman
Even with ideal landscape management, wildfi re risks to communities will continue to increase,and retreat from the wildland-urban interface will become increasingly necessary. Th e primaryquestion is whether that retreat will be planned, safe and equitable, or delayed, forced andcatastrophic.

[2] According to the Final 2023–2031 RHNA, ABAG has
Sonoma Developmental Center Specific Plan determined that unincorporated Sonoma County's fair share of regional housing need for the 2023 to 2031 period would be 3,881 units. Approximately 1,632 of these units would be allocated as housing affordable to very low- and low-income households.93 The ABAG
Executive Board adopted the Final RHNA Plan in December 2021. It should be noted that
while the present RHNA allocation is for the next eight years, full development of the SDC
Specific Plan would occur over a longer time horizon, over multiple RHNA cycles.

RE: Public Comments on Sonoma Developmental Center Draft Environmental Impact Report (DEIR) and Specific Plan – Revise EIR to Meet CEQA, Scale it Back and Protect Open Space!!

Dear Permit Sonoma, Board of Supervisors and Sonoma County Planning Commission,

As a long-time resident of Sonoma Valley who cares deeply about the lands, wildlife and people who live here, I do not support the Sonoma Developmental Center (SDC) Specific Plan as proposed by Permit Sonoma and find that the DEIR is inadequate to meet the requirements of the California Environmental Quality Act. Please see my general comments followed by comments on the DEIR and a detailed table with more detailed comments.

GENERAL COMMENTS on SDC DEIR, Specific Plan and Planning Process

Reversal of County Land Use Policies: The proposed SDC Specific Plan and DEIR comprise a complete reversal on decades of city centered growth and open space protection in Sonoma County. Instead of providing a visionary plan that addresses climate change and environmental protection while providing appropriate affordable housing, the County of Sonoma is deciding to forever urbanize the heart of rural and agricultural Sonoma Valley. Whether or not the Specific Plan is implemented or not, the rezoning of these lands for residential, hotel, commercial, retail and other new land uses will forever transform these lands.

Public Land for Public Good: This public land has always served the public good. For decades, everyone from local residents to county elected officials to open space agencies and the general public have envisioned these lands for protected open space and serving the needs of people with developmental disabilities and others who may need housing and services. So, it is extremely heartbreaking to realize that the county is instead intent on building a giant new subdivision here despite the many other options that have been forwarded by the community and stakeholders. The state statute is being willfully misinterpreted by the County of Sonoma to the detriment of the people of California who own these lands. Turning public lands over to private developers for profit is simply wrong when there are many models for repurposing public lands without doing so, such as Marin Headlands, Presidio Trust, and Mare Island.

Open Space: My comments are primarily focused on the open space lands surrounding the campus. These lands are critical for conservation, biodiversity and habitat linkage at a regional and state level. These lands qualify for and are prioritized for recognition in Governor Newsom's 30 X 30 Executive Order among environmental leaders such as Sierra Club, Sonoma Land Trust and Sonoma Mountain Preservation.

It is unfortunate that the DEIR and Specific Plan do not give these treasured lands the level of analysis and protection as the development on the historic campus. Definitions are unclear and there are no requirements or details on how, when or through what process the open space will be permanently protected in public ownership.

No doubt it is because the primary focus has been on urban planning. It might be a very good urban plan for a town or city but not for the center of the Sonoma Valley Wildlife Corridor and open space that provides easy access to nature and quiet recreation for all, across the income spectrum. Here the urban plan constitutes old fashioned sprawl.

Housing: While we all recognize the need for affordable housing, we also know that we can't build our way out of it. Just look to the rest of the Bay Area and places like Los Angeles where affordable housing is even more scarce. There is room in existing cities and towns to provide affordable housing for the people who need it. But of course, we need to change the way we provide housing; build-baby-build isn't it. The SDC lands are the wrong place for massive housing development comprised primarily of market rate housing. This will simply create another high-end wine country enclave and profits for private developers.

Timeline: While I don't have any confidence that the county intends to change course, I do request that the county provides the public, Planning Commission and Board of Supervisors adequate and appropriate time to revies and finalized the DEIR and Specific Plan. The County must ask the State of California for more time to accomplish this important planning process. The County and State should not adopt a plan just to meet an arbitrary deadline. There is no rush given that the SDC property will be in transition for decades to come.

DEIR COMMENTS

1. **REVISE DEIR TO MEET CEQA**: Revise and strengthen the Draft Environmental Impact Report to meet the requirements of California Environmental Quality Act by analyzing and preventing or reducing all negative environmental impacts generated by the proposed Specific Plan by scaling back project, avoiding impacts and providing legally enforceable mitigation measures in a Mitigation and Monitoring Program. As drafted the DEIR is not adequate to meet CEQA. It has zero mitigations for any environmental impacts, including two that are "significant and unavoidable:" historic preservation and VMTs.

2. **REVISE SELF-MITIGATED SPECIFIC PLAN:** Revise and strengthen the Specific Plan Conditions of Approval to be legally enforceable requirements and recast as mitigation measures in the DEIR, as above. As drafted, the "self-mitigating" Specific Plan does not mitigate significant negative environmental impacts. The Conditions of Approval (CofAs) only apply to half of the environmental areas required for study under CEQA. And there are none for critical issues such as wildfire. Most of the CofAs for biological resources apply only to construction, not operations or maintenance, and are based

mostly on existing state law or Best Management Practices, which are not in statute and therefore not legally enforceable.

All Specific Plan Goals and Policies need to be specific, strong and enforceable. Otherwise, they are practically meaningless. Please remove vague words such as "promote" or "encourage" or "if feasible." Replace with "require", "shall" or "must." These strengthened Goals and Polices then need to be made Conditions of Approval and recast as Mitigations in the DEIR in a Mitigation and Monitoring Program.

If CofAs, policies or goals can't be made specific, then remove them as they do not mitigate environmental impacts. Having a Self-Mitigated Plan is not part of CEQA and does not necessarily meet CEQA; and certainly not in the case of the SDC Specific Plan and DEIR.

3. **SCALE BACK DEVELOPMENT AND CHANGE PREFERRED ALTERNATIVE:** Scale back the development to 450 or fewer homes in scale with the rural character of the property; utilize existing buildings, preserve historic features. Require that 100 percent of the homes be affordable to low, very low- and moderate-income working people and to individuals with developmental disabilities. Require that all homes and buildings meet Visitability Standards for access by Americans with Disabilities (ADA), prioritizing those who currently live in Sonoma Valley.
   - Eliminate the hotel, retail and commercial space that is not needed as those services already exist nearby in Sonoma Valley.
   - Change the Preferred Alternative to the Historic Preservation Alternative, which is the most environmentally sound, and amend to reflect the requirements above.
4. **ANALYZE OPEN SPACE AND PUBLIC INSTITUTUION ALTERNATIVES:** All the alternatives studied by the County of Sonoma are variations on a major mixed-use development that maximizes urban style use. The scaled back Historic Alternative is the closest to what the public and community has asked for over the years. However, the Open Space and Public Institution Alternatives that were dismissed by the County of Sonoma offer significantly difference alternatives that deserve further analysis. The Marin Headlands and Presidio Trust are good examples of how public land was repurposed without overdevelopment that could be analyzed further in the Open Space Alternative.

Providing more details on the Historic, Open Space and Public Institution Alternatives will serve to meet CEQA criteria to provide the public and decisionmakers with a true range of alternatives.

While the DEIR claims that these alternatives were dismissed due lack of consistency with state statute, I would argue that the various development alternatives that were presented are too narrow and also inconsistent with state statute. State statute calls for housing as appropriate on the SDC site and to prioritize affordable housing and housing for developmentally disabled individuals. What's present is very much out of scale and not appropriate for rural land. In addition, the DEIR and Specific Plan calls for the introduction of commercial agriculture throughout the preserved open space areas, which was never mentioned in state statute. Many other new land uses never mentioned in state statute are also proposed.

In there any legal, statutory or other reason why County of Sonoma should not analyze and provide more details on the Historic, Open Space and Public Institution Alternatives?

5. **PROVIDE SPECIFICS AND ADDRESS IMPACTS TO OPEN SPACE** – The Specific Plan and the DEIR mentions open space protection in general terms in several places, in various ways, but fails to provide a clear definition of "preserved open space," or to give the exact boundaries (other than in one general overlay map), or give details on how or when it will be protected, transferred or managed.

   Vague Goals and Policies contained the Specific Plan and DEIR do not suffice, such as *"future developers at the site must work with the County to ensure proper management and stewardship"* and *"Work with Sonoma County to dedicate the preserved open space as regional parkland."* Not resolving these issues is likely to create confusion and conflict later for all involved, as elected officials, agency staff and developers change over time.

   The DEIR and Specific Plan cannot rely on state statute to protect the open space lands as that language is vague, only as "feasible" and in the "best interests of the state."[1]

   These inadequacies need to be resolved in the DEIR and Specific Plan by adding clear descriptions of the open space lands with exact boundaries; likely mechanisms for transferring the lands and to what possible entities or types of entities; a timeline; and how the lands will be managed and under what authority. Environmental impacts and mitigations for impacts to the open space lands from development of the campus and ongoing operations must be provided.

   Preserved Open Space and Agriculture: The Specific Plan and DEIR make sweeping statements about "historic agriculture" but do not explain the extent of past agriculture in terms of types or amount of acreage. The impacts of allowing commercial agriculture on open space that is currently not in agriculture must be analyzed and the environmental impacts avoided or mitigated in the DEIR.

   Unacceptable New Uses in Preserved Open Space: Table 4-3 (attached) of the Land Use Section of the Specific Plan outlines many new uses in "preserved open space" including wine tasting rooms, timber conversion, wholesale nurseries, sports facilities and several others that have not been analyzed under CEQA or addressed at all in the goals, policies or CofAs of the Specific Plan. These "permitted" new uses in Preserved Open space must be analyzed, avoided or prevented and mitigated as required under CEQA and in my view NOT ALLOWED OR PERMITTED in Preserved Open Space.

[1] *The disposition of the property or property interests shall provide for* ***the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible*** *and shall be upon terms and conditions the director deems to* ***be in the best interests of the state.***

SHOULD NOT ALLOW AS PROPOSED THESE USES IN PRESERVED OPEN SPACE TABLE 4-2 SPECIFIC PLAN

Agricultural Crop Production and Cultivation
Agricultural Processing
Animal Keeping: Beekeeping
Animal Keeping: Confined Farm Animals
Animal Keeping: Farm Animals
Animal Keeping: Pet Fancier -
Farm Retail Sales
Farm Stands
Indoor Crop Cultivation
Mushroom Farming
Nursery, Wholesale
Timberland Conversions, Minor
Nursery, Wholesale
Tasting Rooms

SHOULD NOT ALLOW AS PROPOSED IN SPECIFIC PLAN WITH CONDITIONAL USE PERMIT
Recreation and Sports Facilities: Recreation Facility, Outdoor
Recreation and Sports Facilities: Rural Sports and Recreation

6. **SONOMA VALLEY WILDLIRE CORRIDOR MAPPING AND RIPARIAN SETBACKS:** Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed. Explain why 50 feet is adequate to protect riparian areas and the wildlife corridor. In this section, I will defer to comments by the experts, including the Sonoma Land Trust and Center for Biological Diversity.

Mapping: Neither the DEIR nor the Specific Plan provides an accurate map of the Sonoma Valley Wildlife Corridor. The DEIR refers to Figure 1.6-3, which does not appear in the DEIR. The Specific Plan Figure 1.6-3 is a map of Existing Vegetation.

In the Specific Plan Figure 1.6-2 titled "Wildlife Constraints," something that appears to represent the Sonoma Wildlife Corridor consists of two wavy green lines labeled as "Critical Wildlife Linkage Marin Blue Ridge." However, that term is not defined, does not contain the words "Sonoma Valley Wildlife Corridor" and is never used anywhere else in the Specific Plan or DEIR. And, in fact, the Sonoma Valley

Wildlife Corridor does not appear to be specifically mapped anywhere in the Specific Plan or DEIR that I could find.

To meet CEQA by providing the public and decisionmakers with accurate information, the Sonoma Wildlife Corridor needs to be clearly mapped and defined with consistent terms. You must revise the DEIR and Specific Plan to specifically map and describe the boundaries of the Sonoma Valley Wildlife Corridor.

7. **WILDFIRE:** There are no mitigation conditions of approval for wildfire; and the goals and policies are based on a future Emergency Response Plan that will be developed at some point. This is inadequate under CEQA. The DEIR and Self-Mitigating SDC Specific Plan do not eliminate risk or wildfire hazard to insignificant levels. Develop and add enforceable Mitigations in the DEIR and Conditions of Approval in the Specific Plan for Wildfire to reduce and prevent risk as there currently are none.

The Evacuation Time analysis seems unrealistic and not based on fact as it suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. It took people HOURS to evacuate from Kenwood and Sonoma Valley during recent fires.

Also, the DEIR calls for the "requirement" for a shelter-in-place facility at SDC after 200 homes are built. There is no proven rationale for sheltering in place particularly in a High Fire Risk Area. Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new state and county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives.

The DEIR and Specific Plan must also consider a wildfire mitigation that includes retreat from wildfire areas. Please see attached article in Bay Nature from experts on land use and wildfire which explains why developing in high wildfire areas is no longer appropriate or safe.

Please include by reference the comments on wildfire and evacuation from the State Alliance for Firesafe Road Regulations and other commenters with expertise on these issues.

8. **CLIMATE CRISIS and VMTs:** The DEIR finds that the proposed Specific Plan will produce "significant and unavoidable" environmental impacts due to huge increases in Vehicle Miles Traveled that will be generated primarily by new residents driving to and from the SDC site. The DEIR offers no mitigations or conditions of approval to reduce or avoid the amount of driving.

The DEIR finds that the proposed SDC Specific Plan will undermine local, regional and state policies and commitments to address the climate crisis as it found significant and unavoidable impacts in the areas of vehicle miles traveled. That means that there is NO WAY to offset or mitigate the extra driving generated by all the new housing, retail, commercial development proposed at SDC. The County must not approve this project as proposed with these impacts if it is serious about addressing the climate crisis.

Taking this approach fails to meet the standards contained in CEQA because VMTs can be avoided and reduced by building fewer homes, reusing and demolishing fewer buildings, requiring public transit, and other measures that were never considered. The DEIR and Specific Plan must be revised to analyze and provide mitigations and measures to reduce VMTs.

9. **CONFLICTS WITH EXISTING COUNTY AND VOTER APPROVED POLICIES:** Statements in the DEIR and Specific Plan that the proposals do not conflict with existing county policies are inaccurate. The proposed Specific Plan is a complete reversal of land use policy in the County of Sonoma dating back to the original General Plan in 1989. It constitutes urbanization of rural and open space lands not seen since the 1970s; and the type of development that paved over places such as Silicon Valley.

As proposed, the DEIR and Specific Plan violates decades of city-centered growth policies adopted and supported by the voters of Sonoma County and contained in the General Plan. Until now, the County of Sonoma has mostly upheld policies to grow inside existing cities and towns, honor voter-approve Urban Growth Boundaries, protect greenbelts and open space, and respect voter-approved community separators. The voters of Sonoma County have taxed themselves to create the Ag + Open Space District, the SMART Train, and provide expanded funding to Sonoma County Regional Parks.

The DEIR must analyze and mitigate the impacts to these long-standing land use and open space protection policies and voter-approved measures from the proposed Specific Plan and complete reversal of land use policy in order to comply with CEQA.

10. **HOUSING AND POPULATION**

New housing at SDC is not required or necessary for the County of Sonoma to meet its state mandated Regional Housing Needs Allocation of 3,881 housing units for the next 8-year cycle (2023-2031), as cited in the DEIR.[2] In fact, housing at SDC was never considered as part of the RHNA process because the property's future remains uncertain and is currently zoned for public facilities, not housing.

The DEIR cites the Association of Bay Area Governments (which also assigns RHNA numbers) that between 2020 and 2040, the number of housing units in Sonoma County will grow by 15 percent, while

[2] According to the Final 2023–2031 RHNA, ABAG has
Sonoma Developmental Center Specific Plan determined that unincorporated Sonoma County's fair share of regional housing need for the 2023 to 2031 period would be 3,881 units. Approximately 1,632 of these units would be allocated as housing affordable to very low- and low-income households.93 The ABAG Executive Board adopted the Final RHNA Plan in December 2021. It should be noted that while the present RHNA allocation is for the next eight years, full development of the SDC Specific Plan would occur over a longer time horizon, over multiple RHNA cycles.

the population grows by 9 percent. These facts indicate that adequate housing units will be provided if housing units grow twice as fast as population. These projections of housing and population indicate that housing needs are likely to be met without building 1,000 units at SDC. In addition, the DEIR discloses that unincorporated Sonoma County is in fact losing population.

It is clear that the housing numbers proposed in the Specific Plan and analyzed in the DEIR do not reflect actual official population or housing needs. It is based solely on Permit Sonoma's assumptions about how to make the development profitable for developer. This is the wrong baseline and approach.

The DEIR fails to consider that Sonoma County Transportation Authority has previously determined that the county and cities could build at least 30,000 new and rebuilt (post fire) housing units without expanding outside of UGBs or existing USAs. SDC was neither referenced nor considered as a location for housing.[3]

1

The DEIR fails to make note that the City of Sonoma has adequate room to meet and exceed its RHNA allocations for the next 8-year cycle; or that according to the Springs Specific Plan Notice of Preparation of an EIR, there is potential for 700 new housing units there. The county Housing Rezone EIR has also identified parcels for higher density housing in the Springs and around the unincorporated county which would result in additional housing.

With these facts in mind, the DEIR must analyze and mitigate the growth inducing impacts of adding 1,000 extra housing units to Sonoma Valley and the County of Sonoma. One alternative the DEIR should consider

is putting those 1,000 units into existing towns and cities, possible through a Transfer of Development Rights agreement with cities and the county of Sonoma itself.

11. ENDANGERED, THREATENED SPECIES

The DEIR and Specific Plan fail to adequately analyze or mitigate the negative environmental impacts to endangered and threatened species on the SDC lands. The mitigations, goals, policies and Conditions of Approval are inadequate because they are weak with unenforceable actions, rely primarily on existing laws that have to be followed anyway, and/or rely on future studies and assessments as assessments – all of which fail to meet CEQA.

In addition, the DEIR and Specific Plan fail to provide any analysis or even discuss the fact that mountain lions and bears and other predators utilize the SDC lands; or any of the research on this wildlife and others that is published or available. The DEIR and Specific Plan must recognize and provide details on this wildlife and provide analysis and mitigations to reduce negative environmental impacts; and prevent human-wildlife interactions – at the least.

I will defer to comments on this section to the experts including Center for Biological Diversity and Sonoma Land Trust.

12. COMMUNITY BENEFITS AGREEMENTS

The DEIR and Specific Plan need to consider and analyze the benefits of the use of a Community Benefits Agreements at SDC with the community, labor, and public and appropriate stakeholders as a way to provide certainty that the mitigations and measures to protect the environment and community are upheld over the decades as SDC is being transformed.

For example, county residents, particularly in the Sonoma Valley could determine what is most important based on community needs and particulars of the project once a property owner or manager is identified. For example, we could require the property owner or manager to commit to high levels of affordable and workforce housing, good, living wage jobs, protecting wildlife corridors, supportive and accessible housing for disabled people, and much more. We could fill in the gaps that the DEIR and Specific Plan don't provide, particularly if the state choose a different plan and/or the county never adopts or implements the Specific Plan.

13. **STATE STATUTE:** The County of Sonoma needs to revisit its interpretation of the state statute in respect to the Specific Plan and EIR as follows:

> **Housing:** State Statute says the following:
> *It is the intent of the Legislature that priority be given to affordable housing in the disposition of the Sonoma Developmental Center state real property.*
> *The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be* ***appropriate for the property*** *shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that* ***is deed restricted to provide housing for individuals with developmental disabilities.***

Nowhere does the statute call for maximum urbanization of the SDC nor to create a new town, hotel, commercial or retail. The scale of housing and development is not appropriate for the rural property surrounded by ag land. Therefore, the County of Sonoma's Specific Plan and DEIR are not consistent with and misinterpret the state statute. Both need to be revised to align with state statute and public comment by scaling back the development, eliminating market rate housing and other development, and providing deed-restricted affordable housing to individuals with developmental disabilities.

Open Space: State Statute says the following:

The Department of General Services recognizes the exceptional open-space, natural resources, and wildlife habitat characteristics of the Sonoma Developmental Center.

It is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as ***public parkland and open space.***

The disposition of the property or property interests shall provide for ***the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible*** *and shall be upon terms and conditions the director deems to* ***be in the best interests of the state.***

The state statute makes clear that the permanent protection of open space lands is for public parkland and natural resources as a public resource. The County's Specific Plan and DEIR are inconsistent with state statute as they propose introducing agriculture, sports fields and other uses without consider the negative environmental impacts of doing so.
However, the state statute also conditions protection of the open space "to the extent feasible" and to "be in the best interests of the state." That is why the county Specific Plan and DEIR must provide details on how, when and with what entities that the open space will be protected. If not, then the state legislature will need to act to ensure the protection of the open space and that none of it is sold off for development or other inappropriate use.

Economic Feasibility: State Statute says the following:

The planning process shall facilitate the disposition of the property by amending the general plan of the county and any appropriate zoning ordinances, completing any environmental review, and ***addressing the economic feasibility of future development.***

The County of Sonoma's entire Specific Plan and DEIR is tied to this one mention of economic feasibility to the exclusion of just about everything else. The state did not mandate that the project be economically feasible or financially feasible but to address it. Economic feasibility changes constantly with market conditions. Specific Plans and General Plans are written for long periods of time when economic feasibility is certain to change. The County is misinterpreting state statute to maximize urban development at the SDC site. The proposal could also be economically feasible if, for example, the state paid to clean up the site, then transferred it to state parks or another public

conservation entity. A bond measure or initiative could be written. However, the County looked at only one option or alternative: making profits for a private developer. This lacks vision and is inconsistent with state statute and CEQA

The Planning Commission must direct Permit Sonoma to revise the Specific Plan and DEIR to be consistent with state statute and public comment and provide new alternatives that don't focus entirely on urbanization and developer profits.

There are many other concerns that I have regarding the DEIR and Specific Plan, but these are what I am able to provide with the time and energy that I have at this time.

PLEASE SEE DETAILED TABLE OF COMMENTS BELOW AS WELL AS ARTICLE MENTIONED ABOUT WILDFIRE RETREAT.

Sincerely yours,

Teri Shore

DEIR		Comment or Question	Action Requested
Open Space Related Definitions, Goals, Policies and CofAs from DEIR		The permanent preservation of open space lands in public ownership in perpetuity is not fully addressed nor the impacts to those lands adequately analyzed or mitigated by the DEIR and Specific Plan. While there is extensive discussion of the core campus, the open space is treated with vague and conflicting terms; even though it comprises the most acreage in the Specific Plan at 755 acres. Open Space definitions inconsistent, confusing. Agriculture is included in some places, not others, and never clearly defined in DEIR. Neither state nor community ever envisioned commercial agriculture in protected public open space. State statute never mentions agriculture or commercial agriculture. How when and by what mechanisms the open space lands will be permanently protected in public hands is never adequately described.	1. Fully address, analyze and mitigate impacts to prioritized preservation of open space lands in public ownership in perpetuity as priority in the DEIR and Specific Plan, where now very little if any attention is given to the 755 acres outside the core campus development. 2. Provide clear, consistent definition for open space, preserved open space, permanent protections, open space in core campus, parks, paseos. 3. Open space should be defined as all the lands outside the core campus that will be permanently protected for natural resources, wildlife habitat, the Sonoma Wildlife Corridor, riparian corridors, wetlands, passive recreation and no development; other than maintaining and operating existing dams and improving trails. 4. Open space definition needs to include terms “public lands” as in “permanently protected as public lands in public hands for the public good.” Make clear that open space will not be in developer or other private hands. 5. Remove agriculture and commercial

			agricultural uses from definition of open space; and/or conduct analysis of impacts to open space from new commercial agricultural land uses that is now completely missing from DEIR. 6. Provide details on how, when and by what mechanisms the open space lands will be protected in perpetuity in public ownership.
Page 3 – ES 1.1	755 acres of contiguous open space, and the 11-acre non-contiguous Camp Via grounds within Jack London State Historic Park.	Is 11-acre Camp Via part of open space? Seems it should have a separate definition as a former camp. Unless intention is to remove and restore camp.	Define Camp Via as separate from public open space; or analyze impacts from removing and restoring as open space and deeding to Jack London State Park.
	Open space includes many acres of valuable wildlife habitat, former agricultural land, recreational uses, and the Eldridge Cemetery, as well as an existing network of trails and access roads	Here open space includes agriculture and the cemetery. The extent of historic agriculture is never defined. Commercial agriculture never existed on site, only for food for facility clients and staff. Cemetery is separate entity. State statute never mentions agriculture or commercial agriculture.	Remove agriculture from definition of public open space; or conduct analysis of impacts to open space from new commercial agricultural land uses that is now completely missing from DEIR. Define actual uses and acreage of historic agricultural uses; and commercial ag if it existed. Define Cemetery separately from open space.
Page 5 – ES3.1	preserved open space and parkland	Here preserved open space and parkland and mentioned together, but not defined. What parkland? Where?	Provide clear definition of preserved open space and parkland.
Page 10 ES 3.1	open space in the Core Campus	What? Open space in the Core Campus? Does that count toward the 755 acres of open space? Very confusing.	Define open space in the Core Campus as something other than open space to avoid confusion; and because a park next to buildings is not really open space but more like a park.
Page 11 ES3.1	preserved open space	Needs to be defined.	Define; remove agriculture from definition per above.

Page 11 ES3.2	Active open space areas (parks, paseos).	Active open space area is a new term introduced here with no definition. Same for parks and paseos.	Define active open space areas, parks, paseos.
Page 12 ES3.3	reclaimed as open space	What? This suggests that buildings will be removed and reclaimed as open space. That would not be open space. Maybe a park or greenspace?	Define reclaimed areas where buildings have been removed other than as open space.
Page 55 2.1.2.3	contiguous open space		Define what you mean by contiguous open space.
Page 55 2.1.2.3	Open space includes former agricultural land, recreational uses, the Eldridge Cemetery, and many acres of valuable wildlife habitat.	Here open space includes agriculture and the cemetery. The extent of historic agriculture is never defined. Commercial agriculture never existed on site, only for food for facility clients and staff. State statute never mentions agriculture or commercial agriculture. Cemetery is separate entity.	Remove agriculture from definition of public open space; or conduct analysis of impacts to public open space from new commercial agricultural land uses that is now completely missing from DEIR. Define Cemetery separately from open space.
	Embedded in the open space is an existing network of trails and access roads as well as a water system consisting of two surface water reservoirs, aqueducts, spring head, storage tanks, treatment plant, pipelines and a water intake in Sonoma Creek.		Analyze and mitigate how maintenance and operations of existing infrastructure in open space as described will impact the open space, habitat, wetlands and other natural resources.
Page 61 2.2.1	The legislation recognizes the exceptional open-space, natural resources, and wildlife characteristics of SDC, and it is the intent of the legislature that the lands outside of the core developed campus and its related infrastructure be preserved as public parkland and opens space.	Here for the first time the DEIR uses the terms “preserved as public parkland and opens space.” Is open space the same as parkland? How much will be open space and how much parkland?	Define preserved open space as above; and define public parkland. Describe how much land will be open space and how much parkland. My recommendation is that all open space be designated as parkland.
Page 63 2.3	surrounding open space, recreational, and agricultural areas,	Here open space, recreation and agriculture are lumped together as if one. State statute never	Remove agriculture and define separately. If the intention is to allow commercial agriculture,

		mentions agriculture or commercial agriculture.	then analyze and mitigate the impacts and provide land use and zoning over areas that county wants open to ag.
	The surrounding open spaces flourish as natural habitats and as agricultural and recreational land linked to regional parks and open space systems.	Here open space, recreation and agriculture are lumped together as if one. State statute never mentions agriculture or commercial agriculture.	Remove agriculture and define separately. If the intention is to allow commercial agriculture, then analyze and mitigate the impacts and provide land use and zoning over areas that county wants open to ag. Analyze and mitigate the impacts to introducing ag into open space.
	vast protected open space of oak woodlands, native grasslands, wetlands, forests, creeks, and lakes that provide habitats and wildlife movement corridors; agricultural land; and recreational open space integrated with the surrounding park systems.	This seems to be a more accurate definition for preserved open space, except for reference to agriculture.	Remove agriculture and define separately. If the intention is to allow commercial agriculture, then analyze and mitigate the impacts and provide land use and zoning over areas that county wants open to ag. Analyze and mitigate the impacts to introducing ag into open space.
Page 68 2.4.3 Key Planning Strategies	Further, the campus will be surrounded by a vast network of permanently preserved open spaces.	Yes, this is the most accurate and correct description. But doesn't define permanently protected or by what means.	Define permanently preserved open spaces and describe by what means they will be permanently protected.
Page 70 2.4.3.1 Land Use Classifications	**Single-Family Detached.** Single-family units that are detached from any other buildings (with the exception of accessory dwelling units) and have open space on all four sides.	Inaccurate use of open space. The green spaces between dwelling units are typically called yards. If it is for communal use, then use and define an appropriate term such as green space, park, pocket park or something.	Define areas around buildings as yards, green space, park, pocket park or something other than open space, which refers to the lands outside the core campus.
Page 72	The Institutional designation accommodates adaptive reuse and new construction of a retreat/conference center located at the southern terminus of Sonoma Avenue, this area is envisioned as making use of the open spaces and	Not clear what open space is being referred to here. If it is green areas between buildings, then define and describe as above. Or if the conference and retreat center is making use of public open space.	Clarify use of public open space by private retreat or conference center; and/or redefine area around buildings in core campus as parks, greenways or appropriate term.

	scenic setting to support a conference center.		
	Parks and Recreation The Parks and Recreation designation provides for parks, recreation fields, and landscaped trails and pathways, and associated infrastructure structures. Park spaces may be active or passive, and could include dog parks, play areas, and other uses. These areas are intended to primarily consist of outdoor spaces, but they may contain support structures such as restrooms or small utility buildings. Park and recreation areas may have a secondary function as stormwater treatment and infiltration areas.	Does Parks and Recreation designation apply only in core campus? Please make clear. It should not apply to public open space.	Clarify that Parks and Recreation designation does not apply in public open space.
	Buffer Open Space The Buffer Open Space designation encompasses managed open space areas that create transitions between open space habitat and development. Along the edges of the Core Campus, the Buffer Open Space is intended as a defensible fire buffer area, with fire resilient landscaping that protects buildings from fire, along the creeks, the Buffer Open Space creates floodable areas for stormwater management and ensures adequate riparian corridors for wildlife movement. Agricultural and active recreation uses are allowed within this designation as long as they are located further than 50 feet away from	Agriculture is allowed in Buffer Open Space, but the impacts are never analyzed or mitigated. Why is 50 feet adequate to protect riparian areas from agriculture? Why isn't 100 feet a more adequate setback. Why not mitigate by prohibiting agriculture in open space buffer. Does Open Space Buffer overlap with preserved public open space? Agriculture is never mentioned in state statute.	Analyze and mitigate impacts of introducing agriculture into Open Space Buffer Areas. Explain whether this new land use and land use designation overlaps with preserved public open space; and mitigate and analyze the impacts.

	the top of Sonoma Creek's banks. Within the Buffer Open Space areas, built elements should be limited to trails and planters, permeable fencing, and informational signage.		
	Preserved Open Space The Preserved Open Space designation is intended to preserve open spaces outside of the Core Campus for habitat, recreation, ecological services, water resources, and agricultural uses. This space also contains some infrastructure, including water infrastructure, that is important for the continued functioning of local water systems.	Neither state nor community ever envisioned commercial agriculture in protected public open space. State statute never mentions agriculture or commercial agriculture.	Remove agriculture and commercial agricultural uses from definition of open space; and/or conduct analysis of impacts to open space from new commercial agricultural land uses that is now completely missing from DEIR.
Page 75	**western open space**	What is this? First time that term is used.	Define western open space.
Page 76	*Agrihood* The Agrihood District is envisioned as a new neighborhood that is a nod to historic agricultural lands, with physical and visual connections to the historic agricultural areas, low-impact development at a lower intensity, and a smooth visual transition between higher intensities to the west and the agricultural open space at the east.	See comments above about agriculture. The Agrihood appears to overlap with preserved public open space and community separator lands. What the heck is agricultural open space?????	Conduct analysis and mitigate impacts to preserved public open space from new commercial agricultural land uses that is now completely missing from DEIR. Conduct analysis and mitigate impacts to preserved public open space from new "agrihood." Describe how the agrihood overlaps with community separators; and how a vote of the people is likely to be required as it intensifies development. Define this new term: agricultural open space.
Goals and Policies	**Open Space Related**	**Comment or Question**	**Action Requested**
Page 94 3.1.3.3 Relevant Policies			

and Implementing Actions			
Pg 94, 131 Open Space and Resources and Hazards	2-A Open Space: Preserve the open space surrounding the core campus in public ownership in perpetuity, preventing further development in undeveloped areas and ensuring ongoing stewardship in partnership with neighboring State and regional parks and other institutions and organizations.	While I support this, there is no analysis, description or detail or how or when this will be accomplished. This language is far too vague to provide adequate mitigation. It needs to be more detailed and added to Conditions of Approval. The DEIR needs to provide specifics such as naming prioritized entities such as California State Parks, Sonoma County Regional Parks, Sonoma County Open Space District, California Coastal Conservancy and other "conservation" institutions and "non-profit" and "public" organizations. How will it be accomplished, such as through conservation easements, fee-title, inter-agency transfer or other mechanisms. A timeline, such as within three years of the adoption of the DEIR. Right now, there is nothing in writing; and the state statute is vague, conditional on "feasibility."	Add specific details for how, when and through what mechanisms the preservation of the open space in public ownership in perpetuity will be accomplished, and provide detailed options, as well as a timeline. Preservation of open space in public ownership in perpetuity needs to be added as a DEIR Mitigation and a Condition of Approval in the Specific Plan.
	2-B Balance: Promote a balance of habitat conservation, agriculture, and recreational open space, reflecting the recent historic use of the surrounding open space.	Balance and Promotion is not an action or requirement. Does not serve as an enforceable mitigation or condition of approval. Agriculture needs to be removed or analyzed and mitigated as a new land use. Define historic use. Recreational use is another new term introduced here without definition.	Either remove this entirely as "balance" and "promote" have no enforceability to serve as a mitigation or condition of approval; or change to "require habitat conservation and protection of natural resources of open space in public ownership in perpetuity." Remove agriculture. Remove or define "historic use." Remove or define "recreational open space."
	Policies	Work with is vague and meaningless. Who is	Add specific details for how, when and through

	2-1 Work with Sonoma County to dedicate the preserved open space as regional parkland.	supposed to work with Sonoma County? Isn't this a Sonoma County document? This needs detailed description of how, when and by what mechanisms that the preserved open space will dedicated for public ownership in perpetuity. Here you say it will be parkland. In other places you say it will be agriculture. I support making it all parkland. But what does regional parkland mean? Does that prevent the land from going to state parks?	what mechanisms the preservation of the open space in public ownership in perpetuity will be accomplished, and provide detailed options, as well as a timeline. Preservation of open space in public ownership in perpetuity needs to be added as a DEIR Mitigation and a Condition of Approval in the Specific Plan. Define what you mean by "regional parkland."
	2-7 Prohibit lights within the wildlife corridor and along the creek corridor.	Support.	
	2-11 Implement "dark skies" standards for all public realm lighting and all new buildings on the site, including by requiring that all outdoor fixtures are fully shielded, that outdoor lights have a color temperature of no more than 3,000 Kelvins, and that lighting for outdoor recreational facilities be prohibited after 11pm.	Support.	
Page 95	2-20 Require that new development preserve existing trees to the fullest extent feasible. Locate new construction and public realm improvements around existing landscaping features.	Inadequate. "As feasible" is unenforceable. This does nothing to save a single tree, nor does it provide any information on the tree canopy that exists at SDC or the conservation or climate benefits they provide.	The DEIR needs a full assessment of the trees and tree canopy; and needs to require protection of mature trees and by size and species and historic value. The conservation ad climate values of the existing trees need to be analyzed.
	2-20 Require that new development preserve existing trees to the ***fullest extent feasible.*** Locate new construction and public realm	Inadequate. "Fullest extent feasible" is unenforceable. The use of the word "require" is meaningless here.	The DEIR needs a full assessment of the trees and tree canopy; and needs to require protection of mature trees and by size and species and historic value.

	improvements around existing landscaping features.		The conservation ad climate values of the existing trees need to be analyzed.
Pg 101 *Standard Conditions of Approval*	MOB-2 Construction of the Highway 12 connector should avoid damage to scenic and open space resources such as trees, rock outcroppings, and historic buildings to the **greatest extent feasible.**	Inadequate. "Fullest extent feasible" is unenforceable. The use of the word "require" is meaningless here.	Provide actual requirements and conditions of approval to prevent damage to scenic and open space resources such as trees, rock outcroppings and historic buildings.
Page 102	Preserved Open Space land use designation is intended to preserve open spaces outside of the Core Campus for habitat, recreation, and agricultural uses.	Remove agriculture from definition of preserved open space. Agriculture is never mentioned in state statute.	Remove agriculture from definition of preserved open space; and/or conduct analysis and mitigations for introducing ag into open space, and land use designations as described above.
Page 105	preserving the site's open space framework	Define open space framework. Is that just a map?	Define and describe the open space framework.
Page 123 3.2.2.4 Planning Area Overview			
Agricultural Resources	The Planning Area is a located in a rural setting within the vastly agricultural area of unincorporated Sonoma County. Parcels immediately to the south of the Planning Area in the eastern portions are currently being used as vineyards. In this rural context, there is some land within SDC that was historically used for agriculture within the Planning Area.	Inadequate. Vague. Unclear.	Define amount of acreage and actual agriculture uses at SDC. Clarify whether they are commercial ag uses or just for growing food for residents and staff at SDC.
	This area contained historic agriculture uses, including animal husbandry and grazing, orchards, vineyards, crop production and the former Sunrise Industries farm.	Inadequate. Vague.	Define amount of acreage and actual agriculture uses at SDC. Clarify whether they are commercial ag uses or just for growing food for residents and staff at SDC.

	The presence of rich soils and the mandate to preserve open space on the SDC site suggests that agricultural uses could again become an important land use on the SDC site.	Commercial agriculture as the Specific Plan and DEIR propose is a new land use compared to the food and farming conducted at SDC for residents and staff.	As above, either remove agriculture or conduct an analysis of the impacts of introducing commercial agriculture into open space. Define amount of acreage and actual agriculture uses at SDC. Clarify whether they are commercial ag uses or just for growing food for residents and staff at SDC.
Page 124	Approximately 610 acres within the Planning Area is designated as Grazing Land and 98 acres is designated as Farmland of Local Importance.	Yes, but there is no commercial grazing or agriculture being conducted on site; and it is unlikely there ever was.	See above.
	However, there are no current grazing activities occurring within the Planning Area.	Exactly.	Introduction of grazing is a new land use that requires analysis and mitigation in the DEIR.
	No land within the Planning Area is currently zoned as Agricultural in the Sonoma County General Plan; the entire Planning Area is currently zoned as Public Facilities. The only agricultural and resource-based land use permitted in this zone is beekeeping, and agricultural processing is conditionally permitted.	Exactly.	Introduction of new commercial agricultural uses as proposed requires analysis and mitigation in the EIR.
Page 131 3.2.3.3 Relevant Policies and Implementing Actions The following relevant policies and implementing actions of the Proposed Plan address agriculture and forestry resources:	2-D Biological Resources: Promote conservation of existing habitat, including creeks, groundwater recharge areas, and open spaces, through intentional water and energy conservation, sustainable food production, top-tier sustainable building practices, and aggressive waste reduction strategies in order to protect natural resources and critical wildlife habitat, maintain wildlife linkages, and foster environmental stewardship.	Inadequate. Promote is not adequate to protect or mitigate environmental harm to biological resources.	Change promote to "require" and provide some actual mitigations.

	Policies 2-1 Work with Sonoma County to dedicate the preserved open space as regional parkland.	Inadequate. Vague. Unclear. “Work with” has no clear definition. Given this is one of the most important assets and elements of the Specific Plan and state statute, the DEIR needs to provide far more detail and actual requirements, mitigations and enforceable measures and conditions of approval to meet CEQA.	Add specific details for how, when and through what mechanisms the preservation of the open space in public ownership in perpetuity will be accomplished, and provide detailed options, as well as a timeline. Preservation of open space in public ownership in perpetuity needs to be added as a DEIR Mitigation and a Condition of Approval in the Specific Plan.
	2-2 Work with agricultural community partners and local farmers to reintroduce agricultural uses in the agrihood and within the managed landscape buffer to promote local production and regenerative farming practices, honoring the site’s history and enhancing the site’s connection to the land.	As above, “work with” is an inadequate term to meet CEQA mitigation requirements. New land uses including the agrihood and agriculture need to be analyzed and mitigated. If the intent is to prioritize regenerative farming and local production, that needs to be made clear. Commercial agriculture is not that.	Analyze and mitigate impacts to open space lands from new land use of “agrihood.” See comments above about agrihood, community separators and agriculture in general.
	2-21 Preserve and enhance the wetlands east of the core campus as a fire break, groundwater recharge, and habitat area.	Required by law to protect wetlands. Therefore, this is not a mitigation.	Analyze and mitigate impacts to wetlands as use as fire break and groundwater recharge area, which are new land uses for wetlands that are protected by federal law.
	2-26 Prohibit the use of all pesticides, rodenticides, and poisons in materials and procedures used in landscaping, construction, and site maintenance within the Planning Area. This restriction should be included in all Declarations of Covenants, Conditions and Restrictions (CC&Rs) to ensure that future homeowners are aware of the requirements.	Support.	Support.
	The proposed Agrihood District (Goal 5-M) would	Exactly. And the impacts of this have not been	Analyze and mitigate impacts of Agrihood on

	support new agricultural uses, with physical and visual connections to the historic agricultural areas, low-impact development at a lower intensity, and a smooth visual transition between higher intensities to the west and the agricultural open space at the east. It is also noted that the County's Zoning Code would be concurrently amended to incorporate the Proposed Plan's new and modified land use districts and overlays, use and development standards, and density and intensity limits, if the Proposed Plan is adopted.	analyzed or mitigated in the DIER.	open space lands that is currently missing from DEIR.
	Given that the Proposed Plan supports agricultural uses as permitted by existing zoning and that the Planning Area does not include any Williamson Act contract lands, this impact would be less than significant	This is nonsensical conclusion. What does it even mean?	Explain.
Page 136	The Proposed Plan would introduce new and modified land use districts and overlays that will accommodate proposed land use classifications including residential, employment center, flex zone, institutional, utilities, parks and recreation, buffer open space, preserved open space, and a hotel overlay zone.	Exactly. And the impacts from all that on open space lands are not adequately analyzed or mitigated.	Fully analyze and mitigate all the environmental impacts to open space lands and Sonoma Valley from Proposed Specific Plan, which has not been adequately done in the DEIR, as comments show.
	In addition, the proposed Agrihood District (Goal 5-M) is planned on the eastern side of the Core Campus and would support new agricultural	New land use.	See above on agriculture as a new land use at SDC and on open space lands.

	uses in recognition of the Farmland of Local Importance, which historically supported agricultural uses on the eastern portion of the site.		
	In addition, the proposed Agrihood District (Goal 5-M) is planned on the eastern side of the Core Campus and would support new agricultural uses in recognition of the Farmland of Local Importance, which historically supported agricultural uses on the eastern portion of the site.	New land use.	As above, new land use needs to be analyzed and mitigated in DEIR.
Page 196 3.3 Air Quality	It is noted that quantified operational emissions do not include potential agricultural uses that would be allowed in the Agrihood district and Buffer Open Space and Permanent Open Space designations of the Proposed Plan. However, as discussed in the Methodology and Assumptions section above, these uses would be located away from future sensitive uses including residential areas (i.e., outside the Core Campus), and permitted agricultural activities are unlikely to occur on a scale that would result in daily operational emissions of the Proposed Plan (**Table 3.3-8**) exceeding BAAQMD's thresholds for particulate matter.	Inadequate analysis. This is giant leap. The DEIR needs to analyze and mitigate, not make giant assumptions based on no facts or evidence.	Analyze and mitigate impacts of potential new ag uses on open space and SDC property, future and current residents of the area. Provide actual mitigations that are enforceable.
	Limited agricultural uses would be allowed in the Agrihood district as well as the Buffer Open	What are the limited agriculture uses.	Analyze and mitigate new agriculture uses.

	Space and Preserved Open Space areas outside of the Core Campus.		
Page 237 3.4.3.3 Relevant Policies and Implementing Actions ***Open Space and Resources and Hazards***	Goals 2-D Biological Resources: Promote conservation of existing habitat, including creeks, groundwater recharge areas, and open spaces, through intentional water and energy conservation, sustainable food production, top-tier sustainable building practices, and aggressive waste reduction strategies in order to protect natural resources and critical wildlife habitat, maintain wildlife linkages, and foster environmental stewardship.	Promote is not an adequate mitigation.	See comments above to require actual requirements and mitigations, replace "promote" with actionable and enforceable measures.
	2-E Wildlife Corridor: Maintain and enhance the size and permeability of the Sonoma Valley Wildlife Corridor (as shown in Figure 1.6-3) by ensuring a compact development footprint at the SDC site and by minimizing impacts to wildlife movement and safety from human activity and development at the campus.	Inadequate. How exactly will impacts be minimized to wildlife movement and safety from human activity and development at the campus.	Provide adequate analysis and mitigations for minimizing impacts to wildlife movement and safety from human activity and development at the campus.
	2-7 Prohibit lights within the wildlife corridor and along the creek corridor.	Support.	Support
	2-8 Maintain wildlife crossing structures by periodically checking for and clearing debris, vegetation overgrowth, and other blockages from culvert and bridge crossing structures; within the Core Campus, the Project Sponsor should develop and execute a maintenance	Inadequate. What does periodically mean? Who will do the checking? How is a project sponsor equipped to develop and execute a maintenance program? The word should needs to be "shall."	Provide an enforceable requirement for maintaining wildlife crossing structures.

	2-9 Within the wildlife corridor, meet but do not exceed the defensible space requirements of the County Fire Department to maintain wildlife habitat while maximizing fire safety.	Inadequate. What the heck does this mean exactly?	Explain and define what this means exactly; and who would be responsible.
	2-14 Prohibit all unleashed outdoor cats, and restrict off-leash dogs and other domestic animals to private fenced yards and designated areas.	Support.	Support.
	2-15 Collaborate with local wildlife protection groups to create and distribute educational information and regulations for residents and employees to guide safe interactions with wildlife onsite. Materials should be accessible to all ages and abilities and could include posted signs, disclosures, fliers, or informational sessions, among other things.	Inadequate. Collaborate does not constitute and enforceable mitigation.	Change collaborate to "require SDC property owner and open space managers to ….."
	2-17 Adhere to residential nighttime noise standards to the extent feasible.	Inadequate. Meaningless.	Provide actual enforceable noise mitigations.
	2-20 Require that new development preserve existing trees to the fullest extent feasible. Locate new construction and	Inadequate. Meaningless.	Provide actual enforceable tree preservation mitigations.
Page 239	2-25 Include protective buffers of at least 50 feet along Sonoma and Mill creeks, as measured from the top-of-bank and as shown on Figure 2.2-1: Open Space Framework, to protect wildlife habitat and species diversity, facilitate movement of stream flows and ground	Inadequate. Why does 50 feet provide adequate protection? Why not 100 feet? What is the Open Space Framework? Just a map? Manage how?	Provide adequate analysis and mitigations for protective buffers, define and describe open space framework, and explain how protective buffers will be managed.

	water recharge, improve water quality, and maintain the integrity and permeability of the Sonoma Valley Wildlife Corridor, and the ability of wildlife to use and disperse through the SDC site. Manage protective buffers so that they support continuous stands of healthy native plant communities.		
	2-27 Ensure that all development adheres to Sonoma County Municipal Code Sec 26-65 on riparian corridor protection.	Following existing law is not a mitigation or measure. It is required by law. How will you ensure it is followed?	How will county ensure that the riparian corridor protection regulations will be followed and enforced; and by whom?
	2-28 Prior to the commencement of the approval of any specific project in the Proposed Plan area, Project Sponsors shall contract a qualified biologist to conduct studies identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level.	Inadequate. Future studies do not provide mitigation.	Inadequate.
Page 240 3.4.3.4 Impacts ***Summary of Proposed Plan***	The existing undeveloped portions of the Planning Area would be designated as Preserved Open Space land use. Development is not proposed to occur within Preserved Open Space, where current daytime recreational uses would continue. Impact 3.4-1 Implementation of the Proposed Plan would not	So here the DIER states that the Preserved Open Space Land Use would remain undeveloped and not be developed, except for recreational daytime uses. Agricultural use and development are not mentioned here. I support that, but it is inconsistent with other parts of the DEIR and Specific Plan. Remove agriculture to be consistent. You can't say there is no impact when	Remove agriculture from preserved open space.

		the impacts of agriculture haven't been analyzed.	
Page 242	Outside of the developed areas, the Proposed Plan establishes dedicated open space areas. Managed open space in these areas would preserve and, in some cases, enhance the quality of sensitive habitats such as wetlands, native grasslands and oak woodlands. Several special-status wildlife and some plant species would be positively impacted by the preservation of these habitats. The open space would preserve the Sonoma Valley Wildlife Corridor and maintain its permeability for the movement of wildlife at a regional scale.	Support, but needs more detail and explanation on how the open space will be managed and how it will enhance habitats and wildlife. I agree that preservation would be beneficial. But once again, the issue of agriculture is not addressed, which could be extremely harmful to everything here.	Reconcile definition and use of preserved open space throughout DEIR and Specific Plan; remove agriculture.
Page 254	The Proposed Plan is intended to contain development within the already developed area (Core Area) and protect open space for recreational and preservation uses. The	Exactly. No agriculture.	See previous comments on agriculture.
Page 255	Because the Proposed Plan preserves the overwhelming majority of the SDC parcel in open space, it ensures continuation of regional connectivity for wildlife, serving as a conduit for transit of wildlife between significant habitat blocks to the east and west.	Inadequate. Just preserving the 755 acres of open space in itself does not protect the natural resources or ensure connectivity for wildlife. Plus, there is a huge amount of inconsistency on how open space is defined and a lack of specificity on how it will be preserved.	Explain in detail how the Proposed Plan ensures continuation of regional connectivity for wildlife, serving as a conduit for transit of wildlife between significant habitat blocks to the east and west.
Page 257	Moreover, the 750 acres of Planning Area that will be preserved as open space will help offset some of the emissions generated by development under the Proposed Plan, though	What? Please provide detailed analysis and assumptions on this point. Looks like another great leap. Particularly since there is no plan for protecting trees, and there is no analysis of the	Please provide detailed analysis and assumptions on this point. Looks like another great leap with very little actual evidence.

	not necessarily on a magnitude sufficient to achieve carbon neutrality for the Planning Area. Nevertheless, this significant source of carbon sequestration supports the 2022 Scoping Plan's emphasis on natural and working lands.	impacts of introducing commercial agriculture.	
Page 307 3.10.1.1 Historical Land Use	SDC operations made use of the significant open space for recreation and agriculture, with programs that made use of the land to support the clients. Institutional decline in the 1970s and 1980s led to the eventual transfer of several hundred acres of what was identified as surplus land to the county and state park system, including approximately 600 acres that were transferred to the adjacent Jack London State Historic Park in 2002. With its remaining 945 acres, the SDC continued to operate agriculture and recreation programs on the property and kept much of the land in active use until the State announced closure of developmental centers in 2015 and closed the SDC in late 2018.		
Page 319	As described in the Biological Resources Chapter, the campus will be surrounded by a vast network of permanently preserved open spaces to protect natural resources, foster environmental stewardship, and maintain and enhance the permeability of the Sonoma Valley Wildlife	It is not clear how the Specific Plan and DEIR will adequately accomplish this.	

	Corridor for safe wildlife movement throughout the site.		
Page 396	Policies 2-1 Work with Sonoma County to dedicate the preserved open space as regional parkland. 2-4 Streamline the existing trail system by mapping, improving, and clearly marking designated trails for recreational use in order to minimize negative effects on the open space from recreational use.	As above, "work with" is not an enforceable mitigation. How will streamlining the trail system improve and mitigate impacts from recreation use?	See comments above about this policy and use of term "work with." Explain how streamlining the trail system will improve and mitigate impacts from recreation use.
	2-5 Consider creating a designated area for water recreation at Suttonfield Lake, such as an access point near the trail from Arnold Drive with rail fencing and clearly marked signage and rules for swimming, dogs, and non-motorized boating.	Not a good idea. That will require a huge amount of supervision, new fences and roads, lighting and all kinds of things that are not conducive to preserving open space, natural resources and wildlife habitat. Plus, it is drinking water.	Remove this concept.
Page 397 *Community Design*	5-16 Develop a cohesive and integrated system of parks and open spaces, to fulfill the active and passive recreational needs of the community, building on the overall framework outlined in Figure 5.1-1.	Is the entire framework based on one map? How, who and when will a cohesive and integrated system of parks and open spaces, to fulfill the active and passive recreational needs of the community be accomplished?	Explain the framework. Describe in detail how, who and when will a cohesive and integrated system of parks and open spaces, to fulfill the active and passive recreational needs of the community be accomplished.
Page 403	Moreover, 755 acres of the Planning Area will be retained as open space that will be publicly accessible and integrated into the regional parks system (proposed Policy 2-1).	Yes. Support, but many elements of the Specific Plan and DEIR conflict with this and fail to address impacts from new land uses such as agriculture. Also, why limit to regional park system? What about state?	Explain why regional parks and not state parks? Explain how the 755 acres of open space will be "retained" and by whom, when and by what mechanisms.
Page 524	Full Open Space and Public/Institutional Use alternatives were also considered; however, for reasons discussed in Section 4.3, these alternatives were	While I appreciate that these alternatives were considered, they could have been more fully analyzed and evaluated to provide public and decision makers with	Provide more analysis and detail on the Full Open Space and Public/Institutional Use alternatives to provide the public and decision makers

	determined to be inconsistent with project objectives and infeasible, and therefore not analyzed in detail.	another option for the SDC property. While it is true that this option is not specifically mentioned in state statute, when it comes to housing, it states "as appropriate." The Specific Plan goes far beyond "appropriate" for housing. It also introduces agriculture which was never mentioned in state statute.	with additional options for the future of SDC.

A Case for Retreat in the Age of Fire as Dozens of Wildfires Threaten Homes in the West

by Emily E. Schlickman, Brett Milligan and Stephen M. Wheeler

BAY NATURE

After the 2018 wildfire in Paradise, Calif., many fire-damaged homes were razed. Justin Sullivan/Getty Images

Emily E. Schlickman, *University of California, Davis*; **Brett Milligan**, *University of California, Davis*, and **Stephen M. Wheeler**, *University of California, Davis*

More than 90 large fires were burning across the parched Western U.S. landscape in mid-September 2022 following a record-setting heat wave, and thousands of people were under evacuation orders. One wildfire had burned about 100 homes and buildings in the Northern California town of Weed. As fire risk rises, is it time to consider managed retreat? Three environmental design and sustainability experts explore the options.

A case for retreat in the age of fire

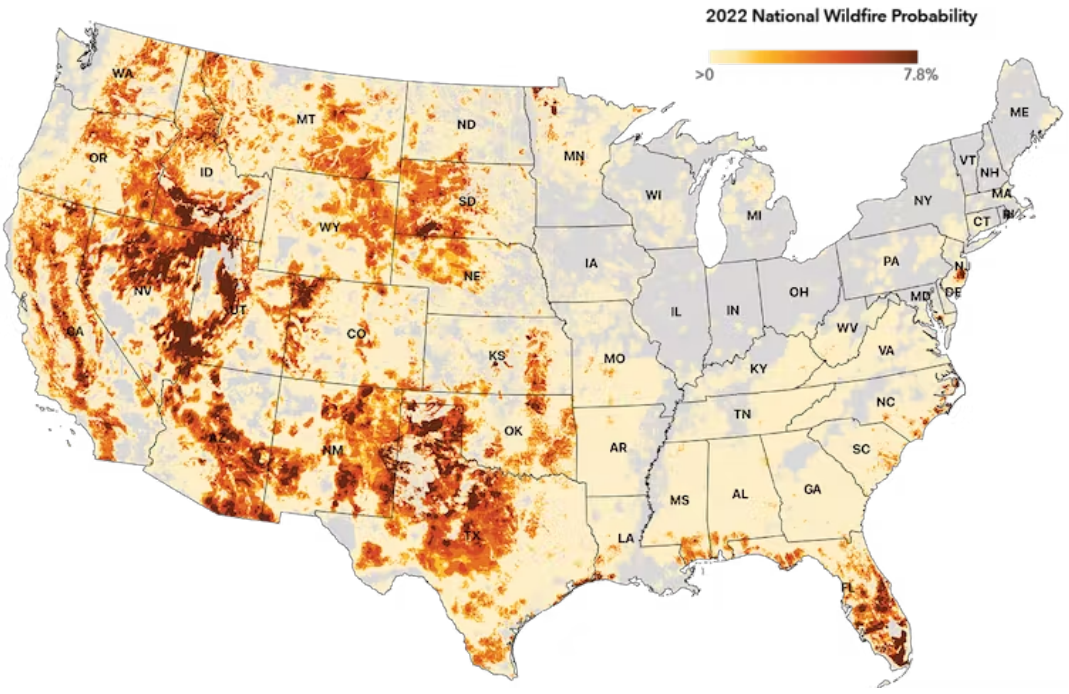
Wildfires in the American West are getting **larger, more frequent and more severe**. Although efforts are underway to create fire-adapted communities, it's important to realize that we cannot simply design our way out of wildfire – some communities will need to begin planning a retreat.

Paradise, California, **worked for decades to reduce** its fire risk by removing dry grasses, brush and forest overgrowth in the surrounding wildlands. It built firebreaks to prevent fires from spreading, and **promoted defensible space** around homes.

But in 2018, a fire sparked by wind-damaged power lines swept up the ravine and destroyed over 18,800 structures. **Eighty-five people died**. It's just one example.

undeveloped land and urban areas where both wildfires and unchecked growth are common. From 1990 to 2010, new housing in the wildland-urban interface in the continental U.S. **grew by 41%**. By 2020, **more than 16 million homes** were in fire-prone areas in the West.

Whether in the form of large, master-planned communities or incremental, house-by-house construction, developers have been placing new homes in danger zones.



Assesses fire risk at the local level can help communities understand and prepare. The map reflects the probability wildfire will occur in an area in 2022. First Street Foundation Wildfire Model

It has been nearly four years since the Paradise fire, and the town's population is now **less than 30% of what it once was**. This makes Paradise one of the first documented cases of voluntary retreat in the face of wildfire risk. And while the notion of wildfire retreat is controversial, politically fraught and not yet endorsed by the general public, as experts in urban planning and environmental design, we believe the necessity for retreat will become increasingly unavoidable.

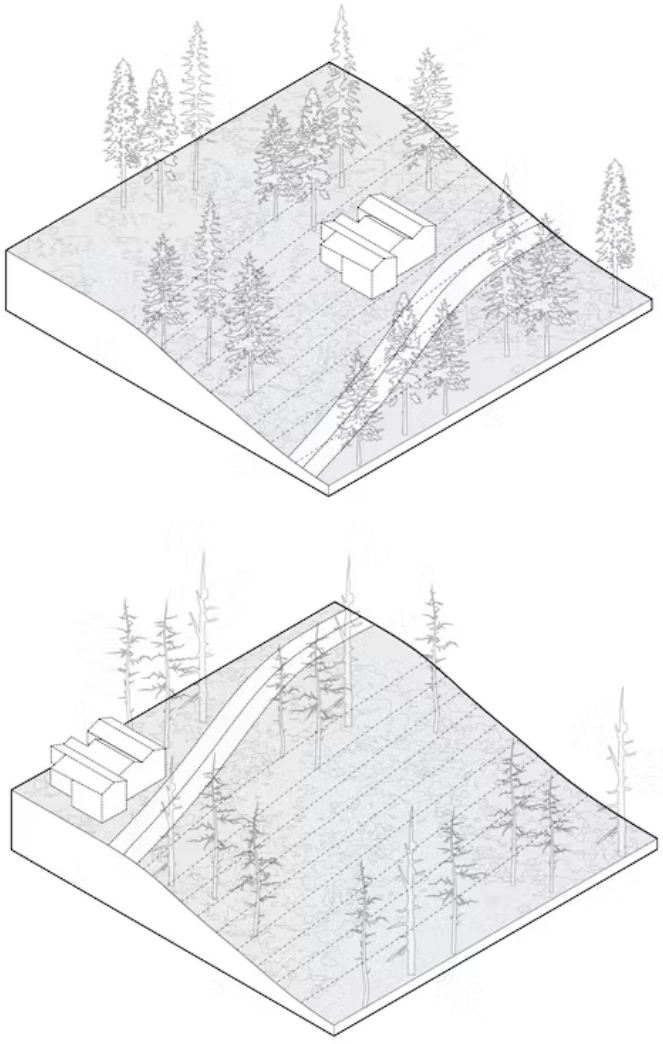
But retreat isn't only about wholesale moving. Here are four forms of retreat being used to keep people out of harm's way.

Limiting future development

On one end of the wildfire retreat spectrum are development-limiting policies that create stricter standards for new construction. These might be employed in moderate-risk areas or

An example is San Diego's steep hillside guidelines that restrict construction in areas with significant grade change, as wildfires burn faster uphill. In the guidelines, steep hillsides have a gradient of at least 25% and a vertical elevation of at least 50 feet. In most cases, new buildings cannot encroach into this zone and must be located **at least 30 feet from the hillside**.

While development-limiting policies like this prevent new construction in some of the most hazardous conditions, they often cannot eliminate fire risk.

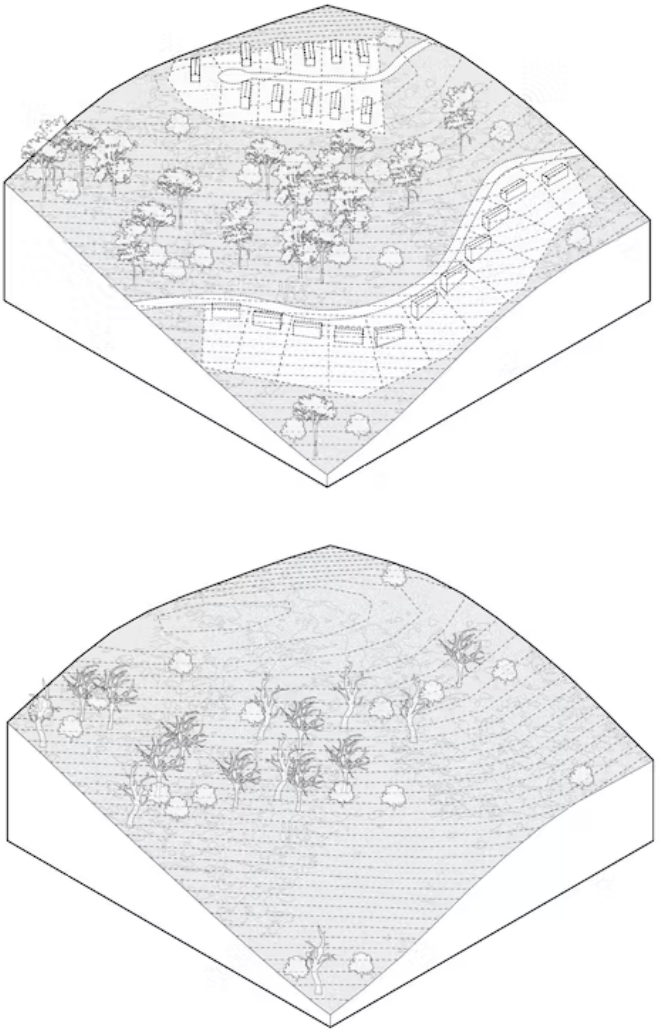


Development-limiting policies can include stricter construction standards. The illustration shows the difference between a home on a steep, wooded hillside that is hard to defend from fire and one farther from the slope. Emily Schlickman

Halting new construction

Further along the spectrum are construction-halting measures, which prevent new construction to manage growth in high-risk parts of the wildland-urban interface.

example, Los Angeles County recently updated its **general plan to limit new sprawl in wildfire hazard zones**. Urban growth boundaries could also be adopted locally, as many suburban communities north of San Francisco have done, or could be mandated by states, **as Oregon did in 1973**.



Halting construction and managing growth in high-risk parts of the wildland-urban interface is another retreat tool. Emily Schlickman

To assist the process, states and the federal government could designate **fire-risk areas**, similar to Federal Emergency Management Agency flood maps. **California already designates zones** with three levels of fire risk: moderate, high and very high.

They could also develop fire-prone landscape zoning acts, similar to legislation that has helped **limit new development along coasts**, **on wetlands** and **along earthquake faults**.

time, states or federal agencies could refuse funding for local authorities that enable development in severe-risk areas.

In some cases, state officials **might turn to the courts** to stop county-approved projects to prevent loss of life and property and reduce the costs that taxpayers might pay to maintain and protect at-risk properties

Three high-profile projects in California's wildland-urban interface have been stopped in the courts because their environmental impact reports fail to adequately address the increased wildfire risk that the projects create. (Full disclosure: For a short time in 2018, one of us, Emily Schlickman, worked as a design consultant on one of these – an experience that inspired this article.)

Incentives to encourage people to relocate

In severe risk areas, the technique of "incentivized relocating" could be tested to help people move out of wildfire's way through programs such as voluntary buyouts. Similar programs have been used after floods.

Local governments would work with FEMA to offer eligible homeowners the pre-disaster value of their home **in exchange for not rebuilding**. To date, this type of federally backed buyout program has yet to be implemented for wildfire areas, but some vulnerable communities have developed their own.

The city of Paradise created a buyout program funded with nonprofit grant money and donations. However, only **300 acres of patchworked parcels have been acquired**, suggesting that stronger incentives and more funding may be required.

Removing government-backed fire insurance plans or instituting variable fire insurance rates based on risk could also encourage people to avoid high-risk areas.

Another potential tool is a "transferable development rights" framework. Under such a framework, developers wishing to build more intensively in lower-risk town centers could purchase development rights from landowners in rural areas where fire-prone land is to be preserved or returned to unbuilt status. The rural landowners are thus compensated for the lost use of their property. These frameworks have been used for growth management purposes **in Montgomery County, Maryland**, and in **Massachusetts** and **Colorado**.

Incentivized relocating can be used in severe risk areas by subsidizing the movement of some people out of wildfire's way. The illustrations show what before and after might look like. Emily Schlickman

Vulnerable communities may want to relocate but don't want to leave neighbors and friends. "Wholesale moving" involves managing the entire resettlement of a vulnerable community.

While this technique has yet to be implemented for wildfire-prone areas, there is a long history of its use **after catastrophic floods**. One place it is currently being used is Isle de Jean Charles, Louisiana, which has **lost 98% of its landmass since 1955 because of erosion and sea level rise**. In 2016, the community received a federal grant to plan a retreat to higher ground, including the design of a **new community center** 40 miles north and upland of the island.

