			Building. The buildings adjacent to them (Oak Lodge, Hatch and McDougall) are important representatives of early 20th century institutional care. This section is nearly contiguous with the cemetery and Jack London HISTORICAL State Park. Has there been any rationale to create a historic area within the property historic district and how the Department of Parks and Recreation could be expanded to include this historic area.F139	Sonoma Bridge, the front entrance gate, and the Eldridge Cemetery, as well as primary circulation routes. Further, the Plan will preserve and reuse the contributing resources identified in Figure 4.3-1, to the greatest extent feasible. If all of the contributing resources identified in Figure 4.3-1 cannot be retained, the following buildings should be considered as least significant of those 28 contributors and studied for removal: Acacia II, Goddard, and Workshop. If all 28 contributing resources identified in the Sonoma Developmental Center Land Use Diagram cannot be retained, in addition to those listed above as least significant contributors, the following buildings should be considered less significant of those 28 contributors and studied for removal: Walnut (significant damage), Firehouse, Main Store Room, Maintenance Shop, and Acacia I. The Proposed Plan will preserve and reuse buildings at both the north and south terminus of Sonoma Avenue, including Wagner, Dunbar and Wright to the north, and Walnut and Hatch to the south. The Plan will preserve and reuse at least 8 of the 10 contributing buildings fronting Sonoma Avenue (including Sonoma Circle): Wagner, Dunbar, Wright, Finnerty, McDougall, Oak Lodge, Hill, Walnut, Hatch, Main Building. The Plan will preserve and reuse all the contributing buildings that face the Central Green, including the Main Building, Chamberlain Hospital, Palm Court, Pines, and Entrance Gate. The Plan will also preserve and reuse houses along Arnold Drive within the core campus, reconstructing as necessary. Reconstruction will adhere to the Secretary of the Interior's Standards for Reconstruction. Thus, the Proposed Plan will also conserve contributing structures to the Historic District beyond the Main Building (PEC) and the Sonoma House Complex. The remainder of the

				comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
A Voice Of Reason	9/25/2022	B5-1	By way of introduction, VOR – A Voice Of Reason - is a national non-profit founded in 1983. For nearly forty years, we have been advocating for high quality care and human rights for all individuals with intellectual and developmental disabilities (I/DD). I write you today on behalf of those individuals with the most severe and profound I/DD and autism in California, in regard to the county's plans for the property that was once home and community for many of our loved ones with I/DD at the Sonoma Development Center. It is my understanding that the property is being divided and parceled out to property developers and investors. We would like to ask that you please keep a substantial portion of the property available to providers of services for those individuals most deeply impacted by I/DD and autism, in keeping with the original intent of those who first developed this property.	Thank you for your comment letter. The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
A Voice Of Reason	9/25/2022	B5-2	Sonoma County is known around the world for its beauty, its amazing vineyards, and for its people. Forest fires may change the landscape. Drought may ruin a season of grapes. But the people of Sonoma County have a chance to retain their heart, their soul, and their dignity, by determining to continue to provide for California's most vulnerable citizens. Business schools used to teach about the value of "Goodwill". You cannot set a price on it, but it is an asset that can bring greater value to all of the other assets a business, or a county, holds. We urge the Sonoma County commissioners to bring that unique and rare value to their	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

			community, and to maintain the goodwill that they have considered one of the many blessings that have long graced Sonoma County and its families.	
Jack London Park Partners	9/26/2022	B6-1	On behalf of Valley of the Moon Natural History Association dba Jack London Park Partners ("Jack London Park Partners"), this will provide comments relating to the County of Sonoma's ("County's") draft Environmental Impact Report ("DEIR") for the draft Sonoma Developmental Center Specific Plan ("Specific Plan" or "Project") under the California Environmental Quality Act (Pub. Resources Code §21000 et seq., or "CEQA") and CEQA's implementing Guidelines (Cal. Code Regs., tit. 14, §15000 et seq., or "Guidelines"), concerning the transfer and disposition of the Sonoma Developmental Center ("SDC") property under Government ("Gov't") Code §14670.10.5. The governing statute recognizes that the SDC property is "composed of a developed campus covering approximately 180 acres and approximately 700 acres of open space adjacent to the Sonoma Valley Regional Park and the Jack London State Historic Park," that the property includes "exceptional open-space, natural resources, and wildlife habitat," and expressly provides that "[i]t is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as public parkland and open space." Gov't Code §14670.10.5(a)(1), (7) & (9).	Thank you for your comment letter. The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-2	The statute further provides that the "disposition of the property or property interests shall provide for the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible and shall be upon terms and conditions the director deems to be in the best interests of the state," and expressly	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			recognizes "the need for conservation of water resources to preserve or enhance habitat, fish and wildlife resources" in evaluating proposed uses of the property. Gov't Code §14670.10.5(c)(3) & (5).	
Jack London Park Partners	9/26/2022	B6-3	With this in mind, and as set forth below, Jack London Park Partners requests that the DEIR be revised and recirculated to (1) provide for the direct transfer of the SDC open space west of Arnold Drive to the California Department of Parks and Recreation ("State Parks") to be "preserved as public parkland" and ensure "permanent protection of the open space and natural resources as a public resource," as required by Gov't Code §14670.10.5(a)(3) and (9); (2) analyze environmental impacts on the open space and adjacent areas of Jack London State Historic Park (the "Park") that would be posed by unrestricted access by Project residents and hotel guests; (3) analyze the potential impacts of the proposed Project on water resources critical for biological resources, including the flora, fauna and habitat in the upgradient SDC open space and adjacent areas of the Park; and (4) provide for a southern entrance ("Southern Park Entrance") to the Park in the SDC open space area immediately northwest of the Jim Berkland Memorial Bridge on Arnold Drive, mitigating both environmental impacts from unrestricted access and traffic impacts, allowing adaptive reuse of the two historic buildings in that area, and providing for wildlife corridor protections and enhancements there.	The comment is noted. Pursuant to Gov't Code §14670.10.5, the Proposed Plan will preserve the open space surrounding the core campus in public ownership in perpetuity, preventing further development in undeveloped areas and ensuring ongoing stewardship in partnership with neighboring State and regional parks and other institutions and organizations (Goal 2-A and Policy 2-1). Under CEQA, biological resource impacts of the Proposed Plan are analyzed, as well as impacts on open space and water resources. Jack London State Park is adjacent and not part of the Proposed Project. See the impact analyses on biological resources and hydrology and water quality in sections 3.4 and 3.9 of the DEIR. Recirculation is not required because significant new information has not been added to the EIR after public notice is given of the availability of the draft EIR for public review. See MR-6 and MR-7 regarding impacts on VMT and wildlife movement. See also MR-8 regarding the feasibility of adaptive reuse. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the state transfers the open space to. See MR-2. The remainder of this comment advocates for a southern park entrance which is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Jack London Park Partners	9/26/2022	B6-4	Jack London Park Partners emerged during a budgetary crisis in 2012 that would have shuttered many state parks. It was the first non-profit organization to take up management of a state park on behalf of the people of California. Since then, it has been successfully managing, restoring and maintaining the natural and historical features of the Park under contract with State Parks, the owner of the Park. Jack London Park Partners also contributes funds to advance cultural and recreational programs, and create educational exhibits, interactive displays, signage and other features at the Park. Jack London Park Partners is the outgrowth of Valley of the Moon Natural History Association, a citizens' group established nearly a half-century ago to support the interpretive needs of three parks in Sonoma County, including the Park. The Association has played a vital role in recruiting and organizing the hundreds of volunteers who support all functions of the Park. Among the organization's most noteworthy accomplishments are the award-winning restoration of the cottage that was the residence of Jack and Charmian London after acquiring the "Beauty Ranch," and the completely re-imagined House of Happy Walls Museum which interactively brings the story of Jack and Charmian London to life.	The comment is noted; however, the comment does not relate to the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-5	Most recently, Jack London Park Partners began the restoration of 40 acres of historic orchard, established on SDC property more than a century ago, which became part of the Park in 2002. While many of the trees had died, some were still alive and bearing fruit, and the surviving trees have provided scions to grow new, historically authentic fruit trees to restore the orchard. With a combination of agricultural expertise and tender loving care, the orchard is on its way toward healthy stabilization	The comment is noted; however, the comment does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			with revitalized trees producing several varieties of apples and pears, prune plums, apricots, cherries, and quince.1 Jack London Park Partners has formed a partnership with Farm to Pantry to provide fruit from the orchard to Sonoma organizations that help people facing food insecurity.	
Jack London Park Partners	9/26/2022	B6-6	With this history and continuing commitment in mind, Jack London Park Partners has a keen interest in ensuring that "[t]he disposition of the property or property interests shall provide for the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible," as set forth in the statute governing the future of the SDC property, Gov't Code §14670.10.5(c)(3), analysis of which is required by CEQA. Similarly, as a steward of the Park, Jack London Park Partners has an interest in protection of water resources critical for the extant flora, fauna and habitat in the SDC open space and adjacent areas of the Park, as is similarly required by Gov't Code §14670.10.5(c)(5) and analysis of which is required by CEQA. And, Jack London Park Partners has an interest in preventing harm to wildlife, habitat and other biological resources that would be posed by unrestricted access to the western open space and the adjacent Park by large numbers of Project residents and visitors. Such harm could be addressed in part by the proposed Southern Park Entrance, which could also mitigate traffic and vehicle miles traveled ("VMT") impacts and provide opportunities to adaptively reuse historic buildings and enhance the wildlife corridor in the area immediately northwest of the Jim Berkland Memorial Bridge on Arnold Drive. None of these potentially significant effects on the environment and proposed mitigation measures are addressed in the County's DEIR. Accordingly, these comments address direct transfer of the open space to State	The comment is noted. See MR-6 and MR-7 regarding impacts on VMT and wildlife movement. See also MR-8 regarding the feasibility of adaptive reuse. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the state transfers the open space to. See MR-2. This comment advocates for a southern park entrance which is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Parks to ensure that it will be a public resource as parkland, and other key issues relating to water resources, habitat preservation, public access, and protection and enhancement of the wildlife corridor.	
Jack London Park Partners	9/26/2022	B6-7	Relevant CEQA Standards: The failure of the County's DEIR to adequately analyze the environmental impacts requires that it be revised and recirculated. An EIR is inadequate as a matter of law where, for example: · The project description "did not adequately apprise all interested parties of the true scope of the project for intelligent weighing of the environmental consequences of the project;" · "[I]t cannot be found that the FEIR adequately investigated and discussed the environmental impacts of the development project;" or · "[T]he discussion of alternatives omitted relevant, crucial information." San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus (1994) 27 Cal.App.4th 713, 729, 734, 739 (internal quotation marks omitted). An agency's determinations must be set aside where there is a prejudicial abuse of discretion. An "[a]buse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." Pub. Resources Code §21168.5; see Pub. Resources Code §21168; Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova (2007) 40 Cal. 4th 412, 426-27 & 427 fn. 4 ("Vineyard Area Citizens"); Laurel Heights Improvement Assn. v. Regents of University of California (1988) 47 Cal.3d 376, 392 fn. 5 ("Laurel Heights I").	The comment is noted; however, the comment does not relate to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Jack London Park Partners	9/26/2022	B6-8	"[T]here are instances where the agency's discussion of significant project impacts may implicate a factual question that makes substantial evidence review appropriate." Sierra Club v. County of Fresno (2018) 6 Cal.5th 502, 514 ("Friant Ranch"). Under CEQA, "substantial evidence includes fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact," but "not argument, speculation, unsubstantiated opinion or narrative, evidence that is clearly inaccurate or erroneous, or evidence of social or economic impacts that do not contribute to, or are not caused by, physical impacts on the environment." Pub. Resources Code §21080(e)(1) & (2). Here, the County's DEIR wholly fails to analyze the potential impacts described herein and has therefore not proceeded in the manner required by law. The California Supreme Court has recognized that "adequacy of discussion claims are not typically amenable to substantial evidence review." Friant Ranch, supra, 6 Cal.5th at 515. Additionally, an agency's abuse of discretion is prejudicial where its environmental disclosure documents omit information required by CEQA and necessary for an informed discussion. See POET, LLC v. State Air Resources Bd.(2017) 12 Cal.App.5th 52, 84. "The failure to comply with the law subverts the purposes of CEQA if it omits material necessary to informed decisionmaking and informed public participation;" the "[c]ase law is clear that, in such cases, the error is prejudicial." Friant Ranch, supra, 6 Cal.5th at 515 (internal quotation marks omitted).	The comment is noted. See Chapter 3 regarding impact analyses of different environmental categories pursuant to CEQA requirements. No specific assertions have been made to indicate how the DEIR is inadequate. Therefore, the comment does not relate to the adequacy of the DEIR and no further response is required.
Jack London Park Partners	9/26/2022	B6-9	For the foregoing reasons and those set forth below, the DEIR must be revised to include (1) an adequate Specific Plan that clearly states that the open space west of Arnold Drive will be directly transferred to State Parks to further the mandate of the governing statute, Gov't Code	The comment is noted; see response to comment B6-3.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			§14670.10.5; (2) an analysis of potential environmental impacts posed by unrestricted access by Project residents to the western open space and the adjacent Park; (3) an analysis of the potential impact of the proposed Project on water resources critical for the biological resources, including extant flora, fauna and habitat, in the SDC open space and adjacent areas of the Park; and (4) an adequate consideration of alternatives that include and analyze a new Southern Park Entrance to address unrestricted access, mitigate VMT and other traffic impacts, adaptively reuse the two historic buildings, and enhance of the wildlife corridor in that area. Such revisions will provide significant new information and will thus require recirculation of the DEIR.	
Jack London Park Partners	9/26/2022	B6-10	The Project Description Fails to Reflect Direct Transfer of Open Space and the DEIR Fails to Analyze Impacts to Biological Resources from Unrestricted Access: "An accurate, stable and finite project description is the Sine qua non of an informative and legally sufficient EIR." County of Inyo v. City of Los Angeles (1977) 71 Cal.App.3d 185, 192-193. "A curtailed or distorted project description may stultify the objectives of the reporting process," because it is "[o]nly through an accurate view of the project may affected outsiders and public decision-makers balance the proposal's benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal (i.e., the 'no project' alternative) and weigh other alternatives in the balance." Id. Numerous cases have reiterated this principle because, for example, "a project description that gives conflicting signals to decision makers and the public about the nature and scope of the project is fundamentally inadequate and misleading."	The comment is noted. See response to B1-22 regarding open space impacts. Impacts to biological resources are analyzed in Section 3.4 of the DEIR. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2. The remainder of the comment does not relate to the adequacy of the DEIR and no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Stopthemillenniumhollywood.com v. City of Los Angeles (2019) 39 Cal.App.5th 1, 17 (internal quotation marks omitted).	
Jack London Park Partners	9/26/2022	B6-11	As explained below, the Project Description (see DEIR, Chapter 2) and the Specific Plan omit discussion of whether the western and eastern SDC open space will be transferred to State Parks and to the Sonoma County Regional Parks Department ("Regional Parks"), preserved as public parkland, and protected from impacts posed by the Project. The Project Description should be revised to address this critical omission and, specifically, to clearly state that the open space west of Arnold Drive will be transferred to State Parks. Public officials, government agencies, and numerous public commentators have repeatedly called for a direct transfer of the open space to State Parks and Regional Parks, yet the Specific Plan and the DEIR fail to address this issue, and the DEIR fails to analyze the potential impacts of unrestricted access by Project residents and hotel guests on the biological resources that exist in the SDC open space and the adjacent Park.	The comment is noted. As stated in Government Code Section 14670.10.5, it is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as public parkland and open space. Accordingly, page 68 of the DEIR states that the Core Campus will be surrounded by a vast network of permanently preserved open spaces. Further, proposed Policy 2-1 ensures that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The DEIR analyzes the potential impacts of residential and commercial development on biological resources starting on page 235 of the DEIR. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2.
Jack London Park Partners	9/26/2022	B6-12	Indeed, not only does the DEIR fail to analyze such impacts, it sets forth a "vision" that is directly contrary to the statutory requirement that the open space be preserved as "public parkland" and as a "public resource:" The DEIR proposes that the core 180-acre developed area will feature "recreational open space integrated with the surrounding park systems" and that "[r]esidents [will] enjoy pedestrian access to essential services and parks, and seamless connections to surrounding open spaces." DEIR, p. 64. Similarly, the Specific Plan's Guiding Principles include	The comment is noted. As described on page 319 of the DEIR, the Core Campus will be surrounded by a vast network of permanently preserved open spaces to protect natural resources, foster environmental stewardship, and maintain and enhance the permeability of the Sonoma Valley Wildlife Corridor for safe wildlife movement throughout the site. This adheres to the requirements of the State legislation. See also response to comment B1-22. Impacts to biological resources are analyzed in Section 3.4 of the DEIR.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			"[s]upport[ing] the responsible use of open space as a recreation resource for the community." Specific Plan, Guiding Principle 3, p. 1-9.2	
Jack London Park Partners	9/26/2022	B6-13	The County's preferred alternative includes up to 1,000 residential units, 2,400 residents, a hotel and other facilities. Even at the height of operations, the SDC did not provide unrestricted recreational activities in the open space or the surrounding park systems for this volume of residents and staff. Moreover, in the decades since SDC operations wound down,3 fragile ecosystems, wildlife, flora and habitat have developed in the open space and in adjacent areas of the Park. The environmental impact of unrestricted "recreational" access and use of these areas by the "community" of thousands of Project residents and hotel guests is of grave concern, poses the potential for significant impacts, and must be analyzed under CEQA. The language of the DEIR and Specific Plan also suggests preferential and unrestricted access tantamount to private use of these areas by Project residents and hotel guests, contrary to the governing statutory requirements. See Gov't Code §14670.10.5(a).4	The comment is noted. As described on page 242 of the DEIR, there is some increased risk of open space and biological resource impacts that may result from increased vehicular traffic, increased recreational use, and domestic pets. However, policies in the Proposed Plan and Standard Conditions of Approval would serve to reduce potential impacts to a less than significant level. Outside of the developed areas, the Proposed Plan establishes dedicated open space areas. Managed open space in these areas would preserve and, in some cases, enhance the quality of sensitive habitats such as wetlands, native grasslands and oak woodlands. Several special-status wildlife and some plant species would be positively impacted by the preservation of these habitats. The open space would preserve the Sonoma Valley Wildlife Corridor and maintain its permeability for the movement of wildlife at a regional scale. Policies 2-6 through 2-26 address development-related impacts on non-status and special-status species and their habitats. These policies reduce the potential for significant impacts, especially from operational impacts after the completion of the construction of individual projects. They also restrict most development near and in the most sensitive habitat types and habitat types that support special-status plant species, including all of those referenced in Table 3.4-3. Additionally, policies 2-25 (protective buffer of Sonoma Creek), 2-27 (County's Municipal Code for riparian corridor protection), and 2-30 (maintain standard project protection measures for any development adjacent to riparian corridors) would ensure protection of streams

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				and riparian resources during any adjacent ground disturbing actions. Proposed Policy 2-13 would restrict access to the wildlife corridor and creek corridor to designated pedestrian paths marked with clear signage. Proposed Policy 2-14 would prohibit all unleashed outdoor cats and restrict off-leash dogs and other domestic animals to private fenced yards and designated area. With implementation of the applicable polices, the operational impact on riparian habitat and other sensitive activities would be less than significant. The type of recreational uses mentioned in the comment pertains to the Specific Plan. Thus, this is not related to the adequacy of the DEIR, and no further response is required.
Jack London Park Partners	9/26/2022	B6-14	It was precisely because of such concerns that the statute requires that the open space be preserved as "public parkland" and as a "public resource." And it is precisely because of such concerns that public officials, coalitions of government agencies and the public have insisted for years that there be a direct transfer of the open space to State Parks and Regional Parks. For example, the express goal of the SDC Coalition Land Committee's Land and Water Protection Proposal (February 2019)5 was to ensure a "low cost/no-cost transfer of ownership of the areas outside the existing developed campus of SDC to the California Department of Parks and Recreation (State Parks) or the Sonoma County Regional Parks Department (Regional Parks) to ensure permanent protection." At the January 8, 2022 Community Workshop on the Future of SDC, Sonoma Land Trust similarly observed that a "crucial outcome" is the transfer of the 750-acres of open space to State or County parks, and is vital to	The comment is noted. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the state transfers the open space to. See MR-2. however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			protection of the wildlife corridor and other natural resources and the preservation of this land as a public resource.	
Jack London Park Partners	9/26/2022	B6-15	Public officials have also repeatedly declared their support for a direct transfer of the open space to State Parks and Regional Parks. At the County Board of Supervisor's meeting on January 25, 2022, where the Board of Supervisors considered the County Staff's SDC Vision Plan Frameworks, Potential Development Types and Outcomes, Supervisor Susan Gorin expressed support for direct transfer of the SDC open space, stating that it is time to "to move it into annexation of the parks, both Jack London State Park and the Regional Park." Other Supervisors supported her comments. More recently, on June 14, 2022, State Senators Bill Dodd and Mike McGuire, along with Supervisor Gorin, issued a joint statement affirming that the SDC open space will be a public resource, consistent with direct transfer to State Parks and Regional Parks: "The land outside the core campus is already legally protected in state law as parkland and open space, and we will ensure it will always remain public land. Public agencies are working together to ensure the best long-term management of this incredible public resource."6	The comment is noted. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-16	The State Legislature has declared that "[t]he state parks and other nature, recreation, and historic areas deserve to be preserved and managed for the benefit and inspiration of all state residents and visitors to the state parks," and that "[i]ndividual units of the state park system derive increased importance and recognition through their inclusion in a unified state park system that is preserved and managed for the benefit and inspiration of all Californians and visitors to the state." Pub. Resources Code §5001(a)(2) & (3).	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Pursuant to this declaration, State Parks is committed to "promote and regulate the use of the state park system in a manner that conserves the scenery, natural and historic resources, and wildlife in the individual units of the system for the enjoyment of future generations," and "provide for the health, inspiration and education of the people of California by helping to preserve the state's extraordinary biological diversity, protecting its most valued natural and cultural resources, and creating opportunities for high-quality outdoor recreation."7 The governing statute here, Gov't Code §14670.10.5, is clearly intended to apply these mandates to the SDC open space.	
Jack London Park Partners	9/26/2022	B6-17	The failure of the Specific Plan and DEIR to provide for direct transfer is contrary to these assurances by public officials and the requirements of the governing statute. The failure of the DEIR to analyze the environmental effects of unrestricted access to the open space and adjacent areas of the Park is a violation of CEQA. We also note that the governing statute gives the current owner of SDC, the State Division of General Services ("DGS"), the right to transfer all or part of the SDC. The governing statute acknowledges the potential for transfer of a portion of the SDC property after "the county has granted necessary approvals to rezone the property, approved a specific plan or plans for the property, and approved any necessary development agreements needed for disposition of all or any portion of the property, or the director has determined that the transfer, sale, or final disposition is in the best interests of the state." Gov't Code §14670.10.5(e)(2).8	The comment is noted. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2. Pursuant to CEQA, the DEIR does analyze the Proposed Plan's impacts on biological resources and public services and recreation in Sections 3.4 and 3.13 of the Chapter 3 Environmental Analysis. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Jack London Park Partners	9/26/2022	B6-18	Consistent with this authorization, on May 17, 2022, DGS published a Request for Proposal ("RFP") seeking proposals from qualified parties "to purchase the Subject Property (described below) for potential redevelopment," and identified the Subject Property as "an approximately ±180 acre developed core campus ('Subject Property') surrounded by over ±700 acres of open space." RFP, p. 4. As Senator Dodd, Senator McGuire and Supervisor Gorin observed in their joint statement, "[w]e want to be crystal clear – the open space is absolutely not included in the Department of General Service's request for proposals."9 Accordingly, the open space and adjacent areas of the Park should not be subject to preferential and unrestricted access tantamount to private use of these areas by Project residents and hotel guests.	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-19	The Specific Plan and the DEIR should acknowledge that the RFP does not include the open space, and that it will be directly transferred to State Parks and Regional Parks to ensure preservation as "public parkland" and a "public resource." Gov't Code §14670.10.5(a). Moreover, the DEIR must analyze and mitigate the environmental effects on biological resources in the SDC open space and adjacent areas of the Park that would be posed by unrestricted access of thousands of core campus Project residents and hotel guests.	The comment is noted. Pursuant to CEQA, the DEIR does adequately analyze the Proposed Plan's impacts on biological resources and public services and recreation in Sections 3.4 and 3.13 of the Chapter 3 Environmental Analysis. These impacts are mitigated to a less than significant level with implementation of proposed policies and Standard Conditions of Approval as outlined in the DEIR. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-20	The DEIR Fails to Analyze Impacts from Project Use of Water Resources on Biological Resources in the Open Space and Adjacent Parkland. "The ultimate inquiry, as case law and the CEQA guidelines make clear, is whether the EIR includes enough detail 'to enable those who did not participate in its preparation to understand and to consider	The comment is noted. Impacts on biological resources are analyzed in Section 3.4 of the DEIR. The remainder of the comment is not related to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			meaningfully the issues raised by the proposed project.'" Friant Ranch, supra, 6 Cal.5th at 516 (citations omitted); see Guidelines §15151. As a result, "[t]o facilitate CEQA's informational role, the EIR must contain facts and analysis, not just the agency's bare conclusions or opinions." Laurel Heights I, supra, 47 Cal.3d at 404.	
Jack London Park Partners	9/26/2022	B6-21	An EIR must consider the potential environmental impacts from supplying water to a project, not simply whether there are sufficient water resources for a project. "The purpose of an environmental impact report is to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided." Pub. Resources Code §21002.1(a). This includes impacts from water usage, because "[t]he ultimate question under CEQA . . . is not whether an EIR establishes a likely source of water, but whether it adequately addresses the reasonably foreseeable impacts of supplying water to the project." Vineyard Area Citizens for Responsible Growth, supra, 40 Cal.4th at 434 (emphasis in original).	The comment is noted. The DEIR does consider the potential construction and operational impacts from supplying water to the site. Page 480 of the DEIR states that the land use and population projections developed for the Proposed Plan and used as the basis for technical modeling in this EIR account for the construction of this new local conveyance infrastructure. Therefore, the environmental impacts related to construction period traffic, noise, and air quality and GHG emissions have been considered throughout this EIR at a programmatic level. Distribution mains would be installed within the Street Network Figure of the Proposed Plan and where new streets are to be constructed; installation of the mains will be done concurrently with roadway construction. Further, construction would be subject to separate project-level CEQA review at the time specific projects are proposed in order to identify and mitigate project-specific impacts as appropriate. As such, compliance with existing regulations and implementation of Proposed Plan policies would reduce impacts to the maximum extent practicable. Overall, buildout of the Proposed Plan would result in less than significant impacts related to the provision of water treatment and conveyance facilities.
Jack London Park Partners	9/26/2022	B6-22	An EIR is inadequate where, "even if the Water District does have the ability to meet the water requirements of the project, the EIR is silent about the effect of that delivery on	The comment is noted. Cumulative impacts on water resources are analyzed in Chapter 5 of the DEIR. The

Submitter	Date	Comment Code	Individual Comment	Response
			water service elsewhere in the Water District's jurisdiction." Santiago County Water Dist. v. County of Orange (1981) 118 Cal.App.3d 818, 831 ("Santiago County Water Dist."). An agency presenting evidence "to show that there are sufficient water resources available for the project. . . . is beside the point," because "[i]t is the adequacy of the EIR with which [courts] are concerned, not the propriety of the board of supervisors' decision to approve the project." Id. Accordingly, "[d]ecision makers must, under the law, be presented with sufficient facts to 'evaluate the pros and cons of supplying the amount of water that the [project] will need.'" Vineyard Area Citizens, supra, 40 Cal.4th at 431 (quoting Santiago County Water Dist., supra, 118 Cal.App.3d at 829). Where an agency fails to include such an analysis, it has "failed to proceed in the manner prescribed by CEQA." Id. at 435 (internal quotation marks omitted).	remainder of the comment does not relate to the adequacy of the DEIR and no further response is required.
Jack London Park Partners	9/26/2022	B6-23	Here, the DEIR wholly fails to consider the impacts that Project water use will have on biological resources in the SDC open space and adjacent areas of the park. As noted above, the County's preferred alternative includes up to 1,000 residential units, 2,400 residents, a hotel and other facilities. It has been decades since the SDC operated at anything approaching this population and, even at the height of operations, SDC did not involve the level of water use posed by the Project or the drought conditions and groundwater use restrictions currently affecting and forecast for Sonoma County. Moreover, ecosystems exist and have developed in the open space and in adjacent areas of the Park, including coastal redwoods estimated to be more than 1,000 years old, diverse wildlife species and fragile habitat, and the historic orchard that is undergoing restoration and is located immediately west and upgradient	The comment is noted. See response to comment B6-21 and B3-11. Please see also MR-3 regarding the programmatic nature of the DEIR and MR-5 regarding the adequacy of the water supply analysis.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			of the Project. The DEIR fails to analyze the impact of the Project's proposed use of surface and groundwater on these biological resources.	
Jack London Park Partners	9/26/2022	B6-24	Jack London Park Partners expressly identified this concern in a letter commenting on the Notice of Preparation ("NOP") for the Project, submitted to the County on March 25, 2022.11 Similarly, the Sonoma Land Trust's comments on the NOP point out that "the EIR must consider the impacts of the Project on biological resources within [existing] parks" and that "[a]ll such impacts are particularly likely here given intensity of proposed development and SDC's proximity to major regional parks, including Sonoma Valley Regional Park to the northeast and Jack London State Historic Park to the west."12 In fact, the DEIR acknowledges that "[d]irect impacts to streams and surrounding habitat could result in the loss of suitable habitat or harm of these species if they are present," and that "[d]irect mortality, substantial loss of habitat, or loss of breeding habitat may be considered potentially significant impacts." DEIR, pp. 241-242. However, the DEIR fails to analyze the impacts from this new and massive water usage—either on the biological resources in the open space or on the biological resources of the adjacent Park. Instead, the DEIR merely states that "[i]mplementation of the Proposed Plan would not increase water demand within the Planning Area from historical peak amounts" (DEIR, p. 484), wholly failing to analyze the impacts from the Project's water usage on animal and plant species, habitat, ecosystems and other biological resources in the western open space and adjacent areas of the Park. Such impacts must be analyzed for the DEIR to be compliant with CEQA. See Vineyard Area Citizens, supra, 40 Cal.4th at	The comment is noted. While it is true that operation of the Proposed Plan could result in increased risk to impacts on biological resources, implementation of proposed policies and Standard Conditions of Approval would mitigate impacts to a less than significant level. Please see response to comment B6-13. See also MR-5 regarding water usage.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			434; Santiago County Water Dist., supra, 118 Cal.App.3d at 831.	
Jack London Park Partners	9/26/2022	B6-25	The failure to include this analysis cannot be salvaged by claiming the Project is self-mitigating. First, the DEIR does not identify and analyze this impact on biological resources in the open space and adjacent Park areas, which is itself a fatal flaw under CEQA. Second, an EIR cannot treat mitigation measures as elements of the Project. An EIR may not proceed by "incorporating the proposed mitigation measures into its description of the project and then concluding that any potential impacts from the project will be less than significant" because, "[b]y compressing the analysis of impacts and mitigation measures into a single issue, the EIR disregards the requirements of CEQA." Lotus v. Department of Transportation (2014) 223 Cal.App.4th 645, 655-656. In particular, "[a]bsent a determination regarding the significance of the impacts to [specific biological resources, such as] the root systems of the old growth redwood trees, it is impossible to determine whether mitigation measures are required or to evaluate whether other more effective measures than those proposed should be considered," because a determination that there is a significant impact "would trigger the need to consider a range of specifically targeted mitigation measures, including analysis of whether the project itself could be modified to lessen the impact." Id. at 656. Here, the DEIR wholly fails to analyze such impacts.	The comment is noted. See response to comment B6-21. Please see also MR-3 regarding the programmatic nature of the DEIR, and MR-1 regarding the self-mitigating nature of the Specific Plan.
Jack London Park Partners	9/26/2022	B6-26	Additionally, the analysis of biological impacts that is included in the DEIR is impermissibly limited to the Project area itself and treats mitigation measures as elements of the Project—including certain Specific Plan Policies and Standard Conditions of Approval —and	The comment is noted. See response to comment B6-21. Please see also MR-3 regarding the programmatic nature of the DEIR.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			thereby erroneously finds that although the Project "could have a significant direct or indirect impact on special-status species or habitats if it would result in the removal or degradation of the species or potentially suitable habitat," such impacts would be less-than-significant because "[p]olicies in the Proposed Plan would serve to reduce potential impacts." DEIR, pp. 241-242. This approach does not provide the impact analysis required under CEQA. Furthermore, the policies in the proposed Specific Plan are limited to "identifying the presence of special-status species and sensitive habitats at proposed development sites." DEIR, p. 240 (quoting Specific Plan Policy 2-28, emphasis added). They do not address impacts caused by Project water use on biological resources in the open space and adjacent areas of the Park.13	
Jack London Park Partners	9/26/2022	B6-27	In sum, the DEIR's failure to analyze Project water use impacts to biological resources in the open space and adjacent areas of the Park is contrary to well-established requirements of CEQA. The DEIR's conclusion that there are sufficient water resources for the Project and that there are no significant impacts to biological resources at the proposed developments sites is itself inadequately supported and, moreover, wholly fails to analyze the impacts caused by Project water use on biological resources in the open space and adjacent areas of the Park.	The comment is noted. See response to comment B6-21. Please see also MR-3 regarding the programmatic nature of the DEIR and MR-5 regarding the adequacy of the water supply analysis.
Jack London Park Partners	9/26/2022	B6-28	The Proposed Southern Park Entrance Will Mitigate Unrestricted Access and Traffic and Provide Historic Preservation and Wildlife Corridor Protection. The DEIR finds only two Project impacts to be significant—and finds these to be unavoidable: A substantial adverse change to the significance of an historic district, and an increase in VMT. See DEIR, pp. 8-9, 524. As Jack London Park Partners proposed in comments on the NOP,14 both could	The comment is noted. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2. The remainder of the comment is related to the Specific Plan

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			be mitigated in part by including a Southern Park Entrance in the area immediately northwest of the Jim Berkland Memorial Bridge on Arnold Drive, and adaptively reusing the two historic buildings in that area as a visitor center. Additionally, together with direct transfer to State Parks, the Southern Park Entrance could mitigate biological impacts from unrestricted access to the western open space and adjacent areas of the Park by Project residents and hotel guests, and could promote protection of the wildlife corridor in that area.	and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-29	"Without meaningful analysis of alternatives in the EIR, neither the courts nor the public can fulfill their proper roles in the CEQA process." Laurel Heights I, supra, 47 Cal.3d at 404. Specifically, "[a]n EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives." Guidelines §15126.6(a). Accordingly, "it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation." Id.	The comment is noted. The DEIR adequately presents and analyzes alternatives pursuant to CEQA requirements – see Chapter 4 of the DEIR. No specific assertions have been made to indicate how the DEIR is inadequate. Therefore, the comment does not relate to the adequacy of the DEIR and no further response is required.
Jack London Park Partners	9/26/2022	B6-30	The DEIR's analysis of the Project's impacts to biological resources is insufficient, and the DEIR's failure to recognize significant impacts to such resources results in an inadequate consideration of project alternatives. In addition to failing to consider impacts from the Project's water usage and unrestricted access, as discussed above, the DEIR makes a conclusory statement that "given the extensive park and recreational opportunities that will be offered within the Planning Area, development under the Proposed Plan would not increase the use of existing	The comment is noted. As discussed on page 405 of the DEIR, the Proposed Plan would preserve approximately 755 acres of open space within the 945-acre Planning Area, which is envisioned as a recreational amenity with designated trails and water recreational opportunities that integrate with existing regional parks (proposed policies 2-1, 2-4, and 2-5). Additionally, the Core Campus subarea within which development would primarily be focused would include approximately 12.1 acres of active open space which is envisioned to include the Central

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated, and this impact is less than significant." DEIR, p. 406. Yet, as noted above, the DEIR also sets forth a "vision" that the estimated 2,400 "[r]esidents [would] enjoy pedestrian access to essential services and parks" and "recreational open space integrated with the surrounding park systems." DEIR, p. 64. Clearly, these "vision" statements are inconsistent with the conclusion, devoid of analysis, that any impacts will be less than significant.	Green, Baseball Fields, a dog park, and a diverse range of parks and public spaces (proposed policies 6-3, 6-4, 6-5, and 6-6). All of these proposed park and recreational facilities would distribute use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of these facilities would not occur or be accelerated. Moreover, proposed Goal 6-B and Policy 6-3 require the protection and maintenance of existing and proposed recreational facilities to support continued public access without physical deterioration. Therefore, given the extensive park and recreational opportunities that will be offered within the Planning Area, development under the Proposed Plan would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated, and this impact is less than significant.
Jack London Park Partners	9/26/2022	B6-31	As noted above and in Jack London Park Partners' March 25 letter, the SDC open space area immediately northwest of the Jim Berkland Memorial Bridge on Arnold Drive could provide a Southern Park Entrance for improved public access and mitigate unrestricted access to the Park, including the historic orchard, via existing trailheads and access roads. The area also includes two historic buildings, believed to have been constructed more than 100 years ago, that could be restored and adaptively reused as a visitor center, with ADA accessible parking, visitor parking, and access by public transportation on Arnold Drive. There could also be measures to protect and enhance the wildlife corridor in this area.	The comment is noted. See Section 3.4 of the DEIR for discussion of proposed policies and Standard Conditions of Approval that would reduce impacts on wildlife to a less than significant level. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Jack London Park Partners	9/26/2022	B6-32	The area is physically separated by Sonoma Creek from the SDC core campus, and adaptive reuse could help protect, and provide opportunities to enhance, the wildlife corridor including potential land bridges. The area is also across Arnold Drive from the SDC open space north of the core campus, which could similarly be adaptively reused to enhance the wildlife corridor, and could provide overflow visitor parking for the proposed visitor center and southern entrance to the Park, as well as visitor parking for Sonoma Valley Regional Park.	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-33	A Conceptual Site Plan of a Southern Park Entrance for this area was an Attachment to Jack London Park Partners' March 25 letter commenting on the NOP, which is attached hereto. As can be seen in that Conceptual Site Plan, the Southern Park Entrance incudes adaptive reuse of existing structures for a visitor center and Jack London Park Partners staff offices, ADA accessible parking and other visitor parking, access to public transportation, and wildlife corridor protections and enhancements in the SDC open space area immediately northwest of the Jim Berkland Memorial Bridge on Arnold Drive.	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-34	The DEIR should be revised and recirculated to consider and include the Southern Park Entrance proposed by Jack London Park Partners. The proposal appears consistent with Specific Plan Policy 2-4, which seeks to "[r]ealign and upgrade the trails to improve the use experience and accessibility, while minimizing impacts to open space" (Specific Plan Policy 2-4, pp. 2-9), and the DEIR's recognition of "the 11-acre non-contiguous Camp Via grounds within Jack London State Historic Park" that includes "an existing network of trails and access roads." DEIR, pp. 3-4.	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Jack London Park Partners	9/26/2022	B6-35	The Project will dramatically increase both the population in the area and the potential for unrestricted access to the open space and the Park. As noted above, the DEIR projects that the Project will increase the local population by 2,400 residents (DEIR, p. 7), and recognizes multiple potential access points as part of development of the SDC core campus. See, e.g., Specific Plan, Figures 3.1-1 and 3.2-1. The DEIR also recognizes that the open space includes "many acres of valuable wildlife habitat," and that, "[i]n terms of potential operations and maintenance related impacts, some increased risk to special-status species may result from . . . increased recreational use, and domestic pets." DEIR, pp. 3, 241. However, the DEIR fails to identify and analyze such impacts, as discussed above.	The comment is noted. Pursuant to CEQA, the DEIR does adequately analyze the Proposed Plan's impacts on biological resources and public services and recreation in Sections 3.4 and 3.13 of the Chapter 3 Environmental Analysis. These impacts are mitigated to a less than significant level with implementation of proposed policies and Standard Conditions of Approval as outlined in the DEIR.
Jack London Park Partners	9/26/2022	B6-36	The Southern Park Entrance, together with direct transfer to State Parks and other measures, could mitigate the significant biological impacts that the DEIR currently fails to identify and analyze. The SDC open space northwest of the Jim Berkland Memorial Bridge provides opportunities to protect and enhance this area of the wildlife corridor, and the proposed South Park Entrance and visitor center could reduce the risk of environmental harm that could otherwise result from unrestricted Park and open space access by large numbers of Project residents and hotel guests following development of the SDC core campus.	The comment is noted. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2. Impacts to biological resources are adequately analyzed pursuant to CEQA requirements in Section 3.4 of the DEIR. With compliance to regulations and implementation of proposed policies and Standard Conditions of Approval, impacts to biological resources would be less than significant. See also MR-7. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-37	As shown on the Conceptual Site Plan attached hereto, there are existing trailheads and access roads leading to the Park from the SDC open space area northwest, and immediately south, of the Jim Berkland Memorial Bridge.	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			There is also an existing, dedicated pedestrian walkway on the western side of the Jim Berkland Memorial Bridge that would provide access between the proposed visitor center, existing trailheads, and the SDC core campus. These access points would be controlled, allowing existing wildlife corridor features to be protected and enhanced, and operation of the Southern Park Entrance and visitor center would be limited to Park hours, avoiding human impacts to wildlife movement.	
Jack London Park Partners	9/26/2022	B6-38	The Southern Park Entrance could also help mitigate the two significant impacts identified in the DEIR. The DEIR states that "[t]he Proposed Plan would result in significant and unavoidable impacts related to transportation (Impact 3.14-2), and historic resources (Impact 3.5-2)," and that its discussion of alternatives is intended to "inform the public and decision-makers about feasible alternatives that may avoid or substantially lessen the significant effects of the Proposed Plan." DEIR, pp. 524-25. The Southern Park Entrance and public transportation access on Arnold Drive would reduce traffic that must now continue through the center of Glen Ellen and along London Ranch Road for access to the Park. In addition, the proposed Southern Park Entrance includes adaptive reuse of existing structures for a visitor center and would thus preserve those two historic buildings.	The comment advocates for a southern park entrance which is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-39	Accordingly, the Southern Park Entrance proposed by Jack London Park Partners should be identified in a revised Specific Plan and recirculated DEIR, and analyzed for mitigation of significant impacts to biological resources that the DEIR failed to identify, as well as the significant traffic and historical resources impacts acknowledged by the DEIR.	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Jack London Park Partners	9/26/2022	B6-40	Conclusion On behalf of Jack London Park Partners, we appreciate your consideration of these comments, which we believe are important for public access, water resource, biological resource and environmental protection, enhancement of the wildlife corridor, and the future use of SDC open space as a public resource and public parkland in accordance with the governing statute.	The comment is noted; however, the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Jack London Park Partners	9/26/2022	B6-41	On behalf of Valley of the Moon Natural History Association dba Jack London Park Partners ("Jack London Park Partners"), this will provide comments relating to the County of Sonoma's Notice of Preparation ("NOP") and scoping for the proposed Program Environmental Impact Report ("PEIR") under the California Environmental Quality Act ("CEQA"), and related matters, for the future of the Sonoma Developmental Center ("SDC") property under Government ("Gov't") Code §14670.10.5.	The comment is noted. The comment is related to the NOP. The NOP comments previously received were addressed in the DEIR in the summary of NOP Comments (Appendix A, including this letter, which is attached to the DEIR comment letter) and summarized at the beginning of each topical section. See page 45 of the DEIR. No further response is required.
Jack London Park Partners	9/26/2022	B6-42	As set forth below, Jack London Park Partners requests that the NOP project description be clarified to provide for, and that the PEIR analyze, (1) direct transfer of the SDC open space west of Arnold Drive to the California Department of Parks and Recreation ("State Parks") to be "preserved as public parkland" and ensure "permanent protection of the open space and natural resources as a public resource," as required by the governing statute, Gov't Code §§14670.10.5(a)(9); and (2) a southern entrance to Jack London State Historic Park (the "Park"), visitor center, and wildlife corridor protections and enhancements in the SDC open space area immediately northwest of the Jim Berkland Memorial Bridge on Arnold Drive.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Jack London Park Partners	9/26/2022	B6-43	Jack London Park Partners: Jack London Park Partners emerged during a budgetary crisis in 2012 that would have shuttered many state parks. It was the first non-profit organization to take up management of a state park on behalf of the people of California. Since then, it has been successfully managing, restoring and maintaining the natural and historical features of the Park under contract with State Parks, the owner of the Park. Jack London Park Partners also contributes funds to advance cultural and recreational programs, and create educational exhibits, interactive displays, signage and other features at the Park.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.
Jack London Park Partners	9/26/2022	B6-44	Jack London Park Partners is the outgrowth of Valley of the Moon Natural History Association, a citizens' group established nearly a half-century ago to support the interpretive needs of three parks in Sonoma County, including the Park. The Association has played a vital role in recruiting and organizing the hundreds of volunteers who support all functions of the Park. Among the organization's most noteworthy accomplishments are the award-winning restoration of the cottage that was the residence of Jack and Charmian London after acquiring the "Beauty Ranch," and the completely re-imagined House of Happy Walls Museum which interactively brings the story of Jack and Charmian London to life.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.
Jack London Park Partners	9/26/2022	B6-45	Most recently, Jack London Park Partners began the restoration of 40 acres of historic orchard, established on SDC property more than a century ago, which became part of the Park in 2002. While many of the trees had died, some were still alive and bearing fruit, and the surviving trees have provided scions to grow new, historically authentic fruit trees to restore the orchard. With a combination of agricultural expertise and tender loving care, the orchard is on its way toward healthy stabilization	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			with revitalized trees producing several varieties of apples and pears, prune plums, apricots, cherries, and quince.1 Jack London Park Partners has formed a partnership with Farm to Pantry to provide fruit from the orchard to Sonoma organizations that help people facing food insecurity.	
Jack London Park Partners	9/26/2022	B6-46	With this history and continuing commitment in mind, Jack London Park Partners has a keen interest in ensuring that "the disposition of the property or property interests shall provide for the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible," as set forth in the statute governing the future of the SDC property, Gov't Code §14670.10.5(c)(3). In these comments, we address issues relating to public access, protection and enhancement of the wildlife corridor, and direct transfer of the open space to ensure that it will be public parkland and a public resource in fulfillment of these goals.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2.
Jack London Park Partners	9/26/2022	B6-47	Direct Transfer of Parkland/Open Space: As noted above, the governing statute expressly provides that "[i]t is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as public parkland and open space" (Gov't Code §14670.10.5(a)(9)); and that "the disposition of the property or property interests shall provide for the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible." Gov't Code §14670.10.5(c)(3)(emphasis added).	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2.
Jack London Park Partners	9/26/2022	B6-48	The express goal of the SDC Coalition Land Committee's Land and Water Protection Proposal (February 2019)2 was to ensure a "low cost/no-cost transfer of ownership of the areas outside the existing developed campus of SDC to the California Department of Parks and Recreation (State Parks) or the Sonoma County Regional Parks Department	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			(Regional Parks) to ensure permanent protection." At the January 8, 2022 Community Workshop on the Future of SDC, Sonoma Land Trust similarly observed that a "crucial outcome" is the transfer of the 750 acres of open space to State or County parks, and is vital to protection of the wildlife corridor and other natural resources and the preservation of this land as a public resource.	
Jack London Park Partners	9/26/2022	B6-49	The County Staff's SDC Vision Plan Frameworks, Potential Development Types and Outcomes for the January 25 Supervisors' meeting included a reference to State Parks and Regional Parks as among the proposed Government Partnerships (Vision Plan at page 23); and the County Staff's January 25 Summary Report stated that each alternative would "dedicate 750 acres of the 930 acres3 to open space preservation/park expansion." (Summary Report at page 1). At the January 25 meeting, Supervisor Gorin expressed support for direct transfer of the SDC open space, stating that it is time to "to move it into annexation of the parks, both Jack London State Park and the Regional Park." Other Supervisors supported her comments.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2.
Jack London Park Partners	9/26/2022	B6-50	However, there is nothing in the NOP, the County staff documents for the January 25 Supervisors' meeting, or the materials for the February 17 scoping meeting or the March 22 virtual workshop proposing that the open space will be directly transferred to State Parks and the Regional Park. In fact, the NOP states that the SDC open space will simply be "linked to regional parks and open space systems" and, in response to public comments advocating direct transfer at the County's March 22 virtual workshop, the County's consultant stated that "certain complexities" relating to "water rights" would make it "difficult" to transfer the open space to anyone other than the developer of the core	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			campus. The County's consultant also expressed this position at an earlier public meeting.	
Jack London Park Partners	9/26/2022	B6-51	Such statements are contrary to the governing statute's requirement that the SDC open space be preserved as public parkland and protected as a public resource. Gov't Code §§14670.10.5(a)(9) and (c)(3). Moreover, the position of the County's consultant is contrary to the water rights ownership and use provisions expressly included in the statute. Specifically, the statute governing the future of the SDC property provides that "[t]he state owns riparian water rights and pre-1914 and post-1914 appropriative water rights . . . these rights may be held by the state for existing and future domestic uses on the property." Gov't Code §14670.10.5(f).4 The suggestion that water rights issues prevent direct transfer of the open space also ignores the availability of easements and licenses to ensure continued SDC core campus access to water supply sources and infrastructure.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2.
Jack London Park Partners	9/26/2022	B6-52	Similarly, earlier suggestions that including the SDC open space in a sale to core campus developers will increase the potential purchase price or provide tax benefits are not only contrary to the statutory requirement that the land be preserved as public parkland and protected as a public resource, they are also belied by legal authorities disallowing such deductions where, as here, the developer would not be foregoing development rights to the open space, or where the developer would be receiving a quid pro quo or substantial benefit.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.
Jack London Park Partners	9/26/2022	B6-53	We note that the governing statute acknowledges the potential for transfer of a portion of the SDC property after "the county has granted necessary approvals to rezone the property, approved a specific plan or plans for the property,	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			and approved any necessary development agreements needed for disposition of all or any portion of the property, or the director has determined that the transfer, sale, or final disposition is in the best interests of the state." Gov't Code 14670.10.5(e)(2).5 Following transfer of the SDC open space west of Arnold Drive to State Parks, Jack London Park Partners contemplates a management contract with State Parks on terms similar to those that have achieved significant public benefits, environmental protection, and historic preservation for the existing Park during the past decade.	
Jack London Park Partners	9/26/2022	B6-54	For all of these reasons, Jack London Park Partners requests that the project description recognize, and the PEIR analyze, direct transfer of the SDC open space west of Arnold Drive to State Parks to be "preserved as public parkland" and to provide "permanent protection of the open space and natural resources as a public resource," as required by the governing statute. Gov't Code §§14670.10.5(a)(9) and (c)(3).	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41. The disposition of the property is a decision of the State independent of the Specific Plan and the EIR accurately studies the potential use of that area [restricted to open space] regardless of when or to who the State transfers the open space to. See MR-2.
Jack London Park Partners	9/26/2022	B6-55	Wildlife Corridor/Southern Park Entrance: The SDC open space area immediately northwest of the Jim Berkland Memorial Bridge on Arnold Drive could provide a south entrance for improved public access to the Park, including the historic orchard, via existing trailheads and access roads, in addition to protecting and enhancing the wildlife corridor in this area. The area also includes two historic buildings that could be restored and adaptively reused as a visitor center and staff offices, with ADA accessible parking, visitor parking, and access by public transportation on Arnold Drive. A Conceptual Site Plan for this area is an Attachment to these comments. The area is physically separated by Sonoma Creek from the	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			SDC core campus, and adaptive reuse could help protect, and provide opportunities to enhance, the wildlife corridor including potential land bridges. The area is also across Arnold Drive from the SDC open space north of the core campus, which could similarly be adaptively reused to enhance the wildlife corridor, and could provide overflow visitor parking for the proposed visitor center and southern entrance to the Park, as well as visitor parking for Sonoma Valley Regional Park.	
Jack London Park Partners	9/26/2022	B6-56	As shown on the attached Conceptual Site Plan, there are existing trailheads and access roads leading to the Park from the SDC open space area northwest, and immediately south, of the Jim Berkland Memorial Bridge. There is also an existing, dedicated pedestrian walkway on the western side of the Jim Berkland Memorial Bridge that would provide access between the proposed visitor center, existing trailheads, and the SDC core campus. The south entrance and public transportation access on Arnold Drive would also reduce traffic that must now continue through the center of Glen Ellen and along London Ranch Road for access to the Park.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.
Jack London Park Partners	9/26/2022	B6-57	The wildlife corridor enhancement, environmental protection and adaptive reuse of this area is consistent with the County Staff's Summary Report for the January 25 Supervisors' meeting, which acknowledges that "[t]he Board may consider directing staff to explore additional protection measures for the wildlife corridor." (Summary report at page 6.) Existing wildlife corridor features could be protected and enhanced, and operation of the south entrance and visitor center would be limited to Park hours, avoiding human impacts to wildlife movement, consistent with County's materials and public comments at the March 22 meeting. The adaptive reuse as a visitor center and	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			southern entrance is also consistent with preservation of the two historic buildings in that area, and again, with the governing statute's directive that "[i]t is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as public parkland and open space." Gov't Code §14670.10.5(a)(9).	
Jack London Park Partners	9/26/2022	B6-58	The County Staff's SDC Specific Plan and PowerPoint slides for the January 25 Supervisors' meeting include multiple access points to the parkland ("Proposed Connections to Open Space" in SDC Specific Plan "Features Common to Alternatives"), including one location in the area of the Jim Berkland Memorial Bridge. Additionally, the Project Setting section of the NOP acknowledges that "non-contiguous Camp Via" is within the Park, and that the open space includes "an existing network of trails and access roads." We note that the Project Setting section of the NOP acknowledges "many acres of valuable wildlife habitat" and includes a reference to "Biological Resources" among issues to be addressed in the PEIR. We also note that the materials presented at the County's March 22 workshop reference the need to "promote conservation of existing habitat," and "protect natural resources and critical wildlife habitat, maintain wildlife linkages and foster environmental stewardship." Jack London Park Partners has a history of promoting and achieving these objectives at the Park during the past decade.	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.
Jack London Park Partners	9/26/2022	B6-59	The SDC open space northwest of the Jim Berkland Memorial Bridge provides opportunities to protect and enhance this area of the wildlife corridor, and the proposed south entrance and visitor center would reduce the risk of environmental harm that could otherwise result from unrestricted Park and open space access by large numbers	The comment is noted; however, the comment is related to the NOP and not the adequacy of the DEIR, thus no further response is required. See response to B6-41.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			of residents and visitors at multiple locations following development of the SDC core campus. For all of these reasons, Jack London Park Partners requests that the project description be clarified to include, and that the PEIR analyze, a southern entrance to the Park, a visitor center with ADA accessible parking and other visitor parking, access to public transportation, and wildlife corridor protections and enhancements in the SDC open space area immediately northwest of the Jim Berkland Memorial Bridge on Arnold Drive. On behalf of Jack London Park Partners, we appreciate your consideration of these points, which we believe are important for public access, environmental protection and enhancement of the wildlife corridor, and the future use of SDC open space as a public resource and public parkland in accordance with the governing statute.	
Valley of The Moon Alliance	9/26/2022	B7-1	Thank you for this opportunity for Valley of The Moon Alliance (VOTMA) to comment on the Sonoma Developmental Center (SDC) Specific Plan (SP) and DEIR. This is the most significant project proposed for the Valley in many decades, and it will permanently affect the whole of Sonoma Valley. The impact could be quite negative if the project is oversized for the area. Your diligence in getting the appropriate plan and development is appreciated by the communities surrounding SDC. There has been a lot of discussion and community input into this process and not too many perceived positive results for it. We hope that you will consider and respond to our questions and/or suggestions, and to the other well informed and impacted commentators, including the Sonoma Land Trust, Mobilize Sonoma, and the North Valley Municipal Advisory Committee.	Thank you for your comment letter. The comment is noted; however, it is not related to the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Valley of The Moon Alliance	9/26/2022	B7-2	Following are some comments and questions for your response. We have numbered and put in bold the questions, although in some places the text may suggest additional questions. 1. Adequacy of the Documents 1) How can the Specific Plan and accompanying EIR be enforced when the language is so imprecise?	The comment is noted. See MR-9. No other specific assertions have been made to indicate how the DEIR is inadequate. Therefore, the comment does not relate to the adequacy of the DEIR and no further response is required.
Valley of The Moon Alliance	9/26/2022	B7-3	When reviewing the adequacy of the DEIR, one is faced with the dilemma that, as a Specific Plan and a document under CEQA, it is improperly incomplete and inadequate. The current SP contains some goals and objectives that are written with language that is not specific. For example, "Policies in the Sonoma Developmental Center Specific Plan (SDC Specific Plan) are prepared in response to analysis in the EIR to ensure that the plan minimizes or reduces significant environmental impacts to the extent feasible; in this way the plan is "self-mitigating." CEQA also provides opportunities for environmental "tiering," and provides an exemption from subsequent environmental review for certain projects, including housing developments, that are consistent with a specific plan for which an environmental impact report has been prepared. If certified, the EIR will apply to development in the Planning Area that is consistent with the Specific Plan, and further environmental review will not be necessary."	The comment is noted. Please see MR-1 regarding the adequacy of a self-mitigating Specific Plan and MR-3 regarding the level of detail of analysis and programmatic nature of the DEIR.
Valley of The Moon Alliance	9/26/2022	B7-4	This is only one of the areas where language is imprecise, and in this case is a bit scary as well, as it appears designed to eliminate or severely curtail further environmental review of project phases. At page 7-2 of the SP, the Director of Permit Sonoma appears to be substituted as the review authority for all Administrative Design Review for building, grading and drainage permits in lieu of the Design Review Committee. 2) How does that make sense in terms of facilitating community input and balanced community	The comment is noted. Please see MR-6 regarding the adequacy of the transportation analysis and MR-5 regarding the adequacy of the water supply analysis. See also MR-7 regarding the adequacy of impacts on wildlife movement in the DEIR. See also MR-3. The size and scope of the plan itself won't vary; what is studied is a reasonable outcome of the plan. The remainder of the

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			assessment? 3) How can the DEIR properly analyze a plan when the plan is not specific, and when its size and scope could vary substantially? Where is the specificity in the language to assess the impact of a future development on the wildlife corridor, or the impact on the community. There is not adequate analysis to say that no mitigation is needed (i.e., that it is "self-mitigating"). Specific standards are needed now for the County to make an informed decision about this property, its future uses, and its impacts, not later. While different commenters may have different views on aspects of what should be done with the property, this concern for lack of precision is a common complaint of almost all commenters, from ourselves, to the Sonoma Land Trust, to the North Valley MAC.	comment is not related to the adequacy of the DEIR, thus no further response is required.
Valley of The Moon Alliance	9/26/2022	B7-5	2. Scale of Development In the DEIR's ES.2 Areas of Controversy list below, we have some other concerns and questions: A. Neighborhood Character 4)How can the SDC site and the surrounding rural neighborhoods and infrastructure possibly support the maximum 1000 housing units and large-scale non-residential development proposed? The traffic on the roads, the demand for water, and the impacts on the wildlife corridor from this level of development would simply be too great. B. Community Identity 5) Will this development be an extension of Glen Ellen, or will it be its own community of Eldridge, or could an alternative governance structure be preferable?	The comment is noted. Please see MR-1 regarding the adequacy of a self-mitigating Specific Plan and MR-3 regarding the level of detail of analysis and programmatic nature of the DEIR. See also MR-7 regarding the adequacy of impacts on wildlife movement in the DEIR. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Valley of The Moon Alliance	9/26/2022	B7-6	C. Historic Resource Alternative 6) Why is the Historic Resource Alternative not the preferred project when it is found in the DEIR to be the environmentally superior and otherwise meets the primary	The comment is noted. Please see MR-8 regarding the feasibility of the Historic Preservation Alternative.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			objective of the legislation? With 450 housing units, wouldn't this alternative be more be more appropriate for the rural neighborhood community which it is proposed? It was not named the environmentally superior alternative for nothing. It would allow for more opportunities for re-use of the existing buildings and would create housing and jobs for local essential workers. While the Historic Option might be "less" economically feasible, there is no finding that it is not economically feasible. 7) Why is there no financial model presented that allows a transparent comparison of the economic feasibility of various alternatives?	
Valley of The Moon Alliance	9/26/2022	B7-7	D. Legacy of Care 8)Why is the "legacy of Care" spelled out as a goal virtually ignored in the proposed Specific Plan? 9) How did the DEIR arrive at the level of care that the DEIR deemed was adequate? 10) How was the economic feasibility of legacy care units modeled and was any imputed value attributed to preserving the legacy of care? We believe that a more serious attempt is needed to meet goal 2-I of the SP, "to promote the Legacy of Care" in recognition of the work and history of SDC's work. There are presently only five parcels devoted to housing the disabled. 11)What kind and size of parcels are being considered and how many persons with developmental disabilities would be housed in the buildings on those parcels? 12) How was that level of care determined? There are existing buildings that need to be seriously investigated as sites to provide shelter for the disabled and comfort for the mentally challenged or a rehabilitation center. That investigation is missing from the plan. The SDC was established in this location because of its natural	The comment is noted; however, it is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			serenity and beauty. There remains a need for these kinds of services in such a setting.	
Valley of The Moon Alliance	9/26/2022	B7-8	E. Density The DEIR fails to adequately articulate the decision model for determining that 1000 housing units together with a hotel and a quality restaurant should be the preferred project. Economic feasibility is not the primary articulated decision criteria in the legislation. 13)How were the varying objectives in the legislation valued, weighted, and prioritized? 14) Who made the final decision for the preferred project details in terms of housing density and the ratio of affordable vs market rate housing? 15) What decision support model(s) were utilized?	The comment is noted; however, it is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Valley of The Moon Alliance	9/26/2022	B7-9	F. Type, Location and Size of Individual Housing Units: The DEIR assumes that major infrastructure facilities must be replaced under all alternatives. 16) Did the DEIR consider whether the scope and level of infrastructure replacement might be less if fewer new units were constructed, and greater restoration and reuse of the existing structures was instead the focus of the development strategy? 17) Did the DEIR consider the operational feasibility of isolating stormwater inflow and the cost savings (including the downstream avoidance of capacity additions to the treatment facilities) that would result from a simplified smaller housing unit strategy and expanded reuse of existing buildings? 18) Did the DEIR evaluate available newer technology to acceptably mitigate asbestos risks in existing building by isolating and sealing off the hazardous materials instead of ripping that material out and disposing of it? VOTMA believes that increasing the amount of new construction inflates the estimated infrastructure costs and climate change impacts, which in turn inflates the amount and type (i.e., market rate units) of	The comment is noted. The DEIR did consider Utility and Service System impacts for each Alternative located in Chapter 4 of the DEIR. As noted in Table 4.5-1 on page 576 of the DEIR, all Utility and Service System and Hazards and Hazardous Materials impacts would be less than significant for the Proposed Plan and each of the Alternatives. However, Alternatives with few housing units, like the Historic Preservation Alternative, would have fewer impacts on utility and service systems and hazard and hazardous materials compared to the Proposed Plan. Please see MR-8 regarding how GHG emissions in the Proposed Plan compare to the Historic Preservation Alternative. The remainder of this comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			development being proposed to recapture those costs. "Big" becomes self-reinforcing, which it should not be, particularly when the impacts to the environment and community can be so substantial. The DEIR says little if anything about the actual size of various units contemplated in the preferred project. 19) What are the maximum sizes (sq. ft.) for any of the units, and what is the minimum size of the smallest unit? 20) Why did the DEIR not propose a maximum size for any unit, and maximum sizes (sq. ft.) for the various types of units/multifamily facilities? The legislation from which the SP is being developed focuses on affordable housing. By controlling the maximum size of units, the "market rate" units become more affordable. The DEIR suggests that the preferred project is the most economically feasible. 21) Where is the modeling that supports the proposal that 1000 units with 75% of those units priced at market rate is the appropriate outcome consistent with the legislation?	
Valley of The Moon Alliance	9/26/2022	B7-10	G. Connection to Highway 12. 22) What impact on Highway 12 traffic flow would the proposed connector have if the connector is used only for emergency escape? 23) Would there be a new traffic signal for this connector on Highway 12? 24) How far would that signal be from the existing Madrone Road/Hwy 12 signal and how would those signals be coordinated? VOTMA is uncertain about this proposed connection. Another emergency evacuation route, depending on the size of the project, its intensity of use, its precise location, its probable need for yet another stoplight on Highway 12, all need further explanation. Further, the SP, 3-22 proposes to "establish an express bus service to and from Sonoma/ Santa Rosa that would utilize a new connector road between the SDC Core Campus and Hwy 12." 25) Does	The comment is noted. Please see MR-6 regarding the VMT impact of the Highway 12 connector. As noted on page 516 of the DEIR, the Proposed Plan would reduce some travel times from the Madrone/Proposed Plan area due to the planned additional connection to Highway 12 which would aid in evacuation and emergency response times. As noted on page 543 of the DEIR, if the Highway 12 connector was used solely for emergency access, it would eliminate the potential induced VMT impact identified for the Proposed Plan. However, even if an alternative would eliminate induced VMT impacts from a Highway 12 connection, there would likely be similar impacts related to development VMT including VMT per capita, VMT per employee, and total VMT per service population. Therefore, emergency access connection to

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			the proposal assume that the County would provide the funding to construct and operate the line? 26) If not, how would that be funded? 27) What and where is the analysis that supports the conclusion that a new road is needed for that purpose?	Highway 12 would not reduce VMT per capita sufficiently to avoid a significant and unavoidable VMT impact. The remainder of this comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Valley of The Moon Alliance	9/26/2022	B7-11	H. Wildlife Corridor.VOTMA believes that the wildlife corridor at issue here is unique in this region of the State, including its usage by mountain lions and black bear. 28) What studies and representative examples of similar wildlife corridor/adjacent dense development projects influenced your determination that the construction and operation of the 1000 housing units, hotel, quality restaurant, commercial and other enterprise developments that encompass the preferred project would not adversely affect the feasibility of this well-functioning natural wildlife corridor as portrayed by the DEIR and required by the legislation? VOTMA feels it is essential to protect the existing wildlife corridor, which is both unique to the Bay Area and essential for many important species. The transfer of ownership to the parks, SLT or other agencies that would support and maintain the Corridor is needed outside of the choosing of a developer. The size of the project also has an obvious and unavoidable impact on the Corridor. The population and traffic resulting from 1,000 new residences, a hotel and many businesses will have substantial and irreversible impacts on wildlife's use of the area. Furthermore, maintaining the integrity of the Corridor and the ability of wildlife to transit and disperse through the SDC property and adjacent parks is critical to meeting sustainability objectives. VOTMA endorses the Sonoma Land Trust's comments on this issue.	The comment is noted. Please see MR-7 regarding the adequacy of impacts on wildlife movement in the DEIR.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Valley of The Moon Alliance	9/26/2022	B7-12	Wildfires and wildfire evacuation. 29) Were any of the available traffic congestion databases (including those that specifically incorporate the real time traffic conditions on Highway 12 in the Sonoma Valley fires during 2017-2020) used in reaching the conclusion that the evacuation time would not increase significantly if the proposed project were developed? 30) How did you model the conflicting demands of inbound emergency and fire equipment/personnel, with outbound citizen evacuation demands in view of the two-lane status of all major arterials? 31) If done, what were the results and findings? This is a serious consideration especially for those of us who have been evacuated in the past. The testimony given about the length of time it took to get out of the danger zones should cause a recalculation of the timing presented. With this recalculation there needs to be considered how many other people will be trying to leave on the roadways at the same time. In the fires of 2017 and 2020, the traffic was alarming. 31) What happens when other developments, like Kenwood Ranch and Elnoka, are added to the stresses SDC redevelopment poses to Highway 12 as an evacuation corridor?	The comment is noted. Please see MR-4 regarding the adequacy of the wildfire evacuation analysis in the DEIR.
Valley of The Moon Alliance	9/26/2022	B7-13	Water supply. On page 469, the DEIR claims that "The WSA concludes all future demands within its service area can be met, inclusive of the Proposed Project in normal and multiple dry hydrologic years from 2025 through 2045". This same DEIR only acknowledges the likelihood of "single dry years", rather than a concatenation of multiple dry years. 33)Why hasn't the WSA considered he worst-case scenario with multiple dry years – a scenario we are currently facing? This could be our reality. 34) How does the DEIR look at preventive actions in the face of this uncertainty?	The comment is noted. The WSA does consider a multiple dry years scenario. Please see MR-5 regarding the adequacy of the water supply analysis in the DEIR. Policy 6-26 of the Specific Plan, as noted on page 478 of the DEIR, ensures that the SDC site's water rights are retained for uses within the Core Campus and for habitat preservation, ecological services, groundwater recharge in the open space area, and to increase the reliability of the regional water supply.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			35) Would it be prudent to include the Sonoma Valley Groundwater Sustainability Agency (GSA) for comments since the State still holds surface water rights and groundwater wells may be needed for supply water for this project? 36) Was the transfer of the State's water rights included as a done deal within the DEIR evaluation? 37)What if they continue to hold these rights within the open space, like Lake Suttonfield?	
Valley of The Moon Alliance	9/26/2022	B7-14	Hazardous Materials. VOTMA filed comments on the need for further environmental assessment work on March 24, 2022, in response for requests for comments in the NOP for the EIR. Those comments are included in pages 459-464 of the appendix to the DEIR. The DEIR acknowledged those comments on page 236 of Section 3.8 Hazards and Hazardous Waste. But the subsequent portion of this section does not add any new analysis of the recognized environmental conditions (REC) that VOTMA referenced. 38) Why was no further investigation undertaken and presented? The discussion for the most part addresses hazardous materials and substances issues that were identified as known or likely to exist in the Core Planning Area (CPA). The discussion acknowledged that the 2017 Limited Phase II report identified a variety of areas, both in the Core Planning Area (CPA) and in the lands outside of the CPA where "further investigation was needed". (Page DEIR 248; download, page 425). The discussion at various points indicates that if needed further investigation could be undertaken. Deferral of investigation and mitigation are not an allowed strategy under CEQA. The DEIR appears incomplete and defective on this issue. 39) Why were Phase II environmental assessments regarding hazardous materials and substances in the gap areas of recognized	The comment is noted. The DEIR adequately analyzes impacts from hazardous facilities as well as legacy environmental hazards and hazardous waste materials within the Planning Area. As noted on page 261 of the DEIR, the analysis considers the nature of foreseeable hazardous materials use, storage and disposal resulting from the redevelopment of the Sonoma Developmental Center. It also identifies ways that hazardous materials could be exposed to the environment or individuals. The analysis includes a qualitative evaluation of impacts associated with the presence or hazardous materials. The analysis is based on a review of materials ranging from online databases such as Envirostar and Geotracker, hazard maps, Phase I & II Site Assessments (see Appendix G), and relevant plans and regulations at the Federal, State, and local levels. As discussed on page 265 of the DEIR, hazardous materials identified at Phase I & Phase II Site Assessments have the potential to be released into the environment. In such an occurrence several Federal, State, or local agencies such as the EPA, SF Bay Regional Water Quality Control Board, DTSC, or Sonoma County will provide oversight in remediation. Additionally, proper abatement procedures will be

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			environmental conditions (RECs) identified in the prior Phase I but Limited Phase II investigations not undertaken? 40) For areas outside the CPA, where agriculture and recreation with public access are contemplated, will disturbance of soil be prohibited? 41) If not, how did the DEIR determine that there was no significant risk that hazardous material and waste that might have resulted from past activities over the last 125 years in those areas and what might be harmful to the persons, crops or wildlife could be disturbed or uncovered?	followed when renovating any of the structures that have lead-based paint or asbestos. Compliance with the Standard Conditions of Approval Measure HAZ-3 and existing regulations would reduce impacts related to the release of hazardous materials due to foreseeable upset or accident conditions to less than significant. Further, compliance with Standard Conditions of Approval and existing regulations is required for any development activities within the Planning Area that occur outside the Core Campus. However, given that all development will occur within the already developed Core Campus area under the Proposed Plan, hazardous materials impacts would be less than significant in the preserved open space areas. Please see also MR-3 regarding the programmatic nature of the DEIR. Individual projects are required to prepare more precise, project-level analyses to fulfill CEQA requirements.
Valley of The Moon Alliance	9/26/2022	B7-15	Transportation/Traffic: 42) Where is the W-Trans traffic operations analysis that PS suggested in the DEIR footnote 118 had been done? 43) Why was it not made available for review as part of the DEIR? The DEIR analysis of transportation, and specifically traffic issues is inadequate. VMT analysis is acceptable for dense urban projects, but does not capture the rural transportation impacts, especially in an area with defined and limited transportation corridors. Furthermore, if anyone else has submitted this VMT analysis, the County presumably would have required a peer review. 44)Where is that? Importantly, the requirement to use VMT for the projects' CEQA analysis does not preclude requiring a Level of Service traffic impact analysis to assist decision making for land use policy planning purposes, for zoning purposes, and	The comment is noted. The Focused Traffic Operations Analysis for the Draft SDC Specific Plan is published on the project's website at https://www.sdcspecificplan.com/documents. Please see MR-6 regarding the adequacy of the transportation analysis in the DEIR.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			for assessing fire/flood/earthquake evacuation risk parameters, and for assessing risks to the wildlife corridor, as wildlife must live within and navigate whatever level of development is approved here.	
Valley of The Moon Alliance	9/26/2022	B7-16	When asked about this by VOTMA, Permit Sonoma responded that the analysis was in Appendix F of the DEIR appendix. Appendix F at page 748 consists of a one page set of "Traffic Volume Data". There is no text, no interpretation, no assumptions, no contextual analysis. Informed, sound analysis and decision-making require a stand-alone project specific analysis for this project. The textual analysis in the DEIR itself is full of summary and conclusory statements. On the face the findings include 1) on page 442 that traffic from Harney to Glen Ellen would be reduced from peak, 2) on pages 445-446 that household, employment, and total service VMT would be reduced by the project compared to peak, and 3) on page 451 that the project would not result in inadequate emergency access, all seem particularly unsupported, counter-intuitive, and problematic. It is not clear whether the VMT analysis included hotel and quality restaurant VMT (or for that matter whether the GHG analysis included air travel of guests). The GHG analysis and the transportation analysis also do not seem consistent. The GHG analysis does not appear to incorporate emission associated with "fueling" EVs. It would seem relevant in this context to ask some simple foundational questions for both LOS and VMT analysis, such as: 45) Where will the people working at SDC be coming from to work there? 46) Where will the people who live at SDC but work off site be traveling? 47) Where would guests at the hotel be coming from? 48) Where is the nearest pharmacy? 49) Where is the nearest full service	The comment is noted. Please see MR-6 regarding the adequacy of the transportation analysis in the DEIR. As noted on page 234 of the DEIR, emissions were quantified for existing (2019, to align with traffic data provided by the Proposed Plan's traffic engineers, W-Trans) conditions based on land uses and traffic data that reflect the closed SDC facility. The CalEEMod "City Park" land use subtype was used to model existing conditions due to its representative level of low intensity use and was scaled for the Planning Area based on traffic inputs provided by the Proposed Plan's transportation engineers. As a result, existing conditions reflect only mobile sources of GHG emissions and energy consumption. Full detail about modeling inputs is provided in Appendix B. Additionally, it is noted that because there has been no change in land uses at the facility since its closure in 2018, 2019 baseline conditions are appropriately comparable to current (2022) conditions. Project buildout conditions (2040) were quantified for the Proposed Plan based on anticipated land uses and modeled traffic data, which includes the Highway 12 connector road. Emissions modeled in CalEEMod include quantifiable policies, including building electrification, prohibited natural gas, prohibited pesticides, complete streets with pedestrian-oriented design, traffic-calming measures, mixed-use diversity of uses, on-site energy (microgrid) with renewable resources and methane capture, Title 24 and CALGreen Tier 2 levels, water recycling and water conservation strategies

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			affordable market? 50) Where are the nearest medical complexes? 51)What will be the impact on Highway 12 traffic of having another traffic signal at the new proposed connector? The answers to those questions are not in the transportation segment of the DEIR. The use of VMT analysis should not be an excuse to avoid real impact analysis for the many decision-making functions the County must exercise with respect to the appropriate level of development of this property.	and design, and solid waste reduction. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Valley of The Moon Alliance	9/26/2022	B7-17	In developing these comments VOTMA did review some of the earlier documents listed on the SDC SP website. VOTMA now assumes that the August 2022 W Trans Analysis referenced in DEIR footnote 118 was intended to reference the July 2022 Analysis posted on the website. That LOS study uses a single weekday in April 2022 as its sole data source, does not include weekend data, does not include winery event and seasonal data, does not include any segment or intersection data north of the Arnold Drive-Highway 12 intersection, does not include any transportation cumulative impact analysis, and does not reference, reconcile or incorporate the Sonoma Valley Traffic Study the County sponsored in connection with assessing the over-concentration of winery events in Sonoma Valley as it develops the winery event ordinance. The W-Tran is inadequate and incomplete. 52) Was the W-Tran analysis peer reviewed as required by PS guidelines?	The comment is noted. The Focused Traffic Operations Analysis for the Draft SDC Specific Plan is published on the project's website at https://www.sdcspecificplan.com/documents. Please see MR-6 regarding the adequacy of the transportation analysis in the DEIR. However, traffic LOS can no longer be used as metric in the EIR, thus any LOS impacts from the Proposed Plan would not be considered significant under CEQA.
Valley of The Moon Alliance	9/26/2022	B7-18	M. Cumulative Impacts 53) Where is the detailed cumulative impact analysis? The DEIR basically dodges this requirement by saying that the cumulative impacts are already covered in relevant regional analyses. The community and its representatives must live with these impacts, and we have a right to see a detailed cumulative impact analysis. For example, 54) have the	The comment is noted. The cumulative analysis is detailed in Chapter 5 - CEQA Required Conclusions, starting on page 584 of the DEIR, and considers the likely effects of surrounding regional growth. Given the cumulatively considerable VMT impacts from the Proposed Plan, the impacts from Transportation are conservatively considered cumulatively considerable. By

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			effects of the known proposed developments of Elnoka and Kenwood Ranch off Highway 12 been considered from either a traffic or water use perspective? In summary, VOTMA believes that the DEIR is inadequate under CEQA and that the Specific Plan is not precise enough in its project statement to meet the requirements of CEQA. The County needs to ensure that the future use of the SDC is consistent with both the character and limitations of Sonoma Valley and with the communities that reside here. There may be no decision you face that will have a more significant or lasting impact on the Sonoma Valley for decades to come. Please ensure that the unique beauty and character of this special place are not adversely affected by this SDC decision-making process.	2040 SDC water use is estimated to reach 225 acre feet per year, which is less than the historical water demand and well within the supply available at the site according to the Water Supply Analysis conducted by the Valley of the Moon Water District and referenced in Section 3.15. Therefore, the Proposed Plan's contribution to this potentially significant cumulative impact is less than cumulatively considerable.
Sonoma Ecology Center (SEC)	4/3/2022	B8-1	This letter covers two related topics: A. Empirical, recent biodiversity observations made by SEC for consideration in the SDC Specific Plan B. Recommendations on policy and programs for the SDC Specific Plan A. Biodiversity Observations The Sonoma Developmental Center (SDC) property, in addition to its well-known placement at the narrowest point of the Sonoma Valley Wildlife Corridor, is a center of biodiversity. Because of continuous state ownership over the last century, it contains much of the least-disturbed habitat in Sonoma Valley.Since January 2019, community scientists and Sonoma Ecology Center (SEC) have been working on a project to document the biodiversity throughout the SDC. Organized by SEC biologist Dr. Dan Levitis, community members have used an app called iNaturalist to record observations of species throughout the 945 acres of SDC. The project has identified 1,175 species of animal, insect, plant, and fungi based on 14,805 observations. There is no sign that we are running out of new species to find. We are still collecting	Thank you for your comment. The list of documented special-status species and assessment of potential for special-status species to occur (Table 3.4-2) has been amended to include Sonoma Ecology Center provided observations for special status species. Some of the comment's designations of individual species do not meet the criteria to be considered "special status" under CEQA. However, these species will all benefit from the above-mentioned policies and would not be significantly adversely affected by future projects. The Specific Plan places a high priority on biodiversity preservation, preservation of wildlife corridors and protection of special-status species (Vision Statement; existing County, State and Federal policies; please refer to Specific Plan Goals 2-D, 2-E; Specific Plan Policies 2-6 through 2-30). Though the comment does identify some special-status species that were not identified as observed in the DEIR, all potential significant impacts to these species would be mitigated to a less than significant level with the

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			observations, which we will share with you. Thefindings reinforce the need to preserve the sensitive habitat and rare species throughout SDC.Major findings include the high biodiversity of the entire property, several protected speciesliving on the property which had not been previously documented, and the vital importance ofthe under-documented wetland features on the east end of the property. Much of theprotected biodiversity we found on the property were in either riparian areas or wetlands.We are providing these publicly available data so that the SDC Specific Plan can comply with CEQA and protect SDC's natural resources. 1. Observers using eBird have documented 114 bird species on the property. https://ebird.org/hotspot/L5410092/2. Almost 15,000 photo observations uploaded to the citizen science platform, iNaturalist, by 278 community members and SEC staff have thus far documented 1,175 wild species (including animals, plants, fungi, and microorganisms) across SDC. Observations include data from camera trapping by SEC along Sonoma Creek within the Sonoma Valley Wildlife Corridor. These thousands of photo observations have been reviewed and confirmed by experts, and are geo-located, providing a fine-scale understanding of what is living where, and thus which parts of SDC require the greatest protection. https://www.inaturalist.org/projects/sonoma-developmental-center-umbrella-project Below please find a list of protected species the SDC property shelters, with a link to an iNaturalist observation of each. Animals Specially Protected Mountain Lion https://www.inaturalist.org/observations/107081516 Vulnerable White-tailed Kite https://www.inaturalist.org/observations/21885630 Special	implementation of existing Local, State and Federal laws and policies and the specific and general policies in the DEIR and Specific Plan.

			Ecology Center – SDC Specific Plan Policy Recommendations Protected species documented on adjoining parcels, but not on SDC itself include: Critically Endangered Sonoma Sunshine Endangered Northern Spotted Owl Special Concern Red-bellied Newt	
Sonoma Ecology Center (SEC)	3-Apr-22	B8-2	B. Recommendations on policy and programs for the SDC Specific Plan B1. Water and wildlife 1. Conduct a full wetland delineation in the eastern portion of the property, and protect wetlands that are likely not currently mapped. Wetlands on the SDC property are generally under-mapped. Surveys for the WRT assessment were conducted late in September. Our staff and volunteers found multiple seasonal ponds and pools that are not on the maps the county has shared, and diverse wetland-dependent wildlife. a) Western Pond Turtles (a California species of special concern) breed in the degraded wetlands that run from the northern to the southern edges of the property east of Lake Suttonfield, including the old horse corral. Further, these wetlands on the east end of the property were, prior to development, in many ways similar to, and connected to, wetlands in Sonoma Valley Regional Park where Sonoma Sunshine (Blennosperma bakeri) finds one of its few remaining homes. b) We were surprised to find the California Clam-shrimp, an Endangered crustacean that specializes in seasonal pools. We found these in unmapped seasonal ponds near the southern proposed route for a road linkage to Hwy 12.	Comment incorporated. Specific Plan Policy 2-1 has been amended to state: "Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation." Additionally, the DEIR notes mitigations and standard conditions of approval that require projects to conduct a biological resources assessment (Policies BIO-1, BIO-14, BIO-15, BIO-16) to identify, avoid, and mitigate potential impacts to wetlands. BIO-9 prescribes actions to reduce impacts to pond turtles and these actions may be enhanced through BIO-1. California clam-shrimp is not designated a special status species wildlife species by CDFW, however protections to its wetland habitats prescribed in the DEIR will provide protections to this species.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Sonoma Ecology Center (SEC)	3-Apr-22	B8-3	2. Make policy that the wildlife corridor, at its narrowest point along the north side of the campus, shall only ever be widened, not narrowed. Specifically, the developed footprint shall not go north past the location of the current ballfield on the east (removing current buildings Bane, Thompson, and the two houses between the bridges), shall not go northwest onto the hillside above the current kitchen (removing Goddard, Paxton, Industrial), and shall not go northeast beyond Snedeger (removing Roadruck and Bentley).	Specific Plan Policy 2-6 has been revised to incorporate comments. The updated policy now states: "Remove existing development along the north edge of the Core Campus, from area shown as Open Space in Core Area in Figure 2.2-1, and re-introduce compatible native species to expand the wildlife corridor. This includes removing existing buildings Paxton, Thompson/Bane, and Residence 126 and buildings on the northeast side of campus and ensuring that new development remains within the smaller development footprint as shown in Figure 2.2-1. Ensure that the wildlife corridor is not further restricted at its narrowest point along the north side of the campus. The project sponsor shall be responsible for demolishing buildings within the expanded wildlife corridor and establishing new planting and landscaping to support expanded wildlife movement and safety, prior to Certificate of Occupancy on any redevelopment on the eastside of Arnold Dr."
Sonoma Ecology Center (SEC)	3-Apr-22	B8-4	3. Make policy that paths and recreational areas shall not be placed in the northern areas where the wildlife corridor is narrowest. Remove the pedestrian access point in the narrowest part of the corridor (yellow asterisk on the maps in the 2021 alternatives).	Refer to response to comment B8-3.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-5	4. Make policy that trails will not occur in riparian corridors except for short distances (these are habitat areas first, recreation areas second). 5. Make policy that there shall be no new pedestrian bridges over Sonoma Creek. 6. Make policy that setbacks along Sonoma Creek will be at least 100 feet, and larger where green infrastructure projects are planned, in accordance with the Upper Sonoma Creek Restoration Vision.	Comment partially incorporated. Specific Plan Policy 2-27 has been amended to state: "Ensure that all development adheres to Sonoma County Municipal Code Sec 26-65 on riparian corridor protection. Further, maintain and enhance connectivity between water features, including lakes, creeks, vernal pools, and intermittent streams, through vegetated native plant cover, absence of roads along the water features, ditches, and other barriers to water or animal movement, and

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				absence of human presence. Maintain water-related features, including swales, intermittent drainages, and seasonal waterways as open-air channels and avoid undergrounding waterways whenever possible." The DEIR also includes detailed discussion of existing riparian area protections that would be applied as well as Plan-specific policies and Standard Conditions of Approval under Impact 3.4-2.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-6	7. Make policy that setbacks along Hill/Mill Creek will be 50' on the north side, and more than 50' on the south side. 8. Make policy that Lake Suttonfield, Fern Lake, Eldridge Marsh, and all mapped wetlands will have development setbacks of 100' or greater. 9. Make policy that connectivity between water features (lakes, creeks, vernal pools, intermittent streams) shall be enhanced and maintained. Connectivity means presence of vegetated native plant cover, absence of roads, ditches, and other barriers to water or animal movement, and absence of human presence. 10. Make policy that water-related features, including swales, intermittent drainages, and seasonal waterways shall not be undergrounded, but instead shall be daylighted and enhanced as visual amenities and wildlife habitat.	Refer to comment B8-5.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-7	11. Make policy that scientific research and monitoring will be permitted freely on the entire property.	Comment noted. See MR-9 regarding mitigation monitoring.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-8	12. Make policy that invasive species will be managed proactively to reduce fire risk and enhance biodiversity. This effort needs to increase, starting immediately–SEC is doing some of this work with grant funding–and continue in perpetuity.	Specific Plan Policy 2-18 encourages collaboration with local groups to remove invasive species. Additionally, Specific Plan Policy 2-26 has been amended to require ongoing use of an Integrated Pest Management sitewide (refer to response to comment B8-14).

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Sonoma Ecology Center (SEC)	3-Apr-22	B8-9	13. Make policy that Eldridge Marsh will be restored hydrologically and biologically, including retaining more water by blocking the ditches that currently drain it.	The comment is noted. See response to comment B8-5. This policy would support hydrologic and biological connections to Eldridge Marsh.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-10	14. Make policy that development will face away from natural and protected areas to reduce interactions that might impact natural systems.	Thank you for your comment. The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to approve the Specific Plan.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-11	15. Make policy that Dark Sky standards will be adhered to in all development and maintenance activities. Institute an ongoing compliance program to retain dark skies during operations.	Comment incorporated. Specific Plan Policy 2-11 applies Dark Sky standards to the project design.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-12	16. Make policy that all large healthy trees will be retained.	Comment incorporated. Policy 2-20 has been amended to state: "Require that the project sponsor work with an arborist to develop a tree planting plan that retains existing mature healthy trees and supplements the existing tree canopy with a diverse range of native and/or low water trees that provide shade and habitat. Locate new construction and public realm improvements around existing landscaping features that are retained."
Sonoma Ecology Center (SEC)	3-Apr-22	B8-13	17. Make policy that regionally native plants, selected for tolerance of climate conditions during the species' lifespan, will make up at least 80% of landscaping, during both initial construction and ongoing operation.	Refer to response to comment B8-12. Additionally, Policy 2-19 encourages inclusion of native plants in landscaping.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-14	18. Make policy mandating the use of Integrated Pest Management, both for construction and ongoing operation.	Comment incorporated. Specific Plan Policy 2-26 has been amended to state: "Prohibit the use of pesticides, rodenticides, and poisons in materials and procedures used in landscaping, construction, and site maintenance within the Planning Area, and require ongoing use of Integrated Pest Management site-wide. This restriction

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				should be included in all Declarations of Covenants, Conditions and Restrictions (CC&Rs) to ensure that future homeowners are aware of the requirements."
Sonoma Ecology Center (SEC)	3-Apr-22	B8-15	19. Set a program to regrade and revegetate the area immediately around the Jim Berkland bridge so that animals can get down to and across Sonoma Creek, to aid wildlife passage east-west across this narrowest section of the property.	Comment incorporated. Specific Plan Policy 2-13 has been amended to state: "Restrict access to the wildlife corridor and creek corridor to designated pedestrian paths marked with clear signage and delineated by strategic wildlife-permeable fencing. Do not construct new paths or recreational areas in the area where the wildlife corridor is narrowest between the Core Campus and Lake Suttonfield, with the exception of a permeable-surface pedestrian trail on one side of Sonoma Creek."
Sonoma Ecology Center (SEC)	3-Apr-22	B8-16	20. Make policy that any owner(s) of the property will participate agreeably with any surrounding properties to improve wildlife habitat and permeability across property boundaries, up to and including the eventual construction and maintenance of a wildlife overpass or underpass across Hwy 12.	Comment incorporated. Specific Plan Policy 2-56 has been added to state: "The owner(s) of the property shall collaborate in good faith with any surrounding properties to improve wildlife habitat and permeability across property boundaries, up to and including the eventual construction and maintenance of a wildlife overpass or underpass across Highway 12."
Sonoma Ecology Center (SEC)	3-Apr-22	B8-17	21. Make policy that fencing inside and outside the campus shall be removed and only used in new projects to direct movement and reduce hazards to wildlife.	Specific Plan Policy 2-16 describes fencing requirements that are focused on maintaining wildlife corridor function.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-18	Make policy that any new or enhanced road connecting to Hwy 12 shall not be paved or lighted, and shall only be accessible during emergencies. Both proposed road linkages from the new campus to Hwy 12 would cross unmapped wetland, endangering wildlife and encumbering any efforts at wetland restoration. The northern route (along Sunrise) in particular cuts through habitat where Western Pond Turtles lay their eggs.	Comment incorporated. See response to B8-16. Additionally, Policy 2-1 has been amended to state: "Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site,

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation." Further, DEIR Policy BIO-1 requires a biological resource assessment for any new project. This assessment will identify wetlands and make recommendations for mitigation of any impacts to biological resources to a less than significant level. Further, BIO-9 will require development to avoid impacts to the Western Pond Turtle.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-19	23. Make policy that fire fuels management activities, such as the proposed "buffers," adopt and use standards that achieve multiple objectives including enhancing biodiversity, reversing weed invasion, and protecting water resources. 24. Make policy that multi-benefit water resources projects shall be an acceptable use of land inside and outside the campus. "Multi-benefit" here is defined as projects that protect or create habitat and recreation benefits, and don't impede wildlife passage, while delivering water benefits to people and nature.	Policies 2-9 and 2-10 require fuels management to be minimized within wildlife corridors to limit disturbance to species. Additionally, Policy 2-31 has been amended to add: "Construct and maintain a managed landscape buffer along western and eastern edges of the Core Campus to aid in fire defense consisting of a shaded fuel break in wooded areas and grazed or mown grassland. Shrubs and chaparral should be limited within the managed landscape buffer. Management of this landscape buffer should aim to enhance biodiversity, reverse weed invasion, and protect water resources."
Sonoma Ecology Center (SEC)	3-Apr-22	B8-20	Set in place a permanent program, starting before demolition or construction begins, to monitor wildlife	DEIR measure BIO-1 requires that each new project conduct a biological resources assessment. Incorporated in this assessment would be recommendations for monitoring and additive measures, if needed, to reduce impacts to biological resources.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Sonoma Ecology Center (SEC)	3-Apr-22	B8-21	B2. Urban design: 1. Make policy that the developed campus shall be visually and functionally integrated with the surrounding natural environment. Sight lines shall preserve and invite connections to open space. Trails shall link developed areas to natural spaces. 2. Make policy that existing buildings will be retrofitted and reused to the degree that re-use can be shown to have greater or equal life-cycle environmental benefits than replacing them. Where cherished buildings are to be replaced, replace them with new buildings that are of similar style, in similar locations. 3. Make policy that collectively the buildings and spaces on the campus shall mirror the diversity seen in the historic buildings: a complexity of angles, materials, styles, and ages.	Policies in Section 5 of the Specific Plan address urban design. The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to approve the project.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-22	B3. Climate and emissions 1. Make policy that the site will be net zero energy, net zero or better emissions, as measured during operations, on an island-able, crisis-ready microgrid.	The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to adopt the Specific Plan.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-23	B4. Housing 1. Make policy that, in perpetuity, the proportion of housing at SDC that is below-marketrate will be maximized through use of private and public funding, and innovation in funding, ownership structures, design such as clustering and greater building heights, and construction materials and techniques. 2. Include a program that requires future landowners and/or lessees to partner and facilitate potential projects and programs to increase below-market-rate housing.	Section 4.2 addresses affordable housing in the Specific Plan. The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to adopt the Specific Plan.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Sonoma Ecology Center (SEC)	3-Apr-22	B8-24	B5. VMT, Traffic, Transit, and Roads 1. Make policy that developers are required to go beyond conventional Sonoma County requirements to assure increased local and regional transit availability, headways, and actual use, including innovative transit such as car sharing, regional bikeways, and other alternatives to single occupancy vehicles.	Policies 3-41 through 3-44 require multimodal infrastructure to reduce single-occupancy vehicle travel. The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to approve the project.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-25	2. Make policy that a bike path should be linked to Sonoma County Regional Parks' Sonoma Valley Trail. 3. Make policy that workplaces and community services shall be promoted at SDC in order reduce vehicle trips, reduce driving time for residents, and create a sense of place.	Policies 3-41 through 3-44 require multimodal infrastructure to reduce single-occupancy vehicle travel, including development and connection with the Sonoma Valley Trail. The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to approve the project.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-26	B6. Safety: 1. Make policy that buildings, roads, and spaces within the developed area shall be designed to be ready for wildfire, including clustered buildings, roads to the outside, and power lines underground. For reference see "Building to Coexist with Fire: Risk Reduction Measures for New Development" at https://anrcatalog.ucanr.edu/Details.aspx?itemNo=8680. 2. Make policy that development shall be designed with spaces and resources to function as a local emergency resource hub, a place that area residents can evacuate to, not just evacuate from.	Policies 2-31 through 2-42 address design and management approaches to wildfire safety. These policies are in accordance with fire risk reduction measures in the article mentioned by the commenter. The remainder of the comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to approve the project.
Sonoma Ecology Center (SEC)	3-Apr-22	B8-27	B7. Governance: 1. Make policy that the entire SDC site shall be governed by an entity with a public-benefit mission, governed by representatives for an array of public and private interests, using clear guiding principles. This	The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			entity could seek, receive, and spend money to increase the public benefits produced by the site. It would provide an ongoing guide for future development and operations of the entire site, assuring that key principles remain throughout the development of the site and beyond. 2. Set a program to design and create the governance entity described above.	of Supervisors for their consideration in making a determination whether to approve the project.
Center for Biological Diversity	9/26/2022	B9-1	On behalf of the Center for Biological Diversity, we are writing to express our concerns regarding the Draft Environmental Impact Report ("DEIR") for the proposed Sonoma Developmental Center Specific Plan ("Project"). The Center for Biological Diversity ("Center") is a non-profit, public interest environmental organization dedicated to the protection of native species and their habitats through science, policy, and environmental law. The Center has over 1.7 million members and online activists throughout California and the United States. The Center and its members have worked for many years to protect imperiled plants and wildlife, open space, air and water quality, and overall quality of life for people in Sonoma County. The DEIR fails to adequately assess and mitigate impacts to sensitive habitats and special-status species, wildlife connectivity, and wildfire risk. As mentioned in the Center's March 4, 2022 comments on the Notice of Preparation ("NOP"), incorporated herein by reference, the Project would sever the last remaining artery of ecosystem connectivity in the area and result in harm to sensitive and imperiled species, loss of biodiversity, reduced resilience to climate change, and increased wildfire risk.	Thank you for your comment letter. The comment is noted. Please see MR-7 regarding impacts of the Proposed Plan on wildlife movement. See also response to comment B8-3, B8-15, B8-16, B8-19, and B3-27 for wildlife corridor policy amendments and description of fire risk reduction measures. Since the projected would concentrate development in the already built out area of the Core Campus, it would not sever ecosystem connectivity. See also Section 3.4 of an analysis of impacts on biological resources. The remainder of the comment does not specify how the DEIR is inadequate, thus no further response is required.
Center for Biological Diversity	9/26/2022	B9-2	The DEIR fails to adequately describe, analyze, and mitigate the Project's significant impacts to wildlife connectivity and special-status species. The DEIR downplays the Project's impacts to special-status species	The comment is noted. Please see response to comment B8-1 and B9-1. See also MR-7 regarding impacts on wildlife movement.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			and wildlife connectivity, stating that "Development under the Proposed Plan is anticipated to take place primarily within the developed footprint of the Planning Area, limiting the potential for adverse impacts on special-status species and sensitive natural communities" (DEIR at 241). This ignores the fact that the Sonoma Developmental Center has been unoccupied by people since 2018 and likely serves as both live-in and move-through habitat for numerous species, whether they were present pre-development, while people were using the campus, or have established or re-established there since the campus became vacant. Placing development in this critical connectivity area, even if it is within an existing (but vacant) development footprint, will undoubtedly have significant impacts to wildlife connectivity and sensitive and imperiled species in the area, from mountain lions to California red-legged frogs. New development that includes commercial and industrial facilities and new roads and infrastructure will fortify existing barriers, increase human activities, and severely degrade this already constrained connectivity area, which will result in both direct and indirect effects to species and ecosystems and reduce climate resilience.	
Center for Biological Diversity	9/26/2022	B9-3	The Project's impacts to wildlife connectivity will consequently have significant adverse effects on the many special-status species that rely on such connectivity for live-in and move-through habitat to support population health and long-term survival. Although the DEIR acknowledges the Project area as a "regionally important wildlife corridor" (DEIR at 235), it severely underplays the Project area's importance for wildlife connectivity. The Project is located in the last remaining wildlife connectivity area linking protected open space across Sonoma Valley from Jack London State Park and Sonoma Mountain to the	The comment is noted. Please see response to comment B8-1 and B9-1. See also MR-7 regarding impacts on wildlife movement. The DEIR does adequately outline existing riparian habitat conditions starting on page 211 of the DEIR and the riparian forest on site is described on page 218. Habitat Types are mapped in Figure 3.4-1. Sensitive habitats, including the riparian corridor, are outlined on page 234. See also response to comment B10-9 regarding riparian habitat impacts. The NOP and comments on the NOP received by the County are