This technique, though, has drawbacks – from the complicated logistics and support needed to move an entire community to the time frame needed to develop a resettlement plan to potentially overloading existing communities with those displaced.

In extreme risk areas, wholesale moving could be an approach – managing the resettlement of an entire vulnerable community to a safer area. Emily Schlickman

Even with ideal landscape management, wildfire risks to communities will continue to increase, and retreat from the wildland-urban interface will become increasingly necessary. The primary question is whether that retreat will be planned, safe and equitable, or delayed, forced and catastrophic.

Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Program DraftEIR (EIR) Comments 2

Sept 18, 2022

Dear : Brian Oh, & Too Whom This May Concern;

Why has County Staff/Consultants done the following, and what are your mitigation recommendations?: C167-1

The EIR & SP preparation violates BPC6731, without a Civil Engineer in responsible charge of Planning?

The EIR has committed the County to a course of action, new development, prior to EIR's Certification?
Historic Reuse appears proper, yet each price consequence results in expanded project impacts.
What is the economic obsolescence impact to the Springs/Glen Ellen of the proposed project?

The EIR and SP propose demolition of 1.2M sq-ft of buildings, along with the 1M+0.35M gal fresh water tanks, see Figure 4.3-1: "Historic Assets", without reference to local Wildfire protection. Why?

The EIR & SP propose demolition of Historic Firehouse (c1932) without wildfire impact consideration?
EIR & SP neglect wildfire consideration, as not "High Fire Risk", though analysis excluded SDC?

Why does EIR & SP use uncalibrated (unrealistic) models, eg without reference to actual fire evacuation?

The EIR develops a series of conclusions as analysis, beginning after point in time of project completion? C167-2
The EIR assumes no cumulative effects to the proposed project; eg. GHG's and solid waste, but does not include project specific demolition, nor constructed lifecycle, GHG's & wastes? Why?

The EIR assumes no cumulative effects from combining the proposed project wastewater into a down-stream waste treatment facility when a historic facility is located on site to recharge the wetlands/creek.

SDC is an Historic opportunity to propose and develop an integrated environmental & climate protective response to wildfire, in a traumatized and sensitized area, without which this proposal has a significant cumulative negative impact to the local & regional environment due to unrealized wildfire protections.

Why is EIR & SP preparation biased in favor of Standard-Operating-Procedure for new development?
There is, at great expense, no Professional caliber analysis within these documents, explain?

Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Program Draft EIR (EIR)

Sept 18, 2022

Dear : Too Whom This May Concern; for Preliminary Discussions,

Though Permit Sonoma worked hard, produced >4000pgs, & created many potential alternatives within their Specific Plan/EIR process, they have overshot the mark creating a plan for the past, "fighting the last war" as we often do, and not taking advantage of the opportunity to present a plan for the future.

C168-1

Why does it appear the SDC EIR and associated Specific Plan (characterized by the County's preferred Proposed Project Alternative) have defined and committed the County of Sonoma, as Lead Agency under CEQA, to a series of specific decisions, plans, and/or alternatives without fully considering other acceptable plans (under legislation 14670.10.5), alternatives, mitigation measures, and the Null Project.

Please explain why the County (Permit Sonoma) has allowed the EIR to be produced which does not address the mitigatable cumulative effects of waste generated by the proposed alternative over the Null Project hypothesis, to the extent where recommended building demolition of ~1.2M sq-ft produces a minimum of 161,000 cy of debris equal to 67 years of operation of the Proposed Project Alternative in addition to the equal amount of debris produced by the eventual demolition of the Proposed 1.2M sq-ft Project (∑=322,000 cy, or 134 years at the rate of the Proposed Project at completion); together with the project waste there will be an average cumulative waste of 19.8 tons/day or 1.5% of daily averages (2016-2020, per SP pg 603) ? Since we are already transferring all our solid waste away from Sonoma County because we do not have local landfill capacity, and our waste charges ($135/ton) are double the charge for Hazardous Waste ($50.97/ton asbestos waste) taken to Kettleman Hills landfill, this must be considered a significant mitigatable impact by Reuse and Historic Preservation of the existing buildings. At the local waste costs, this represents >$960,000/yr = ~$65M over the 67 years, from these 3 sources.

Why is no mention made in the EIR or SP of GHG's which were imbedded and carried within the existing constructed buildings which will be released into the atmosphere by their demolition, nor is any mention made of the GHG emissions which are imbedded in the production of the new materials and resources which are expected to replace the demolished SDC buildings, these are significant long term mitigatable cumulative effects? Why has the EIR not addressed either of these cumulative GHG effects, from demolition, neither the before demolition GHG emissions sequestered in the existing buildings which will be released, nor the GHG emissions released in the production of the replacement 1.2M sq-ft of buildings together with their own lifecycle emissions released upon their demolition? These GHG's must be considered a significant mitigatable impact by their (building) Reuse.

C168-2

TCE ***ENGINEERING*** *154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com*

Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish?

C168-2

Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-of-the-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building?

Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to “In-Situ” mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the housing, hospital, and office buildings? Lack of consideration of this impact has direct impacts of needlessly and costly filling existing hazardous waste landfills, both individually and cumulatively, though mitigatable.

C168-3

Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, “a death by 1000 cuts” to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation (HP)? Can you explain how you are mitigating these neglected impacts which should be further compared to the environmentally preferred HP, in producing a cycle of demolition and reconstruction which has a cumulative effect due to volume of waste, and on the environment due to exploitative expectations, the expectation that ‘everything I have should be new’, ‘we need the new’, ‘I need the new’? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis?

Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Program DraftEIR (EIR)Comment 3a

Sept 23, 2022

C169-1

County's evidentiary record is anecdotal @best. Sonoma Valley represents a national treasure, as described as, "The Valley of the Moon". Sonoma is the Native Indigenous American name for the valley. When White settlers asked what Sonoma meant, Natives pointed to the trace of the Moon setting and rising behind the eastern ridgetops during certain times of the year, the White's interpretation was that "Sonoma" meant 'the valley that the Moon touches' ("The Valley of the Moon"). My Anthropology studies and linguistic avocation has taught me to hear the phonetic sounds (the basic phonemes), particularly for significant language words, words that have cultural, spiritual, or international usage, such as words which are adopted into a language from another. The basis of this study is Multi-critical analysis as opposed to diacritical analysis. Typically there will be very little understanding of the actual meaning of an adopted word. Then, if it retains a high referential standing, it indicates it's an adopted word, not merely a forgotten word. Typical adopted words with high Referential standing and forgotten meanings are: Alleluia, precious, and Amen.

C169-2

In this case we have Sonoma: what are the phonemes for "Sonoma", they are "Tsu" (not Tso) & "Noma"; so in this case our supposition is correct, because these are two very important international words. "Tsu" or "Tzu" represents the name given by the Chinese to one of their greatest Philosophers, "LaoTzu" the founder of Taoism (from UCI Anthropology studies "Chinese, Taoism & Confucianism", 1983), "LaoTzu" was originally named "LoTzu", meaning "Man-Master" (Philosopher) and when he was older it was changed to "LaoTzu", meaning "Old-Man-Master" (or Great Philosopher): Therefore "Tzu" means "Master". "Noma" is the Aramaic word for 'name' establishing the identity and essence of a thing and thereby giving man control over the substance, and in the Greek "Nomo" means "law or control", again, in Western parlance the essence is unknowable but the manifestation is controllable by the 'name': so control and name are the same thing, therefore "Noma" means "name" (from participation in Antiochian and Greek culture, which develops from a multi-critical analysis as opposed to diacritical).

"Sonoma" therefore means "The Master's Name", and in a Spiritual sense, it means the highest name above all names. "The Master's Holy Name", in an Eastern Spiritual sense describing God's, the Creator's, or Great Spirit's control over the location by the Moon's contact with the Earth, not Man's control over God by invocation of the Name. This we hear many times from Joseph Campbell, man's search for control vs man's search for God.

TCE ***ENGINEERING*** *154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com*

Also, in another form of Transcendence, both “Tsu” and “Noma” mean “control”, so they are like conjoined twins, in a simple manifestation of the “Rosetta Stone”. Looked at separately, we call this a “Translation”, but conjoining them is a form of transcendence in the physical plane of existence. The name “Sonoma” appears to be used as a descriptive tool, by connecting physical transcendence (translation of place) with the location of a Spiritual Transcendence (in reference to the verticality of the Moon’s touching the Earth), it again mirrors the “Rosetta Stone” representing two kinds of Transcendence, with the Earthly “T” crossing the Spiritual vertical demarcation.

C169-2

More than the mere analysis of the word and its application to the space, is the significance of "Sonoma" in the cross-cultural linguistic representation of deification using ancient language references from across the sea, and linked only by many thousands of years. There is no other place name which connects so perfectly the unity of man, the Name itself transcends both the ages and the seas, thus we have the essence of a World Heritage Cultural Site. Like many other UNESCO World Heritage Sites, which are in disrepair and in danger of destruction, Sonoma's "Valley of the Moon" is suffering an existential threat from the Proposed Project Alternative. Located at near the exact geographic center of Sonoma Valley, 10 miles from it's head along Hwy 12, and 12 miles from it's outlet at Skagg's Island. And transected by a vital Wildlife Corridor connecting 2 Mountain Parks: Sugarloaf/Hood and Jack London Parks; no discussion or analysis has been given to the significance of this World Heritage Cultural Site, or the impacts or any mitigation from the significantly new, taller, and dense construction within the Program Draft EIR-SP Project analysis (cursory discussion was given to light pollution, but none to the physicality of the presence of tall, dense, populous village construction in the midst of an Historic Treasure, McDonalds centered in Teotihuacan).

C169-3

The significance of this Spiritual location was not lost on those who created the Sonoma Developmental Center for a healing center for their developmentally disabled children. We should hope that at this more enlightened time, and consistent with CEQA, the Historical Preservation Act, and the 50th Anniversary of the World Heritage Convention (Sept 17, 2022), we should be prepared to preserve both the content and the context, as much as is physically possible, for this National Treasure, "The Valley of the Moon". Under the UNESCO World Heritage Convention, which the United States was signatory (though withdrawn from 2018), we should "strengthen Credibility of the World Heritage List, ensure Conservation of World Heritage properties, promote Capacity-building measures, increase public awareness, involvement and support for World Heritage, and enhance the role of Communities in implementation of the World Heritage Convention". What has been done here appears to be the opposite, a complete neglect of not only Native American cultural values, but World Heritage Convention values.

C169-4

Analysis of EIR Historical Asset discussion:

The Program Draft EIR is silent on the above discussion, while reporting Environmental Impact Report - County Summary "5.3 Significant and Unavoidable Impacts: According to CEQA Guidelines 15126.2(b), an EIR must discuss any significant environmental impacts that cannot be avoided under full implementation of the proposed program...However the Proposed Plan aims to be self-mitigating. Thus, all proposed policies aim to address environmental impacts (to the, sic) to the greatest extent feasible and no mitigation measures are required. The analysis in Chapter 3 determined that the Proposed Plan would result in significant impacts to the cultural/historic resources and transportation (home-based work trip vehicle miles traveled per capita) that, even with implementation of mitigation measures, would remain significant and unavoidable". This language neglects real analysis of the Null Hypothesis Project, and only considers the Proposed Plan impacts which it states (along with all other alternatives) have similar impacts [without discernment as to avoidable, mitigatable, or unmitigatable], which is entirely untrue in the Null Hypothesis case.

C169-4

Continuing; "5.3.1 Cultural, Historic, and Tribal Resources: new construction under the Proposed Plan has the potential to disconnect the remaining contributing resources in the Core Campus from those in the Community Separator and Regional Parks lands to the east and west, disrupting the SSHHD's overall integrity to the point that it would no longer be eligible for listing in the National Register of Historic Places, CRHR, or as a California Historic Landmark. This impact, in addition to demolition of the aforementioned resources would result in a substantial adverse change to the significance of the historic district such that the significance of the historic district would be materially impaired pursuant to Section 15064.5. Implementation of goals 2-I and 2-J and policies 4-20 through 4-32 as well as Standard Conditions of Approval (LU1 through LU6) would partially compensate for the impact associated with the demolition of historically contributing resources and physical alteration of the historic district to the maximum extent practicable; however, because these measures would not be enough to avoid or reduce the impact completely, the Proposed Plan's impact would remain significant and unavoidable". No mention is made of the Tribal Resources, because no artifacts remain or they could be recovered in a project excavation, but this does not address the transcendent value of the space and place name as a World Heritage Cultural Site, which can be subsumed in the potential Project construct, where we have heard discussed 2-3Msf of Commercial Construction.

C169-5

Again, the Program Draft EIR's considerations of the impacts, mitigations, and alternatives appear limited to the Proposed Plan Project Alternative, and do not address the Alternatives, nor the Null Hypothesis Project, continuing a foregone conclusion (see 2-3Msf of Commercial Construction discussed above, is that unmitigatable?).

C169-6

Please see the following analysis of project conceptual iteration for planning and design.

TCE ***ENGINEERING*** *154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com*

Please see pg4 p3 San Mateo Gardens, re "substantial evidence in the record, is a predominantly factual question...for the agency...drawing on its particular expertise"; here we are bringing your attention to the word “expertise”.

C169-6

Friends of the College of San Mateo Gardens v. San Mateo County Community College District

https://law.justia.com/cases/california/court-of-appeal/2017/a135892.html

We want to accept the presumption of legal operation, but we must also accept and correct the illegal condition when evidence is presented to the contrary. In a County system, Engineering is not conducted without Accounting. But if the Accounting fails such as for Northwestern Pacific Railroad, the sad evidence must be accepted, and correction immediately made or we suffer the loss of funding or function. No one was there to accept the Trucker's weighmaster's tickets when the washout deliveries were made in the upper NWP line, none could be found, none ever delivered, no NWP.

The reason we approach the initial determination of a project this way, using California Supreme Court’s remand for San Mateo Gardens, is, here we equate the Court EIR analysis process to the Engineering process, in that there are a sequence of iterative steps involved. This process is best exemplified from the CA Supreme Court's remand expressed in San Mateo Gardens, where a series of back-and-forth evaluations and propositions are made in analyzing a project (one such method is CPM,Critical Path Method), which is the same process we use in conceptual design or planning.

C169-7

A comparison is made by question; does the "initial concept" with its features fit the need and the existing space, then we may have to adjust the concept's features to the needs, or to the space? Conceptual planning designs forward & backward many times.

This comparison is not to decry the effort expended or the information obtained through Planning education or product, but a marathon runner prepares for a marathon, not Law or Engineering. Preparation for a marathon may be great preparation for someone wanting to become a Lawyer, Doctor, or Engineer, but by itself does not make one a Lawyer, Doctor, or Engineer. Nor is an Urban Planner a qualified Civil Engineer, and therefore is unable to make professional judgments in respect to the Planning of "fixed works" identified in BPC 6731.

[See Licensing BPC 6730-6730.2(a); 6731; 6734; 6735(a). See also Administrative Mandamus case, Morris v Harper (2001) 94 Cal.App.4th 52 . “After all, ‘“‘[i]t is the refusal or neglect to perform an act which is enjoined by the law as a present duty that serves as the very foundation for the [mandamus] proceeding.’ ” (Morris v. Harper, supra, at p. 60.)"]

San Mateo Gardens; "Instead of resting on whether a project is new “in an abstract sense,” the “decision to proceed under CEQA’s subsequent review provisions must . . . necessarily rest on a determination—whether implicit or explicit—that the original environmental document retains some informational value.” (Id. at p. 951.) Such an inquiry “is a predominantly factual question . . . for the agency to answer in the first instance, drawing on its particular expertise.” (Id. at p. 953.)"

C169-8

From where does this “expertise” derive, Planners require no Science education?

TCE ***ENGINEERING*** *154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com*

The EIR standard is, if/when there are significant environmental impacts, then a review of impacts and mitigations must obtain (other than stating overriding or unmitigatable conditions), and a "judicial review must reflect the exacting standard that an agency must apply". San Mateo (ibid) pg 8.

C169-8

What this is referring to is, that the evidence must be prepared to a very high standard, from the beginning, in order for it to be considered "substantial evidence in the record". Where is the “exacting Standard” & “expertise”?

According to the National Society of Professional Engineers code of ethics, Professional Engineers may disagree without a single outcome obtained, but must remain decorous.

C169-9

["The Supreme Court in San Mateo Gardens provided guidance for how to apply the subsequent review provisions. It explained that whether “major revisions” will be

required as a result of project changes “necessarily depends on the nature of the original environmental document,” i.e., whether it was an EIR or a negative declaration. (San Mateo Gardens, supra, 1 Cal.5th at p. 958.) It further explained that the appropriate standard of review also depends on the nature of the original environmental document. Although an agency’s determination of whether major revisions are required is reviewed for substantial evidence, “judicial review must reflect the exacting standard that an agency must apply when changes are made to a project that has been approved via a negative declaration,” as opposed to the deferential standard that applies when the project was originally approved by an EIR. (Id. at p. 953; see Committee for Re-Evaluation of TLine Loop v. San Francisco Municipal Transportation Agency (2016) 6 Cal.App.5th 1237, 1247, 1251-1252 [applying San Mateo Gardens in case where project originally approved by EIR]; Latinos Unidos de Napa v. City of Napa (2013) 221 Cal.App.4th 192,"]

In planning, we have said, the process is intensely exhaustive and iterative, and what is described as the Court EIR review process is also exhaustive and iterative.

C169-10

The Court ceding competency to the local agency is similar to the process of presenting a case to a Court of Competent Jurisdiction. A Court of Competent Jurisdiction is composed firstly of a trained lawyer, either by a Law School or by preparation and passing the Baby Bar. Then of course, the prospectant Judge must pass the National Bar Exam locally administered, next the Judge must practice law for a minimum of 10 years. At some point the Judge is appointed or runs for election, and finally, the Judge is selected to hear a case by the Chief Judge. The Court itself must also be of Competent Jurisdiction, meaning it is the proper venue, as established by our system of Jurisprudence. These are significant tests.

If someone went to College and studied English or Political Science, they could learn a lot of laws, but they would not be presumed to know how to practice Law,

And they did not go to Law School or pass the Baby Bar, and they have not prepared to be a Lawyer, let alone a Judge.

TCE ***ENGINEERING*** *154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com*

Engineering is one of the most complex problems in supply & demand, as evidenced by the number of divorces in custom home remodeling and construction, and why Public Works requires Licensed Civil Engineers.

C169-11

Our critique is not meant to characterize the work of any Engineers having completed reports for the SDC EIR-SP, since we do not know what instructions they were given.

But we contend that recommended demolition for over 1.2Msf without analysis of 400,000sf, and recommended demolition of ~75,000sf of Hospital Treatment Building rated at "not requiring any updates", represents an incomplete analysis at best, and certainly a neglect of the impacts on the resources being analyzed.

As we spoke of backward-and-forward analysis in design, this is required in Planning as well, unless a truncated process is employed. It is far easier to make the facts fit the design, than to make the design fit the facts. If your timeline is short, it is far easier for you to establish the Project, and make the analysis fit the Project by not addressing impacts except in a standard way, such as, "(h)owever the Proposed Plan aims to be self-mitigating". “from Program Draft EIR 5.3 Significant and Unavoidable Impacts”

Subsequent to the very specific State Law being passed to sell SDC, incorporating significant intent for community participation, many meetings were held with studied interest and good comments. Comments were sent to Permit Sonoma and the Planners involved in SDC's NOP of Program Draft EIR & SP, but these comments were not incorporated in the evaluation nor in the Proposed Alternative Project SP, nor were they forwarded to the Planning Commission, nor were they provided to other participants or commenters to the EIR & SP.

C169-12

This is not standard practice, and violates CEQA Code 15004(a)&(b)(1)-(3); “(a) Before granting any approval of a project subject to CEQA, every lead agency or responsible agency shall consider a final EIR or negative declaration or another document authorized by these guidelines…(b) Choosing the precise time for CEQA compliance involves a balancing of competing factors, EIR’s and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment.”

(b)(1) "With public projects, at the earliest feasible time, project sponsors shall incorporate environmental considerations into project conceptualization".

The timeframe window for "cumulative impacts" evaluation was limited to after Proposed Alternative Project completion, leaving out the demolition and construction of the entire project, let alone the life cycle embedded costs, GHG’s and energy to be demolished as a consequence from the new construction.

C169-13

This time frame results in unsubstantiated conclusions for the Proposed Project Alternative in ES.3 Alternatives to the Proposed Plan, “As discussed in Impacts 3.6-2, the Proposed Plan would thus support and reflect the increasingly stringent State and local goals and regulations that seek to increase energy efficiency, reduce energy consumption, and prioritize renewable energy – reinforcing that the Proposed

Plan would not result in cumulatively considerable impact with respect to wasteful, inefficient, or unnecessary consumption of energy resources." They left out 161,000 tons of waste.

15004 (b)(3), "With private projects, the Lead Agency shall encourage the project proponent to incorporate environmental considerations into project conceptualization, design, and planning at the earliest feasible time."

C169-13

This truncated analysis appears to be the type that establishes priorities, goals, and objectives before the certification of the EIR is complete, therefore "limiting alternatives or mitigation measures".

This truncated analysis would violate CEQA Code 15004 (b)(2), "public agencies shall not undertake actions concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance";"and for example, agencies shall not:(b)(2)(B)", "Otherwise take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project".

C169-14

Given that Permit Sonoma will only provide the public's comments to the Planning Commission upon final EIR Certification, and a series of comments have been made to the SDC Comprehensive Planning Manager which has not incorporated the public's comments into the Proposed Project Alternative, "at the earliest feasible time", they appear to have violated Sec's 15004(a)&(b)(1)-(3), inclusive.

What we contend here is, that the proper "back-and-forth" process has not occurred, as within the planning process proper, within the design process proper, within the EIR process, as would be the same within the Court's evaluation of the EIR process itself, from San Mateo Gardens remand from the California State Supreme Court, which constitutes proper Authority to all jurisdictions within California.

C169-15

We also contend that "particular expertise" and "the exacting standard that an agency must apply" is not available to the review that the "judicial review must reflect", without a Licensed Civil Engineering in Responsible Charge of "Fixed Works" Planning, BPC 6731.

CEQA Guideline 15149 "USE OF REGISTERED PROFESSIONALS IN PREPARING EIRS" suggests nontechnical preparation of EIR documents, but this does not exempt Program EIR's completed in conjunction with Specific Plans from the "particular expertise" and "exacting standards" of the Court, nor from State Law BPC 6731 declaring "City and Regional Planning to be Civil Engineering" requiring "responsible charge engineering"

Your Humble Servant

See Appendix of additional CEQA Guideline Violations, following:

TCE ENGINEERING 154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com

Appendix of additional CEQA Guideline Violations, following:

15064.5. DETERMINING THE SIGNIFICANCE OF IMPACTS TO ARCHAEOLOGICAL AND HISTORICAL RESOURCES (a) For purposes of this section, the term "historical resources" shall include the following: (3) Any object, building, structure, site, area, place,… Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code § 5024.1, Title 14 CCR, Section 4852) including the following: (A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage; (D) Has yielded, or may be likely to yield, information important in prehistory or history.

C169-16

15065 MANDATORY FINDINGS OF SIGNIFICANCE
(a) A lead agency shall find that a project may have a significant effect on the environment and thereby require an EIR to be prepared for the project where there is substantial evidence, in light of the whole record, that any of the following conditions may occur:
(1) The project has the potential to: … eliminate important examples of the major periods of California history or prehistory.
(2) The project has the potential to achieve short-term environmental goals to the disadvantage of lon

C169-17

term environmental goals.
(3) The project has possible environmental effects that are individually limited but cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

(c) Following the decision to prepare an EIR, if a lead agency determines that any of the conditions specified by subdivision (a) will occur, such a determination shall apply to: (1) the identification of effects to be analyzed in depth in the environmental impact report or the functional equivalent thereof, (2) the requirement to make detailed findings on the feasibility of alternatives or mitigation measures to substantially lessen or avoid the significant effects on the environment, (3) when found to be feasible, the making of changes in the project to substantially lessen or avoid the significant effects on the environment, and (4) where necessary, the requirement to adopt a statement of overriding considerations.

C169-18

Note: Authority cited: Section 21083, Public Resources Code. Reference: Sections 21001(c), 21082.2, and 21083, Public Resources Code; San Joaquin Raptor/Wildlife Center v. County of Stanislaus (1996) 42 Cal.App.4th 608; Los Angeles Unified School District v. City of Los Angeles (1997) 58 Cal.App.4th 1019, 1024; and Communities for a Better Environment v. California Resources Agency (2002) 103 Cal.App.4th 98.

15088 EVALUATION OF AND RESPONSE TO COMMENTS (a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The Lead Agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments. (b) The lead agency shall provide a written proposed response to a public agency on comments made by that public agency at least 10 days prior to certifying an environmental impact report. (c) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, the major environmental issues raised when the Lead Agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice.

C169-19

Note: Authority cited: Section 21083, Public Resources Code. Reference: Sections 21092.5, 21104, and 21153, Public Resources Code; People v. County of Kern (1974) 39 Cal. App. 3d 830; Cleary v. County of Stanislaus (1981) 118 Cal. App. 3d 348.

C169-19

15088.5 RECIRCULATION OF AN EIR PRIOR TO CERTIFICATION (a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification… "Significant new information" requiring recirculation include, for example, a disclosure showing that:
(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it. (4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (Mountain Lion Coalition v. Fish and Game Com. (1989) 214 Cal.App.3d 1043)

15091. FINDINGS (a) No public agency shall approve or carry out a project for which an EIR has been certified which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. The possible findings are: (1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR. (2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency. (3) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR. (b) The findings required by subdivision (a) shall be supported by substantial evidence in the record. (c) The finding in subdivision (a)(2) shall not be made if the agency making the finding has concurrent jurisdiction with another agency to deal with identified feasible mitigation measures or alternatives. The finding in subdivision (a)(3) shall describe the specific reasons for rejecting identified mitigation measures and project alternatives. (d) When making the findings required in subdivision (a)(1), the agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to avoid or substantially lessen significant environmental effects. These measures must be fully enforceable through permit conditions, agreements, or other measures.

C169-20

15092. APPROVAL (a) After considering the final EIR and in conjunction with making findings under Section 15091, the Lead Agency may decide whether or how to approve or carry out the project. (b) A public agency shall not decide to approve or carry out a project for which an EIR was prepared unless either: (1) The project as approved will not have a significant effect on the environment, or (2) The agency has: (A) Eliminated or substantially lessened all significant effects on the environment where feasible as shown in findings under Section 15091, and (B) Determined that any remaining significant effects on the environment found to be unavoidable under Section 15091 are acceptable due to overriding concerns as described in Section 15093.

C169-21

15093. STATEMENT OF OVERRIDING CONSIDERATIONS (a) CEQA requires the decision-making agency to balance, …the adverse environmental effects may be considered "acceptable." (b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reasons to support its action based on the final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.

TCE ENGINEERING 154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com

15097. MITIGATION MONITORING OR REPORTING. (a) This section applies when a public agency has made the findings required under paragraph (1) of subdivision (a) of Section 15091 relative to an EIR or adopted a mitigated negative declaration in conjunction with approving a project. In order to ensure that the mitigation measures and project revisions identified in the EIR or negative declaration are implemented, the public agency shall adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects. A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity which accepts the delegation; however, until mitigation measures have been completed the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program. (b) Where the project at issue is the adoption of a general plan, specific plan, community plan or other plan-level document (zoning, ordinance, regulation, policy), the monitoring plan shall apply to policies and any other portion of the plan that is a mitigation measure or adopted alternative. The monitoring plan may consist of policies included in plan-level documents. The annual report on general plan status required pursuant to the Government Code is one example of a reporting program for adoption of a city or county general plan.

C169-22

15126. CONSIDERATION AND DISCUSSION OF ENVIRONMENTAL IMPACTS All phases of a project must be considered when evaluating its impact on the environment: planning, acquisition, development, and operation. The subjects listed below shall be discussed as directed in Sections 15126.2, 15126.4 and 15126.6, preferably in separate sections or paragraphs of the EIR. If they are not discussed separately, the EIR shall include a table showing where each of the subjects is discussed. (a) Significant Environmental Effects of the Proposed Project. (b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented. Association of Environmental Professionals 2018 CEQA Guidelines 174 (c) Significant Irreversible Environmental Changes Which Would be Involved in the Proposed Project Should it be Implemented. (d) Growth-Inducing Impact of the Proposed Project. (e) The Mitigation Measures Proposed to Minimize the Significant Effects. (f) Alternatives to the Proposed Project.

C169-23

15126.2 CONSIDERATION AND DISCUSSION OF SIGNIFICANT ENVIRONMENTAL IMPACTS. (a) The Significant Environmental Effects of the Proposed Project. An EIR shall identify and focus on the significant environmental effects of the proposed project….The subdivision would have the effect of attracting people to the location and exposing them to the hazards found there. Similarly, the EIR should evaluate any potentially significant impacts of locating development in other areas susceptible to hazardous conditions (e.g., floodplains, coastlines, wildfire risk areas) as identified in authoritative hazard maps, risk assessments or in land use plans addressing such hazards areas. (b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented. Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the project is being proposed, notwithstanding their effect, should be described. (c) Significant Irreversible Environmental Changes Which Would be Caused by the Proposed Project Should it be Implemented. Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since …generally commit future generations to similar uses. (d) Growth-Inducing Impact of the Proposed Project. Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. … projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

C169-24

TCE ENGINEERING 154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com

15126.4 CONSIDERATION AND DISCUSSION OF MITIGATION MEASURES PROPOSED TO MINIMIZE SIGNIFICANT EFFECTS. (a) Mitigation Measures in General. C169-25
(1) An EIR shall describe feasible measures which could minimize significant adverse impacts, including where relevant, inefficient and unnecessary consumption of energy.
(A) The discussion of mitigation measures shall distinguish between the measures which are proposed by project proponents to be included in the project and other measures proposed by the lead, responsible or trustee agency or other persons which are not included but the lead agency determines could reasonably be expected to reduce adverse impacts if required as conditions of approving the project. This discussion shall identify mitigation measures for each significant environmental effect identified in the EIR. (B) Where several measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified. Formulation of mitigation measures should not be deferred until some future time. However, measures may specify performance standards which would mitigate the significant effect of the project and which may be accomplished in more than one specified way. (C) Energy conservation measures, as well as other appropriate mitigation measures, shall be discussed when relevant. Examples of energy conservation measures are provided in Appendix F. (D) If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed but in less detail than the significant effects of the project as proposed. (Stevens v. City of Glendale (1981) 125 Cal.App.3d 986.) (2) Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally binding instruments. In the case of the adoption of a plan, policy, regulation, or other public project, mitigation measures can be incorporated into the plan, policy, regulation, or project design.

15126.6. CONSIDERATION AND DISCUSSION OF ALTERNATIVES TO THE PROPOSED PROJECT. C169-26
(a) Alternatives to the Proposed Project. An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. … There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. (Citizens of Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553 and Laurel Heights Improvement Association v. Regents of the University of California (1988) 47 Cal.3d 376).
(b) Purpose. Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.
(c) Selection of a range of reasonable alternatives. The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are:(i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.
(d) Evaluation of alternatives. The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be C169-27

discussed, but in less detail than the significant effects of the project as proposed. (County of Inyo v. City of Los Angeles (1981) 124 Cal.App.3d 1).

(e) "No project" alternative. (1) The specific alternative of "no project" shall also be evaluated along with its impact. The purpose of describing and analyzing a no project alternative is to allow decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The no project alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does establish that baseline (see Section 15125). (2) The "no project" analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

C169-27

(3) A discussion of the "no project" alternative will usually proceed along one of two lines:

(A) When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. Typically this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan.

C169-28

(B) If the project is other than a land use or regulatory plan, for example a development project on identifiable property, the "no project" alternative is the circumstance under which the project does not proceed. Here the discussion would compare the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved. If disapproval of the project under consideration would result in predictable actions by others, such as the proposal of some other project, this "no project" consequence should be discussed. In certain instances, the no project alternative means "no build" wherein the existing environmental setting is maintained. However, where failure to proceed with the project will not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project's non-approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment.

(C) After defining the no project alternative using one of these approaches, the lead agency should proceed to analyze the impacts of the no project alternative by projecting what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.

(f) Rule of reason. The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making.

(1) Feasibility. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives. (Citizens of Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553; see Save Our Residential Environment v. City of West Hollywood (1992) 9 Cal.App.4th 1745, 1753, fn. 1).

C169-29

TCE ENGINEERING 154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com

15130. DISCUSSION OF CUMULATIVE IMPACTS (a) An EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable, as defined in section 15065 (a)(3). Where a lead agency is examining a project with an incremental effect that is not "cumulatively considerable," a lead agency need not consider that effect significant, but shall briefly describe its basis for concluding that the incremental effect is not cumulatively considerable. (1) As defined in Section 15355, a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR. (2) When the combined cumulative impact associated with the project's incremental effect and the effects of other projects is not significant, the EIR shall briefly indicate why the cumulative impact is not significant and is not discussed in further detail in the EIR. A lead agency shall identify facts and analysis supporting the lead agency's conclusion that the cumulative impact is less than significant.

C169-29

15355. Def. CUMULATIVE IMPACTS "Cumulative impacts" refers to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts. (a) The individual effects may be changes resulting from a single project or a number of separate projects. (b) The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.

C169-30

15144. FORECASTING Drafting an EIR or preparing a Negative Declaration necessarily involves some degree of forecasting. While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can. Note: Authority cited: Section 21083, Public Resources Code; Reference: Sections 21003, 21061, and 21100, Public Resources Code.

Regarding: Sonoma Developmental Center (SDC) Sale to Galen's Gardens/Samaritan Housing Society

Aug 26, 2022

Dear : Too Whom This May Concern; for Preliminary Discussions,

Galen's Gardens/Samaritan Housing Society's offer is $1B for "Improvements to the Environment" at Sonoma Developmental Center (SDC) to such an extent as to offset the value & price of any other offer.

C170-1

The current process has gone off track, while Permit Sonoma's efforts at creating an EIR & Specific Plan process for development of SDC have produced Yeomen's effort of planning & exceptional avenues for creative visioning at SDC, they have shot clear past the demarcations of the community's desires/needs.

Galen's Gardens/Samaritan Housing Society offer is a "Null Hypothesis Project" proposal for "Improvement of the Environment" at SDC and Historic Restoration of the Historic main building ("Professional Education Building/PEC"), which exempts the proposal from CEQA. We in America suffer from a lack of vision, we have been convinced that the proper thing to do is to "Think Globally, but Act Locally" only. This is not correct, this is unscientific, it is anti-scientific and anti-American, we need to "Think Locally, and Act Globally", because that is scientific. What we want locally around us, we should want for all, and similarly with what we don't want near us. We've lost the Public will. See Appendix"A"Term Offer Sheet.

C170-2

Our offer is simple: create a Climate Crisis Center; establish a Polytechnic Environmental Institute; reuse as many of the buildings and facilities as possible; prevent waste & GHG emissions in the demolition of the County Proposed Project Alternative (CPPA) of ~161,000 tons waste along with the replacement of these same buildings with another ~161,000 tons of future waste (∑=134yrs waste); establish 6-Agencies with 100units/ each of affordable housing, with each reserving 10 of these units for "short term rentals". We will use Camp Via as an RV site, and re-establish the water & waste treatment systems for wetlands.

The value of this proposal to the State is $1.133 Billion, and we would return all the property to the State at any time they wish (subject to the Housing & School Leases, and $100M Rehab Loan). Our only conditions for the creation of the Climate Crisis Center, the Polytechnic Environmental Institute and the affordable housing is $100M Endowment from California Coastal Conservancy, $25M/yr Operating Budget (per CalPoly Humboldt) for the Polytechnic Institute, and the use of the property until it's return to the State. Please see attached Appendices for details.

Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Program Draft EIR (EIR)

Sept 18, 2022

Dear : Too Whom This May Concern; for Preliminary Discussions,

Though Permit Sonoma worked hard, produced >4000pgs, & created many potential alternatives within their Specific Plan/EIR process, they have overshot the mark creating a plan for the past, "fighting the last war" as we often do, and not taking advantage of the opportunity to present a plan for the future.

Why does it appear the SDC EIR and associated Specific Plan (characterized by the County's preferred Proposed Project Alternative) have defined and committed the County of Sonoma, as Lead Agency under CEQA, to a series of specific decisions, plans, and/or alternatives without fully considering other acceptable plans (under legislation 14670.10.5), alternatives, mitigation measures, and the Null Project.

Please explain why the County (Permit Sonoma) has allowed the EIR to be produced which does not address the mitigatable cumulative effects of waste generated by the proposed alternative over the Null Project hypothesis, to the extent where recommended building demolition of ~1.2M sq-ft produces a minimum of 161,000 cy of debris equal to 67 years of operation of the Proposed Project Alternative in addition to the equal amount of debris produced by the eventual demolition of the Proposed 1.2M sq-ft Project (∑=322,000 cy, or 134 years at the rate of the Proposed Project at completion); together with the project waste there will be an average cumulative waste of 19.8 tons/day or 1.5% of daily averages (2016-2020, per SP pg 603) ? Since we are already transferring all our solid waste away from Sonoma County because we do not have local landfill capacity, and our waste charges ($135/ton) are double the charge for Hazardous Waste ($50.97/ton asbestos waste) taken to Kettleman Hills landfill, this must be considered a significant mitigatable impact by Reuse and Historic Preservation of the existing buildings. At the local waste costs, this represents >$960,000/yr = ~$65M over the 67 years, from these 3 sources.

Why is no mention made in the EIR or SP of GHG's which were imbedded and carried within the existing constructed buildings which will be released into the atmosphere by their demolition, nor is any mention made of the GHG emissions which are imbedded in the production of the new materials and resources which are expected to replace the demolished SDC buildings, these are significant long term mitigatable cumulative effects? Why has the EIR not addressed either of these cumulative GHG effects, from demolition, neither the before demolition GHG emissions sequestered in the existing buildings which will be released, nor the GHG emissions released in the production of the replacement 1.2M sq-ft of buildings together with their own lifecycle emissions released upon their demolition? These GHG's must be considered a significant mitigatable impact by their (building) Reuse.

TCE ENGINEERING 154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com

Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish?

Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-of-the-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building?

Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to “In-Situ” mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the housing, hospital, and office buildings? Lack of consideration of this impact has direct impacts of needlessly and costly filling existing hazardous waste landfills, both individually and cumulatively, though mitigatable.

Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, “a death by 1000 cuts” to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation (HP)? Can you explain how you are mitigating these neglected impacts which should be further compared to the environmentally preferred HP, in producing a cycle of demolition and reconstruction which has a cumulative effect due to volume of waste, and on the environment due to exploitative expectations, the expectation that ‘everything I have should be new’, ‘we need the new’, ‘I need the new’? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis?

I've been wanting to submit my contribution to the SDC planning process.
The lighting that is part of any development at SDC needs to be low lighting to preserve dark sky and nocturnal animal hunting and activities.
My husband is an amateur astronomer and has to drive up to Lake Sonoma with his local astronomers group to do sky viewing.
The new lighting these days is atrocious and needs to be carefully planned to preserve quality of life and looking up at the stars.

C173-1

With attention to detail this can be accomplished -

Please include this planning in the SDC going forward - Super Important to minimize the impact of lighting.
Thank-you.
I didn't see anything about lighting in the EIR report. Did I miss it?

I've lived in the valley since 1977.
Our quality of life and wild land habitat are of extreme importance.
Our care for nature is what makes this valley the special place that it is.
Sincerely,

Dear Mr. Oh,

I am writing because I strongly disagree with the most recent proposal to develop SDC for the following reasons:

1) 1000 housing units and 940 on-site jobs is too large for our small town. This monstrosity would significantly impact traffic, water use, and greenhouse gas emissions. We are already in a severe drought and we don't have the water supply to house that many people. C175-1

2) It is an extreme fire risk to add 2000+ cars onto our roads as it took hours to evacuate during the last big fire. Your plan will be putting many people's lives and animals at risk. The idea that creating another road to Highway 12 wouldn't remotely solve the problem. The fire chief's assessment that this new development would only cause 1-2 minutes extra time for evacuation is not based on the reality of the citizens who live here.

3) The plan will negatively effect our wildlife, which is the glory of living here in Glen Ellen. One of the reasons we choose to live here 35 years ago, is because of the wildlife and openness of the area. I believe that is also why tourists love coming to our pristine valley.

My vision for the property is mostly reserved open space, transferring the property to a public or non-profit company, offering community based programs ie: educational, sustainable green techlology center, historic preservation of the main building, bicycle paths and an organic farm. The Wildlife Corridor and Sonoma Creek should be well protected with no more then 200 affordable, sustainable homes with priority to people with disabilities. The State of California should pay to clean up the mess left behind, which is something we were taught as children. Pushing this expense onto Sonoma County or the new builder is unethical. The State has a surplus of funds so they can afford it. C175-2

We have an opportunity to behave differently then our previous generations. The model of “bigger is better” isn't working any more. The planet is suffering so we need to approach this jewel in a sustainable, carbon neutral way. Thank you for your careful consideration.

Sincerley,

Vivien Hoyt

Our farm labor community could desperately use the housing on site. Don't tell me the buildings aren't suitable to live in. If you ever went to Mexico and saw what the majority of people live in, you would agree that the accomadations at Sonoma Development Center look like palaces. If that is to difficult for the majority to comprehend than do nothing with the property. Let it rot away and become open space for nature to enjoy and the public also!

C176-1

Respectfully,
Will Ivancovich

Re: Sonoma Development Center Specific Plan Draft Environmental Impact Report, dated August 22, 2022

Dear Mr. Oh:

I live on Arnold Drive, just south of Sobre Vista Drive. These comments are directed to the Sonoma Development Center Specific Plan Draft Environmental Impact Report, dated August 22, 2022. I am quite disturbed by many of the assumptions and conclusions included in the report, and would like a detailed response to the questions and issues raised below.

C177-1

FIRE EVACUATION

In the Specific Plan, the Vision and Guiding Principles are full of references to “well-planned evacuation routes” and "proactively planning for community safety in natural disasters,” but the DEIR somehow concludes that pouring a couple of thousand cars onto Arnold Drive in the event of a disastrous fire will somehow not have a significant impact on emergency evacuation plans. This is a flawed and inadequate analysis for many reasons.

FIRE FROM THE WEST

The DEIR states on p. 515: “Historically, a fire approaching from the west may be less likely, and therefore did not warrant further specific analysis.” This is troubling for at least three reasons.

C177-2

First, the lower likelihood of a fire coming from the west is based on historical

records that are less and less relevant given the impact of global warming and changing weather patterns. For these reasons, it is very difficult to predict how and where fires will originate and spread. Lightning strikes could occur anywhere, as we saw in 2020, and wind and drought conditions could make previously rare situations more common.

C177-2

Second, the DEIR should be planning for all contingencies, even "black swans." This is particularly important since the project will have a permanent impact on the community and will impose threats for decades.

Third, a fire from the west would be particularly devastating, as it likely would give residents much less time to evacuate and cause massive and sudden evacuation by residents and workers at the SDC and the surrounding communities. The assumptions on p. 515 that 25% of residents and employees would evacuate when given an Evacuation Warning and 65% would evacuate when given an Evacuation Order seems false and irrelevant, as most everyone would immediately flee when they saw the fire racing down the mountain (as would the other people on Arnold Drive and the surrounding areas).

Given all this, please respond to these concerns and explain in detail why the impact of a fire from the west was not considered. A full and complete study of this issue needs to be completed, and its results need to be considered and incorporated into the Specific Plan, before the DEIR can be approved

FIRE FROM THE NORTHEAST AND SOUTHEAST

As for the analysis of evacuation from the northeast and southeast, the analysis in the DEIR is also faulty and disconnected with real life experience. On p. 512, the DEIR states that "the travel model represents a typical weekday peak hour…" and then proceeds to add the potential impact of additional traffic from residents and workers at SDC.

C177-3

The total number of cars from residents and workers according to the DEIR would be over 2200. Although the DEIR never directly says how many additional vehicles will flood onto Arnold Drive from the SDC in the result of a fire emergency, it does state that 75% of the residential units, including two cars from each household, and 75% of the workers, with one car each, will be involved (p. 515)- given the Proposed Plans goal of adding 1000 new housing units and employing 940 people (Table 4.1-1 Summary of Alternatives, p. 534), the total is approximately 2205 vehicles. Add hotel guests (possibly one vehicle for each of the 120 rooms) and visitors (shopping, recreation, friends), and the total is probably closer to 2500.

The first problem is that there is insufficient data supporting the travel model which is relied upon. In the Appendix to the DEIR, Appendix F is entitled "Traffic Model Data." It consists of one page. There is no information regarding how the study was

done, when it was done, or what criteria was used. It could have been done so long ago it is irrelevant, or during Covid, when traffic was not typical. According to p. 512 of the DEIR, the DEIR relied upon the Sonoma County Regional Travel Model which "estimates traffic generated by land uses and tracks traffic volume relative to road capacities to calculate the associated levels of congestions and congested speeds." No other information is given regarding the travel model and, significantly, it does not appear to be based on a detailed and empirical study of realistic and existing traffic patterns. This is not acceptable for a project of this magnitude, especially when it is supposed to seriously evaluate emergency evacuation routes in the event of what could be a huge, fast-moving catastrophic fire.

C177-3

Second, the DEIR again assumes that only 25% of the residents will evacuate when they receive an Evacuation Warning. It seems risky and irresponsible to bet the lives of so many people on that assumption, rather than assuming that there will most likely be widespread panic if disaster strikes, especially now that we all know about what happened in Paradise and other communities.

C177-4

It also is important to note that the study that the DEIR cites for these evacuation rates only relies on three fires which took place in 2017 and 2018.[1] Besides the fact that the analysis is based on a limited sample and is therefore unreliable, this raises the question of whether the cumulative psychological impact of yearly devastating fires since 2017-8 has in itself begun to change behavior. That question is unasked and thus unanswered.

Further, the study itself states the following in the section entitled Evacuation or Stay:

> For wildfires, the direct implications of high and variable shadow evacuation rates (ranging form 29.1% to 75% for the three fires) are unclear. One possible explanation is that officials were often unable to issue mandatory evacuation orders before residents needed to evacuate. Another explanation is that residents may have found the environmental cues of the fire to be very high risk, leading them to evacuate without an order. Future research is needed to separate the impacts of poor messaging and environmental cues on shadow evacuations for wildfires.

This suggests that the statistical analysis relied upon by the DEIR is tentative at best and needs further study, something that the DEIR does not recognize. Much more needs to be studied before an emergency evacuation plan can be based on such tenuous assumptions about evacuation rates.

C177-5

The third problem is that the DEIR ignores the fact that if there is a fire, the traffic on Arnold Drive will <u>not</u> be the same as a "typical weekday peak hour." The reason, of course, is that all the people in the area will be impacted during a massive

explosive fire emergency, and they will swell Arnold Drive and Highway 12 well beyond "typical weekday peak" traffic. However, it is odd and indefensible that the DEIR focuses only on daily traffic patterns and employees and residents of the new town envisioned by the Specific Plan, but ignores the significantly increased volume of traffic that would occur from all the other residents of Glen Ellen and along Arnold Drive, as well as those fleeing the fire from other locations in the area. The DEIR also does not take into account the additional traffic that will be generated by the guests at the proposed 120 room hotel (possibly another 120 vehicles) or the visitors to the new commercial and recreational space they seek to build.

C177-5

The fourth problem is that the analysis of the impact of the Proposed Plan on fire evacuation itself provides no backup material explaining exactly how the results were obtained. Table 3.16-1: Peak Hour Travel Times With Fire Evacuation (p. 517) is presented without any further explanation of how the results were actually calculated. This is particularly relevant as the invalid or limited assumptions discussed above skew the results, and a more accurate model would undoubtedly yield different results. It is therefore important to provide a detailed description of the statistical model and the methodology and imputs relied upon, so that the appropriate corrections can be made to yield more accurate results.

C177-6

Finally, none of what the DEIR states is consistent with actual events or personal experience. The DEIR concludes that travel time in the event of an evacuation will increase by only 1.2 minutes - actually, in my experience, even during normal traffic, sometimes it takes several minutes before I can even get onto Arnold Drive, so it seems unlikely that a huge influx of traffic will delay me, and many others, no more than a minute. It seems that the DEIR overlooks the basic fact that Arnold Drive is a two lane country road with hundreds if not thousands of residents on either side of the road with no other escape route. Arnold Drive was backed up for miles and barely moved during the Nuns Canyon Fire and the Kincade Fire evacuations. And sending people to Highway 12 is not the solution – that too is a small congested two -lane road and it is jam packed during normal rush hour traffic, and will be a poor evacuation route under the best of conditions. However the study is skewed to obtain the desired results of "no impact," the actual experiences of people in the area and common sense starkly contradict the conclusion that the addition of close to 2500 vehicles (including hotel guests and visitors) will have no significant impact.

Please address each of these concerns in detail and explain why the DEIR does not adequately address the public safety issues they raise.

CONCLUSION

C177-7

All this raises serious questions about the DEIR's conclusion that "implementation

of the Proposed Plan would not impair an emergency response or emergency evacuation plan and impacts would be less than significant" (p. 517) and that therefore “no mitigation is necessary.” (p. 518). This defies logic and needs to be explained in detail in light of the questions and issues raised above. Beyond this, the DEIR should not be approved until there is a serious, complete and evidentiary based Emergency Response Plan in place and only after there has been a comprehensive and objective study of how the Planned Project will impact public safety and traffic conditions on Arnold Drive during a fire emergency

Re: Sonoma Developmental Center Specific Plan Draft Environmental Impact Report

Dear Mr. Oh,

We provide these comments in response to the County of Sonoma's (County) Sonoma Developmental Center Specific Plan (Specific Plan) Draft Environmental Impact Report (DEIR) published on August 10, 2022.

C179-1

As long-time residents of Glen Ellen and the greater Sonoma Valley, we have significant interests in the Specific Plan and ultimate development of the former Sonoma Developmental Center (SDC) site. We are concerned that the DEIR does *not* provide substantial information about the environmental impacts of the County's proposed Specific Plan (Proposed Plan) as compared to alternatives. While our concerns extend to the cumulative environmental impacts of development under the Proposed Plan, we are particularly struck by the DEIR's failure to study or disclose the impacts to the resources and existing communities in and around the SDC. The analysis in the DEIR focuses on how the proposed development would be experienced by future residents and workers at the SDC site and does not adequately consider how doubling the current population of Glen Ellen would affect the surrounding community. This bias is laid bare by the DEIR's finding that more than doubling the residential population would have comparable impacts to increasing the population by approximately 50 percent. In short, the DEIR does not

fulfill its basic purpose, which is to demonstrate that the County has fully considered and disclosed the potential impacts of implementing the Proposed Plan and alternatives.

C179-1

II.
COMMENTS

We organize our comments according to the headings in the DEIR for ease of reference.

Table of Contents

C179-2

The Table of Contents shows the DEIR is over 600 pages, exclusive of appendices. That is a lot of paper for the public to review and provide written comments on within 45 days. Thus, while the Table of Contents does not contain substantive information, it nonetheless conveys a fundamental deficiency running throughout the EIR, namely that the DEIR does not facilitate the public's understanding of the County's proposal or the environmental impacts of implementing that proposal.

A 600-plus page DEIR is not just a hardship for the public, it is contrary to the California Environmental Quality Act (CEQA). CEQA Guidelines direct that environmental documents be clear and easy to understand: "EIRs shall be written in plain language and may use appropriate graphics so that decisionmakers and the public can rapidly understand the documents."[1] Further, EIRs should be concise: "the text of draft EIRS should normally be less than 150 pages and for proposals of unusual scope or complexity should normally be less than 300 pages."[2] An EIR should "*effectively* disclose to the public the 'analytic route the ... agency traveled from evidence to action.'"[3] Indeed, making the EIR accessible and understandable to the public is necessary to achieve the policy objectives behind CEQA's requirement that state agencies prepare an EIR,

---

1 14 Cal. Code Regs. § 15140.
2 14 Cal. Code Regs. § 15141.
3 *Citizens of Goleta Valley v. Bd. of Supervisors*, 52 Cal. 3d 553, 568, 801 P.2d 1161 (1990) (internal citations omitted) (emphasis added).

which include "protect[ing] the environment *but also … demonstrat[ing] to the public that it is being protected.* (*County of Inyo v. Yorty*, 32 Cal. App. 3d 795)," and "demonstrat[ing] to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action. (*People ex rel. Department of Public Works v. Bosio*, 47 Cal. App. 3d 495.)."[4]

C179-2

The DEIR is over 600 pages and includes an additional 3,500 pages of appendices, yet it still fails to present a clear picture of the County's proposed action or the environmental consequences of it. In making the DEIR unduly long and confusing and providing the public only 45 days to review and provide comments, despite many requests for additional time, the County has effectively deprived the public a fair and meaningful opportunity to understand and engage in the environmental review and consideration of the Proposed Plan.

Section 1.1 Purpose of the EIR

C179-3

According to the County, the DEIR is intended to serve multiple purposes:

- To satisfy CEQA requirements for analysis of environmental impacts by including a complete and comprehensive programmatic evaluation of the physical impacts of adopting and implementing the Proposed Plan;
- To recommend a set of measures to mitigate any significant adverse impacts;
- To analyze a range of reasonable alternatives to the Proposed Plan;
- To inform decision-makers and the public of the potential environmental impacts of the Proposed Plan prior to taking action on the Proposed Plan, and to assist County officials in reviewing and adopting the Proposed Plan; and
- To provide a basis for the review of subsequent development projects and public improvements proposed within the Planning Area. Subsequent environmental documents may be tiered from the Final EIR.[5]

---

4 14 Cal. Code Regs. § 15003(b), (d).
5 DEIR, pp. 41-42.

As described below the DEIR does not achieve these purposes.

The DEIR does not provide a complete or comprehensive evaluation of the physical impacts of adopting and implementing the Proposed Plan. Under CEQA, "[t]he purpose of an [EIR] is to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided."[6] To this end, an EIR must describe, in detail, the significant effects on the environment of the project, including cumulative effects.[7]

C179-4

Contrary to the requirements under CEQA, the DEIR's impacts analysis here is largely limited to a description of goals and policies applicable to a given resource or category of resources, followed by a conclusion that, if all future development activities contemplated by the Proposed Plan are perfectly designed and implemented to comply with those goals and policies, then there will be no significant impacts. In other words, the DEIR finds that any and all development under the Proposed Plan would effectively be self-mitigating across all resource areas, except for historic resources and transportation. The DEIR's impacts analysis does not appear to cite to specific evidence as the basis for these findings.[8] The DEIR does not show that the County undertook specific studies or evaluation of the potential impacts of development activities covered under the Proposed Plan. Instead, the DEIR repeatedly states that the County chose to defer field and other site-specific studies.[9]

This facile analysis, which does not point to any mechanism for the County (or other regulatory entity) to ensure that future development activities perfectly comply with all

C179-5

6 Cal. Pub. Res. Code § 21002.1(a).
7 14 Cal. Code Regs. §§ 15126.2, 15355, 15358.
8 14 Cal. Code Regs § 15091(b) (EIR's findings must be supported by substantial evidence).
9 *See, e.g.,* DEIR, pp. 236 (no new field studies for biological conditions or resources), 252 (deferring biological assessments); 253 (deferring wetland delineation).

applicable goals and policies for resource protection, is insufficient to support the DEIR's conclusory findings that any and all reasonably foreseeable impacts of implementing the Proposed Plan can be avoided or effectively mitigated to the point of insignificance. C179-5

As indicated above, we were unable to locate discussion of specific field studies or site-specific analyses that the County undertook to evaluate the potential impacts of development under the Proposed Plan or alternatives. Based on our review, the DEIR does not provide information or substantive explanation adequate to resolve or narrow the issues we raised in our Scoping Comments, including, but not limited to:

- Biological Resources
  - Analysis of impacts to fish and wildlife resources and habitat, including any federally listed endangered or threatened species that are or have the potential to occur in the project area
  - Analysis of impacts to plant and botanical resources
  - Analysis of the potential for development activities to introduce non-native, invasive species

- Energy Resources
  - Analysis of whether there are adequate, cost-effective renewable energy sources available to timely meet anticipated energy needs on the campus under the Specific Plan and alternatives
  - Analysis of whether proposed development under the Specific Plan and alternatives would affect reliability or cost of energy resources locally or regionally

C179-6

- Greenhouse Gas Emissions
  - Quantitative analysis of any changes to greenhouse gas emissions caused by the development program proposed under the Specific Plan and alternatives

- Hydrology and Water Quality
  - Analysis of hydrogeologic impacts, including whether restoration of onsite water supply systems would potentially impact surficial expression of interconnected groundwater sources
  - Analysis of potential geomorphological impacts to natural waterways caused by increased runoff volume and duration from additional impervious surfaces

- Public Services, Recreation
  - Analysis of the Specific Plan's impacts to existing recreational use on the SDC campus, particularly passive recreation
  - Analysis of opportunities to meet latent and future recreational demand under the Specific Plan and alternatives

- Utilities and Service Systems
  - Analysis of whether there are adequate water supplies to reliably meet demand on the campus under the Specific Plan and alternatives into the future, including description of specific sources and whether those sources could be cumulatively affected by other developments within the region, e.g., implementation of the Sustainable Groundwater Management Act, or potential changes to regional surface water supplies caused by the decommissioning of the Potter Valley Hydroelectric Project (FERC No. 77).

C179-7

- Transportation and Traffic
  - Analysis of the availability of feasible existing or future public transit alternatives to serve increased population given the relative geographic isolation of the SDC campus from urban and suburban commercial districts and other services and amenities
  - Analysis of impacts related to pedestrian and bicycle safety on two-lane roads in the broader area, not just within the project boundary

C179-8

- Wildfire Hazards
  - Analysis of the increased risks of wildfire occurrence and severity locally and regionally under the Specific Plan and alternatives
  - Analysis of the impacts to safe and effective evacuation routes locally and regionally in the event of wildfire or other natural disasters.[10]

The DEIR does not recommend a specific set of measures to mitigate any significant adverse impacts. Under CEQA, "[a]n EIR shall describe feasible measures which could minimize significant adverse impacts."[11] As stated above, here the DEIR generally finds that the Proposed Plan will not have any significant impacts that require mitigation.[12] These findings are based on assumptions that specific development projects will be designed and implemented by unknown developer(s) to achieve and adhere to all current goals and policies related to resource

C179-9

[10] Scoping Comments, pp. 3-4.
[11] 14 Cal. Code Regs. § 15126.4; *see also* Cal. Pub. Res. Code § 21002.1(a).
[12] *See* DEIR, Table ES-2.

protection. However, these assumptions are not supported by any specific analysis based on record evidence for how specific development projects could be designed or reliably implemented to attain all resource goals and policies and effectively mitigate project impacts. C179-9

Further, the DEIR states that the Proposed Plan is non-binding on the state or any future owner. The DEIR does not provide any basis for the assumption underlying the impacts analysis that the state or future owner will implement specific development projects in a manner that is self-mitigating, even where attainment of all the listed resource goals and policies may exceed legal and regulatory requirements. The DEIR's assumption that specific development projects under the Proposed Plan will be designed and built to be self-mitigating is meaningless in the absence of any demonstrated authority to require that outcome.

The DEIR does find that development under the Proposed Plan would adversely impact cultural and historic resources and transportation. However, it finds that these impacts would be "significant and unavoidable" and does not propose any specific mitigation measures for either category of impacts.[13] In sum, the Proposed Plan does not include any specific mitigation measures to lessen even those impacts that the DEIR concedes would be significant. C179-10

The DEIR does not provide adequate analysis to meaningfully compare the Proposed Plan to alternatives. "One of [an EIR's] major functions ... is to ensure that *all reasonable alternatives* to proposed projects are thoroughly assessed by the responsible official."[14] The discussion of alternatives must "include sufficient information about each

[13] *Id.* at 21, 35.

[14] *Citizens of Goleta Valley v. Bd. of Supervisors*, 52 Cal. 3d 553, 565 (1990) (emphasis in original; internal citations omitted). "An EIR need not consider every conceivable alternative but must consider a range of alternatives sufficient to permit the agency to evaluate the project and make an informed decision, and to meaningfully inform the public." *Fed'n of Hillside & Canyon Associations v. City of Los Angeles*, 83 Cal. App. 4th 1252, 1264 (2000).

alternative to allow evaluation, analysis, and comparison with the proposed project."[15] "Under the 'rule of reason,' an EIR's discussion of alternatives is adequate if it provides sufficient information to compare the project with a reasonable choice of alternatives."[16] The DEIR's alternatives analysis does not meet these standards.

C179-10

In response to the County's Notice of Preparation, we requested that the EIR consider a reasonable range of alternatives to the County's proposal, and further requested that the range of alternatives "not be limited to variations on the same development plan differing only slightly by number of housing or other building units proposed to be constructed."[17, 18] Despite this request, the only meaningful difference in the alternatives considered in the DEIR is the density of the proposed development.

C179-11

The DEIR does not even consider a true no action alternative. Under CEQA, an EIR's discussion of alternatives must include a "no project" alternative.[19] The purpose of discussing a no project alternative is to permit a comparison of the impacts of approving the proposed project with the effects of maintaining the status quo.[20] The no action alternative "is a factually based forecast of the environmental impacts of preserving the status quo. It thus provides the decision makers with a baseline against which they can measure the environmental advantages and disadvantages of the project and alternatives to the project."[21]

---

16 *Fed'n of Hillside & Canyon Associations v. City of Los Angeles*, 83 Cal. App. 4th at 1264.
17 Letter from Caroline Hipkiss to Brian Oh (Mar. 25, 2022) (Scoping Comments), p. 5.
18 14 Cal. Code of Regs § 15126.6(a).
19 14 Cal. Code of Regs § 15126.6(e).
20 *Id.*
21 *Plan. & Conservation League v. Dep't of Water Res.*, 83 Cal. App. 4th 892, 917–18 (2000), *as modified on denial of reh'g* (Oct. 16, 2000).

Rather than continuation of the status quo, the DEIR defines the *no action alternative* to include a similar *or greater* level of development as the Proposed Plan: "the No Project Alternative would result in a palette of uses similar to those outlined in the Proposed Plan, and like in the Proposed Plan, these uses would be located at the Core Campus, and the surrounding land would be preserved as open space."[22] By assuming there would be comparable development under the No Project Alternative and the Proposed Plan, the DEIR omits analysis of the environmental impacts of the Proposed Plan as compared to existing (baseline conditions). *This hides the actual environmental impacts of the Proposed Plan and all alternatives considered in the DEIR.*

C179-12

Under CEQA, "[a] public agency should not approve a project as proposed if there are feasible alternatives or mitigation measures available that would substantially lessen any significant effects that the project would have on the environment."[23] Here, the DEIR identifies the Historic Preservation Alternative as the environmentally superior alternative because it would reduce the "significant and unavoidable" impacts to historic resources under the Proposed Plan to be "less than significant."[24] However, the DEIR does not recommend the Historic Preservation Alternative because it would have "overall environmental impacts that are largely comparable between the Proposed Plan and the alternatives," but would not provide as much housing or "long-term fiscal stability."[25] The DEIR's impacts analysis, which is not based on any specific development design scenarios or supported by field or other site-specific studies, is inadequate to demonstrate that the environmental impacts of the Historic Preservation

---

22 *Id.* at 11.
23 14 Cal. Code Regs. § 15021(a)(2).
24 DEIR, p. 12.
25 *Id.* at 14.

Alternative would be comparable for all resources other than historic resources.[26] It strains credulity to predict that the Proposed Plan for 1,000 housing units and a population of 2,400 would have comparable impacts to a plan for 450 housing units and population of 1,080 (i.e., less than half the housing and population density as the Proposed Plan).[27] Contrary to CEQA's policy objectives, this conclusory analysis does not demonstrate to the public that the County "has, in fact, analyzed and considered the ecological implications of its action."[28] C179-13

The DEIR is inadequate to inform decision-makers or the public of the potential environmental impacts of the Proposed Plan. An EIR should inform decisionmakers of the environmental impacts of a proposed project and ensure that the "government at all levels to make[s] decisions with environmental consequences in mind."[29]

For the reasons discussed above, the DEIR's analysis of the impacts of the Proposed Plan as compared to alternatives is too vague and conditional to provide clear understanding of the environmental impacts of the Proposed Plan or alternatives, or to demonstrate that any government decisions based on the DEIR's analysis will have been made "with environmental consequences in mind."

The DEIR is too vague to serve as a basis for future, project-specific environmental documents. The DEIR acknowledges that additional environmental analysis for specific development projects will be required: "As a program EIR, the preparation of this document does not relieve the sponsors of specific projects from the responsibility of complying with the C179-14

---

[26] The "EIR does *not* assess project-specific impacts that may result from developments pursuant to the Proposed Plan." *Id.* at 2 (emphasis added).
[27] *Id.* at 13-14.
[28] 14 Cal. Code Regs. § 15003(d).
[29] 14 Cal. Code Regs. § 15003(c), (g).

requirements of CEQA (and/or NEPA for projects requiring federal funding or approvals)."[30] However, the DEIR indicates that future environmental documents may rely upon the DEIR's analysis to some extent: "These projects may, however, use the discussion of impacts in this EIR as a basis of their assessment of these regional, countywide, or cumulative impacts, provided that the projects are consistent with the Proposed Plan and the data and assumptions used in this EIR remain current and valid."[31] C179-14

For the reasons described above, we strongly disagree that the impacts analysis provided in the DEIR could or should be relied upon in future project-specific environmental documents.

IV.
CONCLUSION

We request the County revise the DEIR to address the deficiencies described above prior to finalizing the document. In particular, the County should reconsider its definition and analysis of the No Project Alternative, and rejection of the Historic Preservation Alternative. We thank the County for considering these comments.

Respectfully,

Sonoma Developmental Center Specific Plan: Draft Environmental Impact Report, August 2022

Comments by Charles Mikulik

C180-1

Numbers in parenthesis proceeding a comment refer to the PDF page number and the document page number of the Draft EIR respectively.

1. It is not clear how the potential loss of historic integrity under CEQA is being assessed. Furthermore, the Draft EIR indicates that the Specific Plan, if implemented, would result in the property to no longer qualifying as a National Register eligible Historic District. How specifically did you determine this? What are the criteria for determining the level of integrity tied to the number of historic buildings that are necessary to retain eligibility? This is particularly confusing as this is something that would generally be determined by the State Historic Preservation Officer. Did Page & Turnbull somewhere state that this loss of integrity is unavoidable? If so, based on what?

ES.1.2 Purpose

C180-2

2. (13/4) "Allow County departments, other public agencies, and private developers to design projects that will enhance the character of the Planning Area, preserve environmental resources, and minimize hazards". While this sounds great, it is vague at best. More specific language would be nice. What do you mean by enhance the character of the Planning Area? Please explain why the preservation of as much the structures, buildings, and landscape does specifically meet this purpose?

ES.1.3 Objectives

3. (16/6) Please explain and define what the criteria for determining feasibility are? My understanding is that cost is not a legal factor for determining whether something is feasible.
4. The use of "feasibility" appears to be open to interpretation. It appears that if adopted, the individual responsible for determining what is feasible will define what that means for themselves. Is true? Why are there no clear guidelines presented in the document?

ES.2.1 Cultural, Historic, and Tribal Resources

C180-3

5. (18/8) Similar to questions 3 and 4 the statements on this page appear to state that the impacts to the historic district are unavoidable and would reduce the integrity to a point where the property is no longer eligible. How was this determined and by whom? Has the State Historic Preservation Officer been notified that the eligibility status has been predetermined without concurrence from the Office of Historic Preservation?
6. Regarding California Code of Regulations Title 14: 15064.5 (which can be reviewed here: https://casetext.com/regulation/california-code-of-regulations/title-14-natural-resources/division-6-resources-agency/chapter-3-guidelines-for-implementation-of-the-california-environmental-quality-act/article-5-preliminary-review-of-projects-and-conduct-of-initial-study/section-150645-determining-the-significance-of-impacts-to-archaeological-and-historical-resources#:~:text=Download-,Section%2015064.5%20%2D%20Determining%20the%20Significance%20of%20Impacts%20to%20Archaeological%20and,Commission%2C%20for%20listing%20in%20the).), there is no

discussion regarding what the impacts to the community could be if this lost its integrity. Please explain what consequences are expected if this were to occur?

7. Implementation of goals 2-I, 2-J and policies 4-20 through 4-32 and Standard Conditions of Approval LU1 – LU-6 would be a partial mitigation but not enough but do not legally appear to be enough. Why are there no project specific mitigation measures to support and guarantee proper implementation?

C180-3

ES.4.2 Identification of Environmentally Superior Alternative

8. (23/14) While it is acknowledged that the Historic Preservation Alternative is the more environmentally sound approach, it is then indicated that it would be inferior regarding energy use, biological resources, and wildfire risks. Please present the data used to make this determination.

C180-4

.

2.4.4.1 Core Campus Districts

9. (83/Figure 2.4-2: Districts) I am not sure what to make of this as this depiction of the "Historic Core" seems to fly in the face of everything we know about the history of the campus.

3.1.3.4 Impacts

10. (110/101) Impact 3.1-1. This section does not make sense and is contradictory to other statements. Please explain how the assumption that there is a "less than significant impact" was determined? By definition, a property losing its status as a historic district is a significant impact. This section needs to be redone and the impacts need to be appropriately acknowledged.

Section 3.5: Cultural, Historic, and Tribal Cultural Resources

11. (269/260) The first paragraph on this page states that they are providing a list of all previously identified cultural resources, however, this is not true as no one has consulted with me. My professional assessment is that there are many more contributing resources on the property. I am more than willing to provide that data.

3.5.3.3 Relevant Policies and Implementing Actions

3.5.3.4 Impacts

C180-5

12. (303-304/294-295). Anything that would impact the integrity of the district is a significant impact. Why is that not acknowledged?
13. (304-305/295-296) Lots to be disappointed about here. Every effort should be made to preserve the district including construction of buildings replicating the architectural styles, etc.

Sonoma Development Center Specific Plan

Dear Brian Oh,

The following comments are to make sure that the SDC is transformed into a neighborhood that is accessible and affordable to all, epically people with disabilities. C181-1

Given the SDC's history of being an old hospital for people with disabilities it is vital that the entire development is acesaaible. One of the ways to achieve this is to build as many homes using the Visibility method. Visitability requires a zero-step entrance with a slope no greater then (1:12), 32-inch width pathways and doorways. Bathrooms are also equipped with grab bars and are big enough for a mobility device user. Additionally, the climate controls and light switch are low enough for those who use a mobility device. Petaluma passed their own Visitability ordinance earlier this year and it's a great example. The highlight of their ordinance is the width measurements are several inches great then the minimum 32 inches. Visitability has less extremity requirements then Universal Design which requires lower counters or a roll in shower. This could Visitability more appealing to build since it has less extensive design requirements. It was good to see at least 5 parcels be set aside for people with Developmental Disabilities. Ideally there will be more then 5-10 parcels and are built using Universal Design or Visitability.

It is great that a top priority is to transform the SDC into a pedestrian ordinated and multimodal neighborhood. However, it will need to be acesaaible and safe for people with disabilities. This will mean having a sidewalk network that has no gaps and is well maintained. People with disabilities are more likely to be hit by a car if they need to go into the street to due to a sidewalk gap or an obstacle. They are at greater risk as they may not hear or see the car and if they are in a mobility device they may not be seen by motorist. In addition, sidewalks in disrepair can higher trip/fall hazard. They may not see the crack or bump or it could cause their mobility device to get stuck potentially causing it to flip over. Ideally as much of the bicycle network is built with raised curbs or another physical barrier. This is important for people with disabilities as they may a have specially adopted bike which may be lower the ground and harder to see. It will also allow for someone to safely avoid heavy foot traffic or an obstacle on the sidewalk. The sidewalk and bicycle network should also extend outside of the SDC and provide access to Glen Ellen, and other surrounding areas. In addition, wayfinding will also need to be acesaaible with large bold text and have a section that's in brail. Furthermore, intersections and C181-2

crosswalks will need to be highly visible by being pained in large bold stripes. In addition, curb extension or cut outs should be built to maximize visibility. Having crosswalks that are signalized and adequately timed is also vital for safety and accessibility. For example, a crosswalk may to be extended from 10 seconds to 20 seconds to allow for a safe crossing. While it is good to see Complete Streets as one of the goals adding Vision Zero elements should also be considered.

C181-2

Figure 5.1-4 the Arnold Drive concept is overall pretty good. It excels in having a highly visible intersections, crosswalks and protected bike lanes. Having a narrower road will help motorist driver slower enhancing pedestrian safety. Still other ways to make motorist slow down such as landscaping separating opposite lanes of travel should be considered. Signalized crosswalks, traffic lights or stop signs will need to be added to make it accessible. Figure 5.1-6 Harney Street concept is good in that it has wider sidewalks however, the bike lanes should be protected like the ones on Arnold Drive. The bike lane in the middle should be removed as it is too dangerous for bicyclists with disabilities. It is also hard to tell if the intersections are highly visible which is needed given the potential for heavy traffic. In figure 5.1-8 it is good to see a Class 1 bike lane and should be on both sides of the street. Since there is a Class 1 pathway the bikeways on the streets should be removed. The intersection and crosswalk could also be highly visible with signalized crosswalks.

C181-3

Public transportation is also important for those who may not drive due to their disability. More routes into the Santa Rosa, and other major hubs in the area should be added to enhance service. In addition, the county should strongly consider having some express buses to these major hubs. The stops should also provide real time info on routes and schedules with information being provided in both audio and visual format. The stops will need to be covered to provide protection from the elements. The county should also improve its paratransit service so it is easier to get same day rides.

The SDC presents a great opportunity to build affordable housing and help alleviate the housing crisis. The severe housing widely felt for people with disabilities due to the lack of very and extremely low-income housing. This is because many people with disabilities rely on Social Security Insurance (SSI) and/or other public benefits. All of these benefits pay a few hundred or up to around a thousand dollars less than the average rent across the county. Thus, they fall into

C181-4

the very and extremely low-income. Furthermore, the recipient may receive the money from their benefits after rent is due resulting in late fees. This can further reduce one's budget for the month as they may not have the luxury of getting bi weekly. In addition to everyday items extra costs may include medical, support services, or assistive technology to help them with their disability. Given the severe economic challenges that people with disabilities face it's important there is as much affordable housing as possible. The plan mentions building at least 183 affordable units but the county should strongly consider building a mere 17 more units so it's an even 200. It is also very important that future landlords are willing to accept Section 8 and other housing vouchers. These vouchers are a common way for people with disabilities to obtain housing that would otherwise be unaffordable. However, it can be very challenging to find landlords that will accept these vouchers. It would be good to see the county work with landlords to accept these vouchers. This can look like educating landlords on the importance of accepting them and clearing misconceptions of who uses them.

C181-4

Given that the area is in an extremely high fire danger area it's vital that homes and buildings are built to be fire resistant and fuel loads are cleared from the area. The current road network needs to be studied to see how it will handle the increase in traffic during an evacuation. Due to the challenges from disasters improvements will need to be made like building another road to highway 12. The county will also need to take into account that people with disabilities may need extra assistance while evacuating. They may need a ride out of the area and may bring a mobility device, an oxygen tank or other medical equipment. Alerts and warnings will need to be sent out via landline phone and email as these could be their primary way communication. Police and fire personal may need to go door to door since people with a vision or sight disability may not hear or see the high/low sirens. In addition, some may more advanced warnings as it may take longer for them to pack and be ready to leave. For those with cognitive or learning disabilities they may assistance packing the correct supplies or extra explanation on evacuating. While doing outreach and education with residents on wildfire resiliency make sure the information is presented clearly for those with a cognitive disability. Any pictures or graphics will need to be described for those who with sight disability and in audio format for those who have hearing a disability. The fire station at the SDC is a great idea and it should also operate as an operations center. This will help improve response to both the SDC and greater Sonoma Valley.

C181-5

C181-6

It is important that resources like the Sonoma House or main building are kept to help pay respect and homage to past SDC residents and employees. The Sonoma House or main building should be converted into a museum on the history of the SDC. The cemetery should also be revitalized to pay respect for those who died at the center. Other buildings that are persevered should be turned into community space such as an event center instead of a hotel. The Flex Zone is a great concept and supportive services should be considered to occupy the space. It would also be good to see mixed use which is a good way to maximize affordable housing. If the water recreation area at Suttonfield Lake is created it will need to be designed be acesaaible. This will mean having a paved pathway to the to the water's edge. It is also important that the other open spaces are also accessible. If they have amenities such as play structures or work out machines will need to be able to accommodate all mobility levels. To help finance the project all state, federal, private funding are pursued especially for affordable housing. It would also be good to see at least some community buildings be built in the 1-5-year phase instead of the 5-10-year phase. The development should also take into consideration of where a school could be built if the demand arises.

Thank you for taking time to review my comments on the future of the Sonoma Development Center and for previous comments and focus groups. The plan presents a great opportunity to make a vibrant community that is affordable and acesaaible. If the SDC is developed to be acesaaible it will be a great way to carry on its legacy.

Thank You,

Collin Thoma

RE: Public Comment on SDC Specific Plan and DEIR

Dear Mr. Oh:

We are writing today following our review of the draft environmental impact report pertaining to the Sonoma Developmental Center's (SDC) future.

C182-1

As most following this planning process, including Sonoma County Planning Commissioner Greg Carr, have stated (repeatedly, loudly, emphatically) – we find that this report fails, either in part or in total, to account for several environmental impacts essential to any meaningful understanding of the ways in which the public's safety, true protections for the natural environment, and the many human needs are to be addressed. And so, with but a few scant weeks to pour through a 789 page report that bases its assessments, conclusions, and recommendations on the previous "Plan" - and so is itself deeply flawed and grossly inadequate, we will once more *howl into the void*.

Others with more advanced professional qualifications have pinpointed the flaws in those sections of the report pertaining to the natural environment, historic preservation, public safety, and traffic. We will restrict our comments to concerns for the future housing uses of SDC's Core Campus - and to a planning process that appears to have now gone off the rails – disappearing into the abyss of railroaded transparency!

The first of our issues concerns the so-called "SDC Specific Plan" and the "reasonable range of alternatives to the Proposed Plan" - as required by CEQA in an EIR. Is it just us? We find that the community's input is nowhere to be seen in either of these deeply deficient reports.

To illustrate, we and others have proposed, as one reasonable alternative, using SDC's built footprint, referred to elsewhere as its "historical 180-acre built area," as a campus for those seeking training in the trades, in the applied sciences, public service occupations, and other professions of financial and social benefit to the students, their families, and the entire state.

We see no evidence that this invaluable, desperately needed (see any number of actual empirical studies) educational use was given a moment of consideration. Remarkably shortsighted given that use of SDC's Core Campus as a campus would come with fewer vehicle miles travelled, allocations for affordable housing, to name but a few of the benefits, in part because students, staff, and educators could be offered housing within the campus. Please see the attached letter sent to the Sonoma County Board of Supervisors on November 21, 2021 as it offers a deeply researched look at just such a use.

C182-2

Further, the Draft EIR ignores the county's dire need for affordable housing, calling instead for allocating 90% of the 1,000 proposed new houses as market rate homes. This in defiance of **The Final Regional Housing Needs Allocation (RHNA) Plan**, adopted in December 2021 which determined that Sonoma County's fair share of regional housing would be 3,881 units, with 1,632 allocated as housing affordable to very low- and low-income

households. That would be about half the homes to be built, not 10% as this draft EIR calls for! Just a disgraceful display of the preference throughout the draft for meeting the needs of the wealthy over the rest of us.

C182-2

> "SDC Core Campus: Consists primarily of residential buildings, with medical, educational, recreational, and administrative buildings interspersed. A cluster of utility and support buildings, and fire station sit at the western edge of the Core Campus. On the eastern portion of the site, historic agriculture uses…"
>
> Government Code Section 14670.10.5 (c) (4): The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be appropriate for the property shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that is deed restricted to provide housing for individuals with developmental disabilities.

To this end, we propose developing cottage clusters throughout the campus designed to meet specific needs such as supportive housing for individuals with disabilities, older adults, agricultural workers, and young families in need of starter homes. As an enriching environment affording access to the educational, recreational, social, health, and support resources, all on this technical college campus, all bringing full circle the many necessities of life - all without segregating this campus from the rest of Glen Ellen - what could be better?

C182-3

It is outrageous to propose 100 of the 1,000 housing units might be deemed affordable, especially when communities such as Glen Ellen have been ravaged for Tourist Occupancy Taxes since Sonoma County's Vacation Rental Ordinance went into effect more than a decade ago. One hundred units doesn't begin to make up for the hundreds of homes converted into commercial tourist traps over these years. We need to actually, truly, add to our housing stock. By "add to" we mean in addition to recovering, by some means, those dwelling units sacrificed for profit, private and public. The proposed housing outline comes nowhere near to meeting the documented need for affordable housing in Sonoma County.

Although state housing element law is cited in Chapter 3.1.2: Population and Housing, we believe that, beyond this scant mention, it ignores state law and the Sonoma County Housing Element. Certainly, it does not begin to touch on the county's requirement to provide for its burgeoning homeless population, a significant aging population unable to live on its paltry retirement income, or an agricultural community ignored in this process - as usual.

Our second point also concerns process. While the people of Sonoma County, of the State of California have been encouraged to participate in a planning process sold to us as public, above board, and time constrained, we have just learned of another process (see attached 9/23/22 Index-Tribune article). This one private, ongoing, underhanded, free of transparency, a play for SDC by a real estate developer and his business partner - both with lengthy histories of questionable business ethics. This time, having sufficiently inserted themselves into the state system, carrying satchels of cash, of many millions of tax dollars, all offered to Sonoma County in exchange for a deal requiring NO Environmental Impact Report and benefitting only the few, the wealthiest schemers.

C182-4

> "Public records reveal that two Sonoma County businessmen — Darius Anderson and Doug Bosco — played central roles in the backdoor negotiations for the easement sales" in a sham process meant to deflect the public's attention away from the dealmaking between a little-known state agency headed by the same man working to bring coal through Sonoma County on the Sonoma-Marin Area Rail Transit district — SMART line (see two attached 2021 Bohemian articles)

Former congressman Doug Bosco is the CEO of the private freight company Northwestern Pacific Railroad Company (NWP Co.). Along with his business partner, real estate developer (e.g., Treasure Island: Radioactive debris) and owner of the powerful Platinum Advisors political consulting firm, Darius Anderson, they leveraged their influence to lobby state and federal lawmakers for the right to transport coal, among other commodities on the SMART rail line. Although most of their plans failed to pan out, through a series of complex loans and contracts (according to The Bohemian's 2021 report), a publicly chartered rail agency, North Coast Railroad Authority (NCRA), now owes NWP Co. millions of dollars. And today they continue running freight on the SMART rails.

It should be noted that Anderson and Bosco are founding members of Sonoma Media Investments, which owns most of the print media in Sonoma County including the Press Democrat, Sonoma Index-Tribune, Sonoma County Gazette, Petaluma Argus-Courier, North Bay Business Journal, Sonoma Magazine, and La Prensa.

C182-6

So it's business as usual as the high rollers operate behind the scenes, leveraging millions of tax dollars in a play for possession of a community resource. Doug Bosco believes he and he alone can secure SDC, work around the usual requirements for an EIR, and buy off Sonoma County to create his next dream project.

When Supervisor Gorin spoke at last week's (September 21) meeting of the North Sonoma Valley Municipal Advisory Council, there was no mention of the Bosco/Ocean Conservancy deal. Nor did County Planner Oh indicate that he was negotiating a deal with Doug Bosco when he addressed the Sonoma County Planning Commission at its September 15 meeting.

The public is entitled to an explanation - NOW! This planning process must be halted until those who will pay (in oh so many ways) are fully informed of the facts.

And now, one final point that cannot be ignored: The Sonoma Developmental Center, Eldridge, the neighborhoods south of SDC - WE ARE ONE! We are Glen Ellen. We will not stand for further planning hellbent on separating our neighborhoods by this or any other planning process!

With earnest sincerity,

RE: Public Comment on SDC Specific Plan and DEIR

Dear Mr. Oh:

We are writing today following our review of the draft environmental impact report pertaining to the Sonoma Developmental Center's (SDC) future.

C182-1

As most following this planning process, including Sonoma County Planning Commissioner Greg Carr, have stated (repeatedly, loudly, emphatically) – we find that this report fails, either in part or in total, to account for several environmental impacts essential to any meaningful understanding of the ways in which the public's safety, true protections for the natural environment, and the many human needs are to be addressed. And so, with but a few scant weeks to pour through a 789 page report that bases its assessments, conclusions, and recommendations on the previous "Plan" - and so is itself deeply flawed and grossly inadequate, we will once more *howl into the void*.

Others with more advanced professional qualifications have pinpointed the flaws in those sections of the report pertaining to the natural environment, historic preservation, public safety, and traffic. We will restrict our comments to concerns for the future housing uses of SDC's Core Campus - and to a planning process that appears to have now gone off the rails – disappearing into the abyss of railroaded transparency!

The first of our issues concerns the so-called "SDC Specific Plan" and the "reasonable range of alternatives to the Proposed Plan" - as required by CEQA in an EIR. Is it just us? We find that the community's input is nowhere to be seen in either of these deeply deficient reports.

To illustrate, we and others have proposed, as one reasonable alternative, using SDC's built footprint, referred to elsewhere as its "historical 180-acre built area," as a campus for those seeking training in the trades, in the applied sciences, public service occupations, and other professions of financial and social benefit to the students, their families, and the entire state.

We see no evidence that this invaluable, desperately needed (see any number of actual empirical studies) educational use was given a moment of consideration. Remarkably shortsighted given that use of SDC's Core Campus as a campus would come with fewer vehicle miles travelled, allocations for affordable housing, to name but a few of the benefits, in part because students, staff, and educators could be offered housing within the campus. Please see the attached letter sent to the Sonoma County Board of Supervisors on November 21, 2021 as it offers a deeply researched look at just such a use.

C182-2

Further, the Draft EIR ignores the county's dire need for affordable housing, calling instead for allocating 90% of the 1,000 proposed new houses as market rate homes. This in defiance of **The Final Regional Housing Needs Allocation (RHNA) Plan**, adopted in December 2021 which determined that Sonoma County's fair share of regional housing would be 3,881 units, with 1,632 allocated as housing affordable to very low- and low-income

households. That would be about half the homes to be built, not 10% as this draft EIR calls for! Just a disgraceful display of the preference throughout the draft for meeting the needs of the wealthy over the rest of us.

C182-2

> "SDC Core Campus: Consists primarily of residential buildings, with medical, educational, recreational, and administrative buildings interspersed. A cluster of utility and support buildings, and fire station sit at the western edge of the Core Campus. On the eastern portion of the site, historic agriculture uses…"
>
> Government Code Section 14670.10.5 (c) (4): The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be appropriate for the property shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that is deed restricted to provide housing for individuals with developmental disabilities.

To this end, we propose developing cottage clusters throughout the campus designed to meet specific needs such as supportive housing for individuals with disabilities, older adults, agricultural workers, and young families in need of starter homes. As an enriching environment affording access to the educational, recreational, social, health, and support resources, all on this technical college campus, all bringing full circle the many necessities of life - all without segregating this campus from the rest of Glen Ellen - what could be better?

C182-3

It is outrageous to propose 100 of the 1,000 housing units might be deemed affordable, especially when communities such as Glen Ellen have been ravaged for Tourist Occupancy Taxes since Sonoma County's Vacation Rental Ordinance went into effect more than a decade ago. One hundred units doesn't begin to make up for the hundreds of homes converted into commercial tourist traps over these years. We need to actually, truly, add to our housing stock. By "add to" we mean in addition to recovering, by some means, those dwelling units sacrificed for profit, private and public. The proposed housing outline comes nowhere near to meeting the documented need for affordable housing in Sonoma County.

Although state housing element law is cited in Chapter 3.1.2: Population and Housing, we believe that, beyond this scant mention, it ignores state law and the Sonoma County Housing Element. Certainly, it does not begin to touch on the county's requirement to provide for its burgeoning homeless population, a significant aging population unable to live on its paltry retirement income, or an agricultural community ignored in this process - as usual.

Our second point also concerns process. While the people of Sonoma County, of the State of California have been encouraged to participate in a planning process sold to us as public, above board, and time constrained, we have just learned of another process (see attached 9/23/22 Index-Tribune article). This one private, ongoing, underhanded, free of transparency, a play for SDC by a real estate developer and his business partner - both with lengthy histories of questionable business ethics. This time, having sufficiently inserted themselves into the state system, carrying satchels of cash, of many millions of tax dollars, all offered to Sonoma County in exchange for a deal requiring NO Environmental Impact Report and benefitting only the few, the wealthiest schemers.

C182-4

> "Public records reveal that two Sonoma County businessmen — Darius Anderson and Doug Bosco — played central roles in the backdoor negotiations for the easement sales" in a sham process meant to deflect the public's attention away from the dealmaking between a little-known state agency headed by the same man working to bring coal through Sonoma County on the Sonoma-Marin Area Rail Transit district — SMART line (see two attached 2021 Bohemian articles)

Former congressman Doug Bosco is the CEO of the private freight company Northwestern Pacific Railroad Company (NWP Co.). Along with his business partner, real estate developer (e.g., Treasure Island: Radioactive debris) and owner of the powerful Platinum Advisors political consulting firm, Darius Anderson, they leveraged their influence to lobby state and federal lawmakers for the right to transport coal, among other commodities on the SMART rail line. Although most of their plans failed to pan out, through a series of complex loans and contracts (according to The Bohemian's 2021 report), a publicly chartered rail agency, North Coast Railroad Authority (NCRA), now owes NWP Co. millions of dollars. And today they continue running freight on the SMART rails.

It should be noted that Anderson and Bosco are founding members of Sonoma Media Investments, which owns most of the print media in Sonoma County including the Press Democrat, Sonoma Index-Tribune, Sonoma County Gazette, Petaluma Argus-Courier, North Bay Business Journal, Sonoma Magazine, and La Prensa.

C182-6

So it's business as usual as the high rollers operate behind the scenes, leveraging millions of tax dollars in a play for possession of a community resource. Doug Bosco believes he and he alone can secure SDC, work around the usual requirements for an EIR, and buy off Sonoma County to create his next dream project.

When Supervisor Gorin spoke at last week's (September 21) meeting of the North Sonoma Valley Municipal Advisory Council, there was no mention of the Bosco/Ocean Conservancy deal. Nor did County Planner Oh indicate that he was negotiating a deal with Doug Bosco when he addressed the Sonoma County Planning Commission at its September 15 meeting.

The public is entitled to an explanation - NOW! This planning process must be halted until those who will pay (in oh so many ways) are fully informed of the facts.

And now, one final point that cannot be ignored: The Sonoma Developmental Center, Eldridge, the neighborhoods south of SDC - WE ARE ONE! We are Glen Ellen. We will not stand for further planning hellbent on separating our neighborhoods by this or any other planning process!

With earnest sincerity,

The California Coastal Conservancy on Thursday approved a $250,000 grant to explore an addition to the Sonoma Developmental Center redevelopment project that would invest in climate research and rehabilitation.

Doug Bosco, chairperson of the conservancy's board, said it represented a "major change" to the project's current $100 million redevelopment project, which is to sell the 945-acre property to a real estate developer and build up to 1,000 homes, potentially with a hotel and retail spaces.

"It's a beautiful campus, it should be used for something that really enriches people," Bosco said.

The grant directs the county's planning department to develop a plan for adding a climate center to the project and establish financial partnerships that would help pay for it.

"Although real estate developers have proposed typical uses for the campus, the county would like to explore the possibility of dedicating a portion of the site to producing and demonstrating practical solutions for climate change adaptation," according to the staff report on the grant.

The funding comes as part of a $500 million appropriation from the state legislature for the Coastal Conservancy to invest in resiliency projects in 2022-23 and 2023-24.

The proposed climate center would diversify the economy of the Sonoma Valley — which significantly employs low-paying hospitality and agriculture jobs — and bring in "innovators, inventors and investors" to be the "economic engine of the center," according to the report.

“It would run the gamut” on climate innovation, Bosco said, who served as a member of the U.S. House of Representatives between 1982 and 1990. Bosco has been chair of the state’s Coastal Conservancy for 17 years and an environmental advocate since the 1970s.

“Anyone that thinks that the world of climate change adaptation is going to be a poverty stricken world is wrong,” Bosco said. “Smart people and smart investors are getting into it fast. What we would like to do is have a place where there's synergy among people similar like to what happened with Silicon Valley.”

While other climate centers exist throughout the state, many focus research on a single topic, like agriculture or electric vehicles, Bosco said. The proposed climate center at the developmental center would be unique in seeking innovative solutions for a wider variety of issues related to climate change.

“It’s the future. There’s no two ways about,” Bosco said. “No one knows climate change like Sonoma County.”

The draft environmental impact report for developmental center is to be finalized Sept. 23, with the final report to be released Oct. 17. The redevelopment plan is scheduled to go before the Sonoma County Board of Supervisors by the end of the year.

RE: Sonoma Developmental Center: Best Use Planning Means Enrichment Planning For A Sustainable Future For All!

Dear Supervisors, Staff, and Consultants:

We have been asked to select from the three options laid out in the SDC Alternatives Report released just a few weeks ago (November 1, 2021). Each offering little realistically plausible beyond an audacious open door for upscale developers to bring in projects bound to fail if past is prologue (i.e., Rohnert Park's Sonoma Mountain Village]aka Hewlett-Packard] and Petaluma's telecom boom (and bust). Beyond some open space promises (with little detail), the rest in no way addresses the very real and urgent needs of Sonoma County residents. C183-1

More tourist-serving accommodations? This valley has been decimated by the county's cash-cow (Transient Occupancy Tax), converting units built for, zoned for, subsidized for, intended for - residents to live in - now operating as disruptive commercial enterprises in residential neighborhoods. The costs to our communities are innumerable. It is clear we have been sold out by our civic leaders. Any further moves toward "tourist-trapping" our community will not go down well. Forget the hotel! Give us back our housing stock!

Industrial parks? For which segment of our undereducated population? According to The Sonoma County Workforce Investment Board's draft Local Workforce Development Plan 2021 – 2024:

> Over the next five years, the following are the top five occupations that will be in-demand for Sonoma County:
> 1. Office and Administrative Support
> 2. Sales
> 3. Food Preparation and Serving
> 4. Transportations and Material Moving
> 5. Management

C183-2

Unless Sonoma County changes course, opting for a more enriching, visionary future, these will be the jobs of tomorrow. I see no reason to settle, to offer so little to our children, to our community. My vision is one calling for opportunity, advancement, growth, fulfillment in work and play.

The people of Sonoma County have been told there must be a plan covering how anything we ask for will be paid for. Curiously, I see no such level of detail in this consultant's report. Why the dichotomy? Maybe it's time to get real, to try a bit more transparency, to actually explore feasible options that will bring to the county what residents so urgently need, with top of the list being decent affordable housing for agricultural workers, students, developmentally disabled, the unhoused, and others most sorely in need. This housing might well be thought of as that needed to replace the hundreds of homes lost to the vacation rental industry as well as to the fires of 2017 - 2020.

C183-3

Sonoma County may not have fulfilled its promise of a community-driven process, but the people of Glen Ellen and beyond are stepping up on their own. For my part, I am pushing past what some say is the line of possible to envision the day students live, learn, and work on SDC's campus. Imagine SDC as a place flourishing with innovation, preserving history, expanding its role to enrich the surrounding community with lifelong learning opportunities, special needs housing and education, visiting professor lecture series, and all while graduating people prepared with the skills essential for fulfilling, well-paying careers, ably set to meet and exceed the demands of today and the future.

I am in full agreement with the thoughts and recommendations sent to you by the Sonoma Land Trust concerning the need to preserve the wildlife corridor. Therefore, the remainder of my comments will pertain to the built portion of the campus.

C183-4

To start, I have to say that the prospect of jamming together thousands of homes in the southern end of SDC is appalling. How does such a banal idea enrich the quality of life for Sonoma County residents? As a housing advocate clocking in more than 30 years, I endorse incorporating housing into SDC's future, especially special needs housing. To do so well will require far more thought than we see here. Questions remain as to how many homes can safely be added to the this part of the valley, how the units would be protected from further loss to Sonoma County's Vacation Rental Conversion Program or to any other misuse. As well, I need to see much more detail regarding the intended population.

As others have said (and I concur), "The alternatives do not provide for adequate emergency egress in the event of wildfire, are not compatible with the rural character of the surrounding communities within the Sonoma Valley, and do not realistically address impacts on infrastructure, such as water recharge, inadequate roadways, sewage system capacity, etc."

Too often Sonoma County officials have ignored what is needed for what is easiest, furthering the human toll. I've seen it all. The matter of public safety became alarmingly clear as a planning oversight when we learned, through the series of meetings held within a single week earlier this month (11/13/21, 11/16/21, 11/17/21), that the consultants did not meet with CalTrans when developing their traffic outline, yet calculated traffic flow by comparing apples and oranges.

C183-5

Able-bodied drivers (2,000-4,000 new local residents, those traveling into Glen Ellen for work, tourists, and others are likely not comparable to developmentally disabled people who have never driven. Their traffic pattern predictions would be laughable if they weren't also potentially deadly (as we have seen when residents attempting to escape the Paradise fire and who were incinerated while desperately fighting to escape the flames).

A related shock, we also learned the consultants never met with local fire agencies. Simply appalling comes nowhere close to my outrage that Sonoma County is, once more, cashing in at the expense, at an ultimate cost of the very lives of the people who live and work here.

Yes, the pressures for change have arrived. Sonoma County's needs are:

- Development (commercial: housing imbalance) - We need to plan for a rebalancing;
- Poverty escalation due to promotion of industrial sectors paying less than living wages (hospitality, tourism, and agriculture) must be addressed by accepting nothing less than **living wage jobs**. We need to prepare our young people for a brighter future;
- Economic collapse following the housing bust;
- Brain drain: SDS closure, the relocation of well-paying industries (telecommunications, Hewlett-Packard, etc.;
- An insatiable hunger for revenue derived from new sources such as recreational drug production and sales, vacation rental conversion of thousands of Sonoma County homes;
- A growing homeless population;
- Escalating real estate prices - pricing most local residents out of the market;
- Housing codes prejudicing construction of large homes over more modest sized units;
- The impact of a collapsing infrastructure (fires, contaminated drinking water, unkept electrical systems);
- The decline of our professional and degreed populace;
- Climate change;
- Questionable practices at the county level (planning, code enforcement, zoning, emergency services);
- Student housing shortage: Santa Rosa Junior College opted to use bond revenue for the construction of an elaborate parking structure instead of desperately needed student housing - resulting in thousands of students now sleeping in their cars (some in that very parking structure [PD article about JC students living in their cars]);
- Low to middle income and special needs housing loss due to VACATION RENTAL industry & lack of building;
- Shortage of skilled tradespersons: Sonoma County lacks cutting-edge jobs training for a sorely-needed workforce - one able to meet national trades workforce shortage.

C183-6

What is the best possible use for SDC as one answer to the issues listed above? Let's start with the dilapidated SDC structures. Their condition is undoubtedly the result of the state's neglect. Therefore, it is incumbent upon Sonoma County to insist that the state acknowledge it is theirs to repair.

C183-7

Not only must the restoration be paid for by the state, we have recently learned that California has a revenue surplus to cover those costs. And those resources have attached to them some stringent guidelines as to how the reported surplus can be spent. Lucky for us infrastructure and colleges are among the options:

> "California is — once again — overflowing with money, and will likely have a $31 billion budget surplus next year, according to a Wednesday report from the independent Legislative Analyst's Office. And because the state is forbidden from spending more tax dollars per Californian than it did in 1978, once adjusted for inflation, it only has a few options for handling most of the cash windfall: slashing taxes; issuing tax rebates; funneling it to schools and community colleges; or earmarking it for certain purposes, such as infrastructure." (Hoeven, 11/18/21)

As indicated above, Sonoma County's workforce predictions are not encouraging. They mirror a sad national trend wherein opting out of college are also coming up short on the skills needed to succeed in the workplace:

C183-8

Two-thirds of Americans over 25 don't have a bachelor's degree or higher. A Harvard study uncovers inconsistent efforts to give these workers skills for economic mobility and calls for improving the problem.

C183-8

Academic work on training programs has been somewhat static, says Rachel Lipson, director of the Harvard Project on Workforce. A paper from 30 years ago might not look much different from one published today. "There's been a lot of attention on K-12 quality and college access and completion, but a lot less on the types of educational and training pathways that sit in between high school and four-year college," she says.

These pathways are critical to the future of economic mobility, and the Project on Workforce hopes to raise the research community's interest in them. "The plurality of the U.S. labor force does not have a four-year college degree," says Lipson. "We can't throw up our hands and say four-year colleges are the only answer." (Smith, 2021)

~~~~~~~~~~~~~~~~~~~

Answers:

C183-9

Having outlined the need and some substantial financial avenues, I will now outline how to put SDC to work for the betterment of the people of Sonoma County. Instead of continuing to produce cooks and tourism graduates, we need to give our kids a better future, one promising living wage opportunities, not a serf's subsistence; one grounded in an understanding of California's history as essential to knowing how best to go forward!

Some Educational & Housing Models As Best Fits For The SDC Campus:

- High Tech "Trade Tech College" -
- Satellite Junior College Campus: Vocational Tech!
- Berea College: I have learned that Berea is interested in expanding to develop this unique college model in every state: Every student attends tuition-free! Every student works on campus, putting to work the lessons learned in the classroom. Majors include education, agriculture, the trades, the arts, and much more.
- The University of Oregon, Phil and Penny Knight Campus for Accelerating Scientific Impact: a 160,000-square-foot campus built to accelerate groundbreaking scientific discovery and development in a collaborative multidisciplinary environment <https://inhabitat.com/leed-gold-targeted-knight-campus-advances-scientific-innovation/>
- Career Technical Education, (Sonoma County) also referred to as CTE, is a multi-year sequence of courses that integrates core academic knowledge with technical and occupational knowledge to provide students with a pathway to post-secondary education and careers. CTE programs deliver an enriched educational experience that promotes student interest and academic success while developing technical and career readiness skills necessary for the workplace of the future. Graduates of today's rigorous and relevant CTE programs are better prepared for high-wage, high-skill and high demand careers.
- "State-supported technical college" - Clark Howard 9/13/18 show
- "Upskilling For Today & Tomorrow" - The Hill Event: Streamed Live 9/22/21 <https://youtu.be/ph9f1Z_P45c>
~~~~~~~~~~~~~~~~~~~

I would add that it is entirely feasible within these models to:

- Incorporate an affordable housing component, including special needs housing, into the campus plan;
- Offer on-site housing for students, staff, faculty which will reduce traffic impacts and provide additional incentives to prospective applicants;
- Training/Educational offerings might include an emphasis on high tech (environmental sciences, construction trades - including 3-D printing for housing production, modern firefighting and law enforcement courses, certificate programs in mental health, special education, & so much more);
- Traditional Trades (Carpenter, electrician, plumber, telecommunications engineer, auto mechanics, fire fighting, law enforcement - emphasizing community policing!, ecological land/resource management, nursery management [plant propagation, marketing, shipping], etc.), w/emphasis on high tech tools;
- LEED Certification program;
- Environmental Sciences: building in internships around campus grounds care (maintenance, repairs, upgrades, etc.) - Forestry, Firefighting technology, Alternative Energy Program;
- Sustainable Farming Program;
- Indigenous People's Program: History & Culture;
- Health/Medical: Psych techs, med techs;
- Arts & Crafts Program (including student work program, sale to the public of hand-made goods);
- Retail Management: (w/training to include time spent running on-campus market);
- Day school for students with developmental disabilities (plug in tech students for "on-the-job" psych tech training aspect);
- Carve-outs for Crisis Management Clinic for Developmentally Disabled in need of care beyond that available in their community settings;
- Permanent Supportive Housing: See as a model Sweetwater Spectrum, Fifth Street West, Sonoma - a "mini-community" for autistic adults (Kory Stradinger, Executive Director);
- Community Center & History Museum: Oversight of cemetery, Sports/Playing Fields, Historic Preservation (Cemetery, buildings, overall site);
- Emphasis on: Economic and Racial Diversity.

The COVID-19 pandemic crushed SMART's ridership numbers and cast further doubt on the passenger train's long-term viability. Photos by Chelsea Kurnick

Railroaded: Behind the Scenes of SMART's Freight Takeover

By Will Carruthers

A Story in Two Parts. Read the second story here.

Nov 3, 2021

On the muddy banks of the Petaluma River in downtown Petaluma, a new housing complex is rising. Crews employed by the A.G. Spanos

Corporation, a Stockton-based developer, are constructing a 184-unit apartment complex on a lot sandwiched between a row of historic businesses and the tidal slough.

Before laying out the concrete foundations, the crews ripped out a few hundred feet of railroad tracks that crossed the lot. The old rails were part of a spur located less than a mile off the century-old main line running between Sausalito and Eureka. Planning and construction could not commence until Spanos controlled the legal "rights of way" on the tracks.

Rights of way are contractual easements that allow their owners to travel across another's property. In this case, the easements on the riverfront tracks had value because the developer needed to extinguish them in order to build. That fact cost Spanos millions of dollars.

Public records reveal that lengthy negotiations between the Spanos corporation and two state-created rail transportation agencies for ownership of the rights of way preceded breaking ground for the construction project. One right of way was owned by a passenger line, Sonoma-Marin Area Rail Transit district — SMART. A second right of

way was owned by a state-owned freight line, North Coast Railroad Authority (NCRA). Both railway agencies saw the sale of the easements as potential cash cows.

In April 2017, Spanos reached an agreement with the two agencies, shelling out $2.4 million for the right to remove the track. But that is not the end of the story. Millions of taxpayer dollars have been deployed to bail out and close down the NCRA, which leases the right to use its rails to a private company called Northwestern Pacific Railroad Company, or NWP Co.

Public records reveal that two Sonoma County businessmen — Darius Anderson and Doug Bosco — played central roles in the backdoor negotiations for the easement sales.

Who are they and why does this story matter?

Darius Anderson is a real estate developer who owns Platinum Advisors, a powerful California lobbying and political consulting firm. He also owns the *Press Democrat*.

Records show that during the negotiations over the railway easement sales price, Anderson apparently leveraged Platinum Advisor's position

as a SMART lobbyist to, in effect, benefit the aforementioned Northwestern Pacific Railroad Company or NWP Co, which is controlled by another *Press Democrat* owner, former congressman Doug Bosco.

Records obtained by the *North Bay Bohemian* and *Pacific Sun* using the California Public Records Act reveal that SMART director Farhad Mansourian allowed Anderson to guide SMART's participation in the Petaluma right of way deal, even though that task was outside of the scope of Platinum Advisor's state lobbying contract with SMART. Mansourian also asked Anderson to lobby federal lawmakers, another task outside the scope of Platinum's original contract.

During his five years representing SMART, Anderson's firm lobbied for state and federal legislation involving the fate of Bosco's private freight company. SMART paid Platinum Advisors $600,000 before the contract ended in February 2020.

In order to grasp why the lobbying contract and the railway right of way deals stink of conflicts of interest, we must take a step back into the recent history of rail freighting in the North Bay, a

domain which Bosco and his allies have overseen for at least 15 years, with financial consequences that are not in the public's best interests.

How It All Began

Our story starts with the gradual demise of a once-lucrative railroad line stretching about 300 miles from Sausalito to Humboldt Bay that chugged into existence in 1914.

At first, sections of the Northwestern Pacific Railroad were operated by a potpourri of privately owned companies that profitably hauled lumber and other commodities up and down the North Coast, while also operating passenger trains.

California Department of Transportation

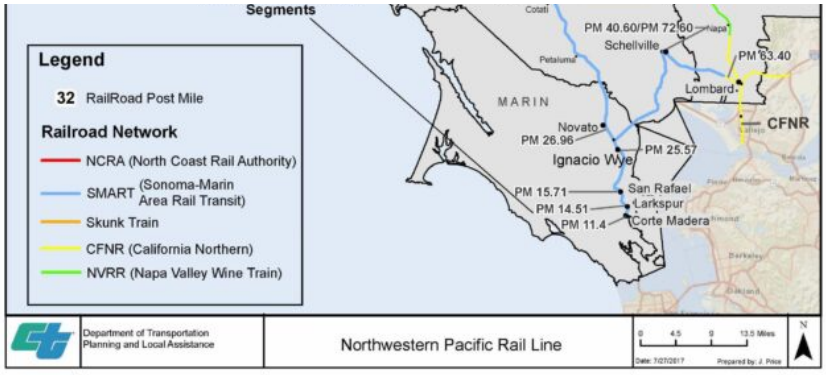

Figure 4. Map of Northwestern Pacific Railroad - Southern Section

However, the rail line's profitability was ultimately doomed by the decline of the North Coast's resource extraction industries, a catastrophic tunnel fire in 1978, and an endless series of floods. In the 1980s, storm-induced landslides destroyed the mid-section of the line, running through the Eel River Canyon. Increasingly, the railway appeared to have no future.

Trying to preserve the viability of the defunct rail line for freighting, state lawmakers created the North Coast Railroad Authority in 1989. Over the next two decades, state and federal agencies spent $124 million purchasing the railroad from various private companies and funding the NCRA's efforts to restore sections of the decaying track for use by freight trains. But the hoped-for regeneration of the historic railroad was stymied by the failure of the California government to consistently fund the substantial costs of restoring the entire rail

line and the NCRA's ongoing operating costs.

Enter Bosco

In June 2006, a group of businessmen formed the privately owned Northwestern Pacific Railroad Company or NWP Co. The venture was designed to rejuvenate the freight line by creating a "public-private partnership" with the flailing NCRA to reopen the entire line. In short, NCRA and NWP Co would collaborate to improve and maintain the rail infrastructure using public and private funds. NWP Co would privately lease the right to operate freight trains from the NCRA and (somehow) make money.

Among NWP Co's founders was Doug Bosco, a former state assemblyman and congressman who had worked on transportation issues at the state and federal levels during his time in office.

According to the NWP Co business plan submitted to the California Transportation Commission in October 2006, Bosco and his partners had grand plans. The document outlined multiple business prospects which NWP Co claimed would allow the company to generate annual revenues of more than $3 million within a few short years.

First, on the southern end of the line, NWP Co projected annual revenues of about $1.1 million hauling lumber and agricultural products. The company estimated revenues of about $2 million transporting garbage from Sonoma County's landfill to a solid waste dump in Nevada, with which it claimed to have an "exclusive right to negotiate" for 200 years.

If reopened, the northern end of the line would be even more lucrative, NWP Co claimed. The company asserted that it would partner with Evergreen Natural Resources to transport rail cars packed with gravel from the Island Mountain Quarry at the border of Mendocino and Trinity counties. Once the decaying rail lines to the quarry were reopened, the gravel shipping business could generate revenues of "at least $30 million per year," the business plan stated.

As the general counsel for NWP Co, Bosco would "assist in the interface between NWP Co. and NCRA and various funding agencies in order to ensure ... that the public agencies' reimbursement funding flows smoothly to NCRA," according to the NWP Co business plan. Public records show that Bosco now also serves as CEO of NWP Co.

If the company's Island Mountain plans had panned out, NWP Co — and the NCRA in turn — would have gained a rich stream of income. At the time, the NCRA estimated the capital cost of rehabilitating 300 miles of rails was $150.6 million — $42.6 million for the portion south of the Russian River, and $108 million for the northern Eel River Division, according to NWP Co's plan. A *Los Angeles Times* report in 2001 was less optimistic, citing a federal study which calculated the cost of reopening the entire line for freight and passenger rail at $642 million.

The NCRA-NWP Co main lease agreement was signed in September 2006. In 2011, the NCRA and NWP Co started running freight cars along 62 miles of refurbished track in the North Bay. But, according to a recent report by SMART, the

freight revenue appears to be lower than the amounts originally projected by NWP Co. Nor did Bosco's company secure a contract to ship Sonoma County's waste to Nevada. And the Island Mountain quarry project, and other shipping opportunities potentially served by rejuvenation of the northern two-thirds of the line, never materialized.

To make up for the shortfall between revenues and capital, legal and operating costs, the NCRA entered into a complex series of loans and contracts with NWP Co, which somehow resulted in the publicly chartered rail agency owing millions of dollars to the privately owned NWP Co.

"AN IMPARTIAL OUTSIDE OBSERVER ... COULD CONCLUDE THAT ... THE PUBLIC IS NOT CURRENTLY GETTING — AND MAY NOT EVER GET — THE BENEFIT OF TENS OF MILLIONS OF TAX-PAYER DOLLARS USED IN THE LINE'S REHABILITATION."

Bernard Meyers

But a 2020 state assessment of the NCRA — in effect, an autopsy — examines how the public rail agency's intertwined relationship with the private NWP Co came to pass. Remember, the NCRA was theoretically created for the purpose of saving the publicly owned railroad, but it became, in effect,

forever indebted to Bosco's privately owned company, according to government reports and a former NCRA board member.

According to the report, prepared by a handful of state agencies, including the California State Transportation Authority and California Department of Finance, "When the Legislature created NCRA, it did not designate NCRA as a state or local agency and did not appropriate funding for its operations. Since its inception, NCRA has covered its expenses from rail revenues; state grant funding; public and private loans; loan forgiveness; proceeds from lease agreements; and leasing or sale of assets." (Since it never received much revenue from its lease agreement with NWP Co, NCRA's most valuable assets became the excess properties and rights of way it owned up and down the line, including the property rights on the Spanos lot bordering the Petaluma river — and we shall return to *that* story.)

For decades, California agencies have been wary of funding the NCRA due to its convoluted accounting practices, which are intertwined with the accounts of NWP Co. CalTrans and FEMA have long branded the NCRA a "high risk"

recipient of state and federal funds.

A Sweet Deal

Bernard Meyers, a former NCRA board member, says that the NCRA's long-running debts to NWP Co and its myriad financial problems can be directly traced to the problematic 2006 lease agreement with NWP Co.

Mitch Stogner has served as executive director of NCRA since 2003. Stogner worked as Bosco's chief of staff for 15 years, first in the California Assembly (1976-1982), and then in Congress (1983-1991).

Remarkably, the 2006 agreement states that NWP

Co is not required to pay rent on the tracks *until* the company has booked $5 million in net revenue in a single year — "net" meaning $5 million after taxes and other expenses. Because NWP Co has not met the $5 million threshold, it has paid very little to the NCRA for the use of the tracks.

Between 2006 and 2019, the NCRA "entered into 8 agreements, 7 amendments, and 1 informal financing arrangement with NWP Co. to fund NCRA's operations," according to the 2020 state assessment. The partially revealed paper trail delineates a strange relationship between the two, with NCRA acting as landlord and NWP Co acting as tenant. It's a relationship in which the tenant does not pay rent, because it does not net more than $5 million a year, but it has enough, somehow, to loan the landlord millions of dollars to cover rail maintenance and capital construction costs.

Without the investment of hundreds of millions of dollars, however, reaching the $5 million annual revenue benchmark was clearly a pipe dream.

Meyers represented Marin County on the board of the NCRA for six years. In 2013, he wrote a brutally accusatory and detailed exit memo to his

colleagues laying out a litany of complaints about the way the NCRA was run — and whom the oddly crafted agency seemed designed to benefit.

"An impartial outside observer coming afresh to the NCRA's books and the NWP lease could conclude that this organization is primarily run for the benefit of its lessee, NWP Co., that the public is not currently getting — and may not ever get — the benefit of tens of millions of tax-payer dollars used in the line's rehabilitation, and that public benefit was not a primarily intended consequence," Meyers wrote.

Four years later, in June 2017, the California Transportation Commission revisited the financial status of the NCRA after state staff noticed that a recent audit had raised "substantial doubt about NCRA's ability to continue as a going concern." Testifying to the Commission, Stogner did not deny the charge of insolvency. Instead, he leaned into it, commenting that such a concern "is a comment that our auditors have made for at least the last seven or eight years" due in part to the fact that the agency did not have a dedicated source of state funding. As a remedy, Stogner proposed that the state transfuse the moribund NCRA with cash plasma. Instead, in January 2018,

the commission signaled its support for the state legislature to shut the NCRA down, a process which has been dragging on and on.

In early 2018, State Senator Mike McGuire introduced legislation to transform much of the 300 mile long railroad right of way into a bike and pedestrian trail dubbed the Great Redwood Trail, running from Larkspur to Humboldt Bay.

This legislation requires the freight business on the southern end of the line, where its lessee, NWP Co, had been running freight since 2011, to be controlled by Sonoma-Marin Area Rail Transit district, SMART. The passenger rail agency was created by state legislation in 2002. It is funded by a combination of federal, state, and local tax dollars. When NWP Co started to run freight on the NCRA rail lines in 2011, it agreed to share the rails with SMART. In August 2017, SMART started to run passenger trains.

Enter Anderson

On Jan. 1, 2015, SMART hired Darius Anderson's Platinum Advisors to represent the transit agency's interests in Sacramento.

By choosing to hire Platinum Advisors, SMART's board of directors chose a firm with deeply intertwined business and political interests in the North Bay.

Anderson is a North Bay native who reportedly got his start in politics as a driver for Bosco in Washington D.C.

He went on to work for billionaire Ron Burkle's Yucaipa Investments. Burkle has partnered with Anderson in real estate ventures, such as developing Treasure Island in San Francisco Bay. In 1998, Anderson founded a Sacramento-based lobbying firm, Platinum Advisors. Public records from 2018 show that Burkle is Anderson's "partner" and that Burkle "owns ten percent or more" of the political consulting firm.

Notably, in 2017, San Francisco Superior Court found that Anderson and Doug Boxer, the son of former US. Senator Barbara Boxer, had defrauded the Federated Indians of the Graton Rancheria while working as consultants to the tribe's casino venture in the early 2000s. Anderson was ordered to pay $725,000 to the tribe to cover its legal fees and arbitration costs in the civil action. Defrauding the Graton Rancheria does not seem to have negatively affected Anderson's reputation amongst the political and corporate classes, however. Today, Platinum Advisors represents dozens of public and private clients from its offices in San Francisco, Sacramento and Washington D.C. Anderson enjoys insider access to many Democratic and Republican politicians, as he is a prolific campaign fundraiser.

In 2011, Anderson and Bosco joined forces as founding members of Sonoma Media Investments, which now owns most of the print media in Sonoma County, including the *Press Democrat*, *Sonoma Index-Tribune*, *Sonoma County Gazette*, *Petaluma Argus-Courier*, *North Bay Business Journal*, *Sonoma Magazine*, and *La Prensa*.

SMART's contract with Platinum Advisors includes a conflict of interest clause, requiring

Anderson to promise that he and his firm did not own — and would not develop — any "direct or indirect" financial holdings which conflict with their work for SMART.

The contract allowed SMART to ask Anderson and his employees to divulge their economic interests, but SMART spokesperson Matt Stevens said that SMART's outgoing director Farhad Mansourian, who directly oversaw Anderson's work, did not request such disclosures, and that SMART staff was "not aware of any financial conflicts of interests that would conflict in any way with Platinum Advisors performance regarding its services."

Darius Anderson did not respond to requests for comment.

Mansourian deployed Platinum Advisors to push for state funding and favorable legislation in Sacramento. And he often turned to Anderson and Platinum Advisors' transportation specialist Steven Wallauch to lobby state officials on legislation involving the NCRA and Bosco's NWP Co, according to emails obtained by the *Bohemian*/*Pacific Sun* through a public records request. On multiple occasions, Mansourian also

requested that Bosco himself contact the governor's office and federal lawmakers on behalf of SMART.

When McGuire introduced Senate Bill 1029 in 2018, it needed language to effectuate the closure of the NCRA's debts and business relationships with its contractors, chief among them Bosco's NWP Co.

Emails show that Bosco was involved in crafting the legislation.

On June 27, 2018, Mansourian emailed Anderson for an update on the legislation: "Did you talk to Doug?! ... Should we go and see Governor's chief of staff on SB 1029 ??"

Anderson responded the next day: "I did talk to Doug. Once they have language solidified, they will go to the Governor's office."

"What language? Who is working on that?" Mansourian asked.

"There is language being worked on to pay off the debts and liabilities. I am sure that Jason [Liles] will be sharing with us all before it moves forward. It's the same language that you are working on

with Jason," Anderson wrote. Jason Liles, the McGuire aide working on the legislation to close down the NCRA, is also a Bosco alumnus.

The last paragraph of McGuire's bill, as signed by Gov. Jerry Brown in September 2018, allocated $4 million in state funding to SMART "for the acquisition of freight rights and equipment from the Northwestern Pacific Railroad Company [NWP Co]." At a board meeting last May, SMART's directors agreed to purchase NWP Co's freight rights and equipment for $4 million, and to add freight services to its passenger rail offerings.

Liles did not respond to requests for comment. SMART's spokesman said the agency's staff does not know how the $4 million figure was reached. Bosco wrote "I do not recall where the $4m sales price came from," but called the price a "bargain" for the state. The 2020 state assessment of the NCRA, which was prepared and published after the $4 million figure was calculated, argues that SMART taking ownership of freight service in the North Bay will have some financial benefits over allowing a separate private freight company to purchase the freight rights from NWP Co.

In subsequent NCRA-related bills authored by

McGuire, the state set aside more millions of dollars to cover NCRA debts. On top of paying $4 million to NWP Co for freight rights and equipment, the state paid NWP Co $3.47 million to cover NCRA's interest-bearing debts to the company, according to Garin Casaleggio, a CalSTA representative.

That amounts to a $7.47 million cash payout to the NWP Co enterprise that had failed to deliver on the prospects it outlined in the 2006 business plan. It does not look like the freight rail business is going to do any better under SMART, however.

The move to take on the additional responsibility of running a freight line came at a trying time for SMART. On March 3, voters in Sonoma and Marin counties rejected Measure I, a ballot item intended to extend the sales tax supporting SMART from 2029 to 2059 — giving SMART a financial buffer for decades to come. Weeks after the failure at the ballot box, a global pandemic hit, crushing the agency's ridership numbers and casting further doubt on the passenger train's long-term viability.

Bosco, who appeared at a virtual SMART meeting in May 2020, wasn't much help in predicting the future. Asked about his company's current revenue, Bosco wouldn't give a specific answer.

"I don't want to disclose the exact numbers because that's our proprietary information. But I can tell you that we take in about $2 million in revenues a year," Bosco said.

Yet, despite having few details about how much money Bosco's freight company earned or spent, and lacking an assessment of how much it would cost SMART to take over the freight operation, 11 of SMART's 12 board members voted in favor of the paying off and taking over NWP Co's freight operations at the May 2020 meeting.

The supporters of the decision highlighted the fact that Senator McGuire and state officials had

endorsed the deal, and that McGuire promised to secure $10 million in state funding over the coming years to cover SMART's freight startup costs. Still, it remains unclear to this day how much it will cost SMART to cover day-to-day freight operations or how much revenue the business is expected to bring in.

Adding to the pressure, SMART staff told board members at the May 2020 meeting that the board had to make a decision by June 30 or risk losing the state money on the table.

Only one board member, then-San Rafael Mayor Gary Phillips, abstained from supporting the takeover, citing a lack of financial information.

"We've been told by Mr. Bosco, and I like Doug, that it's highly profitable or at least profitable. I don't have anything — I don't know if any of us have anything that would indicate that. And so we're going to take on this obligation with the unknowns that are present. I think that, quite frankly, would be quite foolish of the board," Phillips said during the meeting.

This February, SMART contracted with a Marin County consultant, Project Finance Advisory Limited, to study the feasibility of the freight

takeover plan the agency's board had approved nine months earlier. In early September, the consultant provided board members with an executive summary of the report. The full report is not complete, according to Stevens, the SMART spokesman.

The executive summary is revealing about NWP Co's business history, even though Bosco's company declined to disclose its operating costs to the consultant.

The document estimates that NWP Co's freight business brings in between $1.2 and $1.3 million per year by hauling agricultural products to four North Bay manufacturers, including Lagunitas Brewing Co. and Hunt & Behrens, Inc., and storing excess railroad equipment and liquid petroleum gas for Bay Area refineries. Although most people associate freight companies with transporting goods, the report estimates that nearly half of NWP Co's revenue comes from storing rail equipment and "LPG" filled tankers at a train yard near Schellville.

The report cannot estimate how much it costs NWP Co — and by extension will cost SMART — to offer freight services because "detailed,

itemized financial records for NWPCo. were not provided" to SMART.

The report posits that running freight cars can offer a "comfortable profit margin," but it's not clear how many, if any, North Bay companies are interested in switching from conventional trucking to rail freight.

Since the actual freight operating costs are unknown, outsourcing operation of the freighting back to NWP Co or another contractor could run up a deficit for SMART, which is having enough trouble trying to provide adequate passenger services.

While SMART studies the North Bay's freight market, NWP Co has continued to serve its customers without paying SMART.

In his written response to the *Bohemian*/*Pacific Sun's* questions, Bosco said that "The NWP/NCRA lease has not yet been transferred to SMART nor has NWP relinquished its operating rights. Accordingly, NWP is not paying rent to SMART." Stevens, the SMART spokesman, confirmed that NWP Co continues to run freight under its lease agreement with the NCRA while SMART and NWP Co negotiate an interim agreement.

Next week, the *Bohemian*/*Pacific Sun* will report on the secret negotiations over the price of the rights of way in Petaluma that took place between Bosco, Anderson, the Spanos Corporation, and SMART.

Peter Byrne contributed to this report and edited it.

Subject: Q. on noise and light pollution for Draft EIR for SDC
Date: Monday, September 26, 2022 4:55:29 PM

EXTERNAL

Hello,

In reading about noise on page 323 in the DRAFT EIR, I am curious what mitigations planned to keep noise down in the future development that harm the wildlife?
Our society is noisier and higher volume with humans pushing the limits on modified mufflers, house parties, and electronic music. We know these excessive noise levels affect humans in negative ways, and also stresses our native wildlife. What will be done to limit the stress due to noise on the critical habitats surrounding SDC, including the wildlife corridor?

C184-1

I have another Q. This time about light pollution. Our nocturnal species need dark skies to feed, procreate and navigate at night. What is the plan to limit lighting at the new development with special consideration to native wildlife?

What will be the plan to educate future residents of the area on living in harmony with wildlife, esp. with respect to the above subject areas?

Thank you for your work,
Elizabeth Brand

Subject: SDC Environmental Report
Date: Monday, September 26, 2022 4:11:43 PM

EXTERNAL

Dear Mr. Oh:

I do not feel that the environmental report considered the wildlife corridor sufficiently. The stated goals of the project are at odds with the environmental report. There did not appear to be cognizance of current migratory pathways — where the animals are now using the land — and how that would be considered in such a dense residential project.

C185-1

The other issue that was not addressed is water. What aquifer does SDC draw from. What is the current state of that aquifer in terms of capacity, depth and anticipated longevity. With water being a state-wide concern, more consideration needs to be given to this issue. Long-term residents are suffering now and the Environmental Report short-shifted this critical issue.

Obviously the number of proposed dwellings is out of scale with the size and character of Glen Ellen but perhaps that is beyond the scope of the Environmental Report. Hiring a San Francisco firm to assess such a fragile and rural landscape was a problem in itself. Their ideas of "walkable village environment" — very hip and very urban in its concept is ridiculous in the isolated setting of the SDC.

Anyway, thank you for letting us comment and let's hope someone listens.

From: Deb Votek
To: Brian Oh
Subject: Questions and comments regarding Draft Environmental Impact Report
Date: Monday, September 26, 2022 3:29:56 PM

EXTERNAL

Dear Mr, Oh,

We have been residents in Glen Ellen for 38 years recording rainfall. The rainfall average at our home on Sonoma Mountain Road is 45 inches. Last year we recorded 14.5 inches with the average steadily getting lower over the years. There are many cases of neighbors' residential well water levels also getting lower over the years. Where is the evidence that the development of the scale proposed for SDC will not further impact water availability for those of us who do not have municipal water available to them?
The DEIR is inadequate while the so-called self-mitigated Specific Plan contains many general policies, goals and conditions of approval to address environmental impacts, the DEIR does not meet CEQA requirements. The DEIR clearly does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by too few requirements and many vague words such as “promote” or “encourage” or “if feasible.” The DEIR definitely needs to be amended and the Conditions of Approval strengthened and moved into a **legally enforceable Mitigation and Monitoring Program.**

C186-1

Respectfully,

Joseph & Deborah Votek

Subject: Water Demands and the SDC
Date: Monday, September 26, 2022 4:23:48 PM

EXTERNAL

Dear Mr. Oh,

I have many concerns about where the planning for the future of the SCD is going. For example: to state that effectively doubling the size of Glen Ellen would increase commute or evacuation times by only 15 seconds is outlandish. What type of modeling did you use I wonder. I personally had to evacuate during the 2017 fires and part of my property was destroyed. I live just one row of houses from a property line for the SDC. The traffic was bumper to bumper on one of the only two roads out from town.

C187-1

The main topic of this letter, however, is water. Again, what type of modeling did you use? As you know, we're experiencing climatic change and more erratic weather, and more droughts are predicted for our area. Putting the load of so many new people (2+ thousand) on the local, fragile water supply seems a ticket for disaster.

Additionally, I am concerned about the safety of the creeks, streams and rivers on the SDC property. I do not think that a 50 foot setback is enough to protect the waterways and the wildlife associated with those same waterways. Demolition and building projects will release pollutants into the soil and water, as would the increased population. Right now, this area is a delicate sanctuary for many other types of life as well. Please increase setbacks to 100 ft from all waterways.

Thank you for considering my concerns.

Cc:	Susan Gorin; David Rabbitt; Chris Coursey; Lynda Hopkins; James Gore
Subject:	Draft SDC EIR
Date:	Monday, September 26, 2022 3:27:59 PM

EXTERNAL

Dear Mr. Oh,
There are several areas that I wish to address today concerning the draft SDC EIR. The areas are:
1. Density
2. Traffic
3. Environmental
4. Consistency with Goals & policies of GP as well as Specific Plans

C189-1

Density: Proposed density is much too high for the location and creates inherent negative impacts on the existing population, environment and adjacent locales. High density, such as proposed (housing as well as commercial), increases the danger of wildfires, changes the world of wildlife and nature (a critical need to preserve), changes the cultural, visual and societal quality of life, presents a considerable impact (both now and in the future) on agriculture, and such density should be restricted to existing developed areas within major city boundaries, not in rural areas.

C189-2

Traffic: Increased traffic would negatively impact roads, especially those designated to remain rural roads in the county General Plan as well as Specific/Area Plans due to large scale commuting, avoidance of congested major roadway, and other rationale. Also, would have a serious impact on emergency evacuations in this area as well as adjacent areas due to wildfires, earthquakes, emergency services, etc.

C189-3

Environmental: Negatively impacts the rural environment/quality of life, scenic resources, wildlife corridors and existence, and is in conflict with the General Plan for areas that are to be maintained "rural."
Treats a rural area more as an urban area in proposed design. Ignores the personality of an area and the needs of existing occupancy/usage. It appears to desire to create a large area of relative high density in contrast to existing and long time usage as well as expressed future designations (GP). Additionally, the existing inadequate water usage and recycling as well as inadequate energy provisions are major obstacles - and costly. (Prior to building any major density growth the infrastructure needs, residential as well as commercial, must be in place prior to any new development or usage i.e. any new or adequately restructured roadways, improved and adequate water availability and reuse thereof. Also, alternative transportation needs such as buses, etc.should be in place.

C189-4

Consistency with GP and Specific/Area Plans: These BOTH need to be thoroughly reviewed as the impacts of this proposal is far reaching - the negative impacts extend far beyond the confines of this project. Per the GP-to maintain the rural quality (visual as well as technical/environmental) with development to be in sync with established precedents and within established urban/rural locations.

C189-5

You have received, I am sure, numerous letters from a wide variety of persons and

perspectives. Herewith are my suggestions (based upon my many years of being involved in voluntarily working with the county on the General Plan and more specifically a Specific/Area Plan). Maintain the general character of the area. Any development should be low profile, provide for a greater percentage of low-middle income housing within a set total allotment, keep any additional commercial to a minimum, no hotels, and the total number of new housing (including any bonuses) should be capped @ 450! And by all means, protect the open space, wildlife corridors, rural amenities and the character of the existing locale.

C189-5

Thank you.
Sincerely,
Tamara Boultbee

To: Permit Sonoma

From: Teresa Murphy

Subject: Eldridge Draft EIR/Draft Specific Plan

I have been a strong community advocate for the preservation and prudent management of the Eldridge Property formerly known as Sonoma Developmental Center since 2012.

C190-1

I STRESS that the urbanization of Eldridge is not portrayed accurately in the Draft EIR. The number of houses, population and vehicles are not realistic The Draft EIR does not stress the preservation of cultural integrity, history, conservation and housing in scale. The inadequacy of the term 'self-migrated" is repeated over and over. Specific plan appears to fall short of CEQA. Legally enforceable Mitigation and Monitoring should be included in the DEIR that currently states in many instances, "no mitigation needed.'

I respectfully request the following;

There should be a review of the Landmarks Commission meeting at which the Commissioners self-disclosed that they were uninformed due a less than seven day opportunity to review the documents. Permit Sonoma did not send the DEIR and DSP until Friday before Labor Day and the hearing was the next week. It appeared that the Commission would like more time to study the historic aspects of the property. Why was not the Landmarks Commission brought in two YEARS earlier for their expert opinion? Include a reference or rationale of why Sonoma County has not responded to a two-year-old application for Historical Landmark status for Eldridge.

C190-2

A CEQA level identification of potential impacts of known or potential historic sites and landscapes.

Consider the historic sites as an entire cultural landscape. Do not individual buildings individually to be demolished.

Require a future developer prepare a historic preservation plan, based on desired development and suitability of buildings for adaptive reuse, with the overarching objective of preserving a set of buildings that reflect the diversity of building types and the continuum of life at the former SDC.

Explain how the demolition of buildings reduces the eligibility of the property for the National Register of Historic Places. The property application has been submitted by SHPO and the GEHS has been asked for additional and expanded information on the property, specifically the east side of Arnold Drive. According to the Draft not all buildings, structures, and landscape elements within the historic district boundary are considered contributing resources because some of them are outside the 1889- 1949 period of significance and others do not have sufficient historical integrity. Due to the expansion of the historic district boundary as requested by SHPO, the number of

C190-3

contributing resources grew from 46, as identified in JRP's May 2017 report, to 94 buildings and structures. Where is any reference to Wallace, Roberts and Todd or Page and Turnbull or JRP and their findings regarding historical preservation of building and landscapes?

C190-3

Why is there no mention of historic preservation in the initial bullet points? The statement of Balance with Historic Resource Conservation is acceptable however it is qualified with 'where feasible.' What is the definition of the phrase 'where feasible?'