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Mayacamas Mountains and beyond. CDFW identifies the Project area as an "Irreplaceable and Essential Corridor" with high levels of biodiversity1 and the Conservation Lands Network designates it as an "Area Essential to Conservation Goals."2 The area is important for terrestrial and riparian connectivity essential for both wildlife movement and climate resilience (Gray et al., 2018). It is also immediately adjacent to an important undercrossing under State Route 12. The Sonoma Land Trust has identified multiple wide-ranging species, including deer, bobcats, coyotes, and river otters, that actively use and move through the area. Its riparian corridors are important for numerous special-status species, many of which are currently present in the Project area. Despite the Center's extensive description of these critical habitat resources in its NOP comments, the DEIR omitted this information. The omission undermines the DEIR's analysis of these impacts, and also yields an inadequate description of the baseline physical conditions present on the project site and vicinity, which is required by CEQA and the CEQA Guidelines.	included as Appendix A of this EIR and noted briefly at the beginning of each topical section.
Center for Biological Diversity	9/26/2022	B9-4	The DEIR erroneously concludes that "Implementation of the Proposed Plan would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites" (DEIR at 254, Impact 3.4-4). Similarly, the DEIR states that the Project would not have "a substantial adverse effect" on riparian or other sensitive habitats, arguing that future development would take place "previously developed portions of the Planning Area, limiting the potential for disruption to undeveloped habitat areas" (DEIR at 251). Among other shortcomings, this approach omits consideration of the Project's "edge	The comment is noted. See response to comment B9-1 and B9-3. See also MR-7 regarding impacts on wildlife movement. See also Section 3.4 of an analysis of impacts on biological resources, including their habitat.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			effects," which will result in habitat loss and induced human presence, traffic, and growth that will further degrade the Project area's connectivity value in this critical connectivity pinch point. Given the importance of riparian corridors for both local and regional wildlife connectivity, the DEIR's Policy 2-25, which requires 50-foot buffers along Sonoma and Mill Creeks (DEIR at 239) and other policies and best management practices are insufficient to mitigate impacts to these important riparian corridors and the special-status species that occur or have the potential to occur in these habitats to less than significant.	
Center for Biological Diversity	9/26/2022	B9-5	Riparian ecosystems have long been recognized as biodiversity hotspots performing important ecological functions in a transition zone between freshwater systems and upland habitats. Many species that rely on these aquatic habitats also rely on the adjacent upland habitats (e.g., riparian areas along streams, and grassland habitat adjacent to wetlands). In fact, 60% of amphibian species, 16% of reptiles, 34% of birds and 12% of mammals in the Pacific Coast ecoregion depend on riparian-stream systems for survival (Kelsey and West 1998). Many other species, including mountain lions and bobcats, often use riparian areas and natural ridgelines as migration corridors or foraging habitat (Dickson et al, 2005; Hilty & Merenlender, 2004; Jennings & Lewison, 2013; Jennings & Zeller, 2017). Additionally, fish rely on healthy upland areas to influence suitable spawning habitat (Lohse et al. 2008), and encroachment on these habitats and over-aggressive removal of riparian areas have been identified as a major driver of declines in freshwater and anadromous fish (e.g., Stillwater Sciences 2002; Lohse et al. 2008; Moyle et al. 2011). Therefore, establishing large buffers that allow for connectivity between the aquatic resource and upland	The comment is noted. See response to comment B10-9 regarding riparian habitat impacts and response to comment B8-1 regarding special-status species impacts.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			habitat in riparian areas is vital for many species to persist. The Project's inadequate mitigation will deteriorate the riparian habitat and connectivity value for federally threatened steelhead, chinook salmon, California giant salamanders, foothill yellow-legged frogs, western pond turtles, and the many other species that occur or have the potential to occur in and around the Project area.	
Center for Biological Diversity	9/26/2022	B9-6	A literature review found that recommended buffers around aquatic resources for wildlife often far exceeded 100 meters (~325 feet) (Robins, 2002). For example, Kilgo et al. (1998) recommend more than 1,600 feet of riparian buffer to sustain bird diversity. In addition, amphibians, which are considered environmental health indicators, have been found to migrate over 1,000 feet between aquatic and terrestrial habitats through multiple life stages (Cushman, 2006; Fellers & Kleeman, 2007; Semlitsch & Bodie, 2003; Trenham & Shaffer, 2005). For example, California red-legged frogs have been found to migrate about 600 feet between breeding ponds and non-breeding upland habitat and streams, with some individuals roaming over 4,500 feet from the water (Fellers & Kleeman, 2007). Newts have been documented traveling up to a mile from breeding ponds (Trenham, 1998). Western pond turtle nests have been found up to 1,919 feet from aquatic habitats and individuals have been documented to move regularly between aquatic habitats with long-distance movements of up to 2,018 feet (Sloan, 2012). Accommodating the more long-range dispersers is vital for continued survival of species populations and/or recolonization following a local extinction (Cushman, 2006; Semlitsch & Bodie, 2003). Therefore, even the best management practices that require 300-foot buffers from streams, ponds, and other wetlands from Oct 31-June 1 for reptiles and amphibians (BIO-9 –	The comment is noted. See response to comment B10-9 regarding riparian habitat impacts, comment B8-1 regarding special-status species impacts, comment B10-2 regarding wetland impacts, and comment B9-1 regarding wildlife connectivity.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			BIO-11) are insufficient for minimizing impacts to these and other species. In addition, more extensive buffers provide resiliency in the face of climate change-driven alterations to these habitats, which will cause shifts in species ranges and distributions (Cushman et al., 2013; Heller & Zavaleta, 2009; Warren et al., 2011). With the driest 22-year period in 1,200 years in the western US and drought conditions that will likely continue (Williams et al., 2022) climate change refugia and resilience provided by ecosystems like riparian areas will be ever more critical for species survival and ecosystem health. This emphasizes the need for sizeable upland buffers around streams and other aquatic resources, as well as connectivity corridors between heterogeneous habitats. The DEIR fails to adequately assess and mitigate impacts to local and regional wildlife movement and habitat connectivity.	
Center for Biological Diversity	9/26/2022	B9-7	Edge effects of development in and adjacent to open space, like the proposed Project, will likely impact key, wide-ranging predators, such as mountain lions and bobcats (Crooks, 2002; Delaney et al., 2010; Lee et al., 2012; Riley et al., 2006; J. A. Smith et al., 2015, 2017; Vickers et al., 2015; Y. Wang et al., 2017), as well as smaller species with poor dispersal abilities, such as song birds, small mammals, and herpetofauna (Benítez-López et al., 2010; Cushman, 2006; Delaney et al., 2010; Gray, 2017; Kociolek et al., 2011; Slabbekoorn & Ripmeester, 2008). Limiting movement and dispersal can affect species' ability to find food, shelter, mates, and refugia, especially after disturbances like fires or floods. Individuals can die off, populations can become isolated, sensitive species can become locally extinct, and important ecological processes	The comment is noted. See response to comment B10-9 regarding riparian habitat impacts, comment B8-1 regarding special-status species impacts, comment B10-2 regarding wetland impacts, and comment B9-1 regarding wildlife connectivity. See also MR-3 and MR-9 regarding the level of detail of analysis and programmatic nature of the DEIR and enforcement of policies.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			like plant pollination and nutrient cycling can be lost. Negative edge effects from human activity, such as traffic, lighting, noise, domestic pets, pollutants, invasive weeds, and increased fire frequency, have been found to be biologically significant up to 300 meters (~1000 feet) away from anthropogenic features in terrestrial systems (Environmental Law Institute, 2003). For example, field observations and controlled laboratory experiments have shown that traffic noise can significantly degrade habitat value for migrating songbirds (Ware et al., 2015). Subjects exposed to 55 and 61 dBA (simulated traffic noise) exhibited decreased feeding behavior and duration, as well as increased vigilance behavior (Ware et al. 2015). Such behavioral shifts increase the risk of starvation, thus decreasing survival rates. Policies like 2-13 and 2-14 that require signage and fencing to the wildlife corridor and creek corridor (with unspecified boundaries) and restrict off-leash pets, respectively (DEIR at 238), will not reduce the impacts of increased human activity, traffic, noise, light, etc. And although Policy 2-26 prohibits "the use of all pesticides, rodenticides, and poisons in materials and procedures used in landscaping, construction, and site maintenance within the Planning Area" (DEIR at 132), there is no mechanism of enforcement for this (or other best management practices) provided. The DEIR does not provide substantial evidence, as CEQA requires, that its proposed mitigation will reduce the Project's biological impacts to less than significant.	
Center for Biological Diversity	9/26/2022	B9-8	It is estimated that 90-95% of historic riparian habitat in the state has been lost (Bowler, 1989; Riparian Habitat Joint Venture, 2009). Using 2002 land cover data from CalFire, the Riparian Habitat Joint Venture estimated that riparian vegetation makes up less than 0.5% of California's total	The comment is noted. See response to comment B10-9 regarding riparian habitat impacts, comment B8-1 regarding special-status species impacts, comment B10-2

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			land area at about 360,000 acres (Riparian Habitat Joint Venture, 2004). This is alarming because riparian habitats perform a number of biological and physical functions that benefit wildlife, plants, and humans, and loss of what little is left will have severe, harmful impacts on special-status species, overall biodiversity, and ecosystem function. California cannot afford to lose more riparian corridors.	regarding wetland impacts, and comment B9-1 regarding wildlife connectivity.
Center for Biological Diversity	9/26/2022	B9-9	The DEIR fails to adequately describe, assess, and mitigate the Project's significant impacts to wildfire risk. The DEIR ignores important wildfire history and therefore fails to adequately describe, assess, and mitigate the Project's impacts to wildfire risk. The DEIR fails to mention or discuss the area's historical fire regimes and the role Indigenous communities likely played in shaping the fire ecology of habitats in and adjacent to the Project area. Wildfires due to lightning strikes and Indigenous cultural burning have occurred on California's landscapes for millennia. They're a natural and necessary process for many of California's ecosystems. But some of the recent fires have been exceptionally harmful to communities. In the past 200 years since European colonization, forced relocation and cultural genocide of Native Tribes, fire suppression and poor land management combined with poor land-use planning have shifted historical fire regimes throughout the heterogeneous ecosystems of the state. In addition, hotter, drier and more extreme weather conditions due to climate change make the landscape more conducive to wildfire ignitions and spread. Almost all (95-97%) contemporary wildfires are caused by humans and/or human infrastructure (Balch et al., 2017); therefore, the placement of new roads and development in and/or adjacent to high and very high fire hazard severity zones requires careful and comprehensive analyses of the area's	The comment is noted. The DEIR outlines the area's wildfire environmental setting, including the impacts of recent wildfires starting on page 500 of the DEIR. The DEIR does note that development will occur adjacent to a VHFHSZ. However, pages 518 and 519 outline various State, regional, and local regulations and proposed policies that would reduce wildfire risk to a less than significant level. See also, Master Response 4.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			fire history, the various ecosystems' fire ecology, and potential mitigation measures to reduce risk of ignition and fire within the Project area and spreading to nearby communities. The DEIR falls tragically short in this respect.	
Center for Biological Diversity	9/26/2022	B9-10	Decision-makers, including the County, must work to include Indigenous communities in climate change and wildfire discourse and planning. These communities are disproportionately affected by wildfire. Native Americans were found to be six times more likely than other groups to live in high fire-prone areas, and high vulnerability due to socioeconomic barriers makes it more difficult for these communities to recover after a large wildfire (Davies et al., 2018). In addition, farmworkers, who are majority people of color and often include migrant workers that come from Indigenous communities, often have less access to healthcare due to immigration or economic status. They are more vulnerable to the health impacts of poor air quality due to increased exposure to air pollution as they work. Yet farmworkers often have to continue working while fires burn, and smoke fills the air, or risk not getting paid (Herrera, 2018; Kardas-Nelson et al., 2020; Parshley, 2018).	The comment is noted. Pursuant to CEQA requirements as noted on page 46 of the DEIR, the County contacted nine tribal representatives in February 2022, providing information about the planning process and inviting them to initiate consultation under AB 52 if desired. One response was received from the Federated Indians of Graton Rancheria requesting further consultation. In addition, the Lytton Rancheria of California shared knowledge of historical Native American occupants. Correspondence from tribal contacts is included in Appendix C.
Center for Biological Diversity	9/26/2022	B9-11	"Indigenous communities have often been marginalized in the sciences through research approaches that are not inclusive of their cultures and histories." Traditional ecological knowledge ("TEK") is often excluded from analyses or distilled to conform to Western science (Ramos, 2022). The DEIR fails to acknowledge that Indigenous communities and cultural burning played a role in California's historical fire regime. Consultation with local Native Tribes and incorporation of Indigenous science, including but not limited to oral histories,	The comment is noted. See response to comment B9-10. The DEIR adequately explains the potential wildfire risks to development under the Proposed Plan under Impact 3.16-2 on page 518 of the DEIR as well as regulations and proposed policies that would mitigate this risk to a less than significant level. The analysis discloses and considers recent fire activity in and around the project site area and takes that activity into account. See also Master Response 4. Further, issues of cultural burning

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			ethnographies (that may include burn scars and charcoal records), and archeological data should be incorporated in fire history analysis. As a society, we need to work towards integrative research that "transcends disciplinary boundaries" and employs a range of methodological options to get a deeper understanding of the relationship between people and ecosystems (Ramos, 2022). Doing so will help inform fire management strategies and mitigation measures that work towards reducing harms of wildfire to people while facilitating beneficial fire for the appropriate ecosystems. The DEIR fails to adequately describe, assess, and mitigate the Project's impacts to wildfire risk and therefore fails to comply with CEQA.	were not raised through the tribal consultations process by the interested tribes.
Center for Biological Diversity	9/26/2022	B9-12	The DEIR also fails to provide adequate mitigation to reduce wildfire risk to less than significant. For example, the DEIR points to the Mayacamas Volunteer Fire Department and the construction of a new fire station to "meet the needs of the population under buildout" and therefore "would not substantially impair [] emergency response procedures" (DEIR at 511). However, it is unclear if human and monetary capital will be sufficient to sustain and maintain the new fire station. The DEIR does not specify how the Applicant will ensure the fire station will be adequately staffed so that quick response times are possible, nor is there assurances that there will be funding to operate and maintain the fire station. As such, it is too vague, unenforceable, and unsupported by evidence to qualify as adequate mitigation under CEQA. According to Captain Michael Feyh of the Sacramento Fire Department, California no longer has a fire season (Simon 2018); wildfires in California are now year-round because of increased human ignitions in fire-prone areas. Emergency	The comment is noted. According to Impact 3.13-1 on page 401 of the DEIR, the Proposed Plan would require the expansion of the existing Sonoma County fire district to serve the Planning Area and identify a location for the fire district to construct a new fire station within the Core Campus in order to meet the needs of the population under buildout (proposed Policy 6-1). The new location of the fire station will be within the Core Campus to ensure easy and proximate emergency access to Arnold Drive with minimal crossings of pedestrian and bicycle routes. Funding and staffing of this service is related to the Specific Plan and not the adequacy of the DEIR and increased demand for emergency services is an economic impact rather than an environmental impact, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			calls to fire departments have tripled since the 1980s (Gutierrez and Cassidy 2018), and firefighters (and equipment) are being spread thin throughout the state. Firefighters often work 24- to 36-hour shifts for extended periods of time (often weeks at a time), and they are being kept away from their homes and families for more and more days out of the year (Ashton et al. 2018; Bransford et al. 2018; Del Real and Kang 2018; Gutierrez 2018; Simon 2018).	
Center for Biological Diversity	9/26/2022	B9-13	The extended fire season is taking a toll on the physical, mental, and emotional health of firefighters, as well as the emotional health of their families (Ashton et al. 2018; Del Real and Kang 2018; Simon 2018). The physical and mental fatigue of endlessly fighting fires and experiencing trauma can lead to exhaustion, which can cause mistakes in life-or-death situations while on duty, and the constant worry and aftermath that family members endure when their loved ones are away working in life-threatening conditions can be harrowing (Ashton et al. 2018). According to psychologist Dr. Nancy Bohl-Penrod, the strain of fighting fires without having sufficient breaks can impact firefighters' interactions with their families, their emotions, and their personalities (Bransford et al. 2018). There have also been reports that suicide rates and substance abuse have been increasing among firefighters (Greene 2018; Simon 2018). This is not sustainable. And California's firefighter shortage is getting worse while more extreme heat waves due to climate change are making firefighting even more dangerous (Alexander, 2022; H. Smith & Mejia, 2022)(Smith and Mejia 2022; Alexander 2022). Recent wildfires have been exceptionally harmful to people. Between 2015 and 2020 almost 200 people in the state were killed in wildfires, more than 50,000 structures	The comment is noted. The DEIR adequately explains the potential wildfire risks to development under the Proposed Plan under Impact 3.16-2 on page 518 of the DEIR as well as regulations and proposed policies that would mitigate this risk to a less than significant level. Analysis of social impacts of fires is beyond the scope of this program EIR, and due to the amount of speculation involved, would not result in a meaningful analysis.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			burned, hundreds of thousands of people had to evacuate their homes and endure power outages, and millions were exposed to unhealthy levels of smoke and air pollution. Human-caused wildfires at the urban wildland interface that burn through developments are becoming more common with housing and human infrastructure extending into fire-prone habitats, and homes and structures can add fuel to fires and increase spread (Knapp et al., 2021). This is increasing the frequency and toxicity of emissions near communities in and downwind of the fires. Buildings and structures often contain plastic materials, metals, and various stored chemicals that release toxic chemicals when burned, such as pesticides, solvents, paints, and cleaning solutions (Weinhold, 2011). This has been shown with the 2018 Camp Fire that burned 19,000 structures; the smoke caused dangerously high levels of air pollution in the Sacramento Valley and Bay Area and CARB found that high levels of heavy metals like lead and zinc traveled more than 150 miles (CARB, 2021).	
Center for Biological Diversity	9/26/2022	B9-14	In addition, there are significant economic impacts of wildfires on residents throughout the state. One study estimated that wildfire damages from California wildfires in 2018 cost $148.5 billion in capital losses, health costs related to air pollution exposure, and indirect losses due to broader economic disruption cascading along with regional and national supply chains (D. Wang et al., 2021). Meanwhile the cost of fire suppression and damages in areas managed by the California Department of Forestry and Fire (Cal Fire) has skyrocketed to more than $23 billion during the 2015-2018 fire seasons.The DEIR fails to acknowledge that development and human infrastructure in high fire-prone areas increases the risk of igniting wildfires.	The comment is noted. The DEIR does acknowledge on page 518 that development under the Proposed Plan could result in potentially significant impacts from exacerbating wildfire risks. Further, the DEIR states that "Overall, only five percent of wildfires in California are caused by lightning strikes; the majority—95 percent—are caused by human activity. Major causes of wildfires in Sonoma County include lightning strikes, wind-damaged electrical transmission lines, power equipment use, burning of debris, vehicles driven over dry grass or brush, arson, campfires, and others." (DEIR at p. 500.) See response to comment B9-13. In addition, Policy 6-21

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			As detailed in a 2021 Center Report (Yap, Rose, Broderick, et al., 2021), development in highly fire-prone areas increases unintentional ignitions, places more people at risk (within and downwind of the Project area), and destroys native shrubland habitats that support high levels of biodiversity. Almost all contemporary wildfires in California (95-97%) are caused by humans in the wildland urban interface (Balch et al., 2017; Radeloff et al., 2018; Syphard et al., 2007; Syphard & Keeley, 2020). For example, the 2019 Kincade Fire, 2018 Camp and Woolsey fires, and 2017 Tubbs and Thomas fires were sparked by powerlines or electrical equipment. And although many of the 2020 fires were sparked by a lightning storm, the Apple Fire was caused by sparks from a vehicle, the El Dorado Fire was caused by pyrotechnics at a gender-reveal celebration, the Blue Ridge Fire was likely caused by a house fire, and electrical equipment is suspected to have ignited the Silverado and Zogg fires. Roads and energy infrastructure are sources of wildfire ignitions, and the Project will be placing both in high and very high fire hazard severity zones.	would require all new and existing utility lines be buried underground to mitigate additional wildfire risk.
Center for Biological Diversity	9/26/2022	B9-15	Policy 2-31 is grossly insufficient to mitigate the Project's impacts to wildfire risk. The proposal to construct a "managed landscape buffer along western and eastern edges of the Core Campus to aid in fire defense consisting of a shaded fuel break in wooded areas and grazed or mown grassland" and bulldozing shrubland and chaparral within the buffer (DEIR at 507) is vague and not based on sound science or substantial evidence. The DEIR disclosed neither the size of the buffer nor its exact location. And the DEIR provides no evidence that such a buffer would reduce ignition risk or prevent the spread of a wildfire either into or out of the Project area. The DEIR is also silent on what	The comment is noted. Policy 2-31 is adequate in mitigating wildfire risk. The Governor's Office of Planning and Research published the Wildland-Urban Interface Planning Guide in August 2022 located here: https://opr.ca.gov/docs/20220817-Complete_WUI_Planning_Guide.pdf. Best practices identified in this document include defensible space guidelines to maintain managed landscape buffers. This, Policy 2-31 is in accordance with State planning guidance. Please see also MR-3 regarding the programmatic nature of the DEIR. The DEIR does not assess project-specific impacts of potential future projects

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			the environmental impacts (e.g., additional habitat destruction) will be from implementation of this measure. (CEQA Guidelines §15126.4(a)(1)(D).)The DEIR fails to adequately mitigate the Project's impacts to wildfire ignition risk, and fails to consider feasible mitigation measures. New infrastructure in high fire-prone areas should be avoided. If unavoidable, mitigation measures should require structures to have ember-resistant vents, fire-resistant roofs, and irrigated defensible space immediately adjacent to structures (Knapp et al., 2021; Syphard et al., 2014; Syphard & Keeley, 2020). External sprinklers with an independent water source could reduce structures' flammability. Rooftop solar and clean energy microgrids could reduce fire risk from utilities' infrastructure during extreme weather. The County should commit to evidence-based mitigation measures that include equitably retrofitting existing communities near the Project area with similar fire-resilient measures and providing wildfire personal protective equipment (e.g., N95 masks, air purifiers) to nearby communities. Transmission lines could be placed underground. In addition, education and awareness for residents, visitors, and nearby communities should be provided and include how to reduce ignition risk.	under the proposed Plan, all of which are required to comply with CEQA as applicable. See also response to comment B9-13. Further, impacts do not support mitigation measures outside the Planning Area.
Center for Biological Diversity	9/26/2022	B9-16	In addition, wildfire mitigation must include emergency services and evacuation plans that are inclusive and consider diverse populations and vulnerable groups. Wildfire impacts disproportionately affect low-income and minority communities. As discussed in the Center's 2021 Built to Burn report (Yap et al., 2021): Past environmental hazards have shown that those in at-risk populations (e.g., low-income, elderly, disabled, non-English-speaking, homeless) often have limited resources for disaster	The comment is noted. See MR-4 regarding the adequacy of the wildfire evacuation analysis. Further, County evacuation plans already take into account issues associated with sensitive populations. See Impact 3.16-1; implementation of the Proposed Plan would not impair an emergency response or emergency evacuation plan and impacts would be less than significant.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			planning and preparedness (Richards, 2019). Vulnerable groups also have fewer resources to have cars to evacuate, buy fire insurance, implement defensible space around their homes, or rebuild, and they have less access to disaster relief during recovery (Davis, 2018; Fothergill & Peak, 2004; Harnett, 2018; Morris, 2019; Richards, 2019). In addition, emergency services often miss at-risk individuals when disasters happen because of limited capacity or language constraints (Richards, 2019). For example, evacuation warnings are often not conveyed to disadvantaged communities (Davies et al., 2018). In the aftermath of wildfires and other environmental disasters, news stories have repeatedly documented the lack of multilingual evacuation warnings leaving non-English speakers in danger. (Axelrod, 2017; Banse, 2018; Gerety, 2015; Richards, 2019). Survivors are left without resources to cope with the death of loved ones, physical injuries and emotional trauma from the chaos that wildfires have inflicted on their communities.	
Center for Biological Diversity	9/26/2022	B9-17	Health impacts from wildfires, particularly increased air pollution from fine particulates (PM2.5) in smoke, also disproportionately affect vulnerable populations, including low-income communities, people of color, children, the elderly and people with pre-existing medical conditions (Delfino et al., 2009; Hutchinson et al., 2018; Jones et al., 2020; Künzli et al., 2006; Reid et al., 2016). Increased PM2.5 levels during wildfire events have been associated with increased respiratory and cardiovascular emergency room visits and hospitalizations, which were disproportionately higher for low socioeconomic status communities and people of color (Hutchinson et al., 2018; Jones et al., 2020; Liu et al., 2017; Reid et al., 2016).	The comment is noted. See MR-4 regarding the adequacy of the wildfire evacuation analysis. Further, it is speculative to try and analyze PM2.5 emissions from an unknown future fire event without undue speculation. CEQA requires (see, for example, CEQA Guidelines Section 15064), which states, “In evaluating the significance of the environmental effect of a project, the Lead Agency shall consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment.” As an informational document, the Specific Plan EIR is required to study only reasonably foreseeable consequences. CEQA does not require an

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			Similarly, asthma admissions were found to have increased by 34% due to smoke exposure from the 2003 wildfires in Southern California, with elderly and child age groups being the most affected (Künzli et al., 2006). Farmworkers, who are majority people of color, often have less access to healthcare due to immigration or economic status. They are more vulnerable to the health impacts of poor air quality due to increased exposure to air pollution as they work. Yet farmworkers often have to continue working while fires burn, and smoke fills the air, or risk not getting paid (Herrera, 2018; Kardas-Nelson et al., 2020; Parshley, 2018). The DEIR fails to adequately assess and mitigate the Project's impacts to wildfire risk, including evacuation and community safety.	agency to assume an unlikely worst-case scenario in its environmental analysis.
Center for Biological Diversity	9/26/2022	B9-18	Conclusion: We are in the midst of a global extinction crisis, with species going extinct at a rate of over 1,000 times the background rate and more than one million species on track to become extinct over the coming decades (Pimm et al., 2014). We are also in the midst of a climate crisis in which intensifying climate change is contributing to increasing extreme fire weather, longer fire seasons, and more area burned annually (Abatzoglou & Williams, 2016). The County should work to safeguard the region's biodiversity, remaining wildlife habitat, and climate change resilience by preserving remaining wildlife connectivity areas, particularly where special-status species are known to occur, like the Project area. The DEIR fails to adequately assess and mitigate the Project's impacts to special-status species, sensitive habitats, wildlife connectivity, and wildfire risk. The County should recirculate a revised EIR that remedies the deficiencies identified in this letter, and recirculate it for public review and comment. Thank you for the opportunity to submit comments on the	The comment is noted. The comment does not specifically address how the DEIR is inadequate, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			DEIR. Please include the Center on your notice list for all future updates to the Project and do not hesitate to contact the Center with any questions at the email addresses listed below.	
Sonoma Ecology Center (SEC)	9/26/2022	B10-1	Comments on the draft SDC Specific Plan Significant effort has been made to develop the SDC Specific Plan in response to community and agency issues of concern. While laudable, there are several topics related to areas of our expertise, and in others cases globally, where the plan misses key opportunities, some critical, to address these concerns. Following are comments from Sonoma Ecology Center to support Sonoma County's efforts to develop an exceptional plan for this exceptional site. Appendix A: Conditions of Approval Most of the policies in the draft Specific Plan have no Conditions of Approval to implement them. This needs to be corrected. Unless Conditions of Approval enforce the Plan's intent, the EIR cannot claim that mitigating actions will occur. Because many policies are vague or unenforceable–using words like "promote," "encourage," "if feasible"--such words must be removed from the Conditions of Approval, or else the Conditions cannot be considered mitigation commitments. Conditions of Approval in the draft Plan do not provide any means to control impacts after the construction period; that is, during the decades of operation and occupancy. This needs to be corrected by adding Conditions of Approval that describe enforceable, objective standards that will apply after construction.	Thank you for your comment letter. The comment is noted. The Standard Conditions of Approval document consists of conditions required to be implemented upon development of the Proposed Plan to mitigate potential environmental impacts along with proposed policies. See also MR-1 regarding the adequacy of a self-mitigating Specific Plan.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Sonoma Ecology Center (SEC)	9/26/2022	B10-2	Similarly, many policies designed to protect ecological resources must be carried through to the actions of future residents and occupants of the property, and therefore should be required to be included in CC&Rs, as exemplified in a single policy of the draft Plan, Policy 2-26. A list of objective, enforceable items to be included in future CC&Rs (Dark Skies, pet policies, fence specifications, native and drought-tolerant landscaping, no pesticides in landscaping, etc) should be provided in the COM section of the Conditions of Approval. Protections of wetlands are insufficient in the draft Plan. In order to implement Goal 6E, wetlands must be fully documented before any construction occurs. Therefore, add to BIO-1 after the first sentence "Identifying sensitive habitats includes a jurisdictional wetland delineation and designation of wetlands in Sonoma County zoning code." BIO Conditions of Approval require two types of corrections before the Plan can claim to mitigate environmental impacts. First, additional species need to be added to the BIO Conditions of Approval, so that the Conditions cover all known occurring species, as detailed in the datasets described in our April 5, 2022 letter and reiterated in our September 26, 2022 comment on the DEIR. Second, Conditions of Approval need to mitigate impacts after construction, during occupation and use of the site. These Conditions will need to codify ongoing mitigations described in the Plan and its policies, within any areas known now or in the future to harbor protected species, such as prohibiting dogs, prohibiting ground-disturbance land management techniques such as	The comment is noted. According to Impact 3.4-3 on page 253 of the DEIR, future development under the Proposed Plan would be subject to the requirements of Clean Water Act Section 404 and 401 permitting requirements, which would limit and/or mitigate impacts from projects that would discharge pollutants or dredged or fill materials into waters of the state, including wetlands. Future development would also be subject to the CDFW Lake and Streambed Alteration Program, which would require any project that could substantially divert or obstruct the flow of; substantially change or use any material from; or deposit debris into a river, stream, or lake to agree to measures that would protect existing fish or wildlife resources. Conformance with these policies, Measure BIO-1 and the Conditions of Approval Measures BIO-15 and BIO-16 would result in less than significant impacts on wetlands from future projects. See also response to comment B8-2 and B8-18 regarding wetland policy amendments. See also response to comment B8-1 regarding special-status species. See also MR-9.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			tilling, prohibiting entry of heavy equipment such as trucks, masticators, or tractors, etc.	
Sonoma Ecology Center (SEC)	9/26/2022	B10-3	The effectiveness of mitigating provisions and policies cannot be assessed unless the Plan and the Conditions of Approval mandate a permanent monitoring program, beginning before demolition or construction begins, to detect and regularly report wildlife use patterns, abundance of protected and indicator species, streamflow, and water levels in major wetlands. Therefore, please add such a program in both the Plan (Chapters 2, 6, and potentially others) and the Conditions of Approval. Revise MOB-2 so that it implements Goals 2D and 2E, as follows: "Construction of the Highway 12 connector should shall avoid damage to biological, scenic and open space resources such as protected biological species, protected habitats such as wetlands, trees, rock outcroppings, and historic buildings to the greatest extent feasible." Western Pond Turtles (a California species of special concern) are documented to breed in the degraded wetlands that run from the northern to the southern edges of the property east of Lake Suttonfield, including the old horse corral. These wetlands were once connected to wetlands in Sonoma Valley Regional Park where Endangered Sonoma Sunshine (Blennosperma bakeri) occurs. California Clam-shrimp, an Endangered crustacean that specializes in seasonal pools, occurs in unmapped seasonal ponds near the southern proposed route for a road linkage to Hwy 12.	Comment noted. See MR-9 regarding mitigation monitoring. See also response to comments B8-16 and B8-18 regarding Highway 12 policy amendments. See response to comment B8-1 regarding special-status species. See also MR-9.
Sonoma Ecology Center (SEC)	9/26/2022	B10-4	2.1 Open Space Management Framework Goal 2-B and Table 4.3 suggest there is agriculture planned in Preserved Open Space (i.e. outside the agrihood), but such agricultural uses are not shown on any maps or limited in acreage or location by any text. Please fix this, particularly in light of known sensitive species and habitats	The comment is noted. As stated on page 94 of the DEIR, proposed Goal 2-A would preserve the open space surrounding the core campus in public ownership in perpetuity, preventing further development in undeveloped areas and ensuring ongoing stewardship in partnership with neighboring State and regional parks and

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			in many areas of the Preserved Open Space; otherwise the Plan cannot claim to implement Guiding Principle 3 to Integrate Development with Open Space Conservation.	other institutions and organizations. Agricultural activities would only occur in the historic agricultural area on the east side of the site, but nowhere else. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-5	2.2 Biological Resources and Wildlife Corridors: A. Figure 4.1-2 and other Plan maps are only partially consistent with Goal 2E and Policy 2-6 to "expand the wildlife corridor." The low/medium residential area north of the ballfields (the location of the Bane/Thompson building) is a key border with the narrowest part of the corridor, including high-value riparian habitat and access to year-round water in Sonoma Creek. To fulfill Goal 2E and Policy 2-6, this area should not be built on, and if it remains as a development area, it should have a 100' setback from Sonoma Creek or preserve all existing native trees, whichever width is greater. Also, to reduce corridor disturbance in this pinchpoint area, structures between the two Arnold Drive bridges should be removed and not replaced.	The comment is noted. Please see MR-7 regarding impacts of the Proposed Plan on wildlife movement. See also response to comment B8-3, B8-15, B8-16, and B8-19 for wildlife corridor policy amendments. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-6	B. Policy 2-8 is not enforceable as written and needs to be changed to, for example, "...the Project Sponsor will develop and execute a maintenance program…" C. Policy 2-10, as written, can not achieve its intent if its language remains vague and unenforceable. To fix this, remove "If possible".	The comment is noted; however, it is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-7	D. Policy 2-12 restricts development to limited trails and signage, and minimizes development of trails within wildlife and creek corridors. However, this policy's lack of specificity may impact wildlife and other biotic resources. Expand the policy such that: paths and recreational areas	The comment is noted. Please see MR-7 regarding impacts of the Proposed Plan on wildlife movement. See also response to comment B8-3, B8-15, B8-16, and B8-19 for wildlife corridor policy amendments. The remainder of the comment is related to the Specific Plan

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			shall not be placed on the northern edge of the core campus where the wildlife corridor is narrowest.	and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-8	E. Policy 2-16, as written, does not fulfill Goal 2E. To fix this, clarify that the policy applies to "open space" both inside the core campus and outside it, with the exceptions of 1) fenced back yards of residences and 2) fences meant to direct movement of and reduce hazards to wildlife.	The comment is noted. Specific Plan Policy 2-16 describes fencing requirements that are focused on maintaining wildlife corridor function. The comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-9	F. Policies 2-25 and 2-27 (riparian corridor protections) do not fulfill Goal 2-D. a. To avoid confusion, please use language consistent with Sonoma County policy and zoning by changing "protective buffers" to "riparian corridors". b. The 50' riparian corridor protections mapped by Permit Sonoma (see map) in SDC, and copied in Policies 2-25 and 2-27, are anomalous and should be made consistent with the logic of riparian corridor widths everywhere else in Sonoma Valley; that is, where Sonoma Creek adjoins low-density land uses or open space, the corridor width is 100'. c. Riparian corridor setbacks need to be larger where green infrastructure projects are planned to reduce flooding and enhance terrestrial and aquatic wildlife habitat. Please see the Upper Sonoma Creek Restoration Vision. Where there are vertically eroding banks, these projects will pull the top of bank back, to create banks that can slow storm flows and stabilize the creek corridor. Riparian corridors in the Plan should be established from these new top-of-bank locations, which could be 50 or 100 feet or more back from the existing, vertical bank top, rather than using a generic setback width based on today's conditions. d. Please either include Asbury Creek alongside Sonoma and Hill Creeks in Policies 2-25 and 2- 27, or justify its exclusion.	The comment is noted. As noted on page 252 of the DEIR, Policy 2-25 requires inclusion of protective buffers of at least 50 feet along Sonoma and Mill creeks, as measured from the top-of-bank, to protect the sensitive communities. Section 7-14.5 of the Sonoma County Code establishes stream setbacks for structures requiring a building permit, with minimum setbacks equal to the greatest of 1) two and one-half times the height of the stream bank plus 30 feet, 2) 30 feet outward from the top of the stream bank, or 3) any distance established in the general plan and/or zoning code. Future development would be subject to these setbacks' requirements. If riparian habitat and other sensitive natural communities are present and disturbance is required, federal and State regulations would require measures to reduce, avoid, or compensate for impacts to these resources. The requirements of these regulations are implemented through the permit process as indicated in Conditions of Approval Measure BIO-14. In addition, Conditions of Approval Measure BIO-1 requires conducting specific project biological resource assessments prior to commencement of any project. With implementation of Measure BIO-1 and Conditions of Approval Measure BIO-14, impact of future development under the Proposed Plan on riparian habitat or sensitive natural

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
				communities would be less than significant. See also response to comment B8-5 and B8-9 regarding riparian area policy amendments. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-10	Policy 2-26 and Policy 6-17, which both prohibit use of pesticides in landscaping, need a Condition of Approval to implement them, that applies during operation, not just construction.	The comment is noted. See response to comment B8-14 regarding amendments to policies 2-26. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-11	H. Policy 2-28, as written, will not achieve Goal 2D. To fix this, change to "... conduct studies identifying the presence of special-status species and sensitive habitats at proposed development sites, including wetland delineation, …"	The comment is noted. See response to comments B8-2 and B8-18 regarding wetland delineation policy amendments.
Sonoma Ecology Center (SEC)	9/26/2022	B10-12	Goal 2E, to enhance and expand the wildlife corridor, cannot be implemented unless wildlife permeability extends past the current SDC boundaries. Therefore, add a policy that future owner(s) of the Preserved Open Space shall positively participate with any surrounding property owners, CalTrans, and Sonoma County TPW to improve wildlife habitat and permeability across property boundaries, up to and including the eventual construction and maintenance of a wildlife overpass or underpass across Hwy 12.	The comment is noted. Please see MR-7 regarding impacts of the Proposed Plan on wildlife movement. See also response to comment B8-3, B8-15, B8-16, and B8-19 for wildlife corridor policy amendments. The remainder of the comment is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-13	3. Mobility and Access Policy 3-16 "Create a multi-use creek trail running parallel to Sonoma Creek that connects to a greater Glen Ellen-Eldridge community bikeway." conflicts with Policy 2-25 to protect wildlife and other functions of riparian areas. To correct this, change Policy 3-16 to locate most of the north-south trail outside the riparian corridor setback. Trails should not occur in riparian corridors except for short	The comment is noted. At stated on page 234 of the DEIR, Proposed Plan Policy 2-25 establishes a 50-foot minimum setback from Sonoma Creek that ensures that new development would not occur in the vicinity of the area. Thus, all development would adhere to riparian setback requirements. The remainder of the comment is

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			distances (these are habitat areas first, recreation areas second). Add a policy that there shall be no new pedestrian bridges over Sonoma Creek unless built high above the riparian zone such that wildlife are not affected. SCTA has conducted studies showing that a large fraction of passenger vehicle trips in Sonoma Valley are to drop off and pick up school children. In order to fulfill Goal 3-F and Policy 3-41, add a policy to provide free bus service to and from local primary and secondary schools.	related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-14	4. Land Use If Goal 2E is to "Maintain and enhance the size and permeability of the Sonoma Valley Wildlife Corridor", then a map of the corridor's current size (Figure 1.6-2) is insufficient to guide land use. That map must be augmented by a map of the future, larger corridor, otherwise it is not possible to know where Policies 2-6 to 2-10, 2-12, and 2-13 "within the wildlife corridor" apply. If Goal 2E is to be achieved, special protections are needed for the narrowest, most vulnerable portion of the wildlife corridor, beyond the protections of other areas of Preserved Open Space. To accomplish this, add a new land use designation, potentially called "Corridor Pinchpoint," where no uses (in the sense of "use" in Table 4-3) are permitted. The Corridor Pinchpoint is the area bounded on the south by the ballfields, on the west by a line extending north from Manzanita, on the north by the Planning Area boundary, and on the east by a line extending north from Railroad. Change instances of "the wildlife corridor" in all Policies to "the Corridor Pinchpoint."	The comment is noted; however, it is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Sonoma Ecology Center (SEC)	9/26/2022	B10-15	Table 4-3, Permitted Uses, must remove or condition land uses that are in conflict with the Plan's Guiding Principles, Goals, and/or the stated intent of the individual land use classifications:	The comment is noted; however, it is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			● Remove Timberland conversion and Tasting Rooms as permitted or conditionally permitted uses from the Agriculture and Resource Based Land Use category of the table in the Preserved Open Space column. Change all other uses in the Agriculture and Resource Based Land Use category of the table from "Permitted" to "Conditional Use Permit" in the Preserved Open Space column. ● Change all permitted uses in the Transportation, Energy, Public Facilities Land Use category of the table from "Permitted" to "Conditional Use Permit" in the Preserved Open Space and Buffer Open Space columns.	
Sonoma Ecology Center (SEC)	9/26/2022	B10-16	The stated purpose of Preserved Open Space (p. 4-10) is not carried through to any policies or Conditions of Approval. To remedy this, add enforceable policies in chapter 4.4, including a policy to the effect that "Within Preserved Open Space, multi-benefit water resources projects shall be an acceptable use of land, where such projects protect or create habitat and recreation benefits, deliver water benefits to people and nature, and do not impede wildlife permeability.	The comment is noted. See response to comments B8-5, B8-9, and B8-18 for water-related policy amendments.
Sonoma Ecology Center (SEC)	9/26/2022	B10-17	6. Public Facilities, Services, and Infrastructure In order to implement Goal 6-E, safeguarding SDC's water supply for human and ecosystem needs, these provisions need to be added to policies in Chapter 2, potentially in Chapter 6, and in the Conditions of Approval: ● Lake Suttonfield, Fern Lake, Eldridge Marsh, and all mapped wetlands shall have development setbacks of 100' or greater. This setback is consistent with Sonoma County's policies (see table of wetland setbacks here). ● Connectivity between water features (lakes, creeks, vernal pools, intermittent streams) shall be enhanced and	The comment is noted. Development would be pursuant to all Sonoma County regulatory setback standards, including requirements outlined in the County Code and General Plan. See response to comments B8-5, B8-9, and B8-18 for water-related policy amendments.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
			maintained. Connectivity means the presence of vegetated native plant cover, absence of roads, ditches, and other barriers to water or animal movement, and absence of human presence. ● Water-related features, including swales, intermittent drainages, and seasonal waterways shall not be undergrounded, but instead shall be daylighted and enhanced as visual amenities and wildlife habitat. ● Eldridge Marsh (permanent and seasonal wetlands on the east side) shall be restored hydrologically and biologically, in part by blocking ditches that currently drain the area.	
Sonoma Ecology Center (SEC)	9/26/2022	B10-18	Policies affecting Roulette Springs fail to fulfill Goals 2D and Policy 2-21. As documented in the Sonoma Developmental Center Existing Conditions Report (PCI, 2015), this area is unique among wetlands in the region for its provision of a large, perennial, reliable source of water for people and nature. In order to fulfill Goals 2D and Policy 2-21, the policies and Conditions of Approval need to commit to proactively restoring and protecting Roulette Springs, instead of merely avoiding further damage to it and diversions from it, in order to maximize ecological benefit to wetland habitats and listed species. ● Add "and Roulette Springs" to Policy 2-21. ● Strengthen Policy 6-30 to proactively restore and protect Roulette Springs, instead of merely avoiding further damage to it, in order to maximize ecological benefit to wetland habitats and listed species.	The comment is noted. According to Impact 3.4-3 on page 253 of the DEIR, future development under the Proposed Plan would be subject to the requirements of Clean Water Act Section 404 and 401 permitting requirements, which would limit and/or mitigate impacts from projects that would discharge pollutants or dredged or fill materials into waters of the state, including wetlands. Future development would also be subject to the CDFW Lake and Streambed Alteration Program, which would require any project that could substantially divert or obstruct the flow of; substantially change or use any material from; or deposit debris into a river, stream, or lake to agree to measures that would protect existing fish or wildlife resources. Conformance with these policies, Measure BIO-1 and the Conditions of Approval Measures BIO-15 and BIO-16 would result in less than significant impacts on wetlands from future projects. See also response to comment B8-2 and B8-18 regarding wetland policy amendments.

Submitter	*Date*	*Comment Code*	*Individual Comment*	*Response*
Sonoma Ecology Center (SEC)	9/26/2022	B10-19	Chapter 7.6 Funding and Financing Mechanisms This section provides no actual funding/financing plan, just a description of many possible options. Please correct this omission by inserting a table showing the list of planned funding and financing options mechanisms, and how much funding or financing each would contribute to the total cost of implementing the Specific Plan, preferably presented in the phases of section 7.3.	The comment is noted; however, it is related to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-1	Sonoma Land Trust (SLT) provides these comments on the Draft Environmental Impact Report ("EIR") for the Sonoma Development Center Specific Plan ("Specific Plan," "Proposed Plan," or "Project"). The Sonoma Developmental Center ("SDC") property can play a pivotal role in providing much-needed affordable housing while protecting Sonoma County's ecological and recreational resources for future generations. The Specific Plan also presents a unique opportunity for California to demonstrate how redevelopment of a state-owned property can deliver community benefits such as climate resilience, affordable housing and expanded park access, while achieving priorities such as the 30x30 biodiversity conservation initiative. Because SDC is owned by the state, there is also a public trust obligation to conserve and protect the property—and especially the Sonoma Valley Wildlife Corridor—as an "ecological unit" above and beyond the specific direction provided by the 2019 legislation. Under the public trust doctrine, navigable waters, tidelands and wildlife resources are held in trust for all of the people, and the state acts as the trustee to protect these resources for present and future generations. This is acknowledged in Guiding Principles #3 and #4 of the Specific Plan. The Proposed Plan for the redevelopment of the SDC core campus will have significant and unidentified impacts to the local and regional environment—most notably to wildlife connectivity, wildfire safety, hydrology and management of water resources. As discussed in detail in Attachment A and in the analysis provided by biology, transportation, wildfire, and hydrology experts (Attachments B, C, D, E, and F),2 the EIR fails to adequately inform decisionmakers and the public about the numerous environmental impacts of the SDC Specific Plan. Instead the EIR defers both the required	Thank you for your comment letter. The comment is noted. Specific comments are responded to in the responses that follow.

Commenter	Date	Letter	Comment	Response
			analysis and development of mitigation measures to the future, which violates the basic requirements of the California Environmental Quality Act (CEQA).	
Sonoma Land Trust	9/26/2022	B11-2	The detailed comments of SLT focus on the additional analysis and evidence needed to fulfill CEQA's primary responsibility of fully disclosing the environmental consequences of this large-scale development project that will significantly alter the landscape of the Sonoma Valley. The attempt to use the concept of a "self-mitigating" Specific Plan avoids the responsibility of analyzing the impacts first to understand what needs to be mitigated, before jumping to the next step of determining what measures are necessary and effective to reduce impacts to less than significant. Put simply the EIR fails to "show its work" and connect the dots between the Project's significant impacts and the vague (and mostly deferred) mitigation measures contained in the Specific Plan.	The comment is noted. Please see MR-1 and MR-9.
Sonoma Land Trust	9/26/2022	B11-3	The incredible environmental values and assets of SDC—and the site's history and legacy of care—require an equally exceptional EIR and Specific Plan. These will be the guiding documents for decades to come, and the rush to meet an unrealistic deadline for approval of the EIR and Project that does not enjoy strong public support is unnecessary. SLT suggests an approach that will allow the County to still move forward in a timely manner to meet Project objectives, satisfy the 2019 legislation related to the disposition and future use of SDC, and improve and correct flaws in the environmental documents. This approach meets CEQA requirements, improves consistency with the County's General Plan and fulfills Guiding Principle #5 to promote sustainable development practices in building and landscape design. SLT recommends that the Planning Commission and Board of Supervisors decline	These are comments on the approval sequence and process, and commenter's desire to see analysis conducted after selection of a Master Developer, and not on the EIR, and are noted. See also MR-8.