Did the consultants confer with CALFIRE developed recommendations for fire prevention in older buildings and evacuation plans for the Valley?

C190-4

CALFIRE identified the oldest fire suppression buildings in the State dating to 1931-2. The Eldridge Fire Department was built in 1932 yet it is not considered significant and one to be potentially removed. Then the plan calls the area Fire House Commons. Why will the area be named for a building to be remove as 'insignificant?

The Historic Core according to Dyett and Bhatia appears to consist of two buildings: The Sonoma House and the Professional Education Building. The buildings adjacent to them (Oak Lodge, Hatch and McDougall) are important representatives of early 20th century institutional care. This section is nearly contiguous with the cemetery and Jack London HISTORICAL State Park. Has there been any rationale to create a historic area within the property historic district and how the Department of Parks and Recreation could be expanded to include this historic area?

What is the definition of a 'flex' area?

Thank you for your consideration

RE: Comments on Sonoma Developmental Center (SDC) Draft Specific Plan EIR and Draft Specific Plan

Dear Staff, Planning Commissioners, and Consultant Team,

This letter contains my comments on the Draft Environmental Impact Report (DEIR) for the SDC Specific Plan and on the Draft Specific Plan (proposed plan) itself. Thank you for considering and responding to these comments and sharing them with the planning team.

C191-1

I agree with and support the comments submitted by the Sonoma Land Trust (SLT). Also, I agree with and support the comments identified in the North Sonoma Valley MAC comment letter. In addition to the issues identified in those two letters, I have submitted comments to the County Landmarks Commission and the County Planning Commission – the comments in both these letters (attached at the end) are hereby incorporated by reference and should be addressed in the Final EIR.

C191-2

Overall, as a 30 plus year land use planner and CEQA specialist, I am disappointed with the failed process to prepare a plan that represents at least a modest amount of responsible land use planning, mindfulness of site constraints, and community input. Sonoma Valley residents, including the community surrounding SDC, supports housing, especially affordable housing. However, there is no support for the high-density scale reflected in the proposed plan, which would double the size of the existing semi-rural community. At even half the proposed size, the project would represent the largest development in Sonoma Valley in decades. The plan reads as if it belongs in an existing urban area in a city and does not reflect the rural character and special qualities of the site and surrounding area that are valued by residents and visitors. The proposed plan does not reflect a "community-driven" process - it fails to incorporate a moderate scale that was requested by the vast majority of public comments over the past two years. The plan also lacks many mitigating policies that were requested multiple times.

C191-3

The DEIR is fundamentally flawed, as outlined in my comments below. Overall, the DEIR reflects a bias towards the proposed dense development and tends to dismiss the proposed plan's environmental disadvantages when comparing it to other reduced-scale alternatives. Many comments from wildfire experts have already been submitted and I share their concerns, having had to evacuate twice from my home. Revisions to both the EIR and the Specific Plan are necessary to address these potentially significant impact issues and to develop a more balanced plan that will reduce significant impacts.

C191-4

GENERAL EIR COMMENTS – Please respond to each of these concerns

1. **Deferral of analysis –** In many topical areas, the DEIR states that sufficient details are not available to conduct the environmental analysis and that the analysis will occur when individual projects are

proposed. However, many of the projects will not be subject to CEQA due to exemptions provided once the Specific Plan is completed. Therefore, this deferral is not adequate.

2. **Minimization of impacts** - The DEIR assumes plan policies will mitigate impacts, but the feasibility of these policies is unknown (such as increasing transit and building a road connection to Highway 12) and many policies are unenforceable. So, the DEIR grossly underestimates the impacts. The DEIR is clearly result-driven.
3. **Skewed Alternatives Comparison** - The DEIR identifies the Historic Preservation Alternative as environmentally superior, but then dismisses advantages of this smaller alternative and incorrectly claims that impacts of the proposed plan and the Historic Preservation Alternative are "comparable." Some mitigating components (e.g., widening creek corridors) were arbitrarily excluded from the Historic Preservation Alternative, making it look worse than it is. For a fair unbiased analysis, the alternatives must be evaluated in an "apples to apples" comparison to the proposed plan, using the same or similar assumptions about project components that offer mitigation.

C191-4

4. **Environmentally Superior Alternative Should Be Selected:** Given the sensitivity of the site, the onsite wildlife corridor, surrounding open space, rural location, wildfire risks, and guiding principles, both a reduction in the number of homes and substantial reduction in commercial development size should be the preferred plan. A reduced-size alternative is the only way to mitigate the many significant impacts of the proposed high intensity project. Design guidelines will not mitigate the impacts. The market study did not identify a high demand for non-residential development. The Historic Preservation Alternative, while not ideal, is the only alternative that presents a level of land use development at a scale compatible with the site, surrounding rural lands, and overall Sonoma Valley character. There has been an overwhelming number of public comments requesting a smaller alternative.

C191-5

5. **Comparison to Previous SDC Use:** The continued argument that the SDC property should be able to accommodate thousands of residents and workers because it used to house and employ thousands of residents and workers is not valid. Nor is it valid to compare existing building square footage to proposed square footage, in an attempt to justify the proposed plan and minimize impacts, as it is the proposed use (not necessarily footprint) of the buildings that drives most of the impacts. The reason this comparison is invalid is as follows:
    a. As an institution, SDC tread very lightly on the environment and adjacent community. At its most populous, most of the residents of SDC did not leave the property. They did not drive cars, they didn't go offsite to schools, doctors, restaurants, etc.
    b. Vehicle trips were primarily limited to employees who worked three shifts so that traffic was spread out, rather than concentrated at peak hours.
    c. Because of the limited outdoor activities and absence of constant vehicle traffic onsite, people and cars did not interfere with wildlife movement; the campus was open, peaceful, and not occupied with uses that generated a substantial amount of traffic (e.g., hotel, restaurants, etc.).
    d. There were no retail uses drawing visitors and vehicles to the site.

C191-6

e. It should also be noted that employment and resident numbers at SDC reached a peak during a time over 50 years ago when there was very little cumulative growth in Sonoma Valley and both Arnold Drive and Highway 12 were still well-functioning roadways.

C191-6

6. **Lack of supporting evidence –** Throughout the DEIR, conclusions and assumptions are made without providing supporting information, thus providing no rationale or transparency.
7. **Project Scale is Source of Significant Impacts and Failure to meet project objectives:** The proposed plan's size and scale contradicts the County's transit-oriented growth and land use policies; and is inconsistent with its own guiding principles, failing to balance development with resource and historic protection. Another SDC Specific Plan guiding principle directs the plan to balance redevelopment with existing land uses and calls for looking at how uses fit the character and values of the site and surrounding area, as well as benefit local communities and residents. It does not appear that the proposed project abides by this principle. Regardless of whether the housing is low, medium, or high density, it's the total amount of housing and commercial development that is particularly important in evaluating the project. The community will not benefit from clogged roadways and increased fire risks and evacuation delays.

   Because of its size, the project will have significant impacts in both transportation and historic resources, but no mitigation is offered in the way of downscaling the size to reduce these impacts. There is no way that the site can provide all the goods and services needed for this large population. To try to provide that undermines the function of the surrounding open space and destroys the semi-rural character of the existing community on both sides of the site.

C191-7

8. **Missing Project Phasing and Performance Standards –**
   a. The proposed Specific Plan is missing mandatory phasing requirements that would help mitigate impacts. The phasing components of the proposed Specific Plan are advisory only and not enforceable. There is no guarantee that the needed housing will be developed before the hotel or other commercial uses. There is nothing stopping the future landowner from building the hotel first, which would be contrary to the project objectives.
   b. Affordable housing should be prioritized in a mandatory phasing plan.
   c. The project description needs to identify a project phasing plan to address all the demolition and remediation that will need to occur, as well as site preparation, infrastructure repairs, etc. This plan needs to be fully evaluated in terms of impacts on traffic and roadways, wildlife and open space resources, and surrounding land uses (noise, emissions, glare), etc.
   d. Project phasing should be tied to performance standards. There are no performance standards to gauge or monitor project impacts. Since many of the future impacts are unknown and feasibility of some policies is unknown, performance standards are needed to ensure that future development can be modified if policies or mitigation measures are not effective. For example, biological surveys should be required to monitor how well wildlife adapts to demolition, construction, and new land uses. If it becomes clear that the wildlife corridor is being adversely impacted, additional measures and design features could be implemented to reduce impacts before proceeding with additional development phases. VMT and roadway congestion thresholds should also be established and traffic impacts mitigated to the maximum extent feasible before continuing with buildout. Performance standards could be developed for each environmental resource area.

C191-8

9. **Flawed Market Demand Study –** The market demand study prepared in 2020 for the SDEC Background Report and the Alternatives Report that preceded the DEIR was updated via a short memo (July 14, 2021), with assumptions that were never reviewed by the public or peers. The update was to attempt to justify larger housing numbers, using a straight-line projection over the next 20 years. This updated study was then used as the basis for including and defending the proposed 1000 homes in the proposed Specific Plan. However, there is no justification for the projections methodology, which is over-simplified. There is no evidence that housing demand in Sonoma Valley will increase at the rate presented in the updated market study. This "update" to the market study cannot be used as a basis for the housing in the proposed plan.

C191-9

DETAILED DEIR COMMENTS

DEIR EXECUTIVE SUMMARY

C191-10

Page 3, "…does not mandate that the State will accept the outcome of the County-driven process…" **–** This statement implies that somehow the State has jurisdiction over the approval of the Specific Plan. It does not have any Specific Plan approval authority and this misleading wording should be stricken. The County planning process does not require approval from the State. Whoever buys the property from the state will be bound by the Specific Plan. This type of wording has been used by the County as a thinly veiled threat to the community that if we don't accept the County's plan, the state will enact a far worse redevelopment.

Page 3, "The Planning Area includes all SDC property, encompassing approximately 945 acres ‑which includes a developed Core Campus covering approximately 180 acres, the 755 acres of contiguous open space, and the 11-acre non-contiguous Camp Via grounds within Jack London State Historic Park." Is this planning area equivalent to the study area for the EIR? The study area should go beyond the site itself and must be clearly defined for each impact topic.

C191-11

Page 7, Buildout: "Buildout projections of this EIR do not include the total amount of potential development that could be accommodated by the Proposed Plan; rather, the buildout outlines the most likely development that would occur by 2040, including additional bonus housing units that would result from provision of affordable housing as mandated by the Proposed Plan."

Basing the DEIR analysis on this assumption of the "most likely development" is insufficient and is not supported by any evidence that this level of development is the most likely scenario. The DEIR underestimates the overall impacts because it does not evaluate the reasonable worse case buildout scenario. The DEIR must evaluate a reasonable worse case of development to ensure that all potential impacts are identified.

Page 7, Buildout: "The Proposed Plan is anticipated to result in a total buildout of approximately 2,400 residents, 1,000 housing units, and 940 jobs." This does not clarify whether this is the total maximum buildout or the "likely development" referenced in the previous paragraph. Looking at the

minimums/maximum table in Chapter 4 of the plan shows that over 1200 units could be built and that doesn't even include bonus densities.

C191-11

Page 7, Areas of Controversy: "Many members of the public expressed opposition to new housing development in the area…" This appears to be another attempt to paint the community as NIMBYS. This statement is not true, which I can say after listening to hours of public testimony and reading countless comment letters. This statement must be modified to note that people support housing, especially affordable housing, but are opposed to the large number of houses, especially the large number of market rate housing, based on the fact that the site is outside of the urban growth boundary and not along a transit corridor.

Page 11 acknowledges that "the market demand for non-residential uses (with the exception of a hotel) is limited and higher employment levels will reduce financial feasibility." Yet, the DEIR still analyzes a proposed plan with more than 900 jobs, which detracts from financial feasibility and substantially contributes to significant impacts. What is the basis for this high amount of commercial development?

C191-12

Page 11, Reduced Alternative – The text states that this alternative would be less economically viable – what does that mean? Is it viable or not? There is no provision in the state legislation or in the project objectives to maximize economic viability. Yes, the plan must be feasible but it does not need to maximize financial gains.

Page 12, Historic Preservation Alternative – There is no basis given for only a partial reduction in jobs - why not reduce the jobs proportionately? With 600 jobs, it would be heavier on commercial development than housing, when in fact the State has prioritized housing, not commercial development.

C191-13

Page 14, Environmentally Superior Alternative (also in Section 4.5): "Overall, the Historic Preservation Alternative is the environmentally superior alternative, although significant impacts of the Proposed Plan and the two alternatives are largely comparable, and the Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks. Additionally, this alternative would not support key project objectives related to increased housing supply, varied housing opportunities, community vibrancy, and long-term fiscal stability to the same degree as the Proposed Plan." This statement is incorrect and misleading for several reasons.

C191-14

- To say that the proposed plan's impacts are "largely comparable" to the impacts of other alternatives is seriously flawed. The types of impacts may be the same, but the magnitude of impacts is much less under the Historic Preservation Alternative, with the substantial reduction in buildout. This needs to be acknowledged and corrected throughout the EIR. The Historic Preservation Alternative, in addition to reducing historic resources impacts, would substantially reduce impacts in the issue areas of traffic, biological resources, land use, noise, visual, air quality, Greenhouse Gas emissions, and public services. Traffic impacts may still be significant, but they would be much less severe in the Historic Preservation Alternative.
- It is reasonable to assume that impacts across the board would be reduced with a smaller development.

- The way the Historic Preservation Alternative is crafted, it excludes components that allow a fair comparison between it and the proposed plan. For example, widened creek corridor setbacks are included in the proposed plan but arbitrarily excluded from the Historic Preservation Alternative, resulting in a conclusion that this alternative would cause greater biological impacts. Corridor setbacks could be easily incorporated into the Historic Preservation Alternative in most locations. The connection to Hwy 12 is also excluded from this alternative, thus making the traffic impacts greater. This alternative (or the proposed plan) must be modified to include the same impact-reducing features such as creek corridor setbacks, roadway connections, etc. to at least provide a fully transparent, apples to apples comparison. If properly compared, the impacts in biological resources and wildfire risks would be reduced compared to the proposed plan.
- The Historic Preservation Alternative would support multiple key project objectives, including significantly increasing housing supply with the largest housing project ever in the Sonoma Valley; contributing to community vibrancy and long-term fiscal stability; AND reducing both traffic and historic resources impacts, as well as other impacts. The DEIR provides no supporting information to substantiate the claim that the Historic Preservation Alternative would not support key project objectives.
- There is no basis for the claim that the Historic Preservation Alternative would not achieve long-term fiscal stability similar to the proposed plan.

C191-15

EIR MAIN BODY

Page 41, Section 1.1.1, Purpose: One of the purposes of the DEIR is stated as: **"**To recommend a set of measures to mitigate any significant adverse impacts." Yet, there is no mitigation included in the DEIR. Even in the two significant impact areas, no additional mitigation is recommended although there is feasible mitigation. For example, the proposed hotel size could be reduced, or the overall development size could be reduced to minimize environmental impacts.

C191-16

Page 43, **Scope of EIR**: "…nor does it assess project-specific impacts of potential future projects under the Proposed Plan, **all of which** are required to comply with CEQA and/or the National Environmental Policy Act (NEPA) as applicable." This statement contradicts statements elsewhere that indicate that most, if not all, future development will be exempt from CEQA due to streamlining provisions. Please clarify which individual projects will be subject to environmental review. Even if project-specific impact assessment is not possible at this stage, it is feasible to assess the types and magnitude of impacts of buildout and to identify appropriate types of mitigation measures. This has not been done in the DEIR.

C191-17

Page 47: "Subsequent to certification of the Final EIR, the Board of Supervisors may approve the Proposed Plan." Isn't it possible for them to approve one of the alternatives, as well? Please clarify.

Page 51, "In addition, the Proposed Plan includes amendments to the County's General Plan and Zoning Code." The DEIR is incomplete in that these proposed amendments, particularly the zoning code amendments, are not included in the plan or DEIR project description.

C191-18

Page 51, Location: The description of the project location is erroneous in claiming that it is between Glen Ellen and Eldridge, as if it will not disrupt these two communities. Why does the County insist on

continuing to ignore the neighborhood south of SDC and call it Eldridge? It is part of Glen Ellen and the SDC site is in the middle of Glen Ellen, dividing it. Furthermore, there's nothing in the text noting that this location is OUTSIDE of an urban growth area, which is an important land use policy consistency issue. C191-18

Page 53, Planning Area: Sonoma Valley Regional Park is not located to the south of the SDC site.

Page 53, Section 2.1.2.1, Land Use: "…designed in a relatively compact footprint within the expansive grounds to maximize the benefits of the tranquility and peacefulness of the site." These tranquil features are at the core of the existing land use pattern and must be considered in assessing the proposed plan's consistency with County land use policies, the proposed plan objectives, and Glen Ellen Design Guidelines. C191-19

Page 55, Section 2.1.2.3, Environmental Resources and Natural Setting: This section fails to discuss the critical wildlife corridor that covers the entire property.

Page 57, Water: The text states that the water system components "have the capacity to provide drinking water, irrigation, and fire suppression to a resident population in the neighborhood of 6,600 people." Please cite the source of this statement and provide documentation to support it. Also, if the water system is going to be restored to service this number of people, this growth-inducing impact needs to be evaluated in the DEIR. C191-20

Page 58: "…WTP is in relatively good condition." This conclusion is not supported by any analysis. Assessments in earlier reports indicated problems with the system.

Page 61: "SDC was the valley's largest employer until it closed." Please provide documentation to support this statement. Employment at SDC dropped off dramatically in the past 10 years before closing, as the client population was reduced.

Page 68, Section 2.4.3: "It also aims to improve multi-modal access from the SDC to Highway 12 (State Route 12 or SR 12) by exploring the feasibility of constructing an additional east-west emergency access connection from the site." This makes the connection to Hwy 12 sound very tentative and, therefore, the road connection cannot be assumed in the DEIR analysis. It is not known whether this roadway is feasible or could be permitted by CalTrans. C191-21

Page 71: "8 to 30 units per gross acre and a maximum FAR of 2.0" – This is a very broad range – what was assumed for the EIR analysis?

Page 72: Institutional Use: FAR of 2.0 – There is no discussion of the acreage provided for this category so the project description is incomplete.

Page 72, Buffer areas: Who will be responsible for maintaining these buffer areas and ensuring they are fire resistant and appropriate for wildlife use?

Page 73, Hotel: 120 rooms is entirely out of scale for this rural location, outside of an urban growth area and within a high fire risk area. This use will substantially increase VMT, hamper wildfire evacuation, and generate the need for other goods and services demanded by clientele at such a high-end hotel. The community has been very vocal about not turning SDC into a tourist destination. How does this fit in with a primarily residential area and lower income residential population? Furthermore, there is nothing in the state legislation calling for a large-scale hotel. This use was not adequately analyzed in the DEIR. C191-22

Page 73, Section 2.4.4.1, Core Campus Districts: There is no documentation or analysis of how these districts fit in with the surrounding land uses on neighboring lands. It is not clear how these districts comply with the fundamental objective of the project:

"Balance Redevelopment with Existing Land Uses. Use recognized principles of land use planning and sustainability to gauge how well proposed land uses protect public trust resources and fit the character and values of the site and surrounding area, as well as benefit local communities and residents."

What benefits are provided to the surrounding and neighboring Sonoma Valley communities?

Page 77, Build Out: "While the project buildout projection reflects a reasonably foreseeable maximum amount of development for the Planning Area through 2040, it is not intended as a development prediction or cap that would restrict development in any of the five subareas." This statement contradicts other statements about buildout assumptions. Doesn't the plan need to have a development cap? The DEIR needs to identify the maximum buildout for each land use and then analyze that maximum development scenario. C191-23

Table 4-2, DEIR assumptions regarding buildout: Table 4-2 in the Specific Plan lists the minimum and maximum number of housing units for each district. The maximum totals 1210 and the table footnote states that this number does not include additional county and state density bonuses. Density bonuses are likely to occur and are reasonably foreseeable. Therefore, the EIR substantially underestimates the full project impacts by more than 200 units or 20 percent of the project.

Arnold Drive Overlay: Figure 5.3-1 in the Specific Plan shows maximum building heights of 45 feet in the historic core, right up to Arnold Drive. This height contradicts the proposed policies for Arnold Drive and conflicts with multiple requests to maintain the open feel of Arnold. This is a significant visual impact.

Page 81, "This EIR serves as the environmental document for all discretionary actions associated with development under the Proposed Plan." This statement implies that all development will be exempt from CEQA and contradicts the statement noted on page 43. Please clarify these contradicting statements and document what projects will and will not be subject to subsequent CEQA. The road connection, for one, will not be exempt. Is the site in a designated "transit-priority area"? C191-24

Section 3.1 Aesthetics

Section 3.1.2, Environmental Setting: The description fails to discuss the existing scenic landscapes created by the former SDC. Broad lawns and vistas to both the east and west mountain ranges exist within the campus and along Arnold Drive and these scenic vistas need to be acknowledged. The

campus was intentionally designed to provide open spaces and extensive landscaping between buildings to establish a calming, tranquil environment for the clients. Please include this information in the setting and include an assessment of these visual features in the impact analysis. C191-24

Page 103: "Given that construction will be clustered only in the previously developed Core Campus and that new development will keep with the overall scale and development height variation of the current SDC campus, adverse effects on the scenic vistas of SR 12 on the eastern edge of the Planning Area and the scenic landscape unit on the western edge of the Planning Area would be less than significant." There is no guarantee that new development will be required to comply with the advisory goal of keeping with the overall scale and development height of the current SDC campus so compliance cannot be assumed. This conclusion fails to acknowledge the increased density and overall increased number of buildings at higher heights than existing, not in keeping with surrounding land uses. The proposed plan will not maintain the large internal open space expanses. This impact analysis also fails to address the impacts on scenic vistas of Sonoma Mountain and the Mayacamas along Arnold Drive. C191-25

Page 104: "With adherence to existing and proposed policies and standards, development of an SR 12 connector under the Proposed Plan would ensure that damage to scenic resources along SR 12 would be less than significant." But many of the proposed policies are not mandatory and therefore cannot be assumed in the analysis. C191-26

Page 104, impact 3.1.3: The analysis states that the site is nonurbanized but fails to acknowledge the significant impact that will occur as a result of the proposed urban development plan – it represents a significant change in visual character. Instead, the analysis attempts to justify the project because it will create a new vibrant community. How does creating a "vibrant" community protect rural scenic qualities? The proposed plan's urban features are in direct conflict with rural scenic resources, both onsite and on surrounding properties, especially since SDC is in the middle of the rural village of Glen Ellen.

Page 104, impact 3.1.3: The analysis fails to address the fact that the introduction of new modern, urban architectural features will significantly impact existing historic visual character of the campus and surrounding land uses. There is no discussion of impacts on surrounding land uses. What policies will ensure that architecture blends in with surrounding land use character?

Consistency with Glen Ellen Development and Design Guidelines: There is no mention of these existing guidelines that address Glen Ellen. How does the proposed redevelopment conform to these existing guidelines?

Section 3.3 Air Quality

Page 167, Construction: The analysis fails to mention or address demolition impacts, which will be substantial. C191-27

Page 167, Construction: Even though this EIR is programmatic, the deferral of construction impact analysis is not acceptable. There is substantial information available to develop reasonable demolition

and construction scenarios. The aggregate dust and toxic air contaminants released from demolition activities must be analyzed because the amount of demolition will be enormous. C191-27

Page 169: "Furthermore, because the SDC facility has been closed since 2018, there has been no change in the amount of development or types of land uses in the Planning Area between 2019 and 2022 – meaning that the 2019 baseline year conditions are comparable with existing conditions as of the release of the NOP for this EIR." Please define both the Planning Area and study area for the air quality analysis. Is the Planning Area the same as the study area? The study area for air quality should include the surrounding community. Please provide evidence to support the conclusion that there has been no change in development. As a local resident, I can verify that conditions have indeed changed since 2019. In 2019, Glen Ellen had just lost 180 homes. These homes are still being rebuilt, as of 2022 and many empty lots are waiting to be rebuilt. There continues to be demolition, site-grading, and construction.

Relevant Proposed Policies: There are no mitigating policies for reduction/avoidance of demolition impacts on air quality or GHG emissions.

Page 183, VMT: It is incomprehensible that VMT would increase by less than 1000 as a result of the proposed plan, with so much new development and the introduction of thousands of new residents. The SDC site's location outside of an urban area will necessitate vehicle use for daily goods and services. Because the VMT is grossly underestimated, the air quality and greenhouse gas analysis both underestimate impacts and must be revised. C191-28

Impact 3.3-1: The DEIR impact analysis relies on proposed plan policies to reduce air quality impacts and conform to the 2017 Clean Air Plan. Some of these policies are enforceable, and the feasibility of several policies has not been determined. For example, relying on multi-modal transportation to reduce VMT is unrealistic given the site's rural location and lack of existing or planned frequent transit service. There are no schools within walking distance, nor are there doctors' offices, hospitals, farm jobs, or winery jobs. People will be required to drive on a daily basis, most likely to Santa Rosa, Sonoma, or Napa.

Also, there is no discussion of the massive amounts of demolition and associated emissions that will occur to develop a plan of this size.

Impact 3.3-2: The DEIR claims that construction impacts cannot be assessed at this time. How will these impacts be assessed if future projects are exempt from CEQA? C191-29

Page 200, Impact Summary: "Future development would be subject to individual review; new sources would be evaluated through the BAAQMD permit process and/or the CEQA process to identify and mitigate any significant exposures." This deferral of analysis and mitigation measures is not acceptable, especially since future projects may be exempt from CEQA and many uses will be allowed by right. The DEIR should at least require a buffer between new development at SDC and existing residential uses adjacent to the southern boundary, as mitigation for future potential impacts.

Missing Analysis: The DEIR fails to analyze the numerous types of land uses permitted under the proposed plan that will involve toxic emissions, such as fertilizer plants and laundry facilities. C191-29

Section 3.4 Biological Resources

Missing Species: The wildlife species list is missing Bald Eagle, observed multiple times at the Lake Suttonfield reservoir. C191-30

Missing Analysis: Impacts on wildlife movement through the campus are not discussed in the EIR. The campus itself is part of the wildlife corridor. Proposed development will result in far more activity within the campus than ever existed, even during SDC's peak operation. There will be significant impacts on wildlife movement from the introduction of thousands of people and vehicles. Furthermore, there is no overall prohibition or restrictions on fencing within the campus so wildlife will likely be blocked from movement through the campus. The proposed fencing policies refer to the open space and campus interface areas, not the campus itself.

Section 3.5 Cultural Resources

Page 295: "Furthermore, at the time when rehabilitation projects for these two individual historic resources or new work immediately adjacent to the historic resources are proposed, the project-level CEQA document would need to identify potential impacts to historic resources." This conclusion is flawed in that it attempts to defer necessary impact analysis. Again, many future projects will be exempt from CEQA so there will be no way to analyze potential impacts and develop appropriate mitigation measures. C191-31

Section 3.10 Land Use Analysis

Page 321, Land Use Impact Analysis: The DEIR states that the proposed policies will be incorporated into the zoning codes that will be concurrently adopted by the Board. Where are the proposed amendments to the Zoning Code? Don't they have to be specified in an official proposed zoning code amendment and analyzed in this DEIR in order to proceed with adoption? C191-32

Page 317, Impact 3.10-1: The DEIR claims that there is no impact associated with physically dividing an established community. This conclusion is in error. There is no discussion of the fact that the proposed dense development, which is in effect a new city, is in the middle of the existing semi-rural village of Glen Ellen. There have been many references to the proposed development as a self-contained "closed community" - this indicates that it will indeed cut off the two parts of Glen Ellen. The massive size and scale of the proposed plan will certainly divide Glen Ellen. There is no attempt to integrate the land uses on the site with neighborhoods to the north and south because the large amount of proposed commercial development is basically inconsistent with the nearby residential and semi-rural village uses. Instead, the proposed plan will create gridlock on Arnold Drive, preventing local residents from passing from one side of the village to the other side. The previous low-intensity institutional use did not create a barrier or divide the community.

Impact 3.10-2, General Plan Policy Consistency Analysis

C191-33

The Sonoma County General Plan (GP) contains many policies aimed at preventing urban sprawl and encouraging development within or adjacent to urban growth areas. The high-density development proposed for SDC is neither within nor adjacent, or even near, urban growth boundaries. Furthermore, all the land around it is within a community separator. As such, the proposed plan's size and scale is in direct conflict with County General Plan policies and therefore, the plan's project description is inconsistent with the General Plan. These existing policies still apply to the SDC site and will not be replaced by the Specific Plan. As noted on Draft EIR page 312, under CEQA, if a proposed project conflicts with a land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, then a significant land use impact would occur.

The DEIR analysis of consistency with existing policies, contained on pages 319 to 321, does not address individual policies and fails to address the many significant impacts associated with policy conflicts. Furthermore, by failing to identify impacts, it fails to recommend mitigation measures (such as downscaling, reducing overall density and bulk, etc.) to reduce these major conflicts. This DEIR land use section includes conclusions without providing any analysis or evidence to support the claims that the proposed plan is consistent with the General Plan policies. Instead, it ignores the relevant policies and concludes that the project is consistent and no mitigation is required. The analysis of this land use impact must be revised to address each applicable General Plan policy and any other existing relevant policy.

Page 321, DEIR states:

C191-34

> "Further, the Proposed Plan retains the overall land use framework of the General Plan with some targeted changes to promote economic development and appropriate residential and commercial infill development in the Core Campus. The Proposed Plan's land use designations (see Figure 3.10-3) are generally consistent with those in the General Plan, although they differ in some instances. In these limited exceptions, the Proposed Plan's designations differ from the General Plan in order to more accurately reflect either the existing zoning or current use on the property. While the Proposed Plan does include some targeted changes to land use designations, these changes are generally consistent with the General Plan vision of supporting transit-oriented residential and commercial development, encouraging new retail opportunities, and preserving open space."

This paragraph is full of inaccuracies and misleading statements. Placing high density development in a semi-rural area does NOT retain the overall land use framework of the General Plan in Sonoma Valley. It is not an infill site in an urban area. The Proposed Plan's high density land use designations are not consistent with General Plan designations outside urban growth areas. The statement that the Proposed Plan's designations differ from the General Plan in order to more accurately reflect existing zoning or current use on the SDC site is completely erroneous. The site is zoned Public Facility and the current use is vacant. The prior use was an institution, not a high-density urban residential and commercial community. This is not a transit-oriented development site (not along a major travel corridor in an

C191-34

urban area, with existing frequent transit service) and is inconsistent with General Plan policies regarding transit-oriented development.

The following policy conflicts would occur, as a result of the proposed plan. These policies need to be addressed in the DEIR. It is likely that there are other relevant policies not listed below that need to be analyzed as well.

C191-35

OPEN SPACE/AESTHETIC POLICIES

Goal OSRC-1: Preserve the visual identities of communities by maintaining open space areas between cities and communities.

Objective OSRC-1.1: Preserve important open space areas in the Community Separators shown on Figures OSRC-5a through OSRC-5i of the Open Space and Resource Conservation Element.

Objective OSRC-1.2: Retain a rural character and promote low intensities of development in Community Separators. Avoid their inclusion in City Urban Growth Boundaries or Spheres of Influence. Avoid their inclusion within Urban Service Areas for unincorporated communities.

Objective OSRC-1.4: Preserve existing specimen trees and tree stands within Community Separators.

Goal OSRC-2: Retain the largely open, scenic character of important Scenic Landscape Units.

Objective OSRC-2.1: Retain a rural, scenic character in Scenic Landscape Units with very low intensities of development. Avoid their inclusion within spheres of influence for public service providers.

Goal OSRC-3: Identify and preserve roadside landscapes that have a high visual quality as they contribute to the living environment of local residents and to the County's tourism economy.

Objective OSRC-3.1: Designate the Scenic Corridors on Figures OSRC-5a through OSRC-5i along roadways that cross highly scenic areas, provide visual links to major recreation areas, give access to historic areas, or serve as scenic entranceways to cities.

Objective OSRC-3.2: Provide guidelines so future land uses, development and roadway construction are compatible with the preservation of scenic values along designated Scenic Corridors.

Goal OSRC-4: Preserve and maintain views of the nighttime skies and visual character of urban, rural and natural areas, while allowing for nighttime lighting levels appropriate to the use and location.

COMMENT: The above General Plan policies point out the importance of maintaining rural landscapes and land uses and protecting the very qualities that make Sonoma Valley attractive to residents and visitors. The intensity and density of uses in the proposed Specific Plan are contrary to these policies. Implementation of the proposed plan will not preserve the scenic values of the Arnold Drive and Highway 12 scenic corridors. The visual identity of Glen Ellen and Sonoma Valley will be permanently altered.

COMMENT: Arnold Drive is a designated scenic corridor. It serves as a scenic component of the village of Glen Ellen; it provides expansive views of both the Mayacamas and Sonoma Mountain; it instills a sense of calm and peacefulness with its beautiful large mature treescape. The proposed land uses, development and new roadway construction will NOT be compatible with the preservation of scenic values along this scenic corridor. The policies in the proposed plan do not protect these scenic values, as the plan allows tall out of scale buildings adjacent to Arnold, inconsistent with existing land uses on the site and nearby developed properties. Figure 5.3-1 (Specific Plan) shows maximum building heights of 45 feet in the historic core, right up to Arnold Drive. The policies intended to protect qualities are "should" statements rather than shall statements. Therefore, the proposed plan is inconsistent with General Plan policies intended to mitigate an environmental effect. This is a significant impact. C191-36

LAND USE POLICIES

Goal LU-3: Locate future growth within the cities and unincorporated Urban Service Areas in a compact manner using vacant "infill" parcels and lands next to existing development at the edge of these areas. C191-37

Objective LU-3.3: Encourage "infill" development within the expansion areas of the cities and unincorporated communities.

COMMENT: This is NOT an infill project. Infill development is within urban areas, as in "urban infill." This site is not an edge to urban areas – it is within the semi-rural unincorporated low-density village of Glen Ellen, some distance away from urban goods and services (e.g., doctors, schools, etc.). Nor is the site an "expansion" area – it was a low-intensity institution that had very little impact on the surrounding community. The proposed plan will destroy the existing rural, scenic character of this area with massive removal of trees, highly dense construction, and urban development features. It is inconsistent with these existing General Plan land use policies.

Sonoma County Code: The DEIR summarizes relevant sections of the County Code: "Article 82 of Chapter 26 of the Sonoma County Code details general design review standards. The intent of Article 82 is not to stifle individual initiative, but to set forth the minimums necessary to achieve a healthful community whose property values are protected from unplanned developments. General development standards favor preserving natural topography, landmark sites and trees, views and vistas of the landscape, harmony with site characteristics and nearby buildings, and local architectural motifs. Article 82 also details general development standards that pertain to light and glare. Requirements include that the number, location, size, design, lighting, materials, and use of colors in signs are compatible with the architectural style of the structure they identify and harmonize with their surroundings. The color, size, height, lighting and landscaping of appurtenant signs and structures shall be elevated for compatibility with local architectural motif and the maintenance of view and vistas of natural landscapes, recognized historic landmarks, urban parks, or landscaping. C191-38

Article 64 of Chapter 26 of the Sonoma County Code outlines the purpose and development criteria for the Scenic Resources Combining District which applies to the Planning Area. The purpose of this district is to preserve the visual character and scenic resources of lands in the county and to implement the provisions of Sections 2.1, 2.2 and 2.3 of the General Plan Open Space Element. Article 64 provides

specific provisions that impact development for scenic landscape units and scenic corridors within the county. Such requirements include that structures should be sited below ridgelines, be screened by vegetation, and that development should be clustered. Further, Article 64 outlines requirements regarding Community Separators which also apply to the Planning Area. Except for most of the Core Campus area, the SDC site is located within a local voter-approved Community Separator overlay that preserves lands with very low densities between communities. The Community Separators help to achieve the County's General Plan Land Use Element goal to maintain natural character and low intensities of development in open spaces between cities and communities.

C191-38

The Historic Combining District (HD) also applies to the Planning Area. As stated in Article 68 of Chapter 64 of the Sonoma County Code, the purpose of the HD is to protect those structures, sites and areas that are remainders of past eras, events and persons important in local, state or national history, or which provide significant examples of architectural styles of the past, or which are unique and irreplaceable assets to the county and its communities. Alterations to existing structures and construction of new structures within historic districts shall be consistent with the historic district design guidelines adopted by the board of supervisors.

COMMENT: It appears that the proposed plan conflicts with numerous provisions of the County Code, as it will not preserve existing character and will introduce high-density development directly adjacent to designated community separator lands. Also, the proposed removal of many historic structures will violate the intent of County Code provisions.

TRANSPORTATION POLICIES

C191-39

COMMENT: The County General Plan establishes Level of Service (LOS) standards for roadway operations. Although CEQA no longer requires LOS analysis, the LOS standards still apply to the proposed Specific Plan. The proposed Specific Plan is in direct conflict with these existing LOS standards. This policy conflict must be evaluated and disclosed in the DEIR.

Section 3.14 Transportation

Flawed Analysis: The transportation analysis is deficient because of the lack of transparency, missing supporting documents, underestimation of impacts, and missing analysis. The assumptions used in the transportation impact analysis must be transparent and based on existing conditions and traffic patterns. Policies to encourage onsite jobs are not enough to reduce the impact. People will still need to drive to schools, doctors, grocery stores, etc. and commercial uses onsite and a hotel will draw visitors and generate many additional vehicle trips. It cannot be assumed that providing a jobs/housing balance will substantially reduce VMT.

Vehicle Trip Generation: VMT is underestimated likely because of unrealistic assumptions about transit and vehicle use. The DEIR's proposed plan trip generation estimate was developed using the SCTM19 travel demand forecasting model maintained by the Sonoma County Transportation Authority (SCTA). However, the trip generation factors used in the analysis were not included in the DEIR. Consequently, it

is impossible to evaluate the reasonableness of either those factors or the resulting trip generation estimates. This information is critical to understand and independently review the DEIR conclusions. C191-39

Underestimation of impacts: The transportation analysis must evaluate a reasonable worse-case scenario, meaning it should be assumed that the large amount of proposed commercial space could accommodate regional businesses that generate a high volume of vehicle trips (e.g., Amazon distribution center or large retail facility). These types of facilities are being proposed in other parts of Sonoma County.

Missing baseline and impact analysis: One glaring omission in the transportation analysis is that there is NO MENTION of Warm Springs Rd., which connects to Bennett Valley Road (also not addressed) and is a major commuter route between SDC (as well as Sonoma and Napa) and Santa Rosa. People and trucks use this route to bypass the congestion on Highway 12 because it's faster. The VMT on this rural, winding, two-laned roadway will dramatically increase, yet there is no analysis. C191-40

As a 30-year resident on Warm Springs Road, I can speak from experience regarding Glen Ellen traffic patterns. Arnold Drive is used as an alternative to Highway 12 for commuting between Santa Rosa and Napa, Vallejo, and San Francisco. The commuting route includes Bennett Valley Road, Warm Springs Road and Arnold Drive. It has gotten to the point of being dangerous to pull out onto Warm Springs Road from private driveways between Arnold Drive and Bennett Valley Road. The narrow two-lane winding country Warm Springs and Bennett Valley roads provide poor line of sight, and commuting vehicles drive at excessive speeds. There is no bicycle lane or even a roadway shoulder, yet it is a very popular bicycle route to avoid Highway 12 between Glen Ellen and Kenwood – literally hundreds of bicyclists use the road on some days. With the increase in traffic from the Specific Plan buildout, this hazardous roadway situation will be significantly exacerbated, yet it was not studied.

Other commuters coming from Santa Rosa use Highway 12 to Arnold Drive to bypass congestion in Boyes Hot Springs on Hwy 12. The intersections of Arnold Drive/Highway 12 and Arnold Drive/Warm Springs Road must be added to the analysis. Traffic in Sonoma Valley has dramatically increased during the past 20 years, as evidenced by congestion on Highway 12 and Arnold Drive. All studies should be conducted using current traffic counts. Traffic counts conducted in 2018 for the referenced study "Sonoma Valley Capacity Threshold Study, Draft Report" are not reflective of current conditions. This was a time period after the fires and many residents were dislocated to other parts of the valley due to their homes being lost.

Missing Analysis – Traffic Safety on Arnold Drive: Because VMT is substantially underestimated and there is no LOS analysis (that is required by General Plan policies), there is no consideration of the traffic safety implications for Arnold Drive both north and south of the SDC site. Arnold Drive bisects the central village of Glen Ellen where commercial business and private driveways join the street and pedestrians cross back and forth between businesses. This semi-rural village will very likely experience gridlock with the addition of thousands of vehicles on a daily basis. There will be substantially increased safety risks for cars trying to turn onto Arnold Drive and for pedestrians using this segment of Arnold Drive. In effect, the increased traffic on Arnold Drive will divide the existing village of Glen Ellen. South C191-41

of the SDC site, vehicles exiting the multitude of private driveways (including the several hundred apartments just south of SDC) will have an extremely difficult time trying to turn onto Arnold Drive. The existing hazardous condition will be significantly exacerbated with the addition of project-related traffic. C191-41

Page 409, Highway 12 Connection: The DEIR refers to Caltrans comments regarding the proposed Hwy 12 connection, "noting that the new connector should not be designed to increase vehicular throughput, since doing so could result in induced auto travel and prior Caltrans studies have indicated that Highway 12 and Arnold Drive already have sufficient capacity to accommodate growth." What previous studies? When? Did those previous studies anticipate the size of redevelopment at SDC? How will the new connector NOT increase vehicular throughput? By its very nature, it will increase vehicle throughput to Hwy 12.

Highway 12 Connection: The impact analysis assumes that the possible road connection to Hwy 12 will be implemented despite the absence of any feasibility study. The Specific Plan makes the proposed road seem tentative, which it is since it will have to undergo a lengthy CalTrans review process. It should not be assumed in the transportation impact analysis.

Page 409-410: "…though a feasibility analysis of the viability of future transit service increases is beyond the scope of a programmatic CEQA assessment." The proposed Specific Plan identifies numerous policies regarding provision of transit services. How can we know if these policies are feasible and will reduce/avoid impacts if no feasibility analysis is conducted now? Infeasible mitigation policies cannot be assumed to reduce impacts. C191-42

Page 410: Where is the following referenced traffic study available for review: Focused Traffic Operation Analysis for the SDC Specific Plan, W-Trans, August 2022? This report is necessary in order to conduct an independent review of the traffic numbers.

Page 417: "The segment of Arnold Drive between Harney Street within the Planning Area and Glen Ellen carried a daily volume of approximately 5,400 vehicles per day in 2021." Please clarify where in "Glen Ellen" the traffic volumes on Arnold Drive were counted. Is the northern terminus of this segment at Hwy 12 or where?

Page 417, incomplete sentence: "To the south of the Proposed Plan area between Harney Street and Madrone Road, daily volumes in 2021 were approximately 6,200 vehicles, as compared to approximately 7,100" – when?

Page 425: "Areas that have a diverse land use mix and ample facilities for non-automobile modes of travel, including transit, tend to generate lower VMT than auto-oriented suburban areas." The SDC site is an example of an "auto-oriented" location. It is not located on a transit corridor and will generate higher VMT than a site closer to an urban area. C191-43

Page 427, Historical traffic volumes: How is this discussion of historic traffic volumes relevant? The method to estimate old volumes is not accurate; also, this was 7 years ago, before regional growth

occurred. "…estimated to have generated approximately 3,800 vehicle trips per day in 2015 when it was fully operational." It wasn't fully operational in 2015 – the clients had dramatically decreased.

C191-43

Table 3.14.3 Traffic Volumes: How can it be that the proposed plan results in lower traffic volumes than No Project? This makes no sense and is not valid. The assumptions for the No Project Alternative need to be revised to reflect a truly No Project scenario.

Proposed Project Scenario – The traffic analysis assumes construction of the Hwy 12 connection but there are no details on this connection and no project-specific CEQA analysis of the connection to satisfy CalTrans approval requirements. Therefore, this connection cannot be reasonably assumed. As requested by Planning Commissioner Carr, please redo the analysis without the Hwy 12 connection and then compare it to the Historic Preservation and other alternatives.

Page 432, Transportation Methodology: "The model's 2040 cumulative year includes growth that is consistent with adopted general plans within the County and with regional projections contained in Plan Bay Area 2040." There is no way to determine if the multiple Sonoma Valley projects that are reasonably foreseeable are included in these growth forecasts.

C191-44

Page 440: "For informational purposes, it is estimated that the Sonoma Developmental Center historically generated approximately 3,800 daily vehicle trips, suggesting that the Proposed Plan would generate approximately 13 percent more vehicular traffic than historical uses." This type of statement skews the analysis and attempts to minimize the impacts of the proposed plan, by comparing trips to historical levels that are not relevant to current conditions. This type of bias should be removed from the DEIR.

Internal Circulation Impacts: The DEIR claims that there would be little or no traffic impacts resulting from internal vehicle trips at the SDC site. However, if Arnold Drive is considered part of the "internal" roadway system, this conclusion is invalid. Arnold Drive, as a major connector roadway and essential part of the internal roadway system will be adversely impacted by the large increase in vehicle use.

Specific Plan Policy 3-27, "Provide no free parking within campus." The EIR did not analyze the impacts of this policy. This policy must be removed from the specific plan. There will be impacts on neighboring narrow streets and restrictions on vehicular access. Furthermore, where do people park their extra cars, given that only 1 space per unit is required? Impacts on recreation users – people who can't afford to pay for parking. Also, visitors to the site? Nowhere in Sonoma Valley are there parking meters.

C191-45

Specific Plan Policy 3-30: "Allow adjacent on-street parking spaces to apply towards minimum parking requirements." How would this work if there is no free parking on campus?

Back-in diagonal parking – this technique doesn't work in semi-rural areas where there are large trucks, trailers, etc. This parking configuration will have adverse impacts on roadway operations and safety.

Policy 3-43, "Work with Sonoma Regional Parks Department to ensure that there is adequate off-street parking for parks users on both the east and west sides of Arnold Drive, including through the use of

shared parking areas, and eliminate existing on-street parking along Arnold Drive north of the Core Campus."

C191-45

This area is not part of the campus, is it? It is in the county road right of way and is an extremely popular trail access and should NOT be deleted. People with disabilities use this parking area to access the paved pathway because it is the closest area to park to pavement. Removal of this parking area will have adverse impacts on recreation access. This policy should be removed from the plan.

Specific Plan Components Causing Impacts

There are numerous proposed Specific Plan policies and components of the proposed site plan that will have direct impacts that have been underestimated. As mitigation, revisions must be made to certain plan features. Here are some examples.

C191-46

Page 4-6, Specific Plan: "Employment uses are clustered in the northwest, creating a job center" – this is one of the most sensitive places for wildlife movement. Structures, employees, and vehicles will have significant impacts on the wildlife corridor in this area. Revisions to the plan are needed to avoid this impact.

Specific Plan Figure 4.1-3 (FAR) doesn't show 2.0, which is what much of the campus will be allowed. Permitting 2.0 FAR reflects a strictly urban plan. There is no consideration of the site's special landscape features or of its semi-rural location, or the people living in adjacent neighborhoods. The FAR should be reduced in highly visible scenic areas along Arnold Drive and in areas where wildlife movement is important.

Specific Plan Page 4-7, Plan Impacts: Provide an "active jobs center for the broader Sonoma Valley" – this will generate thousands of extra vehicle trips that are unnecessary to meet the project objectives. The state legislation does not mandate a job center nor is it appropriate in this semi-rural location, not on a transit corridor. This land use is inconsistent with county city-centered growth policies and should be identified as such in the DEIR land use policy consistency analysis.

Page 4-10, Specific Plan: Creek buffer is only 50 feet – is this adequate for protection of wildlife movement?

Specific Plan Permitted Uses Table 4-3 and Potential Impacts:

C191-47

- Laundry plant, fertilizer plant, etc. - These uses would result in use of highly toxic chemicals, in close proximity to homes. This impact has not been analyzed.
- Timberland Conversions – Impact 3.2-3 states that: "Further, the proposed plan does not contemplate allowing any timber harvesting activities in the area." However, Table 4-3 of the Specific Plan allows Timber Conversions as a permitted use in both the Preserved Open Space lands

and in the Flex zone. This is a significant impact that has not been identified. Impact 3.2-3 must be modified to note this impact.

C191-47

- Tasting rooms would be permitted by right in flex zone - Please remove this from the list of permitted uses. Glen Ellen and Sonoma have been overrun by tasting rooms and they do not benefit residents.
- Resort permitted by right in Hotel Overlay zone and the flex zone - Elsewhere, a hotel is referenced, which is different from a resort. Neither a resort nor hotel should be allowed by right, potentially circumventing public review and CEQA.
- Both a conference center AND a 120 -room hotel are listed as permitted uses. This combination of uses is not discussed or analyzed in the DEIR. What was assumed for VMT of these two combined uses? Why are both a conference center and a hotel allowed – this was never discussed with the community?

C191-48

Specific Plan Policy 4-3, "Require completion of at least 10,000 square feet of retail and eating and drinking establishments and of at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive." This policy could hamper housing development. If the County truly wants to promote housing, why is there a condition limiting housing until at least 10,000 square feet of commercial is developed? This provision seems contrary to the purpose.

Policy 5-K Arnold Drive Overlay: "Along Arnold Drive, development should maintain the feel and scale of the buildings and landscape along Arnold Drive, including with a variety of building types and scales, a continuous landscape setback, activity, and views into the SDC site."
This goal and its implementing policies must be modified to say "shall" and include provisions to protect views of Sonoma Mtn. and Mayacamas from Arnold Drive. Otherwise, there will be a potentially significant impact on both historic resources and visual resources (scenic views and scenic view corridor). There is no mention of protecting these views or the existing beautiful mature trees that line Arnold Drive. Also, existing setbacks and lower building heights must be maintained along Arnold Drive. Current proposed policies don't provide those protections that the community has requested, repeatedly.

Policy 5-52 "Vary building heights and types along Arnold Drive to avoid a monolithic appearance and to foster an interesting streetscape, and the existing setbacks along Arnold Drive should be maintained." This policy needs to be strengthened by replacing "should" with "shall."

Chapter 4 Alternatives

C191-49

Page 529, No Project Assumptions: "While this EIR cannot pre-judge the State's actions, the EIR tries to frame these in light of the State Legislature's established land use objectives for the site, per Govt. Code Section 14670.10.5. Furthermore, the State has already released a developer request for proposal for development of the site pointing to the Proposed Plan underway, and can enter into long-term ground leases with private developers—cited as a mechanism for the site in the Government Code for SDC redevelopment—so that the State retains planning control over the campus unfettered by local regulations to achieve these land use objectives, should the County be unwilling to plan and zone for these uses."

Under the No Project alternative, it cannot be assumed that the state will take control of the site and that the county will have no land use authority. If the state proceeds with sale of the property, any private developer would be subject to county land use controls. The RFP issued by the State clearly states that the property is being offered for sale. There is nothing in the RFP referencing the possibility for a long-term ground lease with private developers. Furthermore, there is no documentation of how the EIR preparers derived the housing and job numbers for the No Project scenario. The State legislation does not specify that jobs are a high priority. C191-49

Historic Preservation Alternative: It appears that the Historic Preservation Alternative arbitrarily excludes some elements in order to make it look less environmentally superior. For example, the road connection to Highway 12 (for emergency response) is not included. As a result, the Draft EIR claims that the Historic Preservation Alternative has greater evacuation impacts than the proposed plan. All things being equally compared, the proposed project will have substantially greater impacts on evacuation times.

Page 533: "Thus, it is anticipated that some new development would occur under the Historic Preservation Alternative, and this alternative would prioritize market rate housing units over affordable housing units in order to generate adequate financial returns, undermining the State mandate and project objectives to promote affordable housing." There is no documentation of this conclusion – please provide evidence to support this statement that market rate housing would be prioritized over affordable units. In fact, compared to current and projected construction costs for new buildings, adaptive reuse is an effective way to reduce costs. The alternative could still promote affordable housing, which may be more viable with lower adaptive reuse costs. Furthermore, there are financing mechanisms to fund affordable housing and policies can be included in the Specific Plan to promote more affordable housing. C191-50

Page 570, Environmentally Superior Alternative: "Overall, the Historic Preservation Alternative is the environmentally superior alternative…" The text goes on to dismiss this alternative and minimize its environmental benefits. To say that the proposed plan's impacts are "largely comparable" to the impacts of other alternatives is inaccurate and misleading. The types of impacts may be the same, but the magnitude of impacts is much less with a reduced size alternative. The Historic Preservation Alternative, in addition to reducing historic resources impacts, would substantially reduce impacts in the issue areas of traffic, biological resources, land use, visual, air quality, climate change, and public services, if properly compared to the proposed plan. Even if reuse of existing buildings may be more expensive than new construction, it would offset the significant greenhouse gas emissions and site disruption that will result from demolition and new construction. The reuse analysis conducted by the planning team did not factor in the costs of mitigating greenhouse gas impacts, which will be substantial. Therefore, the Historic Preservation Alternative provides significant advantages over the proposed Specific Plan. C191-51

Growth-Inducing and Cumulative Impacts

C191-52

Section 5.1.1.2 Jobs/Housing Growth: It is completely inaccurate to say that the proposed job growth of 940 jobs outside of an urban growth boundary, within the rural village of Glen Ellen is a "modest" number. The number of jobs cannot be compared to the county-wide number. Compared to jobs in Sonoma Valley, the addition of 940 jobs is significant and is growth-inducing. Commercial businesses are struggling to find employees for existing retail services so it is not clear how the EIR can claim that there is a shortage of jobs. Furthermore, the market study conducted for the Specific Plan determined that non-residential development did not generate overall revenues and was not a contributing factor for financial feasibility. As quoted in the SDC Alternatives Report (November 2021), "Commercial and industrial uses may support building construction costs but are unlikely to have a significantly positive impact on overall development feasibility."

While there is a large demand for affordable housing in Sonoma Valley, creating over 700 market-rate homes is a significant growth-inducing impact because there is no evidence to demonstrate the existing or projected demand for this high number of market-rate homes. These housing units will not serve the existing Sonoma Valley population – they will attract people from outside the valley and outside of Sonoma County.

C191-53

Page 568, Historic Preservation Alternative, Growth Inducement: "The Historic Preservation Alternative would result in 600 jobs, which is much lower than both the historical employment level of 1,365 employees at SDC prior to its closure, as well as jobs to fully balance the projected population and would thus not induce growth. Additionally, as with the Proposed Plan, all development will occur in already developed areas. The Historic Preservation Alternative would not induce substantial unplanned population growth in the Planning Area and the impact would be less than significant and comparable to the Proposed Plan. However, this Alternative would accommodate a lower proportion of the projected regional growth within the SDC campus, and lead to greater development pressures elsewhere in the region."

This is not a growth-inducing impact, yet the table shows it as having a greater impact than the Proposed Plan, which is absurd. There is no basis provided for this conclusion and no evidence of regional growth projections that show this demand in Sonoma Valley. It cannot be justified that this site should accommodate a disproportionate amount of the Countywide projected growth. There is no large-scale "projected growth" for this rural area because it is outside the urban growth boundary. Growth should be placed in urban growth areas, consistent with city and county policies to avoid leapfrog development and urban sprawl.

TRANSPORTATION POLICIES

C191-54

The County General Plan establishes Level of Service (LOS) standards for roadway operations. Although CEQA no longer requires LOS analysis, the LOS standards still apply to the proposed Specific Plan. The proposed Specific Plan is in direct conflict with these existing LOS standards. This policy conflict must be evaluated and disclosed in the DEIR.

C191-54

DEIR Section 7.2: Section 7.2 of the plan references additional project review but does not address any future CEQA review.

MISSING SPECIFIC PLAN POLICIES THAT WOULD HELP MITIGATE IMPACTS

Despite the large number of policies in the proposed plan, there are numerous critical policy omissions. Here are suggested policy additions and modifications. These policies should be incorporated into the EIR as mitigation measures.

- Prohibit Big Box Developments – this type of development would significantly impact the site and surrounding area and draw large numbers of vehicles.
- Prohibit exclusionary fencing within the campus, in order to allow wildlife movement throughout the campus.
- Establish MANDATORY project phasing programs to ensure that housing development is prioritized over hotel and commercial development.
- Require design features to incorporate permeability.
- Establish performance standards to guide project phasing.
- Establish mandatory policies to minimize demolition impacts associated with noise, air toxics, dust, etc. This should include project phasing.

Thank you for carefully considering and addressing my comments.

Sonoma County Planning Commissioners

RE: Preliminary Comments on Draft SDC Specific Plan and Draft EIR for 9/15/22 Meeting

Dear Planning Commissioners,

I am a land use planner and CEQA specialist in Sonoma County and have many concerns regarding the proposed large-scale SDC Specific Plan and the adequacy of the SDC Specific Plan Draft EIR. I am still reviewing the Plan and EIR and will submit detailed comments by the comment due date. However, I wanted to bring to your attention a few of the many issues that need to be addressed. Overall, the DEIR reflects a bias towards the proposed dense development and tends to dismiss the proposed plan's environmental disadvantages when comparing it to other reduced-scale alternatives. Substantial revisions are necessary to the EIR and Specific Plan to make the EIR adequate, under CEQA, and to create a plan that represents sound land use planning.

C191-55

Specific Plan Scale

C191-56

The planning process has failed to result in a plan that even remotely resembles a community-supported alternative. The promised community-driven process has not occurred. Despite widespread, valid public concerns about the proposed high-density plan and the Board of Supervisors direction to evaluate a plan with 450 to 800 residential units, the proposed Specific Plan still includes an extreme amount of development (1000 plus homes, 410,000 square feet of commercial), which is totally out of scale for this location outside of an urban growth boundary and in the middle of the semi-rural village of Glen Ellen. There is no project comparable to this size in the entire Sonoma Valley. This urban sprawl development, including a 120-room hotel and potential conference center, will, in effect, create a new city, in direct conflict with good land use planning principles and County growth policies. Yes, we need and want housing, but there must be a balanced approach that factors in site constraints, impacts, surrounding land uses, historic resource values, and limited transportation network. This balanced approach is even reflected in the plan's guiding principles (see DEIR page 5-6) but the plan fails to conform to these principles. Project objectives to "balance redevelopment with existing land uses" and "balance development with historic resource conservation" have been ignored.

The Draft EIR identifies significant, unavoidable impacts on historic resources and traffic from the proposed Specific Plan due to its size. There is no mitigation identified for destroying so many historic buildings and converting the site to a new urban development. These issues could be addressed with a smaller alternative.

Environmentally Superior Alternative

C191-57

DEIR page 570 states: "Overall, the Historic Preservation Alternative is the environmentally superior alternative…" The text goes on to dismiss this alternative and minimize its environmental benefits. To say that the proposed plan's impacts are "largely comparable" to the impacts of smaller alternatives is false and misleading. The types of impacts may be the same, but the magnitude of impacts on traffic, climate change, historic resources, noise, biological resources, public services and land use would be much less with a reduced-scale alternative. The Historic Preservation Alternative is feasible and its size and scale should be pursued as the preferred plan. Some modifications to this alternative could be incorporated to further reduce impacts, such as even more adaptive reuse and more compact development design. It appears that some impact-reducing elements included in the proposed plan were arbitrarily excluded from this alternative (e.g., the road connection to Highway 12 for emergency access), thus making this alternative appear less environmentally advantageous. Also, there is no reason to conclude that this alternative couldn't achieve affordable housing goals. Compared to current and projected high construction costs for new development, adaptive reuse can be an effective strategy to reduce overall project **costs and impacts.**

Deferral of Analysis

C191-58

The Draft EIR defers analysis of impacts on some resources to a future time when individual projects are proposed. However, most if not all future projects will be exempt from CEQA under permit streamlining legislation so there will be no means to limit full buildout or implement much-needed future mitigation measures.

Specific Plan Phasing

SDC Planning Advisory Team (PAT) members and public comments stressed the importance of project phasing to reduce impacts on the environment and on the community. There is only one requirement for phasing (Policy 4-3, which requires completion of at least 10,000 square feet of retail businesses and at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive) and this policy does not reduce any environmental impacts. The Specific Plan itself has a section on "Recommended Phasing" but these provisions are advisory and not mandatory. The EIR must identify phasing as mitigation to help further reduce traffic and other impacts.

Need for Performance Standards

C191-59

Project phasing should be based on performance standards adopted for each environmental issue area. In this way, impacts can be monitored and additional mitigation measures developed, as needed. For example, there is no certainty that massive demolition and construction activities, as well as the introduction of a large mobile population to the site, will not dramatically affect the surrounding open space resources. Before proceeding with full buildout, it should be proven that the site can actually accommodate the projected buildout.

Specific Plan Policy Language and Enforceability

C191-59

Many of the policies in the proposed plan are intended to reduce/avoid impacts but the wording is such that it is not mandatory and many policies are not carried forward to Appendix A, Standard Conditions of Approval. Thus, these policies cannot be relied on to be implemented and fully mitigate impacts. Any policy that does not have a strong "shall" statement is not enforceable.

Jobs/Housing Growth (DEIR Section 5.1.1.2)

C191-60

It is completely inaccurate to say that the proposed job growth of 940 jobs outside of an urban growth boundary is a "modest" number. The number of jobs cannot be compared to the county-wide number – this methodology purposefully minimizes the impact. Compared to the rest of Sonoma Valley, which is a distinct planning region, the addition of 940 jobs is significant and is growth-inducing. Also, there is no documentation of the need for these jobs in Sonoma Valley. The market study conducted as part of the Specific Plan alternatives report (November 2021, see sdcspecificplan.com/documents) determined that non-residential development did not generate overall revenues and did not contribute to financial feasibility. The alternatives report states: "Commercial and industrial uses may support building construction costs but are unlikely to have a significantly positive impact on overall development feasibility." Also, the EIR (page 11) states: "…the market demand for non-residential uses (with the exception of a hotel) is limited and higher employment levels will reduce financial feasibility."

While there is a large demand for affordable housing in Sonoma Valley, creating over 700 market-rate homes is definitely a significant growth-inducing impact because there is no existing demand for this high number. These housing units will not serve the existing Sonoma Valley population – they will attract people from outside the valley and outside of Sonoma County.

Comparison to Previous Institutional Use

C191-61

The EIR analysis, including the growth-inducing section as well as other sections, attempts to justify the large-scale plan by erroneously comparing the proposed plan population and employee growth to the previous institutional use and number of clients/employees. This comparison is invalid and should not be used as a basis for over-developing the site due to the fact that:

- As an institution, SDC tread very lightly on the environment and adjacent community. At its most populous, most of the residents of SDC did not leave the property. They did not drive cars, they didn't go offsite to schools, doctors, restaurants, etc.
- Vehicle trips were primarily limited to employees divided into three shifts so that traffic was spread out, rather than concentrated at peak hours. There were no retail commercial uses or a hotel to generate trips.
- Because of the limited outdoor activities and absence of constant vehicle traffic onsite, people and cars did not interfere with wildlife movement; the campus was open, peaceful, and not occupied with uses that generated a substantial amount of traffic (e.g., hotel, restaurants, etc.).

C191-61

- Employment and resident numbers at SDC reached a peak during a time over 50 years ago when there was very little cumulative growth in Sonoma Valley and both Arnold Drive and Highway 12 were still well-functioning roadways.

Nor is it valid to compare existing building square footage to proposed square footage in an attempt to minimize impacts, as it is the proposed **use** of the buildings that drives most of the impacts.

EIR Traffic Assumptions

C191-62

There is no guarantee that people who live onsite will work there. That cannot be assumed for purposes of analyzing traffic impacts. Also, it cannot be assumed that the roadway connection to Highway 12 will be developed. Therefore, the traffic impacts are substantially underestimated in the EIR.

Wildlife Corridor Impacts

C191-63

Despite many scoping comments, impacts on wildlife movement **through** the campus are not addressed in the EIR. The campus itself is part of the wildlife corridor and must be acknowledged as such. Furthermore, there is no overall prohibition or restrictions on fencing within the campus (only prohibition on wooden fences) so wildlife will likely be blocked from movement through the campus. There will be significant impacts on wildlife movement from the introduction of thousands of people and vehicles, as well as fences.

No Project Alternative Definition

C191-64

Under the No Project alternative, it cannot be assumed that the state will take control of the site and that the county will have no land use authority. If the state proceeds with sale of the property, any private developer would be subject to county land use controls. The RFP issued by the State clearly states that the property is being offered for sale. The RFP contains no reference to the possibility for a long-term ground lease with private developers. Therefore, this is not a reasonable assumption.

Financial Feasibility

C191-65

Despite making references to financial considerations, there is no definition or accurate assessment of the financial feasibility of the proposed plan or alternatives. While financial feasibility is required, there is no mandate to maximize revenues at the cost of other resources and values, or at the cost of reasonable land use planning.

Thank you for considering my comments. Please feel free to contact me if you have any questions or need clarification on any of these comments.
Regards,

Vicki Hill, MPA

Email sent to Landmarks Commission:

September 5, 2022

Dear Landmarks Commissioners,

I am unable to attend the Landmark Commission hearing regarding the SDC Specific Plan and Draft EIR but have the following comments. As a land use planner and CEQA specialist, I have serious concerns about the proposed Specific Plan and it's impacts on historic resources (and many other environmental impacts). These impacts could be substantially reduced by a smaller alternative, as identified in the Draft EIR. C191-66

1. A redevelopment plan of this scale (over 1000 homes and 900 jobs) on the historic SDC campus will destroy multiple significant historic structures and the historic setting and values of the site. Although the Draft EIR assumes 1000 homes, Specific Plan Table 4-2 identifies maximum buildout numbers, which total 1210 residential units. This total does not include density bonuses that will likely be granted to the future developer. It will not be possible to preserve the historic character of the site with a project of this size.

2. The proposed plan is inconsistent with one of the fundamental project objectives, which calls for balancing development with historic resource conservation. The high-density plan does not provide a balance and would not maintain the historic integrity of the site. The SDC site has been determined eligible for listing as a Historic District under the National Register of Historic Places.

3. The Draft EIR identifies **significant, unavoidable** impacts on historic resources from the proposed Specific Plan. There is no mitigation identified for destroying so many historic buildings and converting the site to a new urban city-like development, as called for in the proposed plan. C191-67

4. The Draft EIR identifies the **Historic Preservation Alternative** as the **environmentally superior alternative**. Because of its reduced size, impacts on historic resources would be **less than significant** under the Historic Preservation Alternative. This alternative would also be consistent with the project objectives. Furthermore, this alternative has other environmental advantages, some of which have been dismissed in the Draft EIR.

5. While financial feasibility is required, there is no mandate to maximize revenues at the cost of historic resources. The Historic Preservation Alternative is feasible and its size and scale should be selected as the preferred plan. Some modifications to this alternative could be incorporated to further reduce impacts, such as even more adaptive reuse and more compact development design. It appears that some impact-reducing elements of the proposed plan were arbitrarily excluded from this alternative (e.g., the road connection to Highway 12 for emergency access). Also, there is no reason to conclude that this alternative couldn't achieve affordable housing goals. Compared to current and projected high construction costs for new development, adaptive reuse can be an effective strategy to reduce overall project costs and impacts. C191-68

6. The Draft EIR defers analysis of impacts on individually significant historic resources to a future time when individual projects are proposed. However, many future projects will not be subject to CEQA and therefore the analysis cannot be deferred – it must take place as part of the Specific Plan EIR and mitigation measures must be identified.

C191-69

Thank you for considering my comments during your deliberations.

PAGE PUBLIC COMMENT 14 COMMISSIONER COMMENTS 58 -

oOo-

A P P E A R A N C E S (Appearances Via Zoom) PLANNING COMMISSION: Commissioner Chairman Larry Reed Commissioner Greg Carr Commissioner Jacquelynne Ocana Commissioner Shaun McCaffery Commissioner Eric Koenigshofer STAFF MEMBERS: Scott Orr, Deputy Director Brian Oh, Division Manager Tasha Levitt, Secretary Jennifer Klein, County Counsel

-oOo-

Pursuant to Sonoma County Planning Commission Agenda on Thursday, September 15, 2022, commencing at the hour of 1:03 p.m. via Zoom videoconference, before me, MICHELLE D. BARBANTE, a Certified Shorthand Reporter and Deposition Officer of the State of California, the following proceedings were had: -oOo- CHAIRMAN REED: Thank you, Brian. That was very clear and succinct.

Any commissioner questions or clarifications? Commissioner Carr?

COMMISSIONER CARR: Just one, Brian. Maybe you could go over the process for the Board of Supervisors with respect to the final EIR. The County system is set up so that the Planning Commission's responsible for recommending a final EIR to the Board. The Board can hear comments -- as I understand it, the Board can hear comments on the adequacy of that final before they vote on certification, but they would not go through another draft comment and response process. Is that still the case? MR. OH: That is correct. And so through the Chair. Just there's what will be before you, potentially, at the end of October is just that the Planning Commission may make a recommendation either to

approve -- deny or approve with something with recommendations, and so they're sort of three different paths the Commission can take, and then ultimately that would need to happen to set us up to get in front of the Board of Supervisors for their final deliberation, potential approval, and that can't happen -- well, it can only happen no sooner than ten days after the -- the draft -- the final is released.

DEPUTY DIRECTOR ORR: And through the Chair. Just to offer a little more clarity on one point. So the public is able to comment on the process all the way up through the Board of Supervisors making a decision. We do have some stops along the way that -- like with, you know, during the draft EIR period for us to incorporate it into the final EIR, you know, the line has to be drawn somewhere, but on the process, public comment continues until the end of the public hearing at the Board of Supervisors.

CHAIRMAN REED: Good. Thank you.

Commissioner Koeningshofer.

COMMISSIONER KOENIGSHOFER: Thank you. Relative to the Plan itself, the Proposed Plan, if they're -- if people have concerns about the Plan that would potentially lead to some modification of the Plan, has that ship sailed entirely?

MR. OH: Through the Chair. No, it has not. So when we release both documents, I mean, that was really the first time the actual draft was up for public review, and so at this point, it's -- it's still very much a draft document for input.

COMMISSIONER KOENIGSHOFER: So I thought that the intro was that we're hearing comments on the DEIR today only. Could you clarify your -- that with the answer you just made? MR. OH: Certainly. So part of -- this isn't a CEQA requirement. It's part of our County Code that we conduct a public hearing as just another opportunity to maximize community input into the draft Environmental Impact Report, and so Commissioner Carr had alluded to this, you know, should the Commission want to have further discussion on the contents of the draft Plan, that's something that, you know, the Commission can request, and I will certainly accommodate.

DEPUTY DIRECTOR ORR: So Chair Reed, you're currently on mute.

CHAIRMAN REED: I was suggesting that Commissioner Koenigshofer was muted. Did that answer your question, Commissioner Koenigshofer?

COMMISSIONER KOENIGSHOFER: No.

MS. KLEIN: Would it help to put up the schedule again so you can see the meeting at which the item is coming back for consideration by your Commission and if there's a need for, you know, more? Would that help to look at that again? COMMISSIONER KOENIGSHOFER: Yeah. Well, they're fishing for it.

MR. OH: So the last day for comment on the draft EIR is September 26, so there's nothing that wouldn't be outside of the Planning Commission's purview to have a series of discussions or workshops focused on the Plan itself. And so to Direct -- Deputy Director's Orr's -- Deputy Director Orr's point, it -- the public, as well as the Commission, you know, at this point it's a draft, and so depending on how the Commission would like to provide input up until the presentation of the final EIR and Plan, which is right now tentatively set for October 27th, we can -- we can make that happen.

CHAIRMAN REED: Commissioner Koenigshofer.

COMMISSIONER KOENIGSHOFER: I may be the only one who's kind of confused about this. If there were potential changes to the Plan, couldn't that trigger potential changes of required analysis by an EIR? So -- and if today we're not hearing comments on the Plan, I -- I just -- I don't understand how that works. You

know, if everybody else does, let's just go ahead.

DEPUTY DIRECTOR ORR: Through the Chair. So it really depends on, you know, the magnitude of the change, and, you know, at that October 27th hearing, Staff will do its best to let you know things that would likely require changes in the EIR or things that can be accommodated in that day as we get towards -- as we move towards a recommendation.

CHAIRMAN REED: Scott, just to clarify. If this is a self-mitigating plan let's say, that comments to the Plan would automatically be directed towards a response in the draft EIR so that if there were some comments to suggest, let's -- let's strengthen the -- the Plan in terms of historic resources, that that comment could be received and that the Plan, you know, could

consider that; is -- does that make sense? DEPUTY DIRECTOR ORR: I believe that makes sense, and I believe I agree with that.

CHAIRMAN REED: Okay.

DEPUTY DIRECTOR ORR: You know, we're going to get a range of comments, and, you know, we are going to err on the side that it's something that needs to be addressed in the EIR and that it wasn't specific to the Plan in a bubble, in a vacuum, and not overlapping with the EIR at all.

CHAIRMAN REED: Got it.

Commissioner Carr? COMMISSIONER CARR: Well, I was going to hold off until after the public comments came in on the EIR, but part of my purpose in talking about the schedule is to first say that the schedule is completely inadequate and insufficient to have a good plan, even if we were to largely accept the Plan that's before us; that having a hearing and a decision on one day at the Planning Commission on a project of this magnitude is not possible, and we would not be doing our -- our due diligence on a plan in that time frame.

And so what I'm going to suggest, whenever the time is right after we get through this, is that we set up a schedule that realistically allows us to go through and deliberate on the Plan to make sure we have plenty of time for public input and -- and take, you know, probably months to go through this. And I know there are folks out there that probably don't want to hear that, maybe -- maybe a few, but it just is not possible to do a legitimate planning process job at one hearing, or even two.

And I -- I'm willing to commit myself to as many hearings as possible and in as short a time frame as we can and as many meetings as possible, as long as we go through the -- the Plan, and I would suggest probably page by page

and look at the policies and make changes as appropriate based on the -- you know, the comments that we get in the public hearing and based on Staff's input.

We -- we just took over a year to do the local postal plan. The local postal plan had nowhere near the input from the public that this plan is going to have. This is a major planning process, and to suggest -- I realize that you're under the constraint of having to tell the state that you're going to do this in three years, but it isn't going to happen. It's not going to happen in three years, and it's time that we just face facts. Let's do the right thing, have a legitimate expedited hearing process and deliberation process on this plan so that we do a good plan.

The EIR may or may not suffice for whatever we end up deciding. I don't know that. There's going to be eons of comments come in on the adequacy of this draft EIR that we're going to have to read through and read the responses and go through that. I just think we're -- it's unrealistic to try to do this. And I further doubt that the Board of Supervisors is going to do this in one hearing either. It's just not going to happen, and it's time that we face the music, talk to

our state partners and say, "Look, we're willing to hurry this thing up, but it is not going to be done by the end of the year." CHAIRMAN REED: With that, Scott, Brian, I don't know how you want to respond or if we want to just dive into public comment. I -- do you want to address the process to date, you know, in terms of the public input and how we've gotten to where we are? I mean, when I read through the Plan and read through the DEIR, it's -- it's a pretty thorough and thoughtful proposal, and it seems clearly evaluated, and I -- and I don't think we've spoken to what the

process has been to date.

DEPUTY DIRECTOR ORR: So I will start off and then I'll defer to Brian Oh on the process to date, and I'll focus on where we are and what's coming. You know, from the Staff perspective, you know, we've tried our hardest to balance, you know, the -- all of the competing interests. Our local needs both, you know, as a community and as a -- you know, as planning professionals with, you know, the state statutes and requirements in order to set our Board of Supervisors up for making -- being able to make a decision within the agreed upon time. So but I'm sure we'll talk about it more as we continue this meeting, and then after we receive public comment.

But Brian, do you want to expand on the process to date a little bit? MR. OH: Sure. Through the Chair. So typically with any of our long-range initiatives, most of that time in that three-year process involves working directly with the community, and so this project is unique in that it started and likely will end virtually, and so we've had to deal with a number of challenges and learn -- and learning experiences along the way, but ultimately what is before you today -- and again, there's -- there's no action here. What we're trying to do is move us to getting the draft into a final, but a lot of engagement has gone into that, so everything from larger 200-plus -- 200-person-plus Zoom workshops focused on refining those draft policies that are in the document, the 200-page document, to much more focused engagement.

And so last year we invested a lot of time and -- and money into developing a community engagement strategy, which was inclusive, which could allow us to hear and maximize our input across all parts of our county, and so there was a number of focused -- sort of focused -- focus group meetings with

people with developmental disabilities. We work closely in direct partnership with our Latino community in the

Sonoma Valley, and so there's a lot of strategies that we employed that went into what is out there in the public for review, and so we're continuing to refine that as we get comments and input from the community. And so while there -- you know, when you look at that schedule, there's, you know, just a handful of hearings. My job, as Staff for the Planning Commission here, is to provide, you know, all that -- all the information that the Commission may need to feel comfortable, and so to whatever degree the number of meetings that may be, again, that's something that I'm -- I'm ready, you know, to clear the -- the schedule and the calendar for us to -- to set us up for consideration on October 27th and to get in front of the Board by November 8th.

CHAIRMAN REED: Great. Okay. Thank you for that. It looks like we have close to 100 attendees, and I think we probably want to limit comment to two minutes at this point just so we can try to keep on track. And let's try to focus on, you know, the Plan as it is presented and the adequacy of the environmental review, and then we'll pick up after public comment and get back to Commissioner Carr's concerns and discuss it more.

Scott, do you want to run the timer? DEPUTY DIRECTOR ORR: Yeah. So just for

members of the public who this may be your first Planning Commission meeting, so I will be sharing my screen with the timer that will tick down from two minutes. Generally I will say the name of the next person up, followed by the person after that, just to, you know, have a smoother flow, so just please be on the lookout for your name.

We -- we will get to everyone who wishes to speak, but just for the purposes of meeting planning, it really helps if everyone who wants to speak can put their hand up now, if only so we can pause and reconsider halfway through if we need to have a bathroom break. Because we do expect a lot of comments. I do have 15 hands up at the moment, so we're going to be going for at least a half an hour.

So the first speaker is going to be Bean Anderson, followed by John Stalcup. And as soon as I share my screen, I will allow you to speak. And just confirming everybody's seeing the two minutes? I see thumbs up, so, Bean, you should be able to unmute yourself.

PUBLIC COMMENT BEAN ANDERSON: Great. Thank you everyone. I appreciate this opportunity to speak. I'm going to speak mostly about the EIR as it relates to the

historical alternative.

On page 561, it states the Historical Alternative assumes a preference for more large lot, single-family homes in order to maximize financial feasibility. My question is, based on what analysis or precedent?

C192-1

I'd like to point out the Community's Alternative Plan that we submitted last Friday to the DGS does not rely on large lot single-family homes but contains a mix of all types of housing in a village community setting. And for those of you, just to make it clear, the Community Plan was developed by the people of Glen Ellen and the surrounding Sonoma Valley. It was submitted to the DGS, as I said, last Friday. It came about due to extreme frustration with the County's planning process, where, while there were many community meetings and opportunity for input, they were generally largely ignored and both the MAC and the -- one of the PATs has filed complaints

about that. So the community got together to develop a plan on its own. Some key issues of it are that it maintains local community control over the land for now and actually for the next hundred years. It's a truly community-developed plan, and I'd like to point out, this is a really democratic government action. It was

C192-1

done by the people for the benefit of the people, so thank you very much. I appreciate the opportunity.

DEPUTY DIRECTOR ORR: Great comment. After John will be Arthur Dawson.

JOHN STALCUP: Hey there. John Stalcup, Glen Ellen resident for 24 years. I have over two dozen comments that I'll be submitting on the Plan. I've read it. I just want to address one thing here, and that is the impact of egress in a wildfire.

C192-2

The Plan says there's a fire report that says everything's fine, essentially, and everything isn't fine. There's no analysis, as the last person noted, and there isn't any analysis on most of the critical significant impacts of this plan, which, again, I've been here for a couple decades. I've seen a lot of things go through. I've never seen such a paucity of analyses as this.

And I realize that there are a lot of interests out there that want to develop this into a megalopolis, and it just doesn't fit the -- we call it Valley -- that we live in, not just Glen Ellen, but Kenwood/Oakmont/ Sonoma. It's going to impact all of us, but particularly, as I say, with fire, because we barely made it out with our lives the last time. And to say that there's no significant impact, I -- I just don't

know where -- whence this comes. That's it. Thank you.

DEPUTY DIRECTOR ORR: Thank you, John.

After Arthur, it will be Josette Brose-Eichar.

Hi, Arthur, you can go ahead.

ARTHUR DAWSON: Okay. Thanks. I serve as Chair of North Sonoma Valley Municipal Advisory Council, or the MAC for short, and we're in the process of drafting a response to the draft EIR, and this will represent extensive community input over several years, which is also summarized in a letter to the supervisors in January.

C192-3

Whatever number of units is approved, we request the Specific Plan be revised to incorporate a multiphased approach, and it includes a robust Mitigation Monitoring Program. No one knows how this is going to turn out, and there needs to be room to maneuver in our rapidly changing landscape. It appears that the DEIR fails to disclose the full extent of impacts that will result from this large-scale development outside an urban growth area. The Specific Plan represents one of the largest, if not the largest, development in the history of Sonoma Valley and is in conflict with County General Plan policies calling for city center growth. Our many concerns about this project are detailed in our letter.

I'd like to highlight that the DEIR itself states that the Historic Preservation Alternative is environmentally superior. That alternative calls for a cap of 450 housing units. The same number that has been endorsed by the MAC.

Scale is the most obvious mitigation for this project. A smaller project means a smaller impact. One specific concern I'd like to mention, the DEIR states that the Core Campus is not included in any fire severity zones. The map used in the DEIR doesn't show such zones in the local responsibility area where the Core Campus is. That map was drawn by the state fire marshal

and doesn't include that data for the LRA. In fact, the state's draft map shows moderate and high fire severity zones within the Core Campus. Please re-examine this data, and also please add a third scenario for the possibility of a wildfire coming down from Sonoma Mountain. Thank you.

C192-3

DEPUTY DIRECTOR ORR: Thank you, Arthur.

After Josette, it will be Sonya Karabel.

JOSETTE BROSE-EICHAR: Josette Brose-Eichar, Boyes Hot Springs. I would like to thank Commissioner Carr for his realistic assessment and questions that he had up-front.

C192-4

I'm going to focus on just a few things since

time is short. The hotel is one of the biggest problems. Vehicle miles traveled are not dealt with properly. It is pushed off to the future. Not only is gas travel not dealt with realistically, but the reality's that these will be low-paying jobs and employees will be traveling from outside the Sonoma Valley. Really, hotels should not be in the Specific Plan to begin with.

Then we have the connector road to Highway 12. Nowhere is it addressed the impact this road will have on the wildlife corridor. It will be a complete disruption in how animals move today. Plus, it will be virtually useless during what we now -- what we now have: Unpredictable wildfires.

Assumptions made in the draft EIR are not reality.

Water. I see no analysis of what water we have today from our various water districts and no acknowledgment of climate change and a decreasing supply of groundwater. No specifics are offered on water recycling. Should that not be in the EIR? And why is the most ecologically sound plan not being considered? As an EIR is an environmental impact report, not -- why not go

for the least environmental impact? And last, why are there no real numbers, aka, economic feasibility to explain pushing these housing units, which will most likely be unneeded market rate homes. The EIR uses outdated thinking and conclusions as if this was a new subdivision in Walnut Creek and not a massive development in the middle of a rural area. The impacts are not defined and push to the future when they will not be dealt with adequately. Thank you so much. C192-4

DEPUTY DIRECTOR ORR: Thank you, Josette.

After Sonya will be Orlando O'Shea.

SONYA KARABEL: Hi. My name is Sonya Karabel, and I'm with UNITE HERE Local 2, which is the hotel workers union for Sonoma County. I am commenting not really on the EIR but on the Draft Specific Plan, but since it seems that there's not going to be any future opportunity to comment on the Draft Specific Plan, I wanted to get that in now. C192-5

And I just wanted to raise the -- you know, the Sonoma County, especially Sonoma Valley, has a really, really big problem with inequality and with development that furthers that inequality, and in order for this development to be something that actually moves that forward and helps to address those problems, there should be community benefits at the Sonoma Developmental Center, making sure that there's strong affordable housing, that there's -- that the jobs that are provided

are good jobs, including, you know, if there are hotel jobs, that there's environmental protections, that there's wildlife -- wildlife corridors and that there -- that disability justice is integrated into the Plan.

And that the best way to do that, you know, for -- to ensure those community benefits is to put that into whatever the ultimate development agreement

C192-5

that happens is and actually get whoever that developer is to make legally binding commitments to community priorities, and so that's something that we want to see be integrated into the Specific Plan and -- and ensuring that, you know, when we do know more about what this development actually -- you know, what a developer is proposing, that that developer, you know, commits to doing something that really benefits the entire -- the entire community and the residents. So thank you.

DEPUTY DIRECTOR ORR: Thank you, Sonya.

Next up is Orlando, followed by Bryce Jones.

C192-6

ORLANDO O'SHEA: Hi there. I think what I want to address is both the Specific Plan and the EIR. I may be one of the few people in here now who actually had a loved one at the SDC site in the Northern STAR Unit. That is my son, who, since the closure of the SDC STAR Unit has endured horrible abuse in the community, which has been verified heartily by Community Care Licensing,

and he's currently being warehoused in his third stay at Northern STAR now in Vacaville, as a result of the close of the SDC.

So I want to make really clear, you are aware that state legislation mandates that priority needs to be given to the housing needs of individuals with developmental disability when planning. There's not nearly enough talk about that mandate, which you are legally mandated to do.

Along with many other families and advocacy organizations, I'm asking you to prioritize this population. Specifically we're asking for five enhanced behavioral support homes on the site, which would also be very good from an EIR perspective.

This issue is really of utmost importance, as this population is falling

through the cracks with the closure of Sonoma Developmental Center, and they are being subjected to ongoing harm due to the closure. So I'm asking everyone to honor the legacy of SDC, and I'm asking everyone involved in the process to carefully consider your legal obligations and to uphold your legal mandate to prioritize this population. Thank you. C192-6

DEPUTY DIRECTOR ORR: Thank you, Orlando.

After Bryce, it will be Steve Birdlebough.

Hi Bryce, can you hear me?

BRYCE JONES: I can hear you.

Thank you very much for the opportunity to speak today. My name is Bryce Jones. I live in Sonoma County for the past eight years and wanted to speak to the impacts of this project. Granted, a thousand units sounds like a lot of housing, but it's a drop in the bucket for what we need in terms of housing in Sonoma County. This project, as I can tell, preserves a huge amount of wilderness and open space, provides access to recreational opportunities, which is going to be great for multiple age groups, and as far as I can tell, you know, this project has been thoroughly discussed in the public. I've participated in some of the other comment sessions and would really like to applaud Permit Sonoma's Staff's work on this project. This is an incredibly attractive place to live from -- from my point of view, from somebody with a six-year-old daughter, you know, it seems like a great place to go for a walk. It's nice density so you can walk to different businesses that will potentially be there. There's a mixture of homes, and I think Staff has really done a phenomenal job, along with the consultants, on crafting something that takes into concern, you know, the -- the wild environment, but as well the needs of creating housing C192-7

C192-7

opportunities for

people and families in the county, and I would definitely like to recommend the planning commissioners support the project. And I really, you know, just think it's great. Thank you very much.

DEPUTY DIRECTOR ORR: Thank you, Bryce.

After Steve, it will be Teri Shore.

C192-8

STEVE BIRDLEBOUGH: Thank you. Steve Birdlebough with The Transportation and Land Use Coalition, and I -- I think that the Plan that was drawn up was based on information that was years old. The negotiations with the state assume that, because there were more than 4,000 people on this site years ago, that you could have a development here that would involve a lot more driving than was involved in the previous occupancy.

And the Air Resources Board is moving in the direction of reducing vehicle miles traveled. Sonoma County has a goal of reaching carbon neutrality by 2030. The state is looking at 2045. Our own goal would involve a six percent per year reduction in vehicle miles traveled. The state plan calls for about a one percent per year reduction. Both of those are very important to -- to honor, and I think this project just doesn't meet that goal.

Highway 12 is pretty much at capacity now.

Adding another 1,000 housing units in this particular location is not a good idea. Caltrans has told us that they don't want to have an additional road from this area over to Highway 12, so there's a lot that really hasn't been looked at and needs to be looked at in this situation. Thank you.

DEPUTY DIRECTOR ORR: Thank you, Steve.

After Teri, it will be Tracy Salcedo.

TERI SHORE: Good afternoon. My name is Teri Shore, environmentalist. I live in Sonoma Valley.

C192-9

First, I would support Greg Carr's comments about the Planning Commissioners to follow his lead. And regarding the planning, with all due respect to the urban planners, if this plan for the historic campus was in an existing city or town, I would probably support it, but unfortunately, it's in the middle of an ag and rural -- agricultural valley, and it really constitutes sprawl as proposed.

I believe that the CEQA is inadequate, and the self-mitigating plan does not fully mitigate the environmental impacts by a long shot.

I'll be providing more detailed comments, as will other folks, but I just wanted to focus on the open space at this time. And I'm very concerned that the Specific Plan in the EIR give few details about the

preserved open space and how it will be protected and their re-introduction or introduction of commercial agriculture. Under the land use plan, I don't think any of these items were anticipated and preserved open space, which are in Table 4.3 of the Specific Plan, which includes wine tasting rooms, wholesale nurseries, timber conversions, indoor crop cultivation, farm stands, farm retail sales, animal keeping, agricultural processing, agricultural crop production and cultivation. None of those are appropriate for preserved open space, and none of those were studied in the EIR, so that is one major failure, and we need to clarify the open space unprotected from commercial agriculture. Thank you very much.

DEPUTY DIRECTOR ORR: Okay. After Tracy it will be Meg Beeler.

C192-10

TRACY SALCEDO: Hi, I'm Tracy Salcedo, and I live in Glen Ellen -- am I? Yeah.

Okay. And I just have a couple of comments. I'll be making other comments in a letter, but I'm talking right now from -- I'm multitasking from the library at Dunbar Elementary School in Glen Ellen, and it occurs to me that one of the things I haven't seen in either the EIR or the Specific Plan is discussion about the schoolkids that will be part of the new community that is being planned.

C192-10

If you add about a thousand homes at 2.5 people per home, assuming that the half person is a child and not someone who's been lopped off at the hips, that means that up to 500 of the new residents of SDC will be school-aged. Since there's no school planned for the property, that means all those kids will need transportation buses and/or private vehicles to get to or from school. While vehicle miles traveled will be minimized by use of electric vehicles, that doesn't offset the traffic impacts that will be felt Valley-wide.

So I would like to see the DEIR analyze replacing possibly the hotel with a school property, so that kids could maybe walk to school, and/or replacing the proposed conference center or, you know, something that would really benefit the community that way.

And just a final comment about cumulative impacts, which is kind of what I was talking about, and the analysis of fire danger. I'd to see the report analyze the cumulative impacts of shunting all of the proposed people onto Highway 12 in the event of wildfire blowing out of the Mayacamas and onto Arnold Drive, in the event of wildfire blowing off of Sonoma Mountain. And the reason is basically because you're taking so many more people and you're throwing them onto either one of those two-lane highways, and no matter which direction they go, they're going to end

C192-11

up in a bottleneck, either in Sonoma or heading into Santa Rosa. So those are my comments. Thank you.

C192-11

DEPUTY DIRECTOR ORR: Thank you, Tracy.

After Meg Beeler, it will be Bonnie Brown.

MEG BEELER: Good afternoon, Commissioners. I'm Meg Beeler, the Chair of Sonoma Mountain Preservation. Like many in the audience, SMP believes that the DEIR needs significant modifications. We'd like it to be used as a tool for systematic implementation as required by the state. We'd like your help with this.

C192-12

The proposed new road from Arnold Drive to Highway 12 is one example. The road will create substantive adverse effects on the wildlife corridor, on the open space and on the protected wetlands that support documented endangered species. The road will be in the direct path of the 2017 fires, yet sending residents fleeing into Diablo winds is not even mentioned in the DEIR.

Quote, "best practices" in the DEIR did not address the cumulative effects of such a road. The approach of quote, "We'll do needed studies later," unquote, gives developers no clear direction up front and does not guarantee wetlands and species protection or mitigation policy.

Riparian zone protection is another. The DEI -- DEIR ignores studies that say that creek setbacks should be up to 325 feet. Instead, it proposes only a 50-foot setback next to Sonoma Creek and none next to Mill Creek. Adding 2400 people around these creeks, without addressing the cumulative effects of the environmental degradation is not best practice. It is unacceptable. The community's offered many specific suggestions for best practices and mitigation. It's 3500 pages, as you've noticed, yet these have largely

remained unaddressed or ignored. We're counting on you to offer better direction to Permit Sonoma. Thank you.

C192-12

DEPUTY DIRECTOR ORR: Thank you Meg.

After Bonnie Brown, it will be Rick Coates.

BONNIE BROWN: Hi. Good morning. Good afternoon. I'm Bonnie Brown, chair of the SDC Campus Project. We have a proposal out for two years for adaptively reusing some of the residential buildings on the east side of the build -- of the campus for single-resident occupancy for the disabled and people of lower income. They are good -- they are in good condition, as by all reports should have been done. They have some toxics that need to be removed.

C192-13

According to the Plan, Specific Plan, and you can see all the maps and in the DEIR, all of the buildings on the east side of Arnold Drive are planned to be demolished and all new construction. And one of the really big impacts of that, which has never been addressed, is the -- there are only two unavoidable impacts that have been designated in the DEIR and one that needs to be included, and we have asked for it to be quantified, is greenhouse gas emissions when you tear down that many buildings and then source all of the new materials for all new construction. And it has -- I haven't found it anywhere in the DEIR when we asked for that to be addressed.

Also, involving the connector road through the open space, that would go right through the wetlands, in the middle of the great east side of the open space. It would be right where the groundwater recharge would be happening, wildlife, and then the road runoff. And actually the state agencies have said there would be a lot of greenhouse emissions.

C192-14

We have Madrone Road three blocks south of the entrance to SDC campus, and it is a wide road of three lanes most of the way. If people try to take that

C192-14

as an access during wildfires, they wouldn't be able to get onto Arnold Drive or Highway 12. They'd be totally impacted. There's not a use for this road, and it's really a bad idea. I hope you'll speak to that. Thank you.

DEPUTY DIRECTOR ORR: Thank you, Bonnie. So Sharon Church, I think I accidentally put you ahead of Rick Coates. Are you ready to speak?

SHARON CHURCH: Sure.

DEPUTY DIRECTOR ORR: Okay.

C192-15

SHARON CHURCH: Thank you. I'm Sharon Church. I'm a resident of Glen Ellen, and I have submitted some written comments already, but I would like to say, I appreciate Greg Carr's concern about the inadequate time on the schedule. It really feels like this horrendous plan is being shoved down our throats and that people haven't been listening and just, you know, minimally including a few little points here and there because we're going to ramrod through the maximum.

Well, economically feasible doesn't mean eco -- doesn't mean maximum building for maximum profit, ignore everything else, and that's exactly what seems to be happening here. So please, please, take the time, listen to the comments. Let's make some adjustments. The community wants to have something there that will

work and we can be proud of, that provides the legacy of care and housing for the developmentally disabled: Affordable housing. We don't need hotels, conference centers, expensive homes. Let's get real here about what we do

need and recognize where you're building it: In the path of severe fires. Knowing loosies [phonetic] were the affordable housing when that does come to -- to pass, because if you really believe in affordable housing, you're not going to just say, "Hey, developer, you can pay me off with a few bucks and we've done our job." That just doesn't work anywhere. So at any rate, the community's participated. We really want to feel like we're being heard, and we'd like to partner in this, but so far it doesn't feel like that's what's been happening. Thank you.

C192-15

DEPUTY DIRECTOR ORR: Thank you, Sharon. So next would be Rick Coates, followed by Bob Holloway.

RICK COATES: Yes. Can you hear me? DEPUTY DIRECTOR ORR: Yes, we can, Rick.

RICK COATES: Yeah. First, I want to mention that I represent EcoRing, which is a nonprofit that promotes ecotourism and green travel.

C192-16

I want to endorse what Commissioner Carr said. I think that he's spot on. One of my big concerns is that I feel that the excessive development here will actually harm tourism; that it will diminish the attractiveness of the site and will increase the traffic to where people will not want to visit. And there's a great deal of economic activity that accrues from the tourism in the area, so it's -- it's a problem in that regard, and I think it needs to be addressed.

I'm very concerned, too, about the cavalier attitude towards VMT and the greenhouse gas generation that it represents. VMTs have to go down, and this is going in the wrong direction. And the EIR that they're presenting suggests that it's not mitigatable. Well, that's because the plan they chose isn't mitigatable. They need to revise the Plan, and it can be

C192-16

mitigated in one way by reducing the amount of development.
At any rate, so also I'm concerned about the fact that there's not a consideration for bicycle transport to Sonoma and to -- and to Santa Rosa from Eldridge, so there doesn't seem to be alternative transportation available. Thank you.

DEPUTY DIRECTOR ORR: Thank you, Rick.
After Bob, it will be Derek Knowles.

C192-17

BOB HOLLOWAY: Hi. This is Bob Holloway. I'm a resident of the nearby Agua Caliente neighborhood, and I want to thank you for the opportunity to comment here.

I'd like to submit my strong support for the Historic Preservation Alternative that's outlined in the draft EIR. As you know, the County's preferred alternative, which is the Specific Plan, it does provide some very thoughtful preservation guidelines in the form of its goals and policies in the Cultural, Historic, and Tribal Cultural Resource, Chapter 3.5.33, but a loss of 28 percent of the contributing historic resources, combined with this new dense infill construction of, like, 30-foot to 40-foot high additional infill building and the alteration and reconstruction of the remaining contributing structures within this national and state register eligible historic district is simply too great a loss of the historic fabric to retain the district's historic feeling and character. This would cause a property to lose its eligibility for listing in the national and the California registers and as a California historic landmark. These impacts are described in the draft DEIR as significant because they cause a substantial adverse change to the historic district as defined by the -- the district sense of place, and it would not honor the legacy of the

developmental center's former uses and Staff. The historic story can best be told as -- with as much of the original character as possible, even with repurposed original buildings.

C192-17

So 1,000 units of housing is way too impactful, and I'd urge you to look at the Historic Preservation Alternative outlined in the DEIR as the preferred alternative. Thank you.

DEPUTY DIRECTOR ORR: Thank you, Bob.

After Derek will be Claire A.

C192-18

DEREK KNOWLES: Hi there. I'll keep these brief to squeeze more people in. But I'm 33 years old and have lived in Sonoma Valley for about ten years now and just want to offer a perspective from my generation, a generation that's come of age during wildfires and heatwaves and COVID and what seems like ceaseless development.

As I consider my future in this county, you know, in light of a housing affordability and climate crisis, the SDC planning process has been a revealing, if not frustrating, microcosm of the gulf between what this county says it values and what its actions suggest.

I've attended many of these public comments and followed the evolution of this project closely and in community of people who live in the area, and I think it's obvious to anyone who's paying half -- halfway decent attention to this plan means to me the DEIR is friendly for developers and not the community. If the

latter was actually granted the respect and attention it deserves, these units would prioritize affordable housing and minimize environmental impact entirely and really meet the moment of a world that's rapidly changing every day and hurdling us into an unlivable planet. And this plan obviously

doesn't do that.

C192-18

I urge the Commission to listen to the overwhelming community consensus and echo the sentiment, as well of Commissioner Carr to allow more time for this process to be intelligently and democratically completed, and thank you everyone for their time.

DEPUTY DIRECTOR ORR: Thank you, Derek.

After Claire, it will be John McCaull.

C192-19

CLAIRE A.: Hello, this is Claire Amkraut. I'm a resident of Boyes Springs, and my comment is related to page 561, where it says open space is available within the Core Campus. It would be less than in the Proposed Plan due to lower densities in existing building in the location of buildings within areas reclaimed as open space in the Proposed Plan, and I'm talking here specifically about the Historic Alternative.

What analysis is this based on? And I want to point out that the community's alternative, which was presented to DGS on September 9th, has more open space

than the Proposed Plan and the buildings do not interfere with open space. I also want to point out that the lower number of housing units in the Community's Plan presents many options for mitigation of the issues that are pointed out in the EIR.

Continuing on, on page 562, Paragraph 2, it refers to the lower financial feasibility of the Historical Alternative, and what evidence do you base this on? The Community's Plan shows more financial feasibility based on a compact, smaller scale layout rather than the sprawling layout in the Preferred Plan.

I also am going to close by saying that I support Commissioner Carr's

comments and also Bob Holloway, who is another supporter of the county looking at the Historic Alternative. Thank you for the opportunity to comment. C192-19

DEPUTY DIRECTOR ORR: Thank you, Claire.

After John, it will be Jim Price.

JOHN McCAULL: Good afternoon, Commissioners. My name is John McCaull. I'm the Land Acquisition Director for Sonoma Land Trust. With more than four decades of experience in Sonoma Valley, the Land Trust is working to ensure that the irreplaceable wildlife corridor values of the SDC Campus and adjacent C192-20

open space remain viable options for wildlife movement and health. Since we started working on SDC more than ten years ago, our conservations goals have remained the same, get the 750-plus open space acres of SDC transferred into park ownership and ensure the permeability of the SDC Campus for wildlife movement.

We're also on record as supporting significant affordable housing development at SDC that is compatible with the property's natural values and resource constraints.

I want to just -- we're going to submit detailed comments on the Specific Plan and EIR. I want to use the biological analysis today as an example of the problems with the concept of a self-mitigating EIR. The draft EIR's C192-21 analysis and discussion of potential biological impacts is extremely limited and is insufficient to determine whether the Plan's potential impacts will be significant. The EIR fails to discuss how proposed new roads and significant increases in traffic and human activity on the site may affect wildlife movement or cause other significant impacts, and as one speaker

mentioned, the EIR will permit uses in the preserved open space that conflict with open space preservation goals.

C192-21

The problem is that the lack of analysis of biological impacts and other impacts prevents the EIR from identifying significance levels. You can't identify impacts. You can't develop mitigation measures. So we have a lot more to say on this, but I just want to flag that this self-mitigating EIR framework is really where we need to start to understand the problems moving forward. Thank you very much.

DEPUTY DIRECTOR ORR: Thank you, John.

And then just as a check-in for our members of the public, we've got ten hands -- about ten hands still up, so if you're wishing to speak, please get your hand up.

So after Jim, it will be Larry Davis.

JIM PRICE: Thank you for the opportunity to talk to you today. First of all, I want to state my -- well, first of all, my name is Jim Price. I live in the Springs. I've been here since 2008, and a homeowner.

C192-22

My -- I want to state strong support, first of all, for the Glen Ellen Historical Society and their work in presenting a -- the -- what I would be calling the Hundred Year Proposal, and my comments are -- are based on, you know, the support for the Historical Alternative, which, when you look at how the -- the Permit Sonoma has characterized the historical alternative, it appears to be written as a put-down to the downgrade and the HAN boost the Preferred Plan with comments pared -- prepared by the same authors as proposed by the Plan. It's not appropriate in an ERA process for, you know, the -- you know, for the people who are -- who are offering a Preferred Plan to be stating their biases within the context of the EIR,

which appears to be the case here.

Specifically on page 562, Paragraph 2, the lower potential for well-designed active gathering places, what is that based on? What is the empirical data on which that analysis is based on? The Community Plan, which has been proposed by the -- on behalf of the community by the Glen Ellen Historical Society, provides more open space for activity gathering. C192-22

On page 562, Paragraph 2, quote, the area available for habitat and movement would be lower than the Proposed Plan. Based on what analysis? What is the empirical data in which the -- the authors are basing that on? The Community Plan shows increase in open space for wildlife habitat and movement over the Preferred Plan. Thank you for the opportunity to comment.

DEPUTY DIRECTOR ORR: Thank you, Jim.

Next will be Larry Davis, followed by

Gina Cuclis.

LARRY DAVIS: Thank you. As I mentioned, my concern is that we're not paying attention to democratic participation of the public, first, but more importantly, we have a rogue Planning Department that apparently is running the Board of Supervisors and apparently is in negotiation with the state in ways that none of the public is participating in, and I think we need to take another look and an analysis of our whole planning condition and what is going on here in terms of allowing public comments to be heard but not acted on. C192-23

It's clear that we need to now reconsider everything, and of course, that's one of the things is we might consider how did the Planning Department choose this planning consultant, and why is it that the planning consultant and the planning department are so far away from what the public has been

telling them for the last five or ten years? Something is way out of whack here, and I don't know quite who to go to other than, you know, a grand jury or a law case or take it to the public through some kind of a -- it says here in the planning laws that we can actually bring things like this, the changes in the planning -- the General Plan and changes in zoning can actually be put up to a public vote.

C192-23

So I'm not quite sure what our -- our mechanisms of change of this kind of a disastrous proposal can be, but I don't want anymore excuses from the Planning Department about how they've tried to talk to the public and listen to the public and that this represents the public's interest, because that's not true, as many of the other facts and fictions that they put into their plans are not true, so I'm very concerned that we have some kind of evaluation of the planning process that's gone on, because it's low confidence.

DEPUTY DIRECTOR ORR: Thank you, Larry.

After Gina will be Deborah "Knit-a-saka?" "Knit-saka"? GINA CUCLIS: Hello, I'm Gina Cuclis, and I'm glad I got to follow Larry Davis, because Larry is expressing what I, and I know a lot of people, feel about the frustration, feeling like the community has not been heard and listened to. I live in Boyes Hot Springs. I've lived in Sonoma Valley 36 years. It's where I raised my twin daughters, who are now 29.

C192-24

And the next thing I want to address is what was said earlier at Staff about middle-income housing. I happened to express that issue before. I've been to so many of these meetings in the last few years, I can't remember where and how many times I've said it, but this plan, the discussion in the EIR, doesn't address -- properly address middle-income

housing.

My experience over the 36 years in Sonoma Valley, and that includes being on the City of Sonoma's Planning Commission many years ago, private developers, they don't come to Sonoma Valley to build middle-income housing. We say 25 -- the Plan says 25 percent affordable, which, by the way, is way too low percentage, but the other 750, the develop -- a private developer is going to want to build as expensive housing as you can get, and that's McMansions. So this is not meeting a community need. C192-24

And I just also want to the say thank you for Greg Carr. You can tell who the one Sonoma Valley resident is on the Planning Commission, and what he had to say about the planning process in moving forward is excellent, so thank you.

DEPUTY DIRECTOR ORR: Thank you, Gina.

After Deborah will be Kathy Pons.

DEBORAH NITASAKA: Hi, my name is Deborah Nitasaka. Can you hear me?

DEPUTY DIRECTOR ORR: Yes, we can. C192-25

DEBORAH NITASAKA: I submitted a letter last November, and it seems to have been filed in the

"Who Cares" bin as none of my thinking is reflected in anything coming out of Permit Sonoma, so I will revise that letter to reflect how the draft EIR's impact on it speaks to that.

I've lived in Glen Ellen for 30 years. I'm an affordable housing advocate. I'm going to read a statement here. "SDC's built campus includes construction areas, a fire department, police and horticulture carve-outs, all areas that should be reinstated, this time as classrooms." I see no earnest attempt by the County to locate such a resource, but they are

C192-25

out there. My dream for a technical or trades campus would provide desperately needed professional training for California's young adults wanting to work with their hands and minds. Building trades, applied science programs, are just some of the ways in which this wonderful campus might educate people for the jobs of today and tomorrow, while also providing the means to maintain the special place to serve the special needs of those with special needs, the essential needs of those with special needs.

This model would include surrounding cottage neighborhoods, housing requiring minimal traveled miles, as it would be largely for students, staff and

educators, along with special needs housing designed to accommodate the developmentally disabled, those with other disabilities and physical challenges, etc. All affordable housing, all with appropriate supportive services to be coordinate and provided, where possible, by students and staff, to be developed on the outskirts of the main campus. Thank you.

DEPUTY DIRECTOR ORR: Thank you, Deborah.

After Kathy Pons, it will be Jim B.

C192-26

KATHY PONS: Good afternoon. My name is Kathy Pons. I'm looking at the goals of this project and -- and I'm finding it hard to find anything that is -- is regarding the legacy of care. I think that -- that because SDC was a hospital for developmental -- developmentally disabled people, that it just kind of follows that maybe some of that should be carried on and some of the buildings could be actually utilized for that.

I think there needs to be -- I -- I support the historical alternative because of the opportunity to be able to reuse some of those buildings for

that kind of housing, for housing with dis -- with -- for people with disabilities in particular. I think it's -- it should carry a higher priority than being economically feasible, which sounds like -- I mean, there's a common

C192-26

sense there, but -- but what -- if the developers are going to give priority to have to do what they want, just because it -- it's more economically feasible for them, I think we need to rethink that and have some discrepancy or some other perks for them if needed and get what the community is asking for in that area.

So I support Commissioner Carr's comments on the time schedule, and I hope that that will, you know, go forward and soon. Thank you.

DEPUTY DIRECTOR ORR: Thank you, Kathy.

Next is Jim B., followed by Larry Hanson.

C192-27

JIM B.: Jim B., speaking as an Oakmont resident. This is more a visceral comment. I've enjoyed everything that everyone has said so far about the development. And I think -- I support Commissioner Carr as well, and I hope the other commissioners listen carefully to what he was saying.

But I'll just -- this is just feelings, and I remember both being in line on Pythian for the Glass Fire to get out that direction, and then also the Oakmont Drive for the earlier Nuns Fire trying to get out. Both of them were very frightening situations for all of us here in Oakmont. And I heard someone say that the state of California has no intention of changing Highway 12. Well, that's great that you have a plan for

leaving Elnoka and going out to Highway 12. What happens after you get out to Highway 12, though? It was frightening.

I think the commissioners actually have people's lives in their hands right

now in the decisions that they're making, and I support the person who brought up perhaps having a grand jury look at this and moving it out of these people's hands. Thank you.

C192-27

DEPUTY DIRECTOR ORR: Thank you, Jim.

After Larry, it will be Vicki Hill.

LARRY HANSON: Yes. Can you hear me okay? DEPUTY DIRECTOR ORR: Yeah. Go ahead, Larry.

C192-28

LARRY HANSON: Oh, great. Thank you. Thank you for the opportunity. Yeah, Larry Hanson, and I'm President of the Board of Forest Unlimited. We've been working to protect forest and forest watersheds in Sonoma County for over 25 years, and so I have a keen interest in the open space and the protection of the watersheds, protection of the forest and the woodlands there, for the watershed value for climate change mitigation and for wild -- wildfire, wildlife habitat I should say, and the wildlife corridors. However, the protection for this has not really been spelled out, and, therefore, is inadequate.

In addition to that, the setbacks for the

riparian zones do not actually protect the riparian areas, and are, therefore, inadequate in the Plan.

The development plan should be based on the most ecological plan in this day and age that we are faced with, with wildfires and drought impacts and climate change, etc., and I don't think that's happening -- that's not the Proposed Plan. Housing should be city centered and not in a rural -- not rural centered, and there is insufficient analysis of the ingress and egress for wildfire impacts. And the alternative analysis is inadequate and needs realistic additions to it.

I tried to cover as many -- as much as I can. The great comments that I've heard from everybody, I agree with. And Commissioner Carr we agree with. Thank you.

C192-28

DEPUTY DIRECTOR ORR: Thank you, Larry.

Next up is Vicki Hill, followed by Norman Gilroy.

VICKI HILL: Hi there. I'm Vicki Hill. I'm a land use planner and CEQA specialist.

C192-29

The process has failed to produce a reasonable plan. We all agree we need housing, but trying to force a high-density development into a site outside of an urban growth area makes no sense. The site is not in a transit corridor, nor is it next to an urban area. The state legislation does not mandate maximizing economic return, especially at the total expense of responsible land use planning.

And how can it possibly be claimed that it will be a self-contained community? As a land use planner, I wholeheartedly agree with Commissioners Carr and Koenigshofer and their concerns. I urge you to stop the train to avoid a train wreck. Don't wait for the final EIR to implement changes. Stop now, downsize the Plan, listen to the public, incorporate much needed phasing requirements and performance standards and then finalize the EIR. It's the only rational way.

The EIR assumes plan policies will mitigate impacts, but the feasibility of these policies is unknown, such as increasing transit. And many policies are unenforceable, so the EIR grossly underestimates the impacts. It's clearly biased towards the Proposed Plan.

The EIR identifies the Historic Preservation Alternative as being environmentally superior but then dismisses its advantages and incorrectly

claims that the impacts of the Plan and alternatives are comparable. Some mitigating components, such as widening creek corridors, were arbitrarily excluded from the Historic Preservation Alternative, making it look worse than it

C192-29

is.

The Proposed Plan contradicts the County Transit Growth and Land Use Policies and is inconsistent with its own guiding principles to truly balance uses and resources. I urge you to stop and take a look, and if you want to look at history, look at the Eldridge For All website. It has a lot of history about community input. Thank you.

DEPUTY DIRECTOR ORR: Thank you, Vicki.

Next up is Norman Gilroy, followed by Kate Eagles.

C192-30

NORMAN GILROY: Norman Gilroy. Thank you. It seems to me we're sitting here listening to the same debate that happened in San Jose and Silicon Valley 30 years ago. You know the results of that. They lost it piece by piece. And we are in the beginning of doing that, in fact maybe we're in the middle of doing that, in Sonoma County.

We need to think carefully about our future. It's not for nothing that the community proposal is called the Hundred Year Plan. We need to be thinking in those terms, and I believe that we are not in this plan.

I'm concerned that the language of the Plan, and in particular the language of the Historic Alternative, are biased to -- to the proposed -- to

essentially put a hit on the Proposed Plan or at least support the Proposed Plan, I'm sorry. It talks about the Historical Alternative being less superior in environmental features, energy use, etc. lacking community vibrancy, etc., etc., all of which are unsupported claims. All of which, by

the way, in the community's proposal, have been covered and are actually just the opposite. How do we get that kind of information into the process and take the bias out of the way the -- the analysis has been made? Overall the Historic Preservation Alternative is the environmentally superior alternative and reading from the Plan. We agree and we urge the Planning Commission to adopt it as the preferred alternative under the EIR. I thank you for the opportunity to -- to testify. I support the comments of Commissioners Carr and Koenigshofer. I think they're right on. I think we should do something about that now. Thank you.

C192-30

DEPUTY DIRECTOR ORR: Thank you, Norman. So next up will be Kate Eagles, and then our last public speaker is going to be Roger Peters.

KATE EAGLES: Thank you for this opportunity to speak, and I think my comments were made a few speakers back, so I won't take too long on this, but I just wanted to say that I think it's very clear that increasing the supply of affordable and workforce housing is broadly supported by the Sonoma Valley community. I live just south of the SDC site, very easy walking distance, and I personally really want to see a vibrant community there, but not at any cost to the environment and the health and safety of Sonoma Valley residents.

C192-31

And I think our general understanding was that the DEIR should really help the community better understand the scale of the environmental impacts of the Specific Plan, how they would be mitigated, what options were considered, and why these options were dismissed. And I don't think we're there yet, frankly, and I think part of that was just touched on, I think because a lot of the language is "should language" rather than "shall language," so it's not, you know, necessarily as impactful. There are terms

used such as "if feasible" or "assumed" are used repeatedly, so I think the analysis -- there's some acknowledgement of some uncertainty in the impacts and the mitigation measures as well. C192-31

So I really suggest that -- that as was just mentioned, we look at some way to phase the project, to look at mitigation check-ins or compliance or something along those lines to really better understand what we're doing and what we're getting into as we move through this process. Thank you.

DEPUTY DIRECTOR ORR: Thank you, Kate.

And then it looks like still our last public speaker is going to be Roger Peters. C192-32

ROGER PETERS: Thank you. Just a few comments. In reviewing this draft EIR, it seemed to me there are a lot of conclusions stated, summaries stated, but not necessarily any supporting information in our studies. I always look for what the study underlying the conclusion in and it was lacking in a number of areas, and I'll cover just four of those.

First, with respect to hazardous materials and hazardous waste, there was a phase 2 environmental analysis that recommended further study in quite a few areas that are summarized in a chart on page 464 of the appendix. Those apparently weren't done.

Secondly, there's a reference to a W-Trans operational traffic study. If you look in the appendix, that's a one-page study of trip generation. There's no study. I think you want -- may want to look at the Sonoma Valley traffic study that was done in connection with the winery events as something that could be good.

Third, as to vehicle miles traveled, I didn't see a study. Again, there's

C192-32

no link to what the study

is, so you can't read through the assumptions, so what assumptions were used for household employment, total service segments of vehicle miles traveled where the -- where's the nearest affordable market, where's the nearest medical center, and so on. So that needs to be detailed.

And then fourth, as far as cumulative impacts, that essentially said that all the regional models capture cumulative impacts, and, therefore, we don't need to do a cumulative impact analysis.

I urge you to -- urge you, Planning Commission, to ask for further studies that support the summaries and the recommendations because currently the underlying studies have not been provided or have not been done or both.

Thanks.

DEPUTY DIRECTOR ORR: Thank you, Roger.

So Chair Reed, that looks to be the end of public comment.

CHAIRMAN REED: Okay. That's great. I would suggest that we take a ten-minute break and come back and get some comments from the commissioners. Does that sound good? DEPUTY DIRECTOR ORR: Okay. So we'll put up a slide saying that we'll be back at 3:05? CHAIRMAN REED: Yeah.

DEPUTY DIRECTOR ORR: Okay. Thank you.

(Recess taken.) CHAIRMAN REED: Scott, I realized I neglected to close the public comment at the end of the comment. I see we have one more hand. Should we entertain, or did I effectively close public --

DEPUTY DIRECTOR ORR: I don't recall you officially closing public comment, so I think it would be prudent to take this last one and then officially close public comment.

CHAIRMAN REED: Great.

DEPUTY DIRECTOR ORR: So Nick Brown, you'll be our last public speaker. Let me share my little clock again. All right, Nick, you should be able to unmute yourself.

NICK BROWN: Thank you, Commissioners. And thank you, Brian for your presentation. C192-33

Brian mentions that the PAT has supported a product Permit Sonoma has come up with. The PAT does not support this product. In fact, over a year ago, 12 of the 14 PAT members wrote a letter to Permit Sonoma saying this process is going in the wrong direction and is largely broken.

As the commissioner asks, is this a done deal? This product, with all of its self-mitigating effects in

the draft EIR, this quote-unquote "preferred alternative," appears to have been baked in from the start despite the community's clear preferences for other alternatives now coalescing around the Historic Alternative and as well as the Sonoma Valley Community Plan submitted to the Department of General Services last Friday.

This Historic Alternative is clearly the superior alternative, not only environmentally, as is the concern in the draft EIR, but it also largely mitigates community concerns over emergency evacuation and traffic impacts in general, two factors Permit Sonoma identifies as problematic in the Historic Plan, are economic viability and slightly less open space in that plan. Well, the open space -- the housing in that plan was spread out deliberately. It can be easily brought in. There will be way more open space as it's easily brought in and adjusted.

The economic viability, builder groups have been looking at the campus and have identified that a profit can be turned at 600, 450 and 385 units,

depending on the group looking at it. Other groups that are supportive of this appropriately scaled alternative of 450 units are the North Sonoma Valley MAC, the Sonoma Valley Citizens Advisory Council, the Sonoma City Council, the Landmarks Commission and frankly the Board of Supervisors at their meeting in January. C192-33

As Commissioner Carr wonders, I believe the whole Sonoma Valley community is supportive of doing the right thing and is committed -- and the community has clearly shown its commitment to participate in as many hearings as needed to get this right. We are with you. We can get this right. Thank you again.

DEPUTY DIRECTOR ORR: Thank you, Nick.

CHAIRMAN REED: Okay. With that, let's close the public hearing and bring it back to the commissioners. And just to remind here, we're not taking any action today, so we're offering our own comments on the draft EIR.

And Commissioner Koenigshofer, do you want to comment? COMMISSIONER KOENIGSHOFER: Would you also remind those listening that, while the public hearing is closed, the period for public comment is still open until --

CHAIRMAN REED: Yes. Until September 26th, if I recall.

MR. OH: Correct, 5:00 p.m.

CHAIRMAN REED: Well, I think that we heard a lot of comments from the public, somewhat critical of --

of the Plan, and we have some initial, you know, thoughts from Commissioner Carr.

I'll just -- you know, I want to thank Staff for putting the Plan together and just acknowledge that when I looked at the Plan and read through the guiding principles and, you know, actually thought, wow, this is really

ambitious and -- and a thoughtful plan, it was a deep dive to go back through the draft EIR and really kind of dig in and see how, you know, those guiding principles were laid out and how they were evaluated.

But I think that there's -- a reason we're here today is to hear comments and help move that plan together, but I -- I certainly don't think that we're throwing that plan out. That plan is, I think, a thoughtful approach to how you might develop the Sonoma Development Center and -- and I'd like to hear from other commissioners just how we might beef up the -- the analysis and see how best to move this forward.

Commissioner Carr.

COMMISSIONER COMMENTS

COMMISSIONER CARR: Thanks. Thanks, Mr. Chairman.

You know, I'm -- I'm not ready to talk about the Plan at all. I think that's for later. And I do,

you know, anticipate a lengthy hearing process for the Plan. I think people are going to be -- there's going to be a lot more speaking going on than there -- than there was today.

I read through the several hundred pages of comments on the NOP that were provided by the Staff, along with the EIR materials, and -- and my first reaction is that the idea that the Staff is going to be able to prepare responses to all the comments that are going to ultimately come in on this EIR is going to be -- you're talking about hundreds of comments and hundreds of pages, and I, for one, would request that we be given at least 30 days from the publication date of the final EIR until the first hearing. I think that's a complete -- that's a reasonable request for -- to give us time to read and absorb all that information.

And -- and then I think that we should be looking at some sort of a field trip or site visit. I've asked for this now for several times over the last year. I think it would be very beneficial to the commissioners to be able to take a couple of ganders of this site from different perspectives to get a feel. I don't know. I've been on the site in the past and have a fairly good idea about what it looks like, but I don't know to what extent other commissioners have had a

chance to look.

And I would like to see maybe a bus ride. Maybe we can all meet in Santa Rosa and take a bus ride down. Typically you've got to deal with the Brown Act issues on that, so you usually have a member of the press that goes along with us. And then maybe we have some stops scheduled where we can get out and have the Staff and consulting team give us a presentation on what's going on where. I just think that would be extremely valuable to do to see how this fits into the context of that area.

As far as the schedule goes, I -- I feel like I would be misleading people to think that this is going to be anything less than six to eight months to go through this process, to make changes in the Plan, to have the Plan redrafted to reflect our changes and then to whatever degree a EIR is still applicable, that obviously Counsel and Staff would have to look at that. If -- if there's a way to shorten that six- to eight-month period, I'm happy to do it if it means meeting more frequently. But I also understand that several of the commissioners work, and so I -- you know, I'm -- my time's probably a little freer, but if we wanted to meet, like, once a week or every couple of weeks or something on a regular basis to go through the

Plan and accept or -- or whatever's in there or change it, I do think

there are many valuable and very forward-thinking policies in this plan. I think a lot of it, I agree with the chairman, is very, very good and forward-thinking, but I also think there are some things that need changing in the Plan, and I don't know whether those things would -- would impact the EIR, how they would impact the EIR, if at all.

But I feel like we need to go through this and -- and -- in at least a sensible-take-a-deep-breath way. I understand the implications of that, but I'm hoping that -- that that can be -- that can be accommodated.

Second sort of thing I wanted to bring up on the schedule, and this I'm not sure there's an answer to, but I'll throw it out there. There's a -- the state has had an RFP out for transfer of this property, and they've been seeking bids from landowner, developer, other interested parties to take on responsibility for this property. I don't know the details of that, and I don't know that any of us do. My understanding is that there were a couple of -- three proposals that were submitted just recently that DHS -- I'm sorry, DGS -- is going forward, and I'm -- I'm wondering if the Staff would have any -- could enlighten us a little bit about how that transfer proposal process fits in with the

County's consideration of the EIR and the -- and the Plan. Is there anything that you can shed light on for us on how those interact, because obviously one -- one could lead to the other and vice versa.

MR. OH: Certainly. So through the Chair. The Department -- the State Department General Services solicited bids up through last Friday. We, as the County, do not play a role in the disposition process, and so there's two tracts. There's the local county planning process. The schedule was identified, you know, at the start of the onset of the three-year process,

and this is where the two tracts were going to meet. The County-led planning, a Specific Plan document, certification of an EIR, that sets the course for a future project sponsor to follow, essentially, and so I -- you know, it remains to be seen. You know, there's still a number of months as part of their schedule, but the idea was the scheduling is timed in a way that with the County wrapping up its local planning process, that sets it up for the future property owner to start work next year.

COMMISSIONER CARR: So it's a little bit uncertain how that might unfold since we're not -- we're not part of that -- MR. OH: Correct.

COMMISSIONER CARR: -- process.

So I have one other question I want to ask. Maybe this is a question for Counsel and Staff as well before I try to seek some input from my fellow commissioners. A Specific Plan is an extremely valuable tool for planning, especially planning for a site like this, and a Specific Plan EIR really can work to streamline some of the projects. Brian's presented this many times, and anybody that's been involved in a specific planning process knows this well. And lately the legislation has come down the pipe that if a housing project is proposed that is consistent with a Specific Plan, that it can go forward with no additional CEQA review.

The concern I have with respect to this EIR and this process is that there are some conditions under which that CEQA exemption would not apply, and one of them is if a Specific Plan EIR does not offer enough detailed assessment of the impacts of a project that it is not exempt under -- even if it's a housing project. I think I'm reading that correctly for counsel, but I'm very concerned that if we don't get a EIR that meets that criterion, that we really are not using a Specific Plan the way it should be used. We're going

to be going through CEQA review on -- on all these subsequent projects. Am I reading that provision of the Resources Code properly, Jennifer? MS. KLEIN: I think I know the one you're talking about, and I think it really -- you know, it depends. The intent here is to have streamlined review. That doesn't mean no review. So there would be the opportunity to supplement if needed, and that's -- that's what we would do. It's hard with a, you know, hypothetical not knowing where or what the housing is.

COMMISSIONER CARR: Yeah. Well, obviously, it would have to be -- it would depend on reviewing those criteria and making sure. I guess that I would really hate to try to advocate for affordable housing on this site, which I would like to do, and be able to -- and have people think that they're going to be able to avoid CEQA going forward with their projects, unless we have an EIR that's adequate. That's my biggest concern is the level of detail in the EIR. It may be appropriate for the level of detail in the Plan, but if we're not going to give the housing projects the benefit of the doubt on a streamline process, I feel like we're not really -- we're not really doing the job that we could. So anyway, I just was curious.

If other commissioners want to weigh in. I have -- I have about six or seven things I want to request as far as Staff work before we start the hearings, and I can go through those, but I -- those are just requests on my part. I was wondering if the commissioners had any -- any feedback on the schedule stuff.

CHAIRMAN REED: Commissioner Koenigshofer.

COMMISSIONER KOENIGSHOFER: To begin with, I want to ask a question, just a follow-up on the question that Greg just posed to Counsel referencing in his

question a residential project component.

I need to understand the Specific Plan, the EIR, and what potential scrutiny or additional environmental review is there for whatever's proposed by whomever buys the property. Is -- is the issue of the EIR on the Specific Plan specific to residential development proposal components? How does it relate to the -- the job development portion of it, the commercial -- how does it relate to a hotel project? Could you just give us an overview of what exactly would we be -- because I look at this, as far as I understand it, we're -- you know, we're -- we're going to approve this Specific Plan that has the environmental work done on it, and that looks like that might be approving the entire project that might come in.

MS. KLEIN: Yeah, it's very difficult to answer these hypotheticals because we don't have any specific project, and we don't know whether it fits into a CEQA exemption. We don't know if it would fit within the level of analysis that's already been done in this EIR, where it can be relied on, for instance, in the Core area where there's more analysis being done and at a programmatic level for the remaining open space area, so -- And then secondarily, consistency with the Plan. It just -- it depends what the detail is and what the project is, so I really -- I can't answer the question.

COMMISSIONER KOENIGSHOFER: Let -- let me try with more specificity. If the Plan says that there's a specific footprint on the ground, and the Plan anticipates a 120-room hotel at that specific location, is that sufficient compliance or accord with the Plan that that component would not require additional environmental review? MS. KLEIN: I don't know. I would have to research that and come back.

COMMISSIONER CARR: I'll weigh in on that. I don't -- I understand that it's hypothetical and it -- the reliance on a clear answer, but my understanding from reading the EIR is that hotel would be subject to subsequent review, and it would be for review for compliance with the Plan, but it would also review the individual impacts of that particular hotel, and those impacts would be addressed through -- either through a subsequent Neg Dec or a recertification of the EIR or some combination of that -- of those two.

The issue becomes -- for housing projects under the state law, it's a little bit different, and there are some exemptions in the Public Resources Code for housing projects, and those are the ones where I think the issue of -- and I think Jennifer was really good about not being sure about this, because where -- if it -- if an EIR is not sufficiently detailed under a Specific Plan EIR, then that exemption may not be utilized, and that's all I'm saying is I -- I'm hoping that we can end up with a Specific Plan EIR that is detailed enough to give those housing projects that exemption. I don't know that -- if we'll get there or not, but that's my hope.

COMMISSIONER KOENIGSHOFER: If I -- if I may through the Chair. Understanding this point is critical to me to understanding whether or not the Plan itself is fine as is, because, you know, whether it comes up all the time, whether or not there's any further review or is this it? And I, in reading the Plan, reading that -- that flex area and the references to potential density bonuses and so forth, it just is not clear to me exactly what the Plan says is okay and was -- is the consideration of that sufficient in the EIR so that -- so that we don't mistakenly think we're clearing a path and we're not, or we mistakenly

think that some components would be subject to further review, even if it's just for compliance with -- or compatibility -- with the -- with the scope of the EIR. So I -- I need to understand that scope of question there somewhere along the line.

DEPUTY DIRECTOR ORR: I'll jump in for a moment. So I think the most important thing to remember that if something isn't considered under this EIR -- something needs to be considered as part of this EIR to get that streamlining that relies on this EIR later to some extent. It -- it could be a use that we haven't considered existing today, or it could be, you know, new regulations that come down in a few years that didn't exist at this time so it wasn't considered in the evaluation. So there's various levels of streamlining, but, you know, another important factor is whether something is listed as, you know, a permitted use that you don't need a permit for, or if it's listed as a conditional use permit.

You know, just because something may have, you know, streamlined CEQA but requires a use permit, it would still -- you know, there's still a discretionary process where the project is analyzed, not just for, you know, coverage under the EIR, but coverage under the General Plan, the zoning ordinance and -- and the like.

So if the concern is this plan is your only bite at all of the apples, you know, I think it's important to, you know, consider which ones, you know, maybe are listed as requires a conditional use permit or which ones that aren't and look at it that way rather than just assuming that anything approved under this EIR will never be looked at again.

I don't know if that gets to your question, Commissioner Koenigshofer, but I hope it helps a little bit.

COMMISSIONER KOENIGSHOFER: I think that you summarized the point of my question. In terms of -- and when I listen to the comments of the public, it seems to come through pretty clear, too, that there's un -- people are uncertain about just exactly what does each component, where does it fall in terms of the criteria list that you just outlined? And I think, unless I'm alone on this, that question set with some examples about what might be proposed as per the Specific Plan,

what would just by operation of the zoning ordinance, for example, be subject to further review.

CHAIRMAN REED: Scott, is that something that you think you can document? It seems like the Plan suggests and supports the idea that subsequent project level development needs -- needs more scrutiny, needs more review, and it allows for that. But it's not specific to the site or the project or anything else. Is there a way to define where that's likely to occur?

MR. OH: So through the Chair. Where that's most likely to occur, I sort of liken this to you have a list of ingredients, and the program-level EIR takes that list, evaluates those impacts, and then there's enough sort of flexibility and assumption that when -- if and when either a project that is the entire campus or likely components of a -- the larger project gets in front of Permit Sonoma, there's an application submitted, they have this set of ingredients to consider. But ultimately they are going to have to submit some level of environmental analysis and Staff will have to determine and go through, you know, just what they do with any other projects.

So and -- and so when we say it's streamlined, that's what we're referencing is there's sort of this list and set that the program EIR allows, but the

unknown here is the fact that there isn't a project, right? We aren't a

project sponsor that is out here proposing a very specific project which would, I think, have a little bit more definition and maybe put a little more assurance to the community, but that's just -- that's not where we're at in this process.

CHAIRMAN REED: It seems like my experience with specific plans is that there's -- that's the benefit. You know, you kind of are aspirational at this point, and when you get down to the project level, you need to follow all those guidelines and you are held to account for those, and that seems to be spelled out in the Plan.

MR. OH: I think so, yes.

CHAIRMAN REED: Commissioner Ocana, do you have any thoughts?

COMMISSIONER OCANA: You know, I think I'm -- I hear Commissioner Carr's concerns, and I hear the public's concerns about the ability to include comments. What I'm most concerned about is the County's -- I'm worried that if we don't meet the deadline, this is going to cause a bigger consequence, and so I'm -- that's what my big concern is. If we carry on with additional hearings, where does that leave the County as far as being able to -- to create a plan that is really

guided by us? Maybe Brian could speak to that.

MR. OH: Sure. I think that's the 60-plus-million-dollar question. You know, we've been meeting regularly with the state and our counterparts throughout this process. You know, there has -- you know, we're still -- both the County and the State are working off of the same timeline up until this point. We talk a little bit about what may happen with the selection of no project, but all we can go off of is we have a three-year agreement with the state. They have funding to keep the warm handoff afloat this year. I

-- I can't sort of hypothesize what happens, you know, in the next year or two, and then the question about time.

And I understand Commissioner Carr mentioning the six months, and I would sort of -- I would respond to that. I mean, if we can get a better sense of Staff on what the Commission feels they need to see in that X number window in order for them to make a decision as a decision maker, that would give us that clarity so that we can go back and prepare, so rather than say, you know, it's going to take six months minimum, I would want to hear what is it that you would need to see in those six months, and we will work, as Staff, very diligently to get back in front of the Commission.

COMMISSIONER OCANA: So if I could follow up on that. It appears to me that the most important thing right now is meeting the state's deadline, because we could potentially not be offered another opportunity, though we are right now, correct? And when does that deadline expire, on December 31st or on the fiscal year of 2023? MR. OH: December 31st.

COMMISSIONER OCANA: So essentially, laymen's terms, if we don't provide the Specific Plan to the state by December 31st, we could essentially lose our opportunity to guide this project entirely; is that correct? MR. OH: That's likely.

COMMISSIONER OCANA: So I think that my contribution right now is I would really like to see the Commission discuss whether or not we're willing to meet that timeline. We've got -- it's September 15th. I don't know how many special hearings we can have before then to make a decision, but, you know, as a body, are we willing to risk not meeting that deadline? That's what my question is. I'm not sure I'm willing to make that risk, but I do

understand that there are a lot of outstanding questions.