Commenter	Date	Letter	Comment	Response
			to certify this EIR and instead direct staff to use the historic preservation alternative as the starting place for a new and revised preferred project, and a revised Specific Plan and EIR that addresses the flaws identified in the Attachments to this letter. We recommend that the historic preservation alternative be revised to start with an affordable housing project of 200+/- homes (Phase 1), and to allow for future development phases consistent with whichever proposal the California Department of General Services (DGS) selects as the winning bid pursuant to their surplus property sale process for the SDC core campus. The EIR acknowledges that the County and public have no accurate estimate of how much development will actually occur at SDC, because we don't know which proposal DGS will select to enter into an Exclusive Negotiating Agreement for the sale of the campus. As the EIR states on page 77: "...development of most of the properties in the Planning Area would be implemented through the market-driven decisions that the selected buyer(s) would make for their properties, and no development rights or entitlements are specifically conferred with the Proposed Plan. Furthermore, given that the majority of future development under the Proposed Plan is residential, varying levels of density bonuses are available under the State depending on the level of affordable housing provided. Thus, it is difficult to project the exact amount and location of future development that may result." According to the schedule released by DGS, a buyer will be selected in late October, which gives Permit Sonoma, the public and the decision makers an opportunity to focus on a real-world proposal that will drive "the exact amount and location of future development." This will also resolve the problem of	

Commenter	Date	Letter	Comment	Response
			speculating about financial feasibility and making unfounded assumptions on how much and what type of housing needs to be built on the site to subsidize the affordable housing mandates.	
Sonoma Land Trust	9/26/2022	B11-4	Importantly, the historic preservation alternative also requires significant modification to expand the wildlife corridor, riparian and open space protections and setbacks. SLT's top priority is ensuring that the Specific Plan furthers Guiding Principle #3. Therefore, the revised historic preservation alternative must include and meet the following specific performance standards: • Provide sufficient setbacks from all creeks designed to protect water quality and quantity, instream and riparian habitat, and wildlife connectivity • Provide a sufficient buffer that reduces the current footprint of the north side of the SDC campus adjacent to Sonoma Creek to allow wildlife to safely travel through the Sonoma Valley Wildlife Corridor • Ensure human activities and improvements at SDC do not impair wildlife's use • Ensure new roads and increased traffic do not create a danger to wildlife • Ensure new development does not create new sources of light, glare, or noise that would impair wildlife's use of the Corridor • Ensure new development does not increase the risk of wildfires that would harm the natural and built environments • Ensure runoff from new impermeable development does not result in erosion or contamination of creeks and riparian areas.	Commenter would like to improvements to the Historic Preservation Alternative. These are noted. The listed improvements do not pertain to the significant adverse impacts of the Project or the alternatives.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-5	These comments provide the Sonoma Land Trust's input on the Draft Environmental Impact Report ("EIR") for the Sonoma Development Center Specific Plan ("Specific Plan,""Proposed Plan," or the "Project"). As discussed below and in the analysis that follows provided by biology, transportation, wildfire, and hydrology experts (Attachments B, C, D, E, and F to September 26, 2022 letter from SLT to Brian Oh),1 the EIR fails to provide a stable project or analyze the full scope of impacts that would foreseeably result from the buildout of the draft Specific Plan. Relying on the Specific Plan's goals and policies—which are replete with caveats and qualifications—the EIR treats the Specific Plan as a self-mitigating project. But the EIR does not actually do the analysis or present the substantial evidence necessary to support that conclusion. Nor does the EIR incorporate the purported self-mitigating aspects of the Specific Plan into a formal mitigation monitoring and reporting program, which program is required under CEQA to ensure that a project's mitigating elements are meaningful and enforceable and actually achieve their stated goals. The errors in the EIR are especially consequential in this case, given the immense specificity of the draft Specific Plan. If the draft Specific Plan is adopted, the County will know substantially where specific uses will be located and what the footprint and intensity of those uses will be. The County is relying on that specificity to streamline future environmental review of development under the Specific Plan, including by avoiding altogether future environmental review wherever possible. Specific Plan at 7-3 (indicating that certain types of development under the Specific Plan might be exempt from further	The comment is noted. Please see MR-1 and MR-9.

Commenter	Date	Letter	Comment	Response
			CEQA review and stating that the "County intends to rely on these provisions for exemptions and tiering to the maximum extent feasible"). Particularly given the County's stated objectives, it is critical that the EIR analyze fully all foreseeable impacts of all development allowed under the Specific Plan and that it mitigate those impacts found to be significant. The EIR cannot and should not defer to future environmental review the analysis of the Project's impacts and identification of mitigation.	
Sonoma Land Trust	9/26/2022	B11-6	The EIR also fails to properly include documents referenced and relied on by the EIR. For example, the DEIR references a traffic study for the Project, but fails to attach it as an appendix to the EIR. EIR at 410, Footnote 118 [references the Focused Traffic Operations Analysis for the SDC Specific Plan (W-Trans, August 2022 [actually July 6, 2022])].	The Traffic Operations Study is available at the project website at: https://www.sdcspecificplan.com/documents.
Sonoma Land Trust	9/26/2022	B11-7	Similarly, the EIR references an evacuation study for the Project site prepared by Kittelson and Associates, but fails to append this document. EIR at 506. Under well-established case-law, the lead agency is required to present all relevant reports relied upon to prepare the EIR as part of the document. As described below, the current EIR fails to adequately inform decisionmakers and the public about the environmental impacts of the SDC Specific Plan. The final EIR must be significantly revised to include all necessary evidence, analysis, and mitigation if it is to comply with CEQA.	The study by Kittelson & Associates relates to analysis conducted for wildfire evacuation, which is presented within the body of the Draft EIR. This section of the EIR was prepared by Kittelson & Associates; no separate standalone study or report was prepared and therefore all relevant reports are provided. See also MR-4.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-8	The EIR fails to provide an accurate, stable, and finite project description. • The Project Description does not provide a clear description of the amount of development allowed under the Specific Plan. The EIR also does not include an accurate representation of the amount of development that is identified in the Draft Specific Plan. Table 4-2 in the Specific Plan includes a range of housing units permitted in the various districts of the SDC with a maximum of 1,210 units. The table notes that a +/- 10% deviation in each district is allowed subject to approval by the Community Development Director, which could lead to a maximum of 1,331 units (1,210+121). A footnote to Table 4-2 notes that "While the base housing unit range for each district is represented as a range, the total base number of units built across all districts should equal the total shown in the table" (emphasis added). However, there is no further detail describing how this unit count would be implemented and any lesser number (e.g. 733) enforced when each district has a range of unit allotments. Furthermore, the Specific Plan at 4-12 acknowledges that developers would be able to use State and County density bonuses for inclusionary housing and notes an additional 200 market rate units. However neither the Specific Plan nor the EIR explain how that number was developed. Furthermore, the Specific Plan identifies another planned 100-unit affordable housing project that is anticipated to be developed (with County involvement)	The Project Description is stable and has been consistently referenced throughout the document. Table 4-2 of the Draft Specific Plan that the commenter references provides a range of housing units within each district of SDC; it is not the intent of the Specific Plan that the maximum to end of the range would be achieved in every district. The last sentence of the page with the table notes that "… the SDC site is anticipated to have around 1,000 total housing units at buildout." A footnote has been added to Table 4-2 of the Specific Plan, as follows. "This table provides a range for the total number of housing units within each Specific Plan district to provide implementation flexibility. It is not anticipated that development would be built to the maximum of the range in every district. The total number of housing units anticipated under the Specific Plan is 1,000." The comment states that, "The Specific Plan could accommodate at least 1,331 units before density bonus allowances and sets no upper limit on the number of units allowed, while the EIR analyzes a maximum of 1,000 units." First, as explained in the previous paragraph, the 1,000 housing units allowed in the EIR are inclusive of anticipated density bonuses. Approximately 283 affordable units are included within the 1,000 units, as explained in the Draft Specific Plan page 4-12. Should developers choose to provide additional affordable housing units beyond the Specific Plan inclusionary requirements (which are already higher than the County inclusionary requirements), they can seek additional density bonuses, which may result in the total of 1,000 housing units to be exceeded. Various density bonuses are available

Commenter	Date	Letter	Comment	Response
			on the SDC site. According to current State density bonus law, a 100% affordable project could seek a density bonus of up to 80%, which could lead to an additional 80 units beyond the 100 identified. The Specific Plan could accommodate at least 1,331 units before density bonus allowances and sets no upper limit on the number of units allowed, while the EIR analyzes a maximum of 1,000 units (EIR Table 2.5-1).	under State law. The Density Bonus is a State mandate. A developer who meets the requirements of State law is entitled to receive the density bonus as a matter of right. This would be true anywhere in Sonoma County like elsewhere in the state, and not just at SDC. Density bonuses under State law are available for affordable housing, seniors, foster youth/disabled veterans/homeless, and college students, among others. Should developers seek density bonuses that would cause the number of total housing units to exceed 1,000 or alterations in the non-residential land use program, the County at that time would need to determine whether and what level of additional environmental review is required.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-9	While the Project Description residential unit count is different than the units identified in the Specific Plan, there are also sections within the EIR that cite statistics with unclear sources, leading to cloudy and unsupportable conclusions. The Project Description notes the development of 1,000 residential units and a future population of 2,400 persons (average size of 2.4 persons per household). This is in contrast with the average household size in Sonoma County of 2.6 persons per household as identified in the EIR at 369 (Population and Housing section). What is the data point to suggest that the average household size at SDC would be lower than the County-wide average? This discrepancy of 200 persons is not reflected in any of the analyses that rely on population, such as Public Service and Recreation, Utilities and Service Systems, Air Quality and Greenhouse Gas Emissions.	The commenter asks why an average of 2.4 persons per household was used, when the overall average countywide household size is larger. According to the State Department of Finance (see Report E-5), Sonoma County's countywide average household size on January 1, 2022 was 2.5, a slight decrease from the average household size of 2.6 in 2020. The countywide housing stock as of January 2022 was 74.2 percent single family, which typically house larger households than multifamily units. Given that the housing type mix at SDC is anticipated to be split evenly between single family (attached and detached) and multifamily, with nearly half of the multifamily units anticipated to be for seniors, an average household size of 2.4 provides a conservatively high estimate of population that would result. For residential land uses/population, the Sonoma County Transportation Authority modeling input is housing units, not population, so a change in household size assumption would have no impact of transportation modeling results. For assumptions regarding various analyses, see response to next comment below.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-10	Compounding the confusion over accurate unit counts and the accuracy of analyses, some of the impact sections reference different numbers than the Project Description, resulting in an unstable project description and confusion about key elements of the Project. EIR at 429 (Land Use and Transportation Network Assumptions) states that "the analysis presented in this section is based on an assumption that implementation of the Proposed Plan would result in 1,000 residential units with State and County density bonuses, including 435 single family units, 345 multifamily units, and 220 senior housing units." But neither the EIR Project Description nor the Specific Plan indicates that the 1,000 residential units would be inclusive of State and County density bonuses. Nor does the EIR Project Description or Specific Plan identify the split between single family and multi-family units or provide for senior housing units. Where did these assumptions come from? How can they be relied upon for the Transportation analysis? Other sections that made assumptions regarding the split between units types include Population and Housing, Public Service and Recreation, Utilities and Service Systems. In the Public Services and Recreation section, Table 3.13-4 at p.402 (Student Generation Rates) analyzes 500 single family units and 280 affordable/apartment units (780 in total) to conclude a total new student population number. Not only is this assumption of the number of unit types not in the Project Description	The EIR analysis impacts resulting from 1,000 housing units (in addition to non-residential development), which is the total number of market-rate and affordable units. This information is spelled out in the Draft Specific Plan (page 4-12): The base number of units allowed is 733, with a base of 550 market rate units allowed, roughly split between multifamily and single-family types. With inclusionary housing requirements of 25%, at least 183 additional affordable units will be produced. Developers will additionally be able to use State and County density bonuses for inclusionary housing, which, as of 2022, could lead to approximately an additional 200 market-rate units. With Sonoma County's additional planned affordable housing development of around 100 housing units, the SDC site is anticipated to have around 1,000 total housing units at buildout. Please see Table 4-4 of projected development in the Specific Plan. The Specific Plan does not specify a percentage or maximum or minimum amount of senior housing at the site. Based on market analysis previously conducted for SDC, 220 housing units are assumed to be for seniors; these are reflected as part of the overall multifamily totals. The Draft EIR notes (page 370), "Based on buildout projections developed for the Proposed Plan, the SDC site is expected to house 2,400 people in 1,000 housing units. Specifically, the population will include 1,872 non-seniors in 780 housing units and 528 seniors in 220 housing units. Further, intentional consideration will be incorporated into new development to support housing opportunities for individuals with

Commenter	Date	Letter	Comment	Response
			(what is the source?), but it is also a different unit split assumption than what is used in the Transportation section. Beyond transportation, what unit assumptions were used for the projected Water Demand Estimates (EIR Table 3.15-1) or the analyses for wastewater, solid waste generation, etc.? Calculations for these utilities are based on different use factors for different unit types, but the data tables do not reference the unit counts assumed and because of the lack of information in the Project Description, there is no clarity or validity to the information.	developmental disabilities." The commenter seeks information on what assumptions or use factors were used for various purposes, and asserts that different housing units counts and unit type mixes have been used in various analyses. This assertion is incorrect. The Draft EIR uses a consistent 1,000 housing unit count throughout, with unit mix described previously. More specifically, assumptions for the topics mentioned are as follows: • Water Supply. Appendix D: Water Supply Assessment (WSA) Table 1 shows the variety of land use assumptions in calculating water demands, including 1,000 housing units. • Wastewater Demand. Table 3.15-2 of the Draft EIR states that the wastewater demand is calculated based on Proposed Plan buildout water use estimates in the WSA with a 10% allowance for inflows and infiltration. • Solid Waste. Solid waste demand is based on countywide per capita factors as described in detail on page 487 of the Draft EIR, and as stated on that page, based on SDC population of 2,400. These per capita waste generation rates account for waste generation from all uses, not just residential. Because at buildout SDC is far fewer jobs relative to population compared to the county as a whole (Sonoma County has 0.49 jobs per resident presently whereas SDC is projected to have 0.38), the waste generation analysis is conservative. • School Student Generation. Student generation was calculated from the 780 non-senior units, consistent with information on pages 80 and 370 in the Draft EIR. • Transportation. The transportation analysis uses 1,000 housing units and 900 jobs.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-11	EIR at 77 states “While the project buildout projection reflects a reasonably foreseeable maximum amount of development for the Planning Area through 2040, it is not intended as a development prediction or cap that would restrict development in any of the five subareas. Rather, the Proposed Plan allows for flexibility in the quantity and profile of future development within and between subareas, as long as it conforms to the policies and standards, including permitted densities and FARs, in the Specific Plan” (emphasis added). This statement is problematic in that neither the Specific Plan nor the EIR identify what the maximum development potential for the Specific Plan would be at the permitted densities and FARs of each land use district. Therefore it is impossible to know the actual maximum buildout envisioned by the Specific Plan. Also, what five subareas does this this statement refer to?	The comment states that the EIR analysis is “problematic” because the Specific Plan and the EIR are based on a “reasonably foreseeable maximum amount of development in the Planning Area” rather than a “maximum development potential”. The Draft EIR follows well laid CEQA requirements in conducting the analysis. CEQA Guidelines Section 15064 states, “In evaluating the significance of the environmental effect of a project, the Lead Agency shall consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment.” The population and jobs calculated represent the high end (approximately 80% of the maximum permitted densities/intensities). Furthermore, the Specific Plan outlines 1,000 housing units as the probable maximum development resulting under assumptions outlined. In a hypothetical situation where a developer provides more than the (already higher than the County required minimum elsewhere) minimum affordable housing and qualifies for and develops additional affordable housing, the additional affordable housing resulting would not be inconsistent with the Specific Plan, as that is a right to a developer available under State law. Therefore, the EIR includes language stating that amount of reasonable probable development anticipated should not be considered a “cap”. As an informational document, the Specific Plan EIR is required to study only reasonably foreseeable consequences. CEQA does not require an agency to assume an unlikely worst-case scenario in its environmental analysis. See page 4 of the DEIR for a description of subareas.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-12	Since the overall development capacity permitted by the Specific Plan is unclear, thesubsequent analyses that rely on the unit count presented in the Project Description aretherefore inaccurate. The unit counts identified in the Specific Plan and EIR areinconsistent and call into question analyses completed for the many of the impact areas,including the transportation section (VMT assessment), air quality and greenhouse gasemissions calculations, noise analysis, wildfire/emergency evacuation analysis, biologicalresources assessment, and utility needs assessment, among others. The failure toaccurately describe the overall development capacity of the Project is a serious andpervasive deficiency, as it renders faulty the EIR's environmental impact analyses as well impacts. As a result of the understatement of development potential, the EIR understates the true impacts of the Project.	The comment is noted. Please see Table 4-4 of projected development in the Specific Plan.
Sonoma Land Trust	9/26/2022	B11-13	CEQA requires that the EIR analyze all elements of the project. But the EIR's Project Description omits key elements, preventing the reader from fully understanding the full scope of the Project and resulting in an EIR that fails to accurately assesses the impacts of the Project. These deficiencies include the following: o The Specific Plan will be adopted along with amendments to the Sonoma County General Plan and Zoning Code, however details of the amendments and proposed zoning are not identified in the Project Description.	The comment is noted. The Project Description indicates that the project includes a General Plan and Zoning Ordinance amendment in addition to the Specific Plan. The General Plan and Zoning Ordinance amendments are to add a General Plan land use designation and zoning designation for the Specific Plan and do not create impacts not studied or described in the DEIR.
Sonoma Land Trust	9/26/2022	B11-14	A portion of the Core Campus west of Arnold Drive is part of the Sonoma State Home Historic District and includes two individually contributing historic resources—the Sonoma House and the Main Building,	See Figure 4.3-1 in the Draft Specific Plan. Detailed square footage of all buildings is in Draft Specific Plan, Appendix B: Inventory of Buildings and Historic Status

Commenter	Date	Letter	Comment	Response
			which is a National Historic Landmark. The Project Description identifies the total square footage of existing building square footage that will be retained for adaptive reuse (EIR at Table 2.5-3), but does not identify where the buildings are. Which buildings will remain and which buildings will be demolished?	
Sonoma Land Trust	9/26/2022	B11-15	What has been assumed for duration of site work, building demolition, and construction of new buildings as well as reuse of existing facilities? What is the phasing plan for the buildout of the Project? The Specific Plan provides only one concrete policy for phasing (Policy 4-3, which requires completion of at least 10,000 square feet of retail businesses and at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive). But given that buildout will occur over a nearly 20 year period, phasing is critical and can ensure additional future construction occurs only if it will not result in additional significant environmental impacts.	Buildout of the Specific Plan will happen over 20 years. Section 7.4: Recommended Phasing provides information on likely phasing. This information was used for the assumptions for duration of site work, building demolition, and construction of new buildings in the DEIR. The section notes that this is recommended phasing, and actual phasing will depend on market conditions and the project developers.
Sonoma Land Trust	9/26/2022	B11-16	EIR at 59 notes “The site will have a system of distributed energy resources (DERs) that will generate electricity on-site, which could include solar, wind, geothermal, and methane gas co-generation, a process that captures and burns the potent methane gases that are emitted from solid waste, such as from landfills, wastewater treatment plants, dairies, and other facilities.” There is no land use	Figure 4.1-1 of the Draft Specific Plan shows location of utility buildings, and Table 4-3 shows districts where renewable energy facilities are permitted. Policy 6-19 of the Specific Plan gives examples of on-site co-generation, stating “… such as solar, wind, geothermal, biomass, and methane gas co-generation”. There is no specific requirement that any one of these types of energy generation be built, and if impacts from any specific generation facility will create new significant environmental

Commenter	Date	Letter	Comment	Response
			district in the Specific Plan that would allow a methane gas co-generation facility at SDC, so it is unclear where such a facility could be located. The Specific Plan and EIR contain a "Utilities" land use classification, but a gas co-generation facility is not identified in this category and there are no areas on EIR Figure 2.4-1 (Proposed Land Uses) that are designated "Utilities". Where would this facility be located? Where are the impacts of a new methane co-generation facility analyzed? They do not appear to be addressed in any other sections of the EIR.	impacts, those would need to be evaluated in subsequent environmental reviews.
Sonoma Land Trust	9/26/2022	B11-17	Likewise, the Project Description and Utilities classifications omit geothermal, even though the SDC property has geothermal wells, which are not identified in the Specific Plan or EIR.	The comment is noted. The Project Description on page 59 mentions the site will have geothermal energy resources. Page 283 of the DEIR mentions natural geothermal influences in the area.
Sonoma Land Trust	9/26/2022	B11-18	There are existing uses outside of the Core Campus (in the agricultural area between the Core Campus and Hwy 12 and the current recreational uses on the west side of the SDC). Were they included in the baseline/existing conditions? What assumptions have been made regarding their continued operation and/or expansion of these uses?	The comment is noted. Existing uses outside the Core Campus area are included in the baseline/existing conditions of the DEIR. For example, the Project Description on page 53 states that there are some existing recreational uses in the Planning Area, including Camp Via and the Ropes Course in the western portion of the Planning Area. See Policy 2-1 regarding the future use of the preserved open space outside the core campus.
Sonoma Land Trust	9/26/2022	B11-19	The EIR repeatedly identifies the Core Campus as the focus of future development, but future uses and any improvements outside the core campus must be identified and analyzed as well – especially as they relate to impacts on sensitive resources. Since the General Plan	The comment is noted. See response to comment B11-18 regarding uses in the area outside the Core Campus and B11-13 regarding General Plan and Zoning Ordinance amendments.

Commenter	Date	Letter	Comment	Response
			amendment(s) and proposed rezoning(s) for the SDC site in its entirety is unknown, the permitted uses in areas outside the Core Campus is unclear. What land use changes are contemplated for areas outside of the Core Campus? What zoning, specific plan, and general plan land use designations will apply to SDC property outside of the Core Campus?	
Sonoma Land Trust	9/26/2022	B11-20	The EIR does not fully describe the intensity and distribution of future residential and non-residential development. EIR Figure 2.4-1 identifies the location of future land use designations, but the Project Description should provide a summary table that identifies proposed land use districts, amount of land (acreage) with that designation, and the maximum development potential in that district (non-residential square foot and residential units). Without this information, it is not clear how residential units and non-residential square footage will be distributed throughout the site and what impacts that distribution might have. How many acres are identified in each land use designation? What is the maximum development potential for each land use category based on the acreage and allowed density (for both residential units and non-residential square footage)? How do the units and square footage overlay on the land use map provide a sense of development distribution throughout the Core Campus? How	The comment is noted. Please see Project Buildout on page 77 of the DEIR and Figures 2.4-1 and 2.4-2. Additionally, Section 2.4.3.1 provides land use classifications and the associated density/intensity standards

Commenter	Date	Letter	Comment	Response
			much development is allowed in more sensitive areas east of Sonoma Creek? How can the public and decisionmakers understand the actual impacts and correctly identify different areas and subareas if the boundaries are to be determined?	
Sonoma Land Trust	9/26/2022	B11-21	EIR at 51 states “Appendix A of the Specific Plan contains a Standard Conditions of Approval document that shall consist of conditions required to be implemented upon development of the Proposed Plan to mitigate potential environmental impacts. In addition, the Proposed Plan includes amendments to the County’s General Plan and Zoning Code.” Will all of the policies and standard conditions of approval that comprise mitigation to project impacts be adopted in a reporting program of some sort? How will the policies and standard conditions be enacted and implemented as effectively and with as much accountability as mitigation measures?	The comment is noted. Please see MR-1 and MR-9.
Sonoma Land Trust	9/26/2022	B11-22	EIR at 82 states that “the Proposed Plan would require the following approvalsand discretionary and ministerial actions by the County of Sonoma: Adoption of ordinances, guidelines, programs, and other mechanisms for implementation of the Proposed Plan.” This is a very vague description of a long list of future actions that will need to be taken to ensure the successful implementation of the Specific Plan (and the policies/programs that are serving as mitigation for project impacts).	The comment is noted. Please see MR-1 and MR-9. See response to comment B11-13 regarding General Plan and Zoning Ordinance amendments

Commenter	Date	Letter	Comment	Response
			CEQA Guidelines Section 15124(d) requires that the Project Description contain a "list of permits and other approvals required to implement the project," so this section should be more detailed and clear. What specific ordinances, programs, and other implementation mechanisms are proposed for adoption? What amendments to the Zoning Code and/or General Plan are contemplated with the adoption of the Specific Plan? What other County policy documents might be impacted/amended as a result of the Specific Plan?	
Sonoma Land Trust	9/26/2022	B11-23	The comments presented below refer to and build on comments prepared by Prunuske Chatham, Inc. ("PCI Comments") and Pathways for Wildlife ("Pathways Comments") on the EIR and Specific Plan, attached below as Attachments B and C to Sonoma Land Trust's September 26, 2022 letter to Brian Oh. The County must respond to these comments and the comments in Attachments B and C. The EIR fails to adequately analyze or mitigate the Project's impacts on biological resources. The EIR's analysis both understates the severity of the potential harm to biological resources within and adjacent to the proposed Project site and neglects to identify sufficient mitigation to minimize these impacts. What little analysis is present is not supported by data or substantial evidence. Given that analysis and mitigation of such impacts are at the heart of CEQA, the EIR must remedy these deficiencies to comply with CEQA. The "programmatic" nature of the proposed EIR is no excuse for a lack of detailed analysis. The EIR must provide an in-depth analysis of the Project, looking at effects as specifically and comprehensively as possible. Because it looks at the big	The comment is noted. Please see MR-1 and MR-9. The DEIR sufficiently analyzes impacts on biological resources. Chapter 3.4 assesses potential environmental impacts on existing biological resources. and Section 5.2.4 addresses cumulative impacts regarding the same. See Chapter 6 List of Preparers on page 611 of the DEIR. Multiple firms that specialize this work have completed the DEIR pursuant to CEQA requirements.

Commenter	Date	Letter	Comment	Response
			picture, a program level EIR must provide more exhaustive consideration of effects and alternatives than an EIR for an individual action, and must consider cumulative impacts that might be slighted by a case-by-case analysis. Further, it is only at this early stage of the redevelopment of SDC that the County can design wide-ranging measures to mitigate County-wide environmental impacts. A "program" or "first tier" EIR is not a device to be used for deferring the analysis of significant environmental impacts. It is instead an opportunity to analyze impacts common to a series of smaller projects, in order to avoid repetitious analyses. Thus, it is particularly important that the EIR for the Project provide detailed and comprehensive analysis of the existing conditions and the full range of development proposed by the Specific Plan, rather than deferring such analysis to when specific development is proposed at a later time. Meaningful analysis of impacts now would help inform the design and details of the Specific Plan to best minimize environmental impacts.	
Sonoma Land Trust	9/26/2022	B11-24	The EIR fails to address Executive Order N-82-20, which establishes the state's goal to conserve at least 30 percent of California's land and coastal waters by 2030 with a particular focus on protecting and enhancing wildlife corridors. o The Specific Plan proposes to permanently conserve approximately 755 acres of contiguous open space outside the Core Campus. How does this open space preservation fit within the State's goals under Executive Order N-82-20? o The Sonoma Valley Wildlife Corridor encompasses over 10,000 acres of land stretching from Sonoma Mountain east across Sonoma	The comment is noted. By permanently preserving all open space outside the Core Campus as noted in the DEIR, the Proposed Plan would comply with the goals of the Executive Order. See also MR-7 regarding impacts on wildlife movement. The Proposed Plan would be required to comply with all relevant federal, State, regional and local regulations. Such regulations are outlined in the Regulatory Setting section starting on page 203 of the DEIR. Further, the Draft Specific Plan outlines numerous policies for the conservation of biodiversity resources at the site. This is outlined in the Biological Resources Impact Analysis starting on page 235 of the DEIR. The remainder of the comment relates to the Specific Plan and not the

Commenter	Date	Letter	Comment	Response
			Valley to the Mayacamas Mountains. It is a key linkage in a larger corridor from coastal Marin County to eastern Napa County. SDC lies at the heart of the Corridor. Since the 1990s, the Sonoma Valley Wildlife Corridor has been recognized as an area of significant wildlife presence and movement. The critical linkages and wildlife use have been well established by the scientific community.2 Maintaining and enhancing the permeability of the Corridor and the ability of wildlife to use and disperse through SDC is therefore critical to meeting the Project's sustainability and open space conservation guiding principles and to ensure the viability and efficacy of other conserved lands in the Corridor throughout Sonoma County. E.g., EIR at 65 (Guiding Principle 3: "Integrate Development with Open Space Conservation. Promote a sustainable, climate-resilient community surrounded by preserved open space and parkland that protects natural resources, fosters environmental stewardship, and maintains and enhances the permeability of the Sonoma Valley Wildlife Corridor for safe wildlife movement throughout the site. Support responsible use of open space as a recreation resource for the community.") (emphasis added). Given its recognized role in wildlife migration, how does the Specific Plan ensure protection and enhancement of the Sonoma Valley Wildlife	adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			Corridor pursuant to the Specific Plan's guiding principles and Executive Order N-82-20? o How would the Wildlife Corridor contribute to or impact the overall effect of land conservation efforts under Executive Order N-82-20? o Why does the EIR not address Executive Order N-82-20 or analyze the Project's consistency with a mandate for conservation of biodiversity resources on stateowned property? o Is the Specific Plan consistent with Executive Order N-82-20? o Will the Specific Plan impact the State's ability to meaningfully conserve at least 30 percent of California's land and coastal waters by 2030 in Sonoma County? How will the Specific Plan impact the effectiveness of conservation efforts under Executive Order N-82-20?	
Sonoma Land Trust	9/26/2022	B11-25	There are significant information gaps regarding wildlife use at SDC that must be resolved to understand the scope of impacts from the proposed redevelopment. Obtaining this information will be critical to informing protection areas, buffer sizes, levels and location of development, and appropriate best management practices or improvements to avoid or minimize Project impacts. See generally PCI Comments; Pathways Comments. o For example, the EIR indicates that no site survey was completed to determine the presence or location of special-status or other species. The EIR cannot determine the impacts of development under the Specific Plan—the locations and footprints of which are known—until such survey is completed. E.g., PCI	The comment is noted. The FEIR incorporates data shared by the Sonoma Ecology Center - see responses to letter B8. As noted on page 236 of the DEIR, no new field studies were conducted for the preparation of this EIR, because existing resources contained information on pertinent aspects of biological resources in the Planning Area at level of detail appropriate for a program level environmental assessment. Future project specific detailed biological surveys will be necessary to confirm presence or absence of sensitive resources on future development sites. Cumulative impacts related to biological resources are discussed in Chapter 5: CEQA Required Conclusions. See also response to comment B11-90 and B11-128.

Commenter	Date	Letter	Comment	Response
			Comments at 13. The EIR should also make use of existing data sources, such as the species observation list previously shared by the Sonoma Ecology Center, which the EIR inexplicably ignores. o Similarly, the EIR does not include data regarding use of the Sonoma Valley Wildlife Corridor by special-status species or other wildlife. Pathways Comments at 10-11.The study proposal that Pathways for Wildlife prepared for Sonoma Land Trust, which was included in Sonoma Land Trust's comments on the Notice of Preparation, is representative of the vetted and scientifically proven methodology for conducting wildlife connectivity studies. This type of study is necessary to be able to determine and analyze the Project's impacts to Wildlife Corridor. The Sonoma Land Trust had offered to partner with the County and State to conduct this study so that this information would be available and could be used as part of the EIR, but their offer was not accepted prior to release of these documents.	
Sonoma Land Trust	9/26/2022	B11-26	The County must first identify the information gaps that need to be filled in order to determine the impacts of the Project. For example, a detailed study is needed to establish a baseline of wildlife use on SDC prior to redevelopment. What other information gaps need to be filled in order to determine the impacts of the Project? • How will the phased build-out of the Project induce or modify impacts to biological resources? • Would the impacts to biological resources be different if the Project were phased differently? • How would the impacts to biological resources vary if	The comment is noted. There are no significant information gaps. No new field studies were conducted for the preparation of this EIR, because existing resources contained information on pertinent aspects of biological resources in the Planning Area at level of detail appropriate for a program level environmental assessment. See MR-3 and response to comment B11-25. Construction and operational activity impacts of the Proposed Plan were analyzed under the Biological Resources Impact Analysis starting on page 235 of the DEIR pursuant to CEQA requirements. Regarding the wildlife corridor and performance standards see MR-7 and MR-9. Proposed policies and Standard

Commenter	Date	Letter	Comment	Response
			only a portion of the Project were built out? • How will the County determine whether redevelopment of SDC increases interference with wildlife movement or use within the property or across the larger corridor? What metrics will the County use to gauge impacts to wildlife movement? Which species will be analyzed? What specific performance standards must development meet to ensure that the Wildlife Corridor remains permeable and viable as development is phased in? • How will the County ensure that SDC redevelopment does not result in a reduction of wildlife species diversity? • How will the County ensure that SDC redevelopment does not result in a reduction of wildlife species abundance?	Conditions of Approval would ensure that impacts to biological resources are less than significant.
Sonoma Land Trust	9/26/2022	B11-27	The EIR acknowledges that wildlife and their habitat may be considered sensitive to noise and other operational impacts. E.g., EIR at 337-338. The Specific Plan proposes more than 1,000 units of residential development in addition to commercial and visitor serving development. By contrast, in recent years, the human activity at SDC has been considerably reduced. Even before facility closure, the site only supported approximately 415 clients living there, 470,000 sf of client housing, 49,000 sf staff housing, and 643,400 sf offices, shops, etc. California Department of Developmental Services. (2012). Sonoma Developmental Center Building Use Survey. Department of Developmental Services. October 2012.	Construction and operational activity impacts of the Proposed Plan were analyzed under the Biological Resources Impact Analysis starting on page 235 of the DEIR pursuant to CEQA requirements. Regarding the wildlife corridor and performance standards see MR-7 and MR-9. Proposed policies and Standard Conditions of Approval would ensure that impacts to biological resources are less than significant. Regarding noise impacts, see response to comments B11-225 and B11-227.

Commenter	Date	Letter	Comment	Response
			o Do the impacts identified by the EIR scale in a linear fashion based on the amount of development, the number of residents, and the extent of human activity at operation? o How did or will the County quantify the change in magnitude of operational impacts by virtue of the significant increase in population and operational activities under the Specific Plan as compared to a recent baseline?	
Sonoma Land Trust	9/26/2022	B11-28	The EIR fails to identify a consistent baseline against which the Project is evaluated. Selection of an appropriate baseline is particularly important in this case because the SDC property has been gradually vacated since the 1960s, as facility operations wound down and the facility ultimately closed in 2018.3 In the meantime, development of the surrounding area has proceeded with reduced assumptions about the level of human activity at SDC—for example, evacuation capacity of roadways, levels of sewer service, water use, and recreation. Further, SDC's historic operations are not a reliable benchmark for the intensity of the proposed Project, as the former institutional use did not have the same level of impacts as proposed residential and commercial development. SDC residents did not drive cars and the employees operated in shifts, reducing traffic and other impacts. Estimates of this Project's impacts should therefore be made based on comparisons to recent, rather than historic, site occupation and use.	The comment is noted. While there is no direct perfect comparison for new residents at the SDC site, the historical numbers are provided to give contextual reference to the fact that the site has been previously developed and has served as a home to a substantial population of residents and employees previously. The baseline used for impact analysis in the DEIR is 2022 unless otherwise noted.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-29	With respect to biological resources, the EIR fails to adequately describe the baseline condition of the Sonoma Valley Wildlife Corridor. o The EIR provides no data regarding actual use of the Wildlife Corridor by individual species. o The EIR does not analyze whether or how the gradual reduction in human activity at SDC since the 1960s has changed the operational characteristics of the Wildlife Corridor. o The EIR does not provide data or analysis to show whether or how increasing human activity in the Core Campus in excess of historic levels will impact wildlife movements within and through the Wildlife Corridor.	The comment is noted. The DEIR adequately describes current conditions of the wildlife corridor on page 235 of the DEIR. Special-status species in the area are noted in Tables 3.4-1 to 3.4-3. See MR-7 and response to comment B11-224 regarding impacts on wildlife movement. See response to comment B11-28 regarding the baseline used.
Sonoma Land Trust	9/26/2022	B11-30	The EIR acknowledges that wildlife and their habitats may be sensitive to noise impacts. EIR at 337-338. However, the EIR fails to analyze or mitigate for noise impacts to these specific sensitive receptors. o The EIR relies on quantitative thresholds from the CEQA guidelines, but it fails to analyze or explain whether these thresholds are applicable to wildlife or habitat receptors. EIR at 345-346. o The EIR's vibration threshold only contains standards for human receivers and structures. EIR at 346. It is silent as to what constitutes a significant impact to wildlife or habitat. o The Specific Plan policies that "address noise" ignore wildlife and habitat receptors.	The comment is noted. As described in the Impact Analysis starting on page 349 of the DEIR, compliance with regulatory requirements and implementation of proposed policies and Standard Conditions of Approval would mitigate impacts on noise-sensitive receivers to a less that significant level. Since wildlife is considered a noise-sensitive receptor as stated on page 337 of the DEIR, the significance thresholds pursuant to CEQA incorporate wildlife into the Noise Impact Analysis. Measures HAZ-1 and HAZ-2 develop standards that protect noise-sensitive receivers which would inherently include wildlife. Further, Policy 2-11 implements "dark skies" standards which would mitigate light impacts on wildlife. Regarding noise impacts, see also response to comments B11-225 and B11-227.

Commenter	Date	Letter	Comment	Response
			§ Policy HAZ-1 defines "noise-sensitive receiver" as "residences, schools, day care facilities, hospitals, nursing homes, long term medical or mental care facilities, places or worship, libraries and museums, transient lodging, and office building interiors." EIR at 347. § Policy HAZ-1 does not impose standards for nighttime construction noise that are designed to reduce impacts to wildlife or habitat. EIR at 347-348. § Policy HAZ-2 establishes quantitative vibration standards only with respect to humans and structures. Policy HAZ-2 does not establish quantitative vibration standards designed to reduce impacts to wildlife or habitat. EIR at 348-349. Notwithstanding that the Specific Plan defines "noise-sensitive receiver" to exclude wildlife or habitat, the EIR concludes that construction noise impacts to "noise-sensitive receivers, such as Special Status species and their habitat … would be less than significant" because, inter alia, nighttime construction noise would be subject to the Sonoma County General Plan 2020 noise standards. EIR at 349-350. This conclusion is unsupported and is contradicted by the Specific Plan. Per Policy HAZ-1, nighttime construction noise is only subject to the Sonoma County General Plan 2020 Table NE-2 standards "If construction activities occur … within 0.5 miles of a noise-sensitive receiver (residences, schools, day care facilities,	

Commenter	Date	Letter	Comment	Response
			hospitals, nursing homes, long term medical or mental care facilities, places or worship, libraries and museums, transient lodging, and office building interiors).” EIR at 347. • Project-generated noise is a particular concern because noise has been shown to modify the behavior of species that are present at or are similar to those present at the SDC site. Noise can affect the spatial distribution of wildlife and can cause changes in predation and other critical behaviors. If project-generated noise were to alter the dispersal of wildlife through the Sonoma Valley Wildlife Corridor or otherwise substantially affect the behavior of special-status species or species of concern, those impacts would constitute significant impacts under the EIR’s chosen significance thresholds. See Biological Resources Criterion 1 (a significant impact is one that causes a “substantial adverse effect … on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service”); see also Biological Resources Criterion 4 (a significant impact is one that affects movement of wildlife through a wildlife corridor). The EIR must therefore analyze a range of noise-related impacts and other operational impacts in detail to ensure that those impacts will not constitute unmitigated significant impacts. o Mountain lions in particular are known to be sensitive to noise. Mountain lions	

Commenter	Date	Letter	Comment	Response
			have been documented using the Sonoma Valley Wildlife Corridor through the SDC property. Mountain lions are also a species of concern, facing significant threats in the Bay Area and around the state. The EIR does not even acknowledge the presence of mountain lions at the SDC site, let alone analyze and mitigate impacts to mountain lions. Because mountain lions are designated as a "Specially Protected Mammal" by the California Department of Fish and Wildlife, impacts to mountain lions could constitute significant project impacts under Biological Resources Criterion 1. The EIR must study and mitigate potentially significant impacts to mountain lions. o Similar considerations apply to the project's light impacts. The EIR must document wildlife dispersal through the SDC site and compare those data to the Project's various development plans in order to analyze the Project's construction and operational light impacts to biological resources.	
Sonoma Land Trust	9/26/2022	B11-31	The EIR also fails to disclose or analyze the projected impacts of the proposed Highway 12 connector road. Two options for connector roads are shown in Specific Plan Figure 3.1-1, and three types of facilities (a direct connection to Highway 12, an emergency access connection, and a pedestrian/bike connection) are all alluded to in accompanying text. These connections would have foreseeable direct, indirect, and cumulative impacts on the Project's biological resources, including	The comment is noted. Please see MR-7 regarding impacts of the Proposed Plan on wildlife movement. See also response to comment B8-3, B8-15, B8-16, B8-19, and B11-99 for wildlife corridor policy amendments. See also MR-3; individual developments, such as the Highway 12 connector, would be subject to separate CEQA review.

Commenter	Date	Letter	Comment	Response
			wetlands, drainages, and the Sonoma Valley Wildlife Corridor. How does the EIR propose to address and mitigate the impacts of these connectors?	
Sonoma Land Trust	9/26/2022	B11-32	Given intensity of proposed development and SDC's proximity to major regional parks, including Sonoma Valley Regional Park to the northeast and Jack London State Historic Park to the west, it is foreseeable that the Project's biological and other impacts will extend to and impact resources in those parks. The EIR must consider the impacts of the Project on biological resources within existing parks, including but not limited to impacts to biological resources from the increased water demand that would result from the construction, occupation, and operation of more than 1,000 residential units, a hotel, and other facilities.	The comment is noted. The Draft EIR follows well laid CEQA requirements in conducting the analysis. CEQA requires (see, for example, CEQA Guidelines Section 15064), which states, "In evaluating the significance of the environmental effect of a project, the Lead Agency shall consider direct physical changes in the environment which may be caused by the project and reasonably foreseeable indirect physical changes in the environment." As an informational document, the Specific Plan EIR is required to study only reasonably foreseeable consequences. CEQA does not require an agency to assume an unlikely worst-case scenario in its environmental analysis. See Section 5.2 for an analysis on cumulative impacts on biological resources, public services and recreation, and utilities and service systems.
Sonoma Land Trust	9/26/2022	B11-33	The EIR fails as an informational document because it does not analyze the Project's significant unmitigated environmental effects before identifying mitigation measures and analyzing their effectiveness. The County cannot condense these two steps into one or disguise mitigation actions as project features. Even if mitigation measures can be implemented as features of the Project, the EIR must evaluate the Project's true impacts without those measures in place before it can propose, analyze, and adopt needed	The comment is noted. See MR-1. The DEIR adequately describes baseline conditions pursuant to CEQA requirements. As noted on page 236 of the DEIR, no new field studies were conducted for the preparation of this EIR, because existing resources contained information on pertinent aspects of biological resources in the Planning Area at level of detail appropriate for a program level environmental assessment. Future project specific detailed biological surveys will be necessary to confirm presence or absence of sensitive resources on future development sites. See response to comments B8-2

Commenter	Date	Letter	Comment	Response
			mitigation. The EIR here skips this crucial step and fails to connect the dots between the Project's impacts and selected "mitigation." As a result, decisionmakers and the public do not know what the Project's unmitigated impacts would be or how the cited policies and conditions would purport to mitigate those impacts. o The EIR fails to describe fully the environmental setting of the Project. An EIR's description of a project's environmental setting crucially provides the baseline physical conditions by which a Lead Agency determines whether an impact is significant. Here, the EIR fails to accurately portray the site's underlying environmental conditions and therefore undercuts the legitimacy of the environmental impact analysis. § For example, the EIR judges impacts to biological resources primarily by estimating impacts to special-status plants and wildlife. EIR 221-251. But the EIR does not include any observational data regarding the presence or absence of these species. Id. • The EIR relies exclusively on the California Natural Diversity Database to "identify special-status species with the potential to occur in the SDC area." EIR at 221 (emphasis added). By definition, the species identified in the EIR may not occur in the SDC area. Likewise, as the EIR admits, the EIR's identification of	and B8-18 regarding wetland delineation policy amendments. See also MR-3 and MR-9.

Commenter	Date	Letter	Comment	Response
			special-status species may be under-inclusive. Id. ("Lack of information in the CNDDB and other reports … does not imply that the species does not occur… This lack of information may reflect a lack of Project or reporting more than absence of specialstatus species. Thus, there may be additional occurrences of special-status species within this area that have not yet been surveyed and/or mapped."). • Surveys for sensitive plant and animal species are entirely absent. • Instead, the EIR improperly defers critical studies and surveys until after project approval. • The EIR cannot identify what the impacts to specific special-status species will be or how significant those impacts will be, because the EIR cannot state with any degree of certainty whether or to what degree those species are present in the areas planned for development. • The EIR cannot remedy its lack of analysis by punting to "[f]uture project specific biological surveys [that] will be necessary to confirm presence or absence of sensitive resources on future development sites." EIR at 237. The Specific Plan is incredibly detailed. It shows specifically where different types of development will be located within the Core Campus	

Commenter	Date	Letter	Comment	Response
			and describes in detail what each type of development will look like. E.g., EIR at 69-80. The Specific Plan breaks the Core Campus into development districts (EIR at 74) and identifies building square footage for commercial, hotel, office, public, institutional, and utility use (EIR at 80). In short, the County already knows what types of development could occur under the Specific Plan and substantially where those different types of development would occur. The EIR cannot avoid analyzing the foreseeable impacts of that development simply because more granular analysis may later be required. The EIR similarly indicates that the Project may impact wetlands and other waters. EIR at 235. However, the EIR admits that "formal wetland delineations have not been performed for the SDC and it is anticipated that additional wetlands will be mapped during future site assessments." Id. The EIR cannot analyze or explain what the impacts to wetlands will be, how significant those impacts will be, or even if development will be possible in the areas planned for development if the EIR does not know where wetlands are located on the SDC site. o The EIR improperly defers analysis of Project impacts until later stages of	

Commenter	Date	Letter	Comment	Response
			development and fails to explain how it reaches its conclusion that impacts will be less than significant.	
Sonoma Land Trust	9/26/2022	B11-34	The EIR's impact methodology violates CEQA because it does not actually disclose or analyze any particular impacts. It simply states without analysis, explanation, or substantial evidence that certain unspecified impacts may occur. Decisionmakers and the public thus lack sufficient information about the nature and scope of potential impacts to evaluate those impacts for themselves. • For example, the EIR states that "[t]wo specific projects could have the potential to impact special status species and sensitive natural communities. The proposed Highway 12 connector project would follow Sonoma Creek in a southerly direction, and then proceed east adjacent to the open space area outside the SDC core area." EIR at 241. The EIR concludes that "[w]ith implementation of Station Conditions of Approval BIO-1 through BIO-13,	The comment is noted. The DEIR methodology is pursuant to CEQA requirements for a programmatic EIR. See MR-3. The 'two specific projects' noted on page 241 of the DEIR are both related to the Highway 12 connector. See also MR-7.

Commenter	Date	Letter	Comment	Response
			potential impacts would be less than significant." Id. But at no point does the EIR disclose what potential impacts the Highway 12 connector project could have on special status species or sensitive natural communities. Decisionmakers and the public have no way of knowing whether the connector threatens habitat loss, increased mortality from vehicle strikes, or something altogether different. And without knowing what the impact is, decisionmakers cannot know what it is that Conditions of Approval BIO-1 through BIO-13 are supposed to be mitigating. Equally significant, the EIR does not disclose what the second of the "[t]wo specific projects" that threaten impacts is. Decisionmakers and the public are left to guess. o What specifically are the anticipated impacts of the Highway 12 connector? o How will Conditions of Approval BIO-1 through BIO-13 mitigate those impacts? o What is the second specific project that could impact special status species and sensitive natural communities? o What specifically are the anticipated impacts of that second project? o How will Conditions of Approval BIO-1 through BIO-	

Commenter	Date	Letter	Comment	Response
			13 mitigate those impacts?	
Sonoma Land Trust	9/26/2022	B11-35	The EIR also states that "stream restoration and bridge maintenance projects are expected within aquatic features, [so] direct impacts would occur." EIR at 252. But the EIR fails to elaborate about what those "direct impacts" might include. o What specific impacts are anticipated from stream restoration and bridge maintenance projects? o How frequently are such projects anticipated to occur and at what locations? • The EIR states that the Project would not have a substantial adverse effect on state or federally protected wetlands in part because no new ground-disturbing activities would occur during Project operation. But the EIR does not discuss or analyze potential operational impacts to wetlands from recreation or other non-construction activities during Project operation. EIR at 254. o The Specific Plan proposes using known wetlands for recreational purposes. E.g., Specific Plan at 2-2 ("Designating an area at Suttonfield Lake for off-leash dogs and water recreation…"). What are the specific anticipated impacts from recreational uses and off-leash dog use at Suttonfield Lake?	The comment is noted. Please see response to comment B9-7. Policy 2-14 would prohibit all unleashed outdoor cats, and restrict off-leash dogs and other domestic animals to private fenced yards and designated areas to mitigate impacts to a less than significant level.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-36	The EIR states that "[i]mplementation of the Proposed Plan would have a significant impact on migratory species, corridors, or nursery sites if the siting, construction, or operation of development allowed under the Proposed Plan would impede on or remove migratory corridors or nursery sites." EIR at 255. The EIR then concludes that the Project would not impede migratory corridors or nursery sites. Id. But the EIR never defines what level of imposition rises to the level of a significant impact. Id. The EIR states that "recreational trails, in or near habitats that include wildlife corridors … are considered to be uses consistent with open space management and are not considered substantial impacts to the wildlife corridor functionality of the site." Id. But the EIR's conclusory statements provide no data or analysis about the impact of recreational trails or other uses on wildlife behavior, especially if over 2000 new residents and 900 employees significantly expand public use and recreation. The EIR's conclusions are not supported by substantial evidence. • The EIR next concludes that the "Proposed plan does not conflict with local ordinances, therefore, impacts related to	The comment is noted. See MR-3 and MR-7. See response to comment B11-25 and B8-1. As noted on page 257, future projects under the Proposed Plan would conform with all local policies and ordinances. This includes any regulatory regional or local requirements, such as the Sonoma County Code.

Commenter	Date	Letter	Comment	Response
			conflict with local policies or ordinances would be less than significant." EIR at 257. However, the EIR does not identify specific local policies or ordinances against which the Project was analyzed. It simply states that the "[f]uture projects under the Proposed Plan would conform with local policies and ordinances including the Sonoma County Tree Protection Ordinance and the Sonoma County General Plan." Id. The EIR's so-called "analysis" fails to mention other local rules and policies that the EIR identified as applicable to the Project, including the County Heritage or Landmark Tree Ordinance or the Valley Oak Habitat Combining District (EIR at 210). Nor does the Biological Resources section discuss or analyze the Project's consistency with Measure K, through which Sonoma County residents renewed protections for community separators and protected tens of thousands of acres of open space and agricultural land from subdivision and sprawl. EIR at 207-212. Without substantial evidence of consistency—or at least a more complete accounting of applicable policies and regulations—the EIR's consistency determination is just a conclusory statement.	

Commenter	Date	Letter	Comment	Response
			See EIR at 257. Decisionmakers and the public cannot independently verify the Project's consistency with local rules and regulations, and the EIR fails as an informational document.	
Sonoma Land Trust	9/26/2022	B11-37	The EIR does not explain why its selected significance criteria are relevant or appropriate. • The EIR identifies six significance criteria for impacts to biological resources, but fails to explain why these criteria were selected. EIR at 236. The EIR neither discloses the origin of these criteria nor provides data or analysis to support their use as significance thresholds under CEQA. Due to this lack of evidence, decisionmakers and the public cannot meaningfully gauge whether the EIR's significance criteria are adequate markers of the Project's environmental impacts. • How did the County select its chosen significance criteria? • Why were other significance criteria not considered?	The comment is noted. Biological Resource significance thresholds criteria are directly from CEQA Guidelines.
Sonoma Land Trust	9/26/2022	B11-38	The EIR's approach to mitigation presents two issues. First, the EIR evades responsibility for developing, enforcing, and monitoring mitigation measures by incorporating its chosen mitigation directly into the Specific Plan. The EIR cannot disclose the Project's "unmitigated" impacts because, under the EIR's approach,	The comment is noted. See MR-1, MR-3, and MR-9. See also response to comment B8-1 and B10-9. Impacts from hazards and hazardous materials, fire risk, noise and vibration, and lighting are analyzed in sections 3.1, 3.8, 3.16, and 3.11 pursuant to CEQA threshold requirements.

Commenter	Date	Letter	Comment	Response
			no impacts have gone unmitigated. Second, the purported mitigation that County incorporates in the Specific Plan punts to uncertain future actions and thus defers the analysis and development of any meaningful mitigation to a later date. By incorporating deferred mitigation into the Specific Plan, the EIR cannot meaningfully analyze what mitigation may be appropriate or how effective that mitigation may be. In so doing, the EIR denies decisionmakers and the public the opportunity to fully understand the Project's impacts and improperly delegates the County's legal responsibility to mitigate those impacts. The EIR relies on Specific Plan policies and Conditions of Approval to avoid, reduce, or mitigate the Project's potentially significant impacts. The EIR must therefore treat these policies and conditions as formal mitigation measures. It must analyze fully the effectiveness of the mitigation against specific identified impacts and must include the mitigation measures in a Mitigation Monitoring and Reporting Program. • The EIR's conclusions as to the effectiveness of mitigating policies and conditions are not supported by analysis or substantial evidence. They are simply a means by which the EIR avoids identifying or analyzing the Project's unmitigated impacts, as required by CEQA. This approach fails to disclose	

Commenter	Date	Letter	Comment	Response
			unmitigated impacts and fails to support the County's chosen mitigation. o For example, the EIR concludes that with the implementation of Specific Plan Policies 2-6 through 2- 26 and Conditions of Approval BIO-1 through BIO-13, "the impact of future development under the Proposed Plan on species identified as candidate, sensitive, or special- status species would be less than significant." EIR at 242. But the EIR neither identifies specific impacts that the Project will have on specific candidate, sensitive, or special-status species, nor explains how or to what degree the cited policies and conditions would reduce those impacts. EIR at 241-251. § What analysis supports the County's conclusion that Specific Plan Policies 2-6 through 2-26 and Conditions of Approval BIO-1 through BIO-13 would reduce impacts to special-status species to less-than-significant levels? § How can the County conclude that the cited policies and conditions will reduce impacts if it has not yet identified and analyzed those specific impacts or the impacted species? § How does the County anticipate the cited policies and conditions would reduce impacts to specialstatus species? o Similarly, the EIR asserts that "implementation of policies	

Commenter	Date	Letter	Comment	Response
			2-25, 2-27, 2-29, and 2-30 would ensure impacts to riparian resources [from the proposed highway connector project] would be less than significant." EIR at 252. But again, the EIR fails to identify what specific impacts the connector road would have or indicate how and to what degree the cited policies would mitigate those impacts. o The EIR further asserts that the "implementation of applicable policies" would render "the operational impact on riparian habitat and other sensitive activities … less than significant." EIR at 252. The EIR asserts that applicable policies would restrict access by humans and domestic animals to specific areas and would reduce the trampling or degradation of riparian habitat. But the EIR is silent about other potential and foreseeable impacts, such as litter, fire risk, noise, lighting, and vibration.	
Sonoma Land Trust	9/26/2022	B11-39	To the extent the Specific Plan policies and Conditions of Approval cited in the EIR could mitigate for the Project's impacts, that mitigation is impermissibly deferred. • For example, Condition of Approval BIO-14 improperly relies on existing regulatory programs and the permitting processes of other agencies to "[a]void, minimize, or mitigate for impacts to aquatic communities." EIR at 252. In so doing, the County delegates its	The comment is noted. Please see MR-1, MR-3 and MR-9.

Commenter	Date	Letter	Comment	Response
			legal responsibility to assess and mitigate Project impacts to "the Army Corps, RWQCB, [or] CDFW." Condition of Approval BIO-14 defers to the issuer of any required permit(s) to design appropriate mitigation and provides no clear benchmark or performance standard(s) that that mitigation must meet. Unless the County is the permitting agency, Condition of Approval BIO-14 does not clearly provide for County oversight of this process. Such delegation of authority to analyze and mitigate environmental impacts is improper. • Similarly, Condition of Approval BIO-16 requires the Project Sponsor to develop a habitat mitigation plan subject to approval by the agency or agencies with oversight over any impacted aquatic resource. EIR at 254. That Condition defers to the habitat mitigation plan—and therefore the Project Sponsor(s) and other agencies—to analyze the scope and effect of the impact to aquatic resources and to design appropriate mitigation. Here, too, the County improperly delegates its legal responsibility to future developers and regulators and fails to provide concrete performance standards for resulting mitigation. Analysis	

Commenter	Date	Letter	Comment	Response
			of impacts and mitigation cannot be deferred to a later date but must be performed prior to project approval. Nor may a lead agency satisfy CEQA by approving a project subject to conditions requiring the applicant to prepare future studies and mitigation measures, because in so doing the agency would be improperly delegating its legal responsibility to assess a project's environmental impact. Instead, the lead agency itself must prepare or contract for the preparation of impact assessments that reflect the agency's independent judgement. Where the finalization of mitigation is deferred, the EIR must explain why it cannot be finalized now and must establish performance standards for such mitigation that will ensure the impact will be reduced to a lessthan-significant level. How does the EIR here meet these requirements? § The EIR's conclusions that impacts to biological resources are insignificant is unsupported by either meaningful analysis or substantial evidence.	
Sonoma Land Trust	9/26/2022	B11-40	Even if the EIR could mitigate impacts through Specific Plan policies and conditions of approval, the policies and conditions identified in the EIR are not sufficient to avoid potentially significant impacts.	The comment is noted. See response to comment B8-1 and response to comment B11-25 and B11-26.

Commenter	Date	Letter	Comment	Response
			o The EIR failed to conduct field studies or survey plants and wildlife at the SDC site. EIR at 221, 236. The EIR therefore admits that there may be special-status plants and wildlife present on site that are not accounted for in the EIR's list of special-status species. EIR at 221. However, the EIR concludes that "[i]mplementation of the Proposed Plan would not have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special-status species" because future development will comply with standard conditions of approval that target special-status species. EIR at 241-251 (BIO-2 [special-status bats], BIO-3 [American badger], BIO-4 [nesting raptors], BIO-5 [burrowing owl], BIO-6 [northern spotted owl], BIO-7 [tricolored blackbird], BIO-8 [special status nesting birds], BIO-9 [western pond turtle], BIO-10 [foothill yellow-legged frog, red-bellied newt, and California giant salamander], BIO-11 [California red-legged frog], BIO-12 [California freshwater shrimp and listed salmonids], BIO-13 [special-status plants]. Even if these conditions of approval were sufficient to address the named special-status species, they would not address impacts to candidate, sensitive, or special-status mammals, reptiles, or amphibians that may be present in the SDC area but which may not be captured in the EIR's list of special-status	

Commenter	Date	Letter	Comment	Response
			species. See EIR at 221. The County simply cannot know, and EIR cannot analyze, whether and to what degree the Project may impact as-yet unidentified special-status species until the County conducts appropriate surveys.	
Sonoma Land Trust	9/26/2022	B11-41	The EIR's analysis and mitigating policies and conditions focus only on construction impacts. See, e.g., Conditions of Approval BIO-1 through BIO-14. But operational impacts could be equally if not more significant. § For example, significantly increased recreational uses from thousands of new residents and workers near the Wildlife Corridor or Suttonfield Lake could have potentially significant impacts to wildlife movement, wetlands, or special-status species by locating hikers and pets near critical habitat. The EIR generally assumes these impacts are less than significant because recreational uses are broadly consistent with open space management principles. But consistency with open space management principles does not necessarily mean that these uses would not negatively and significantly impact habitat or wildlife behavior. Increased visitor use along trails across SDC may alter behaviors and cause some species to avoid those areas. § Increased vehicular traffic that results from the development would also	The comment is noted. The DEIR Impact Analysis on Biological Resources also accounts for operational activities, see section 3.4.3.4, and it was determined that these impacts are less than significant. See also MR-3.

Commenter	Date	Letter	Comment	Response
			likely increase human-wildlife interactions. Wildlife are already documented to traverse Highway 12. How will development under the Specific Plan contribute to and mitigate the risk of vehicular collusions? How will increased traffic change wildlife behavior in the Sonoma Valley Wildlife Corridor and throughout the SDC site? The EIR cannot presently answer these questions because it has not analyzed the operational impacts of the Project on wildlife. § The surveys and related work discussed in Conditions of Approval BIO-1 through BIO-14 only apply when development is occurring. They do not continue to apply during Project operation and thus cannot mitigate operational impacts that are driven simply by the presence of humans and human activity. The EIR must analyze and mitigate operational impacts in addition to construction impacts.	
Sonoma Land Trust	9/26/2022	B11-42	The EIR relies on policies and conditions that are vague and unenforceable. The EIR fails to show how these vague and unenforceable policies and conditions could definitively avoid or mitigate potential significant impacts to biological resources. § Specific Plan Policy 2-7: Prohibit lights within the wildlife corridor and along the creek corridor. • This policy prohibits lights from being physically	The comment is noted. Please see MR-1, MR-3 and MR-9. Impacts on biological resources were determined to be less than significant with compliance to federal, State, regional, and local regulations as well as proposed policies and Standard Conditions of Approval.

Commenter	Date	Letter	Comment	Response
			located within the wildlife corridor and along the creek corridor, but it does not clearly prohibit light intrusion into the wildlife corridor or the creek corridor from lights located outside the corridors. Without prohibiting light intrusion, the EIR cannot show that project lighting will not impact biological resources in the wildlife and creek corridors. § Specific Plan Policy 2-8: Maintain wildlife crossing structures by periodically checking for and clearing debris, vegetation overgrowth, and other blockages from culvert and bridge crossing structures; within the Core Campus, the Project Sponsor should develop and execute a maintenance program in collaboration with the owner and operator of the preserved parkland and open space. • This policy is vague and unenforceable. It provides only that the Project Sponsor "should develop and execute a maintenance program." There is no guarantee that a maintenance program will be developed or executed.	
Sonoma Land Trust	9/26/2022	B11-43	Specific Plan Policy 2-10: Within the wildlife corridor, limit mowing and the removal of dead plant material to the absolute minimum required for fire safety. If possible, mowing should be conducted outside the nesting	The comment is noted. Please see MR-1, MR-3 and MR-9. Impacts on biological resources were determined to be less than significant with compliance to federal, State, regional, and local regulations as well as proposed policies and Standard Conditions of Approval.

Commenter	Date	Letter	Comment	Response
			bird season, or nesting bird surveys should be constructed within 14 days of mowing. • This policy is vague and unenforceable. It states that mowing should be conducted outside the nesting bird season and that nesting bird surveys should be "constructed" within 14 days of mowing only if possible. As an initial matter, it is not clear what it means for a nesting bird survey to be "constructed." Surveys must be completed within an appropriate time of any mowing activity in order to adequately inform whether and how that mowing activity is conducted. Further, this policy provides no indication what entity will be responsible for determining whether nesting bird surveys are possible or whether it is possible to mow outside of the nesting season. o Who does the County envision will be responsible for those decisions? o What sort of oversight will the County, the Project proponent, the owner, etc. have to ensure this policy is actually complied with? o What are the impacts to nesting birds if is it not possible to avoid mowing during the nesting bird season or if it is not possible to conduct timely surveys?

Sonoma Land Trust	9/26/2022	B11-44	Specific Plan Policy 2-15: Collaborate with local wildlife protection groups to create and distribute educational information and regulations for residents and employees to guide safe interactions with wildlife onsite. Materials should be accessible to all ages and abilities and could include posted signs, disclosures, fliers, or informational sessions, among other things. • This policy is vague and unenforceable. Materials must be accessible to all ages and abilities (not should). • How will the County gauge compliance with this policy? • How will the County enforce compliance with this policy and regulations? • Until the County identifies what regulations will be implemented, how can the County know that the regulations implemented will be sufficient to mitigate impacts to wildlife? Specific Plan Policy 2-17: Adhere to residential nighttime noise standards to the extent feasible. • This policy is vague and unenforceable. • It is not clear to which standards this Policy refers. What are the standards with which the County envisions compliance? • Who determines whether and when it is feasible to adhere to residential nighttime noise standards? • How often does the County anticipate that it will not	The comment is noted. Please see MR-1, MR-3 and MR-9. Impacts on biological resources were determined to be less than significant with compliance to federal, State, regional, and local regulations as well as proposed policies and Standard Conditions of Approval. Noise standards that the Proposed Plan will comply to are defined in the County General Plan. See Standard Conditions of Approval regarding compliance with noise standards and response to B11-30. See also B11-96 regarding preservation of existing trees.

Commenter	Date	Letter	Comment	Response
			be feasible to adhere to residential nighttime noise standards? Under what circumstances does the County anticipate that it would not be feasible to adhere to residential nighttime noise standards? • What are the activities for which the County anticipates that it may not be feasible to adhere to residential nighttime noise standards? • What additional mitigation would be required if it is not feasible to adhere to residential nighttime noise standards? Or if no further mitigation would be required, the impact would be significant and must be identified and analyzed in the EIR. What would be the impacts if the mitigation is infeasible?	
Sonoma Land Trust	9/26/2022	B11-45	Specific Plan Policy 2-21: Preserve and enhance the wetlands east of the core campus as a fire break, groundwater recharge, and habitat area. • This policy is vague and unenforceable. • This policy is not valid mitigation because it lacks clearly defined standards and is not specific enough to effectively implement or enforce. Who will determine whether wetlands are sufficiently “preserved” or “enhanced”? On what basis will those determinations be made? Specific Plan Policy 2-22: Leave standing or downed dead trees in place for wildlife habitat whenever they do not present a hazard for fire safety or	The comment is noted. Please see MR-1, MR-3 and MR-9. Impacts on biological resources were determined to be less than significant with compliance to federal, State, regional, and local regulations as well as proposed policies and Standard Conditions of Approval. See also B11-114.

Commenter	Date	Letter	Comment	Response
			recreational users, except within the managed landscape buffer. • This policy is vague and unenforceable. • This policy is not valid mitigation because it lacks clearly defined standards and is not specific enough to effectively implement or enforce. • Who determines whether dead trees present a hazard for fire safety or recreational users? • What constitutes a sufficient hazard that would authorize removal? • How frequently does the County anticipate that dead trees would constitute a hazard and would be removed pursuant to this policy? • What additional mitigation would be required if trees are removed?	
Sonoma Land Trust	9/26/2022	B11-46	Specific Plan Policy 2-25: Include protective buffers of at least 50 feet along Sonoma and Mill creeks, as measured from the top-of-bank and as shown on Figure 2.2-1: Open Space Framework, to protect wildlife habitat and species diversity, facilitate movement of stream flows and ground water recharge, improve water quality, and maintain the integrity and permeability of the Sonoma Valley Wildlife Corridor, and the ability of wildlife to use and disperse through the SDC site. Manage protective buffers so that they support continuous stands of healthy native plant	The comment is noted. Please see MR-1, MR-3 and MR-9. Impacts on biological resources were determined to be less than significant with compliance to federal, State, regional, and local regulations as well as proposed policies and Standard Conditions of Approval. See response to comment B10-9. Mill Creek runs along the southern border of the Core Campus.

Commenter	Date	Letter	Comment	Response
			communities. • The EIR does not analyze or explain why a 50-foot buffer is appropriate or sufficient to reduce impacts to creeks at SDC. Merely stating that an impact will occur is insufficient; an EIR must also provide information about how adverse the adverse impact will be. Likewise, merely stating that an impact will be mitigated is insufficient; an EIR must explain how the mitigation will avoid or reduce impacts. • A 50-foot buffer is not sufficient to reduce impacts to riparian resources. The EIR states that the riparian forest along Sonoma Creek has an average width of 150 to 300 feet—three to six times the width of the proposed buffer. Why is the required buffer so significantly smaller than the riparian resources it is meant to protect? • What and where is Mill Creek? • The 2019 Land and Water Protection Proposal (which was signed off on by Regional Parks, California Department of Fish and Wildlife, and Sonoma County Ag + Open Space calls for significantly larger buffers, including a 300-foot buffer along Sonoma Creek, a 300-foot buffer along Asbury, Mill/Hill, and	

Commenter	Date	Letter	Comment	Response
			Butler Canyon Creeks (exception for a 100-foot buffer along Mill/Hill Creek within the core campus), and a 100-foot wetland buffer. o Why did the EIR depart from this approved proposal? o On what basis does the EIR conclude that smaller buffers will protect wildlife?	
Sonoma Land Trust	9/26/2022	B11-47	Specific Plan Policy 2-26: Prohibit the use of all pesticides, rodenticides, and poisons in materials and procedures used in landscaping, construction, and site maintenance within the Planning Area. This restriction should be included in all Declarations of Covenants, Conditions and Restrictions (CC&Rs) to ensure that future homeowners are aware of the requirements (emphasis added). • This policy is vague and unenforceable. It does not guarantee that the prohibition on pesticides, rodenticides, and poisons will be included in all CC&Rs. § Specific Plan Policy 2-28: Prior to the commencement of the approval of any specific project in the Proposed Plan area, Project Sponsors shall contract a qualified biologist to conduct studies identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce	The comment is noted. Please see MR-1, MR-3 and MR-9. Impacts on biological resources were determined to be less than significant with compliance to federal, State, regional, and local regulations as well as proposed policies and Standard Conditions of Approval.

Commenter	Date	Letter	Comment	Response
			impacts to sensitive habitat or habitat function to a less than significant level. • This policy improperly defers analysis of impacts and mitigation that must be conducted now in this EIR. Analysis of impacts cannot be deferred to a later date but must be performed prior to project approval. Conducting thorough analysis at this stage is the only way decision-makers and the public can have sufficient information about impacts and mitigation to be able to evaluate the impacts of a proposed project for themselves. The needed analysis could then inform the location of various uses and development within the Sonoma Development Center and allow consideration of alternatives that minimize biological impacts. By deferring analysis of Project impacts and mitigation through implementation of the Specific Plan, the EIR fails to provide sufficient information to the public and decisionmakers and therefore fails as an informational document.	
Sonoma Land Trust	9/26/2022	B11-48	The comments presented below reference comments prepared by Neal Liddicoat, Griffin Cove Transportation Consulting, PLLC ("GCTC") on the EIR and Specific Plan, attached below as Attachment D to Sonoma Land Trust's September 26, 2022 letter to Brian Oh.	The comment is noted. See MR-9, MR-6, and MR-7. See also response to comment B8-3, B8-15, B8-16, and B8-19 for wildlife corridor policy amendments.

Commenter	Date	Letter	Comment	Response
			• The Specific Plan and its EIR include goals and objectives for this Project that include a focus on non-motorized modes of transportation within and between the Project area and local communities (e.g., Specific Plan at 3-2 and DEIR at 6. However, the proposed site maps do not demonstrate any such connections. Creating walkable and bikeable connections to Glen Ellen (including Eldridge) will be critical to encouraging nonmotorized forms of transportation. How will Project design ensure connections would be implemented to meet the Project's stated goals with respect to sustainability and community character? • The Project requires some new road development—even if only for emergency access—and will result in substantial increases in traffic volumes. Increased traffic through the property on Arnold Drive will put tremendous pressure on wildlife. Additionally, development of new roadways (e.g., on the east side of SDC) will impair existing ecological connections across the Sonoma Valley Wildlife Corridor. The EIR fails to address the impact of increased traffic on wildlife. • Wildlife movement within SDC and across the Corridor is already constrained. Currently, there are only two options for wildlife to move east-west across the core campus without having to cross the Arnold Drive roadway: along Sonoma Creek or along Hill Creek. Along the eastern edge of SDC, safe wildlife crossing of Highway 12 is limited to three culverts on Butler Creek and its	

Commenter	Date	Letter	Comment	Response
			tributaries. These small crossings under Highway 12 are the most critical locations for wildlife moving east-west across Highway 12 both within SDC and on nearby lands. High levels of wildlife movement have been documented at all three of the culverted crossings. The increased traffic and development of the Project will further constrain wildlifes' east-west movement opportunities, resulting in will have significant impacts on wildlife. How will Project design ensure safe wildlife crossings are retained? • The Project, including the Specific Plan policies, fail to ensure that new road construction, increased traffic volumes, and traffic speeds on SDC do not increase interference with wildlife movement and use within the property or across the larger corridor or result in increased road mortality. Development and human activities should be limited near the crossing structures. To help mitigate these impact, the Project design should: o limit new road, driveway, and trail construction, especially outside the core campus area o If new roads are constructed or old roads upgraded, incorporate crossing structures to accommodate wildlife o Install speed bumps and wildlife crossing signage at critical junctures	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-49	The EIR's transportation analysis presents a description of the Project, including a specific breakdown of housing unit types, that is inconsistent with both the EIR Project Description and with the description of the project in the Specific Plan document. GCTC at p. 2. The transportation analysis assumes a maximum of 1000 residential units, but assigns a specific breakdown of uses (i.e., 435 single family units, 345 multi-family units, and 220 senior residential units). GCTC Report at 1. Different types of housing typically result in different amounts of trip generation and VMT. Neither the Specific Plan nor the DEIR specify this particular breakdown of uses. On what basis does the EIR base the assumption of different types of residential units? • The EIR bases its analysis of VMT on a model completed by MTC. EIR at 433. However, the EIR uses the average VMT per capita for the entire nine county Bay Area for comparison of the Project's VMT. This comparison is inappropriate because in rural areas without established mass transit and limited alternative transportation options, the VMT is likely to be higher. The EIR analysis should have used average VMT figures for the County, or preferably, for a sub-area that includes all of the towns in the vicinity of the Project. • The EIR assumes the existing VMT is 59,654 and the proposed Project would result in a VMT of 60,285 in 2040. DEIR at 183. The EIR provides no explanation regarding how these figures were derived. Given that the SDC campus	The comment is noted. The commenter states that the EIR incorrectly bases its VMT analysis on the MTC model. This statement is incorrect; the transportation VMT analysis uses the Sonoma County SCTM19 travel demand model and uses methodologies and significance thresholds that are consistent with State requirements. The MTC model was only used to establish the regional employee VMT significance threshold, which OPR guidance states is the appropriate geographic area for development in unincorporated County areas. See also B3-15, B11-247, B11-248, B11-249, and B11-250.

Commenter	Date	Letter	Comment	Response
			is largely unoccupied, it appears that the existing VMT figure is artificially inflated, which skews the VMT analysis. The EIR's assumed VMT calculation suggests that the total VMT will only increase by 631. Without accounting for non-residential uses (e.g., office, commercial, etc.) the VMT for the 1,000 residential units would amount to an increase in VMT of 0.631 per dwelling unit, which is not realistic. If we consider the non- residential uses, the incremental increase in project-related VMT is even lower. In addition, the air quality section of the EIR indicates that the Project-related population will increase by 2,500 people for the residential portion of the Project. The Transportation section states that ". . . residential uses in the Plan area with implementation of the Proposed Plan would on average generate 15.2 VMT per capita . . ." EIR at 445. The population increase of 2,500 multiplied by 15.2 VMT per capita would result in 38,000 VMT, which is far greater than the total increase of 631 claimed in the EIR. This calculation only considers residential uses so the actual VMT would be far greater. Therefore, the EIR's VMT calculation as presented is simply not credible. Moreover, the EIR admits that the Specific Plan policies cannot be guaranteed to reduce significant VMT impacts so the correct conclusion regarding this impact after mitigation is that it would remain significant. EIR at 35.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-50	The EIR does not provide a transportation analysis of the proposed Project without assuming the construction of the new Hwy 12 connector. Since the feasibility of this road has not been determined, what are the LOS and VMT impacts without the new connector? • The EIR presents a flawed analysis of the Project's consistency with applicable plans. o The EIR acknowledges that the Sonoma County General Plan objectives require traffic operation standards of level-of-service ("LOS") C on roadway segments and LOS D at intersections. EIR at 443. The EIR concedes that the Project may exceed the established LOS standards. Id. Even though LOS is no longer used for evaluating a project's traffic impacts, when the general plan includes LOS standards, LOS does need to be considered when evaluating a project's consistency with the general plan. o Instead of estimating Project-related traffic and evaluating the Project's consistency with County LOS standards, the EIR concludes, absent any evidence, that the Project would be consistent with LOS targets established in the General Plan. EIR at 444. As discussed below, this conclusion appears to be erroneous. GCTC at p. 2. o The EIR references a traffic impact analysis prepared for the Project, but fails to include it in the EIR. GCTC at p. 2. Specifically, the EIR references the Focused	The comment is noted. VMT impacts are still significant without the Highway 12 connector. See the VMT analysis of the Historic Preservation Alternative on page 569. See MR-6.

Commenter	Date	Letter	Comment	Response
			Traffic Operations Analysis for the SDC Specific Plan (W-Trans, August 2022). EIR at 410, Footnote 118. The focused traffic study revealed that under future conditions with implementation of the SDC Specific Plan, two intersections are projected to operate unacceptably if no modifications to the current roadway configurations are made. GCTC at 2 and 3. The intersection at Arnold Drive/Harney Street would operate unacceptably at LOS F during the p.m. peak hour and the future new intersection on SR 12 at the new SDC Connector Road would have unacceptable LOS E operation on the stop-controlled connector road approach. Id. The study also revealed that at buildout of Project, the segment of SR 12 between Arnold Drive and Trinity Road and the segment of Arnold Drive between SDC and Madrone Roadwould would continue to operate below the County's standard at LOS D. GCTC at 3. Although these road segments are also identified as falling short of the County LOS standard without the Project, no mitigation measures were proposed to allow operation at an acceptable LOS. In any event, it is clear that these two roadway segments will fail to meet the County LOS standard upon completion of the Project, thereby violating the General Plan objectives. Id. The information necessary to address conformance with General Plan Objective CT-4.1 and CT-4.2 exists, but was not	

Commenter	Date	Letter	Comment	Response
			included within the DEIR, which would have allowed public review. Although the focused traffic study identifies improvements to would remedy LOS deficiencies, no assurance is provided that those measures would be implemented. GCTC at 3. Why does the EIR not disclose this study or its contents? The County must make this traffic report available to the public.	
Sonoma Land Trust	9/26/2022	B11-51	The EIR underestimates Project trip generation. o The EIR employs the SCTM19 travel demand forecasting model used by the Sonoma County Transportation Authority ("SCTA") to estimate the Project's trip generation. However, the EIR fails to disclose the specific trip generation factors employed in the trip generation model. As a result, it is impossible for document reviewers to understand or evaluate the accuracy of those factors or the resulting trip generation estimates. GCTC at p. 3. What specific trip generation factors were used? What is the substantial evidence to support those factors? o Traffic impact analyses frequently evaluate trip generation using the Institute of Transportation Engineers ("ITE") document Trip Generation Manual. An estimate of trip generation based on the ITE Manual information (hereto referred to as the "ITE estimate") versus the estimate documented in the EIR provides perspective on the credibility of the EIR Project's transportation analysis. GCTC at p. 3. For purposes of comparison, the ITE estimate considers two	The comment is noted. See response to comments B11-246, B11-247, B11-248, B11-249, and B11-250.

Commenter	Date	Letter	Comment	Response
			scenarios: one uses the Project plan described in the EIR transportation section and one considers the maximum residential development scenario described in the Specific Plan document. Id. Using industry-accepted procedures and conservative assumptions, both ITE estimate results indicate a substantially higher trip generation than disclosed in the EIR. GCTC Letter, Table 1 at p. 5. o For the first ITE estimate using the EIR Project plan, the trip generation estimate shows 6,556 residential trips and 5,697 non-residential daily trips for a total of estimated trip generation of 12, 253. GCTC at p. 5 and 6. This denotes a difference of approximately 114 percent more trips than the EIR estimate of 5,736. GCTC letter at p. 5 and EIR at 440. Although a small difference between model-based trip generation and ITE trip rates is expected, a difference of this magnitude brings into question the validity of the EIR's analysis. Id. o For the second ITE estimate using the maximum residential development scenario described in the Specific Plan document, the trip generation breakdown shows 8,593 residential trips and 5,697 non-residential trips for a total of estimated trip generation of 14,290, which is an even larger difference than the EIR estimate. GCTC at p.6. o The ITE analysis presented in the GCTC letter reveals that the EIR substantially	

Commenter	Date	Letter	Comment	Response
			underestimates the Project's trip generation. This faulty analysis implicates the EIR's vehicle miles travelled ("VMT"). GCTC at p. 7. Trip increases described in the GCTC letter will similarly translate to roughly equivalent increases in VMT. Id. and EIR at 447. Although the EIR already concludes that VMT impacts would be significant and unavoidable, the EIR's failure to accurately estimate trips results in a failure to disclose the extent and severity of those impacts, which is impermissible under CEQA.	
Sonoma Land Trust	9/26/2022	B11-52	The EIR substantially overestimates internal trips. o The EIR's transportation analysis assumes that 24.4 percent (approximately 1,398 of the Project's total 5,736 daily trips) of Project-generated trips would never leave the project site ("internal trips"). EIR at 440 and GCTC at p. 7. However, here too, the EIR is overly optimistic and over estimates the internal trips. Even where job opportunities and other amenities exist within the Specific Plan area, residents will still commute to existing jobs and drive off site to nearby communities. There is no guarantee that people who live on site will work there. GCTC employed three different methods to estimate internal trips at the SDC site. GCTC at pps. 7 and 8. Under each of the methods, GCTC found internal trip values ranging from 6.5 to 8.8 percent, all substantially lower that the 24.4 percent value used in the EIR analysis. GCTC at p. 8.	The comment is noted. See response to comments B11-246, B11-247, B11-248, B11-249, and B11-250.

Commenter	Date	Letter	Comment	Response
			Consequently, the DEIR analysis has substantially overstated the number of internal trips and grossly underestimated the number of external trips. Id. In this way, the EIR failed to accurately assess the off-site transportation-related impacts of the Project. Id. o The EIR's underestimate of the number of external trips, leads to similarly understated Project-related VMT, which serves as basis for determining the significance of the Project's transportation impact. In short, the Project's transportation impact has been greatly understated due to a failure to provide an accurate estimate of the volume of traffic resulting from the Project. See, GCTC Table 3 at p. 9. This failure to accurately estimate traffic impacts in turn implicates the air quality and greenhouse gas analyses, noise analysis, wildfire/emergency evacuation analysis, and biological resources assessment, among others.	
Sonoma Land Trust	9/26/2022	B11-53	The EIR presents a flawed Project traffic assignment. o The EIR presents a flawed analysis of projected traffic volumes for the three road segments that provide access to the Project site: Arnold Drive north of the site, Arnold Drive south of the site, and the proposed Highway 12 connector. GCTC letter at p. 9. Despite the fact that the EIR omitted some of the data related to Project existing traffic volumes, GCTC was able to derive the Project traffic	The comment is noted. See response to comments B11-246, B11-247, B11-248, B11-249, and B11-250.

Commenter	Date	Letter	Comment	Response
			assignment on each roadway segment. Id. In each scenario analyzed in the EIR, the volume of project trips assigned to regional access roads falls substantially short of the 4,338 external trips claimed in the EIR. GCTC at p. 9 and Table 4 at p. 10. In the analyses implementing the Highway 12 connector, the volume of traffic on Arnold Drive north of the site is shown to be reduced upon completion of the Project, which seems highly unlikely. Id. Although some variability in these types of analyses can sometimes occur, none of the factors that would contribute to such variability (such as the presence of alternative routes that allows for redirecting traffic to less congested routes) apply at the Project site. GCTC at p. 10.Therefore, substantial evidence fails to support the EIR's analysis and conclusions, and the EIR fails to accurately account for the full volume of Project-related traffic. • The EIR's vehicle- miles travelled analysis is inaccurate and misleading. o The EIR's VMT analysis is equally concerning and is flawed for several reasons. GCTC at 11. First, the VMT analysis assumes a 15 percent reduction in VMT based on transportation demand management ("TDM") trip reductions. Id. However, the EIR provides no support for its assumption regarding a 15 percent trip reduction. Id. Even the EIR admits that "the ability for individual development projects to achieve a 15 percent reduction	

Commenter	Date	Letter	Comment	Response
			in VMT is uncertain." EIR at 447. The GCTC analysis suggests that the VMT would be substantially greater than disclosed. GCTC at 11. Second, the employment VMT figures (also called "Home-Work VMT per Worker") presented by the EIR are highly questionable. Id. Specifically, the planning area baseline average (7.1), the countywide baseline average (12.4), and the regional baseline average (16.9) for home-based commute VMT per worker are all higher than the EIR value assigned for home-based commute VMT. Id. The EIR's finding that the Project's homebased commute VMT would be 4.8 is approximately 67 percent of the corresponding value for the Planning Area, 39 percent of the Countywide value, and only 28 percent of the Bay Area Region value. Id. This unexplained discrepancy, along with the aforementioned flaws in the analysis raises serious concerns about the EIR's credibility. GCTC at p.12. o The EIR relies on Specific Plan Policy 3-41 to reduce the Project's VMT impact. GCTC at p.12. This policy requires all development to reduce vehicle trips by 15 percent below rates listed in the ITE Trip Generation Manual using TDM strategies. Id. and Specific Plan at p. 3-12. However, as the GCTC letter explains, this policy does not make sense given that the Project's proposed trip generation is already so low. Id. In other words, if the Project's trip	

Commenter	Date	Letter	Comment	Response
			generation estimate is to be believed, the Project trip rate is already substantially less than 15 percent below ITE trip rates. Therefore, unless the Project's trip generation estimate is corrected, Specific Plan Policy 3-41 is meaningless. GCTC at p.13.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-54	CEQA requires EIRs to include all feasible mitigation to reduce a significant impact to an insignificant level even where an impact is significant and unavoidable. Here, the EIR fails to identify mitigation measures that would reduce the Project's traffic impacts. These include measures found in the California Air Pollution Control Officers Association ("CAPCOA") report "Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity, Public Draft, August 2021, found at https://www.airquality.org/ClimateChange/Documents/Handbook%20Public%20Draft_2021-Aug.pdf. Some of these measures could include, for example: MM T-7: Bus Shelter for Existing/Planned Transit Service - Bus or streetcar service provides headways of one hour or less for stops within one-quarter mile; project provides safe and convenient bicycle/pedestrian access to transit stop(s) and provides essential transit stop improvements (i.e., shelters, route information, benches, and lighting). MMT-31: Orient Project Toward Transit, Bicycle, or Pedestrian Facility MM T-38: Implement Preferential Parking Permit Program. (For electric vehicle and other alternative fuel vehicles.) MM T-39: Implement School Bus Program MM T-40: Implement a School Pool Program MM T-42: Provide Electric Shuttles MMT-47: Required Project Contributions to Transportation Infrastructure Improvement MM E-23: Use Microgrids and Energy Storage	The comment is noted. The commenter states that the EIR fails to identify all feasible mitigation measures related to VMT impacts, citing several VMT mitigation strategies found in the California Air Pollution Control Officers Association (CAPCOA) report "Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity," Public Draft, August 2021. The assertion that the DEIR fails to identify feasible measures is incorrect. The County chose to address VMT mitigation through Specific Plan Policies 3-41 and 3-42, which require individual developments occurring with the Specific Plan to achieve reductions in vehicle trips and VMT through implementation of TDM strategies and establishment of a TMA to oversee areawide VMT reduction programs. Both individual developments and the TMA are expected to rely heavily on the data contained in the CAPCOA publication cited by the commenter (or more appropriately, to more recent versions of the CAPCOA report). The selection of TDM strategies will vary by individual development project and the TMA, and will likely evolve over time to maximize effectiveness, as described on DEIR pages 448-449. This approach was intentionally chosen as a VMT reduction strategy rather than attempting to speculatively predict which measures (including those identified by CAPCOA) may or may not be relevant during the span of the proposed Specific Plan. Many key VMT reduction strategies related to physical infrastructure and reducing automobile travel that are cited by the commenters have also already been incorporated as Specific Plan policies.

Commenter	Date	Letter	Comment	Response
			• In sum, the EIR's transportation analysis is flawed. Particular deficiencies were identified with respect to the volume of traffic associated with the Project, how much of that traffic will be captured internally, the assignment of that traffic to the stud y area roads, and the validity of the estimate of Project-related vehicle-miles traveled. GCTC at 13. These failures implicate the validity of the conclusions presented in the EIR. Id. • The errors and omissions in the Transportation analysis implicate the EIR's analyses of other topics, including air quality and greenhouse gas emission impacts.	Following are responses to CAPCOA measures cited by the commenter (note that the commenter appears to have mis-numbered and combined some CAPCOA measures so the following list is organized by topic). Measure cited by commenter: • Bus shelters for existing/planned transit service • Provide safe and convenient bicycle/pedestrian access to transit stops • Provide essential transit stop improvements • Orient project toward transit, bicycle, or pedestrian facility • Measures would be implemented by development in the Specific Plan area • Bus service with headways of one hour or less • Subsidization of fare-free service or service expansions could be a strategy used by the TMA if funding allows • Implement preferential parking permit program • Implement school bus program • Implement a school pool program • Provide electric shuttles • Required project contributions to transportation improvements Specific Plan Policy 3-23 calls for adding an additional bus stop in the campus; Policies 3-24 and 3-25 call for providing transit shelters, seating, and lighting among other amenities including real-time system updates and arrival times; Policies 3-12, 3-13, 3-15, 3-16, and 3-21 collectively call for the establishment of new pedestrian and bicycle connections including to transit along the Arnold

Commenter	Date	Letter	Comment	Response
				Drive corridor. Specific Plan Policy 3-22 calls for the County to work with Sonoma County Transit to expand transit service and extending the fare-free Route 32 shuttle to the site. The Sonoma Valley Unified School District already provides bus service to students who live beyond walking distance, though if this practice were discontinued in the future, implementing of a school bus or shuttle would remain a viable TDM strategy that the TMA could utilize. Policy 3-22 calls for extension of the Route 32 shuttle to the Specific Plan area; electrification of shuttles has no effect on transportation VMT. Policy 3-22 calls for extension of the Route 32 shuttle to the Specific Plan area; electrification of shuttles has no effect on transportation VMT. Development projects will be required by the County to contribute to improvements; the County would be responsible for completing Arnold Drive complete streets improvements and path connections (see Specific Plan section 7.6) which form a key component of VMT reduction strategies related to non-auto travel. Specific Plan Policies 3-27, 3-28, 3-29, and 3-31 require parking management strategies that will reduce VMT; preferential parking permit programs could be incorporated as a component of these strategies.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-55	The comments presented below reference comments on the EIR and Specific Plan prepared by Alexandra Syphard, Senior research ecologist specializing in wildfire science and fire ecology, Conservation Biology Institute ("Syphard Letter"), attached as Attachment E to Sonoma Land Trust's September 26, 2022 letter to Brian Oh. • The EIR fails to adequately analyze Project-related impacts related to evacuation during a wildfire. The EIR references an evacuation analysis prepared by Kittelson & Associates that is not included in the EIR or its Appendices and is not available anywhere on the SDC Specific Plan website. The County must make this report available to the public. o The EIR fails to adequately describe the baseline conditions relevant to evacuation. In past fires, Highway 12 became so congested that it took hours to drive even short distances. The evaluation of project-related wildfire evacuation impacts lacks adequate information. For example, the EIR fails to provide details related to implementation of the proposed vegetated fuel buffers, their size, how they would be managed, and how they would be maintained. o In addition, it defies logic that the evacuation of more than 2,000 cars (and potentially 3,000 or more depending on the number of housing units and number of jobs) during a wildfire would increase travel time during an evacuation by fewer than 15 seconds. The EIR fails to provide the basis for this conclusion or	The comment is noted. All outputs from the evacuation analysis are included under Impact 3.16-1 of the DEIR. Also, see responses to letter C109. Specifically, see response to comment C109-5. See also MR-1, MR-3, and MR-9.

Commenter	Date	Letter	Comment	Response
			provide or even summarize the evacuation analysis prepared by Kittelson & Associates. In addition, the unstable project description and the flawed transportation analysis add to the uncertainty regarding the number of proposed housing units and the corresponding amount of increased traffic, which will exacerbate fire risk and the ability to safely evacuate.	
Sonoma Land Trust	9/26/2022	B11-56	The EIR fails to adequately evaluate project-related wildfire risk. o It is common knowledge that fire is an ever-present danger in Sonoma County. Decades of fire suppression, a changing climate, the epidemic of dead and dying trees, combined with a record drought equate to a recipe for disaster in the region. As County staff acknowledge, the combination of dense forests, heavy fuel loads, low humidity, potential for high winds, and the steep terrain can rapidly turn even small fires into lethal, major disasters. EIR at 500 and 501. • The environmental destruction wrought by wildfires is exacerbated by development in the Wildland-Urban Interface, which unwisely places people and structures directly in the line of fire. o Here, not only is the proposed Project located within the Wildland-Urban Interface, it is surrounded by lands designated as moderate, high, or very-high fire hazard severity zones ("FHSZ"). EIR Figure 3.16-2 Fire Constraints. o As the EIR recognizes, the site's natural vegetation	The comment is noted. See responses to letter C109. Specifically, see responses to comments C109-7, C109-9, and B3-25. See also MR-1, MR-3, and MR-9.

Commenter	Date	Letter	Comment	Response
			and slopes are conducive to the rapid spread of wildland fires as was the case during the Sonoma Complex fires in 2017. EIR at 502. • As the EIR acknowledges regarding wildfire ignition risk, " the majority—95 percent— are caused by human activity." EIR at 500. o Increased housing density, the location, and the pattern of development drives wildfire risk. Syphard et al. 2013. Isolated or remote clusters of development, such as the one proposed here, are particularly vulnerable (Syphard et al. 2016). o This is especially true when the housing is surrounded by high FHSZs.	
Sonoma Land Trust	9/26/2022	B11-57	It is well established that most human-caused wildfires start near roads and housing development (Syphard and Keeley 2015 and others). Therefore, not only is the likelihood that more fires will start near the project site (that in turn increases the number of fires that could become destructive), but the increase in transportation into and out of the new development increases the likelihood of fires starting in the area. The EIR fails to address this fact. • The EIR states that impacts related to wildfire risk will only be considered significant if "the Proposed Plan risks exacerbating those existing environmental conditions." EIR at 506. The EIR lists several criteria for evaluating fire risk, but fails to evaluate the risk of having a substantial increase in population on-site and increased use of the open space. • The proposed increase in population on-site,	The comment is noted. See responses to letter C109. Specifically, see responses to comments C109-7, C109-8, and C109-15. See also MR-1, MR-3, and MR-9.

Commenter	Date	Letter	Comment	Response
			particularly at the maximum level allowed, would exacerbate fire risks for three reasons: o increased housing density o a substantial increase in vehicles on the site and o a substantial increase in use of the undeveloped open space areas. • Increased housing density and population on site, especially at the proposed low- to medium densities, would increase opportunities for fires to ignite; and there is still ample continuous vegetation in the surrounding landscape for wildfires to spread. (Syphard et al. 2007, Syphard et al. 2019, Radeloff et al. 2018). • Research shows that the location of human ignitions tends to occur closest to roads and human infrastructure (Molina et al. 2019, Chen and Jin 2022). Increased vehicles on site would increase opportunities for fires to ignite. Therefore, the addition of people coming into and out of the area because of the new development increases the likelihood of more fires starting on-site and in adjacent areas. • In addition, it is reasonable to assume that with an increased population of 2,400 people, or more, there will be a significant increase in use of open space areas, which will in turn, increase wildfire ignition risk. Therefore, the Project would exacerbate wildfire risk, especially if the site can eventually house even more people. • The EIR fails to analyze any of these factors, fails to provide evidence that the Project will not exacerbate wildfire risk, and incorrectly concludes that impacts related to wildfire risk are less-than-significant.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-58	The EIR fails to adequately analyze project-related wildfire risk exposure of people and structures due to flooding, landslides, runoff, post-fire slope instability, or drainage changes. The Specific Plan and its EIR indicate that all proposed development would be located on the flat part of site. However, some structures located near the boundaries of the Core Campus are adjacent to steep slopes (within areas preserved as open space), which are known landslide-susceptible areas, and contain vegetative wildfire fuels. EIR at 521. • The EIR relies on Policy 2-31 to reduce risks of flooding and landslides. However, as indicated above, this policy lacks details about how fuel management would be implemented and maintained in areas susceptible to flooding and landslides. o This information is important because some types of vegetation are more prone to ignition than others. o In addition, vegetation removal could result in unintended consequences, such as exacerbating slope instability especially after a wildfire. • The EIR entirely ignores potential exposure and risk to people from flooding, runoff, or drainage changes. o As explained further in the section on hydrology and water quality below, the EIR defers all analysis related to exposing people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, or inundation by seiche, tsunami, or mudflow. EIR at	The comment is noted. See Impact 3.16-4 on page 521 of the DEIR regarding potential secondary impacts from a wildfire. With compliance of proposed policies, implementation of the Proposed Plan would not expose people or structures to significant risks, including downslope or downstream flooding or landslides. See also MR-1, MR-3, and MR-9.