CHAIRMAN REED: Commissioner Koenigshofer.

COMMISSIONER KOENIGSHOFER: Thank you for asking that question, Commissioner Ocana, because I wanted to be reminded of what the actual deadline date is. And I also need to really understand what is the timeline that the Department of General Services on considering the proposals or the offers that have been made to the state to acquire the property. I assume when we're talking about that, we're talking about the 180-acre Core area, because the disposition of the 750 acres or so is firmly set to go to either State or County Parks.

So I know this is a multilayered question. So if -- if the Board of Supervisors had this -- the EIR -- final EIR and final Plan on its agenda for February 5th, we assume that the state would come in and shut it down. And then most importantly, just so I understand it, if the County of Sonoma missed the three-year deadline, and then whatever participation is before us now is shut down, does that mean that the -- whoever the state sells the property to, the County doesn't have any land use regulatory role over that 180 acres? And if so, who does, the general services agency or the legislature or what would happen if that were to occur? MR. OH: Through the Chair. So great question. We have existing land use designation and so should we

not go through that process, that remains the same, and so this is zoned public facilities. That said, the state should -- they have a couple options of either selling or doing other things. They could run a ground lease, and in which case the State would supersede local County regulations. There's no indication of that at this point, but any future developer would

have to work through and go through the entitlement process with Sonoma County.

CHAIRMAN REED: Maybe just to chime in here. I mean, I agree with Commissioner Ocana. I think that it's urgent that we meet that -- that deadline. And you know, in reading through the documentation in the Plan, it was a -- kind of a deep dig in a short amount of time to try to -- to catch up with the -- the envisions of the Plan, so for me, it may be helpful to have at least one meeting where we could have a presentation on the Plan and hear from the consultant team and -- and kind of reinforce, you know, the principles and goals that are in the Plan and try to get a better sense of, you know, how those came to fruition and -- and hear about the -- the benefits of what that brings to this potential community.

Commissioner Carr.

COMMISSIONER CARR: Thanks, Mr. Chairman.

Yeah, I've, you know, gone back and forth on this. The risk, I guess, is if we take longer than December to -- to do this plan that, you know, some, you know, state action is going to, you know, overwhelm us and we're going to regret it. Of course there's a risk of that. I just think the risk is extremely low, and the argument for that is that we -- the County is pursing a plan, and we've been diligently pursuing that plan. We were -- we've been held off substantially with the early public meetings and the outreach because of the pandemic. The -- you know, the Staff has, you know, gotten on the motorcycle and pushed hard to bring this thing around, but the idea that you're going to interrupt the planning process at the most critical moment in planning to -- to meet an arbitrary deadline to me is -- is irresponsible.

And you've heard the -- you've heard the comments of the public. They're -- we would be effectively recommending a plan to the Board of Supervisors that nobody in the community likes, and even though it has some good features in it, and -- and I just think that it's our job to go through this thing and do it right. And let's try to do it -- let's try to expedite it, and if the state is -- starts rattling its

cages, you know, the Board of Supervisors will be on the phone and going, "Come on you guys." But I -- you know, I think the Board can tell us if we're amiss in this. You know, our job is to recommend a good plan I think.

CHAIRMAN REED: Commissioner Ocana before we get to Commissioner Koenigshofer.

COMMISSIONER OCANA: Thank you. My -- my concern here, though, Commissioner Carr, is whether or not this is actually an arbitrary deadline. It sounds like to me it is actually a deadline, and that there are, you know, unforeseen consequences of what could happen with County involvement should we not meet that deadline.

So, I mean, if it is arbitrary, then it's really not a deadline, and so I'm wondering, as far as -- I don't know if Ms. Klein could contribute or if Brian has some more -- MS. KLEIN: Here -- here's my suggestion. It is a deadline, and I think the better course for your Commission, if you are feeling conflicted about the timeline not being what you are used to in a complex planning project, that -- that you find a way to give the Board the power to decide whether the agreement is going to be breached or not. And that by nonaction you

don't cause that to happen.

COMMISSIONER OCANA: I -- I agree with that for.

MS. KLEIN: And there are a variety of ways that motion could be made when the time comes, but that is not before your Commission today. Today is, again, comments on the draft EIR and only on the draft. I realize there's a lot of marrying the Plan concept and what's -- what the environmental review of it is, and it's really hard to separate those when the -- the Plan is -- you know, is inspiring a lot of really strong feelings.

But I strongly advise your Commission to -- to consider, you know, that it's really the Board that should be making that kind of a call, and if it wants to extend the planning process and send it back, let it do that, but I think it -- it would be very awkward to just simply sort of send Staff back at this level for more and more work when it has tried so diligently to fulfill the obligations that the Board directed to it.

CHAIRMAN REED: That's great. Thank -- thank you for that summary. Commissioner Koenigshofer.

COMMISSIONER KOENIGSHOFER: Yeah, I'm -- I don't -- I'm not advocating that we throw out the

deadline or that we play chicken with the state over what might follow procedurally if the County doesn't meet the deadline.

At the same time, I'm trying to figure out how to fit into the time between today and the deadline getting answers to the questions regarding the DEIR and what it's analyzing so that -- you know, so that I can understand whether the EIR that's before us is adequate to the task.

So, you know, I -- I like Commissioner Reed's question or suggestion regarding having an interim meeting to get information on the -- on the Plan itself, and I would think at that juncture, if we could also get some more

information or a better understanding of the legal procedural questions that some of us have asked about how certain components of the -- of a project that's consistent with the Plan would or wouldn't trigger additional review. I -- those questions are important to me in evaluating the DEIR, and I believe those questions are unresolved in a very substantial part of the public based on the comments.

So I wonder if, mindful of the deadline and trying to maintain adherence to that timeline, we couldn't pursue something along the lines of Commissioner Reed's suggestion.

DEPUTY DIRECTOR ORR: Chair Reed, you are muted, but it sounded like you maybe said "Commissioner McCaffery." CHAIRMAN REED: I did, Scott. Did you have something to say, Commission McCaffery?

COMMISSIONER McCAFFERY: Yes. So in -- in looking at the Plan, and I've -- you know, I've gone over the EIR and the -- the -- both the Draft Specific Plan and the draft EIR, and, you know, it's pretty extensive. I think most of the concerns are around, you know, traffic and evac, water, historic preservation and wildfire, and I'd really like to have a meeting to discuss those things.

I mean, I think that everything's been addressed, but just to -- just to make that really clear, I think that'd be -- that'd be nice.

You know, the state kind of asked the County to -- to come up with the Plan, and, you know, the first thing they said was prioritize housing, especially affordable housing and housing for individuals with developmental disabilities, and then to the permitted protection of the open space, and I think that's been addressed. And involve the community, and I think that has happened.

And then they talk about reducing uncertainty,

increasing land values, expediting marketing and maximizing the interest of potential purchasers, and I think that that part kind of comes into conflict with the other things, and I think that's the -- the real thing we need to have a discussion about is the -- is the development intensity. And when you have a project that demands a lot of affordable housing, it needs some way to subsidize that, and so that lends itself to more intense development in order to get that done, and I think that's in conflict with what the community is talking about, and that's kind of the rub. That's the thing we really need to -- to dive into, in addition to the details about, you know, are people going to be safe, are they going to have the resources they need, and things like that.

So I think -- I think it would be good if we -- if we cued up a meeting to talk about that in more detail before are send it to the Board, so with all -- and I know we've -- we've been talking in this deliberation more about the process and things, and, you know, I would like to talk about the specifics, so I think that -- that we should do that.

CHAIRMAN REED: Great. Thank you for those thoughts.

So Scott, is that something we can do? DEPUTY DIRECTOR ORR: Yeah. I -- I was just waiting for the opportunity to float something out there.

So coincidentally, September is a month where we have five Thursdays. Traditionally on the fifth Thursday we have what's called a Planning Agency Meeting, which tends to be, you know, all ten commissioners -- or we have nine appointed commissioners right now -- would be invited to a public informational meeting that is usually used for, you know, as kind of

awareness and education and larger issues without a decision being made. So I -- I've heard interest in a field trip. We've got a fifth Thursday, so just thought I'd gauge the idea of, you know, having a meeting on site on September 29th to, you know -- you know, learn a little bit more about the property, you know, hear from, you know, more from the people working on the Plan. It would be open to the public. So maybe that would be a good -- good starting point.

CHAIRMAN REED: That sounds really good to me. I see thumbs up. Is that something we need a motion for? DEPUTY DIRECTOR ORR: I don't think we need a

motion for it. Just as -- you know, as Staff who -- we would have to cancel the 29th meeting if we didn't have something, so from what I'm hearing is there's a desire from the Commission to program that planning agency day, and so, you know, we'll work on getting the -- the notice out. In the past, we have, you know, done the practice of a bus and a member of the press. Honestly, it may feel like pandemic's totally over, but I would recommend that everybody that's interested meet on the site just for -- because that's still part of life at the moment. So we can maybe get into those details and work that out as -- as part of the public notice, but that would be my recommendation.

COMMISSIONER CARR: Thank you. That would be wonderful.

CHAIRMAN REED: Commissioner Koenigshofer.

COMMISSIONER KOENIGSHOFER: And I agree with that. I think that's a wonderful idea, and I'm wondering, does the fact of us taking a site visit still allow -- is there a mechanism for us to also have the discussion that was just alluded to and hopefully presentation of some additional insight

regarding procedure and further review for individual components of a future project worked into that day's get-together?

DEPUTY DIRECTOR ORR: So it definitely could, but whether it, as a stand-alone, would be enough to, you know, kind of meet the need expressed by a number of the commissioners, that's debatable. So I think we'd have to look into some of the logistics and availability of, you know, the on-site resources, and if we weren't able to kind of accommodate that, you know, informational presentation on -- focusing on the Plan, it would probably look at, you know, another meeting in October prior to the 27th for that kind of informational presentation that was mentioned.

COMMISSIONER KOENIGSHOFER: I may -- to that point, I'm looking at a confidential draft of the potential future schedule.

DEPUTY DIRECTOR ORR: So -- COMMISSIONER KOENIGSHOFER: October 6th.

DEPUTY DIRECTOR ORR: -- maybe just focus on the calendar days of the week, since it's a confidential draft of a calendar.

COMMISSIONER KOENIGSHOFER: Yeah, right. Well, the next time that the Planning Commission would meet would be October 6.

DEPUTY DIRECTOR ORR: That is correct.

COMMISSIONER KOENIGSHOFER: There may or may not be items already scheduled for that. I have no way

of knowing.

DEPUTY DIRECTOR ORR: So regardless of if anything is scheduled, you know, Staff acknowledges that this is a significant community priority and will do everything we can to make room for it.

COMMISSIONER KOENIGSHOFER: It might be really timely if we took the field

trip and then at the next meeting opportunity we actually had the discussion about the Plan and the -- and the triggering criteria for further review.

COMMISSIONER CARR: Through the Chair. Is it possible that we could start the public hearing on the Plan before we receive the final EIR?

DEPUTY DIRECTOR ORR: I probably would want to push that over to Counsel.

COMMISSIONER CARR: It's not always a good idea, but if it -- it might speed things up in the long run, because I -- you know, I fear that the final EIR is going to be voluminous.

MR. OH: So through the -- apologies. The "through the Chair" part threw me off. I thought it was being directed to Chair Reed.

I think just the letter of the law states the decision cannot happen no sooner than ten days of post release of the final, and so I think, to the degree that

it would be helpful to start deliberations on a draft that -- or a final -- you know, something that hasn't been published, I think that's just the tricky territory to consider.

COMMISSIONER KOENIGSHOFER: Mr. Chairman, to that point, would it be feasible to have a workshop on the Plan itself? Not a public hearing, but a workshop that would not, then, be a problem relative to the date situation just answered by Staff? CHAIRMAN REED: Is that to me? The workshop -- DEPUTY DIRECTOR ORR: It -- it would be less problematic than, you know, starting the public hearing in advance of -- starting the public hearing with the intent of making a decision in advance of the materials being ready, so -- COMMISSIONER CARR: I'm not talking about making a decision. I'm saying just start the public -- just open the public hearing and begin that process, and as long as we don't

decide, you know, make our project decision in time, I frankly think it's going to be impossible for us to -- MS. KLEIN: Yeah.

COMMISSIONER CARR: -- make a decision that soon, but hey.

MS. KLEIN: Through the Chair. I think you're really talking, Commissioner Carr, about really conceptual conversations, because you won't have the materials in front of you, so I think it would be a workshop followed by a hearing when they're published.

COMMISSIONER CARR: Okay.

COMMISSIONER KOENIGSHOFER: I think that would satisfy our effort, though, what we're trying to accomplish.

CHAIRMAN REED: Is -- is that something we could combine into a site visit that might be hosted by a consultant that could -- you know, I would assume that most of the energy and thought is on the Core area of the Plan that we could maybe get a room and maybe look at some of the historic structures and get a better sense of how they've been evaluated and, you know, how the different plan alternatives effect. Is that asking too much for that one day? DEPUTY DIRECTOR ORR: I don't think that's something that we can confirm right here, but we can, you know, look into the options. At the very least, we'll, you know, work to coordinate them, a field trip for that day for any commissioners and members of the public who are interested, but I wouldn't want to promise more than that at the moment, until we confer with our state partners who manage the property.

COMMISSIONER KOENIGSHOFER: To or through the Chair. To that point, that would be fishing on one level, but I think, in terms of the public's access to that presentation and our discussion of the workshop, it wouldn't work very well. I think there's probably more people interested that would be

able to attend by Zoom than would practically be coming to the site for that discussion, with respect.

CHAIRMAN REED: Yeah, that's a good point. I hadn't anticipated the Zoom thing. Yeah.

COMMISSIONER CARR: And -- and to the Chair. Just one other thing, just as a caution, there are many issues with respect to the adequacy of this plan and the open space area. It just -- for lack of a better way to say it. It it's not as open spaced as it's presented, so we do need to cover all of those bases when we get to the workshop.

CHAIRMAN REED: Yes. Yes, agreed. You know, I was just trying to -- while we were on site thinking that might be an interesting way to sort of get some thoughts. All right.

DEPUTY DIRECTOR ORR: The -- the general summary of what Staff will be working on is coordinating a planning agency meeting for September 29th, open to

the public, and all ten commissioners. And then also look into adding an early October workshop date to the Planning Commission, so --

CHAIRMAN REED: That sounds great.

Commissioner Carr.

COMMISSIONER CARR: Yeah, so I -- several things I have in mind that I'd like to consider as part of the Plan, and I didn't want to wait until, you know, we're into the planning deliberation process, but I think they may involve some work -- additional work on the part of the Staff, and, you know, I don't know whether any of these things are possible or desirable or anything but I -- in case they did involve some work, I wanted to try to expedite things by mentioning them now.

I would like to have a way to designate affordable housing sites that would preserve those housing sites for 100 percent affordable housing projects. I know there were some issues around whether HCD accepts those in the housing element. I know there are people who believe that that may not be legal, and people who -- and maybe very well that it's done through a series of incentives, but I'm concerned about the market rate projects eating up land that we need for our affordable housing, and I would remind everybody that the REMO [phonetic] for Sonoma County is 58 percent of

the units need to be affordable to below-market housing.

Second thing I'd like to see is the traffic analysis that looked at LOS for the County, and they looked at LOS because the General Plan has requirements for LOS on the area roadways. The traffic analysis that was done looked at the current condition and also the future Specific Plan with the connector to Highway 12. It did not look at the possibility of the future plan without the connector, and there's some language in that analysis that suggests that the -- that that has impacts on Glen Ellen that wouldn't occur with the connector. So I would like to have that study look at the option of a future plan plus -- future plan with the connector.

Third thing, I -- looking at some of the market rate housing possibilities. I'd like to know whether there is an option to limit house size. And I -- I know we did that in the cottage housing program a couple years ago. Those were all accessory units. I don't know if that's something we can do, but I would like to see whether that's possible given the desire for affordability, even among the market rate housing.

I'd like to have another word. I know this comes around a lot, but a lot of our debates is whether or not it's possible, using a Specific Plan, to

restrict housing to people who are working on site, or to at least get a preference in the selection process for folks who are working on the property.

I'd like to see a proposal for phasing that is a little more of a hard cap phasing than the one that's in the Plan currently. I notice that the financial plan is not firmed up early enough in the process for my liking. I would like to see the financing plan identified prior to any construction or entitlements on the property; otherwise, I feel that we're going to be having fair share of funds that could be contributing towards the infrastructure not be charged adequately to development as it occurs.

And the phasing I think should be specific to a certain number of units and a certain -- maybe jobs or square footage of commercial. And that shouldn't be hard enough for there to be, when the cap is reached, there's a report provided to the Commission for -- on what the situation is at that time with respect to various impacts.

And the last -- the last thing I'm wondering if it's possible. The groundwater sustainability plan for Sonoma Valley has prioritized looking for places along the creeks where we can divert, stream and recharge groundwater by streamside diversions. It's a really unique idea, and it's probably one that would ultimately mimic their creek side areas that were in existence prior to people started living here. And it may be that since Sonoma Creek wanders through this property, and there's some flat -- relatively flat areas, I'm just wondering if there's a -- if the geologic work that was done or the site work could identify any potential for part of that streamside recharge of groundwater. That's it.

CHAIRMAN REED: Great. Thank you for those. Any other commissioner comments? Yes, Commissioner Ocana.

COMMISSIONER OCANA: I wanted to comment on one of the public's comments regarding their -- it was someone who said their child had been a resident of the Sonoma Development Center, and their concern was whether or not the County could regulate how many units would go specifically to disabled persons. Is that something that County can do? I'd just like to answer that person's question.

I know we can -- we can mandate affordable housing, but can we mandate diversity in the housing? MS. KLEIN: We would have to look into it. I'm not aware of any particular law that would give preference to that, but it's not my area of specialty, so --

MR. OH: And then just through the Chair. On top of that, there is, you know, through that community dialogue, a policy in the Plan for at least five homes to be deed restricted for people with developmental disabilities, and so that, you know, sort of is in direct response to some of the advocacy around preserving housing for people with developmental disabilities.

COMMISSIONER OCANA: So those would essentially would be like board and cares or group homes? MR. OH: Well, it remains to be seen. I think we have a strong partner in the North Bay Regional Center, and so their -- they have the finger on the pulse of what is out there that -- that is lacking, and so, you know, we look to -- to them for partnership on what makes the most sense here.

COMMISSIONER OCANA: Great. Thank you very much. I think that's really important to make sure that that individual, but also everyone, realizes we

are putting emphasis on that very important topic.

My other question was about phasing. Is there -- I understand that we have indicated phasing is crucial, but do -- in the Specific Plan, are we going to be dictating to a developer how that phasing is going to look? Like, for example, if we -- you know, regardless

of the number of units that are approved, is the first phase going to be entirely affordable housing, or will there be a mix? When does the hotel get to be built? When do commercial buildings get to be built? Are we going to regulate that, or is that something the developer can decide on?

MR. OH: Through the Chair. So there is an entire chapter in the Plan focused on -- on sort of a proposed phasing. There are some very specific policies around ensuring that there's a balance that -- between residential and nonresidential to be built. What Commissioner Carr's alluding to or had suggested is some more stronger policy around that.

So, again, this is what the draft is intended to do is to elicit those responses and those discussions, and, you know, we'll take all that feedback and then produce the final.

COMMISSIONER OCANA: Thank you.

CHAIRMAN REED: All right. That looks like we have exhausted our commissioners. I think we've all been heard. Any -- any last comments before we close today's meeting? Commissioner Carr.

COMMISSIONER CARR: I just -- question for Counsel on querying the Board about whether or not, you

know, their -- how they feel about us going past, if we were to do that. What would be the timing of that, do you think? MR. OH: So through -- MS. KLEIN: Yeah.

MR. OH: I know it wasn't directed to me, but -- MS. KLEIN: I would ask Staff, yeah.

MR. OH: Okay. Sure.

MS. KLEIN: They have the deadline for the -- MR. OH: So the calendar gets identified at the start of the year, and so at this point, the Board date that we do have for the Sonoma Developmental Center Specific Plan is November 8th, and so that's the date that we're working towards, and so if there's any communication, I would imagine that's the landing spot.

COMMISSIONER CARR: So if the Commission felt like it needed more time, and that time might take us past December 31st, wouldn't we want to ask the Commission -- ask that of the Board before we go to the Board? I mean, my sense is, if we get into October, and it looks like we're -- we're -- you know, we need more time to do our job, wouldn't that be the -- the time frame to query the Board on the -- that question?

MS. KLEIN: I don't know if you're asking for my opinion, but I think just in terms of we're short on Board days. I mean, the Board days between now and the end of the year are already filling up. And what you're -- what you're suggesting would potentially necessitate two Board meetings because, if the Board agrees with you, sends it back, the Board's done for the time being.

If the Board doesn't agree with you, then it needs to set another meeting in order to -- and this is you know, to then take action on the package that's in front of us. So the same can be accomplished with one package. You finish your process. If you feel like you can approve, great. If you feel like you can't because you need more process, you need more information, you need more something, then that's really a denial with a recommendation to

extend the process, so that's -- so there's -- your suggestion would necessitate two meetings at the Board, or it can be consolidated into one.

COMMISSIONER CARR: But maybe we should ask that question now.

DEPUTY DIRECTOR ORR: I would say that we don't have the opportunity to ask that -- that now.

COMMISSIONER CARR: What do you mean?

DEPUTY DIRECTOR ORR: So it would have to come before the Board in open session, and we would need a recommendation from the Planning Commission, and just with the timing of how it works, it just would not be feasible for us to be able to get in front of the Board in advance of November 8.

COMMISSIONER OCANA: So Scott, are you saying that our only option is to try, and then go to the Board on November 8 and essentially say we haven't -- we're not -- we're refusing the recommendation or were -- we failed to provide that one? DEPUTY DIRECTOR ORR: That is correct. Similar to what Counsel Klein said, you know, there -- that -- there's two paths. It's either you try and you finish and you make a recommendation to the Board to adopt a plan, or you try and you don't get to a place where you can recommend an option, then you would recommend to deny, because you're not ready to recommend approve. So that would be -- COMMISSIONER OCANA: So you essentially have -- MR. OH: -- that avenue to communicate to the Board where the Commission fell.

COMMISSIONER OCANA: So I'm sorry to interrupt. So we essentially have until November 8th or -- and/or earlier to put it on the agenda?

DEPUTY DIRECTOR ORR: Correct.

And then just, you know, before we -- so just -- I know this is all

critically important, but we do need to be careful not going too far into discussing the plans, since we haven't really started the public hearing for that -- that plan yet. I know it's complicated.

CHAIRMAN REED: Okay. That sounds good.

Given that, Commissioner Koenigshofer, do you have a comment?

COMMISSIONER KOENIGSHOFER: Yeah, I believe that the Commission would be within its appointed authority, if the Commission at some point, perhaps today, decided to send a memo to the Board, alerting the Board to our schedule that we just discussed and decided and why that's happening, reinforcing our intention to do the best we can to meet the December 31st deadline, and also just making an observation that there would be a potential that we might slip a few weeks or a month. I think that commissions have authority to make that kind of communication. That would then be presented as a communication at the next meeting of the Board I would think. Is that -- am I off-base there, Counsel? MS. KLEIN: No. I mean, the Commission can send a communication to the Board of Supervisors.

Nothing would be agendized at the Board at that point for them to take action. It would just be a letter.

CHAIRMAN REED: And I'm -- you know, in the context of not reviewing this plan in detail, to -- to speculate that we're having trouble, that doesn't -- I'm not sure I agree with that at this point. I think we haven't heard, you know, the -- you know, I think having the workshop and having the site visit may reveal, you know, a lot more depth that we haven't really considered at this point and alleviate some of those concerns.

COMMISSIONER CARR: I don't think Eric is suggesting that we say we're

having trouble. I think he's suggesting that if we do need a few more meetings to, you know, to get to a plan that we can recommend approval on, that we just want to know what our -- what our options are for scheduling.

CHAIRMAN REED: I -- you know -- MS. KLEIN: What I think you can do is I think you can ask Staff to consult with the Clerk of the Board on potential meeting dates before a final date, and I think Scott is telling you it's probably very difficult, possibly, you know, to have a second date before the November 8 date, but I think that certainly you can ask him to explore that with the clerk.

But if you send a letter to the Board, the --

they won't be -- unless it's on their agenda as a formal Board item with action agendized, the Board won't be able to do anything with your Commission -- with your communication.

COMMISSIONER CARR: But you're saying -- you're saying if we send them a letter, they won't -- they won't put it on the agenda? COMMISSIONER KOENIGSHOFER: The following week.

MS. KLEIN: I mean, I think that's the -- that's the issue.

DEPUTY DIRECTOR ORR: And, you know, I know that, you know, as Staff, we're part of the County family, but I don't want to speak for another department and how they go through getting things on the agenda, so -- and also, I mean, I hear the desire, but also today was not noticed for us discussing a plan to recommend something to the Board, so we -- we've heard the concern -- COMMISSIONER CARR: We're not talking about -- we're not talking about the Plan. We're talking about a schedule to allow us to do some planning, and we want to make sure we're not stepping on the deadline issue.

DEPUTY DIRECTOR ORR: Right now we're talking about the potential for having

the Planning Commission make an action, make a recommending in a letter to the

Board for the Board to make a decision, and today's meeting was not noticed for that.

COMMISSIONER KOENIGSHOFER: Well, as a person who raised the question of -- and I said memo -- that was reporting what we had done today so that the Board understands what we're doing today with direct communication, I, you know, with all due respect, the Commission is within its authority and its assigned purpose to make such a communication. Not often done, but it isn't -- we're not proposing that the Board take any action. That's not -- you know, I didn't say, "We propose that the Board take an action." I said that we'd report to the Board our intention to meet the deadline and report to the Board in the -- in the communication that in order to try and meet the deadline, to adhere to the deadline, we're doing this. We scheduled it, we're going to go out and have a site visit. We scheduled it, we're going to have a subsequent meeting at a date to be determined, potentially the first or second week of October, where we would do a -- a workshop on the -- on the Plan, itself, all designed around putting us in a position to be more likely to be able to take final action in the context of the deadline. That's what I was proposing.

And it's -- it's a -- it's a way that then

that's just communication received. That's a standard component of the Board's weekly agenda. "Did we get any communication?" "Oh, yeah, we got room from the Planning Commission." "Oh, What did they say?" "Oh, here's what they said." That's what I was suggesting.

MS. KLEIN: Right now you -- there's no agendized item to send a letter or a

communication. There's no agendized action for anything other than providing comments on the draft EIR. So if you want to informally, without a vote, direct Staff to send a letter summarizing your discussion, you can do that.

COMMISSIONER KOENIGSHOFER: So hold on just a second. You're saying that in order for us to make a communication just stating neutral facts, we're not allowed to do that without having it on the agenda? MS. KLEIN: I just gave you a path in order to do that when it's not agendized.

CHAIRMAN REED: It seemed like -- MS. KLEIN: What I said -- what I said was you can ask Staff to submit a communication summarizing your discussion.

CHAIRMAN REED: Let's maybe, you know, see what

we can do here. You know, we're not taking any action today. That was -- that was clear. If we want to -- you know, this is a public hearing. You know, I don't know, Scott, if you can informally say, "Hey, you know, the Planning Commission, you know, per their comments, you know, today was struggling with the schedule. You know, you might want to watch the -- the last piece of the meeting to see what that's about." Can that be done, or -- or, you know, how informal can we make this comment to the Board to say, "Hey, you know, the Commissioners, you know, are feeling, you know, hesitant about the schedule"? DEPUTY DIRECTOR ORR: All -- all I can do is say that Staff will work to share the facts of the meeting today, to the extent that we can.

COMMISSIONER CARR: You know, I think -- I think there's a better way to get this on the Board agenda. I think I know how that is. But I thought it would be stronger coming from the Planning Commission, but that's all right.

CHAIRMAN REED: All right. Are there other comments from commissioners?

All right, well, thank you all for attending, and we will look forward to a site visit and -- and moving forward.

COMMISSIONER CARR: Thanks a lot, Chair. Thanks Staff.

CHAIRMAN REED: Thank you. Good night.

(The matter was adjourned at 4:21 p.m.) -oOo-

///

CERTIFICATE OF REPORTER I, MICHELLE BARBANTE, a Certified Shorthand Reporter, do hereby certify that the foregoing hearing was held at the time and place therein stated; and that the hearing was reported by a Certified Shorthand Reporter, and was thereafter transcribed under my direction into typewriting.

I FURTHER CERTIFY that I am not of counsel or attorney for either or any of the parties in the foregoing proceeding and caption named, or in any way interested in the outcome of the cause named in said caption.

IN WITNESS WHEREOF, I have hereunto set my hand this 19th day of September, 2022.

Responses to Comments

As described above, this chapter includes responses to comments on environmental issues raised in the comment letters. Responses to written comments received during the public review are summarized in Table 2-3 below. The reference number and text of the comments are presented alongside the response for ease of reference. Where the same comment has been made more than once, a response may direct the reader to another numbered comment and response.

Responses focus on comments that raise important environmental issues or pertain to the adequacy of analysis in the Draft EIR or to other aspects pertinent to the potential effects of the Proposed Project on the environment pursuant to CEQA. Comments that address policy issues, opinions, or other topics beyond the purview of the Draft EIR or CEQA are noted as such for the public record. Where comments are on the merits of the Proposed Plan rather than on the Draft EIR, these are also noted in the responses.

Where appropriate, the information and/or revisions suggested in the comment letters have been incorporated into the Final EIR. Where such revisions are warranted in response to comments on the Draft EIR, deletions are shown in ~~strikethrough~~ and additions are shown underlined in red in the matrix of comments and responses.

Table 2-3: Responses to Comments Received on the Draft EIR

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
City of Sonoma	9/22/2022	A1-1	Thank you for the opportunity to comment on the Specific Plan and related Draft Environmental Impact Report for the Sonoma Developmental Center, both dated August 2022. On behalf of the City of Sonoma, we provide the following comments as you finalize the Specific Plan document and Final Environmental Impact report (FEIR): 1. The City of Sonoma continues to support a robust affordable housing plan for the project and a supportive non-housing development program. The non-residential component of the project should include institutional, research and development, office, and other creative uses focused on sustainability and climate solutions-focused enterprises, non-profit organizations, and businesses. Small-commercial uses-such as restaurants, cafes, and small retail uses-to support neighborhood needs and walkable lifestyles are also supported by the City.	Thank you for your comment letter. The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
City of Sonoma	9/22/2022	A1-2	2. The City of Sonoma supports visitor and community-serving uses such as meeting and event facilities (conference center, etc.,) but does not support a hotel use or Hospitality Overlay Zone as this type of use does not provide living wage jobs and increases the Valley's dependance on low wage workers who have little potential for finding housing which in turn exacerbates traffic impacts. The City of Sonoma supports economic generators in the project that provide a substantially better base for employment and that can generate follow-on businesses locally and throughout the state (i.e., provide quality jobs and serve the people of Sonoma Valley and California).	The comment is noted. Please see MR-6 regarding transportation impacts from non-residential land uses.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
City of Sonoma	9/22/2022	A1-3	3. The City of Sonoma supports public, and community uses, such as a museum honoring the legacy of the site and Sonoma's Native People, community center or gathering and recreational spaces, emergency command center, fire station, educational uses, and social support services. As such, the City supports the environn1entally superior alternative analyzed in the DEIR - the "Historic Preservation Alternative". This should be the project approved in the Specific Plan by the Board of Supervisors as it achieves a "higher level of historic preservation with a focus on adaptively reusing existing buildings to the maximum extent while achieving the goals for co-locating housing and employment and limiting development to within the current footprint of the SDC facility (Core Campus)". Further, the Historic Preservation Alternative incorporates existing sustainable features of the Proposed Plan and does not include a new connection to Highway 12. Adoption of the Historic Preservation Alternative "could result in a slightly lower VMT per capita than the Proposed Plan, thereby modestly reducing the significant VMT impact. Without the new roadway and associated lane miles, there would be no potential for induced travel and VMT associated with increases in roadway capacity. As a result, the significant impact associated with induced VMT would be eliminated. The Historic Preservation Alternative would lessen VMT impacts by eliminating the potential for induced travel and may also modestly reduce the projected residential VMT per capita".	The comment is noted. As stated on page 569 of the DEIR, it is true that the Historic Preservation Alternative would eliminate the potential for induced travel and may also modestly reduce the projected residential VMT per capita. While beneficial, these reductions in VMT and VMT per capita would be insufficient to avoid a significant and unavoidable VMT impact. Thus, similar to the Proposed Plan, the Historic Preservation Alternative would also result in significant and unavoidable and cumulatively considerable VMT impacts. Please see MR-6 for more information regarding whether fewer housing or jobs would result in better VMT outcomes. In addition, please see MR-8 for more information on the Historic Preservation Alternative and how that is an infeasible Alternative to meet State legislature requirements to prioritize affordable housing at the site.
City of Sonoma	9/22/2022	A1-4	4. Based on the requirements of CEQA, the analysis of transportation impacts in the DEIR is limited to the analysis of Vehicle Miles Travelled (VMT) in and around the project site (which is in and of itself a "Significant and Unavoidable impact" based on the Proposed Project). Level	The comment is noted. Please see MR-6 regarding the use of VMT rather than LOS for CEQA analysis. The Proposed Plan would still adhere to objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan which pertain to vehicle level of service (LOS) standards. While

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			of Service (LOS) is no longer the test to analyze traffic impacts. The City of Sonoma still does not know and understand the traffic impacts upon our community regardless of the development plan chosen by the Board of Supervisors. This is because there is no "street segment" or "intersection" analysis for the City to review in the DEIR (for the reasons previously explained) as there was in the "Alternatives Report", dated November, 2021. And even with such analysis provided in the Alternatives Report, the nearest segment analysis to the City limits along Highway 12 was from Boyes Boulevard to Verano Avenue, which currently operates at LOS E and will worsen to LOS F with any project developed at the SDC. The Alternatives Report states the following on page 64: "The segment of SR 12 between Boyes Boulevard and Verano Avenue, however, currently operates poorly in the LOS E range and would be expected to fall to the LOS F range with all three alternatives. This roadway segment passes through the Springs communities, serving as their main street, and has high levels of pedestrian and bicycle activity as well as vehicular movements to and from side streets. Neither Caltrans nor the County of Sonoma intend to widen the corridor to increase auto capacity and are instead focusing efforts on shifting more auto travel to non-auto modes including walking, biking, and transit." We request the Specific Plan call for other measures to reduce traffic to and from SDC- like shuttle and like developing Arnold Drive with bike lanes, walking paths etc.	most of the intersections are projected to meet the County's LOS D standard under future conditions with buildout of the SDC Specific Plan, modifications would be necessary to achieve acceptable operation to meet the County's LOS D standard at Arnold Drive/Harney Street and SR 12/New SDC Connector Road. The Proposed Plan incorporates several policies that reduce traffic to and from SDC, see policies 3-41 through 3-44.
City of Sonoma	9/22/2022	A1-5	The County Board of Supervisors must understand that under any development scenario chosen for the SDC, the City of Sonoma will be impacted. But to what extent we do not know. The City respectfully requests that the Board of Supervisors approve the environmentally superior	The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			alternative and eliminate the hotel overlay zone component as presently constituted.	
Sonoma Valley Fire District	9/27/2022	A2-1	Thank you for the opportunity to comment on the Sonoma Developmental Center (SDC) Specific Plan and Draft Environmental Impact Report (EIR). The SDC site is located in the heart of the Sonoma Valley region of southern Sonoma County, about six miles north of the City of Sonoma and about 15 miles south of Santa Rosa, between the unincorporated communities of Glen Ellen and Eldridge. The Specific Plan was developed to guide development of the SDC Core Campus and preserve open space and natural resources on the SDC property. The Proposed Plan establishes ten districts within the Core Campus subarea—Historic Core, Core North Residential, Maker Place, Core South Residential, Fire House Commons, Creek West, Eldridge North, Agrihood, and Utilities— each of which is envisioned to have a distinct character and intermix of uses and products. The Proposed Plan is anticipated to result in a total buildout of approximately 2,400 residents, 1,000 housing units, and 940 jobs,1 which would all be an increase from the current conditions of the SDC facility, closed in 2018 and largely vacant with some remaining uses.	Thank you for your comment letter. The comment is noted; it is not related to the adequacy of the DEIR; thus, no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-2	The Sonoma Valley Fire District (SVFD) provides all-hazards fire, rescue, and paramedic level emergency medical services to the communities of Agua Caliente, Boyes Hot Springs, City of Sonoma, Diamond-A, El Verano, Fetters Hot Springs, Glen Ellen, Mayacamas, Temelec, Seven Flags, and Kenwood (under a contract for services). The SVFD is governed by a seven-member Board of Directors, elected at-large by their constituents, and each	The comment is noted; it is not related to the adequacy of the DEIR; thus, no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			serving a four-year term. The Fire Chief oversees the District's general operations under the Board of Directors' policy direction. The SVFD serves an area of approximately 114 square miles with a resident population of roughly 52,000. The District includes extensive wildland-urban interface (WUI) areas, large single-family homes, multi-family residential complexes, several hotels, ten schools, a hospital, and a historic downtown Plaza. SVFD also provides ambulance service to an additional 100 square miles, and an additional approximately 5,000 residents, as well as a significant number of visitors in the greater Sonoma Valley. SVFD is a combination agency that maintains five career-staffed fire stations, three volunteer stations, an administrative office, and a maintenance facility. SVFD has 60 full-time personnel and over 50 volunteer personnel. SVFD's daily staffing includes four paramedic engines, two advanced life support ambulances, and a Battalion Chief. In addition, this staffing is enhanced through the cadre of dedicated volunteer firefighters and an assortment of specialized equipment, including a ladder truck, seven wildland engines, two rescue trucks, three water tenders, and three additional engines. It is important to note that the SVFD also provides staffing for one shift for the Eldridge Fire Department at the existing SDC Fire Station as part of a contract for services agreement with the State of California Department of General Services. This staffing agreement and services have been in place since 2019. The SVFD serves its Community from the below Fire Stations:	

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*

• Station 1 at 630 2nd St West, Sonoma
• Station 2 at 877 Center St, El Verano [Serves the lower portion of Highway 12, and the Verano and Donald St areas of the Plan Area]
• Station 3 at 1 West Aqua Caliente Rd, Agua Caliente [Located at the north border of the Plan Area and serves most of the Highway 12 corridor]
• Station 4 on Prospect Rd, Diamond A Ranch (Volunteer only)
• Station 5 at 13445 Arnold Dr., Glen Ellen
• Station 6 at 9045 Sonoma Highway, Kenwood
• Station 8 at 3252 Trinity Rd, Glen Ellen, CA 95442 (Volunteer only)
• Station 9 4601 Cavedale Rd, Glen Ellen, CA 95442 (Volunteer only)

SVFD is an independent Special District, organized and operating as defined under the Fire Protection District Law of 1987, California Health and Safety Code section 13800 et seq.

SVFD has been actively engaged in the Sonoma Developmental Center's future for over 5 years. This began in 2017 and continued with SVFD Fire Chief Steve Akre being an active participant in the SDC Coalition meetings beginning in 2018 that were held by Supervisor Gorin and included many SDC stakeholders. These efforts continued with both the Fire Chief and Elected Board members attending the first Eldridge Vision Workshop in June of 2019. SVFD has emphasized through the workshop and ongoing communications, the need for the SVFD to adequately serve the proposed project and the funding necessary to provide these services.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			The SVFD (Chief Akre) has met multiple times with Brian Oh and Director Wick and conducted on-site meetings to review and discuss fire and EMS services and facilities. Chief Akre has additionally attended the subsequent Visioning Workshop and has been an active member of the Planning Advisory Team (PAT). Through these meetings, and work, the SVFD has kept in regular communication with County Staff regarding the progress on the release of both the Specific Plan and the Draft EIR. Most recently, at the request of the Planning Department, the SVFD participated with the Department of Emergency Management (DEM) to develop two wildfire evacuation scenarios. The models utilized the enhanced alert and warning systems and new evacuation zones. The models also relied on the increased evacuation experience of County residents, the DEM, and the SVFD. We believe that these scenarios provide valuable and realistic assessments of how evacuations would be operationalized in 2022 and beyond. The scenarios were provided to the Planning Department and then to the consultants for traffic flow analysis and impacts. SVFD Fire Marshal, Trevor Smith has reviewed both the specific plan and the Draft EIR. Fire Marshal Smith has attended all public meetings associated with the plan and the Draft EIR. Our Fire Prevention Office including both Fire Marshal Smith and Prevention Captain, Gary Johnson have been involved with the development of Glen Ellen Fire Safe Councils and are active participants in other community groups including the Glen Ellen Forum.

Sonoma Valley Fire District	9/27/2022	A2-3	Comments on the Specific Plan Draft Sonoma Valley Fire District's Comments on Wildfire and other Hazards: The SVFD agrees with the Goal (2-F) and Policies (2-54.a, b, c, and d), with the following changes. 2-54.a: The Sonoma Valley Fire District (SVFD) requests that language in the Specific Plan be amended to require the developer shall be required to prepare or fund the preparation of an Emergency Preparedness and Evacuation plan the complies with Sonoma County Evacuation Plans and the Sonoma Valley Fire District's procedures and identifies emergency access/egress routes and procedures. 2-54.b: The SVFD is not aware of any local, state or US Federal Standards in place for an on-site shelter-in-place facility. While this may be a worthwhile goal, there is nothing currently in place to guide this or evaluate its efficacy. In general, evacuating people from a hazardous situation is the first priority and best option to ensure life safety. Sheltering-in-place is typically a strategy choice when there is a hazard, such as smoke, but one that is not a life-threatening hazard, such as a rapidly growing wildfire. Sonoma Valley Fire District's Comments on Mobility and Access: The SVFD agrees with the above Goal (3-B) and Policy (3-5), as updated below. The SVFD is committed to ensuring the safety and timely evacuation of the community, and access for emergency vehicles, while balancing the protection of the wildlife corridor. We believe that this Goal and Policy needs more study and definition to accomplish the above objectives. Sonoma Valley Fire District's Comments on Public	The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Facilities: The SVFD agrees with the above Introduction, Goal (6-A) and Policies (6-1), with the following changes. Introduction: The SDC campus has historically been served by Eldridge Fire Department, a State agency that has coordinated with the Sonoma Valley Fire District for staffing and mutual aid. With the transition of the Planning Area away from State operations, the existing Fire District (Sonoma Valley Fire District) would require the construction of a new fire station at SDC (and the funding for the new station) to serve the residents of the Planning Area and the surrounding community. A new emergency operations center for Sonoma County could likewise be located at SDC, to serve the wider region in case of emergency. Policy 6-1: Expand the Sonoma Valley Fire District to fully provide fire and EMS services to the SDC and identify a location for the construction of a new fire station (to SVFD standards and specifications) within the Core Campus. This includes providing the funding for this new facility, equipment, and ongoing services. Ensure easy and proximate emergency access to Arnold Drive with minimal crossings of pedestrian and bicycle routes. The Sonoma Valley Fire District has the following comments on Implementation and Financing: • The specific funding sources need to be identified for ongoing fire protection and EMS services, including the construction of the fire station, and purchasing of equipment, must be included in implementation and financing. • The SVFD agrees that the new Fire Station needs to be built within the first five years after adoption and prior to	

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			any occupation of new development. • The SVFD must be included in the coordination with local infrastructure agencies for future uses of water infrastructure located within preserved public parkland and open space. This is in order to ensure adequate water for fire suppression. • The Design and construction oversight of the new fire station shall be the SVFD's in coordination with County Planning staff. The costs and funding sources for the design and construction need to be clearly identified. • The plan elements listed in Table 7-1 are assumed to be the responsibility of Sonoma County, and should be stated more clearly. This responsibility and the best estimated costs should be included in the Plan. • The Specific Plan states that "it is assumed that vertical construction costs of community facilities and utility buildings will be the responsibility of public agencies". This needs to be explicitly and consistently stated which agency is financially responsible and how and when the funding is allocated. • The SVFD requests that an MOU or other formal agreement be utilized for financing responsibilities.	
Sonoma Valley Fire District	9/27/2022	A2-4	The Sonoma Valley Fire District's Comments on the SDC Specific Plan Draft EIR Below are the SVFD comments on the Draft EIR, organized by section below: Project Description: The SVFD requests that the construction of a new Fire Station be specifically included in the Project Description.	This comment is noted. The following edit has been made: DEIR p. 68: "It also aims to improve multi-modal access from the SDC to Highway 12 (State Route 12 or SR 12) by exploring the feasibility of constructing an additional east-west emergency access connection from the site. Implementation of the Proposed Plan will also expand the existing Sonoma County fire district to serve SDC, and identify a location for the fire district to construct a new fire station within the Core Campus."

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				This is a minor correction made to clarify and does not affect the findings of the DEIR.
Sonoma Valley Fire District	9/27/2022	A2-5	Hazardous Materials: In the Review of Documents and Records, under the final heading of Emergency Management and Response, the Sonoma Valley Fire District requests that this section be corrected to accurately reflect that it is the Sonoma Valley Fire District and not the “Sonoma County Fire District” that provides services to the greater Sonoma Valley, including the SDC Project Area and surrounding areas.	This comment is noted. The following edit has been made: DEIR p. 257: "Sonoma ~~County~~ Valley Fire District (SCFD) provides fire and emergency response services to the county." This is a minor correction made to clarify and does not affect the findings of the DEIR.
Sonoma Valley Fire District	9/27/2022	A2-6	Impact 3.8-7: Implementation of the Proposed Plan would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires (Less than Significant) SVFD’s Comments: Fire and Resources Assessment Program under the FRAP, the Planning Area is located in the Sonoma Creek watershed and includes areas of high to very high Fire Hazard Severity Zones west of Highway 12, areas of high fire hazard severity in the hills, and areas of moderate fire hazards severity zones in the vicinity of Suttonfield Lake and Fern Lake (Figure 3.16-2). The Core Campus is not included in any of these FHSZs. The figure also shows the extent of the 2017 Nuns Fire as well as Wildland Urban Interface (WUI) zones within the Core Campus and the northern and southern portions of the Planning Area. Based on the impacts and threats demonstrated by the 2017 Nuns fire; the evacuation of nearly 50% of the County for the 2019 Kincade fire; and the imminent threat from the 2020 Glass fire, SVFD suggests wildland fire remains a	This comment is noted. The comment states that without adequate mitigation, Impact 3.8-7 would be significant and unavoidable and would require findings and overriding considerations. While it is true that the Planning Area is located in areas of high to very high Fire Hazard Severity Zones, the Core Campus is not included in any of these FHSZs. Further, the Proposed Plan includes a plethora of policies and Standard Conditions of Approval to adequately mitigate potentially significant impacts to a less than significant level. Such measures, as described under the Wildfire Impact Analysis starting on page 551 of the DEIR, require the Proposed Plan to construct and maintain a managed landscape buffer to aid in fire defense; enhance creek buffers; remove surface and aerial fuels; implement fuel management methods (such as fuel separation, defensible space with continuous tree canopy, and irrigated agriculture); plant fire resilient landscaping; include a five-foot buffer of defensible space around all developments; prohibit wooden fencing; require all new construction and retrofitting of existing

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			significant risk and therefore this impact should be potentially significant and mitigation measures should be included to reduce impacts to the degree feasible. Without adequate mitigation, this impact would be significant and unavoidable and would require findings and overriding considerations. While new development and construction will conform to current building and development standards, there will be no additional protection made to the structures to make them safer in a wildfire environment. If the development was within the SRA andlocated in any of the FHSZ's, additional protection and construction standards would apply making these structures less prone to ignition in the face of wildfire and would lessen the risk of these structures igniting and causing further spread of a wildfire event. California is in the process of updating these FHSZ boundaries and it is anticipated that the updates will be made public in early Fall of 2022. The SVFD recommends the incorporation of a mitigation measure requiring that all new construction in the Specific Plan area meet elevated fire protection and construction standards. The SVFD recommends that all new construction including the retrofitting of existing structures utilize construction methods intended to mitigate wildfire exposure shall comply with the wildfire protection building construction requirements contained in the California Building Standards Code, including but not limited to the following: California Building Code, Chapter 7A, California Residential Code, Section R337, California Referenced Standards Code, Chapter 12-7A. In addition to the modifications to the construction standards the SVFD	buildings use Class A fire-rated roofing materials, fire-resistant siding, and dual-paned tempered glass windows; prohibit the storage of flammable materials under decks or porches; prune branches of trees; cover all building vent openings with wire mesh screens to prevent infiltration from embers of sparks; and ensure that all property owners are informed and educated about wildfire resiliency requirements at the site at the time of purchase. Further, Policy 6-21 would require all new and existing utility lines be buried underground to mitigate additional wildfire risk. Further, the comment recommends mitigation measures that require adherence to wildfire protection building construction requirements contained in the California Building Standards Code and require Fire Protection Plans in compliance with the Sonoma County Fire Code Section 13-59.5. Since these are state and local regulations, the Proposed Plan will be required to comply with all such regulations and standards contained within the California Building Code and the Sonoma County Code. Therefore, with adherence to State, regional, and local regulations as well as proposed policies and Standard Conditions of Approval, Impact 3.8-7 would be less than significant. Given that this impact is less than significant, and the Core Campus is not located in any FHSZ, development under the Proposed Plan would not need to comply with high fire area building standards as mentioned in the comment.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			recommends requiring Fire Protection Plans in compliance with the Sonoma County Fire Code Section 13-59.5 for all development located within the SDC Specific Plan area The SVFD will consider establishing locally designated FHSZs or WUI zones depending upon the outcome of the State's update of FHSZ boundaries and determinations.	
Sonoma Valley Fire District	9/27/2022	A2-7	Land Use: Impact 3.10-2 – Development under the Proposed Plan would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating and environmental effect. SVFD"s Comments: This impact is incorrectly identified as being less than significant. The proposed project would conflict with Sonoma County General Plan GOAL LU-4 which states "Maintain adequate public services in both rural and Urban Service Areas to accommodate projected growth. Authorize additional development only when it is clear that a funding plan or mechanism is in place to provide needed services in a timely manner." SVFD concurs with and supports this goal; however, there is no currently clear funding plan or mechanism in order to SVFD to ensure that sustainable, adequate fire and emergency medical services can be provided for the future growth. The District's onetime impact fee (based on estimates of the SDC development) will not be adequate to fund the necessary one-time facility and equipment needs. However, it will help to support ongoing infrastructure needs, but the impact fees will not provide the steady revenue stream needed to ensure adequate staffing levels for ongoing fire and emergency medical services	This comment is noted. However, impact 3.10-2 is less than significant because, as described on page 321 of the DEIR, the Proposed Plan is consistent with the General Plan's goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency. Funding mechanisms mentioned in this comment pertain to the Specific Plan and are not analyzed under CEQA. Therefore, this comment is not related to the adequacy of the DEIR and no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			operations. Accordingly, an additional sustainable funding plan or mechanism must be established to provide the full range of necessary fire and emergency medical services in a timely manner. SVFD recommends inclusion of the following mitigation measure: Mitigation Measure 3.9-2: The County shall enter into service agreement with SVFD that provides the sustainable funding plan to augment the existing impact fees to provide for required facility and equipment needs, as well as to fund staffing levels for ongoing fire and emergency medical services operations. See comments under Policy PS-3m below.	
Sonoma Valley Fire District	9/27/2022	A2-8	Public Services and Recreation: The SVFD notes several conflicts with the following objectives and policies. Policy PF-2a, Policy PF-2g, Policy PF-2x, and Policy PF-2b: This policy should be changed to include "Districts" in addition to Cities. As discussed above, the SDC Specific Plan does not provide a coordinated plan or funding mechanism regarding the provision of ongoing fire and emergency medical services for the additional growth and demand. The project does not comply with this policy and a mitigation measure should be included to include in lieu fees for future development to ensure adequate services are provided as subsequent development is implemented under the Specific Plan. In 2021, the County of Sonoma approved an impact fee for SVFD, but the infrastructure inventory and consequent impacts were estimates only and will need to be updated to reflect the evolving and expanding project scope and impacts. Additionally, these impact fees fund	This comment is noted. However, policy amendments and funding mechanisms mentioned in this comment pertain to the Specific Plan and are not analyzed under CEQA. Therefore, this comment is not related to the adequacy of the DEIR and no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			infrastructure only and do not provide funding for staffing and operational costs essential for sustainable increased fire and emergency medical services required because of the SDC Specific Plan. Therefore, the Proposed Project conflicts with the above policies and this impact is potentially significant and requires mitigation. Implementation of recommended Mitigation Measure 3.9-2 would reduce this impact to less than significant. Policy PF-2m: Policy PF-2m needs to be amended to specify the Sonoma Valley Fire District as the lead fire agency and include who is responsible for both the preparation and cost of the Fire Services Master Plan. Policy PF-2n: The Sonoma Valley Fire District strongly supports this policy with the following change: that “comparable uses” be changed to “comparable service areas within the SVFD”. Policy PS-3m: SVFD recommends the addition of two mitigation measures to ensure that this policy is met. As a means to develop a sustainable funding plan to augment the existing impact fees to support staffing levels for ongoing fire and emergency medical services operations, SVFD recommends that the EIR be amended to require the County of Sonoma to revise and expand its existing service agreement with SVFD to ensure adequate services. Additionally, another recommended mitigation measure is to require that the SVFD impact fee study rates be reevaluated and updated in light of more certainty in the scope and breadth of the SDC Specific Plan development impacts and infrastructure needs. This updating process may also identify additional exactions and mitigations	

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			based on a particular project (or portions of projects); which then can impose additional specific mitigations beyond the generic impact fees.	
Sonoma Valley Fire District	9/27/2022	A2-9	3.13.2.1 Physical Setting: The Sonoma Valley Fire District requests the following updated description be used in place of the current DEIR's description. The SDC property is served by the Eldridge Fire Department, which operates out of the station located directly on the main campus. The Eldridge Fire Department is a State agency that coordinates with the County as an all-risk department, responding to all emergencies within the SDC property. Due to uncertainty whether the department would continue operation after closure of the developmental center, the fire department lost many of its staff members and is currently understaffed. However, the Eldridge Fire Department was extended to continue full operation and currently covers two of three shifts, supplemented by staff from the neighboring fire district Sonoma Valley Fire District (SVFD) for the remaining shift, following a 2/4 schedule (two days on, four days off). The Eldridge Fire Department maintains a two-minute getaway service standard from the time they receive a service call, which are responded to through a mobile data transmitter (MDT) system. Equipment operated by the department includes a Type 1 fire engine and a Type 3 brush rig. An ambulance is also available through partnership with SVFD, but it is not used for service calls. The Eldridge FD does not have an ISO (Insurance Services Office) rating but runs under SVFD's Class 2 rating standard. The Eldridge Fire Department continues to operate independently, and it is anticipated that future services will	This comment is noted. The following edit has been made: On pages 387-389 of the DEIR, the text under the Fire Protection header in the Physical Setting section is removed and replaced with the following text: "The SDC property is served by the Eldridge Fire Department, which operates out of the station located directly on the main campus. The Eldridge Fire Department is a State agency that coordinates with the County as an all-risk department, responding to all emergencies within the SDC property. Due to uncertainty whether the department would continue operation after closure of the developmental center, the fire department lost many of its staff members and is currently understaffed. 			square miles, and an additional approximately 5,000 residents, as well as a significant number of visitors in the greater Sonoma Valley. SVFD is a combination agency that maintains five career-staffed fire stations, three volunteer stations, an administrative office, and a maintenance facility. SVFD has 60 full-time personnel and over 50 volunteer personnel. SVFD's daily staffing includes four paramedic engines, two advanced life support ambulances, and a Battalion Chief. In addition, this staffing is enhanced through the cadre of dedicated volunteer firefighters and an assortment of specialized equipment, including a ladder truck, seven wildland engines, two rescue trucks, three water tenders, and three additional engines. The SVFD maintains standards of response coverage benchmarks of six minutes until the first unit arrives on the scene for urban areas, seven minutes for suburban areas, and 12 minutes for rural areas, with a goal of meeting these standards for 90 percent of all calls for service. Based on the 2017 Annual Report, which represents the most recent data available, there were approximately 5,300 calls for service, most of which were for emergency medical services (68 percent). The District has achieved a one minute and 56 second average improvement in response times. Another nearby fire station is the seasonally staffed CAL FIRE Glen Ellen Station located within the Sonoma Valley Regional Park. With five SVFD stations in addition to the Eldridge FD within four miles of the SDC site, fire service is well-established in the area. Table 3.13-1 lists fire department stations anticipated to serve the Planning Area.	extensive wildland-urban interface (WUI) areas, large single-family homes, multi-family residential complexes, several hotels, ten schools, a hospital, and a historic downtown Plaza. SVFD also provides ambulance service to an additional 100 square miles, and an additional approximately 5,000 residents, as well as a significant number of visitors in the greater Sonoma Valley. SVFD is a combination agency that maintains five career-staffed fire stations, three volunteer stations, an administrative office, and a maintenance facility. SVFD has 60 full-time personnel and over 50 volunteer personnel. SVFD's daily staffing includes four paramedic engines, two advanced life support ambulances, and a Battalion Chief. In addition, this staffing is enhanced through the cadre of dedicated volunteer firefighters and an assortment of specialized equipment, including a ladder truck, seven wildland engines, two rescue trucks, three water tenders, and three additional engines. The SVFD maintains standards of response coverage benchmarks of six minutes until the first unit arrives on the scene for urban areas, seven minutes for suburban areas, and 12 minutes for rural areas, with a goal of meeting these standards for 90 percent of all calls for service. 				site, fire service is well-established in the area. Table 3.13-1 lists fire department stations anticipated to serve the Planning Area." This is a minor correction made to clarify and does not affect the findings of the DEIR.
Sonoma Valley Fire District	9/27/2022	A2-10	Table 3.13-1 Fire Department Stations Serving the Planning Area This table should be amended to replace "SVFRA" with "SVFD" and to add Fire Station 6 9045 Sonoma Highway, Kenwood. 1 Type 1 Fire Engine.	This comment is noted. The following text edit has been made: DEIR p. 380, Table 3.13-1: "~~SVFRA~~ SVFD Fire Station 1; ~~SVFRA~~ SVFD Fire Station 2; ~~SVFRA~~ SVFD Fire Station 3; ~~SVFRA~~ SVFD Fire Station 5; SVFD Fire Station 6, 9045 Sonoma Highway, Kenwood, Type 1 Fire Engine." This is a minor correction made to clarify and does not affect the findings of the DEIR.
Sonoma Valley Fire District	9/27/2022	A2-11	13.3.3 Relevant Policies and Implementing Actions: The Sonoma Valley Fire District's comments on the below Goal and Policy: Goal 6-A Community Facilities: Provide high-quality community facilities and spaces to serve new residents of the SDC site and the greater Sonoma Valley. Policy 6-1 Expand an existing Sonoma County fire district to serve SDC, and identify a location for the fire district to construct a new fire station within the Core Campus. Ensure easy and proximate emergency access to Arnold Drive with minimal crossings of pedestrian and bicycle routes.	This comment is noted; however, it is not related to the adequacy of the DEIR and no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-12	Sonoma Valley Fire District's Comments on Public Facilities: The SVFD agrees with the above Introduction, Goal (6-A)	This comment is noted. However, policy amendments mentioned in this comment pertain to the Specific Plan and are not analyzed under CEQA. Therefore, this

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			and Policies (6-1), with the following changes. Introduction: The SDC campus has historically been served by Eldridge Fire Department, a State agency that has coordinated with the Sonoma Valley Fire District for staffing and mutual aid. With the transition of the Planning Area away from State operations, the existing Fire District (Sonoma Valley Fire District) would require the construction of a new fire station at SDC (and the funding for such) to serve the residents of the Planning Area and the surrounding community. A new emergency operations center for Sonoma County could likewise be located at SDC, to serve the wider region in case of emergency. Policy 6-1: Expand the Sonoma Valley Fire District to fully provide fire and EMS services to the SDC and identify a location for the construction of a new fire station (to SVFD standards and specifications) within the Core Campus. This includes providing the funding for this new facility, equipment, and ongoing services. Ensure easy and proximate emergency access to Arnold Drive with minimal crossings of pedestrian and bicycle routes.	comment is not related to the adequacy of the DEIR and no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-13	3.13.3.4 Impacts: Impact 3.13-1: This impact is not less than significant and the impact category should be amended to be Less than Significant with Mitigation. SVFD concurs with and supports this goal; however, there is currently no clear funding plan or mechanism in order to SVFD to ensure that sustainable, adequate fire and EMS can be provided for the future growth. The SVFD does not have capacity either in funding or operations to provide the necessary and appropriate fire and EMS services to the SDC Planning area. Current new construction costs for Fire Stations are $1,000 per square	This comment is noted. However, impact 3.13 -1 is less than significant because, as described on page 401 of the DEIR, any new developments of fire protection facilities to serve the Planning Area would be located and constructed on existing urban and built-up land within the Core Campus (proposed Policy 6-1). Environmental impacts related to construction emissions, vehicle miles traveled (VMT), and biological resources associated with construction of the proposed new fire station or SR 12 connector are accounted for in technical modeling provided in other chapters of this EIR. Further, construction of a new fire station would be subject to separate project-level CEQA review at the time the

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			foot. A mitigation measure is required to provide a funding mechanism for the new fire station design and construction.	design is proposed in order to identify any potential project-specific impacts and identify any mitigation as may be appropriate. Funding mechanisms mentioned in this comment pertain to the Specific Plan and are not analyzed under CEQA. Therefore, this comment is not related to the adequacy of the DEIR and no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-14	Fire Protection: The SVFD requests the following updated description be used in place of the existing description. The Eldridge Fire Department continues full operations that service the Planning Area, supplemented by staff from the neighboring fire district, SVFD. The increased local projected buildout population, employment, and housing units generated by the Proposed Plan would likely result in a subsequent increase in fire and emergency medical service calls to the Planning Area compared to existing conditions. Standards of response coverage benchmarks, as defined in the SVFD Standards of Response Coverage report, include six minutes until the first unit arrives on the scene for urban areas, seven minutes for suburban areas, and 12 minutes for rural areas, with a goal of meeting these standards for 90 percent of all calls for service. In order to maintain standards of response coverage benchmarks as a result of buildout under the Proposed Plan, services will be provided by the Sonoma Valley Fire District (SVFD) from the new fire station to be built in the SDC Planning Area as well as from the SVFD's 5 other staffed fire stations. Further, the Proposed Plan will expand the existing SVFD to fully provide fire and EMS services to the SDC Planning Area and identify a location for the construction of a new fire station (to SVFD standards and specifications) within the Core Campus in order to meet the needs of the	This comment is noted. The following edit has been made: DEIR p. 400-401: "The Eldridge Fire Department continues full operations that service the Planning Area, supplemented by staff from the neighboring fire protection district, ~~SVFRA~~ SVFD. The increased local projected buildout population, employment, and housing units generated by the Proposed Plan would likely result in a subsequent increase in fire and emergency medical service calls to the Planning Area compared to existing conditions. Standards of response coverage benchmarks, as defined in the ~~SVFRA~~ SVFD Standards of Response Coverage report, include six minutes until the first unit arrives on the scene for urban areas, seven minutes for suburban areas, and 12 minutes for rural areas, with a goal of meeting these standards for 90 percent of all calls for service. In order to maintain standards of response coverage benchmarks as a result of buildout under the Proposed Plan, ~~it is anticipated that services will still be provided in coordination with neighboring Sonoma County fire districts including SVFRA, Mayacamas Volunteer Fire Department, and Kenwood Fire Protection District.~~ services will be provided by the Sonoma Valley Fire District (SVFD) from the new fire station to be built

			population under buildout (proposed Policy 6-1). This includes the Plan providing the funding for this new facility, equipment, and ongoing services. The new location of the fire station will be within the Core Campus to ensure easy and proximate emergency access to Arnold Drive with minimal crossings of pedestrian and bicycle routes. The Proposed Plan will also explore the feasibility of providing an additional east-west connection from the Core Campus to SR 12 to further improve emergency access (proposed Policy 3-5). Construction of a new fire station could result in subsequent environmental impacts; the specific impacts of which are not known at this time. However, any new developments of fire protection facilities to serve the Planning Area would be located and constructed on existing urban and built-up land within the Core Campus (proposed Policy 6-1). Environmental impacts related to construction emissions, vehicle miles traveled (VMT), and biological resources associated with construction of the proposed new fire station or SR 12 connector are accounted for in technical modeling provided in other chapters of this EIR. Further, proposed policies 5.2-30 and 5.2-31 also ensure that new developments use reclaimed and salvaged materials and incorporate green building measures to mitigate environmental impacts. Because there is not sufficient information as to location or timing for a new fire station, analysis of potential impacts would be speculative at this time. Further, construction of a new fire station would be subject to separate project-level CEQA review at the time the design is proposed in order to identify any potential project-specific impacts and identify any mitigation as may be appropriate. As such, compliance with existing regulations as well as proposed policies would	in the SDC Planning Area as well as from the SVFD's 5 other staffed fire stations. ~~Further, the Proposed Plan will expand the existing Sonoma County fire district to serve the Planning Area and identify a location for the fire district to construct a new fire station within the Core Campus in order to meet the needs of the population under buildout (proposed Policy 6-1).~~ Further, the Proposed Plan will expand the existing SVFD to fully provide fire and EMS services to the SDC Planning Area and identify a location for the construction of a new fire station (to SVFD standards and specifications) within the Core Campus in order to meet the needs of the population under buildout (proposed Policy 6-1). This includes the Plan providing the funding for this new facility, equipment, and ongoing services. The new location of the fire station will be within the Core Campus to ensure easy and proximate emergency access to Arnold Drive with minimal crossings of pedestrian and bicycle routes. The Proposed Plan will also explore the feasibility of providing an additional east-west connection from the Core Campus to SR 12 to further improve emergency access (proposed Policy 3-5). This is a minor correction made to clarify and does not affect the findings of the DEIR.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			reduce impacts to a less-than significant level related to the provisions of fire protection facilities.	
Sonoma Valley Fire District	9/27/2022	A2-15	3.14.4.3 Relevant Policies and Implementation Actions Goal 3-B: Regional connections: Develop and support greater connectivity between SDC and the surrounding areas, including through a direct connection to Highway 12. Policy 3-5: Reuse existing street network to the greatest extent feasible. Improve multi-modal access from the SDC to SR 12 by exploring the feasibility of providing an additional east-west emergency access connection from the site that includes high quality pedestrian and bicycle facilities.	This comment is noted; however, it is not related to the adequacy of the DEIR and no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-16	Impact 3.14-4: Implementation of the Proposed Plan would not result in inadequate emergency access (Less than Significant) As mentioned in the Specific Plan comments under Transportation, the SVFD is committed to ensuring the safety and timely evacuation of the community, and access for emergency vehicles, while balancing the protection of the wildlife corridor. We believe that this Goal and Policy needs more study and definition to accomplish the above objectives.	The comment is noted. Please see MR-4 regarding inadequacy or disagreement with wildfire evacuation analysis and MR-7 regarding impacts on wildlife movement. Further, the Proposed Plan and wildlife corridor will not significantly impair an emergency response or evacuation plan; see Impact 3.16-1.
Sonoma Valley Fire District	9/27/2022	A2-17	Utilities and Service Systems: 3.15.4.3 Relevant Policies and Implementing Actions Public Facilities, Services and Infrastructure Goal 6-A and Policy 6-1: Please see the SVFD's comments on these in the previous sections 6.1 of the Specific Plan and 3.13.3 of the DEIR. Goal 6-26: Ensure the SDC site's water rights are retained for uses within the core campus and for habitat preservation, ecological services, groundwater recharge in the open space area, and to increase the reliability of the regional water supply	The comment is noted. As stated on page 480 of the DEIR, development projects pursuant to the Proposed Plan would be required to install new water mains within the street network to serve fire and domestic water needs. See also MR-5 regarding the DEIR water supply analysis. Based on the findings of the WSA and implementation of proposed policies and Standard Conditions of Approval, the District will have sufficient water supplies available to serve development pursuant to the Proposed Plan