Commenter	Date	Letter	Comment	Response
			299 to 301. o The EIR presents contradictory information related to the potential for flood risk. Specifically, the EIR discloses high risk of flood hazards (EIR at 286 and 287) but defers analysis and identification of feasible mitigations until after Project approval. EIR at 300. o The EIR's approach of deferring analysis and mitigation violates CEQA.	
Sonoma Land Trust	9/26/2022	B11-59	The EIR does not adequately analyze increased fire risk to neighboring residents and wildlife o Given the increased sources of ignition associated with new development and increased traffic, how will the Project exacerbate risk of wildfire ignitions to neighboring communities, e.g., Glen Ellen, Sonoma? o How will the Project exacerbate risks to biological resources due to increased risks of wildfires?	The comment is noted. See responses to letter C109. Specifically, see responses to comments C109-8 and B3-27. See also the cumulative impacts analysis in Section 5.2 of the DEIR. As noted on page 520, construction and maintenance of associated infrastructure to reduce wildfire risk could result in subsequent environmental impacts; the specific impacts of which are not known at this time. However, any new construction of infrastructure facilities to serve the Planning Area would be located and constructed on existing urban and built-up land within the Core Campus (Goal 2-A). Environmental impacts related to construction emissions, vehicle miles traveled (VMT), and biological resources associated with construction of the proposed new facilities and SR 12 connector are accounted for in technical modeling provided in other chapters of this EIR. Further, construction and maintenance of individual infrastructure facilities would be subject to separate project-level CEQA review as applicable at the time the design is proposed in order to identify any potential project specific impacts and identify any mitigation as may be appropriate.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-60	The EIR fails to provide evidence that proposed policies and measures will reduce impacts to less than significant levels. The Project proposes vegetated fuel management buffers but fails to provide details related to buffer size, management, and maintenance. § Why is there no fuel management buffer on the north side of the development site? § How will annual grass areas be managed to reduce ignitability of the landscape? § What criteria will be applied to determine what types of trees or shrubs will be removed and what types will be retained? § What is the plan regarding maintenance of native vegetation, such as chaparral, trees, and shrubs that provide shade and humidity and may be less likely to ignite than grass? o Proposed Policy 2-31states that "shrubs and chaparral should be limited within the managed landscape buffer" (emphasis added). § How will this "limit" be established? Given that this is not a mandatory requirement, what impacts will occur if it is not? o Proposed Policy 2-34 indicates that "minimum clearance of fuels surrounding each structure will range from 4 feet to 40 feet in all directions, both horizontally and vertically" and that areas with "greater fire hazards will require greater separation between hazards." EIR at 508. o What areas of the campus have greater fire hazards	The comment is noted. See responses to letter C109. Specifically, see responses to comments C109-9 through C109-13. See also MR-1, MR-3, and MR-9.

Commenter	Date	Letter	Comment	Response
			that may require more intensive vegetation removal? What sort of shrubs and trees, and therefore wildlife habitat, would be removed under this policy? What would be the biological impacts of such removal? o What entity is responsible for ensuring that the fuel management buffers are properly implemented and maintained? o The County must provide answers to these critical questions and identify other measures for avoiding risk other than vegetation removal, such as avoiding development altogether in areas of greater fire risk.	
Sonoma Land Trust	9/26/2022	B11-61	Many of the policies relied upon to mitigate the significant increased risk of wildfires are inadequate because the measures are vague and unenforceable. o For example: SP Policy 2-42 provides for an educational campaign regarding wildfire risk to future residents. However, the EIR fails to specify the details of implementation. Who is ultimately responsible for ensuring that the policies are followed? o Who will ensure that the educational campaign referred to in Policy 2-42 is updated and continued? o How long will these policies serve to help offset the increased risk that comes with the development? • The EIR fails to identify measures that would reduce personal vehicle use through implementation of mass transit. Having thousands of people driving vehicles on roadways on the site will increase opportunities for fire	The comment is noted. See responses to comment B3-27 and C109-6. See also MR-1, MR-3, and MR-9.

Commenter	Date	Letter	Comment	Response
			ignitions. o The EIR should consider additional mitigation. For example, the Project should include on-site shuttles for the life of the Project, providing transportation for residents to and from the Project site and Eldridge area to the towns of Sonoma, Napa, Petaluma, Rohnert Park, and Santa Rosa throughout the day and evening. • All policies and best management practices should be included as measures in a Mitigation Monitoring and Reporting Plan to ensure implementation and enforceability.	
Sonoma Land Trust	9/26/2022	B11-62	The comments presented below reference comments prepared by Gregory Kamman, CBEC Eco Engineering ("CBEC") on the EIR and Specific Plan, attached below as Attachment F to Sonoma Land Trust's September 26, 2022 letter to Brian Oh. • The EIR Project Description and Project Plan fail to provide sufficient detail about land use changes to complete the necessary hydrologic and water quality assessments to evaluate the Project's hydrological impacts. Due to the lack of an adequate Project Description, the EIR determinations that potential hydrologic and water quality impacts are less than significant requiring no mitigation measures is unsupported. • Redevelopment of the SDC site has the potential to impact the hydrology of interconnected groundwater, spring, and stream systems through changes in land cover, storm water management, and water use. Impacts may include changes to the quantity,	The comment is noted. The DEIR does adequately analyze impacts to Hydrology and Water Quality pursuant to CEQA standards. See MR-1 and MR-3. See Impacts 3.9-1, 3.9-2, 3.9-3, and 3.9-5 for analysis regarding impacts on surface and groundwater quality and recharge pursuant to CEQA thresholds. See also response to comment B11-271.

Commenter	Date	Letter	Comment	Response
			quality, and timing of storm water runoff, infiltrated water available for vegetation and groundwater recharge, and the magnitude, frequency, and extent of critical low flows in steams and low water conditions in wetlands. The EIR does not adequately analyze these impacts. The EIR leaves many questions related to hydrology and water quality unanswered. For instance: o What is the extent of change in impervious surface footprint under this Project? The EIR states only that the Proposed Plan may increase the amount of impervious surfaces. EIR at 298. Even if final numbers will not be known until developers submit future development proposal, the Specific Plan provides the location and types of uses such that the EIR can estimate the changes to impervious surfaces at SDC. o How would the change in impervious surfaces impact the quantity and quality of discharge into Sonoma Creek or its tributaries? o How would proposed stormwater facilities change those processes? o What are the quantitative impacts on the recharge of groundwater aquifers that will result from the Project? o How will the change in extraction of raw water from streams, springs, and aquifers impact environmental quality, including species of concern at the SDC site and beyond compared to recent demand at SDC? o How will projected changes to patterns of temperature and precipitation, such prolonged periods of drought combined with more	

Commenter	Date	Letter	Comment	Response
			intense precipitation events affect water needs and impacts of proposed development at SDC?	
Sonoma Land Trust	9/26/2022	B11-63	The EIR cannot defer the analysis and development of mitigation measures for the Project's impacts on hydrology and water quality. The Specific Plan identifies the location, intensity, and square footage of the different land uses proposed in the Specific Plan: residential, commercial, hotel, office, public, institutional, and utility use (EIR at 80). In short, the County already knows what types of development could occur under the Specific Plan and substantially where those different types of development would occur. Yet, the EIR fails to address the following questions: o How would Project design ensure there would be no substantial increase in the magnitude, frequency, duration, or extent of low-flow events or flood events on springs, streams, and wetlands located at or downstream of the SDC property that may result from changes in land cover, storm water management, and/or the volume, rate, or duration of surface run-off from the site? o How would Project design ensure there would be no substantial degradation of water quality (as per state and local water quality standards), including pollutant load transported by storm water runoff from the site (e.g., sediment load,	The comment is noted. The DEIR does adequately analyze impacts to Hydrology and Water Quality pursuant to CEQA standards. See MR-1, MR-3, and MR-9. Pursuant to CEQA thresholds, the Proposed Plan would have less than significant impacts to hydrology and water quality with compliance to federal, State, regional, and local regulations and implementation of proposed policies and Standard Conditions of Approval.

Commenter	Date	Letter	Comment	Response
			nutrients, metals, and hydrocarbons) that may impact the extent and quality of aquatic habitats? o How would Project design ensure there would be no substantial reduction of infiltration and ground-water recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table? How would Project design ensure there would be no substantial increase in water temperatures in receiving streams resulting from runoff of warm storm water from the site? o How would Project design ensure there would be no substantial net increase in withdrawals or diversions from area springs and streams, including Roulette Springs, Hill Creek, Asbury Creek, and Sonoma Creek, within critical low-flow periods (summer, fall, drought conditions) or as annual averages? o How would Project design ensure there would be maximum possible on-site reuse of treated wastewater as water supply for landscape irrigation, groundwater recharge, or other water supply needs, to minimize environmental impacts of raw water sourcing?	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-64	The EIR fails to adequately analyze Project-related impacts tied to compliance with applicable regulations protecting water quality. EIR at 294. o Impact 3.9-1 - The EIR concludes that impacts related to implementation of the Proposed Plan would not violate any federal, state, or local water quality standards or waste discharge requirements. EIR at 29 and 294. However, the EIR fails to actually analyze how changes in site runoff and associated erosion potential will change. § Performing the required analysis would require detailed hydrologic and hydraulic modeling that incorporates all changes in land use (i.e., impervious surfaces) and runoff estimates to determine where and by how much flow rates and erosion potential may impact receiving waterways. Best Management Practices and other measures could then be designed correctly to mitigate these impacts. Without this information, the EIR cannot adequately evaluate the impacts before and after mitigation. § The EIR bases its conclusion, in part, on implementation of proposed Policy WQ-1. However, this policy only requires consistency with existing laws and regulations. Under CEQA, merely requiring compliance with existing laws and agency regulations does not conclusively indicate	The comment is noted. See MR-1, MR-3, and MR-9. Pursuant to CEQA thresholds, the Proposed Plan would have less than significant impacts to hydrology and water quality with compliance to federal, State, regional, and local regulations and implementation of proposed policies and Standard Conditions of Approval. As noted on page 292, Impact analysis of surface water hydrology considers potential changes in the physical characteristics of water bodies, impervious surfaces, and drainage patterns throughout the Planning Area as a result of construction and operation at the site. Groundwater supply and recharge are assessed by comparing existing conditions within the site area and after implementation of the Proposed Plan. Surface water and groundwater quality is analyzed by using information on existing water quality conditions. Potential sources of contaminants associated with construction are also considered. Flooding impacts are assessed using FEMA data and historical flood information to determine the existing flood zone, specifically evaluating whether the site overlaps designated 100-year floodplains and whether it was a flood risk. CEQA does not require an analysis of how existing environmental conditions will affect a project's residents or users unless the project would exacerbate an existing environmental hazard. This analysis evaluates if construction would exacerbate existing or future flood hazards. See also response to B11-271.

Commenter	Date	Letter	Comment	Response
			that a proposed project would not have a significant and adverse impact. § The EIR also relies on implementation of as yet unspecified Best Management Practices ("BMPs"). EIR at 294. The EIR provides only a laundry list of potential BMPs with no indication or commitment regarding which ones may be implemented or what performance standards they must meet. The EIR fails to address the following questions: What BMPs would be appropriate given specific site conditions? What is the expected efficacy of each measure? What residual impacts might remain after implementation of specific BMPs?	
Sonoma Land Trust	9/26/2022	B11-65	The EIR fails to adequately analyze Project-related impacts related groundwater recharge. o Impact 3.9-2 - The EIR concludes that the project will not interfere with groundwater recharge such that it may impede sustainable groundwater management of the basin and associated potential impacts are less than significant. Id. Similar to its analysis of other hydrological impacts, the EIR fails to provide any analysis of how the proposed Project development will alter groundwater recharge. Having failed to analyze the impact, the DEIR again relies	The comment is noted. The DEIR adequately analyzes impacts to groundwater recharge. The DEIR notes on page 296 that future development at SDC would use surface water supplies from the two reservoirs, and would not be reliant on groundwater. Furthermore, development would be limited to the Core Campus area, and redevelopment of existing structures would not significantly alter the area available for recharge of the groundwater aquifer. Given existing regulations and proposed policies, the Proposed Plan would not substantially decrease groundwater supplies and would not impede sustainable groundwater management of the basin, and this impact would be less than significant. See

Commenter	Date	Letter	Comment	Response
			on compliance with existing regulations and unspecified BMPs. o The EIR has an obligation to describe any potential changes in recharge. Simply stating that unspecified BMPs that support groundwater recharge will be integrated into the Project is insufficient information to demonstrate that the measures will be effective to mitigate potential impacts.	also MR-3 and MR-9 and response to comment B11-271.
Sonoma Land Trust	9/26/2022	B11-66	The EIR fails to adequately analyze Project-related impacts related to flooding and erosion. o The Specific Plan indicates that the site is potentially vulnerable to flooding and dam inundation from a failure of the Fern and Suttonfield dams and spillways. Specific Plan at p.2-6. The EIR explains that future flood events would pose risks to structures such as bridges and culverts and that failure of the dams would exacerbate flood risks. EIR at 286 and 287. Inundation from a dam failure at Fern Lake, could flood a large portion of the Core Campus area, as well as a large area of the Eldridge community just south of the Planning Area. Suttonfield Lake is the largest dam on the site and inundation from a failure at this lake would flood areas east of Sonoma Creek. Both failures would impact proposed residential areas. o The EIR concludes that Project development would not substantially alter the	The comment is noted. The DEIR adequately analyzes impacts to flooding and erosion pursuant to CEQA requirements. The Proposed Project would be required to demonstrate compliance with regulations that include NPDES permits, San Francisco Bay MRP, the Sonoma County Code, the MS4 Phase II Permit, and the Sonoma County General Plan. Proposed policies and Standard Conditions of Approval would be implemented in order to comply with such existing regulations, resulting in less than significant impacts. See also B11-64, B11-271, MR-3, and MR-9.

Commenter	Date	Letter	Comment	Response
			existing drainage patterns or result in substantial erosion and flooding on- or offsite or contribute runoff that would exceed the capacity of existing or planned storm drain systems. EIR at 297 and 298. Here too, these conclusions are not substantiated. § The EIR fails to perform and/or present results from any hydrologic or hydraulic analyses to demonstrate to what degree the project may increase runoff rates and erosion potential from new or redeveloped plan areas. The EIR assumes that adhering to existing County regulations will reduce flooding and erosion impact; yet the DEIR fails to demonstrate that would be the case. § The EIR relies on proposed policies WQ-1 and WQ-4 regarding compliance with applicable plans which, as discussed above, is not adequate to fulfill CEQA requirements. How would these plans insure impacts were reduced to an insignificant level?	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-67	The EIR fails to adequately analyze Project impacts related to exposing people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, or inundation by seiche, tsunami, or mudflow. EIR at 299 to 301. o This conclusion is contrary to the California Division of Safety of Dams ("DSOD") conclusions about Project dam safety presented in section 3.9.2.5 (Flooding – Flooding from Dam Failure) of the EIR. EIR at 286-287. o The EIR states, "The DSOD has classified the downstream hazard of a failure at Fern Lake as high". EIR at 286. The DEIR further states, "[T]he DSOD has classified the downstream hazard of a failure at Suttonfield Lake as extremely high." EIR at 287. These statements alone provide evidence in the record that potential flooding impacts are potentially significant and require thorough analysis. o Despite these disclosures, the EIR impermissibly defers necessary subsurface exploration, laboratory testing, and geotechnical studies of the dam sites to determine potential for failure and need for mitigations. EIR at 300. o The EIR relies on implementation of Policies WQ-2 and WQ-3 as mitigation for the significant risks associated with locating housing and businesses in the inundation zone, stating that these policies provide for	The comment is noted. The DEIR adequately analyzes impacts to flooding. The DEIR recognizes there are potentially signicant impacts related to dam failure on page 299. Due to the potential of flooding from dam failure and because there are no records of dam construction or evaluation of the stability of the dams, a geotechnical investigation will be required as well as an emergency plan. As per Proposed Policy WQ-2 and WQ-3 a geotechnical investigation should be performed on the dam sites to evaluate the potential for failure of the embankments under both static and seismic loading conditions. Possible studies include subsurface exploration, laboratory testing, and geotechnical engineering analysis. The report should evaluate the need for improvements such as spillways, subsurface drains, reconstruction of the dam embankments, and other measures to provide long-term stability of the dam embankments. Short term mitigation measures may include lowering of the water levels in the Lakes by providing spillways at lower elevations. Long term stabilization measures would likely include reconstruction of the dam embankments and installation of subsurface drainage control measures. As per Proposed Policy WQ-5, both Fern and Suttonfield lakes are currently under the responsibility of the State. Since both reservoirs at the Planning Area are classified as at least a high hazard, an Emergency Action Plan (EAP) must be implemented in accordance with the requirements from the California Water Code Sections 6160 and 6161 and Government Code Section 8589.5. When the property is transferred a new EAP must be developed to reduce the risk of loss of human life or injury, and to minimize

Commenter	Date	Letter	Comment	Response
			future geotechnical evaluations. Id. o WQ-2 states “Any potential hazard to life or property in the Planning Area shall be properly investigated by the appropriate licensed professional.” o WQ-3 states “All development that requires a geotechnical, hydrological, or environmental report shall utilize the recommendations of said report and be in compliance with regulatory agencies.” EIR at 294 [listed as standard conditions of approval]. o These proposed policies fail to mitigate potential impacts. Instead, they defer analysis and mitigation until after project approval and leave important questions unanswered. For example: On what basis is the County concluding that dam failure would not pose a significant risk to people on- and off- site? § When would the required studies be performed? § Where would the anticipated embankments and installation of subsurface drainage control measures be implemented? § What is the risk of potentially locating thousands of people on the site given the condition of the dam and the known high risk that it may fail? § How will the required Emergency Action Plan impact the proposed Project? EIR at 300. § How would potential short term mitigation measures (i.e., lowering	property damage in the event of a potential or actual emergency. See also MR-3, MR-9, and B11-271. The Proposed Project would be required to demonstrate compliance with all applicable regulations and plans that include NPDES permits and the Sonoma Valley Sub-basin groundwater sustainability plan. Thus, the impact is less than significant.

Commenter	Date	Letter	Comment	Response
			of the water levels in the Lakes through spillways at lower elevations) impact the environment on- and off-site? Id. § How would implementation of potential long term stabilization measures (i.e., reconstruction of the dam) impact the environment on- and off-site? Id. When will appropriate evaluations be performed? o Under CEQA, studies related to hazards that have the potential to increase safety risks to life and property must be performed prior to project approval. It is critical to perform such evaluations now to determine the level of risk and to include necessary mitigations, which could include changes to the Specific Plan, major repairs or fortifications of the dams, or other mitigation measures as appropriate to avoid or minimize those risks. • The EIR concludes that Project impacts related to obstructing implementation of a water quality control plan or sustainable groundwater management plan would result in lessthan- significant impacts, absent any analysis or evidence. EIR at 301. o As with all of the other hydrology impacts listed above, the EIR relies on compliance with existing policies and regulations to minimize impacts and fails to present any analysis to support its conclusion.	
Sonoma Land Trust	9/26/2022	B11-68	The comments presented below reference comments prepared by Gregory Kamman,	The comment is noted. See MR-5 and B11-272 regarding the adequacy of the water supply analysis.

Commenter	Date	Letter	Comment	Response
			CBEC Eco Engineering (“CBEC”) on the EIR and Specific Plan, attached below as Attachment F to Sonoma Land Trust’s September 26, 2022 letter to County Planner, Brian Oh. The EIR presents a flawed analysis of Project-related water demands and available supply. o The EIR asserts that the analysis of water supply and projected water demand is conservative. EIR Appendix D at pdf page 593. But this is not the case. o As an initial matter, the proposed Project water demand estimate is based on the assumption that the Project consists of 516 residential units along with nonresidential uses. EIR Appendix D Table 2 at 605. But EIR Appendix D Table 1 (at p. 602) indicates that at build-out in 2045, the Project will have constructed 1000 units plus commercial, hotel, office, public, institutional, and utility uses. And as explained above with respect to the Project Description, the number of residential units could exceed 1300. Even if allowed to build out to only 1000 residential units, the EIR underestimates water demand by 484 units or roughly half. o The EIR analysis of the availability of water supplies to meet proposed project water demands is flawed. EIR Appendix D presents the results of this analysis. Based on review of Appendix D by CBEC at 4 and 5, the analysis is faulty and fails to demonstrate there is sufficient water supply to meet the Project’s future	

Commenter	Date	Letter	Comment	Response
			(full buildout) water demands. § The EIR indicates that estimated Project water demands by the year 2045 will be 342 acre-feet per year (AFY). EIR Appendix D, Table 2 at p.14. The EIR indicates that the available reliable supply of water for the period 2030-2045 is 356 AFY. EIR Appendix D, Table 9 at p. 31. Given how close the reliable water supply (356 AFY) is to full buildout demands (342 AFY), there is little room for error in terms of future water supply management. § The EIR water supply estimate shows that the historic (1969-2007) water use (demands) for the SDC averaged 622 AFY and peaked at 1,143 AFY in 1986 (pg. 12, Appendix D). § According to the EIR, the water use estimated for full buildout (2045) of the Project is a little more than half historic SDC water demands. How can this be given that the Project proposes 1000 residential units, a hotel, commercial, and industrial uses? See, EIR Appendix D, Table 1 at p. 13. Even with conservation measures, it appears that Project water demands would be similar to, if not greater, than the historic use. o Upon review and cross-checking data and information presented in the EIR, CBEC identified several questionable results that suggest the EIR water demands are significantly underestimated. EIR Appendix D,	

Commenter	Date	Letter	Comment	Response
			Tables 1 and 2. These findings are as follows: The EIR only provides water use estimates for the proposed hotel but considers only water used by employees. EIR Appendix D Table 2 at p.16. Water use by guests staying at the proposed 100,000 square-foot hotel is not accounted for in the annual water demand estimate. Incorporating guest water use into the demand estimate could easily result in total annual Project demands that exceed available reliable supply. § CBEC identified a significant math error in the DEIR demand estimates for General Commercial, Office, Public/Industrial, and Research & Development land uses presented in EIR Appendix D, Table 2 at p.16. This is shown in Table A of CBEC's report, which merges data from Tables 1 and 2 in EIR Appendix D. When independently calculating water demands using the 2045 land use areas and Water Use Factors provided in Appendix D, the respective 2045 water demands for the General Commercial, Office, Public/Industrial, and Research & Development land uses result in values that are two orders of magnitude higher than those reported in the EIR, which results in an increased annual Project water demand of 9,846 AFY (see CBEC Letter at Table A).	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-69	The EIR's water supply evaluation is inconsistent with Sonoma County guidelines. o The Permit Sonoma website provides guidelines (8-2-1 Water Supply, Use and Conservation Assessment Guidelines) for the preparation of Water Supply Assessments. The purpose of this policy is to provide guidance to applicants and their representatives on how to prepare a Water Supply, Use, and Conservation Assessment (henceforth, the "Assessment"). The Assessment may be a standalone document, or supplemental to a hydrogeologic study, Zero Net Use report, or other water supply related report. These guidelines are intended for discretionary and ministerial projects. Discretionary projects that are dependent on groundwater or surface water will typically require an Assessment with the use permit application. The Assessment will inform the environmental review process and conditions of approval. o The authority of the Assessment falls under Sonoma County General Plan, Water Resource Element Goals WR-2 and WR-4, Objective WR-4.1, WR-4.2, and WR-4.3, and Policies WR-2c, WR-2d, WR-2e, WR-4b, and WR-4f. Therefore, the EIR Water Supply Assessment (EIR at Appendix D) should adhere to County Guidelines. Appendix A to the County's Guidelines includes water use estimates for residential, landscape, agricultural, and Commercial and Industrial uses that	The comment is noted. See MR-5 and B11-272. The Proposed Project would be required to demonstrate compliance with all applicable regulations that include the County Code and General Plan. Given that impacts on water supply are less than significant with implementation of proposed policies and Standard Conditions of Approval, secondary impacts would also be less than significant.

Commenter	Date	Letter	Comment	Response
			are greater than those factors presented in EIR Appendix D, Table 2 (see CBEC Letter Table B). Applying the Sonoma County water use estimates to Project water demand estimates results in higher residential and irrigated area water demands than presented in the EIR. Id. o CBEC's analysis, which corrects the EIR's math errors and applies the Sonoma County guidelines' water use estimates to the EIR demand estimate tables, results in a total annual Project water demand of 10,231 AFY, a values three times higher than reported reliable supply (356 AFY). This annual total demand will be even higher when hotel guest water use is considered. o Based on the aforementioned skewed water supply evaluation, how will Project water demand affect water supply for wildlife and habitat? How will it affect other resources?	
Sonoma Land Trust	9/26/2022	B11-70	In 2016, Sonoma County voters passed Measure K, which renewed critical protections for community separators throughout the County. The EIR must analyze how locating new development—particularly the high-density development proposed as the upper end of the Project description—is consistent with the County's general plan, especially if the Project requires a new road through the Glen Ellen/Agua Caliente Community Separator. This analysis must include a complete accounting of whether and how the Project would comply with Community Separator objectives and policies, which require, inter alia, that	The comment is noted. As noted on page 320 of the DEIR, the Proposed Plan includes multiple goals and policies that would support environmental protection objectives of the General Plan. The Proposed Plan includes multiple policies that encourage sustainable development principles, such as mixed-use, compact development and pedestrian- and bicycle-friendly streets within the Planning Area. The Proposed Plan would not facilitate new development in the 750 acres of preserved open space, which is located outside of Core Campus boundaries. Thus, the Proposed Plan focuses on infill development and development of underutilized and vacant areas within the Core Campus in order to

Commenter	Date	Letter	Comment	Response
			development minimize the removal of trees and mature vegetation and minimize impervious surfaces. While the EIR acknowledges that most of the SDC property is located within a local voter-approved Community Separator overlay, it fails to adequately analyze the impact of road development therein.	preserve scenic and biotic resources and avoid development within Community Separators.
Sonoma Land Trust	9/26/2022	B11-71	The EIR must clearly analyze the impact of the proposed Highway 12 connector not only on VMT, but also on each of the impact areas for which increased vehicle traffic threatens other impacts. For example, the construction of a new roadway has foreseeable impacts to biological resources through habitat degradation and interference with wildlife movement and connectivity. Similarly, use of a new roadway would increase wildfire risk by siting new human activity and ignition sources, such as vehicles, where none previously existed. A new road also induces growth by providing access to new areas and decreasing travel times. The EIR does not adequately analyze the full scope of foreseeable impacts from the proposed Highway 12 connector and therefore cannot adequately mitigate those impacts.	The comment is noted. The DEIR anlayzes the impacts of a potential Highway 12 connection thoughout it's environmental analysis. See also MR-3 and MR-7.
Sonoma Land Trust	9/26/2022	B11-72	The EIR does not adequately analyze the Project's consistent with the County's general plan, especially the policies and goals designed to protect biological resources. • The EIR fails to analyze the Project's construction	The comment is noted. See Impact 3.10-2. The DEIR anlayzes construction impacts thoughout it's environmental analysis. See also MR-3.

Commenter	Date	Letter	Comment	Response
			impacts, claiming the analysis would be speculative without more details about the development projects. However, the County has information about the proposed land use types, and square footage, and can therefore include an analysis of anticipated construction period impacts based on that information. In addition, the EIR should have included a quantitative assessment of health risk impacts.	
Sonoma Land Trust	9/26/2022	B11-73	The EIR relies on the 2017 Scoping Plan rather than the current Draft 2022 Scoping Plan. The newer plan includes incorporates the State's carbon neutrality goals and consistency with Executive Order EO B-55-18) and an updated Efficiency Threshold. The updated Scoping Plan requirements should have been considered in the EIR. The EIR calls for future geotechnical study/investigation to establish appropriate mitigations. However, the EIR fails to include performance standards for the mitigation measures. Therefore, the EIR defers both analysis and mitigation for geotechnical impacts.	The comment is noted. The DEIR uses the most recent information available at the time, which includes the 2017 Scoping Plan. Finalization of the Draft 2022 Scoping Plan is expected by the end of 2022. See also MR-9.
Sonoma Land Trust	9/26/2022	B11-74	The EIR discloses that noise along the Highway 12 Connector would increase from zero to 59 decibels. EIR at Table 3.11-9 at p. 352 and 353. However, the EIR concludes that this increase would not result in a significant impact because the increase noise level does not increase by more than 3 decibels. This is clearly an error. EIR at 353.	The comment is noted. Under the noise thresholds, a significant impact would occur if project-related traffic increases the ambient noise environment of noise-sensitive locations by 3 dBA or more if the locations are subject to noise levels in excess of 60 CNEL for exterior areas. Since the connector is 59 CNEL, this would not be a significant impact.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-75	The EIR insists that, given the extensive park and recreational opportunities that will be offered within the Planning Area, development under the Proposed Plan would not increase the use of existing neighborhood and regional. EIR at 406. However, the EIR provides no evidence that the planning area parks will meet all park needs of residences.	The comment is noted. As noted on page 403, consistent with the Quimby Act (California Government Code Section 66477), the General Plan 2020 Policy PF-2g requires dedication of land or in-lieu fees as a means of funding, park facilities. Policy PF-2c requires the use of the following standards for determination of park needs: 20 acres of regional parks per 1,000 residents countywide and five acres of local and community parks per 1,000 residents in unincorporated areas. Although the Proposed Plan would result in a population increase of about 2,400, there are approximately 12 acres of parks and recreational facilities designed into the Proposed Plan. Thus, implementation of the Proposed Plan would not exceed these use standards.
Sonoma Land Trust	9/26/2022	B11-76	The EIR identifies a number of Specific Plan policies purportedly designed to reduce impacts to cultural and historic resources. But the EIR fails to explain how these policies would actually achieve that goal. o Policy 2-47: Consider adaptively reusing Sonoma House as a museum dedicated to the history of the SDC facility, collaborating with Sonoma County, the State of California, the Glen Ellen Historical Society, and other community groups for design and programming of the space, if feasible. § This policy is vague and unenforceable. It does not require adaptive reuse of Sonoma House or set forth standards to guide whether adaptive reuse would be feasible. § Who determines whether adaptive reuse is feasible? § What benchmarks must be met for adaptive reuse to	The comment is noted. See MR-1, MR-3, and MR-9.

Commenter	Date	Letter	Comment	Response
			be feasible in this context? o Policy 2-48: Provide resources and learning opportunities for residents and visitors about all phases of the history of the site. Materials should be accessible to all ages and abilities and could include posted signs, fliers, or informational sessions, among other things. § This policy is vague and unenforceable. Resources and learning opportunities must be available to people of all ages and abilities. Policy 2-52: Require any unanticipated discovery of archeological or paleontological resources to be evaluated by a qualified archeologist or paleontologist. § This policy is vague and unenforceable. § What standards must guide the evaluation by an archeologist or paleontologist? § What additional mitigation would be required if the archeologist or paleontologist were to identify resources of cultural or historic significance? • The cultural resources analysis suffers from the same self-mitigating errors as the majority of the EIR. For example, the EIR concludes that “the impact of implementation of the Proposed Plan on individually significant historical resources would be less than significant with implementation of the proposed policies and actions referenced [in the EIR] and existing State regulations.” EIR at 295. The	

Commenter	Date	Letter	Comment	Response
			EIR must first analyze the Project's unmitigated impacts before it can propose mitigation. Otherwise, decisionmakers and the public cannot meaningfully evaluate whether, how, and to what degree the purported mitigation would actually reduce significant impacts.	
Sonoma Land Trust	9/26/2022	B11-77	The EIR states that the Project would have a significant impact to land use if development would "physically divide an established community." EIR at 317. The EIR concludes that no division would occur because the Project includes a bike path and other features to enhance connectivity around the Project site. But the EIR ignores that the development proposed under the Specific Plan would nonetheless create a physical barrier in the Sonoma Valley and the Sonoma Valley Wildlife Corridor where none currently exists. Further, in addition to creating a physical barrier, the Project would dramatically increase human activity over present levels. Even if the Project contains elements that could increase connectivity, the population increase that results from the Project would foreseeably result in less tangible barriers, such as increased traffic. The EIR must acknowledge and fully analyze how these impacts would divide Glen Ellen, including the portions of Glen Ellen on either side of the campus, and Sonoma Valley communities more broadly. • The EIR also acknowledges that "[n]ew construction has the potential to disconnect the remaining contributing resources in the Core Campus from those in Community	The comment is noted. As noted on page 318, the Proposed Plan includes features specifically aimed at enhancing connectivity within the Planning Area and improving linkages between the larger Sonoma Valley. Therefore, because the Proposed Plan would not introduce any physical barriers to the Planning Area and would generally improve connectivity for all users, including vehicles, bicyclists, and pedestrians, it would result in no impact with respect to physically dividing an existing community. The DEIR acknowledges that the Proposed Plan would cause a substantial change of a historic district, and this impact would be significant and unavoidable. The physical division of an established community typically refers to the construction of a linear feature, such as an interstate highway or railroad tracks, or removal of a means of access, such as a local bridge, that would affect mobility within an existing community or between a community and outlying area. Thus, Impact 3.10-1 does not pertain to the historic district. See MR-9.

Commenter	Date	Letter	Comment	Response
			Separator and Regional Parks lands to the east and west, consequently disrupting the feeling and character within the historic district. This would affect the cohesiveness of SSHHD's overall integrity to the point that it would no longer be eligible for listing in the NRHP, CRHR, or as a California Historic Landmark." EIR at 296. In other words, the Project would physically divide a historic district and thereby destroy its character as such. o How is this not a physical division of an established community that would constitute a significant land use impact? • As discussed in the above sections, the draft Specific Plan fails to include adequate performance standards to ensure that impacts from development will remain less than significant as the Project is built out. Particularly if the EIR is going to defer development of key mitigation—and it should not do so—the EIR and Specific Plan should adopt a phased-development model that establishes clear and robust performance standards that must be met before the next phase of proposed development can proceed. Build-out should begin with the most important phase(s) of development, namely the construction of affordable housing.	
Sonoma Land Trust	9/26/2022	B11-78	The EIR fails to adequately analyze the Project's air quality and greenhouse gas emissions. o The EIR's air quality analysis is based on a description of the Project that assumes construction of 1,000 residential units, 190,000 square	The comment is noted. The Project Description is stable. The future buildout of the Proposed Plan assumes 1,000 new total units; buildout described in the DEIR is aligned with the buildout described in the Proposed Plan. Table 3.3-7 outlines propsoed policies that support the 2017 Clean Air Plan.

Commenter	Date	Letter	Comment	Response
			feet of office use, 40,000 square feet of commercial/retail use, and 90,000 square feet of hotel, 90,000 square feet of public/institutional/utility uses. EIR at 168. As discussed above, this description is inconsistent with the other descriptions in the Specific Plan and EIR. As discussed throughout these comments, the unstable project description implicates the environmental analysis, including the analysis of impacts to air quality. The result is that by underestimating residential units, traffic, and VMT, the EIR underestimates air quality and greenhouse gas emission impacts o For example, the EIR claims that the Project would not conflict with BAAQMD's 2017 Clean Air Plan, based in part on a screening of the Project's estimated impacts against four criterion. EIR at 183. One of those criteria addresses whether the Project will result in an increase in projected VMT or vehicle trips that is less than or equal to projected population increase. Id. Given the significant underestimation of Project-related traffic and related VMT, as discussed above, the EIR's analysis of air quality impacts is also unreliable and its conclusion that the Project would be consistent with the Clean Air Plan is unsupported.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-79	The EIR fails to adequately analyze and mitigate the Specific Plan's aesthetic impacts. o The EIR lacks support for its conclusion that development under the Specific Plan would not have a substantial adverse effect on a scenic vista (Criterion 1). § EIR at 89 states that that the SDC site is within a Historic Combining District, which is designed to "protect those structures, sites and areas that are remainders of past eras, events and persons important in local, state or national history, or which provide significant examples of architectural styles of the past, or which are unique and irreplaceable assets to the county and its communities. Alterations to existing structures and construction of new structures within historic districts shall be consistent with the historic district design guidelines adopted by the board of supervisors." § EIR at 102 notes that the current County General Plan requires the County to identify and preserve roadside landscapes that have a high visual quality as they contribute to the living environment of local residents and to the County's tourism economy. Furthermore, General Plan objectives additionally aim to provide guidelines so future land uses, development, and roadway construction are compatible with the preservation of scenic values along designated scenic corridors, of which Arnold Road is one. § The SDC's historic landscape creates a unique scenic vista along the length of Arnold Road. Some Specific Plan policies identify historic buildings and contributing buildings to be retained, however the policy language is vague and unenforceable, which results in uncertainty as to whether the resources are going to be retained or whether the scenic vista is going to be lost. For instance,	The comment is noted. Modification to any historic resources under the Proposed Plan would be subject to all applicable regulations, including the County Code and General Plan. The DEIR adequately analyzes aesthetics impacts. Figure 3.1-1 shows the scenic landscape units and corridors located within the Planning Area. State Route (SR) 12, which comprises the eastern edge of the Planning Area, is a Caltrans-designated scenic highway. Arnold Drive, which runs through the center of the SDC property, and SR 12, at the eastern edge of the site, are Scenic Corridors that provide experiences of rural environments the General Plan seeks to preserve. Up to 200 feet on either side of these roads are subject to development restrictions and design criteria. Specifically, Section 26C-222 of the County Code states that all structures shall be subject to the setbacks of thirty percent (30%) of the depth of the lot to a maximum of two hundred feet (200′) from the centerline of the road. The Proposed Plan would adhere to all General Plan and County Code requirements. In addition, the westernmost portion of the SDC site nearest to the Sonoma Mountain is designated as a Scenic Landscape Unit and is limited to agricultural or resource land use categories. Given that construction will be clustered only in the previously developed Core Campus and that new development will keep with the overall scale and development height variation of the current SDC campus, adverse effects on the scenic vistas of SR 12 on the eastern edge of the Planning Area and the scenic landscape unit on the western edge of the Planning Area would be less than significant. Further, as described under Impact 3.1-2, adherence with existing and proposed policies

Commenter	Date	Letter	Comment	Response
			Specific Plan Policy 4-23 states "Preserve and reuse the contributing resources identified in Figure 4.3- 1, to the greatest extent feasible." How can it be ensured that scenic resources including the Arnold Road historic landscape will be retained and maintained? Without firm and enforceable requirements, it cannot be concluded that the impacts to roadside landscapes and scenic vistas is less than significant. § Furthermore, the EIR does not identify a threshold of significance to determine what loss of historic/scenic resources would be acceptable and considered less than significant. Therefore, it is impossible to determine whether the policies identified in the Specific Plan are sufficient to prevent a substantial degradation to a scenic resource, which in this case is the high-quality roadside landscape of Arnold Road. § For Impact 3.1-1, EIR at 103 concludes that since "construction will be clustered only in the previously developed Core Campus and that new development will keep with the overall scale and development height variation of the current SDC campus, adverse effects on the scenic vistas of SR 12 on the eastern edge of the Planning Area and the scenic landscape unit on the western edge of the Planning Area would be less than significant." However, the EIR fails to recognize that the existing SDC campus is considered a scenic resource due to its historic significance and roadside landscape along a scenic corridor. The substantial change to the scenic resource allowed by the lax policies to protect contributing buildings will result in a substantial adverse impact and cannot be substantiated as a less than significant impact. o The EIR lacks support for its conclusion that the Specific Plan would not substantially degrade the existing visual character or quality of public views	and standards would ensure that construction of an SR 12 connector under the Proposed Plan would minimize adverse effects on a scenic vista to a less-than-significant level. See also MR-3 and MR-9. The comment includes statements that the EIR does not provide thresholds of significance for various aesthetic impacts, however, the thresholds applied to the analyses are clearly set forth in Draft EIR Section 3.1.3.1. Development under the Proposed Plan would be required to comply with applicable regulations governing scenic corridors, including the Sonoma County Code and General Plan. With adherence to existing and proposed policies and standards, vistas along Arnold Drive would not be significantly impacted, and development of an SR 12 connector under the Proposed Plan would ensure that damage to scenic resources along SR 12 would be less than significant. Further, the Specific Plan's Arnold Drive overlay would encourage development to maintain the feel and scale of the buildings and landscape along Arnold Drive, including with a variety of building types and scales, a continuous landscape setback, activity, and views into the SDC site. Existing goals and objectives in the Sonoma County General Plan 2020 aim to preserve and maintain views of the nighttime skies and visual character of urban, rural, and natural areas, while allowing for nighttime lighting levels appropriate to the use and location; specifically that development should maintain nighttime lighting levels at the minimum necessary to provide for security and safety of the use and users to preserve nighttime skies and the nighttime character of urban, rural, and natural areas; and ensure that nighttime lighting levels for new

Commenter	Date	Letter	Comment	Response
			of the site and its surroundings (Criterion 3). § Arnold Road is a known scenic corridor with a 200' buffer on either side that is subject to development restrictions and design criteria (Sonoma County General Plan 2020 Figure OSRC-1). Specific Plan Policy 5-O states that "Arnold Drive, development should maintain the feel and scale of the buildings and landscape along Arnold Drive, including with a variety of building types and scales, a continuous landscape setback, activity, and views into the SDC site" (emphasis added). While this is a laudable goal, it is also an unenforceable measure with ambiguous language ("should") and cannot be relied upon to ensure that the existing visual character will be maintained along this scenic corridor. § EIR at 106 states that "with adherence to existing and proposed policies and standards, development under the Proposed Plan would improve rather than substantially degrade the existing visual character of the site, and this impact would be less than significant." By what metric is the visual character being measured to determine that it will improve with the proposed project? § The EIR does not identify thresholds against which the proposed degradation of the visual character and quality views of the site can be assessed to come to the conclusion that the impacts will be less than significant. Therefore, this conclusion is unfounded. o The EIR lacks support for its conclusion that the Specific Plan would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area (Criterion 4) § The EIR qualitatively discusses the light and glare impacts that will result from the operation of the project (lighting from future building fixtures, building windows, automobile headlights, parking lot lighting). What are the expected impacts from security	development are designed to minimize light spillage offsite or upward into the sky. General development standards that pertain to light and glare would need to conform to County-prescribed lighting regulations provided in Section 26-82-030 of the Sonoma County Code. With adherence to existing and proposed policies and standards, development under the Proposed Plan would not substantially increase the amount of nighttime lighting or glare in the already previously developed Core Campus or surrounding open space areas. Impacts associated with light and glare would be less than significant.

Commenter	Date	Letter	Comment	Response
			lighting or other sources during the construction phases of the project? § The EIR references Specific Plan Policy 2-7, which prohibits lights within the wildlife corridor and along the creek corridor. To what sections and at what width of the creek corridor would this prohibition apply? For the purposes of enforcement of this requirement, what area is considered a "wildlife corridor?" The whole SDC area is designated a Habitat Connectivity Corridor – is that the area this policy is referring to? § The EIR references Specific Plan policies 5-32, 5-39, and 5-43, which all refer to maintaining a thick buffer of vegetation in order to buffer lights to protect wildlife within the preserved open space areas. For each of these policies, which serve as mitigation to address light and glare impacts, what are the type and/or height of needed vegetation or depth/width of the buffers to provide suitable light and glare protection to the creek corridors? The EIR or Specific Plan should contain policies or mitigation measures requiring a photometric plan or other metric by which light impacts can be assessed and should also have a policy or mitigation measure addressing maximum light standard height and spacing. § EIR at 107 concludes that "with adherence to existing and proposed policies and standards, development under the Proposed Plan would not substantially increase the amount of nighttime lighting or glare in the already previously developed Core Campus or surrounding open space areas. Impacts associated with light and glare would be less than significant." What thresholds of significance have been used to quantify this statement? What data has been collected regarding the existing light environment and the proposed light environment to be able to draw this conclusion?	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-80	The EIR fails to analyze a reasonable range of alternatives to the proposed Project. Though couched as "alternatives," each of the alternatives discussed in the EIR would inexplicably implement the draft Specific Plan policies—in other words, each alternative assumes the de facto adoption of the draft Specific Plan policies even if the draft Specific Plan is not formally adopted by the County. Additionally, with the exception of the Historic Preservation Alternative, the impacts of the proposed alternatives are substantially the same. The EIR's decision to constrain alternatives in this way is not only unsupported, but also threatens to obscure project alternatives that could actually reduce project impacts, such as alternatives with fewer residences and less commercial concentrated on a smaller development footprint. The EIR must analyze a reasonable range of alternatives, including an alternative based on the development proposal that the State ultimately chooses through its RFP process. Once the State selects a development proposal, the County will better understand the location and intensity of proposed development and will therefore be able to conduct a more thorough analysis of project impacts. • The County should decline to certify this EIR and instead direct staff to use the Historic Preservation Alternative as the starting point for a new and revised preferred project, with a revised Specific Plan and EIR that address the flaws identified in this and the following	The comment is noted. The DEIR does analyze a reasonable range of alternatives. Section 15126.6 of the CEQA Guidelines states that: An EIR shall describe a range of reasonable alternatives to the project, or the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. See also MR-2 and MR-8. The purpose of alternatives is to consider alternate ways to avoid or substantially lessen any of the significant effects of the project. (CEQA Guidelines Section 15126.6 (a).) The EIR concluded that the proposed Specific Plan would only have significant unmitigable impacts in the topics of adverse impacts to a potential historic district because of physical demolition, destruction, relocation or alteration of the district or its immediate surroundings; and related to project specific and cumulative vehicle miles traveled (VMT) impacts. The Alternatives we selected in order to consider ways to reduce or avoid those impacts, while still meeting the main project objective and the intent of the state legislation. The comment suggests that the alternatives must include an alternative based on a development proposal that the State selects, however, the State has made no such selection, and thus there is no known proposal available to study. Further, to the extent that the State selects a development proposal that is substantially different than the Specific Plan, additional CEQA review would likely be necessary

Commenter	Date	Letter	Comment	Response
			Attachments. o The Historic Preservation Alternative should be revised to start with an affordable housing project of 200+/- homes (Phase 1), and to allow for future development phases consistent with whichever proposal the California Department of General Services (DGS) selects as the winning bid pursuant to their surplus property sale process for the SDC core campus. The EIR acknowledges that the County and public have no real idea of how much development will actually occur at SDC, because we do not know which proposal DGS will select to enter into an Exclusive Negotiating Agreement for the sale of the campus. EIR at 77. Since we will know by late October who DGS has selected as the buyer, developing an alternative based on the DGS-selected proposal will give Permit Sonoma, the public, and decisionmakers an opportunity to focus on a real-world proposal that will drive "the exact amount and location of future development." EIR at 77 (emphasis added). This approach would also resolve the problem of speculating about financial feasibility and making unfounded assumptions regarding how much and what type of housing needs to be built on the site to subsidize the affordable housing mandates. o Importantly, the historic preservation alternative also requires significant modification to expand wildlife corridor, riparian and	before implementation of any such development proposal.

Commenter	Date	Letter	Comment	Response
			open space protections and setbacks. In order to further Guiding Principle #3, the revised historic preservation alternative must include and meet the following specific performance standards: § Provide sufficient setbacks from all creeks designed to protect water quality and quantity, instream and riparian habitat and wildlife connectivity § Provide a sufficient buffer that reduces the current footprint of the north side of the SDC campus adjacent to Sonoma Creek to allow wildlife to safely travel through the Sonoma Valley Wildlife Corridor § Ensure human activities and improvements at SDC do not impair wildlife's use § Ensure roads and traffic do not create a danger to wildlife § Ensure new development does not create new sources of light, glare or noise that would impair wildlife's use of the Corridor § Ensure new development does not increase the risk of wildfires that would harm the natural and built environments § Ensure runoff from new impermeable development does not result in erosion or contamination of creeks and riparian areas.	
Sonoma Land Trust	9/26/2022	B11-81	The EIR mischaracterizes and misapplies the State legislation governing the disposition and planning process for SDC. o Government Code section 14670.10.5 (the "Legislation") does not establish any	The comment is noted. See MR-2 and MR-8. See also B11-80; the Alternatives should attain most of the basic objectives of the project.

Commenter	Date	Letter	Comment	Response
			financial objectives for the redevelopment of SDC. § The EIR repeatedly states that economic viability is a stated objective of the State Legislation governing disposition of the SDC property. E.g., EIR at 527 (stating the guiding principles "seek to further the State's goals for the SDC site established in California Government Code Section 14670.10.5 for promoting housing, especially affordable housing and housing for those with development disabilities; preserving open space surrounding the Core Campus; and ensuring that development is economically viable."); EIR at 532 ("State law stipulates that the SDC Specific Plan … ensure the financial feasibility of development"); EIR at 533 (concluding an outcome would be "contrary to the economic objectives codified in State law") (citing the Legislation). Not so. The "Legislation only directs that the County consider the economic viability of future development during the planning process: "The planning process shall facilitate the disposition of the property by amending the general plan of the county and any appropriate zoning ordinances, completing any environmental review, and addressing the economic feasibility of future development." Gov. Code § 14670.10.5(c)(1). It does not require that the County ensure economic viability or even prioritize	As noted in the comment, the Legislation calls for the consideration of economic feasibility of future development. Further, the agreement between the County and State for the SDC planning effort expressly calls for "...completing a report on the economic feasibility of future development...." (Paragraph 3 of Exhibit A to the County/State Agreement.) The Agreement also calls for preparation of an Economic Market Demand Report. (Paragraph 4.C. of Exhibit A to County/State Agreement.)