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Goal 6-27: Maintain water supply and filtration at the site and ensure adequate flexibility and supply to serve regional needs in case of an emergency. SVFD relies on the Valley of the Moon Water District for water supplies for fire suppression. SVFD supports the comments and/or recommendations from the VOMWD regarding Goals 6-26 and 6-27 in order to ensure adequate fire suppression water volume and distribution, including fire hydrants.	during normal, dry, and multiple dry years. As such, impacts would be less than significant.
Sonoma Valley Fire District	9/27/2022	A2-18	Wildfire: 16.1.3.3 Relevant Policies and Implementing Actions Sonoma Valley Fire District's Comments on Wildfire: The SVFD agrees with the Goal (2-F) and Policies 2-54.(a, b, c, and d) 6-1, and 6-27, with the following changes. 2-54.a: The Sonoma Valley Fire District (SVFD) requests that the developer shall be required to prepare or fund the preparation of an Emergency Preparedness and Evacuation plan the complies with Sonoma County Evacuation Plans and the Sonoma Valley Fire District's procedures and identifies emergency access/egress routes and procedures.	This comment is noted. However, policy amendments mentioned in this comment pertain to the Specific Plan and are not analyzed under CEQA. Therefore, this comment is not related to the adequacy of the DEIR and no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-19	2-54.b: The SVFD is not aware of any local, state or US Federal Standards in place for an on-site shelter-in-place facility. While this may be a worthwhile goal, there is nothing currently in place to guide this or evaluate its efficacy. In general, evacuating people from a hazardous situation is the first priority and best option to ensure life safety. Sheltering-in-place is typically a strategy choice when there is a hazard, such as smoke, but one that is not a life-threatening hazard, such as a rapidly growing wildfire.	This comment is noted. However, policy amendments mentioned in this comment pertain to the Specific Plan and are not analyzed under CEQA. Therefore, this comment is not related to the adequacy of the DEIR and no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-20	Policy 6-1: Expand the Sonoma Valley Fire District to fully provide fire and EMS services to the SDC and identify a location for the construction of a new fire station (to SVFD standards and specifications) within the Core Campus. This	This comment is noted. However, policy amendments mentioned in this comment pertain to the Specific Plan and are not analyzed under CEQA. Therefore, this

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			includes providing the funding for this new facility, equipment, and ongoing services. Ensure easy and proximate emergency access to Arnold Drive with minimal crossings of pedestrian and bicycle routes.	comment is not related to the adequacy of the DEIR and no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-21	6-27: SVFD relies on the Valley of the Moon Water District for water supplies for fire suppression. SVFD supports the comments and/or recommendations from the VOMWD regarding Goals 6-26 and 6-27 in order to ensure adequate fire suppression water volume and distribution, including fire hydrants.	The comment is noted. See response to comment A2-17.
Sonoma Valley Fire District	9/27/2022	A2-22	Impact 3.16-1: Implementation of the Project has the potential to impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan (Less than Significant). SVFD's Comments: New development is subject to planning, building, public works, and fire review to evaluate the construction and design to ensure compliance. The most recent codes and regulations will be used as a measure to ensure that the new developments are safely designed and constructed and concerns of access, water supply, fire suppression and detection systems, and safe construction will be ensured. This new development and its overall safety would be affected by the ability of the street network to provide adequate ingress and egress during emergency evacuation and the associated mitigation response forces. Mitigation measures should be included to address this impact, including additional wildfire cameras and a communication system to facilitate evacuations. Additionally, as described in Section 3.13: Public Services and Recreation, it is anticipated that fire protection and EMS services will be provided by the SVFD, in order to maintain standards of response coverage benchmarks under	The comment is noted. Please see MR-4 regarding adequacy of the evacuation analysis. Further, all new development will be subject to State, regional, and local plans and regulations, including California Fire and Building Codes, the Sonoma County Multijurisdictional Hazard Mitigation Plan, the Sonoma County Emergency Operations Plan, the Sonoma County General Plan, and Sonoma County Code. As stated on page 512 of the DEIR, the County's Emergency Operations Plan establishes the emergency management organization for emergency response, establishes operational concepts associated with emergency management, and provides a flexible platform for planning emergency response in the county. Development facilitated by the Proposed Plan would be constructed in accordance with federal, state, regional, and local requirements, which are intended to ensure the safety of county residents and structures to the extent feasible. Compliance with these standard regulations would be consistent with the County's Emergency Operations Plan. Thus, implementation of the Proposed Plan would not impair an emergency response or emergency evacuation plan and impacts would be less than significant; no further mitigation is

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			the Proposed Plan. The Proposed Plan will also expand the Sonoma Valley Fire District to fully provide fire and EMS services to the SDC and identify a location for the construction of a new fire station (to SVFD standards and specifications) within the Core Campus in order to meet the needs of the population under buildout (proposed Policy 6-1). This includes providing the funding for this new facility, equipment, and ongoing services. The new location of the fire station will be within the Core Campus to ensure easy and proximate emergency access to Arnold Drive. Therefore, the implementation and operation of the Proposed Plan would not substantially impair of emergency response procedures. Furthermore, the Proposed Plan will result in new infrastructure and piping that will ensure that adequate water capacity and pressures are maintained to help with firefighting. Most recently, at the request of the Planning Department, the SVFD participated with the Department of Emergency Management (DEM) to develop two wildfire evacuation scenarios. The models utilized the enhanced alert and warning systems and new evacuation zones. The models also relied on the increased evacuation experience of County residents, the DEM, and the SVFD. We believe that these scenarios provide valuable and realistic assessments of how evacuations would be operationalized in 2022 and beyond. The scenarios were provided to the Planning Department and then to the consultants for traffic flow analysis and impacts.	needed. Funding mechanisms also mentioned in this comment pertain to the Specific Plan and are not analyzed under CEQA. Therefore, this comment is not related to the adequacy of the DEIR and no further response is required.
Sonoma Valley Fire District	9/27/2022	A2-23	Cumulative Setting and Impact Analysis The SVFD's number one concern is for the safety of our Community's residents, visitors, and fire suppression personnel. The Fire Marshal's office has been active in the review of the SDC Specific Plan including a review of the	The comment is noted. As noted in the DEIR, new development will be subject to State, regional, and local plans and regulations, including California Fire and Building Codes, the Sonoma County Multijurisdictional Hazard Mitigation Plan, the Sonoma County Emergency

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Draft Environmental Impact Report. We have listened to and integrated into these comments the policy direction of the elected SVFD Board of Directors, public comments made to SVFD, and public comment meetings. Development within the SVFD service area is welcomed especially when we can enhance opportunities for residents and businesses while ensuring safety for all. SVFD, in coordination and collaboration with other Sonoma County entities to include but not limited to; Planning Department, Building Department, Fire Prevention Division of Sonoma County, Department of Emergency Management, Law Enforcement, Public Works etc. will review construction projects to ensure compliance with regulations designed to ensure safety. These regulations, including the California Fire Code, are designed to safeguard public health, safety, and general welfare from the hazards of fire, explosion, or dangerous conditions in new and existing buildings, structure, and premises, and to provide safety and assistance to firefighters and emergency responders during emergency operations. In spite of the reviews and compliance with legal standards to ensure safety, the fact remains that the SDC Specific Plan will increase the total amount of residents, employees, and visitors to our community. This overall increase in population, structures, and vehicles will create impacts to our street networks, the ability to ingress and egress in emergencies, and increase the total number of calls for fire and emergency medical services to which SVFD must respond. There are cumulative impacts to the fire service, such as wildland fires that are potentially significant and require additional study and recommended mitigation measures to ensure the safety of the community as a whole.	Operations Plan, the Sonoma County General Plan, and Sonoma County Code. Consistency with such plans and regulations would not cause cumulative impacts. Further, Page 604 of the DEIR states that Evacuation traffic added by the Proposed Plan would not result in substantial changes in evacuation times, increasing along evaluated routes on average by less than 15 seconds and one percent. The largest increase in travel times to areas beyond the evacuation areas would be up to 1.2 minutes and by up to five percent. The Proposed Plan would reduce some travel times from the Madrone/Proposed Plan area by up to three percent due to the planned additional connection to SR 12. The estimated changes in travel times caused by the Proposed Plan would not require changes in current evacuation routes or plans. Thus, implementation of the Proposed Plan would not impair an emergency response or emergency evacuation plan there would be no cumulatively considerable impact. Further, while the projected population and employment growth in the Planning Area would increase the number of people potentially exposed to impacts from wildfire, the Proposed Plan would not induce substantial unplanned population growth in the Planning Area. The Proposed Plan also includes fire-protection features such as a managed landscape buffer the east, widened riparian corridors, and fire-resilient construction. Therefore, as described in Section 3.16: Wildfire, the Proposed Plan would reduce wildfire impacts locally, and compliance with local and state regulations pertaining to wildfire would help reduce impacts regionally, the Proposed

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				Plan's contribution to wildfire risks is not considered cumulatively considerable.
Sonoma Valley Fire District	9/27/2022	A2-24	Alternatives: The SVFD's recommended mitigation measures apply to all of the growth alternatives.	The comment is noted. All proposed policies and mitigation measures apply to the Alternatives unless otherwise noted.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-1	Regarding: Sonoma Developmental Center (SDC) Specific Plan (SP) & Program DraftEIR (EIR) Comments 2 Sept 18, 2022 County's evidentiary record is anecdotal @best. Sonoma Valley represents a national treasure, as described as, "The Valley of the Moon". Sonoma is the Native Indigenous American name for the valley. When White settlers asked what Sonoma meant, Natives pointed to the trace of the Moon setting and rising behind the eastern ridgetops during certain times of the year, the White's interpretation was that "Sonoma" meant 'the valley that the Moon touches' ("The Valley of the Moon"). My Anthropology studies and linguistic avocation has taught me to hear the phonetic sounds (the basic phonemes), particularly for significant language words, words that have cultural, spiritual, or international usage, such as words which are adopted into a language from another. The basis of this study is Multi-critical analysis as opposed to diacritical analysis. Typically there will be very little understanding of the actual meaning of an adopted word. Then, if it retains a high referential standing, it indicates it's an adopted word, not merely a forgotten word. Typical adopted words with high Referential standing and forgotten meanings are: Alleluia, precious, and Amen.	Thank you for your comment letter. The DEIR details the environmental setting which describes current and historical conditions for each of the impact categories pursuant to CEQA. The comment is noted; however, it is not related to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-2	In this case we have Sonoma: what are the phonemes for "Sonoma", they are "Tsu" (not Tso) & "Noma"; so in this case our supposition is correct, because these are two very important international words. "Tsu" or "Tzu" represents the name given by the Chinese to one of their greatest Philosophers, "LaoTzu" the founder of Taoism (from UCI Anthropology studies "Chinese, Taoism & Confucianism", 1983), "LaoTzu" was originally named "LoTzu", meaning "Man-Master" (Philosopher) and when he was older it was changed to "LaoTzu", meaning "Old-Man-Master" (or Great Philosopher): Therefore "Tzu" means "Master". "Noma" is the Aramaic word for 'name' establishing the identity and essence of a thing and thereby giving man control over the substance, and in the Greek "Nomo" means "law or control", again, in Western parlance the essence is unknowable but the manifestation is controllable by the 'name': so control and name are the same thing, therefore "Noma" means "name" (from participation in Antiochian and Greek culture, which develops from a multi-critical analysis as opposed to diacritical).	The comment is noted; however, it is not related to the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-3	"Sonoma" therefore means "The Master's Name", and in a Spiritual sense, it means the highest name above all names. "The Master's Holy Name", in an Eastern Spiritual sense describing God's, the Creator's, or Great Spirit's control over the location by the Moon's contact with the Earth, not Man's control over God by invocation of the Name. This we hear many times from Joseph Campbell, man's search for control vs man's search for God. Also, in another form of Transcendence, both "Tsu" and "Noma" mean "control", so they are like conjoined twins, in a simple manifestation of the "Rosetta Stone". Looked at separately, we call this a	The comment is noted; however, it is not related to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			"Translation", but conjoining them is a form of transcendence in the physical plane of existence. The name "Sonoma" appears to be used as a descriptive tool, by connecting physical transcendence (translation of place) with the location of a Spiritual Transcendence (in reference to the verticality of the Moon's touching the Earth), it again mirrors the "Rosetta Stone" representing two kinds of Transcendence, with the Earthly "T" crossing the Spiritual vertical demarcation.	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-4	More than the mere analysis of the word and its application to the space, is the significance of "Sonoma" in the cross-cultural linguistic representation of deification using ancient language references from across the sea, and linked only by many thousands of years. There is no other place name which connects so perfectly the unity of man, the Name itself transcends both the ages and the seas, thus we have the essence of a World Heritage Cultural Site. Like many other UNESCO World Heritage Sites, which are in disrepair and in danger of destruction, Sonoma's "Valley of the Moon" is suffering an existential threat from the Proposed Project Alternative. Located at near the exact geographic center of Sonoma Valley, 10 miles from it's head along Hwy 12, and 12 miles from it's outlet at Skagg's Island. And transected by a vital Wildlife Corridor connecting 2 Mountain Parks: Sugarloaf/Hood and Jack London Parks; no discussion or analysis has been given to the significance of this World Heritage Cultural Site, or the impacts or any mitigation from the significantly new, taller, and dense construction within the Program Draft EIR-SP Project analysis (cursory discussion was given to light pollution, but none to the physicality of the presence of tall, dense, populous village construction in the	The comment is noted. Pursuant to CEQA, the DEIR provides an analysis of the Proposed Plan's impacts on cultural, historic, and tribal cultural resources starting on page 282. Further, the site is not a UNESCO World Heritage Site.

Submitter	Date	Comment Code	Individual Comment	Response
			midst of an Historic Treasure, McDonalds centered in Teotihuacan).	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-5	The significance of this Spiritual location was not lost on those who created the Sonoma Developmental Center for a healing center for their developmentally disabled children. We should hope that at this more enlightened time, and consistent with CEQA, the Historical Preservation Act, and the 50th Anniversary of the World Heritage Convention (Sept 17, 2022), we should be prepared to preserve both the content and the context, as much as is physically possible, for this National Treasure, "The Valley of the Moon". Under the UNESCO World Heritage Convention, which the United States was signatory (though withdrawn from 2018), we should "strengthen Credibility of the World Heritage List, ensure Conservation of World Heritage properties, promote Capacity-building measures, increase public awareness, involvement and support for World Heritage, and enhance the role of Communities in implementation of the World Heritage Convention". What has been done here appears to be the opposite, a complete neglect of not only Native American cultural values, but World Heritage Convention values.	The comment is noted. Pursuant to CEQA, the DEIR provides an analysis of the Proposed Plan's impacts on cultural, historic, and tribal cultural resources starting on page 282.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-6	Analysis of EIR Historical Asset discussion: The Program Draft EIR is silent on the above discussion, while reporting Environmental Impact Report - County Summary "5.3 Significant and Unavoidable Impacts: According to CEQA Guidelines 15126.2(b), an EIR must discuss any significant environmental impacts that cannot be avoided under full implementation of the proposed program...However the Proposed Plan aims to be self-mitigating. Thus, all proposed policies aim to address environmental impacts (to the, sic) to the greatest extent feasible and no mitigation measures are required. The	The comment is noted. The Draft EIR adequately analyzes potential cultural and tribal cultural resources impacts based upon a comprehensive records search conducted at the NWIC, located at Sonoma State University. The records search included a review of all recorded historic and prehistoric cultural resources within the Planning Area. In addition, the California State Historic Property Data File (HRI), which includes the NRHP, California Historical Landmarks, and California Points of Historical Interest was examined. The analysis also included a search of the NAHC Sacred Lands File,

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			analysis in Chapter 3 determined that the Proposed Plan would result in significant impacts to the cultural/historic resources and transportation (home-based work trip vehicle miles traveled per capita) that, even with implementation of mitigation measures, would remain significant and unavoidable". This language neglects real analysis of the Null Hypothesis Project, and only considers the Proposed Plan impacts which it states (along with all other alternatives) have similar impacts [without discernment as to avoidable, mitigatable, or unmitigatable], which is entirely untrue in the Null Hypothesis case.	tribal outreach, review of Sonoma County documents, State regulations, and Proposed Plan goals and policies. While the impact of the Proposed Plan is considered significant because it would cause a substantial adverse change to the historical district, proposed policies and the Standard Conditions of Approval would help reduce these impacts to the maximum extent practicable. These includes retention, rehabilitation, and adaptive reuse of buildings, structures, and landscape features in the Core Campus area that contribute to the SSHHD (policies 4-20 through 4-31), as well as considering the preservation of contributing resources that are located in the hog and poultry area east of the Core Campus and the SDC water and sewage system to the west and north (Goals 2-I and 2-J and policy 4-32). However, there are no additional mitigation measures available to avoid impacts entirely. Please see MR-1 for more information regarding the self-mitigating Specific Plan. As stated in CEQA Guidelines, Section 15093(a), if the specific economic, legal, social, technological, or other benefits of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered “acceptable.” Therefore, given that State law stipulates that the SDC Specific Plan prioritize housing at the site per Government Code Section 14670.10.5, the environmental impacts of implementation of the Specific Plan on historic resources may be acceptable for policymakers. CEQA also requires that EIRs identify the Environmentally Superior Alternative, and discuss the facts that support that selection (See PRC Section 21081.5; CEQA Guidelines

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				Sections 15091, 15126.6(e)(2)). The Lead Agency is not, however, obligated to select the Environmentally Superior Alternative for implementation if it would not accomplish the basic project objectives and/or is infeasible (see State CEQA Guidelines Section 15126.6(a), (c) & (f)). Please see MR-8 for more information on why the Historic Preservation Alternative would not accomplish project objectives as required by the State legislature.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-7	Continuing; "5.3.1 Cultural, Historic, and Tribal Resources: new construction under the Proposed Plan has the potential to disconnect the remaining contributing resources in the Core Campus from those in the Community Separator and Regional Parks lands to the east and west, disrupting the SSHHD's overall integrity to the point that it would no longer be eligible for listing in the National Register of Historic Places, CRHR, or as a California Historic Landmark. This impact, in addition to demolition of the aforementioned resources would result in a substantial adverse change to the significance of the historic district such that the significance of the historic district would be materially impaired pursuant to Section 15064.5. Implementation of goals 2-I and 2-J and policies 4-20 through 4-32 as well as Standard Conditions of Approval (LU1 through LU6) would partially compensate for the impact associated with the demolition of historically contributing resources and physical alteration of the historic district to the maximum extent practicable; however, because these measures would not be enough to avoid or reduce the impact completely, the Proposed Plan's impact would remain significant and unavoidable". No mention is made of the Tribal Resources, because no	The comment is noted. See response to comment B1-6. Tribal Cultural Resource impacts are analyzed under Impact 3.5-5 on page 299. The Historical Resources Inventory and Evaluation Report (HRIER) cited in the DEIR determined that a cultural landscape does not exist in the Planning Area. In addition to consultation with tribes required by State law, and in accordance with PRC Section 21083.2 and CEQA Guidelines Section 15064.5(f), which recognize that historical or unique archaeological resources may be accidentally discovered during project construction, Standard Conditions of Approval policy GEO-4 requires developers to halt all work if cultural resources are encountered during excavation or construction of a project, and to retain a qualified archaeologist to evaluate and make recommendations for conservation and mitigation, Policy GEO-5 requires developers to create an inadvertent discovery plan to be implemented if cultural resources are encountered during excavation or construction of a project, and Policy GEO-6 requires developers to conduct cultural resource awareness training prior to project-related ground disturbance. At the program level, the impact of implementation of the Proposed Plan on tribal

			artifacts remain or they could be recovered in a project excavation, but this does not address the transcendent value of the space and place name as a World Heritage Cultural Site, which can be subsumed in the potential Project construct, where we have heard discussed 2-3Msf of Commercial Construction.	cultural resources would therefore be less than significant under CEQA with implementation of existing State regulations as well as policies and actions within the Proposed Plan.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-8	Again, the Program Draft EIR's considerations of the impacts, mitigations, and alternatives appear limited to the Proposed Plan Project Alternative, and do not address the Alternatives, nor the Null Hypothesis Project, continuing a foregone conclusion (see 2-3Msf of Commercial Construction discussed above, is that unmitigatable?). Please see the following analysis of project conceptual iteration for planning and design. Please see pg4 p3 San Mateo Gardens, re "substantial evidence in the record, is a predominantly factual question...for the agency...drawing on its particular expertise"; here we are bringing your attention to the word “expertise”. Friends of the College of San Mateo Gardens v. San Mateo County Community College District https://law.justia.com/cases/california/court-of-appeal/2017/a135892.html	The comment is noted. The DEIR does provide an environmental impact analysis for each Alternative starting on page 536. The remainder of the comment does not relate to the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-9	We want to accept the presumption of legal operation, but we must also accept and correct the illegal condition when evidence is presented to the contrary. In a County system, Engineering is not conducted without Accounting. But if the Accounting fails such as for Northwestern Pacific Railroad, the sad evidence must be accepted, and correction immediately made or we suffer the loss of funding or function. No one was there to accept the Trucker's weighmaster's tickets when the washout deliveries were made in the upper NWP line, none could be found, none ever delivered, no NWP.	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			The reason we approach the initial determination of a project this way, using California Supreme Court's remand for San Mateo Gardens, is, here we equate the Court EIR analysis process to the Engineering process, in that there are a sequence of iterative steps involved. This process is best exemplified from the CA Supreme Court's remand expressed in San Mateo Gardens, where a series of back-and-forth evaluations and propositions are made in analyzing a project (one such method is CPM,Critical Path Method), which is the same process we use in conceptual design or planning.	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-10	A comparison is made by question; does the "initial concept" with its features fit the need and the existing space, then we may have to adjust the concept's features to the needs, or to the space? Conceptual planning designs forward & backward many times. This comparison is not to decry the effort expended or the information obtained through Planning education or product, but a marathon runner prepares for a marathon, not Law or Engineering. Preparation for a marathon may be great preparation for someone wanting to become a Lawyer, Doctor, or Engineer, but by itself does not make one a Lawyer, Doctor, or Engineer. Nor is an Urban Planner a qualified Civil Engineer, and therefore is unable to make professional judgments in respect to the Planning of "fixed works" identified in BPC 6731.	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-11	[See Licensing BPC 6730-6730.2(a); 6731; 6734; 6735(a). See also Administrative Mandamus case, Morris v Harper (2001) 94 Cal.App.4th 52 . "After all, ""[i]t is the refusal or neglect to perform an act which is enjoined by the law as a present duty that serves as the very foundation for the [mandamus] proceeding.' " (Morris v. Harper, supra, at p. 60.)"]	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			San Mateo Gardens; "Instead of resting on whether a project is new "in an abstract sense," the "decision to proceed under CEQA's subsequent review provisions must . . . necessarily rest on a determination—whether implicit or explicit—that the original environmental document retains some informational value." (Id. at p. 951.) Such an inquiry "is a predominantly factual question . . . for the agency to answer in the first instance, drawing on its particular expertise." (Id. at p. 953.)" From where does this "expertise" derive, Planners require no Science education?	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-12	The EIR standard is, if/when there are significant environmental impacts, then a review of impacts and mitigations must obtain (other than stating overriding or unmitigatable conditions), and a "judicial review must reflect the exacting standard that an agency must apply". San Mateo (ibid) pg 8. What this is referring to is, that the evidence must be prepared to a very high standard, from the beginning, in order for it to be considered "substantial evidence in the record". Where is the "exacting Standard" & "expertise"? According to the National Society of Professional Engineers code of ethics, Professional Engineers may disagree without a single outcome obtained, but must remain decorous.	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-13	["The Supreme Court in San Mateo Gardens provided guidance for how to apply the subsequent review provisions. It explained that whether "major revisions" will be required as a result of project changes "necessarily depends on the nature of the original environmental document," i.e., whether it was an EIR or a negative declaration. (San Mateo Gardens, supra, 1 Cal.5th at p. 958.) It further	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			explained that the appropriate standard of review also depends on the nature of the original environmental document. Although an agency's determination of whether major revisions are required is reviewed for substantial evidence, "judicial review must reflect the exacting standard that an agency must apply when changes are made to a project that has been approved via a negative declaration," as opposed to the deferential standard that applies when the project was originally approved by an EIR. (Id. at p. 953; see Committee for Re-Evaluation of TLine Loop v. San Francisco Municipal Transportation Agency (2016) 6 Cal.App.5th 1237, 1247, 1251-1252 [applying San Mateo Gardens in case where project originally approved by EIR]; Latinos Unidos de Napa v. City of Napa (2013) 221 Cal.App.4th 192,"]	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-14	In planning, we have said, the process is intensely exhaustive and iterative, and what is described as the Court EIR review process is also exhaustive and iterative. The Court ceding competency to the local agency is similar to the process of presenting a case to a Court of Competent Jurisdiction. A Court of Competent Jurisdiction is composed firstly of a trained lawyer, either by a Law School or by preparation and passing the Baby Bar. Then of course, the prospectant Judge must pass the National Bar Exam locally administered, next the Judge must practice law for a minimum of 10 years. At some point the Judge is appointed or runs for election, and finally, the Judge is selected to hear a case by the Chief Judge. The Court itself must also be of Competent Jurisdiction, meaning it is the proper venue, as established by our system of Jurisprudence. These are significant tests. If someone went to College and studied English or Political Science, they could learn a lot of laws, but they would not	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			be presumed to know how to practice Law, And they did not go to Law School or pass the Baby Bar, and they have not prepared to be a Lawyer, let alone a Judge.	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-15	Engineering is one of the most complex problems in supply & demand, as evidenced by the number of divorces in custom home remodeling and construction, and why Public Works requires Licensed Civil Engineers. Our critique is not meant to characterize the work of any Engineers having completed reports for the SDC EIR-SP, since we do not know what instructions they were given. But we contend that recommended demolition for over 1.2Msf without analysis of 400,000sf, and recommended demolition of ~75,000sf of Hospital Treatment Building rated at "not requiring any updates", represents an incomplete analysis at best, and certainly a neglect of the impacts on the resources being analyzed.	The comment is noted. Pursuant to CEQA, the DEIR does consider the environmental impacts related to construction and operation under the Proposed Plan at a programmatic level. Please see MR-3 for more information regarding the level of detail of analysis in the DEIR.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-16	As we spoke of backward-and-forward analysis in design, this is required in Planning as well, unless a truncated process is employed. It is far easier to make the facts fit the design, than to make the design fit the facts. If your timeline is short, it is far easier for you to establish the Project, and make the analysis fit the Project by not addressing impacts except in a standard way, such as, "(h)owever the Proposed Plan aims to be self-mitigating". "from Program Draft EIR 5.3 Significant and Unavoidable Impacts" Subsequent to the very specific State Law being passed to sell SDC, incorporating significant intent for community participation, many meetings were held with studied interest and good comments. Comments were sent to Permit Sonoma and the Planners involved in SDC's NOP of Program Draft EIR & SP, but these comments were not	The comment is noted. Please see MR-1 and MR-2 regarding the adequacy of a self-mitigating Plan and project timeline. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			incorporated in the evaluation nor in the Proposed Alternative Project SP, nor were they forwarded to the Planning Commission, nor were they provided to other participants or commenters to the EIR & SP.	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-17	This is not standard practice, and violates CEQA Code 15300(a)&(b)(1)-(3); "(a) Before granting any approval of a project subject to CEQA, every lead agency or responsible agency shall consider a final EIR or negative declaration or another document authorized by these guidelines…(b) Choosing the precise time for CEQA compliance involves a balancing of competing factors, EIR's and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment." (b)(1) "With public projects, at the earliest feasible time, project sponsors shall incorporate environmental considerations into project conceptualization".	The comment is noted. The County's EIR process does not violate CEQA Code 15004(a)&(b)(1)-(3) regarding time of preparation. Before granting any approval of the Specific Plan, this Final EIR is produced for consideration by the Planning Commission and Board of Supervisors. Further, the DEIR has been developed to provide meaningful environmental considerations to the planning process. Please see Chapter 1, Table 1-1 of the FEIR to view edits and additions to the Proposed Plan in response to public comments since the publication of the DEIR.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-18	The timeframe window for "cumulative impacts" evaluation was limited to after Proposed Alternative Project completion, leaving out the demolition and construction of the entire project, let alone the life cycle embedded costs, GHG's and energy to be demolished as a consequence from the new construction. This time frame results in unsubstantiated conclusions for the Proposed Project Alternative in ES.3 Alternatives to the Proposed Plan, "As discussed in Impacts 3.6-2, the Proposed Plan would thus support and reflect the increasingly stringent State and local goals and regulations that seek to increase energy efficiency, reduce energy consumption, and prioritize renewable energy – reinforcing that the Proposed Plan would not result in cumulatively	The comment is noted. The County's EIR process does not violate CEQA Code 15004(a)&(b)(1)-(3) regarding time of preparation. Before granting any approval of the Specific Plan, this Final EIR is produced for consideration by the Planning Commission and Board of Supervisors. Further, the DEIR has been developed to provide meaningful environmental considerations to the planning process. Please see Chapter 1, Table 1-1 of the FEIR to view edits and additions to the Proposed Plan in response to public comments since the publication of the DEIR. Starting on page 584 of the DEIR, cumulative impacts consider the environmental impacts of the Proposed Plan as well as the likely effects of surrounding

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			considerable impact with respect to wasteful, inefficient, or unnecessary consumption of energy resources." They left out 161,000 tons of waste. 15300 (b)(3), "With private projects, the Lead Agency shall encourage the project proponent to incorporate environmental considerations into project conceptualization, design, and planning at the earliest feasible time." This truncated analysis appears to be the type that establishes priorities, goals, and objectives before the certification of the EIR is complete, therefore "limiting alternatives or mitigation measures".	regional growth. Please see also MR-1 regarding the adequacy of a self-mitigating Plan.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-19	This truncated analysis would violate CEQA Code 15300 (b)(2), "public agencies shall not undertake actions concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance";"and for example, agencies shall not:(b)(2)(B)", "Otherwise take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project". Given that Permit Sonoma will only provide the public's comments to the Planning Commission upon final EIR Certification, and a series of comments have been made to the SDC Comprehensive Planning Manager which has not incorporated the public's comments into the Proposed Project Alternative, "at the earliest feasible time", they appear to have violated Sec's 15300(a)&(b)(1)-(3), inclusive.	The comment is noted. The County's EIR process does not violate CEQA Code 15004(a)&(b)(1)-(3) regarding time of preparation. Before granting any approval of the Specific Plan, this Final EIR is produced for consideration by the Planning Commission and Board of Supervisors. Further, the DEIR has been developed to provide meaningful environmental considerations to the planning process. Please see Chapter 1, Table 1-1 of the FEIR to view edits and additions to the Proposed Plan in response to public comments since the publication of the DEIR. Please see also MR-1 regarding the adequacy of a self-mitigating Plan. Further, as noted on page 45 of the DEIR, a NOP for the EIR on the Proposed Plan was submitted to the State Clearinghouse on February 9, 2022 and circulated among relevant State and local agencies, as well as to members of the public. Consistent with legal requirements and State guidance, the EIR Scoping Meeting was held on February 17, 2022 via Zoom to receive comments and suggestions on scope and content for the EIR; solicit input on potential impacts, mitigation measures, and alternatives to consider; and consult with

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				public agencies responsible for natural resources, other regulatory bodies, neighboring communities, Native American tribes, and members of the public. Comments on the NOP, along with input received during public workshops and meetings over the course of the SDC Specific Plan process, have helped to identify the major planning and environmental issues and concerns and establish the framework of this EIR. After the close of the public review period for the DEIR, County staff and CEQA consultants reviewed the comments, responded to the comments received, and determined whether any changes are required to the Draft EIR (see Chapter 3 of the FEIR). As described in Sec. 23A-25 of the County Code, the Lead Department shall present the Final EIR to the Planning Commission. The Planning Commission may make its recommendations to the Board of Supervisors regarding the EIR and the public project. The Board of Supervisors will then consider certification of the Final EIR. Subsequent to certification of the Final EIR, the Board of Supervisors may approve the Proposed Plan. If the Board of Supervisors approves the Proposed Plan, a Notice of Determination will be filed with the State Office of Planning and Research and the Clerk of the County of Sonoma.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-20	What we contend here is, that the proper "back-and-forth" process has not occurred, as within the planning process proper, within the design process proper, within the EIR process, as would be the same within the Court's evaluation of the EIR process itself, from San Mateo Gardens remand from the California State Supreme Court, which constitutes proper Authority to all jurisdictions within California. We also contend that "particular expertise" and "the	See response to comment B1-19. Pursuant to CEQA, the proper planning process and public involvement for the development of the DEIR has occurred, as outlined starting on page 45 of the DEIR. See Chapter 6 List of Preparers on page 611 of the DEIR. Multiple firms that specialize this work have completed the DEIR pursuant to CEQA requirements.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			exacting standard that an agency must apply" is not available to the review that the "judicial review must reflect", without a Licensed Civil Engineering in Responsible Charge of "Fixed Works" Planning, BPC 6731.	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-21	Please consider adding this section on open space to the NSVMAC letter regarding SDC at your September 21, 2022 meeting, Agenda Item 8. It is important to go on record requesting more details in the DEIR and Specific Plan about the open space, as without it we will face more uncertainty as the SDC project progresses over the years and the players change. Please see below and attached suggested text.	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-22	While we recognize that it is the intent of the County of Sonoma and the State of California to protect the open space lands around the historic campus at SDC, the DEIR and Specific Plan are inconsistent and inadequate regarding the description, protection and disposition of 755 acres of open space outside the core campus. Neither the DEIR or Specific Plan gives the exact boundaries (other than in one general overlay map in the Land Use Section of the Specific Plan) or give details on how or when open space lands will be protected, transferred, or managed; or analyze or mitigate the impacts to those lands from the development of the historic campus.	The comment is noted. The DEIR analyzes the impacts on open space throughout the Chapter 3 Environmental Analysis. There are no significant impacts regarding Agricultural and Forestry Resources, Biological Resources, and Public Services and Recreation. For example, under Impact 3.1-3 on page 105, the DEIR states that the proposed development would not differ substantially or detract from the existing visual quality and public views of the site by keeping with the overall scale and development height variation at the current SDC campus and by preserving the site's open space framework outside the Core Campus. Under Impact 3.2-4 on page 135, the DEIR states that the Proposed Plan will only develop in the previously developed Core Campus; all open space that surrounds the main campus will be preserved as such. The State of California enacted Government Code Section 14670.10.5 that outlines the State's goals and objectives for the SDC Specific Plan. The legislation acknowledges the importance of the

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				significant open space areas of the SDC site and requires permanent protection of the SDC site's open space and natural resources. Therefore, proposed Goal 2-A will implement the State's objective and preserve the open space surrounding the core campus in perpetuity, preventing further development in undeveloped areas and ensuring ongoing stewardship in partnership with neighboring State and regional parks and other institutions and organizations. Agricultural activities would only occur in the historic agricultural area on the east side of the site, but nowhere else. Policy 2-1 also will ensure that land shown in Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation. Page 242 of the DEIR states that outside of the developed areas, the Proposed Plan establishes dedicated open space areas. Managed open space in these areas would preserve and, in some cases, enhance the quality of sensitive habitats such as wetlands, native grasslands and oak woodlands. As discussed under Impact 3.13-1, the Proposed Plan would preserve approximately 755 acres of open space within the 945-acre Planning Area, which is envisioned

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				as a recreational amenity with designated trails and water recreational opportunities that integrate with existing regional parks (proposed policies 2-1, 2-4, and 2-5).
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-23	These inadequacies need to be resolved in the DEIR and Specific Plan by adding clear descriptions of the open space lands with exact boundaries; likely mechanisms for transferring the lands and to what possible entities or types of entities; a timeline; and how the lands will be managed and under what authority. Environmental impacts and mitigations for impacts to the open space lands from development of the campus and ongoing operations must be provided. A major concern is that multiple new agricultural uses including tasting rooms and agricultural processing that have never occurred at SDC are proposed to be permitted in the "Preserved Open Space" in the Land Use Section of the Specific Plan. These as well as new conditional land uses in the open space including geothermal development, sports facilities, and parking facilities are never mentioned or analyzed in the DEIR. See Table 4.3 of the Specific Plan, attached. The DEIR needs to be revised to eliminate these sues and/or to analyze and mitigate environmental impacts on the open space and natural resource.	The comment is noted. See response to comment B1-22. See also MR-3 regarding the programmatic nature of the DEIR. As stated on page 406 of the DEIR, construction of proposed park and recreation facilities could result in subsequent environmental impacts; the specific impacts of which are not known at this time and any analysis would require speculation. However, any new developments of parks or recreation facilities necessary to serve the Planning Area would be located and constructed on existing urban and built-up land. Environmental impacts related to construction emissions, VMT, and biological resources associated with construction or expansion of the proposed facilities are accounted for in technical modeling provided in other chapters of this EIR. Further, proposed policies 5-59 and 5-60 also ensure that new developments use reclaimed and salvaged materials and incorporate green building measures to mitigate environmental impacts. Future recreational facilities will tier from this EIR to identify and mitigate site-specific impacts if and when design of those parks and recreation facilities is complete.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-24	Vague Goals and Policies contained the Specific Plan and DEIR do not suffice, such as "future developers at the site must work with the County to ensure proper management and stewardship" and "Work with Sonoma County to dedicate the preserved open space as regional parkland." Not resolving these issues is likely to create confusion and conflict later for all involved, as elected officials, agency staff and developers change over time.	The comment is noted. As noted on page 94 of the DEIR, proposed Goal 2-A would preserve the open space surrounding the core campus in public ownership in perpetuity, preventing further development in undeveloped areas and ensuring ongoing stewardship in partnership with neighboring State and regional parks and other institutions and organizations. Further Policy 2-1 would ensure that land shown In Figure 2.2-1 as

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Lastly, the DEIR and Specific Plan cannot rely on state statute to protect the open space lands [1] as that language is vague, only as "feasible" and in the "best interests of the state."	Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-25	PRESERVED OPEN SPACE/PARKLANDS While we recognize that it is the intent of the County of Sonoma and the State of California to protect the open space lands around the historic campus at SDC, the DEIR and Specific Plan are inconsistent and inadequate regarding the description, protection and disposition of 755 acres of open space outside the core campus. North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-27	Vague Goals and Policies contained the Specific Plan and DEIR do not suffice, such as "future developers at the site must work with the County to ensure proper management and stewardship" and "Work with Sonoma County to dedicate the preserved open space as regional parkland." Not resolving these issues is likely to create confusion and conflict later for all involved, as elected officials, agency staff and developers change over time. Lastly, the DEIR and Specific Plan cannot rely on state statute to protect the open space lands as that language is vague, only as "feasible" and in the "best interests of the state."	The comment is noted. See response to comment B1-24.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-28	I have attached the letter from Sonoma Mountain Preservation addressing the draft environmental impact report and preferred specific plan for the Sonoma Developmental Center. While I apologize for the redundancy, since I've already copied you on the original email with its cc list, I would like to make sure the letter is received by all members of the North Sonoma Valley Municipal Advisory Council, the Springs Advisory	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Council, and the Sonoma Valley Citizens Advisory Commission. I appreciate your assistance with this request. Thank you for all you do.	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-29	We appreciate this opportunity to comment on the draft environmental impact report (DEIR) and preferred Specific Plan for redevelopment of the Sonoma Developmental Center (SDC). While we acknowledge the conflicting directives laid out in the legislation authorizing the specific planning process for the property and recognize the difficulty of making meaningful connections with stakeholders in pandemic times, we must express our overall disappointment with the DEIR and Preferred Plan, which do not reflect community input as we've witnessed in public meetings and in letters over the years-long planning process. The scale of proposed redevelopment of the 180-acre core campus is fundamentally incompatible with the rural character of the surrounding community and the north Sonoma Valley, presents a clear danger to the safety of current and future residents of the Valley in the inevitable event of wildfire, and threatens the integrity of Sonoma Mountain's irreplaceable natural resources — habitats for keystone flora and fauna, the health of the Sonoma Valley Wildlife Corridor, water quality, air quality, recreational opportunities, and historic, tribal, and modern cultural values.	The comment is noted. As noted under Impact 3.1-3 on page 105 of the DEIR, new development under the Proposed Plan will occur primarily within the previously developed Core Campus area, excluding the SR 12 connector which will reuse the existing street network and avoid damage to scenic resources to the greatest extent feasible. Therefore, the proposed development would not differ substantially or detract from the existing visual quality and public views of the site by keeping with the overall scale and development height variation at the current SDC campus and by preserving the site's open space framework outside the Core Campus. Please also see MR-4 regarding the adequacy of the wildfire evacuation analysis. Please see also sections 3.3, 3.4, 3.5, and 3.13 regarding the impact analysis of Air Quality, Biological Resources, Public Services and Recreation, and Cultural, Historic, and Tribal Cultural Resources.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-30	The DEIR fails to adequately or clearly describe meaningful, enforceable mitigations for the environmental impacts of redevelopment at the scale proposed, as required by the California Environmental Quality Act (CEQA). It fails to clearly delineate cumulative impacts. It does not provide sufficient analysis to give decision-makers all the	The comment is noted. Pursuant to CEQA, the DEIR outlines all feasible proposed policies and Standard Conditions of Approval in order to help mitigate significant and potentially significant environmental impacts. Please see MR-1 and MR-9 regarding the adequacy of a self-mitigating Specific Plan. Further,

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			information they need to satisfactorily draw conclusions about the environmental consequences of the Preferred Plan. It is our hope that by addressing the questions that follow, applicable, effective, enforceable mitigations will be identified and instituted that materially decrease or eliminate those impacts.	cumulative impacts are analyzed starting on page 584 of the DEIR.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-31	General concerns/questions The DEIR indicates that, across the board, the environmental impacts of the Preferred Plan and the Historic Preservation Alternative (HPA), which is acknowledged as environmentally superior per CEQA, are "largely comparable." The DEIR also states that the HPA is less superior in terms of energy use, biological resources, and wildfire risk (ES.4.2). Given the significant differences in scale of the two alternatives — the HPA is half the size of the Preferred Plan — these conclusions defy logic. 1) Please explain how construction of 1,000 homes occupied by 2,500 people has the same environmental impact across virtually every category studied in the DEIR as does providing 450 homes occupied by 1,125 people (a 55% reduction)? Which studies support this finding? 2) Please explain how providing workspace for 900 people has the same environmental impact across virtually every category studied in the DEIR as does providing workspace for 600 people (a 33.3% reduction). Which studies support this finding? 3) Please explain how the HPA—which translates to less demolition through adaptive reuse of historic structures, less construction, fewer vehicle miles traveled, and fewer people on the property—uses more energy, has a greater impact on biological resources, and increases wildfire risk	The comment is noted. Please see MR-8 for more information on why the Historic Preservation Alternative is contrary to the goals of the legislation and project objectives which were crafted in response to the direction in the legislation. As noted in Table 4.5-1 on page 572 of the DEIR, the Historic Preservation Alternative would result in less than significant impacts regarding Energy, Climate Change, and GHG Emissions; Biological Resources; and Wildfire which is equivalent to the Proposed Plan. While these impacts are less than significant, indirect emissions associated with electricity consumption, waste and wastewater generation, and water use, would likely be more than those of the Proposed Plan because of the inefficiency of the existing buildings, and the difficulty in updating existing construction to match current standards for energy efficiency and GHG emissions. Under the Historic Preservation Alternative, creek corridors and the wildlife corridor will also not be expanded which would negatively impact wildlife movement compared to the Proposed Plan. Further, the lack of Highway 12 direct access may lead to slightly longer evacuation times compared to the Proposed Plan. Chapter 3 Environmental Analysis of the DEIR explains how the level of significance was reached for each of the significance thresholds under the Proposed Plan. Case

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			than the Preferred Plan, as stated in the DEIR (ES 4.2). Which studies support this finding?	law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 15126.6(f) states that the alternatives in an EIR should be governed by a "rule of reason." Thus, Table 4.5-1 on page 572 of the DEIR compares the reasonable level of significance between the Proposed Plan and the Alternatives. It is noted that Alternatives resulting in less development, like the Historic Preservation Alternative, would result in impacts less than that of the Proposed Plan in many of the impact categories, such as Aesthetics, Air Quality, and Utilities and Service Systems. However, if the impact is already less than significant than the Proposed Plan, the DEIR does not need to quantitatively define how much less significant an Alternative's impact is compared to the Proposed Plan.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-32	Impacts specific to Sonoma Mountain The entire 945-acre SDC property, including the developed core campus, is located within one of the last rural regions on the Sonoma Valley floor, with the mostly undeveloped slopes of Sonoma Mountain forming the entire western boundary and serving as a viewshed/mountain backdrop; as an informal natural reserve/safe haven for native flora and fauna; and as an informal recreational resource for hikers, cyclists, and equestrians from throughout Sonoma County and beyond. Further, historic residential use of the SDC by individuals with developmental disabilities and their caregivers had minimal human-caused environmental impacts on the property's open spaces. Redevelopment at the scale in the Preferred Plan creates an urban footprint within this historically rural zone, significantly increasing human-caused environmental impacts on a number of areas identified under CEQA (i.e., Aesthetics [3.1]; Biological	The comment is noted. Under Impact 3.1-3 on page 104, the DEIR recognizes that the Planning Area is in a nonurbanized rural setting within Sonoma County. The Proposed Plan would change the nature of some land uses to include more dense and diverse types of land uses on the SDC campus including a vibrant mixed-use, pedestrian-scaled district, with a concentration of cultural, civic, retail, visitor, and other uses around the Central Green. Densities and intensities are organized to promote walkability and an active center, with the highest densities and intensities closest to the Central Green, while in some areas, especially toward the east and northeast, buildings would be removed with larger areas than present not having any development. Infill development or redevelopment could have differing visual characteristics than existing development, and by default, would alter the existing visual character of the

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Resources [3.4], and Public Services and Recreation [3.13], to name a few). To mitigate impacts of any redevelopment on the historic, minimal-impact, rural quality of the property, and to ensure the viewscape is preserved, we request that: 1) The DEIR include mitigation measures to compensate for the loss of the rural attributes of the property at its current baseline, or a baseline that dates back no further than 10 years. Please specify which measures in the current DEIR address these impacts, and which studies support them. 2) Please study, provide mitigation measures, and document how incorporating adaptive reuse of buildings into the HPA proposal, with its smaller human footprint, would impact environmental goals.	site and surroundings. New development will occur primarily within the previously developed Core Campus area, excluding the SR 12 connector which will reuse the existing street network and avoid damage to scenic resources to the greatest extent feasible. Therefore, the proposed development would not differ substantially or detract from the existing visual quality and public views of the site by keeping with the overall scale and development height variation at the current SDC campus and by preserving the site's open space framework outside the Core Campus. Thus, with adherence to existing and proposed policies and standards, development under the Proposed Plan would improve rather than substantially degrade the existing visual character of the site, and this impact would be less than significant. No mitigation is needed, see also MR-1. The environmental impact analysis of the Historic Preservation Alternative begins on page 561 of the DEIR.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-33	3) The SDC's open space currently sees frequent use by recreationalists from all over Sonoma County and beyond. That use increased markedly during the pandemic, despite restrictions on travel. The level of use has remained high as the pandemic has waned. The addition of 2,500 residents, 900 workers, visitors to the proposed hotel and conference center, and their friends and family, as outlined in the Preferred Plan, will add an exponential burden on the property's open space, much of which is on the skirts of Sonoma Mountain. Please analyze what that increase in recreational use means for aesthetics, biological resources, cultural, tribal, and historic resources, and water and air quality, and identify mitigations for those impacts.	The comment is noted. Please see the Public Services and Recreation Impact Analysis, starting on page 394 of the DEIR. According to the Sonoma County General Plan 2020, the County's regional parkland ratio is 20 acres of parkland per 1,000 residents. The County's community and neighborhood parkland ratio is 2.5 acres of parkland per 1,000 residents. Consistent with the Quimby Act (California Government Code Section 66477), the General Plan 2020 Policy PF-2g requires dedication of land or in-lieu fees as a means of funding park facilities. Policy PF-2c requires the use of the following standards for determination of park needs: 20 acres of regional parks per 1,000 residents countywide and five acres of

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				local and community parks per 1,000 residents in unincorporated areas. Although the Proposed Plan would result in a population increase of about 2,400, there are approximately 12 acres of parks and recreational facilities designed into the Proposed Plan. Moreover, 755 acres of the Planning Area will be retained as open space that will be publicly accessible and integrated into the regional parks system (proposed Policy 2-1). Open space preservation doesn't require new construction, so impacts are negligible, but other recreational facilities will require construction of new or physically altered facilities (proposed policies 2-1, 6-3, 6-4, 6-5, 6-6, and 6-7) and have a potentially significant environmental impact. The environmental impacts related to traffic, noise, and air quality and GHG emissions during construction and operation of the park facilities have been considered throughout this EIR (see Section 3.3: Air Quality, Section 3.6: Energy and Greenhouse Gas Emissions, Section 3.11: Noise, and Section 3.14: Transportation). Detailed design of the new park facilities has not yet been completed, so site-specific impacts cannot be evaluated at this time. However, construction of new parks would be subject to separate project-level CEQA review at the time the design and exact location is proposed in order to identify and mitigate any project-specific impacts as appropriate. As such, compliance with existing regulations would reduce impacts to a less-than-significant level related to the provisions of park facilities. Please see also MR-3 regarding the programmatic nature of the DEIR.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-34	4) Please analyze the cumulative impacts and potential degradation of floral and faunal habitats, groundwater supply, and riparian zones across the site, including the 750+ acres identified as open space, caused by the increased housing density, noise, construction, traffic, and demolition proposed under the Preferred Plan. Please provide analysis of the impacts of redevelopment on migratory fish species, such as coho salmon. Please also analyze whether these impacts would be mitigated by a smaller redevelopment such as the HPA.	The comment is noted. Cumulative environmental impacts are analyzed starting on page 584 of the DEIR. The environmental impact analysis of Alternatives is provided starting on page 536 of the DEIR. Impact 3.4-4 of the DEIR analyzes whether the Proposed Plan will have a significant impact on migratory fish species. Page 255 states that future development under the Proposed Plan would be subject to the requirements of Clean Water Act Section 404 and 401 permitting requirements, which would limit and/or mitigate impacts from projects that would discharge pollutants or dredged or fill materials into waters of the state, including wetlands. Future development would also be subject to the CDFW Lake and Streambed Alteration Program, which would require any project that could substantially divert or obstruct the flow of; substantially change or use any material from; or deposit debris into a river, stream, or lake to agree to measures that would protect existing fish or wildlife resources. Further, implementation of Standard Conditions of Approval BIO-12 would further reduce this impact to a less than significant level. BIO-12 implements measures to avoid impacts to California freshwater shrimp and listed salmonids that have potential to occur in the streams in the Project Area.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-35	The intent to preserve and protect the 750+ acres of open space surrounding the 180-acre core campus has been codified by the state in its enabling legislation and has been promised by the county in the Preferred Plan. However, neither the Preferred Plan and nor the DEIR delineate clear boundaries for the open space to be transferred, identify a mechanism of transfer, clearly identify the entities that a developer must work with to facilitate transfer, or explicitly require a developer to ensure that redevelopment of the	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			core campus be done in such a way, and with sufficient buffers, as to protect the natural values of the open space. Please add specific, enforceable guidelines for the open space transfers, specifying acreages and minimum boundaries on both the east and west sides of Arnold Drive, and limiting allowed uses on these acreages to passive recreational uses such as hiking, mountain biking, horseback riding, photography, etc.	
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-36	6) Agricultural and commercial uses should not be permitted in open space intended to be parkland. Please clarify that uses such as those identified in Table 4.3 will not be permitted in open space identified for transfer to park agencies, and that mitigations for such uses on other open space parcels are identified and enforceable. Thank you for the time and effort you have put into developing the DEIR and preferred Specific Plan for the property. We look forward to receiving Permit Sonoma's responses to our concerns, and hope the final plan and EIR presented to the Planning Commission for comment and to the Board of Supervisors for approval reflect substantive changes that ensure the integrity of the natural values of Sonoma Mountain, and the communities that surround it, remain intact.	The comment is noted. According to proposed Goal 2-A, the Proposed Plan will preserve the open space surrounding the core campus in public ownership in perpetuity, preventing further development in undeveloped areas and ensuring ongoing stewardship in partnership with neighboring State and regional parks and other institutions and organizations. Agricultural activities would only occur in the historic agricultural area on the east side of the site, but nowhere else. Thus, development or agricultural uses will not occur in designated open space areas outside the Core Campus.
North Sonoma Valley Municipal Advisory Council	Wednesday, September 21, 2022	B1-37	An excellent start to this response. I have noted a few very small grammatical items; nothing substantive.	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-1	APPENDIX to North Sonoma Valley Municipal Advisory Council Letter of 01/06/22. This appendix provides additional details in support of the concepts presented in the main body of the NSV MAC letter dated January 6, 2022. These details are a compilation of information provided in public comments	Thank you for your comment letter. The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			on the SDC Specific Plan Alternatives Report (November 2021), a community survey, and NSV MAC input. These details should be addressed in the Specific Plan policies and design guidelines. All "community survey" references below are to the non-affiliated survey conducted by Sonoma Valley resident Dr. Shannon Lee, Biology Department Faculty at Sonoma State University, in December 2021 (link).	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-2	OPEN SPACE: General Information: ● Community input consistently emphasizes the singular opportunity the SDC campus represents in terms of protecting the open space and wildlife corridor in the context of a vibrant, sustainable community.● Over 90% of the community survey respondents ranked "preservation of open space" as of the highest priority.	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-3	The Community Supports: ● Prioritizing the transfer of park-adjacent properties to Sonoma Valley Regional, Jack London State Historic parks, or a potential land trust with continued public access to trails and open space. ● Protecting the wildlife corridors, their permeability and related natural resources from the wide range of impacts associated with over-development of the campus. ● The wildlife corridors are not separate from SDC campus—animals are not cognizant of boundaries—and their protection is integral to all aspects of the site plan. ● Pursuing the development of performance standards to support housing and other development, as outlined in the Sonoma Land Trust's memo to the NSV MAC, Springs MAC and Sonoma Valley Citizens Advisory Council in follow-up of the November 18, 2021 joint meeting.	The comment is noted. Please see MR-7 regarding impacts of the Proposed Plan on wildlife movement. See also response to comment B8-3, B8-15, B8-16, and B8-19 for wildlife corridor policy amendments. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-4	HOUSING DENSITY: General Information: ● The SDC site is outside of an urban growth area and surrounded by community separator lands and the rural village of Glen Ellen. ● Based on current United States' census definitions, the Eldridge "census designated place," including the SDC campus and the Glen Ellen community just south of the SDC, could add approximately 450 housing units, i.e., through redevelopment of the SDC campus, and still be within a rural (vs. urban) designation, assuming average occupancy in Sonoma County of 2.61 people per dwelling unit. ● Maintaining a rural designation for the site's development is consistent with the Guiding Principles established for the site plan in that new development must complement the surrounding communities of Glen Ellen and Eldridge/Glen Ellen.	The comment is noted. Please see Impact 3.10-2 on page 319 of the DEIR for an analysis on conflicts with any land use plan, policy or regulation. Given that the Proposed Plan is consistent with the General Plan's goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency as discussed above, there would be less than significant impact from implementation of the Proposed Plan related to conflicts with local plans and regulations. In addition, as noted under Impact 3.1-3 on page 105 of the DEIR, new development under the Proposed Plan will occur primarily within the previously developed Core Campus area, excluding the SR 12 connector which will reuse the existing street network and avoid damage to scenic resources to the greatest extent feasible. Therefore, the proposed development would not differ substantially or detract from the existing visual quality and public views of the site by keeping with the overall scale and development height variation at the current SDC campus and by preserving the site's open space framework outside the Core Campus. Further, comment is related to the Specific Plan and not the adequacy of the DEIR.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-5	The Community Supports: The creation of additional housing on the SDC site, particularly affordable housing, however at a substantially lower density—450 or fewer housing units—than in any of the draft alternatives published to date. (The number of housing units in all three plan alternatives is 990 or greater.) ● 89% of community survey respondents support no more than 450 housing units; 65% of those supporting between 400-450 units, and 24%, less than 400 units.	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			● Related to this and to complementary community development as mentioned above, 87% of community survey respondents cited "preserving the rural character of Glen Ellen" as "very important." ● The community does not prioritize market rate housing.	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-6	AFFORDABLE HOUSING: The Community Supports: ● A higher percentage of mixed level affordable housing than the 25% of the published alternatives. Specifically: ● 76% of community survey respondents think that 25-50% (or more) of the SDC housing should be affordable; 49% of all respondents would push that percentage higher, with at least 50-75% of housing units affordable. Over half of that 49% would prefer that 75%+ of all housing be affordable. ● Housing to include housing for individuals with developmental disabilities (as indicated in state statute); community comments also support senior and veterans housing and related services. ● Housing should be fully accessible (to disabled), as outlined in letters from representatives of the disabled community. ● The survey showed little support for estate homes (81% of respondents opposed) or 3-story apartment buildings (68% opposed), however during the NSV MAC discussion of 12/15/21 it was acknowledged that 3-story housing may need to be considered to achieve higher levels of affordable housing. ● Adaptive re-use of existing buildings (see below) may alleviate need for 3-story structures. ● The community generally agrees that clustered housing and integrated affordability level housing should be considered. ● The state of California has prioritized the creation of affordable housing, as has Sonoma County. The state must	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			reconcile this priority with its fiscal responsibility with respect to the SDC property by defraying the significant site remediation costs. ● Housing clusters and siting should be designed to support open space priorities as identified above. ● Housing should be located away from Arnold Drive to preserve the existing visual and historic character and density of the SDC campus.	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-7	Potential funding sources: - Federal Infrastructure Investment and Jobs Act ADAPTIVE REUSE OF EXISTING BUILDINGS: General Information: ● ALL responsible structural studies of the single-story buildings on the east side of the SDC campus indicate that re-use of the buildings is both financially feasible, and a likely positive use of existing resources. ● It is important to note that all of the studies related to the re-use option were conducted using old financial data. Local new construction costs have escalated sharply in the past few years, and particularly in the past 12 months. ● The discussions of adaptive re-use have focused on perceived low demand, and the potential unwillingness of people to live in buildings that have been re-designed. However, there are examples of creative, livable residential re-use deigns throughout urban environments both locally, and in other regions of the US, including lofts in old train stations, apartments in old manufacturing facilities, etc. Additionally, those discussions regarding design do not take into account the changes we have seen in the past couple of years alone. Tiny houses, re-purposed shipping containers, etc., are designs that are now considered livable and comfortable despite the out-of-date view of such designs.	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative and the financial feasibility associated with adaptive reuse. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-8	Community Benefits: ● The re-use option will reduce greenhouse gases associated with demolition and construction. It will reduce air quality problems since the impacts of dismantling of concrete, wood and toxics will be considerably reduced as compared to that of demolished whole buildings. ● The roadways will not be further burdened by the weight and number of overloaded trucks. ● Public safety will be improved due to reduced traffic flows. ● The unique and beautiful architectural nature of the existing buildings will be preserved. ● The re-use of the buildings will be less expensive, and less time consuming, resulting in a more rapid occupancy schedule. ● Local job creation will increase with the use of adaptive re-use of existing buildings due to the nature of the specialty construction skills required for the work. ● "Proof of concept," or the demonstration project aspect of the work, will serve as a model for additional other communities or similar projects.	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-9	The Community Supports: ● The community survey found that 49% of all respondents find adaptive reuse of buildings to serve at-risk populations to be of highest or high priority combined. ● In addition, a total of 64% of all respondents find adaptive reuse of buildings to serve special needs populations to be of highest or high priority combined. ● In addition, the community has indicated support for alternative housing types, e.g., co-housing, that could be implemented to make reuse financially feasible. Potential funding sources: - Grants - Developer funds	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-10	UTILITY INFRASTRUCTURE: Sewer Treatment / Water Recycling General Information: ● The Sonoma Valley County Sanitation District Treatment Facility is located approximately 13 miles from the SDC Campus. The area surrounding the current treatment facility, located at the end of 8th Street East, routinely floods during the wet season. ● Untreated effluent is discharged into Nathanson Creek during flood events. ● Climate change, and associated sea level rise, will result in operations at the current location becoming increasingly difficult to maintain and sustain. ● Flood events will increase as groundwater levels rise. ● Discharges into Nathanson Creek will increase. ● Currently the Sanitation District pays a fine every time it has to dump overflow into the Nathanson Creek system. This happens multiple times a year. Adding additional homes to the sanitation system design will likely cause more frequent overflow problems.	The comment is noted. Please see Impact 3.9-1 on page 294 of the DEIR for an analysis on impacts on waste discharge. Development under the Proposed Plan would be designed and maintained in accordance with regional and County water quality requirements, such as the San Francisco Bay MS4 Permit, existing Sonoma County General Plan, and local plans. Policy 6-16 of the Specific Plan also emphasizes the minimization of impervious surfaces and use pervious pavements where possible. Therefore, construction and operation would comply with all current regulatory requirements and would not violate water quality standards or degrade water quality, and there would be a less-than-significant impact. Further, as noted on page 298 of the DEIR, Conditions of Approval WQ-1 and WQ-4 would ensure compliance with applicable polices and regulations such that impacts from surface runoff would be less than significant.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-11	Community Benefits: ● A sewage treatment facility could be sited on the SDC site—a location in the Sonoma Valley which is resistant to the impacts of climate change and sea level rise. ● Localized water recycling makes re-use financially feasible since the Sonoma Valley County Sanitation District does not, and will not, have the funds to create a large-scale water recycling program from its current location at the end of 8th St. East. ● Localized water recycling and storage is part of a fire resiliency plan. ● Wetlands associated with water treatment could be associated with a wildlife preserve and fire break, adding to climate resiliency. ● Groundwater recharge in the upper Sonoma Valley would benefit the groundwater plan requirements. ● Infrastructure requirements associated with	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			SDC development would require an upgraded sewer treatment and water recycling plan.	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-12	Potential funding sources: - Grants - Reduced penalties for discharges into the Nathanson Creek system could be applied to the construction of a treatment facility. - Recycled water sales. - Local sewer district fees including SDC development, the existing town of Glen Ellen and potential expansion into areas that are currently served by underperforming septic systems. - Developer funds. - Federal Infrastructure Investment and Jobs Act	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-13	Federal Infrastructure Investment and Jobs Act Energy Resiliency / Microgrid Construction General Information: ● An energy sustainability plan and microgrid design should accompany any SDC development. ● Community Choice Aggregation is available in 23 municipalities and counties in California, serving 11 million customers. ● The Climate Center, located in Santa Rosa, is among the main organizing and lobbying organizations responsible for the development and adoption of Community Choice Aggregation. ● PG&E has shown itself to be an increasingly unreliable source for the electric grid. Community Benefits: ● A move towards a localized, sustainable energy infrastructure can serve as an emergency preparedness resource. ● Reduced greenhouse gas emissions. ● Lower energy costs will attract potential commercial interests, and reduce operating costs for a sewage treatment plant, public school, etc. ● Local job creation will increase due the highly skilled workers required for construction, and the administration and monitoring of the system. Potential funding sources: - Grants - Local rate payers - Federal Infrastructure Investment and Jobs Act	The comment is noted. As noted on page 243 of the DEIR, Policy 6-19 would require each building within the Core Campus connect to a microgrid. Further, Impact 3.6-2 on page 249 on the DEIR states that development under the Proposed Plan would be required to comply with State and local renewable energy and energy efficiency plans, as such, this impact would be less than significant. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-14	FIRE SAFETY / CLIMATE RESILIENCY: Fire Safety / Protections General Information: ● Many of our appendix items address this indirectly, including water treatment and wetlands as fire protection; microgrid as protection against large scale electrical grid failure or neglect; adaptive reuse of the reinforced concrete buildings and the open space designation as fire protection. A community center could be used for any number of emergencies. ● Additionally, fire protection building code and WUI (Wildlands Urban Interface) requirements are codified. ● Evacuation plans and roadway emergency preparedness are big questions; it's our understanding that the EIR will address these issues.	The comment is noted. Please see MR-4 related to the adequacy of the wildfire evacuation analysis. Further, as stated on page 519 of the DEIR, development will comply with existing State and local codes and regulations, such as California Fire and Building Codes, as well as proposed policies that would reduce impacts to a less-than-significant level related to exacerbating wildfire risks during implementation of the Proposed Plan. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-15	Climate Resiliency General Information: ● The Sonoma Valley wildlife corridor on the SDC campus is critical to maintain the quality of our water, forests, and wildlife in a rapidly changing and warming environment. ● Keeping landscapes connected via habitat linkages or corridors is the most frequently recommended approach to maintain ecosystem resilience in the face of climate change as it provides an "escape route" for plants and animals to relocate when their habitats are no longer viable. ● Linking also allows resources, including water and nutrients, to pass between habitats that are increasingly confined by human development to maintain ecosystem health for humans and wild residents. ● In 2015, when the SDC was still operational, a paper prepared for Sonoma Land Trust by researchers from the University of California, Berkeley, not only documented how the SDC's wildlife corridor maintains connectivity, but also addressed what it will take to ensure its integrity. ● The SDC "has high potential for landscape permeability and therefore is expected to allow for free passage of wildlife if left undisturbed," the	The comment is noted. Please see MR-7 regarding impacts of the Proposed Plan on wildlife movement. See also response to comment B8-3, B8-15, B8-16, and B8-19 for wildlife corridor policy amendments. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			researchers wrote. They also cited a state mandate—"a cornerstone of California's State Wildlife Action Plan"—that places a priority on making sure development does not encroach on such corridors. ● The researchers noted that protecting the corridor "will require preventing further development, especially in the northern portion of the SDC; as well as reduction in traffic speeds, artificial lighting, invasive species and domestic animal control, limiting human access, and a move toward wildlife-friendly fencing throughout the corridor." ● Aligns with the state's 30x30 goals. Community Benefits: ● Clean and abundant water: connected creek corridors protect our streams and groundwater. ● Reduced wildfire risk: well-managed landscapes have less fuel to carry and spread flames. ● Climate change resilience: plants and animals can move through corridors to cooler places. ● Room to roam: connected landscapes maintain healthy flows of plants, animals, and resources.	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-16	HISTORIC PRESERVATION: General Information: ● The community supports and recognizes the importance of preserving the historic, architectural, and aesthetic character of the SDC campus, including permanent protection, preservation and management of selected buildings and structures, This would include the historic cemetery, and related landscapes that sit within the boundary of the historic district of Sonoma Developmental Center. ● Inclusion of a museum, archival research center, library, and visitor center (The Gateway to Sonoma Mountain) on the grounds linked with and complementary to the Historic Cemetery, Open Space and Wildlife Corridor. ● This management structure is compatible with the goals of the Sonoma Land Trust, co-housing advocates, disability rights supporters, the numerous stakeholders that	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative. As noted on page 296 of the DEIR, proposed policies and the Standard Conditions of Approval (LU-1, LU-2, LU-3, LU-4, LU-5, and LU-6) would help reduce impacts to the historic district to the maximum extent practicable, which includes preserving the cemetery and considering reuse of the Sonoma House as a museum. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			contributed to past community forums, and the recent community survey conducted and presented to the NSV MAC.	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-17	Community Benefits: ● In addition to bringing people together through public events, lectures and workshops, a museum will help provide a sense of community and place by celebrating our collective heritage. ● Museums educate, inspire, foster dialogue, curiosity, self- reflection and serve to help future generations comprehend their history and recognize the achievements of those who came before. ● Fosters partnerships and collaboration with the larger community and other non-profits ● Adaptive reuse of buildings to house research, museum and visitor centers will be effective in reducing our carbon footprint preparing for a future of fire safety, climate resiliency and sustainability of Sonoma Valley ● Historic preservation and reuse of historic buildings reduces resource and material consumption, puts less waste in landfills and consumes less energy than demolishing entire buildings and constructing new ones. Destruction of historic buildings unleashes vast amounts of embodied carbon into the atmosphere contributing to an already overtaxed and warming planet and adding to our carbon footprint. ● An historic district ensures that we are protecting and revitalizing the character of our town and ensuring that the most iconic and diverse collection of architectural buildings, sites and object are preserved for future generations ● Documentation supports that well preserved and revitalized historic districts are an economic boon to a community and affect property values in a very positive way. ● Historic districts are a vibrant, social and economic center for towns and are regarded as world class destinations.	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-18	The Community Supports: ● Preservation and rehabilitation of historically significant buildings, structures, landscapes and historic cemetery. These buildings include Sonoma House, McDougall, Oak Lodge, Hatch, PEC and King. ● Preservation of the SDC Library and other sources of written knowledge. ● Preservation of historic artifacts and digital archives currently stored on campus. ● Preservation of the knowledge possessed by individuals associated with SDC, Eldridge and Glen Ellen. Potential Funding Sources: - Glen Ellen Historical Society has already received grants and funding from private philanthropists to support a museum and visitor center. - The Board of Directors of GEHS and general membership include experienced legal, development, grant writing, fundraising and cultural heritage professionals engaged in raising funding for the project. - Establishment of "Friends of Glen Ellen Historic District" will be instrumental in organizing fundraisers and events providing financial assistance. Modeled after the Friends of Jack London, this will have a self-generating funding source which includes an event/community center, museum, visitor center that includes historic tours and a world class archival and research hub - Federal and State Grants - State Historic Preservation Office Funding - National Park Service Historic Preservation Funding - National Trust for Historic Preservation Funding - Privately Funded Grants - Scholarships and Research Fellowships - Governor Newsom's 2021 Executive Order for 30 x 30 State Funding	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-19	COMMERCIAL SPACE / JOB CREATION: The Community Supports: ● The community has expressed support for innovative or educational use of commercial space at a scale that is compatible with the semi-rural Valley. Vocational training center is a popular idea. ●	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Although it is the NSV MAC's understanding that it is premature to designate too specifically, community suggestions have included a non-profit hub and a trade skills vocational center. ● Community comments have also noted that we have no identified tenants for commercial space at this time, and that the level of demand for commercial space is uncertain, reflective of significant changes in work patterns. ● Community comments have also noted that it's not clear that we have a shortage of jobs in Sonoma Valley—versus a shortage of affordable housing—and that the scale of the commercial space designation needs to be appropriate for this rural community. ● Commercial space ranked second lowest for "not important / neutral" as a re-development priority in the community survey. ● However, when survey respondents were asked to prioritize commercial development, a Community Center was the most popular (77% of survey respondents supporting), following by an Innovation/Research /Climate Hub at 60%. ● Hotel / Resort was the least popular with 10% support from community survey respondents. Potential funding sources: - Federal Infrastructure Investment and Jobs Act - Legislative job training bill	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-20	COMMUNITY-ORIENTED COMMERCIAL: The community is supportive of commercial space to be set aside for community-oriented usage to potentially include: Community Center General Information: ● Glen Ellen currently does not have a community center. Community benefits: ● Potential uses and needs: emergency shelter, temporary emergency health clinic, community meetings, live performances. ● Provides a great boost to the local economy, providing jobs, both in the building and running of the facility. It also provides opportunities for the town to	The comment is noted. As noted on page 395 of the DEIR, Policy 4-1 would promote a fine-grained mix of land uses within the Historic Core, with housing, hospitality, office, commercial, and community uses fronting on the Central Green to create a vibrant community center with activity throughout the day. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			raise money through events, performances and weddings. ● Provides an opportunity for youth to congregate in a safe space promoting strong relationships through sports and recreational activities. ● Can be associated with the local Dunbar School for general assemblies, meetings, and activities, resulting in reduced project costs. Potential funding sources: - Grants - Community fundraising - Adaptive re-use of an existing building as a cost-saving measure	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-21	Relocate Dunbar School to SDC campus General Information: ● Dunbar school currently serves grades K-5 and is located 3.5 miles from the SDC Campus. The current Dunbar campus is aged and located in a rural setting which requires either busing or car transportation for the commute. ● It is acknowledged that the Sonoma Valley Unified School District would need to run demographic and other feasibility studies as part of any determination to relocate. Community Benefits: ● Job creation for the SDC development through school administration, maintenance, and enhanced school campus use by the public. ● The relocation allows for greater use of foot traffic to school from the proposed SDC campus development and the south Glen Ellen area. ● Reduced bus and individual car trips through Glen Ellen. ● Reduced greenhouse gases. ● Reduced bus maintenance and fuel costs. ● Multiple studies have indicated that school campus proximity to neighborhoods and housing promotes increased school campus use and greater neighborhood/ community continuity. ● Modernized Dunbar School campus Potential funding sources: - Grants - Local school construction bonds - Sale of existing Dunbar school campus as surplus land - Developer funds. Most developments of the scale proposed	The comment is noted. As noted under Impact 3.13-1 on page 403 of the DEIR, Policy 6-2 would require project applicants for development under the Proposed Plan coordinate with Sonoma County school districts to ensure that the future population of the Planning Area can be accommodated adequately in public schools. Additionally, project applicants for development under the Proposed Plan would be required to comply with SB 50, which mandates statutory school facilities fees for residential and commercial developments. Compliance with SB 50 would financially offset impacts on SVUSD capacity and would provide funding for potential future school facility development needs associated with the Proposed Plan-related population increase. Therefore, due to available school capacity, compliance with SB 50, and implementation of Proposed Plan policies, construction or expansion of new school facilities would not be required, and this impact would be less than significant. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			for the SDC campus would require new school construction.	
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-22	SITE GOVERNANCE: General Information: ● Many members of the public have requested consideration of establishing a trust to implement the Specific Plan rather than a private developer. A trust would open opportunities for financing and site management that would broaden the potential for successful redevelopment AND community compatibility. ● The model of the Land/ Government-owned Trust for SDC governance and development was introduced at the first public meeting in 2016. Local community response was supportive of the Trust model for SDC governance. The SDC Planning Resource Committee was convened to consider the feasibility of forming a "State-Owned" trust, and to examine the required land disposition, land planning, development management, and infrastructure improvements issues. ● In 2018, the SDC Planning Resource Committee received a proposal from WRT Consulting for a financial assessment study of SDC site development potential, with an emphasis on: conservation of wildlife habitat and open space areas, protection and re-use of historic structures, adaptive re-use of existing buildings, and potential redevelopment off-setting revenue uses for the central SDC campus. ● It is important to note WRT Consulting performed the original Existing Conditions Assessment of the SDC site under a contract with the California State Department of General Services. ● An example of a successful community land trust model: OPAL Community Land Trust	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	1/6/2022	B2-23	Community Benefits: ● The non-profit government trust model reduces the profit incentives associated with private developers. Development companies generally generate a 25-30% profit on a specific project. ● Local trust	The comment is noted. However, it relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			governance allows for far more development financing opportunities. Public funding (governmental in nature), private funding (traditional lending sources: banks, pension funds, insurance companies), private non-profit funding (land trusts, housing trusts, other types of trust related grants). ● Local trust governance may allow for affordable housing occupancy formulas which enable a larger percentage of local workers and residents to live in the newly constructed homes. A private developer cannot make the housing available ONLY to local residents and workers. Any applicant, no matter their location of residency or occupation, is eligible for occupancy. ● A community housing trust-based model would only be responsible for the work associated with SDC campus development. Potential funding sources: - Private non-profit grants - Private fund raising - Governmental grants - Traditional developer fund resources - Income from commercial development	
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-1	On behalf of the North Sonoma Valley Municipal Advisory Council (NSV MAC), we respectfully submit the following comments pertaining to the Public Review Draft of the Sonoma Developmental Center (SDC) Specific Plan (Proposed Plan) and the SDC Specific Plan Draft Environmental Report (DEIR), as issued by Sonoma County in August 2022. While this letter is reflective of community input, it is not intended to be exhaustive or to take the place of individual comments from community members and other interested parties. Given the tremendous amount of input from Sonoma Valley residents and business owners concerned about the project size and its impacts, as well as this MAC's own request and the Board of Supervisors' direction to scale back the Specific Plan, it is surprising that the proposed	Thank you for your comment letter. The DEIR analyzes environmental impacts as a result of the Proposed Plan in Chapter 3 as well as cumulative regional environmental impacts in section 5.2 of the DEIR starting on page 584.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Specific Plan still contains over 1,000 homes and approximately 940 jobs. It appears that the DEIR fails to disclose the full extent of impacts that will result throughout Sonoma Valley from this large-scale development outside of an urban growth area, as is further detailed in this letter.	
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-2	The Specific Plan represents one of the largest, if not THE largest, developments in the history of Sonoma Valley and is in conflict with County General Plan policies calling for city-centered growth. Furthermore, the proposed plan is inconsistent with its own guiding principles calling for a balance between redevelopment and historic preservation; the plan will destroy the very qualities that make the historic SDC site unique and its implementation will have far-reaching, significant adverse impacts on Sonoma Valley residents. With this in mind, we provide the following comments, by general category. Please explain the following inconsistencies in the DEIR:	The comment is noted. Please see Impact 3.10-2 on page 319 of the DEIR for an analysis on conflicts with any land use plan, policy or regulation. Given that the Proposed Plan is consistent with the General Plan's goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency, there would be less than significant impact from implementation of the Proposed Plan related to conflicts with local plans and regulations. Please see also MR-8 regarding the Historic Preservation Alternative.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-3	PROJECT SCALE & HOUSING Increasing the supply of affordable and workforce housing is broadly supported by the Sonoma Valley Community, but not at any cost to the environment and the health and safety of Sonoma Valley residents. Our understanding is that the DEIR should help the community better understand the scale of the environmental impacts of the Specific Plan, how they will be mitigated, what options were considered, and why these options were dismissed. We do not believe the DEIR has yet met these objectives. For example, the DEIR identifies the smaller-scale Historic Preservation Alternative (Historic Alternative) as the environmentally superior alternative. It is not ruled out in	The comment is noted. In Chapter 3 Environmental Analysis, the DEIR outlines potential environmental impacts from the Proposed Plan, as well as any regulatory requirements and proposed policies or Standard Conditions of Approval that will further mitigate these impacts. Chapter 4 Alternatives also analyzes potential alternatives compared to the Proposed Plan. Please see also MR-8 Historic Preservation Alternative for more information why the Alternative would be infeasible.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			the DEIR because it meets the required objectives, but it is dismissed from full consideration. Why?	
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-4	If this alternative is environmentally superior and substantially reduces impacts of the proposed plan; if it more effectively meets some of the fundamental project objectives as outlined in the Specific Plan guiding principles, including Preservation of Historic Resources and Balancing Redevelopment with Land Use (DEIR pages 5 and 6); if it provides 450 new homes (still the largest project in Sonoma Valley); and meets the state's statutory objectives regarding the disposition of the SDC site, why is this alternative (or a version of it that addresses some of the issues identified) not being put forward as the proposed plan? "Overall, the Historic Preservation Alternative is the environmentally superior alternative, although significant impacts of the Proposed Plan and the two alternatives are largely comparable, and the Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks. Additionally, this alternative would not support key project objectives related to increased housing supply, varied housing opportunities, community vibrancy, and long-term fiscal stability to the same degree as the Proposed Plan." (DEIR page 14)	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-5	We do not find adequate data in the DEIR that supports the "less superior" distinctions above, or any reason why these couldn't be readily addressed. There is no requirement that maximum housing be developed, especially if it means significant impacts in several issue areas. In terms of biological resources, the analyses on page 563 of the DEIR indicates that the Historic Preservation Alternative would be "similar or slightly better" than the Specific Plan. In	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative. Please see also MR-6 regarding the adequacy of the transportation analysis and your comments concerning the Highway 12 impacts. See also MR-4 regarding the adequacy of the wildfire evacuation analysis and how Highway 12 would impact evacuation.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			terms of energy use, the older historic buildings are presumed to be less energy efficient, but it's not clear how the net calculation was made since "energy use" is also cited in conjunction with construction and demolition GHGs, which would be significantly higher in the Specific Plan. The increased wildfire risk with this lower density plan is presumably solely because of the arbitrary exclusion of the Hwy 12 connector road in this alternative. How would the proposed Specific Plan fare in comparison to the Historic Preservation alternative if it also excluded the Hwy 12 connector road, or if both included the Hwy 12 connection? Scale is the most obvious way to mitigate impact. While the types of impacts of the Historic and proposed Specific Plans may be the same, they are not equal in magnitude.	
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-6	FEASIBILITY If the Historic Preservation alternative was dismissed because of an assumption that feasibility will require higher development densities, how is a feasibility analysis considered in the DEIR and shouldn't this be more transparently addressed in the Proposed Plan? Since it's unclear what "economic feasibility" means for the SDC campus at this time, shouldn't there be an economic feasibility analysis as part of this evaluation process? The market demand study that was prepared for the alternatives report does not fill this need (and is inconsistent with the Specific Plan in any case in that it reports little demand for non-residential uses). *****	The comment is noted. Please see MR-8 regarding the feasibility of the Historic Preservation Alternative.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-7	MITIGATION MONITORING / PERFORMANCE STANDARDS It's of concern to the community that most of the policies in the proposed Specific Plan are not enforceable, generally because of the use of "should" in the descriptive language	The comment is noted. Please see MR-9 regarding mitigation monitoring/performance standards. See also MR-4, MR-6, and MR-7 regarding impacts on wildfire, transportation, and wildlife movement. See also Standard