Commenter	Date	Letter	Comment	Response
			economic viability. Compare id. with Gov. Code 14670.10.5(c)(3) ("shall provide for the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible") and (c)(4) ("shall require that housing be a priority in the planning process and that any housing proposal determined to be appropriate for the property shall include affordable housing"). Protection of open space and affordable housing are priorities under the Legislation; economic viability is merely a consideration. o The only objective that requires financial feasibility is the County's own guiding principle. § The County—not the State—requires that the Specific Plan "[e]nsure that the proposed plan is financially feasible and sustainable, as financial feasibility is essential to the long-term success of the project." EIR at 528. The EIR proposes to ensure financial feasibility by ensuring "that the proposed plan supports funding for necessary infrastructure improvements and historic preservation while supporting the Sonoma Valley community's needs and galvanizing regional economic growth." Id. • The County's goal to ensure long-term fiscal sustainability is a	

Commenter	Date	Letter	Comment	Response
			binary goal. A project either is feasible (i.e., capable of being completed) or it is not. A project either is sustainable or is it not. A project either pencils or it does not. Nothing directs the County to maximize economic returns or to compare the relative returns of the various alternatives. E.g., EIR at 532 (criticizing the Reduced Development Alternative as "less economically viable … than the Proposed Plan"). As discussed above, the only two Project features that must be maximized under the Legislation are open space preservation and affordable housing. See generally Gov. Code § 14670.10.5. • The County provides a clear path towards ensuring that the Project is financially feasible and sustainable by ensuring that the Project will generate enough revenue for the developer to be able to fund the necessary infrastructure improvements the site requires. • Nothing in the County's objectives or in the Legislation requires the Project to prioritize returns on investment or requires the EIR to analyze the comparative returns of the various project alternatives. Yet comparison of hypothetical and speculative returns on investment inexplicably forms a central pillar	

Commenter	Date	Letter	Comment	Response
			of the EIR's alternatives analysis. E.g., EIR at 530 (comparing the relative economic value of the No Project Low Development Alternative against the Proposed Plan), 531 (same with respect to the No Project High Development Alternative), 532 (same with respect to the Reduced Development Alternative), 533 (same with respect to the Historic Preservation Alternative). Because alternatives must be studied to reduce environmental impacts—not to maximize economic returns—this approach is not only unjustified but contrary to CEQA.	
Sonoma Land Trust	9/26/2022	B11-82	The alternatives analysis cites inconsistent assumptions to guide its analysis and justify its conclusions. Because it is unclear on which assumptions the EIR actually relies, decisionmakers and the public cannot decipher the anticipated impacts of the proposed alternatives or independently judge the EIR's analysis. o For example, on page 530, the EIR concludes that the No Project: Low Development Alternative would result in a greater number of "small-lot and townhome units" because those units "generate much higher financial returns." On page 537, the EIR removes any reference to townhomes and concludes that that same alternative would prioritize "single-family homes to maximize financial feasibility." Then on page 541, the EIR backtracks,	The comment is noted. Case law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 15126.6(f) states that the alternatives in an EIR should be governed by a "rule of reason." If impacts are less than significant for an Alternative and the Proposed Plan, the DEIR need not define how much less significant impacts are. See MR-2 and MR-8. Rehabilitation and adaptive reuse at SDC is generally more expensive than new construction. See Alternatives Report, November 2021 (Updated), available at https://www.sdcspecificplan.com/documents. See Table A-5 for the residual value of residential development. New single family homes generate the greatest net value.

Commenter	Date	Letter	Comment	Response
			stating again that the No Project: Low Development Alternative "would likely have a larger proportion of small-lot single family and townhomes … to achieve financial feasibility." The EIR further muddies the water in its analysis of the Reduced Development Alternative, which the EIR concludes would exhibit "a preference for more large lot, single family homes to maximize financial feasibility." EIR at 553 (emphasis added). On page 557, the EIR further specifies that these large lot residential developments would focus "more on single-family detached residential units than other typologies." (emphasis added). Finally, in its discussion of the Historic Preservation Alternative, the EIR again states that "large lot, single-family homes" would "maximize financial feasibility." EIR at 561; see also EIR at 566 (noting that the Historic Preservation Alternative would also prioritize "singlefamily detached residential units") (emphasis added). § Even assuming that the State's chosen developer would prioritize maximizing financial returns when selecting housing typologies—and the EIR has given no justification to support that assumption—it is logically impossible for three different housing types to each provide higher returns on investment than the next. Either townhomes provide higher returns or large-lot detached single-family residences do. The	

Commenter	Date	Letter	Comment	Response
			EIR's conclusions about which housing typologies would be employed under each alternative are therefore contradictory and unsupported by substantial evidence. • Which housing typology or typologies would provide the highest financial returns? Why does the County believe it fair to assume that a developer would prioritize financial returns from housing when selecting housing typologies for this complex development, which includes multiple revenue streams and a mandatory obligation to prioritize affordable housing? § Further, even if these housing types provided similar returns on investment, the EIR does not explain why one alternative would maximize returns with townhomes while another would maximize returns with largelot detached single-family homes. The EIR needs to justify why those design choices are appropriate assumptions in order for the alternatives analysis to be meaningful. o The EIR also makes inconsistent assumptions about the impacts of increased or decreased development on the amount of construction activity that the Project will generate. Because the EIR fails to apply its assumptions consistently, decisionmakers and the public cannot rely on the analysis that is based on those	

Commenter	Date	Letter	Comment	Response
			assumptions. § For example, the analysis of the No Project: Low Development Alternative concludes that impacts to air quality and biological resources would be reduced because less residential and non-residential development would occur. EIR at 537-538 (this alternative "would result in somewhat reduced impacts on biological resources . . . because a reduced level of ground disturbance and construction activities would occur"); see also EIR at 539 (energy and greenhouse gas impacts would be "slightly less" because "construction activity would be somewhat reduced"). But this understanding that less construction results in less grading and ground disturbance does not carry uniformly through the analysis. For example, the EIR concludes that "[s]imilar impacts on cultural resources, and tribal cultural resources would result from the No Project: Low Development Alternative compared with the Proposed Plan because excavation, grading, and demolition would likely still be required for construction." EIR at 538. For similar reasons, the EIR concludes that this alternative would have "[s]imilar impacts on geology, soils, and seismicity … compared with the Proposed Plan. EIR at 540. Why would	

Commenter	Date	Letter	Comment	Response
			reduced construction activity reduce grading and ground-disturbance based impacts to one class of resources but not to another? § Similarly, notwithstanding the EIR's concession that construction-related impacts would be reduced under the No Project: Low Development Alternative, the EIR concludes that "[i]mpacts related to hazards and hazardous materials … would be similar to those of the Proposed Plan because construction would have similar risks, associated with the accidental release of hazardous materials." EIR at 540; see also EIR at 570 (applying the same assumptions to the Reduced Development and Historical Preservation alternatives). Why would less development reduce certain construction-related impacts but not others? § The EIR does not draw equivalent conclusions with respect to the No Project: High Development Alternative. In that case, the EIR notes that "[g]reater impacts on cultural resources, and tribal cultural resources would result from the No Project: High Development Alternative compared with the Proposed Plan because more development would increase excavation, grading, and demolition of existing buildings and construction requirements." EIR at 546. Likewise, the EIR concludes that "construction activity would be increased, resulting in	

Commenter	Date	Letter	Comment	Response
			slightly greater construction-related and operations GHG emissions." EIR at 547. And "[g]reater impacts on geology, soils, and seismicity would result … compared with the Proposed Plan because excavation, grading, and demolition would still be required and increased for demolition of existing buildings and construction of new residential and non-residential units." EIR at 548. It is logical that increased construction would result in increased construction-related impacts. But it is equally logical that decreased construction would result in decreased construction-related impacts. The EIR does not explain why it assumes the former to be true but not the latter. Its analysis is facially inconsistent and does not provide adequate information by which decisionmakers and the public could independently judge the relative merits of each of the alternatives.	
Sonoma Land Trust	9/26/2022	B11-83	The alternatives analysis relies on assumptions that are not justified or supported by substantial evidence. o For example, the EIR assumes without justification that key policies and conditions of approval from the Draft Specific Plan would survive and be implemented even if the Specific Plan is not adopted. § On page 538, the EIR concludes that the No Project: Low Development	The comment is noted. Case law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 15126.6(f) states that the alternatives in an EIR should be governed by a "rule of reason." It is assumed that the alternatives would likely include the similar goals and policies to the Proposed Plan.

Commenter	Date	Letter	Comment	Response
			Alternative would have less than significant impacts on air quality "[w]ith implementation of the [Specific Plan] policies outlined in Section 3.3." But the No Project Alternatives assume that the Specific Plan is not adopted. EIR at 529 ("should the County not adopt the Specific Plan … the mostly likely course would be for the State to achieve its desired land use objectives through mechanisms other than the Proposed Plan"). • Why would policies and conditions of approval developed in the Specific Plan to address air quality impacts of the Specific Plan exist and be implemented if the Specific Plan is not adopted? § The EIR also assumes that the No Project: Low Development Alternative would implement "policies similar to those" in the Biological Resources Analysis. EIR at 538 ("The policies outlined in Section 3.4, as well as the biological resource protection practices identifies in the Standard Conditions of Approval are assumed to be similar in the Low Development Alternative."). • Why would policies and conditions of approval developed in the Specific Plan to address biological impacts of the Specific Plan exist and be implemented if the Specific Plan is not adopted? § The EIR assumes the same for policies related to	

Commenter	Date	Letter	Comment	Response
			Cultural, Historic, and Tribal Resources. EIR at 538 (“The relevant policies and Standard Conditions of Approval identifies in Section 3.5 are assumed to be similar in the No Project Low Development Alternative.”) • Why would policies and conditions of approval developed in the Specific Plan to address cultural, historic, and tribal cultural resource impacts of the Specific Plan exist and be implemented if the Specific Plan is not adopted? § The EIR assumes the same for policies related to Geology, Soils, and Mineral Resources. EIR at 540 (“Policies and Standard Conditions of Approval identified in Section 3.7 are assumed to be similar in this Alternative.”) • Why would policies and conditions of approval developed in the Specific Plan to address geologic impacts of the Specific Plan exist and be implemented if the Specific Plan is not adopted? § The EIR repeats these assumptions for the No Project: High Development Alternative. EIR at 546 (stating the same assumptions for policies and conditions related to air quality, biological resources, and cultural, historic, and tribal resources); EIR at 548 (stating the same for policies and conditions related to geology, soils, and mineral resources).	

Commenter	Date	Letter	Comment	Response
			• Why would policies and conditions of approval developed in the Specific Plan to address impacts of the Specific Plan exist and be implemented if the Specific Plan is not adopted? § It might be reasonable to assume that certain Specific Plan policies or conditions of approval would persist or be implemented under the Reduced Development Alternative or the Historic Preservation Alternative, since those alternatives would still result in a modified specific plan being adopted. But under the No Project Alternatives, the Specific Plan is—by definition—not adopted. EIR at 529. If the Specific Plan is not adopted, logic would dictate that the Specific Plan's policies and conditions of approval would not be implemented. The EIR needs to justify its contrary assumption why the Specific Plan's policies and conditions would be implemented in the absence of the Proposed Plan. Without that justification, the EIR's conclusions regarding the relative impacts of the various project alternatives are unsupported by reason or substantial evidence.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-84	The EIR also fails to adequately justify the assumptions underlying the selection of the No Project Alternatives. § The No Project Alternative(s) needs to examine what would occur if the Draft Specific Plan is not approved. As the EIR acknowledges, however, determining what would happen if the Draft Specific Plan is not approved is largely speculative. See EIR at 529 ("this EIR cannot pre-judge the State's actions"). • The Legislature and the State Department of General Services "recognized the unique natural and historic resources of the [SDC] property and acknowledged that it was not the intent of the state to follow the traditional state surplus property process." Gov. Code § 14670.10.5(a)(3). The State has expressed an intent to prioritize affordable housing on the site and to protect the site's "exceptional open-space, natural resources, and wildlife habitat characteristics." Gov. Code § 14670.10.5(a)(6), (7), and (9). And the State has provided a framework by which the County may assume planning responsibility consistent with the objectives. Gov. Code § 14670.10.5(a)(8), (c). But nothing in the State Legislation requires the planning process to include any particular elements	The comment is noted. Case law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 15126.6(f) states that the alternatives in an EIR should be governed by a "rule of reason." It is assumed that the alternatives would likely include the similar goals and policies to the Proposed Plan. See MR-2. While this EIR cannot pre-judge the State's actions, the EIR tries to frame these in light of the State Legislature's established land use objectives for the site, per Govt. Code Section 14670.10.5. The comment acknowledges the unknows regarding what would occur if the Specific Plan is not adopted, and also recognizes that a no project alternative that assumes continuation of the status quo is not reasonable. The comment suggests that a viable option would be a transfer of the property to another State agency, however, there has been no indication that there is any State agency interested in utilizing the site.

Commenter	Date	Letter	Comment	Response
			other than affordable housing and open space preservation. See generally Gov. Code § 14670.10.5. And equally significant, the State Legislation does not mandate that the State sell the SDC property through the planning process. See Gov. Code § 14670.10.5(c)(1) ("The director may … enter into an agreement with the county for the county to develop a specific plan for the property and to manage the land use planning process.") (emphasis added); see also Gov. Code § 14670.10.5(e)(1) ("This section shall not apply to the transfer of the property to a state agency in accordance with Section 11011."). The logical conclusion is that if the Specific Plan is not adopted, the Department of General Services could take a number of different paths, including allowing the County to develop a different specific plan for the site or transferring the property to a state agency in accordance with Section 11011. Yet the EIR concludes without explanation or justification that, if the Specific Plan is not adopted, the State would proceed with development of the site in substantial conformity with the rejected draft Specific Plan. o On what basis does the EIR conclude that this outcome is	

Commenter	Date	Letter	Comment	Response
			more likely than any other possible outcome, such as DGS transferring the property to another state agency or DGS waiting for the County to develop an alternative specific plan? o The EIR appears to rely on its claim that the current Draft Specific Plan most fully achieves the objectives outlined in the State Legislation. See EIR at 529 (concluding that "the State [would] retain[] planning control over the campus unfettered by local regulations to achieve these land use objectives" and that as a result, "the No Project Alternative would result in a palette of uses similar to those outlined in the Proposed Plan." But the only two objectives codified in the State Legislation are the mandate to prioritize affordable housing and the mandate to protect open space. See generally Gov. Code § 14670.10.5. So the State Legislation, standing alone, cannot justify the EIR's conclusion that the No Project Alternative would result in the same palette of uses as the Proposed Plan, which palette is designed to achieve the County's objectives—not the State's. Compare Gov. Code § 14670.10.5 with EIR at 527-528. Without further justification, the EIR cannot demonstrate that its purported No Project Alternatives reflect what would actually occur if the Specific Plan is	

Commenter	Date	Letter	Comment	Response
			not adopted.	
Sonoma Land Trust	9/26/2022	B11-85	Similarly, the EIR fails to explain why the development levels in the two No Project Alternatives—which appear to be entirely arbitrary 25 percent increases and decreases in development—would be reasonably predicted to occur. • What data support the EIR's chosen housing and job count for the No Project: Low Development Alternative? • What analysis supports the EIR's chosen housing and job count for the No Project: Low Development Alternative? • What assumptions support the EIR's chosen housing and job count for the No Project: Low Development Alternative? • What data support the EIR's chosen housing and job count for the No Project: High Development Alternative? The EIR draws conclusions about the relative merits of its proposed alternatives without actually analyzing potential impacts or supporting its conclusions with substantial evidence. These failures obscure the EIR's reasoning and make it impossible for decisionmakers or the public to comprehend how the EIR draws it conclusions,	The comment is noted. Case law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 15126.6(f) states that the alternatives in an EIR should be governed by a "rule of reason." It is assumed that the alternatives would likely include the similar goals and policies to the Proposed Plan. See B11-80, B11-82, and MR-2. If impacts are less than significant for an Alternative and the Proposed Plan, the DEIR need not define how much less significant impacts are. As noted on page 376, there is presently a severe shortage of housing in Sonoma County, like in much of the rest of the Bay Area. Thus, it is assumed that planned growth in other parts of the County would occur in some of these Alternative scenarios.

Commenter	Date	Letter	Comment	Response
			particularly where the EIR's conclusions appear to contradict the EIR's own limited analysis. o For example, the EIR concludes that No Project: Low Development Alternative would result in "lower financial feasibility" that the Proposed Plan. EIR at 537. But the EIR does not document or explain why the No Project: Low Development Alternative would be less financially feasible. To the contrary, the EIR states that the alternative's development mix would shift, for example by prioritizing more single-family homes, "to maximize financial feasibility." EIR at 537. § What are the specific financial drivers that influence the financial feasibility of the No Project: Low Development Alternative? § How specifically does the financial outlook of this alternative compare to that of the Proposed Project? o The EIR also states that "the No Project: Low Development Alternative would have an equivalent impact related to land use, population, and housing compared to the Proposed Plan" (EIR at 541-541), notwithstanding that the No Project: Low Development Alternative would develop "to a lesser extent and in a smaller area" (EIR at 541). § Why did the EIR conclude that impacts would be the same even though development intensity is reduced? § Why does the financial feasibility of various	

Commenter	Date	Letter	Comment	Response
			alternatives appear to vary so greatly but the impacts do not? o The EIR assumes without explanation or justification that the No Project: Low Development Alternative, the Reduced Development Alternative, and the Historic Preservation Alternative would "shift some of the planned growth in the Planning Area to other locations in the region." EIR at 543, 559, 568. § Why is the growth planned by the Draft Specific Plan assumed to be inevitable in Sonoma County? • What analysis supports the EIR's chosen housing and job count for the No Project: High Development Alternative? What assumptions support the EIR's chosen housing and job count for the No Project: High Development Alternative? The EIR draws conclusions about the relative merits of its proposed alternatives without actually analyzing potential impacts or supporting its conclusions with substantial evidence. These failures obscure the EIR's reasoning and make it impossible for decisionmakers or the public to comprehend how the EIR draws it conclusions, particularly where the EIR's conclusions appear to contradict the EIR's own limited analysis. o For example, the EIR concludes that No Project: Low Development Alternative would result in "lower financial feasibility" that the Proposed Plan. Commenter	Date	Letter	Comment	Response
			Project: Low Development Alternative would be less financially feasible. To the contrary, the EIR states that the alternative's development mix would shift, for example by prioritizing more single-family homes, "to maximize financial feasibility." EIR at 537. § What are the specific financial drivers that influence the financial feasibility of the No Project: Low Development Alternative? § How specifically does the financial outlook of this alternative compare to that of the Proposed Project? o The EIR also states that "the No Project: Low Development Alternative would have an equivalent impact related to land use, population, and housing compared to the Proposed Plan" (EIR at 541-541), notwithstanding that the No Project: Low Development Alternative would develop "to a lesser extent and in a smaller area" (EIR at 541). § Why did the EIR conclude that impacts would be the same even though development intensity is reduced? § Why does the financial feasibility of various alternatives appear to vary so greatly but the impacts do not? o The EIR assumes without explanation or justification that the No Project: Low Development Alternative, the Reduced Development Alternative, and the Historic Preservation Alternative would "shift some of the planned growth in the Planning	

Commenter	Date	Letter	Comment	Response
			Area to other locations in the region." EIR at 543, 559, 568. § Why is the growth planned by the Draft Specific Plan assumed to be inevitable in Sonoma County?	
Sonoma Land Trust	9/26/2022	B11-86	The EIR concludes that the Historic Preservation Alternative "is projected to result in approximately 50 percent fewer vehicle trips than the Proposed Plan, indicating that the total VMT generated may also be roughly 50 percent lower." EIR at 569. The EIR does not cite data or analysis to support this statement. § How did the EIR reach these numbers? o The EIR states that the reduction in VMT under the Historic Preservation Alternative "would be substantial though would not necessarily translate to less residential VMT per capita, which is the efficiency metric for which a significant VMT impact was identified." EIR at 569. In light of its chosen significance threshold, the EIR cannot meaningfully compare the VMT impacts of the various alternatives unless it quantifies VMT per capita for each alternative. § What data or analysis would be needed to determine whether the substantial reduction in VMT under the Historic Preservation Alternative	The comment is noted. See MR-8 and MR-6. Transportation analysis for each of the Alternatives was conducted by W-Trans. See B11-84.

Commenter	Date	Letter	Comment	Response
			would translate to less residential VMT for capita? § Under what circumstances does a change in total VMT translate or not translate to a change in VMT per capita? § The EIR states that it is uncertain whether the reduction in VMT would translate to a reduction in VMT per capita, but nevertheless goes on to conclude that the alternative's "reductions in VMT and VMT per capita would be insufficient to avoid a significant and unavoidable VMT impact." EIR at 539. By definition the EIR cannot determine the significance of the alternative's VMT per capita impact if the EIR does not know that the alternative's VMT per capita impact is. The EIR's conclusion is therefore unsupported by analysis or substantial evidence. o The EIR does not provide a meaningful analysis of the impacts of each of the alternatives, using terms such as "largely comparable," "slightly greater," and "slightly reduced." These terms are especially inappropriate for the Historic Preservation Alternative, which is the environmentally superior alternative. The EIR incorrectly concludes that the proposed Project's impacts are "largely comparable" to reduced development alternatives. But the Historic Preservation Alternative would significantly reduce the magnitude of impacts on traffic, climate change, historic resources, noise, biological	

Commenter	Date	Letter	Comment	Response
			resources, public services and land use. o The EIR states that the Proposed Project would have "superior financial feasibility" than the alternatives. EIR at 571. But the EIR does not provide data or other substantial evidence to support that conclusion. All of the statements about financial feasibility in the alternatives analysis are conclusory and lack substantiating evidence or discussion. See EIR at 536-571.	
Sonoma Land Trust	9/26/2022	B11-87	The EIR defines the No Project Low Development alternative by a reduction in overall housing and job numbers. It then concludes that "[t]he proportion of both income-restricted affordable housing and affordable by design housing in the Low Development Alternative is projected to be less than the Proposed Plan." EIR at 542. But the EIR fails to provide supporting evidence for this projection. Id. § Why is the proportion of both income restricted affordable housing and affordable by design housing in the Low Development Alternative projected to be less than the Proposed Plan? o The EIR makes the same unsupported projections with respect to the Reduced Development Alternative and the Historic Preservation Alternative. EIR at 559, 568. § Why is the proportion of both income restricted affordable housing and affordable by design housing in the Reduced	The comment is noted. See B11-85, B11-82, and MR-8. Biological resource impacts, including wildlife movement are discussed for each of the Alternatives.

Commenter	Date	Letter	Comment	Response
			Development Alternative and the Historic Preservation Alternative projected to be less than the Proposed Plan? o Conversely, the EIR defines the No Project: High Development alternative by an increase in overall housing and job numbers. It then concludes that “[t]he proportion of both income-restricted affordable housing and affordable by design housing in the High Development Alternative is projected to be more than the Proposed Plan.” EIR at 550. again, the EIR fails to provide supporting evidence for this projection. Id. § Why is the proportion of both income restricted affordable housing and affordable by design housing in the High Development Alternative projected to be more than the Proposed Plan? o The EIR states that “[b]ased on prior alternatives modeling exercises completed for SDC in 2021, it is likely that the No Project: High Development Alternative would generate slightly more per capita VMT than the Proposed Project, though the difference would likely be negligible.” But the EIR fails to identify, cite to, or provide copies of the analysis and results from those “prior alternatives modeling exercises.” Without additional information, decisionmakers and the public cannot independently judge the strength of the EIR’s analysis or the veracity of its conclusions.	

Commenter	Date	Letter	Comment	Response
			• The alternatives analysis fails to discuss or analyze the impacts of any of the proposed alternatives to the Sonoma Valley Wildlife Corridor. o The EIR's analyses of the No Project: Low Development Alternative and the Reduced Development Alternative do not mention the wildlife corridor at all. EIR at 538 (discussing the No Project: Low Development Alternative's impact to biological resources but failing to mention or discuss the Wildlife Corridor); EIR at 554 (same with respect to the Reduced Development Alternative). Because impacts to wildlife movement—and particularly to wildlife movement within the established Sonoma Valley Wildlife Corridor—are a major issue and threshold of significance for the Project's impacts to biological resources, this omission prevents readers from understanding fully the relative consequences of each alternative. § How would the No Project: Low Development Alternative impact wildlife movement and connectivity through the Sonoma Valley Wildlife Corridor? § How would those impacts differ from the impacts the Project would have on wildlife movement and connectivity through the Sonoma Valley Wildlife Corridor? § How would the Reduced Development Alternative impact wildlife movement and connectivity through the Sonoma Valley Wildlife	

Commenter	Date	Letter	Comment	Response
			Corridor? § How would those impacts differ from the impacts the Project would have on wildlife movement and connectivity through the Sonoma Valley Wildlife Corridor? o Similarly, the EIR's analyses of the No Project: High Development Alternative and the Historic Preservation Alternative refer only to those wildlife corridors that lie (or would lie) within the Core Campus. EIR at 546 (noting that under the No Project High Development Alternative, "the area devoted to the expanded wildlife corridor may be reduced or eliminated," but not discussing impacts to the remainder of the Sonoma Valley Wildlife Corridor); EIR at 563 (same with respect to the Historic Preservation Alternative, noting "the creek corridors and the wildlife corridor will also not be expanded"). By failing to analyze the alternatives' impacts to the established Sonoma Valley Wildlife Corridor and their reliance on a new road connecting to Hwy. 12 that bisects the Corridor outside the Core Campus, the EIR obscures the true impacts of those alternatives and prevents readers from accurately comparing the alternatives. The EIR cannot reliably identify an environmentally superior alternative without first comparing the full environmental effects of each proposed alternative. § How would the No Project: High Development	

Commenter	Date	Letter	Comment	Response
			Alternative impact wildlife movement and connectivity through the Sonoma Valley Wildlife Corridor? § How would those impacts differ from the impacts the Project would have on wildlife movement and connectivity through the Sonoma Valley Wildlife Corridor? How would the Historic Preservation Alternative impact wildlife movement and connectivity through the Sonoma Valley Wildlife Corridor? § How would those impacts differ from the impacts the Project would have on wildlife movement and connectivity through the Sonoma Valley Wildlife Corridor?	
Sonoma Land Trust	9/26/2022	B11-88	The EIR states that a cumulative impact analysis "must analyze either a list of past, present, and probably future projects or a summary of projections contained in an adopted general plan or related planning document." EIR at 585. While the EIR claims that the "Proposed Project represents the cumulative development scenario for the reasonably foreseeable future in the Planning Area under the County's General Plan" and "incorporates the likely effects of surrounding regional growth," for many impacts, the EIR limits its analysis to the Plan Area rather than considering the combined effects of the Project together with the environmental impacts that are likely to occur outside the Project's Planning Area.	The comment is noted. See MR-1, MR-3, and MR-9. Cumulative impacts are properly analyzed pursuant to CEQA. The analysis of cumulative impacts need not provide the level of detail required of the analysis of impacts from the project itself, but shall "reflect the severity of the impacts and their likelihood of occurrence."(CEQA Guidelines Section 15130(b)). In order to assess cumulative impacts, an EIR must analyze either a list of past, present, and probable future projects or a summary of projections contained in an adopted general plan or related planning document. The Proposed Project represents the cumulative development scenario for the reasonably foreseeable future in the Planning Area under the County's General Plan. This future scenario incorporates the likely effects of surrounding regional growth.

Commenter	Date	Letter	Comment	Response
			o For example, the Planning Area is constrained to the SDC site. EIR at 54 (Figure 2.1-2: Planning Area Boundaries). But the Sonoma Valley Wildlife Corridor that runs through the Planning Area extends for a significant distance to the east and west, stretching from the top of Sonoma Mountain across Sonoma Creek and the valley floor to the Mayacamas Mountains to the east. Permeability of the Sonoma Valley Wildlife Corridor is important "for the movement of wildlife at a regional scale." EIR at 242. The cumulative impact boundary for impacts to the Wildlife Corridor must include the entire corridor and all projects capable of impacting the corridor if the true scope and magnitude of cumulative impacts are to be understood. Specifically, analysis of cumulative impacts on the Wildlife Corridor should encompass an area extending from the Russian River in the north to the San Pablo Bay to the south, and from the Petaluma River to the west to Napa Valley to the east. This impact boundary is necessary to capture the movements of local populations of the widest-ranging species present (i.e., mountain lions), as well as movement and dispersal among regional populations, allowing for genetic exchange, and range shifts in response to climate change over time. This boundary would include a portion of the Marin Coast-Blue Ridge Critical Wildlife Linkage identified by Penrod et al. (2013),4 but	

Commenter	Date	Letter	Comment	Response
			analysis should include all land development in the region, not only within the mapped critical corridors. The EIR's myopic focus on cumulative impacts caused by and felt within the Planning Area obscures impacts that may occur outside the Planning Area and that the Project may add to, or impacts that may occur within the Planning Area that could be cumulatively significant when impacts from projects outside the Planning Area are accounted for. The EIR must expand its cumulative impacts boundary. o The EIR does not apply a consistent cumulative impact boundary. While the introduction to the cumulatively impacts analysis indicates that the impact boundary is the Planning Area (EIR at 585), the EIR elsewhere extends the impact boundary (e.g., EIR at 589 ("The cumulative geographic context for cultural, historic, and tribal cultural resources is the County of Sonoma."). § Where the EIR does use a wider impact boundary, it is not clear whether the EIR analyzes cumulative impacts based on a specific list of projects or on projected development under the General Plan. For example, at pages 589-590 the EIR states that "[i]f the Proposed Plan, in combination with other past, present, and reasonably foreseeable projects in Sonoma County, would result in the loss of or adverse changes to multiple historic	

Commenter	Date	Letter	Comment	Response
			or cultural resources a significant cumulative impact could result." Further muddying the waters, the EIR does not specify what other projects inform its analysis. EIR at 589-590. Instead, the EIR punts to project-level environmental review and discusses only projects to be completed within the Planning Area under the Specific Plan. Id. The EIR must choose an appropriate cumulative impacts boundary for each impact, justify its choice, and analyze cumulative impacts of the Project together with other past, present and future development. See, e.g., Draft Environmental Impact Report for the Springs Specific Plan at 4.0-3 ("The cumulative setting for aesthetics is the Sonoma Valley Planning Area"), 4.0-7 ("The cumulative setting for biological resources includes the Plan area and the greater Sonoma County region."), 4.0-9 (The cumulative setting for … (climate change) comprises anthropogenic (i.e., human-made) GHG emissions sources across the globe.") § Use of the County's existing general plan for the cumulative impact analysis does not provide a meaningful analysis of cumulative impacts for the SDC Project. The County adopted its general plan more than 14 years ago in 2008, and is currently updating the general plan. The general plan's	

Commenter	Date	Letter	Comment	Response
			outdated cumulative impact analysis omits recent planned and approved projects and therefore does not provide a meaningful framework with which to gauge the Project's cumulative impacts. • Specific Plan Policy 2-28 provides that prior to the commencement of the approval of any specific project in the Proposed Plan area, Project Sponsors shall contract a qualified biologist to conduct studies identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level. This policy epitomizes improper piecemealing of environmental analysis. If development under the Specific Plan is only analyzed on a project-by-project basis, the cumulative impacts of those projects will be obscured and may not be adequately mitigated. The EIR must complete all required analysis now, at the plan-level stage, in order that decisionmakers and the public can understand the full picture of what a buildout of the draft Specific Plan would entail.	
Sonoma Land Trust	9/26/2022	B11-89	Much of the EIR relies on future, project-level environmental review to identify and mitigate potentially significant environmental impacts. See, e.g., EIR Chapter 3.4; see also EIR at 589-590 (finding that cumulative impacts to cultural, historic, and tribal cultural resources would not be cumulatively considerable due in significant part to future	The comment is noted. See MR-3 and MR-9.

Commenter	Date	Letter	Comment	Response
			project-level environmental review). But the Specific Plan states that the County intends to avoid future project-level environmental review to the greatest possible extent. Draft Specific Plan at 7-3 ("When a public agency has prepared an EIR for a specific plan, State law provides that residential, commercial, or mixed-use projects undertaken inconformity to the specific plan are exempt from CEQA, subject to certain requirements. Pursuant to Section 15152 of the CEQA Guidelines, projects will also be eligible to "tier" from the EIR … The County intend to rely on these provisions for exemptions and tiering to the maximum extent feasible."). Furthermore, as a matter of law, residential projects consistent with a specific plan are statutorily exempt from CEQA and do not require additional environmental review. Gov't Code § 65457. o If the County's goal is to evade future project-level review, how can it justify relying on future project-level review to identify and mitigate the Project's impacts? o In light of the Draft Specific Plan's stated goal, how will the County ensure that all necessary environmental review is completed?	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-90	- The Draft EIR's analysis and discussion of potential biological impacts is limited and is insufficient to determine whether the Specific Plan's potential impacts will be significant.	The SDC Specific Plan EIR is a program EIR, presenting a comprehensive assessment of the potential impacts of the proposed SDC Specific Plan. At a programmatic level, the Specific Plan is designed to be self-mitigating and EIR include numerous policies and measures that would ensure impacts to biological resources are avoided and minimized as development takes place. The Specific Plan would preserve the entirety of the approximately 755 acres outside the Core Campus as open space, including improved open space within the Core Campus through 30-50 acres of buffer open space (including riparian, wildlife corridor, and Arnold Drive buffers). The Specific Plan would also expand the Sonoma Valley Wildlife Corridor at the pinch point close to Suttonfield Lake by removing existing buildings in the northeastern portion of the Planning Area and providing that land for wildlife movement. Additionally, the Specific Plan includes policies designed specifically to minimize the impacts to wildlife at the interface of the built and natural environment (proposed policies 2-6 through 2-26). As a programmatic analysis, the DEIR does not assess project-specific impacts of potential future projects under the proposed Plan. Future projects would be required to comply with CEQA, as applicable, including preparation of more precise, project-level analyses regarding potential impacts to biological resources. Appendix A of the Specific Plan also lays out standard conditions of approvals that would apply to all projects based on Specific Plan policies and CEQA analysis, regardless of whether subsequent environmental analysis is

Commenter	Date	Letter	Comment	Response
				conducted or not. This includes Condition of Approval (COA) Policy BIO-1, which would require a biological resource assessment be prepared for any specific project in the Proposed Plan area, including identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level (DEIR page 243). The Specific Plan approach to increase net open space, enhance existing open space areas through incorporation of proposed policies and conditions of approval, and the requirement for future projects to comply with applicable CEQA requirements supports the DEIR's analysis that potential impacts to biological resources would be less than significant.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-91	- The Draft EIR fails to discuss how proposed new roads, and significant increases in traffic and human activity and development density on the site, may affect wildlife movement or cause other significant impacts.	Refer to response to comment MR-7. When conducting analysis of potential environmental impacts, CEQA Guidelines Section 15064 (b)1 only require a Lead Agency to use "careful judgment….based to the extent possible on scientific and factual data." The determination of less than significant impacts on wildlife or to wildlife movement was made based on the fact that the wildlife corridors on the site will be protected in perpetuity, are sufficiently large to support movement from one habitat to another, and will be enhanced by removal of existing development and beneficial policies referenced in response to comment B11-90.
Sonoma Land Trust	9/26/2022	B11-92	The Draft Specific Plan and Draft EIR would permit numerous uses in "Preserved Open Space" that conflict with open space preservation goals and could cause significant impacts.	Comment incorporated. Specific Plan Policy 2-1 has been amended to state: "Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation." Incorporation of the amended policy would require future uses within open space areas to be consistent with the Specific Plan's resource protection policies (policies 2-1 through 2-26) and would involve multiple partners to further refine

Commenter	Date	Letter	Comment	Response
				open space preservation goals for “Preserved Open Space” areas.
Sonoma Land Trust	9/26/2022	B11-93	These and other issues are addressed more fully in the table below. As detailed in the table, the Draft EIR’s lack of analysis of key biological impacts prevents the EIR from identifying which impacts are likely to occur or how significant they will be. Because the EIR does not adequately analyze impacts, it cannot fully develop or analyze effective mitigation measures. Further, what little de facto mitigation the EIR does propose (via Specific Plan policies and Conditions of Approval) is insufficient to reduce impacts to biological resources to less-than-significant levels. In addition to identifying analytical issues in the EIR, our comments below pose specific questions that must be answered to fill informational gaps in the EIR and facilitate complete, scientifically sound impact analysis. PCI also observed that the Specific Plan focuses on avoiding negative impacts on natural resources and, aside from the elimination of two buildings mentioned above, does not take advantage of this key site planning opportunity to call for positive habitat improvements or	Please refer to response to comments B11-90 and MR-1.

Commenter	Date	Letter	Comment	Response
			restoration of impaired ecological values. In addition, the Biological Resources sections contain a number of errors and omissions in describing the basic ecological setting of the site. PCI's full comments and questions on biological resource aspects of the Draft Specific Plan and adequacy of the Draft EIR are provided below.	
Sonoma Land Trust	9/26/2022	B11-94	Is this map meant to show only known occurrences or all likely habitats? Pleaseclarify. Multiple special-status species previously documented as occurring or likelyto occur on the site are not shown. Are these excluded intentionally, and if so, why?For other species, only a portion of their known or likely distribution is shown. SeePCI (2018) 1 for detailed review of potential habitat on site for these species. Speciesnot shown, or not showing full distribution, in Figure 1.6-2, but previouslydocumented as occurring or likely to occur are:- Freshwater shrimp – documented on Sonoma Creek and has potential tooccur on Asbury and Hill Creeks.- Steelhead – documented in Hill Creek and potentially present in AsburyCreek, in addition to presence in Sonoma Creek.- Species of Special Concern documented on or adjacent to the site but notshown (see PCI 2018 for location information):o California giant salamandero Foothill yellow-legged frogo Pallid and Townsends big-eared batso Northern western pond turtleSpecies of Special Concern American badger has been reported on SonomaMountain and also has potential to occur. Mountain lions are a "specially protectedmammal in California" and of high local conservation concern; radio tracking by localresearchers shows extensive use of the SDC site. Note also that northern spotted owl is federally listed as threatened but not shown as such on map.	Figure 1.6-2 is not intended to show all special status species that may occur on the site, nor is it a map of potential habitat for special status species. Such mapping would exceed the requirements of CEQA and would be atypical for assessment of wildlife and plants at both the programmatic level. However, Table 3.4-2 of the DEIR includes a detailed list of species that have been documented on the site and those that have potential to occur. This table has been updated to reflect observations provided by the Sonoma Ecology Center (letter dated April 3, 2022), to include additional observations for special status species. Additionally, spotted owl is shown on the map .

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-95	This map conflicts with known data. What is the data source? It doesn't match PCI (2018) or Sonoma Veg Map data. The large wetland on east side is labeled a "vernal pool" but this wetland is not considered a vernal pool by prior work (e.g., PCI 2018). Please adjust text or explain why the feature is considered a vernal pool, given the high conservation concern for vernal pools.	Comment incorporated. Vernal pool label has been amended to "seasonal wetland." Additionally, the DEIR notes mitigations and standard conditions of approval that require projects to conduct a biological resources assessment (Policies BIO-1, BIO-14, BIO-15, BIO-16) to identify, avoid, and mitigated potential impacts to wetlands. Wetland protection policies identified in the Specific Plan and DEIR would continue to apply and would not result in changes to potential significance of impacts or analyses contained in the DEIR.
Sonoma Land Trust	9/26/2022	B11-96	This figure also omits non-native forest on core campus though it is "existing vegetation" (i.e., relevant to the map), is mapped by the Sonoma Veg Map data, and is included in Figure 2.2-1, Open Space Framework. The non-native forest should be included on this map because these trees provide habitat values, including nesting, cover, and foraging resources for birds and potential roosting habitat for bats. The potential for impacts on birds, wildlife movement, and special-status bats should be addressed in the EIR if removal of this vegetation is proposed.	Figure 1.6-3 is not intended to show all vegetation communities that may occur on the site. Such mapping would exceed the requirements of CEQA at both the programmatic level. However, Policy 2-20 has been amended to state: "Require that the project sponsor work with an arborist to develop a tree planting plan that retains existing mature healthy trees and supplements the existing tree canopy with a diverse range of native and/or low water trees that provide shade and habitat. Locate new construction and public realm improvements around existing landscaping features that are retained." Additionally, COA Policy BIO-2 would prevent potential impacts to special-status bat species and BIO-8 would avoid impacts to other special -status and non-status nesting birds.
Sonoma Land Trust	9/26/2022	B11-97	First sentence states that "the natural landscape and the site's location in the Sonoma Valley also brings fire hazards." Similar wording is used on 2-1. That statement should be omitted or clarified to explain that human infrastructure and human activity pose the most significant risks for wildfire ignition in this area (as	Comment noted. The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to approve the project.

Commenter	Date	Letter	Comment	Response
			stated on page 500), and that weather patterns of the region in combination with local topography lead to high potential for the spread of wildfire throughout both natural lands and developed environments.	
Sonoma Land Trust	9/26/2022	B11-98	This figure shows “Managed Landscape/Fire Buffers” and an “Expanded Wildlife Fire Buffer.” The Managed Landscape/Fire Buffers extend into what is currently open space. How will fuel reduction practices in this zone be tailored to prevent any significant impact on wildlife movement or other habitat values? What is the proposed maximum width of this buffer? All fire buffers should be no wider than necessary to meet public safety needs in order to reduce impacts on natural resources. Potential impacts include reduced permeability for wildlife movement (due to loss of cover and foraging resources, and increased exposure to human activity), damage to sensitive plant communities (i.e., within Oregon oak woodland on the west side of campus, with potential direct removal of oaks as well as potential loss of native understory diversity, reduced oak regeneration and increased potential for weedy species establishment) and within riparian forest along Hill Creek (with potential direct removal of riparian trees as well as loss of native understory diversity, potential reduced native tree regeneration, and increases in weedy species). [See, for example, Kerns et al. (2020), Perchemlides et al. (2008), and Seavy	Refer to MR-7.

Commenter	Date	Letter	Comment	Response
			et al. (2008).] Biological Resources significance Criteria 1 through 4 indicate that these types of impact could constitute significant impacts	
Sonoma Land Trust	9/26/2022	B11-99	This figure showing "Preserved Open Space" does not show the two new potential Highway 12 connector roads that could be developed within or across open space, resulting in an incomplete illustration of the nature of the proposed open space.	Comment incorporated. Policy 2-55 has been added to state: "Ensure that any future roadways or pathways built in the open space do not introduce lighting that would adversely impact wildlife." Additionally, DEIR Policy BIO-1 requires a biological resource assessment for any new project. This assessment will identify wetlands and make recommendations for mitigation of any impacts to biological resources to a less than significant level. Refer to response to comment MR-7. In addition, Policy 2-1 has been amended to state: "Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation."
Sonoma Land Trust	9/26/2022	B11-100	Project impacts to open space cannot be fully analyzed unless this figure shows these proposed new roads and calls out locations for any of the anticipated uses, such as	Refer to response to comment B11-99.

Commenter	Date	Letter	Comment	Response
			intensive agriculture or utility development, noted in Table 4-3, that are not compatible with common understanding of the term "Preserved Open Space," which is land that is primarily undeveloped and left in a natural state, such as grasslands and open rangeland, forests, and woodlands. Locations planned for utility development or intensive agriculture (e.g. indoor crop cultivation, confined farm animal operations, row crops, vineyards, etc.) should be designated as such; otherwise, project impacts to natural resources cannot be analyzed. The Plan does include a Utilities land use type; all proposed utility developments should be shown with that label. The potential impacts of the allowable uses within the "Preserved Open Space" are not analyzed in the EIR. Until the potential impacts are analyzed, it is impossible to determine whether those impacts would be significant or whether certain Specific Plan policies could avoid or mitigate those impacts.	
Sonoma Land Trust	9/26/2022	B11-101	Second paragraph emphasizes vegetation management as a means to reduce wildfire hazard. The prime importance of designing buildings to be fire-resistant, and of use policies that limit the likelihood of ignition, should be emphasized here along with vegetation management. Vegetation removal from the natural landscape should not be the primary approach to fire risk reduction on the site, especially given its importance to wildlife habitat and wildlife movement	Specific Plan Policies 2-9 and 2-10 require fuels management to be minimized within wildlife corridors to limit disturbance to species. Additionally, Policy 2-31 has been amended to add: "Construct and maintain a managed landscape buffer along western and eastern edges of the Core Campus to aid in fire defense consisting of a shaded fuel break in wooded areas and grazed or mown grassland. Shrubs and chaparral should be limited within the managed landscape buffer. Management of this landscape buffer should aim to enhance

Commenter	Date	Letter	Comment	Response
			through the site. See comment above on page 2-4 for further discussion of potential impacts of vegetation removal on biological resources.	biodiversity, reverse weed invasion, and protect water resources."
Sonoma Land Trust	9/26/2022	B11-102	To reduce impacts of trails and recreational use on biological resources, Policy 2-4 should include the decommissioning of trails that are duplicative or causing erosion or other resource damage. The current trail system includes trails that occur close together and lead to essentially the same destinations. Since each trail and its use has a cumulative impact on natural vegetation (i.e. by direct removal and often, the facilitation of invasive plant species) and on wildlife use (by the increase in human and dog presence), decommissioning duplicative or highly erosive trails will reduce the project's recreational impacts. Some of the trails on the site are also contributing to substantial erosion, resulting in soil and vegetation loss and potential impacts to water quality downstream. The site's trail system should be reviewed for such locations to decommission or realign as well.	Specific Plan Policy 2-1 has been amended to state: "Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation. " Amendments would ensure trails are planned cohesively, which would include potential closure of duplicative trails and improvements to degraded trails.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-103	Policy 2-5 calls for setting aside a location for water recreation for people and dogs at Suttonfield Lake. Facilitating intensive dog use of the site could have significant impacts on wildlife use of the area. Dogs can affect wildlife through direct predation, harassment, scent marking resulting in wildlife avoidance, and spread of disease. Dog presence has been found to be associated with reduced habitat use by species including mountain lion, mule deer, bobcats, and small mammals such as squirrels and rabbits (Reilly et al 2017, George and Crooks 2006, Length et al. 2008); with disease transmission to gray foxes (Riley et al. 2004); and with reduced bird presence and species richness (Banks et al 2007). The potential impacts of dog use must therefore be evaluated in the EIR. Until the potential impacts analyzed, it is impossible to determine whether those impacts would be significant or whether certain Specific Plan policies could avoid or mitigate those impacts.	Specific Plan Policy 2-1 has been amended to state: "Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation." Use of open space by people and on-leash dogs is commonly accepted as a compatible use in many open space areas, which would be further addressed during development of the open space plan. While some adverse effects to wildlife may result from allowing dogs and people to access these areas as presented in Reilly et al 2017, George and Crooks 2006, Length et al. 2008, Banks et al 2007, the commenter does not provide evidence that these impacts would be significant. CEQA does not require that an analysis determines that no impact will result from a project or activity.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-104	Goal 2-D seems to be mixing the goal of conservation of habitat on site with resource conservation more globally. Please clarify. For instance, how is “sustainable food production” a means to conserving habitat on the site?	Refer to response to comment MR-3 and MR-7. In addition, Policy 2-1 has been amended to state: “Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation.” Incorporation of the amended policy would require future uses within open space areas to be consistent with the Specific Plan’s resource protection policies (policies 2-6 through 2-26) and would involve multiple partners to further refine open space preservation goals for “Preserved Open Space” areas. Further, DEIR Policy BIO-1 requires a biological resource assessment for any new project. This assessment will identify potential sensitive habitats and species and make recommendations for mitigation of any project-specific impacts to biological resources to a less than significant level.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-105	Policy 2-6 – This policy should also include and address the northwest corner. Figure 2.2-1 indicates a building will be removed in this location and the wildlife buffer expanded.	Comment incorporated. Policy 2-6 has been amended to state: "Remove existing development along the north edge of the Core Campus, from area shown as Open Space in Core Area in Figure 2.2-1, and re-introduce compatible native species to expand the wildlife corridor. This includes removing existing buildings Paxton, Thompson/Bane, and Residence 126 and buildings on the northeast side of campus and ensuring that new development remains within the smaller development footprint as shown in Figure 2.2-1. Ensure that the wildlife corridor is not further restricted at its narrowest point along the north side of the campus. The project sponsor shall be responsible for demolishing buildings within the expanded wildlife corridor and establishing new planting and landscaping to support expanded wildlife movement and safety, prior to Certificate of Occupancy on any redevelopment on the eastside of Arnold Dr."
Sonoma Land Trust	9/26/2022	B11-106	Policy 2-11 – This policy should incorporate the most recent guidance from the Dark Sky Association, which is that all outdoor lights have a color temperature of no more than 2200 Kelvins. [See A Values-Centered Approach to Nighttime Conservation - International Dark-Sky Association; darksky.org)] Dark Sky Standards also provide that: · All lights will use the lowest light level required minimum levels recommended by widely recognized professional standards bodies. · All residential and business outdoor lighting should be actively controlled	Comment noted. Specific Plan Policy 2-11 applies Dark Sky standards to the project design, including but not limited to measures identified in this comment.

Commenter	Date	Letter	Comment	Response
			through means such as timers and motion-sensing switches to ensure that light is available when it is needed, dimmed when possible, and turned off when not needed. Lighting can disrupt wildlife by altering night-time cover and hunting conditions, reducing an area's value and permeability to wildlife. For instance, lighting has been found to reduce use of movement corridors for mountain lions (Beier 1995), deer and mice (Bliss-Ketchum et al. 2016), and bats (Bhardwaj et al. 2020), reducing habitat connectivity for these species. This policy should incorporate the most recent Dark Sky Association guidance and	
Sonoma Land Trust	9/26/2022	B11-107	Policy 2-16 – These are valuable requirements to help address impacts of fencing on wildlife movement, but to allow for passage of wildlife above and below fencing, the Specific Plan should also require that the maximum height of the upper strand be no more than 48" (42" preferred). Since Table 4-3 permits agricultural uses within the "Preserved Open Space," this policy must make clear that these fencing standards apply throughout areas shown as Preserved Open Space in Figure 2.2-2, regardless of whether it may be also used for agricultural uses. See also comment on p. 4-14.	Specific Plan Policy 2-16 requires fencing within open space to be wildlife permeable to maintain wildlife corridor function. Maximum fence heights would be considered with regards to wildlife permeability.
Sonoma Land Trust	9/26/2022	B11-108	Policy 2-17 – The wording of this residential nighttime noise reduction policy suggests that it is optional or will not necessarily be enforced. It is therefore insufficient to reduce noise impacts on wildlife to less-	Refer to response to comment MR-3.