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			rather than "shall" in many instances. Terms such as "if feasible" and "assumed" are also used repeatedly and the DEIR analysis acknowledges considerable uncertainly in the impacts and thus in the mitigation measures as well. Will the policies and conditions of the approval of the Specific Plan be put into a mitigation monitoring plan or program to ensure mitigation compliance for the project? Given the scale of the proposed Specific Plan and absence of any phasing requirements, it's critical that performance standards be developed and tied into the phasing of the project, especially since the DEIR calls for future studies and mitigations that are not yet identified. Will performance standards be put into place, potentially to consider impacts that might include Traffic, Wildlife Function, Resources, Noise?	Conditions of Approval related to biological resources and noise in Appendix A of the Specific Plan.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-8	HOUSING NUMBERS The Specific Plan states that it will result in 1,000 units and the DEIR uses that assumption, but as noted in Specific Plan Table 4.2 more units are suggested, even without likely density bonuses. That means that most of the environmental impacts in the DEIR are underestimated for the number of units permitted. If the analysis is limited to 1,000 units, why is the possibility of 1,100 or more of units included in the Specific Plan?	The comment is noted. As noted on page 79 of the DEIR, the base number of market rate units allowed is 550. With State and County density bonuses for inclusionary housing, the SDC site is anticipated to have around 660 new market rate units and a total of 1,000 housing units at buildout. These environmental impacts of the Proposed Plan are analyzed in Chapter 3 of the DEIR.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-9	CULTURAL RESOURCES / HISTORIC PRESERVATION Isn't it true that the Historic Alternative meets the fundamental project objectives listed on pages 5-6 of the DEIR? Isn't it true that the proposed Specific Plan is inconsistent with the fundamental project objective calling for balancing development with historic resource conservation? Regarding policies and impacts on cultural resources, isn't	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative. See also response to comment B4-2 regarding impacts on the historic district. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			it true that the DEIR does not specifically address impacts on Contributing Resources. Please amend the EIR to include such impacts in its own section, not embedded in the discussion of impacts on the district as a whole or explain why not. Isn't it violative of CEQA for the EIR to assume that the project will be approved as proposed, without mitigations and alternatives to reduce impacts on historic resources having been determined feasible or infeasible? Wouldn't the loss of eligibility for the National Register of Historic Places remove protections for contributory resources? What environmental impacts would attend such losses of eligibility? What mitigations could avoid that loss? Please consider and analyze the benefits of the pending efforts to list SDC in the National Register.	
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-10	What are the performance-based standards to determine which buildings can feasibly be restored or adaptively reused? How is demolition of any building to be decided? What type of analysis and performance-based standards will be applied to permit demolition under the Specific Plan? Please amend the Specific Plan so that demolition of any qualified historic resource will require a Plan amendment based on codified criteria. If not, why not? Isn't protection of National Register eligibility required by CEQA if feasible? Regarding the Sonoma House and the main building, Specific Plan Policy 2-47 uses terms like "consider" and "if feasible." How will feasibility be determined? In light of significant impacts, why are mitigation measures not identified or analyzed? Doesn't CEQA disallow deferral of analysis and mitigation of the Specific Plan's foreseeable impacts on historic resources? Isn't it true that projects consistent with the Specific Plan, including those involving demolition of currently listed or eligible historic resources	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative and MR-9 regarding deferred mitigation. See also response to comment B4-2 regarding impacts on the historic district. Please see also response to comment B3-7. All individual projects would be subject to separate CEQA review to mitigate potential impacts on cultural and historic resources to the greatest extent feasible. Please see also MR-3 regarding the programmatic nature of the DEIR. As stated in CEQA Guidelines, Section 15093(a), if the specific economic, legal, social, technological, or other benefits of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable." Therefore, given that State law stipulates that the SDC Specific Plan prioritize housing at the site per Government Code Section 14670.10.5, the environmental impacts of implementation of the Specific Plan on historic resources may be acceptable for policymakers. The remainder of the

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			will not be subject to discretionary CEQA review? If not, under what circumstances would CEQA review be required?	comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-11	UTILITY INFRASTRUCTURE The Valley of the Moon Water District (VOMWD) consistently contacts customers requesting a 20% reduction in water use, further stating that penalties will be assessed if the reduction is not met. Yet, for the purposes of the DEIR and the water assessment section, the DEIR and VOMWD assert they have the resources to serve the SDC project. What assumptions underpin this assertion? There are contradictions that should be addressed in the DEIR. For example: VOMWD's own estimates for future water deliveries and shortages are based upon single dry years, not the multiple dry year shortfalls we are already experiencing. Additionally, the Sonoma Valley Groundwater Sustainability Agency has made increasing projections for the need for groundwater re-charge throughout the Sonoma Valley, but the VOMWD has not estimated its own required contribution to groundwater re-charge and has maintained an increased groundwater "draw down" in the SDC water assessment report. What are the groundwater re-charge assumptions for the SDC site and are they included in the DEIR?	The comment is noted. Please see MR-5 regarding the adequacy of the water supply analysis. As stated on page 292 of the DEIR, groundwater supply and recharge are assessed by comparing existing conditions within the site area and after implementation of the Proposed Plan. Surface water and groundwater quality is analyzed by using information on existing water quality conditions. See Impact 3.9-2 on page 296 regarding Proposed Plan impacts on groundwater recharge. Given existing regulations and proposed policies, the Proposed Plan would not substantially decrease groundwater supplies and would not impede sustainable groundwater management of the basin, and this impact would be less than significant.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-12	Additional areas of the water assessment report that require clarification in the DEIR: The report assumes the planning area will be served by local, on-site surface water sources. However, for Fern and Suttonfield Lakes, the treatment plant and the pipes/infrastructure are not a part of the core campus development. For the purposes of the DEIR and water assessment, those resources do not exist. - What, specifically are the surface water sources the DEIR	The comment is noted. Please see MR-5 regarding the adequacy of the water supply analysis and response to comment B11-272. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			is stating are available for use? - What becomes of those "non-available" water sources (the lakes, treatment plant)? - Who is responsible for the evaluation of the dams that contain all of that water? - Are the lakes going to be drained, filled in, maintained? • The riparian rights contradict the findings of both the Sonoma Ecology Center and the Sonoma Valley Water Sustainability study that urges an elimination of riparian water rights in order to provide groundwater recharge to diminishing Sonoma Valley aquifers. - Who maintains the riparian water rights? The VOMWD, the state, the developer? • The SDC water treatment plan has not been licensed for operation in many years. The DEIR states it will be evaluated for re-use by the water system operator. - Who will pay for the evaluation? If the plant requires re-construction, or is not salvageable, who pays for these updates? - Where, on the Specific Plan, will it be located?	
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-13	ENERGY MICROGRIDS: The DEIR language is vague in the section that pertains to an electrical microgrid. By definition, a microgrid is a locally controlled and maintained electrical grid with defined electrical boundaries. It is able to operate in both a grid-connected and "island" mode. A stand-alone or isolated microgrid only operates off-the-grid and cannot be connected to a wider electric power system. - Which type of system is being proposed, grid-connected or stand alone?- Will the system have localized generating capacity? - Where is the dedicated space on the Specific Plan for any	The comment is noted. The environmental impacts related to traffic, noise, and air quality and GHG emissions during construction and operation of energy facilities have been considered throughout this EIR (see Section 3.3: Air Quality, Section 3.6: Energy and Greenhouse Gas Emissions, Section 3.11: Noise, and Section 3.14: Transportation). Construction of individual projects would be subject to separate project-level CEQA review at the time the design and exact location is proposed in order to identify and mitigate any project-specific impacts as appropriate. The remainder of the comment relates to the Specific Plan and not the

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			proposed generation? - Who pays for it and maintains it? - Where is the electrical use projection data for microgrid design?	adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-14	VEHICLE MILES TRAVELED (VMT) The Specific Plan indicates that there will be no free parking on campus. Has the DEIR studied the VMT and traffic safety impacts of this policy with respect to visitor vehicle trips to find parking off-site; the impacts on the narrow streets in the adjacent neighborhoods, particularly the Glen Ellen streets south of the SDC (Martin, Lorna, Burbank, Sonoma Glen Circle, Marty and Madrone) where parking is free; or the public safety or emergency evacuation impacts of this policy? Has the potential limit on public access been evaluated? In addition, was there analysis done on the safety implications of increased VMT on the routes used by cyclists and commuters to travel from Glen Ellen to other county locations (Santa Rosa and Rohnert Park), specifically Warm Springs and Bennett Valley Roads. These narrow, winding roads are commonly traveled at relatively high speeds; their road shoulders are significantly deteriorated (no shoulder at all for significant portions). The safety implications on these roads due to the increased VMT in the Proposed Plan must be considered in the DEIR.	The comment is noted. The presence of priced parking near an area with free parking can cause motorists to search for spaces on those free streets (commonly known as "spillover"). However, there is a limited distance motorists are willing to walk from their vehicles. In the case of SDC, on-street parking pricing would only be considered in non-residential areas, primarily in the "core campus". The core campus is located roughly one-third mile from the nearest residential uses in Eldridge and almost two-thirds mile to Glen Ellen, walking distances that would be too lengthy and inconvenient for most motorists. Thus, the potential for spillover parking is minimal. The presence of free parking often leads to many motorists seeking spaces in the same highly desired locations, resulting in vehicles circling the area. This can have the unintended effect of marginally increasing VMT and creating potential safety issues as drivers spend a greater amount of time searching for parking spaces. VMT is a measure of the amount of automobile travel occurring in a region, as measured in miles. Consistent with State requirements, the VMT effects of the Proposed Specific Plan's land uses and Highway 12 road connection were assessed using performance metrics including VMT per capita, VMT per employee, total VMT per service population, and total regional VMT. VMT is a measure of distance and does not directly affect bicyclists, though increased use of bicycling as a travel mode does reduce automobile VMT. With respect to

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				broader bicycling conditions on Warm Springs Road and Bennett Valley Road, the 2010 Sonoma County Bicycle and Pedestrian Master Plan identifies a proposed Class II (bike lanes) facility along the length of Warm Springs Road, a proposed Class III (bike route) facility on Bennett Valley Road between Warm Springs Road and Grange Road, and a proposed Class II (bike lanes) facility on Bennett Valley Road between Grange Road and the City of Santa Rosa. With respect to bicycle commuting to and from Santa Rosa, the Bike Plan identifies the future Central Sonoma Valley Trail along the Highway 12 corridor, to which the proposed Specific Plan would include connections. The Central Sonoma Valley Trail bicycling route is anticipated to be the primary regional connection for commute and recreational travel, and will establish a much more comfortable route for bicyclists than Warm Springs and Bennett Valley Roads since it would be off-street, flatter, straighter, and thus safer. Proposed goals 3-A and 3-C emphasize creating complete streets that emphasize the effectiveness and safety of pedestrian, bicycle, and transit modes.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-15	There is no evidence at this juncture that anyone living on the SDC site will be employed at the site so this cannot be assumed. Has the DEIR considered this in one of its VMT scenarios? On a related note, while it's noted that institutional uses associated with the former SDC have been removed from the SCTM19 model's existing land use database (DEIR page 426), historical VMT numbers are still cited in the Historical Use section (DEIR 427-428) and implied to be relevant. VMT under the Proposed Plan will not be directly comparable to the historic SDC site in terms of either resident (non-driving) or single-employer shift	The comment is noted. Please see MR-6 regarding the adequacy of the transportation analysis. The Sonoma County Travel Model 2019 (SCTM19) is considered to be the best-available tool to estimate the travel demand characteristics associated with the proposed Specific Plan. SCTM19 includes several steps when projecting traffic volumes, the first of which pertains to trip generation by land use. This initial trip generation step is followed by sophisticated algorithms that estimate trip distribution, assignment, and mode split, as well as trip matrices that balance trip assignments and productions

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			work VMT per capita; any assumptions made pertaining to historical VMT need to be made clearer in the DEIR analysis and narrative. Finally, the DEIR cites a VMT increase of ~631, with the existing VMT at 59,654, and the Proposed Plan VMT at 60,285 in 2040 (DEIR, page 183). How can this be accurate based on the anticipated population and the VMT summaries cited throughout the DEIR? The DEIR's Project trip generation estimate was developed using the SCTM19 travel demand forecasting model maintained by the Sonoma County Transportation Authority (SCTA). The specific trip generation factors are not included in the DEIR. Thus, it is impossible to evaluate the reasonableness of either those factors or the resulting trip generation numbers.	within the region. The resulting output is expressed as traffic volume projections but is no longer categorized by individual land use. Accordingly, the trip generation estimates described for informational purposes on page 440 of the DEIR are presented as the aggregated number of daily trips added by the proposed Specific Plan to the surrounding roadway network. Regarding page 183 of the DEIR, the analysis used traffic data provided by W-Trans and incorporated it into air quality modeling (CalEEMod) to derive the VMT numbers used in the Air Quality Chapter. Since these numbers are directly linked to the inputs used for CalEEMod, these are the most appropriate numbers for assessing the BAAQMD threshold.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-16	Can the DEIR appropriately consider the completion of the Sonoma Valley Trail multi-use path, connecting the SDC site with Santa Rosa, as part of the SDC site VMT mitigation if this is a Caltrans controlled project? Why is the downscaling or elimination of the hotel not considered part of VMT mitigation? The hotel is no identified as a priority in the state legislation pertaining to the SDC site and will contribute significantly to VMT. In Table ES-2, the DEIR determines that VMT reduction measures cannot be guaranteed, and they may be insufficient to reduce VMT per capita below the applicable significance threshold or fully offset the effect of induced VMT. "There are no other feasible mitigation measures available." Why is this an allowed conclusion when there are certainly mitigation measures available that might justifiably be considered, even if reductions might not reduce impacts to levels that are less than significant? Examples of mitigation include a reduced scale alternative	The comment is noted. Please see MR-6 regarding the adequacy of the transportation analysis. The DEIR includes no mitigation measures related to VMT impacts, so does not rely on completion of the Sonoma Valley Trail as part of a VMT mitigation strategy. VMT reductions intended to reduce the Specific Plan's VMT impacts are tied to Specific Plan Policy 3-41, which requires all development allowed by the proposed Specific Plan to implement TDM strategies. This requirement will be enforced through standard conditions of approval. VMT reductions intended to reduce impacts will also be achieve through implementation of Specific Plan Policy 3-42, which requires establishment of a Transportation Management Association (TMA) that will develop and oversee trip reduction strategies for uses within the proposed Specific Plan. Neither of these approaches require or rely upon implementation of the Sonoma Valley Trail.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			or elimination (or reduction of size) of the hotel or other commercial development.	
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-17	WILDLIFE CORRIDOR There is no analysis of the impacts on the wildlife corridor through the campus and no acknowledgement of the fact that animals currently use the campus and will be impacted. Also, there is no assessment of the impacts of fencing on wildlife. (Only wooden fences are prohibited on the campus.) The fencing policies appear to apply only to the open space and human/wildlife interface areas, not the campus.	The comment is noted. Please see MR-7 regarding impacts of the Proposed Plan on wildlife movement. See also response to comment B8-3, B8-15, B8-16, and B8-19 for wildlife corridor policy amendments. Proposed Policy 2-16 also requires all fencing within the open space to be wildlife permeable.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-18	LAND USE IMPACTS The proposed Specific Plan is both inconsistent with several project objectives, as noted above, and inconsistent with existing County General Plan policies encouraging growth in transit-oriented, urban areas. It is also inconsistent with General Plan policies calling for an overall reduction in VMT since it introduces urban uses in a non-urban area; this will necessarily increase vehicle trips to reach services in either Sonoma or Santa Rosa.	The comment is noted. Please see MR-6 regarding the adequacy of the transportation analysis. Please see Impact 3.10-2 on page 319 of the DEIR for an analysis on conflicts with any land use plan, policy or regulation. Given that the Proposed Plan is consistent with the General Plan's goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency, there would be less than significant impact from implementation of the Proposed Plan related to conflicts with local plans and regulations.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-19	COMMERCIAL SPACE / JOB CREATION There appears to be no policy saying that the hotel can't be built first. Is there anything in the proposed Specific Plan requiring the developer to build housing first? Why is such a large-scale hotel being proposed when it's not a defined project objective, and when VMT is listed as a challenge?	The comment is noted. Please see MR-6 regarding the adequacy of the transportation analysis. The remainder of the comment relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-20	POPULATION and GROWTH ASSUMPTIONS The DEIR analysis of growth-inducing impacts is based on a comparison of the project size to county-wide population	The comment is noted. Please see Impact 3.12-1 on page 376 regarding impacts on induced population growth. buildout of the Proposed Plan would help fulfill State

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			and employment numbers, which is an unrealistic and invalid comparison. As a distinct planning unit, Sonoma Valley should be the region of comparison. Given the relatively small population of Sonoma Valley, the proposed plan represents a substantial growth-inducing project. Alone, it will double (triple?) the community housing numbers and draw population and employees from other parts of the county as well as from outside the county. Given its location away from necessary goods and services, it will generate pressure for additional urban land uses on surrounding and nearby unincorporated lands. This urban sprawl growth scenario is in direct conflict with climate change policies to encourage compact, in-city growth.	legislature requirements to develop affordable housing within the Planning Area and help mitigate the severe housing shortage facing Sonoma County. Further, the Sonoma County General Plan 2020 Housing Element specifies that future re-use of the SDC facility should include affordable housing. Therefore, given that the Proposed Plan's projected population growth is commensurate with State legislative requirements to prioritize affordable housing development as well as General Plan goals and policies, the Proposed Plan would not induce substantial unplanned population growth in the Planning Area and the impact would be less than significant. Please see also Section 5.1 on page 579 of the DEIR for further analysis on growth-inducing impacts.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-21	IMPACTS ON NEIGHBORHOODS SOUTH OF SDC The Glen Ellen neighborhoods adjacent to SDC will take the brunt of both the construction and operation impacts – not to mention the ongoing impacts of traffic and safety related to parking if there is no free parking on the SDC campus. The over 200 apartments and small lot single family homes directly south of the SDC property will be subject to the aggregate effects of noise, traffic, air emissions, and visual effects. These residents' daily routines will be disrupted during a very long-term construction period. This area is home to many low to moderate-income families who have arguably not had an adequate voice in this planning process. Has the DEIR adequately studied the effect of the Specific Plan on this neighborhood, to include the narrow Glen Ellen streets from Martin Street south to Madrone Road and along Madrone Road?	The comment is noted. In Chapter 3 Environmental Analysis, the DEIR outlines potential environmental impacts from the Proposed Plan, as well as any regulatory requirements and proposed policies or Standard Conditions of Approval that will further mitigate these impacts. Polices and Standard Conditions of Approval that would mitigate impacts in the Planning Area would also serve to mitigate potential impacts in surrounding neighborhoods. See also Chapter 5 for an analysis on cumulative environmental impacts starting on page 579 of the DEIR. See also section 2.2 of the DEIR for a description of the planning context and process.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-22	CUMULATIVE EFFECTS There are several foreseeable projects within 15 miles of the SDC site that will contribute to cumulative growth and related impacts, including but not limited to: the Graywood Ranch Hotel, Elnoka Village Senior Citizens housing project, Milestone Siesta Senior Citizens housing project, Donald Street housing development project, Verano hotel and housing project, Hanna Boys Center residential development program, and the proposed ~70% membership license increase at the Sonoma Golf Club. In the Transportation Methodology section (page 432), the DEIR states," The model's 2040 cumulative year includes growth that is consistent with adopted general plans within the County and with regional projections contained in Plan Bay Area 2040." Were the above-mentioned projects, and any additional foreseeable projects, considered either in the general plans or by Plan Bay Area 2040? Is Permit Sonoma able to share what was included in the model?	The comment is noted. Please see MR-6 for more information regarding the transportation analysis. The cumulative analysis is detailed in Chapter 5 - CEQA Required Conclusions, starting on page 584 of the DEIR, and considers the likely effects of surrounding regional growth. Given the cumulatively considerable VMT impacts from the Proposed Plan, the impacts from transportation are conservatively considered cumulatively considerable. As stated in CEQA Guidelines, Section 15093(a), if the specific economic, legal, social, technological, or other benefits of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable." Therefore, given that State law stipulates that the SDC Specific Plan prioritize housing at the site per Government Code Section 14670.10.5, the environmental impacts of implementation of the Specific Plan on VMT are acceptable.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-23	FIRE / EMERGENCY PREPAREDNESS The DEIR did not consider a fire scenario in which the fire comes in from the west, down from Sonoma Mountain. "Historically, a fire approaching from the west may be less likely, and therefore did not warrant further specific analysis" (DEIR page 515). We know that fires are now burning in ways that are outside of historical precedent due to climate change and related impacts, and that this area has not burned in recent history. With this in mind, we believe a west-approaching fire scenario west must be considered. Did the DEIR consider an evacuation scenario where broadband and/or cell service is out, or is unreliable, affecting receipt of alerts? This occurred in both the 2017 and 2020 fires – land lines and cell service were knocked	The comment is noted. The DEIR did not consider a fire scenario from the west because the western portion of the Planning Area is located in a moderate FHSZ. Fire scenarios were selected as representative of the most likely potential fires to impact Sonoma Valley given the valley's previous fire history and considering such variables including but not limited to wind speeds, direction, humidity, topography, and rate of advancement. As identified in collaboration with the Sonoma Valley Fire District and other local officials, these scenarios represent a worst-case scenario through their impacts on the broader community and traffic congestion. Thus, a fire from the west would not be a worst-case scenario, and impacts would be less

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			out or overloaded and people had limited information to guide evacuation. In Section 16.1.3.4 (page 511), the DEIR states that to further mitigate potential impacts, Policy 2-54 requires that the project sponsor proactively plan for emergency wildfire safety by building or designating an on-site shelter-in-place facility, to be open to both SDC residents and the general public. In our community conversations to date, Sonoma County fire and emergency experts have not condoned or recommended this as appropriate for the SDC site, so we question this as an appropriate mitigation measure.	significant. Please see also MR-4 for more information regarding the adequacy of the wildfire evacuation analysis and credentials of those assisting in the development of the models. See Impact 3.16-1 for a discussion of proposed policies that reduce impacts on evacuation to a less than significant level. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-24	The DEIR indicates no significant increases in evacuation times with the Specific Plan. Tables show evacuation times in the order of 15-20 minutes, with and without the proposed project. The Evacuation Time analysis suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. These hypothetical scenarios defy residents' reality and the actual evacuation times experienced during recent fires: Nuns Canyon fire (2017) resulted in evacuation times out of Sonoma Valley of 1 hour or more; Glass Fire (2020) resulted in evacuation times from nearby Oakmont onto Hwy 12 of one to two hours; evacuations from Kenwood during recent fires took hours, not minutes; adding thousands of vehicles will exacerbate the problem. Page 520 of the DEIR states that, "The additional SR 12 connector road will provide additional fire access and evacuation routes." However, during a wildfire, it's quite possible that residents and workers in the proposed project area will not be able to take this connector route east toward highway 12 due to the high probability of a wildfire advancing from the highway 12 direction (see Specific Plan, figure 2.3-1). Has this possibility been considered in	The comment is noted. See MR-4 regarding the adequacy of the wildfire evacuation analysis and how the Highway 12 connector impacts evacuation.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			the DEIR analysis of evacuation times? Also, can the analysis assume the Hwy 12 roadway connection when it will be subject to a separate CalTrans review and approval process and might not be approved?	
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-25	The assessment of wildfire hazards in the DEIR appears to have a number of errors and omissions, the most serious of which lead to unwarranted conclusions that underestimate this hazard ("Impact 3.8-7 Implementation of the Proposed Plan would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. (Less than Significant)" p. 268). Page 503: "Primary responsibility for preventing and suppressing wildland fires in Sonoma County is divided between local firefighting agencies and the State of California, Department of Forestry and Fire Protection. The SDC Planning Area is currently located in an area identified as a State Responsibility Area (SRA)." 1. The Planning Area "includes the approximately 180-acre SDC Core Campus…" (DEIR, pg. 51) According to the State Fire Marshall's map: https://osfm.fire.ca.gov/media/6822/fhszs_map49.pdf, the Core Campus is within a Local Responsibility Area (LRA. See map on page 4), not the State's. Is this correct?	The comment is noted. As described on page 503 of the DEIR, the primary responsibility for preventing and suppressing wildland fires in Sonoma County is divided between local firefighting agencies and the State of California, Department of Forestry and Fire Protection. The SDC Planning Area is currently located in an area identified as a State Responsibility Area (SRA). Fire management in the SDC Planning Area is located in the Sonoma-Lake-Napa Unit SRA. Government Code Sections 51175-89 advises CAL FIRE, to identify areas, or zones, of very high fire hazard severity potential under the Fire and Resources Assessment Program (FRAP). These zones are mapped and identified based on expected burn probabilities, potential fuels over a 30–50-year time period, and their correlated expected fire behavior, to better predict the possible vegetation fire exposure to buildings and developments. Under the FRAP, the Planning Area is located in the Sonoma Creek watershed and includes areas of high to very high Fire Hazard Severity Zones west of Highway 12, areas of high fire hazard severity in the hills, and areas of moderate fire hazards severity zones in the vicinity of Suttonfield Lake and Fern Lake (Figure 3.16-2). The Core Campus is not included in any of these FHSZs. The DEIR uses the most up to date CAL FIRE FRAP mapping data currently available. The CAL FIRE FRAP mapping shows fire severity zones for both SRA and LRAs. Currently the site is in a SRA but the EIR assumes that this responsibility will shift to local agencies once the State disposes the

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				land, and the wildfire and evacuation analyses in the EIR is based on that premise. Thus, this does not change the significance of the wildfire Impact Analysis of the DEIR.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-26	Page 503: "Under the Fire and Resources Assessment Program (FRAP) "the Planning Area…includes areas of high to very high Fire Hazard Severity Zones west of Highway 12, areas of high fire hazard severity in the hills, and areas of moderate fire hazards severity zones in the vicinity of Suttonfield Lake and Fern Lake (Figure 3.16-2). The Core Campus is not included in any of these FHSZs. " The State Fire Marshall's final map is not intended to show moderate and high FHSZs within the Local Responsibility Area. The State's draft map (page 4), however does show moderate and high FHSZs covering a substantial portion of the Core Campus. While not finalized, this appears to be the best available fire risk data for the Planning Area.	The comment is noted. See response to B3-25.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-27	Goal PS-3 from the Sonoma County General Plan 2020 (DEIR, page 497), reads: "Prevent unnecessary exposure of people and property to risks of damage or injury from wildland and structural fires," with Objective PS-3.1 stating, "Continue to use complete data on wildland and urban fire hazards." 2. How was the data gap between the SRA and the LRA within the Planning Area addressed during the DEIR's analysis of wildfire threat? What evidence was the statement about the Core Campus (DEIR, pg 503. See above) based on? Was this conclusion reached because there is data showing low fire risk there or because lack of data was equated with low risk? 3. The Fire Constraints map (13.16-2) shows the Core Campus being almost entirely outside of any Fire Severity Hazard Zones. How would the Fire Severity Hazard data	The comment is noted. See response to B3-25. On page 518, the DEIR does note that development under the Proposed Plan could result in potentially significant impacts from exacerbating wildfire risks. This increased risk can be due to the site's history of wildfire and proximity to VHFSZs or from increasing the potential for wildfire ignition and spread with development. However, the Proposed Plan includes a plethora of policies and Standard Conditions of Approval to adequately mitigate potentially significant wildfire risks to a less than significant level. Such measures, as described under the Wildfire Impact Analysis starting on page 551 of the DEIR, require the Proposed Plan to construct and maintain a managed landscape buffer to aid in fire defense; enhance creek buffers; remove surface and aerial fuels; implement fuel management methods (such as fuel

Submitter	Date	Comment Code	Individual Comment	Response
			for the Core Campus, shown in the State's draft map, change the analysis of fire hazards there? Does this change the calculus for significance under 16.1.3.1 Criterion 2: "Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire."? 9 4. In addition, the Sonoma County Community Wildfire Protection Plan Update 2022 (referenced in the DEIR, 16.1.1.3. Regional and Local Regulations, p. 496) states that: "Wildland fires that start in the woods and spread into adjacent areas with relatively dense housing often result in the greatest losses of property and life. Efforts to save lives and property will take precedence over losses of wildland resources, so firefighters' response must focus on protecting populated areas rather than fighting a fire in the most efficient way." Even if we assume there are no FHSZs within the Core Campus, this suggests that building dense housing at SDC adjacent to wildlands could result in high "losses of property and life." Responding to such a fire might prevent firefighters from efficiently working to prevent further fire spread. How was this scenario taken into account during the DEIR analysis?	separation, defensible space with continuous tree canopy, and irrigated agriculture); plant fire resilient landscaping; include a five-foot buffer of defensible space around all developments; prohibit wooden fencing; require all new construction and retrofitting of existing buildings use Class A fire-rated roofing materials, fire-resistant siding, and dual-paned tempered glass windows; prohibit the storage of flammable materials under decks or porches; prune branches of trees; cover all building vent openings with wire mesh screens to prevent infiltration from embers of sparks; and ensure that all property owners are informed and educated about wildfire resiliency requirements at the site at the time of purchase. Further, Policy 6-21 would require all new and existing utility lines be buried underground to mitigate additional wildfire risk. Policy 2-40 would reduce ember ignitions and fire spread by requiring trimming of branches that overhang the home, porch, and deck and prune branches of large trees up to 6 to 10 feet (depending on their height) from the ground. Policy 2-40 would remove dead vegetation and debris from under decks and porches and between deck board joints. The Proposed Plan would also comply with all State and local codes and regulations, such as the California Fire Code and Sonoma County Code, which would further mitigate potential impacts. There are several proposed policies that would serve to mitigate impacts from wildland-urban interface areas. Such policies would implement managed landscape buffers, limit surface fuels, minimum clearances between fuels and each building or structure, defensible space, fire resilient landscaping, and fire-resistant construction practices. Further, development would comply with Fire

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				Code Section 4906 which contains existing regulations for vegetation and fuel management to maintain clearances around structures. This code includes provisions for ignition-resistant construction standards for new buildings.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-28	3.16.1.3.4. Wildfire Evacuation 1. Wildfire ignitions are known to increase with the size of a population. How was this relationship evaluated in the calculation of fire risk in the Planning Area?	The comment is noted. The DEIR does not claim there is no wildfire risk from development under the Proposed Plan. However, the Proposed Plan complies with all State, regional, and local regulations and includes a plethora of policies and Standard Conditions of Approval to adequately mitigate potentially significant impacts to a less than significant level. See response to comment B3-27.
North Sonoma Valley Municipal Advisory Council	9/21/2022	B3-29	CLOSING COMMENTS As evidenced through the comments above, we do not believe this DEIR yet adequately and completely evaluates the environmental and safety impacts of the Proposed Plan. Furthermore, we remain committed to the Sonoma Valley community's consistent input calling for both affordable housing and a lower density plan alternative. A plan closer to the Historic Preservation Alternative – determined as "environmentally preferred" in the DEIR analysis – successfully meets the project objectives and the established Guiding Principles for this project and should be given strong consideration. We remain committed to a plan that we can all support and appreciate this opportunity to provide comment. The NSV MAC letter process did not allow to adequately address all topic areas. Please respond to the public comments in the attached addendum that we received in advance of the NSV MAC meeting on 9/21/22, relating to the Specific Plan and	The comment is noted. It does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			the DEIR, which we are incorporating by reference, and give them full consideration.	
The Glen Ellen Historical Society		B4-1	The Specific Plan process, which was touted to be a community driven plan, has most definitely fallen short of its vision. The creation and implementation of the Planning Advisory Team (PAT), which was intended to be 'the voice of the community', appears to have had no voice at all. A general consensus of the local community, with over 2000 valley residents signing a petition in agreement, has resoundingly rejected this Proposed Plan. Regardless of the continual outcry and input provided from the public, the County sits steadfast on its position with this grandiose and elaborate plan. It's apparent that this plan is geared toward addressing the State's housing problem by constructing as many houses as possible on this historic campus in an effort to achieve their unreasonable goal and quota. The County and State are determined to build a new urban style town in the middle of this historic and rural community of Glen Ellen. With a thousand homes, a hotel and large commercial enterprises, the County is relentlessly pushing their agenda regardless of the wants and wishes of this community. In the guiding principles of the Specific Plan Glen Ellen is characterized as an "adjacent town", when in reality the SDC property sits directly in the middle of this historic village of Glen Ellen. If this proposed plan reaches fruition as written, it will destroy the character of this quaint and picturesque village forever.	Thank you for your comment letter. The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
The Glen Ellen Historical Society		B4-2	The Glen Ellen Historical Society has been a strong community advocate for the preservation and prudent management of the Eldridge Property formerly known as Sonoma Developmental Center. And while we continue pursuing the National Registry of Historic Places (NRHP) status for entire 940+ acres, we cautiously endorse the	The comment is noted. The Draft EIR adequately analyzes potential cultural and tribal cultural resources impacts based upon a comprehensive records search conducted at the NWIC, located at Sonoma State University. The records search included a review of all recorded historic and prehistoric cultural resources within

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Historic Preservation Alternative as the only realistic and viable option available within this Specific Plan as written. It is with great urgency that this organization stresses that the urbanization of Eldridge is not portrayed accurately. The Draft EIR does not stress or give any credence to the preservation of cultural integrity, history, conservation and housing in an appropriate scale. The inadequacy of the 'self-mitigated" Specific plan appears to have fallen short of CEQA. CEQA Guidelines mandate consideration and analysis for all alternatives and gives desired designation to the most environmentally superior alternative. (Section 15126.6)	the Planning Area. In addition, the California State Historic Property Data File (HRI), which includes the NRHP, California Historical Landmarks, and California Points of Historical Interest was examined. The analysis also included a search of the NAHC Sacred Lands File, tribal outreach, review of Sonoma County documents, State regulations, and Proposed Plan goals and policies. While the impact of the Proposed Plan is considered significant because it would cause a substantial adverse change to the historical district, proposed policies and the Standard Conditions of Approval would help reduce these impacts to the maximum extent practicable. These includes retention, rehabilitation, and adaptive reuse of buildings, structures, and landscape features in the Core Campus area that contribute to the SSHHD (policies 4-20 through 4-31), as well as considering the preservation of contributing resources that are located in the hog and poultry area east of the Core Campus and the SDC water and sewage system to the west and north (Goals 2-I and 2-J and policy 4-32). However, there are no additional feasible mitigation measures available to avoid impacts entirely. Please see MR-1 for more information regarding the self-mitigating Specific Plan. CEQA requires that EIRs identify the Environmentally Superior Alternative, and discuss the facts that support that selection. (See PRC Section 21081.5; CEQA Guidelines Sections 15091, 15126.6(e)(2)). The Lead Agency is not, however, obligated to select the Environmentally Superior Alternative for implementation if it would not accomplish the basic project objectives and/or is infeasible (see State CEQA Guidelines Section

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				15126.6(a), (c) & (f)). Please see MR-8 for more information on why the Historic Preservation Alternative would not accomplish project objectives as required by the State legislature.
The Glen Ellen Historical Society		B4-3	Your analysis that; "Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks." Is categorically untrue. There are many architects, including those within the National Trust for Historical Preservation, that express exactly the opposite view. Where is the data to support this claim? Examples of this lack of analysis with reference to environmental impacts is evidenced by the sugar-coated language used throughout this document such as, 'if feasible" or "reasonably foreseeable". Legally enforceable Mitigation and Monitoring should be included in every aspect of this DEIR that overtly states in most instances, "no mitigation needed. With regard to the massive demolition suggested in this Proposed Plan, We find it unconscionable that this DEIR makes such outlandish claims. Below are just a few examples of the dozens listed as "requiring no mitigation".	The comment is noted. Please see MR-1 for more information regarding the self-mitigating Specific Plan. Please see MR-8 for more information on why the Historic Preservation Alternative would not accomplish project objectives as required by the State legislature. As noted in Table 4.5-1 on page 572 of the DEIR, the Historic Preservation Alternative would result in less than significant impacts regarding Energy, Climate Change, and GHG Emissions; Biological Resources; and Wildfire which is equivalent to the Proposed Plan. While these impacts are less than significant, indirect emissions associated with electricity consumption, waste and wastewater generation, and water use, would likely be more than those of the Proposed Plan because of the inefficiency of the existing buildings, and the difficulty in updating existing construction to match current standards for energy efficiency and GHG emissions. Under the Historic Preservation Alternative, creek corridors and the wildlife corridor will also not be expanded which would negatively impact wildlife movement compared to the Proposed Plan. Further, the lack of Highway 12 direct access may lead to slightly longer evacuation times compared to the Proposed Plan.
The Glen Ellen Historical Society		B4-4	3.8 Hazards and Hazardous Materials 3.8-1 - Implementation of the Proposed Plan would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. No mitigation needed (where is your data?)	The comment is noted. As noted on page 261 of the DEIR, the Hazards and Hazardous Materials Impact Analysis considers the nature of foreseeable hazardous materials use, storage and disposal resulting from the redevelopment of the Sonoma Developmental Center. It

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			- Implementation of the Proposed Plan would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. No mitigation needed (demolition of old buildings releases huge amounts if embedded carbon into the atmosphere as well as releasing hazardous materials into the soil) - Implementation of the Proposed Plan would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. No mitigation needed (Blatantly incorrect. There are dozens homes on Marty Dr and beyond that are fewer than a hundred yards away) - Implementation of the Proposed Plan would not result in development located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment. No mitigation needed. (There are multiple dumpsites on-grounds that are questionable. Where is your data?)	also identifies ways that hazardous materials could be exposed to the environment or individuals. The analysis includes a qualitative evaluation of impacts associated with the presence or hazardous materials. The analysis is based on a review of materials ranging from online databases such as Envirostar and Geotracker, hazard maps, Phase I & II Site Assessments (see Appendix G), and relevant plans and regulations at the Federal, State, and local levels. Therefore, upon implementation of the Specific Plan and regular operations of the site, compliance with the regulations for hauling hazardous substances would continue to reduce the potential of an accidental release of hazardous materials (Impact 3.8-1) to a less than significant level. Further, Standard Condition of Approval HAZ-3 would require implementation of Best Management Practices to reduce exposure of workers to contaminated materials during construction, including a soil management plan and a health and safety plan. Compliance with the Standard Conditions of Approval Measure HAZ-3 and existing regulations would reduce impacts related to the release of hazardous materials due to foreseeable upset or accident conditions to less than significant. There are no schools located or are proposed to be located within one-quarter mile of the Planning Area. Thus, implementation of the Proposed Plan would have no impact regarding hazard emissions or materials in within one-quarter mile of an existing or proposed school. Regarding Impact 3.8-4, implementation of HAZ-3 prior to construction would reduce the potential risks associated with releases of contaminated media as a result of Proposed Plan to a less-than-significant level.

The Glen Ellen Historical Society		B4-5	5.3 Significant and Unavoidable Impacts (We find these statements (below) to be totally unacceptable and we challenge the validity of your assessment) 5.3.1 Cultural, Historic and Tribal Resources "Development under the Proposed Plan would potentially entail the demolition of at least 13 percent of historically contributing resources that were originally documented as part of the Sonoma State Home Historic District (SSHHD), which has been determined eligible for listing in the California Register of Historical Resources (CRHR) and qualifies as a historical resource under CEQA. Further, new construction under the Proposed Plan has the potential to disconnect the remaining contributing resources in the Core Campus from those in the Community Separator and Regional Parks lands to the east and west, disrupting the SSHHD's overall integrity to the point that it would no longer be eligible for listing in the National Register of Historic Places, CRHR, or as a California Historic Landmark. This impact, in addition to demolition of the aforementioned resources would result in a substantial adverse change to the significance of the historic district such that the significance of the historic district would be materially impaired" (It was expressed several times by Mr. Bhatia [Dyett &Bhatia] during the many virtual community outreaches that most of the older building on the west side campus are, in his words, "beyond repair". Again, those assertions have no merit or data to justify such claims. Recently local architects, well versed in historic restoration, assessed many of the oldest building on the west campus and they agreed that very few of these historic buildings are beyond refurbishing. It is also a proven fact that it is less expensive	The comment is noted. Please see MR-8 regarding the cost of reuse of the existing buildings on site. The DEIR references several data sources in its historic resources analysis. The analysis of potential cultural and tribal cultural resources impacts is based upon a comprehensive records search conducted at the NWIC, located at Sonoma State University. The records search included a review of all recorded historic and prehistoric cultural resources within the Planning Area. In addition, the California State Historic Property Data File (HRI), which includes the NRHP, California Historical Landmarks, and California Points of Historical Interest was examined. The analysis also included a search of the NAHC Sacred Lands File, tribal outreach, review of Sonoma County documents, State regulations, and Proposed Plan goals and policies. Further, the Adaptive Reuse Potential Evaluation Report was published on March 2021 and informed the DEIR analysis. This report details architectural potential for adaptive reuse, as determined by Hornberger + Worstell, architects on the Dyett & Bhatia team, based on site reconnaissance and review of historic building plans. The report outlines a number of challenges to retaining and reusing existing buildings, whether contributory to the site's history or otherwise. These include the poor condition of some buildings, the extent of work necessary to remediate them and bring them up to present building code standards, and requirements of potential new uses that would require significant changes to the buildings. In addition, the Alternatives Report which was published in November 2021 determines that rehabilitation and adaptive reuse at SDC is generally more expensive than new construction. Page 278 and 279 of the DEIR cite and detail the findings

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			and environmentally preferred to refurbish and reuse existing structures than to demolish and rebuild)	of the Historical Resources Inventory and Evaluation Report (HRIER) produced by JRP Historical Consulting, with Denise Bradley. Further, the WRT report is cited on page 272 of the DEIR to explain the historical setting of the site. The Proposed Plan would not also facilitate new development in the 750 acres of preserved open space, which is located outside of Core Campus boundaries. Thus, the Proposed Plan focuses on infill development and development of underutilized and vacant areas within the Core Campus in order to preserve scenic and biotic resources and avoid development within Community Separators. In addition, as noted under Impact 3.1-3 on page 105 of the DEIR, new development under the Proposed Plan will occur primarily within the previously developed Core Campus area, excluding the SR 12 connector which will reuse the existing street network and avoid damage to scenic resources to the greatest extent feasible. Therefore, the proposed development would not differ substantially or detract from the existing visual quality and public views of the site by keeping with the overall scale and development height variation at the current SDC campus and by preserving the site's open space framework outside the Core Campus.
The Glen Ellen Historical Society		B4-6	Retaining the historic character of these 100+ year old buildings, together with their unique architectural styling is equally important, as referenced in the Environmental Analysis > 3.1 Aesthetics, and again reiterated in the Specific Plan's "Guiding Principals": "… to balance Development with Historic Resource Conservation. Preserve and adaptively reuse the Main Building and the Sonoma House complex, conserve key elements of the site's historic landscape, and strive to	The comment is noted; however, it is not related to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			maintain the integrity of the historic district to the west of Arnold Driven by adaptive reuse of contributing buildings where feasible. Support a cohesive community feel and character, while allowing a diversity of architectural styles"	
The Glen Ellen Historical Society		B4-7	We (GEHS) feel that the Historic Preservation Alternative meets the fundamental project objectives listed on pages 5-6 of the DEIR. However, we also find that the Specific Plan is inconsistent with these fundamental project objectives, which calls for balancing development with historic resource conservation? What are the performance-based standards to determine which buildings can feasibly be restored or adaptively reused? How is demolition of any building to be decided? What type of analysis and performance-based standards will be applied to permit demolition under the Specific Plan? The removal of historic buildings is not something we (GEHS) take lightly. These old buildings are a major contributor and a part of the very fabric of our local community and beyond. We find that the lack of data regarding the structural integrity of these historic buildings is quite troubling, as well as the ease by which the County speaks of their removal. We found it necessary to refer back to the assessments of Wallace, Robert &Todd and JRP to find data on structural and seismic conditions as well as building materials condition. The assessment done by Diana Painter and Associates (2015) was also quite valuable in helping us understanding where these historic buildings stood structurally. With Page and Turnbull being one of your consultants, why is there no data available on current building conditions? It	The comment is noted. See response to comment B4-5 that outlines available data regarding current building conditions. The Existing Conditions Report by WRT and the Adaptive Reuse Potential Evaluation report can all be found on the project website at sdcspecificplan.com.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			is obvious to us (GEHS) that these historic buildings are merely considered obstacles in the path of the County's Proposed Plan and that the general consensus of the community at large with their concerns regarding the scope and density of the Proposed Plan have simply been ignored or considered unfounded. The Guiding Principles offer excellent insight and direction: "Ensure that new development complements the adjacent communities of Glen Ellen and Eldridge and fits the character and values of the site and surrounding areas…"	
The Glen Ellen Historical Society		B4-8	Legacy of Care From the beginning of the Specific Plan process the term, "Legacy of Care" has been used and continually tossed around without focus or purpose. Perhaps it is to show a willingness to recognize and acknowledge the 130 years of dedicated service and care to those with developmental disabilities. Though it is heart warming to hear that SDC is being acknowledged and remembered by those who wish to replace it, this sentiment rings hollow with the absence of truly addressing the historical significance of California's first care facility for children with developmental disabilities. Dozens of times we've heard this term "Legacy of Care" used, yet never once has the County and their consultants expressed any interest or desire in creating a Historic Preservation Area - an area that would be dedicated specifically to the Legacy of this once great Developmental Center. The Proposed Plan makes suggestions of remembrances but has nothing of any substance to offer. Where is your plan to address this often-	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	Date	Comment Code	Individual Comment	Response
			used term, "Legacy of Care'"? It appears to be just a term used to console and placate those who truly care about the history of the old Sonoma State Home: The people who lived and worked there; the families whose loved-ones resided there; the local communities that flourished along side… It's these people, places and stories that truly constitute a vision of Legacy of Care. To the County and their consultants Legacy of Care appears to mean nothing, as evidenced by their lack of interest in preserving California History.	
The Glen Ellen Historical Society		B4-9	The Specific Plan make references to preserving the old administration building (PEC building 1908) and the Superintendent's residence (Sonoma House 1897) as evidence enough to prove that Legacy of Care exists in their plan. Ironically tho, these two historic building are already protected on the NRHP and as a County Historic Landmark, respectively. The County also has suggested in their Proposed Plan that these two historic buildings should be slated as part of the hospitality / hotel idea. Is this really how the County wants to portray Legacy of Care? Does the County and State have any plans to respectfully acknowledge the existence of this historic care home? If so, what are they?	The comment is noted. As detailed on page 295 of the DEIR, the Proposed Plan includes policies and actions that would minimize or avoid impacts on individual historical resources by requiring the preservation and maintenance of such resources (Policies 2-47, 4-20, 4-25, 4-26, 4-31). Because the Main Building and Sonoma House and its support buildings and structures are also contributing resources to the SSHHD, projects involving these buildings are subject to the Standard Conditions of Approval policies LU-1, LU-5, and LU-6, per the discussion under Impact 3.5-2, would require the consideration of the Secretary of the Interior's Standards and Guidelines for the Treatment of Historic Properties. Proposed Policy 4-20 requires the Specific Plan to preserve and reuse the two historically significant buildings, the Main Building (PEC) and the Sonoma House Complex, including its six support structures. Furthermore, at the time when rehabilitation projects for these two individual historic resources or new work immediately adjacent to the historic resources are proposed, the project-level CEQA document would need to identify potential impacts to historic resources. The CEQA Guidelines state that a project that generally

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				follows the Secretary of the Interior's Standards for the Treatment of Historic Properties is considered to have a less than significant impact on historic resources. Therefore, the impact of implementation of the Proposed Plan on individually significant historical resources would be less than significant with implementation of the proposed policies and actions referenced above and existing State regulations.
The Glen Ellen Historical Society		B4-10	The Glen Ellen Historical Society has submitted multiple plans to address the indifference and unresponsiveness toward Historic Preservation. It is deeply concerning that these plans have never received a response or recognition of any kind. The willingness of the County to turn a blind eye on an area of such historical significances is worrisome. Our (GEHS) plans are concise and well thought out. Our vision is simple. Establish a small Historic Preservation Area that includes a museum and library, a visitor's center and a small community conference and archive center. The proposed Historic Area would be strategically positioned at the location that is currently suggested as "The Firehouse Commons" in the County's Proposed Plan. Hospitality is the County's focus for this area. Historic Preservation is ours… The County and Dyett & Bhatia have seen our plans: "The Gateway to Sonoma Mountain and the Historic Cemetery" This is what "Legacy of Care" really looks like.	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
The Glen Ellen Historical Society		B4-11	In closing, the GEHS respectfully requests the following; - A CEQA level identification of potential impacts of known or potential historic sites and landscapes. - Consider the historic sites as an entire cultural landscape	The comment is noted. Starting on page 294 of the DEIR is the Cultural, Historic, and Tribal Cultural Resources Impact Analysis which provides an identification of potential impacts to historic resources as required under

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			and not identify individual buildings individually to be demolished. - Require a future developers to prepare a historic preservation plan, based on desired development and suitability of buildings for adaptive reuse, with the overarching objective of preserving a set of buildings that reflect the diversity of building types and the continuum of life at the former SDC. For instance, retain and reuse buildings that represent various architectural styles that are character-defining to the Historic District, including French Eclectic, Spanish Eclectic, and Tudor Revival, as well as character-defining materials such as tile roofs, stucco and brick cladding, and wood windows. - Include a reference or rationale of why Sonoma County has not responded to a two-year-old application for Historical Landmark status for Eldridge.	CEQA. See MR-3 regarding the programmatic nature of the DEIR. All individual development projects are required to prepare more precise, project-level analyses to fulfill CEQA requirements, including impacts on historic resources. Further, proposed policy 4-22 requires that the developer project sponsor prepare a historic preservation plan, based on desired development and suitability of buildings for adaptive reuse, with the overarching objective of preserving a set of buildings that reflect the diversity of building types and the continuum of life at the former SDC. For instance, retain and reuse buildings that represent various architectural styles that are character defining to the Historic District, including French Eclectic, Spanish Eclectic, and Tudor Revival, as well as character-defining materials such as tile roofs, stucco and brick cladding, and wood windows. The remainder of the comment is not related to the adequacy of the DEIR, thus no further response is required.
The Glen Ellen Historical Society		B4-12	Explain how the demolition of buildings reduces the eligibility of the property for the National Register of Historic Places. The property application has been submitted by SHPO and the GEHS has been asked for additional and expanded information on the property, specifically the east side of Arnold Drive. According to the Draft not all buildings, structures, and landscape elements within the historic district boundary are considered contributing resources because some of them are outside the 1889 1949 period of significance and others do not have sufficient historical integrity. Due to the expansion of the historic district boundary as requested by SHPO, the number of contributing resources grew from 46, as identified in JRP's May 2017 report, to 94 buildings and	The comment is noted. See also responses to B4-5 and B4-7. Page 278 and 279 of the DEIR cite and detail the findings of the Historical Resources Inventory and Evaluation Report (HRIER) produced by JRP Historical Consulting, with Denise Bradley. Further, the WRT report is cited on page 272 of the DEIR to explain the historical setting of the site. On page 296, the DEIR explains that the Proposed Plan would affect the cohesiveness of SSHHD's overall integrity to the point that it would no longer be eligible for listing in the NRHP, CRHR, or as a California Historic Landmark. The impact of such activities is considered significant because they would cause a substantial adverse change to the historical district as defined by CEQA Guidelines Section

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			structures. Where is any reference to Wallace, Roberts and Todd or Page and Turnbull or JRP and their findings regarding historical preservation of building and landscapes?	15064.5. While proposed policies noted above and the Standard Conditions of Approval (LU-1, LU-2, LU-3, LU-4, LU-5, and LU-6) would help reduce these impacts to the maximum extent practicable, there are no mitigation measures available to avoid impacts entirely. As such, this impact would remain significant and unavoidable. As stated in CEQA Guidelines, Section 15093(a), if the specific economic, legal, social, technological, or other benefits of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable." Therefore, given that State law stipulates that the SDC Specific Plan prioritize housing at the site per Government Code Section 14670.10.5, the environmental impacts of implementation of the Specific Plan on the historic district may be acceptable to County policymakers.
The Glen Ellen Historical Society		B4-13	Why is there no mention of historic preservation in the initial bullet points? The statement of Balance with Historic Resource Conservation is acceptable however it is qualified with 'where feasible.' What is the definition of the phrase 'where feasible?' - CALFIRE identified the oldest fire suppression buildings in the State dating to 1931-2. The Eldridge Fire Department was built in 1932 yet it is not considered significant and one to be potentially removed. Then the plan calls the area Fire House Commons. Why will the area be named for a building to be remove as 'insignificant? - The Historic Core appears to consist of two buildings: The Sonoma House and the Professional Education	The comment is noted. According to CEQA Guidelines, Section 15364, "feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors. According to Proposed Policies 4-20 to 4-27, the Proposed Plan will preserve and reuse the two historically significant buildings, the Main Building (PEC) and the Sonoma House Complex, including its six support structures. The Proposed Plan will also preserve and enhance the landscape elements that contribute to the significance and character of the Sonoma State Home Historic District, including the formal tree grid at the Central Green, the baseball field,