Commenter	Date	Letter	Comment	Response
			than-significant levels. Noise has been shown to impact wildlife usage of habitat, resulting, for example, in reduced foraging time and efficacy, and reduced nesting use, in birds (Burger and Gochfeld 2002, Stone 2000, Aubrey and Hunsaker 1997, Shannon et al. 2016). Potential noise impacts on wildlife must therefore be analyzed in the EIR.	
Sonoma Land Trust	9/26/2022	B11-109	Policy 2-19 – The planting palette for habitat restoration or general plantings withinthe open space areas should be entirely composed of locally native species; theCounty should delete "and/or low-water plant species." The planting palette forgeneral planting within the campus should also be composed of locally native species where feasible, but in ornamental landscape settings, other low-water-use plants would also be acceptable.	Specific Plan Policy 2-1 has been amended to state: "Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation." Implementation of Specific Plan policies and incorporation of the amended policy 2-1 would ensure an appropriate planting palette for habitat restoration within open space areas.
Sonoma Land Trust	9/26/2022	B11-110	Policy 2-21 - To ensure the proposed enhancements do not have a significant impact on wildlife movement and sensitive wetland habitat, this policy should require that development "Ensure that enhancements protect or	Refer to response to comments MR-7.

Commenter	Date	Letter	Comment	Response
			improve wildlife habitat values.”	
Sonoma Land Trust	9/26/2022	B11-111	Policy 2-24 – Additional bird-friendly design measures should be incorporated in order to avoid impacts to birds. Relevant additional measures include: - Minimize the overall amount of glass on building exteriors facing water features. - Avoid transparent glass skyways, walkways, or entryways, free-standing glass walls, and transparent building corners - Utilize glass/window treatments that create a visual signal or barrier to help alert birds to presence of glass. - Avoid funneling open space to a building façade. - Strategically place landscaping to reduce reflection and views of foliage inside or through glass. - Avoid or minimize up-lighting and spotlights; and turn non-emergency lighting off (such as by automatic shutoff) at night to minimize light from buildings that is visible to birds. (See also comments on Policy 2-11 regarding lighting.) See: Resource-Guide-for-Bird-safe-Building-Design.pdf (audubonportland.org)	Comment noted. Policy 2-24 requires the incorporation of bird-friendly design, which would include but not be limited to measures detailed in this comment.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-112	2-25 – Asbury Creek should be included as one of the streams requiring a setback of at least 50'. Because 50' is a minimum setback that will only protect some of the processes listed, larger buffers should be retained where they currently exist, and opportunities to expand buffers to 100' – 300' should be considered. These larger buffers will provide greater mitigation of impacts from development and human uses on wildlife movement and water quality. For example, setbacks of 100'-300' will be more effective as wildlife corridors, allow for greater natural regeneration of native trees, and provide greater water quality protection through sediment and nutrient filtration (see, for example, Hilty and Merenlender 2004, Castelle et al. 1994, and Lee et al. 2004).	Comment incorporated. No development is proposed along Asbury Creek. In addition, the Specific Plan includes policies that would ensure buffers and protection of riparian areas around creeks, including Asbury Creek. Specific Plan Policies 2-25 (protective buffer of Sonoma Creek), 2-27 (County's Municipal Code for riparian corridor protection), and 2-30 (maintain standard project protection measures for any development adjacent to riparian corridors) would ensure protection of streams and riparian resources during any adjacent ground disturbing actions. Further, DEIR Policy BIO-1 requires a biological resource assessment for any new project. This assessment will identify potential sensitive habitats and species and make recommendations for mitigation of any project-specific impacts to biological resources to a less than significant level.
Sonoma Land Trust	9/26/2022	B11-113	2-F – In order to reduce potential wildfire impacts to wildlife and habitat, the Specific Plan needs to include managing human activities and limiting ignition potential as one of its key strategies. Measures to limit human-caused ignition should be central to residential and recreational site regulations and agricultural use policies.	Policies 2-31 through 2-42 address design and management approaches to wildfire safety. The comment does not address the adequacy of the Draft EIR; therefore, no response is required. However, the commenter's opinion is noted and forwarded to the Board of Supervisors for their consideration in making a determination whether to approve the project.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-114	Policy 2-31 Fire buffers appear to encompass areas of sensitive habitat includingOregon oak woodland, valley oak woodland, and riparian forest. How will fire bufferdevelopment affect the health and quality of these sensitive vegetation types (e.g.,understory diversity, natural regeneration potential, potential incursion of weeds,increased solar exposure, etc.)? How will those impacts be mitigated? These potential impacts need to be evaluated fully in the EIR to ensure they will be less than significant.	Specific Plan Policies 2-9 and 2-10 fuels management to be minimized within wildlife corridors to limit disturbance to species. Additionally, Policy 2-31 has been amended to add: "Construct and maintain a managed landscape buffer along western and eastern edges of the Core Campus to aid in fire defense consisting of a shaded fuel break in wooded areas and grazed or mown grassland. Shrubs and chaparral should be limited within the managed landscape buffer. Management of this landscape buffer should aim to enhance biodiversity, reverse weed invasion, and protect water resources."
Sonoma Land Trust	9/26/2022	B11-115	Policy 2-32 – There seem to be some missing words in the second sentence between "Loose surface litter…shall be permitted…in order to ensure" and "the removal of trees, bushes, shrubs…". Please clarify. Retaining some surface litter is necessary to protect soil health, prevent erosion, allow for natural regeneration of native plants, and support reptiles, amphibians, and other wildlife.	Comment is noted. No change is needed.
Sonoma Land Trust	9/26/2022	B11-116	Policy 2-34 – The Fuel Separation standard provides only minimum clearance distances. Based on this guideline, all native vegetation in this zone could potentially be removed, having a significant impact on biological resources. In order to ensure that the impact of fuel management is less than significant, the Specific Plan must identify an upper limit to the amount of clearing of native vegetation, so that as much native vegetation may be retained as possible while meeting specific fuel reduction objectives. The EIR must also evaluate the	Refer to response to comment B11-114.

Commenter	Date	Letter	Comment	Response
			impacts from the implementation of these standards to ensure they will actually be less than significant or will be mitigated to less-than-significant levels.	
Sonoma Land Trust	9/26/2022	B11-117	How will the likelihood of ignition from human causes be managed? No policies currently address this essential topic.	Refer to response to comment B11-113.
Sonoma Land Trust	9/26/2022	B11-118	The Parks and Recreation land use type description includes dog parks as one use type. Limiting dog presence on the site will be necessary to avoid impacts to wildlife permeability of the site. Policy 6-4 indicates that a dog park will be provided within Core Campus, at least 200' from any creeks or wildlife corridors. This 200' limitation will be valuable in reducing impacts to wildlife. Based on the Land Use diagram (Figure 4.1-2), the Ballfields, Central Green, and one area east of the creek are the only "Park" areas more than 200' from creeks. The Park area east of the creek appears to be within existing riparian habitat along Sonoma Creek, which would not be suitable for a dog park (or any other highly developed park type). Areas within the Ballfields zone, or elsewhere within the Residential or Flex Zones on the west side of Arnold Drive, would be most suitable for a small dog park.	Comment noted. The potential dog park would be located within the Core Campus, at least 200' from any creeks or wildlife corridors. In addition, refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-119	The table indicates that agricultural crop production and agricultural processing, as well as keeping farm animals, is permitted in both "Buffer Open Space" and "Preserved Open Space." Keeping confined farm	Refer to response to comment B11-104.

Commenter	Date	Letter	Comment	Response
			animals, mushroom farming, and timberland conversion are also permitted in "Preserved Open Space." In PCI's experience, these types of activities are often incompatible with open space preservation because they often eliminate most or all natural vegetation, often involve construction of built facilities, and frequently exclude or reduce wildlife with fencing, trapping and other measures. How does the County envision these activities occurring in a manner compatible with open space preservation? How will needs to restrict cattle or other farm animal movement, within open space areas, be aligned with maintaining wildlife permeability?	
Sonoma Land Trust	9/26/2022	B11-120	The table further indicates that an array of other intensive agricultural uses, including farm retail sales, indoor crop cultivation, wholesale nursery, and tasting rooms are all permitted in "Preserved Open Space." These uses are not compatible with open space preservation because they entail built facilities and removal of natural vegetation. These uses should not be permitted in Preserved Open Space. How will the potential impacts of these permitted uses be evaluated in the future?	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-121	Similarly, outdoor recreation facilities and "rural sports and recreation" facilities are potentially permittable in Preserved Open Space. What types of facilities will these include? A clear explanation of this use type is needed to allow determination of potentially significant impacts to wildlife. Uses such as	Refer to response to comment B11-104.

Commenter	Date	Letter	Comment	Response
			Frisbee golf, zip lines, and offroad vehicle use all have potential to reduce wildlife usage via habitat damage and increased human activity levels, and must be analyzed by the EIR.	
Sonoma Land Trust	9/26/2022	B11-122	The table indicates that geothermal resource development, parking facilities, and public utility facilities may all also be located within Preserved Open Space. These are potentially extensive facilities that may also be incompatible with meaningful open space preservation because they entail removal of natural vegetation, construction of new buildings and other infrastructure, and a potentially heightened level of human presence and activity. They should not be permitted within Preserved Open Space unless greater detail can be provided in this Specific Plan, showing where they could be located, how extensive they are, allowing for analysis of impacts to wildlife and other biological resources in the EIR.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-123	The last paragraph indicates that sycamores will line principal axes, and other primarily deciduous canopy trees will be used on other streets. The Specific Plan should prioritize the use of native trees and other native plants for landscaping where they align with the ornamental setting, because they are well-adapted to local climate, require less water and chemical inputs to thrive, and provide habitat benefits (food resources, cover, and nesting opportunities) for the greatest variety of native animal species . Valley oaks, which form an	Comment incorporated. Policy 2-20 has been amended to state: “Require that the project sponsor work with an arborist to develop a tree planting plan that retains existing mature healthy trees and supplements the existing tree canopy with a diverse range of native and/or low water trees that provide shade and habitat. Locate new construction and public realm improvements around existing landscaping features that are retained.”

Commenter	Date	Letter	Comment	Response
			important part of the core campus landscape already in the southwestern section, as well as coast live oak, should be incorporated where space allows to sustain oaks as a long-term element of the campus, help ameliorate historic losses of sensitive valley oak habitat, and support the many species of native birds, mammals, amphibians and invertebrates that rely on native oaks. This will also help meet Policy 5-1, establishing tree-lined avenues "..that complement the surrounding hills and open space landscape."	
Sonoma Land Trust	9/26/2022	B11-124	This section should include a statement specific to lighting meeting Dark Sky standards; this is mentioned only in passing in Policy 5-13 and should be made its own policy, to ensure cross-referencing with Policy 2-7. See comments on page 2-11, above, for further discussion.	Refer to response to comment B11-106.
Sonoma Land Trust	9/26/2022	B11-125	Policy 6-4 regarding a dog park: see comment on page 4-8, above.	Refer to response to comment B11-118.
Sonoma Land Trust	9/26/2022	B11-126	The baseline appears to vary between sections in the EIR. For example, it appears the Transportation section may use 2019 as baseline and the Biology Section uses a different baseline. Without a proper baseline, impact analyses cannot be evaluated. Identifying an appropriate baseline is particularly important for impacts relating to intensity of human uses and presence on the site, since the population of SDC has declined so dramatically in recent years as SDC ceased operations and closed. What	The DEIR and Specific Plan utilize best available information in development of the plan and analyses. Much of the DEIR Section 3.4 relied on biological analyses completed in 2018 (PCI 2018), which was supplemented with more recently available species occurrence information provided by the California Natural Diversity Database.

Commenter	Date	Letter	Comment	Response
			is the specific baseline condition used for each section of the EIR?	
Sonoma Land Trust	9/26/2022	B11-127	"The section describes biological resources in the Planning Area (which includes the project area for the SDC), including habitats, wetlands, critical habitat, and specialstatus species, as well as relevant federal, State, and local regulations and programs." This section does not actually address potential impacts and proposed mitigation measures needed to reduce potential impacts to less–than-significant levels. In order to fully address and mitigate potential impacts on biological resources, the EIR needs to evaluate potential construction-related and operational impacts from implementation of the Specific Plan on individual species, habitats for those species across the SDC area, natural vegetation communities, movement corridors, wetland disturbance and loss, and compliance with applicable policies use.	Refer to response to comment B11-90.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-128	This section does not mention the 50' minimum setback from streams designated by the Riparian Corridor zoning for this site. Instead, smaller setbacks are described in the first paragraph. Is the 50' minimum setback not being applied in the Plan? Reducing the width of riparian and creek setbacks could disrupt animal movement by reducing the width of animal dispersal corridors and disrupting movement through the loss of habitat, increased noise and light disturbance within the corridor, and from human or domestic animal intrusion. The EIR must evaluate the potential impacts on biological resources from a reduction in the riparian and creek setback widths and mitigate the impacts of whatever setbacks it employs to ensure that those impacts are less than significant.	The Specific Plan includes policies that would ensure buffers and protection of riparian areas around creeks, including Asbury Creek. Specific Plan Policies 2-25 (protective buffer of Sonoma Creek), 2-27 (County's Municipal Code for riparian corridor protection), and 2-30 (maintain standard project protection measures for any development adjacent to riparian corridors) would ensure protection of streams and riparian resources during any adjacent ground disturbing actions. Further, DEIR Policy BIO-1 requires a biological resource assessment for any new project. This assessment will identify potential sensitive habitats and species and make recommendations for mitigation of any project-specific impacts to biological resources to a less than significant level. Lastly, Article 65 of the Sonoma County Code is referenced describing setbacks for buildings. Article 65 will be applied throughout the implementation of the project and stream setbacks will be determined during the biological resources assessment required by BIO-1, using the criteria defined by Article 65.
Sonoma Land Trust	9/26/2022	B11-129	This states that measures shall be taken to "protect and enhance valley oaks on the project site" and such measures shall include, but not be limited to, a requirement that valley oaks shall comprise a minimum of fifty percent of the required landscape trees for the development project. But the Proposed Plan contains no such requirement. The EIR states that the Proposed Plan would have a significant impact on biological resources if, among other things, "Implementation of the Proposed Plan would … conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance" (EIR, page 257, Impact 3.4-5). In order to ensure that impacts on valley	Refer to response to comment MR-1. In addition, refer to response to comment B11-123.

Commenter	Date	Letter	Comment	Response
			oak habitat are less than significant, the Specific Plan must include a policy implementing the requirements of the Valley Oak Habitat Combining District. The policy must be added to ensure development does not conflict with the zoning requirements for the protection of valley oak habitat. The EIR must then analyze fully the impacts of that policy.	
Sonoma Land Trust	9/26/2022	B11-130	Here and on p. 221, PCI's work on the Existing Conditions Report is cited as PCI (2015). PCI's work and the report as a whole (prepared by WRT) was completed in 2018. The document is available here: https://transformsdc.files.wordpress.com/2020/01/2-cnaturallandrecreationalresourcesv3.pdf	Comment incorporated. References have been updated to PCI 2018.
Sonoma Land Trust	9/26/2022	B11-131	Second paragraph also indicates that habitat types described are from the California Wildlife Habitat Relationships System. That is incorrect. PCI (2018) and all mapping associated with it use the Manual of California Vegetation-based classification refined by the Sonoma Veg Map project, which provides the more detailed and more precise classification needed to identify potential impacts on sensitive habitat types as required by CEQA. Please correct here and on relevant maps	Comment incorporated.
Sonoma Land Trust	9/26/2022	B11-132	The large wetland on the east side of the habitat map is incorrectly labeled as vernal pool. This should be labeled seasonal wetland or wet meadow.	Comment incorporated. Figure 3.4-1 has been revised to identify as a seasonal wetland.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-133	The first line notes that redwood forest is not considered sensitive in Holland (1986); Holland (1986) is not considered a current reference for sensitive habitat designations and therefore does not constitute substantial evidence of sensitive habitat designations. In order to accurately determine sensitive habitat designations and analyze impacts to those habitats, the EIR must use current rankings by CDFW for sensitive alliances and provide that information for each of the plant communities listed. Note that rankings of G3 or S3 or lower are considered sensitive. Because the EIR failed to rely on up-to-date evidence, the EIR failed to acknowledge that redwood forest is considered a sensitive habitat. In fact, based on PCI (2018), CDFW-ranked sensitive alliances on the site include redwood forest, madrone forest, Oregon oak woodland, valley oak woodland, bigleaf maple forest, cottonwood forest, riparian deciduous forest, native grasslands, and wetlands. The EIR needs to include a map showing all sensitive vegetation types for use in analyzing impacts in the EIR so that decision-makers and the public can fully understand the scope and location of sensitive habitat types and the Project's impacts on sensitive habitat types. Valley oak woodland is of particular concern since it occurs within and adjacent to the core campus, and protections will be needed to reduce impacts to less-than-significant levels.	Specific Plan Policy 2-20 has been amended to state: "Require that the project sponsor work with an arborist to develop a tree planting plan that retains existing mature healthy trees and supplements the existing tree canopy with a diverse range of native and/or low water trees that provide shade and habitat. Locate new construction and public realm improvements around existing landscaping features that are retained." Incorporation of this policy would ensure appropriate protections for potentially sensitive vegetation within the Plan area.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-134	Vernal pools are mentioned in the title and third sentence, and on map 3.4-1. Vernal pools are highly sensitive, specialized wetland types that, if present, would need to be included in the discussion of impacts in the EIR. Mitigation measures specific to vernal pools would also be required. It should be noted that no vernal pools have been identified in prior work (PCI 2018, Sonoma Veg Map). What substantial evidence does the County have with respect to the presence of vernal pools? Please clarify.	Refer to response to comment B11-95.
Sonoma Land Trust	9/26/2022	B11-135	The EIR also fails to analyze the potential impacts on the wetlands in the area fromthe proposed Highway 12 connector or any other proposed Plan elements. The impacts analysis needs to address the direct and indirect impacts of the development on wetlands within the Specific Plan area before the EIR can conclude that any impacts would be less than significant.	Refer to response to comment MR-1. Additionally, the DEIR notes policies and standard conditions of approval that require projects to conduct a biological resources assessment (DEIR COA Policies BIO-1, BIO-14, BIO-15, BIO-16) to identify, avoid, and mitigated potential impacts to wetlands. Wetland protection policies identified in the Specific Plan and DEIR would continue to apply and would not result in changes to potential significance of impacts or analyses contained in the DEIR. In addition, Specific Plan Policy 2-28 states: "Prior to the commencement of the approval of any specific project in the Proposed Plan area, Project Sponsors shall contract a qualified biologist to conduct studies identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level."
Sonoma Land Trust	9/26/2022	B11-136	The EIR identifies Lindera benzoin as present on the site but this species is not known	Comment incorporated. Reference has been removed.

Commenter	Date	Letter	Comment	Response
			to occur in California. If the EIR intended to reference Calycanthus occidentalis, please correct.	
Sonoma Land Trust	9/26/2022	B11-137	The list includes 28 species with moderate to high potential to occur. However, the EIR fails to provide a map showing the location of the habitat necessary for the species; therefore, decision-makers and the public cannot determine what specific elements of the project may impact habitat that could support the various species listed. The EIR needs to address the potential impacts to each species on a speciesby- species basis. Without a species-by-species analysis, it is impossible to determine whether and to what degree development associated with the Proposed Plan would result in potential impacts within the habitat areas presented in Table 3.4-2: Potential Special-status Wildlife. And without full analysis, it is impossible to determine what mitigation is required to reduce those impacts to less-thansignificant levels. How will impacts to habitat impact the listed species and what mitigation measures are proposed to reduce the potential impact?	Refer to response to comments B11-90 and B11-94.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-138	The EIR also omits data about known occurrences of special status species on the Project site. For example, the entry for northern western pond turtle does not indicate that the species has been documented to occur on the site (see PCI 2018 for detail). The EIR's failure to survey the site for special status species or to include data regarding known occurrences prevents the EIR from fully identifying or mitigating possible impacts to special status species.	Comment incorporated. The list of documented special-status species and assessment of potential for special-status species to occur (Table 3.4-2 and Table 3.4-3) has been amended to include Sonoma Ecology Center provided observations for special status species. Some of the comment's designations of individual species do not meet the criteria to be considered "special status" under CEQA. However, these species will all benefit from the above-mentioned policies and would not be significantly adversely affected by future projects. The Specific Plan places a high priority on biodiversity preservation, preservation of wildlife corridors and protection of special-status species (Vision Statement; existing County, State and Federal policies; please refer to Specific Plan Goals 2-D, 2-E; Specific Plan Policies 2-6 through 2-30). Though the comment does identify some special-status species that were not identified as observed in the DEIR, all potential significant impacts to these species would be mitigated to a less than significant level with the implementation of existing Local, State and Federal policies and the specific and general policies in the DEIR.
Sonoma Land Trust	9/26/2022	B11-139	The EIR fails to address the mountain lion, which is designated as a "Specially Protected Mammal" by CDFW, is a species of high local conservation concern, and is known to use the SDC site extensively. Central Coast and Southern California populations are currently under review for listing under the California Endangered Species Act. Some of the same pressures threatening mountain lions in those areas – including habitat fragmentation – are highly relevant to	Refer to response to comment MR-7. In addition, the designation of mountain lion as a Specially Protected Mammal makes it subject to rules under California Fish and Game Code specific to actions that would intentionally take and/or result possession of a mountain lion. Its most notable use is a prohibition of recreational hunting for the species. Mountain lion is not listed on CDFW's special animal list and was not considered a special status species for the purposes of this evaluation because the project does not have potential to result

Commenter	Date	Letter	Comment	Response
			the population in the SDC region as well, especially in long-range planning for increased land development. Development of the types proposed in the Draft Specific Plan may have the potential to significantly impact mountain lion habitat and movement. It is, therefore, foreseeable that the Specific Plan could have a significant impact on mountain lions under significance Criterion 1 ("Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service") or significance Criterion 4 ("Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites"). The EIR must specifically analyze and mitigate for impacts to mountain lions to ensure any such impacts would be less than significant.	in intentional take or possession of a mountain lion and Sonoma County CEQA analysis of special status species typically do not include mountain lion. As the comment indicates, some populations are currently being assessed for listing, though the Sonoma County population is not one of these.
Sonoma Land Trust	9/26/2022	B11-140	The table identifies the potential habitat for special-status plants in the planning area, but it fails to disclose where potential impacts might overlap with areas within the Specific Plan. For example, there is no way to tell based on the EIR where the areas of potential development (including uses permitted within "Preserve Open Space" such as indoor crop cultivation and utility	Refer to response to comment B11-90 and B11-104.

Commenter	Date	Letter	Comment	Response
			development) would occur in relation to the habitat for special-status plants. Nor is it possible to discern what the potential impacts to special status plants and their habitat might be, or what specific mitigation would reduce those impacts. As drafted, substantial evidence and analysis do not support the EIR's conclusion that impacts to special status plants would be less than significant.	
Sonoma Land Trust	9/26/2022	B11-141	The EIR fails to clearly evaluate sensitive plant communities other than wetlands. The scientific community considers several other habitat types that are present at SDC to be sensitive. See PCI (2018); see also comment on p. 214 and following, above. The EIR cannot justify its conclusion that impacts on sensitive habitats will be less than significant without clearly analyzing and mitigating impacts to all relevant sensitive plant communities.	Refer to response to comment B11-90 and B11-104.
Sonoma Land Trust	9/26/2022	B11-142	Riparian corridors serve as important movement routes for many species other than steelhead, including many mammals, birds, amphibians, and reptiles. Please adjust wording. Mill and Asbury Creek serve as important corridors as well. The EIR must fully identify and analyze the impacts to all wildlife corridors on the SDC site, including Mill and Asbury Creeks.	Refer to response to comment B11-112.
Sonoma Land Trust	9/26/2022	B11-143	This section fails to provide a map of all wildlife movement corridors showing where all proposed plan development may be located in relation to the corridors and the EIR fails to identify what, specifically, the direct and	Refer to response to comment MR-7.

Commenter	Date	Letter	Comment	Response
			indirect impacts on wildlife use of the existing corridors might be under Impact 3.4-4 starting on page 254. What are the potential impacts from habitat loss or alteration, noise, light, human presence, dog presence, and fragmentation by roads that may impact wildlife use of the corridor and what mitigation measures are proposed to reduce the specific impacts? Without identifying, analyzing, and mitigating specific impacts to wildlife corridors, the EIR lacks substantial evidence or explanation to justify its conclusion that those impacts would be less than significant.	
Sonoma Land Trust	9/26/2022	B11-144	How will the proposed Class I pathway indicated on Figure 3.2-1, shown leading toward Sonoma Creek from Walnut Street, affect the wildlife corridor and sensitive riparian habitat? What measures will be in place to limit or mitigate for these impacts? Without identifying, analyzing, and mitigating specific impacts of the Class I pathway, the EIR lacks substantial evidence or explanation to justify its conclusion that those impacts would be less than significant.	Refer to response to comment B11-90.
Sonoma Land Trust	9/26/2022	B11-145	Two options for connector roads are shown in Specific Plan Figure 3.1-1, and threetypes of facilities (a direct connection to Highway 12, an emergency accessconnection, and a pedestrian/bike connection) are all alluded to in accompanyingtext. In addition, Policy 3-44 calls for development of the Sonoma Valley Trail (multiusepath) parallel to Highway 12. However, the EIR does not disclose or analyze thespecific impacts of each of those proposed options. What will be the direct, indirect, and cumulative impacts of all these elements on	Refer to response to comment MR-3 and B11-90.

Commenter	Date	Letter	Comment	Response
			biological resources, including wetlands, drainages, Butler Canyon Creek, and wildlife movement through existing undercrossings? Without identifying, analyzing, and mitigating specific impacts of the connector road(s), the EIR lacks substantial evidence or explanation to justify its conclusion that those impacts would be less than significant.	
Sonoma Land Trust	9/26/2022	B11-146	and cumulative impacts of all these elements on biological resources, including wetlands, drainages, Butler Canyon Creek, and wildlife movement through existing undercrossings? Without identifying, analyzing, and mitigating specific impacts of the connector road(s), the EIR lacks substantial evidence or explanation to justify its conclusion that those impacts would be less than significant.	Refer to response to comment MR-3 and B11-90.
Sonoma Land Trust	9/26/2022	B11-147	The EIR's chosen thresholds of significance are not sufficiently specific to enable decision-makers or the public to understand, in practical terms, what it means for the Specific Plan to have a significant or less-than-significant impact on biological resources. Further, the EIR fails to explain how the County chose or developed its significance criteria, or to justify why these specific criteria were selected while others were omitted. The EIR cannot fulfill its role as an informational document unless it provides additional information regarding its significance thresholds. For example:	Consistent with CEQA, Appendix G thresholds were applied to analyses. CEQA does not require further justification for use of these thresholds

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-148	Criterion 1. How does the EIR define substantial adverse effect for each candidate, sensitive, or special-status species present or potentially present in the Specific Plan area? What was the process used to determine if implementation of the proposed Plan will substantially affect specific species? How does this criterion address a potential change in species diversity and abundance that could occur from the implementation of the Specific Plan? How is a potential change in the quantity and quality of native habitat used by the biological resources addressed under this criterion and what is the significance threshold to evaluate impacts of a change?	Refer to response to comments MR-3 and B11-90.
Sonoma Land Trust	9/26/2022	B11-149	Criterion 2. What does the EIR evaluation consider a substantial adverse effect on riparian habitat or other sensitive natural communities? This is not articulated, and therefore, how can impacts be determined? What are the sensitive natural communities present in the planning area and within the development area, including the Highway 12 connector?	Refer to response to comments MR-3 and B11-90.
Sonoma Land Trust	9/26/2022	B11-150	Criterion 5. How is a potential conflict with policies and ordinances evaluated in terms of protected biological resources? What would constitute a significant impact and how would the impacts be mitigated to less-than-significant levels?	Refer to response to comments MR-3 and B11-90.
Sonoma Land Trust	9/26/2022	B11-151	Why was the analysis of impacts limited to a comparison against Figure 3.4-1 when there are additional resources presented in the EIR? Figures 3.2-1 through 3.2-4	Refer to response to comments MR-3, B11-90 and B11-133.

Commenter	Date	Letter	Comment	Response
			provide significantly more information for use in the analysis of impacts in the Biological Resources section. These figures illustrate locations within the planning area that support riparian forest types, evergreen and redwood forest types, and oak woodlands at a scale far more useful for impact evaluation. Portions of 3.4-1 also to be incorrect (see comment above on p. 212).	
Sonoma Land Trust	9/26/2022	B11-152	This section states that the plans' land use designations would not directly, adverselyaffect areas of natural vegetation. This conclusion is inappropriate for the"Methodology and Assumptions" section. Where is the analysis of how land usedesignations would relate to natural vegetation? For instance, how will land usetypes such as managed landscape and fire buffer affect natural vegetation? How willpermitted uses in "Preserved Open Space" such as crop production, keeping ofconfined farm animals, and wine tasting facilities (as stated in Table 4.3-1) affect natural vegetation? Without first answering these and other questions, the EIR cannot support its conclusion with analysis and substantial evidence.	Refer to response to comments MR-3, B11-90 and B11-133.
Sonoma Land Trust	9/26/2022	B11-153	The impacts of the proposed Plan's land use designations are the only aspect of the Plan evaluated in the Biological Resources Section. This approach is inconsistent with other sections of the EIR that evaluate potential impacts from construction of projects within the Specific Plan area. For instance, construction emissions are evaluated in the Air Quality section addressing potential construction emissions from a new road connection to Highway 12. The fact that the proposed Plan is	Refer to response to comments MR-3 and B11-90.

Commenter	Date	Letter	Comment	Response
			programmatic and does not include any specific development projects does not excuse the EIR from including an evaluation of any specific potential construction/development on biological resources. The potential locations of specific development types are shown on figures included in the EIR and the Specific Plan. The draft Specific Plan is, therefore, sufficiently detailed to allow analysis of at least some of these specific impacts at the programmatic stage. The EIR needs include potential impacts from construction and use of a connector to Highway 12 so that decision-makers and the public can determine now—when the County is proposing to lock in these uses—whether these uses will have significant impacts to biological resources and how those impacts could be mitigated.	
Sonoma Land Trust	9/26/2022	B11-154	How can the EIR make the conclusion that the proposed Highway 12 connector and the upgraded wastewater treatment plant would not adversely affect areas of natural vegetation? There is no analysis or substantial presented to support the conclusion. In addition, how can potential conditions of approval reduce impacts? Please articulate why BIO 1 through 14 are not considered mitigations. What are the potential impacts should the County not include the conditions of approval as proposed, and what mitigation measures would be needed to reduce impacts to lessthan significant-levels?	Refer to response to comments MR-3 and B11-90.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-155	While the methods of "intentional water and energy conservation, sustainable food productions, top-tier sustainable building practices, and aggressive waste reduction" seem like valuable strategies for general sustainability of site operations, it is not clear whether or how these methods would "promote conservation of existing habitat" on the site. Further, the EIR does not clearly evaluate the details or efficacy of any of these methods with respect to whether or how they could reduce impacts to biological resources. Please clarify and address.	Refer to response to comment MR-1 and MR-3.
Sonoma Land Trust	9/26/2022	B11-156	The policy states that the defensible space requirements of the County Fire Department should be met but not exceeded in the wildlife corridor. What are the County standards for defensible space and what are the impacts on biological resources from implementation of the defensible space requirements? The impacts should be evaluated under Impact 3.4-4 and 3.4-2 at a minimum but may also require evaluation for potential impacts on special-status plants. What mitigation measures would be needed to reduce impacts on biological resources from implementation of defensible space requirements? What could be the impact is defensible space standards must be exceeded and what mitigation would be needed if the impacts are significant?	Refer to response to comment B11-101.
Sonoma Land Trust	9/26/2022	B11-157	Policy 2-11. Dark skies standards need to apply to the private realm as well as publicsetting, and should apply all new lighting, not just for new buildings. See	Refer to response to comment B11-106. In addition, refer to response to comment MR-3 and MR-7.

Commenter	Date	Letter	Comment	Response
			comments on Specific Plan p. 2-11, above. The impacts of lighting on wildlife need to be addressed in the EIR. The EIR must evaluate how wildlife species modify their behavior as a result of increased nighttime light within wildlife corridors and other habitat and how increased light may alter nocturnal ecology within the Specific Plan area. Studies indicate increased light can disrupt foraging behavior and increase the risk of predation, increase roadkill of mammals, and disrupt dispersal movements and corridor use (Rich & Longcore eds. 2006). Nighttime light may prevent wildlife from fully using habitat available to them and light can prevent mammals from moving along wildlife corridors. Nighttime light can attract animals and result in altered wildlife movement patterns; these changes can expose prey to predators and make them more vulnerable to capture, thereby reducing species abundance and diversity in the area. See comment on Specific Plan, p. 2-11, above.	
Sonoma Land Trust	9/26/2022	B11-158	This comment provides a partial list of potential wildlife impacts from increased light; many other potential impacts may occur. The EIR must evaluate potential impacts and evaluate what level of light pollution might trigger impacts to sensitive species or species movement. How are the potential changes evaluated for the potentially affected species? Habitat modifications must be evaluated in Biology Criteria 1 and 4 to determine how the project may affect wildlife species	Refer to response to comment B11-106. In addition, refer to response to comment MR-3 and MR-7.

Commenter	Date	Letter	Comment	Response
			and how changes may affect the use of movement corridors. The analysis must identify how these potential impacts were evaluated and what mitigation measures are needed to reduce impacts to less-than-significant levels.	
Sonoma Land Trust	9/26/2022	B11-159	This fencing standard will be very important in reducing impacts to wildlife. Will this be required for all agricultural uses within the "Preserved Open Space" as well? Please state if so. If not, impacts on wildlife movement should be re-evaluated to ensure that fencing-related impacts will remain less than significant. Are there locations where fencing will not be allowed because potential impact on wildlife movement cannot be reduced to less-than-significant levels? These areas must be identified in the EIR as a means to reduce impacts to less-than-significant levels.	Refer to response to comment MR-7 and B11-181.
Sonoma Land Trust	9/26/2022	B11-160	This noise standard is vague and unenforceable. It does not include a specificcommitment to lower noise levels. Requirements to meet residential noisestandards, during both day and night, need be addressed and the impacts of notmeeting such standards needs to be evaluated. Biology Criterion 1 says a significantimpact would occur if the Project would have a substantial adverse effect on anyspecial-status species; therefore, the EIR must address the biological impactsresulting from noise and specifically address the impacts of non-attainment of noisestandards. How will increased noise impact species that communicate acousticallysuch birds and bats that use habitat at SDC? How will noise affect animal physiologyand behavior, and how would those changes impact special-status species? Theseimpacts	Refer to response to comment MR-1 and MR-3.

Commenter	Date	Letter	Comment	Response
			must be addressed in Biology Criterion 1 to understand how noise mayimpact special-status species, what noise levels would cause the impact, and whatmitigation measures would be used to reduce the impacts to less-than-significantlevels. Noise impacts on potential changes in wildlife use of corridors must beaddressed under Biology Criterion 4 to provide an understanding of how noise mayaffect movement, and what mitigation measures are proposed to reduce thepotential impacts to less-than-significant levels. How will the County determine if noise impacts occur? Without this critical information, the EIR does not have sufficient evidence to conclude that impacts to special status species would be less than significant.	
Sonoma Land Trust	9/26/2022	B11-161	Why is Asbury Creek not included as protected with a 50' buffer? What are the potential impacts to Asbury Creek from the lack of an adequate buffer? This stream provides significant habitat values and merits protection. It needs to be protected. If it will not be included within a buffer, the EIR must analyze and mitigate impacts to Asbury Creek to ensure those impacts remain less than significant.	Refer to response to comment B11-112.
Sonoma Land Trust	9/26/2022	B11-162	The EIR's summary of impacts in the Biology Section does not permit the level of granular analysis that is required to fully understand the impacts of the draft Specific Plan, particularly in light of the Specific Plan's level of detail and specificity. As such, the analysis of impacts on biological resources risks is missing key impacts that may not be analyzed fully in later environmental review.	Refer to response to comment B11-92.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-163	The first full sentence on this page states that "development is not proposed to occur within Preserved Open Space." However, this conflicts with the Specific Plan (p. 4-14 and following), which permits certain uses in that zone including tasting rooms, mushroom farms, utility development, and parking. Which is correct? If the Specific Plan is correct, the EIR must analyze the biological impacts from those permitted uses and mitigate any impacts to less-than-significant levels. Similarly, the EIR fails to explain how the Conditions of Approval would mitigate the negative impact of the Highway 12 connector on wildlife movement. Nor does the EIR disclose the potential impacts of the wastewater treatment plant, or what types of mitigation would be appropriate to reduce those impacts. Without an analysis and supporting evidence, decision-makers and the public cannot independently judge the EIR's unsupported conclusion that these impacts would be less than significant.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-164	This sentence states that future development under the Proposed Plan could have a significant direct or indirect impact on any special-status species if it would result in removal or degradation of a species or potentially suitable habitat. But the EIR does not contain any performance standards by which one could judge whether removal or degradation of a species or potentially suitable habitat has occurred. Please define what is meant by removal and what is meant by	Refer to response to comment MR-3 and B11-90.

Commenter	Date	Letter	Comment	Response
			degradation. Does removal mean loss of one individual special-status plant or animal? Would a significant impact occur should a special-status species no longer utilize habitat following increased humananimal interactions following site development? This is only an example of how impacts may be defined and how the undefined terms of removal or degradation are problematic as used in the EIR context.	
Sonoma Land Trust	9/26/2022	B11-165	The EIR states that potentially significant impacts could occur if significant amounts of habitat loss occurs. But what constitutes "significant" amounts of habitat loss varies by species? What does the EIR consider to be significant habitat loss for the special-status species present and potentially present at the site? How will the County determine whether a significant amount of habitat loss has occurred for each species? Without this critical information, the EIR does not have sufficient evidence to conclude that impacts to special status species would be less than significant.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-166	Why are all species lumped into a single evaluation paragraph and not discussedindividually? The impacts to special-status species will vary on a species-by-species basis and need to be analyzed individually. Without species-by-species analysis, the EIR cannot disclose what the specific impacts to each species might be or determine how those impacts should be mitigated.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-167	Where will grading, excavation, and construction activities likely occur and what species may be affected in these locations? The Specific	Refer to response to comment B11-104.

Commenter	Date	Letter	Comment	Response
			Plan clearly identifies where development should be sited. The EIR needs to be at least as detailed as the Specific Plan in order to capture the known foreseeable impacts of the project.	
Sonoma Land Trust	9/26/2022	B11-168	What specific species could be impacted with construction of the Highway 12 connector? How can the species be impacted from this activity and what are the mitigation measures needed to reduce the potential impacts to less-than-significant levels? Once mitigation measures are identified, the EIR must address how the mitigation measures reduce the impact on a measure-by-measure basis.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-169	How does the EIR evaluate the potential biological resource impacts of the alternatives in relation to the potential construction impacts from the proposed plan?	The comment is noted. See analysis on biological resource impacts for each of the Alternatives in Chapter 4.
Sonoma Land Trust	9/26/2022	B11-170	What specifically are the potential increased risks to special-status species from the operation of individual parts of the Proposed Plan? Individual special-status species occur in different locations around the SDC site. Some will necessarily be more affected by particular aspects of the Specific Plan depending on where the Specific Plan locates particular uses. The location of proposed uses is known based on the current draft Specific Plan. The EIR therefore needs to analyze the operational impacts of specific proposed uses on the special-status species in their vicinity before	Refer to response to comment B11-104.

Commenter	Date	Letter	Comment	Response
			it can draw any conclusions about the significance of those impacts.	
Sonoma Land Trust	9/26/2022	B11-171	What are the potential impacts from increased vehicular traffic and recreational use and to which species may these impact occur? What mitigation measures are needed to reduce these impacts? Multiple studies have found that increased vehicle traffic, increased density of human uses, and increased human activity levels, including trail development and use and dog presence, can reduce or alter habitat use by key wildlife species on SDC including mountain lions and bobcats (see for example Wilmers et al. 2021, Serieys et al. 2021, Smith et al. 2019, and Nickel et al. 2020).	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-172	Increased visitor use along trails across SDC may alter behaviors and cause some species to avoid those areas. Mitigation measures may include visitor education and requiring all visitors stay on established trails, minimize excessive noise, and keeping dogs on leash at all times. The County must identify areas where mitigation measures may not reduce impacts to less-than-significant levels and consider other means to reduce impacts, such as prohibiting dogs in areas that cannot accommodate their presence. Identification of areas where trail densities might already impact wildlife and identifying redundant trails to eliminate must be explored and analyzed in the EIR.	Refer to response to comment B11-104.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-173	What proposed plan elements have the potential to directly impact streams and thesurrounding habitats and how might this impact individual species that depend on the habitat impacted? How do the policies presented protect these resources and what are the remaining impacts following implementation of the policies? What are the mitigation measures proposed to reduce the potential impacts and how will the mitigation measure reduce the impact?	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-174	What elements of the proposed plan might result in a significant reduction in forest extent and quality and how will these potential impacts be reduced to less–thansignificant levels? How does the County define a “significant” reduction in extent and quality? Do these potential impacts vary by alternatives to the proposed plan?	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-175	What proposed plan elements in open grasslands might impact American badger and burrowing owls? Development and increased human use in open grassland that support habitat for these species may result in the loss of nesting and foraging habitat, and direct mortality. BIO-3 identifies means to avoid American badger dens during development to avoid direct mortality; however, it does not address the impacts associated with loss of habitat. BIO-5 includes relocation measures for burrowing owl; however, the EIR does not address potential impacts from loss of habitat, such as reduced population numbers and the potential for burrowing owls to avoid use of potential nesting and foraging habitat	Refer to response to comment B11-104.

Commenter	Date	Letter	Comment	Response
			located adjacent to developed areas. The EIR must evaluate impacts that result from human presence, such as loss of habitat and potential abandonment of nests resulting from human presence. How will the County determine if these impacts occur following development and how will the County protect the species? What are the mitigation measures needed to reduce the potential impacts on American badger and burrowing owl habitat loss?	
Sonoma Land Trust	9/26/2022	B11-176	The EIR states that "Outside of the developed areas, the Proposed Plan establishes dedicated open space areas. Managed open space in these areas would preserve and, in some cases, enhance the quality of sensitive habitats such as wetlands, native grasslands and oak woodlands. Several special-status wildlife and some plant species would be positively impacted by the preservation of these habitats. The open space would preserve the Sonoma Valley Wildlife Corridor and maintain its permeability for the movement of wildlife at a regional scale." .	Comment noted.
Sonoma Land Trust	9/26/2022	B11-177	How do policies reduce impacts on special-status species? The EIR makes statements without providing supporting discussion or explaining the methods used. As a result, decision-makers and the public cannot independently evaluate the adequacy of the EIR's analysis or the veracity of its conclusions.	Refer to response to comment MR-3.
Sonoma Land Trust	9/26/2022	B11-178	What are the impacts from development that the policies address and what impacts remain after the policies are all implemented? What mitigation measures are	Refer to response to comment MR-3 and B11-90.

Commenter	Date	Letter	Comment	Response
			proposed to address impacts remaining after implementation of policies? How will the County measure the efficacy of the policies and any mitigation measures?	
Sonoma Land Trust	9/26/2022	B11-179	Why are the requirements listed as conditions of approval and not as necessarymitigation measures and how does each condition of approval reduce specificimpacts? The EIR effectively admits that these requirements are needed to reduceimpacts to less-than-significant levels. The EIR needs to analyze the project'sunmitigated impacts and then identify impact-reducing policies as mitigationmeasures. It must also include those mitigation measures in a mitigation monitoringand reporting program to ensure they are effective and enforced. The approach used in the Biological Resources section failed to do this and is inexplicably inconsistent with the methodology used in other sections of the EIR.	Refer to response to comment MR-1, MR-3, MR-9, and B11-90.
Sonoma Land Trust	9/26/2022	B11-180	Conditions of Approval policies appear to relate only to the construction phase. Where is the analysis of impacts on special-status species associated with operations? How will the effects of ongoing site use and facility operation be reduced to less than significant? Without clearly defined and enforceable mitigation, the EIR provides no assurance that the operational impacts of the Specific Plan would be reduced to less-than-significant levels.	Refer to response to comment MR-3 and B11-90.
Sonoma Land Trust	9/26/2022	B11-181	The EIR fails to identify potential impacts on special-status species from dog use at Suttonfield Lake. As such, the EIR cannot determine what mitigation measures are necessary to reduce those impacts to less-than-significant levels.	Refer to response to comment B11-118.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-182	The EIR fails to identify which proposed plan elements could impact special-status bats and their habitat. What happens if the survey indicates that bats inhabit a building that is scheduled for demolition? How will the bats be evacuated from the building and how will they be prevented from reoccupying the site? How will the proposed mitigation prevent impacts?	Refer to response to comment B11-96.
Sonoma Land Trust	9/26/2022	B11-183	The EIR fails to identify which proposed plan elements could impact American badger. What are the potential impacts in open grassland? How will this mitigation prevent impacts and how will the County evaluate the efficacy of the measure?	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-184	Is BIO-4 only needed during construction? Are there any potential impacts on nesting raptors from project operations? How will the proposed mitigation prevent impacts and how will the County determine the efficacy of the measure? BIO 4 does not specify that pre-construction survey work needs to be completed by a qualified biologist. All construction-related wildlife surveys needs to be completed by a biologist. The measure defines an “active nest” as having eggs or nestlings present. Some interpretations of the Fish and Game Code include nest building as active nesting. The definition of “active nest” here needs to incorporate nest building.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-185	The EIR fails to identify the specific potential impacts to burrowing owls. What are the potential impacts in owl habitat and what habitat do they use in the proposed	Refer to response to comment B11-104.

Commenter	Date	Letter	Comment	Response
			plan area? How will the proposed mitigation prevent impacts? BIO 5 does not specify that pre-construction survey work needs to be completed by a qualified biologist. All construction-related wildlife surveys need to be completed by a biologist. The measure defines an "active nest" as having eggs or nestlings present. Some interpretations of the Fish and Game Code include nest building as active nesting. The definition of "active nest" here needs to incorporate nest building.	
Sonoma Land Trust	9/26/2022	B11-186	The EIR fails to identify proposed plan activities that might impact northern spotted owls. What activities might occur within riparian, evergreen and/or oak forests where owls may nest? Please explain how the acquisition of a permit reduces the impact on owls to less-than-significant levels.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-187	What is the proposed work that might occur near Fern Lake and Suttonfield Lake that might impact tricolored blackbird? How will the mitigation measure prevent impacts?	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-188	The measure defines an "active nest" as having eggs or nestlings present. Some interpretations of the Fish and Game Code include nest building as active nesting. The definition of "active nest" here needs to incorporate nest building.	Comment noted. The applied definition of active nest is standard in CEQA evaluations at the project and programmatic level, consistent with Fish and Game Code. There is no need to change the definition and no evidence is provided that such a change is warranted.
Sonoma Land Trust	9/26/2022	B11-189	The EIR fails to identify which proposed plan elements could result in direct impacts to aquatic features and result in the loss of habitat or cause harm to individuals. What will those direct impacts be and how will the	Refer to response to comment B11-135.

Commenter	Date	Letter	Comment	Response
			mitigation prevent these impacts?	
Sonoma Land Trust	9/26/2022	B11-190	Why are the measures limited to potential work within 300 feet of a channel when USFWS mandates measures to protect California red-legged frogs across CRLF habitat, not only within 300 feet of an aquatic feature? The EIR needs to identify protection measures for CRLF habitat outside 300 feet.	COA Policy BIO-11 applies the 300 foot buffer for work that will occur outside the rainy season when California red-legged frog is unlikely to be dispersing across the landscape. During this time, most California red-legged frogs are in areas near aquatic features and so the 300-foot buffer is a protective measure for frogs that may be present around those features. With the implementation of COA Policy BIO-1 for individual projects, it may be that additional protective actions would be called for.
Sonoma Land Trust	9/26/2022	B11-191	The EIR fails to identify which proposed plan elements could result in direct impacts to freshwater shrimp and salmonids and result in the loss of habitat or cause harm to individuals. How will the mitigation prevent these impacts? Why are the requirements listed not considered mitigation? What is necessary to prevent the loss of freshwater shrimp habitat and what compensatory mitigation may be necessary in the event a proposed planned element results in loss of habitat?	Refer to response to comment B11-104 and B11-135.
Sonoma Land Trust	9/26/2022	B11-192	What process will be required if a special-status plant cannot be avoided? What specific mitigation is necessary and how will that mitigation reduce the potential impact? How will the County monitor the efficacy of the mitigation?	Refer to response to comment MR-1 and MR-3.
Sonoma Land Trust	9/26/2022	B11-193	The EIR notes development would take place in previously developed portions and concludes that will limit potential for disruption to	Refer to response to comment MR-1 and MR-3.

Commenter	Date	Letter	Comment	Response
			undeveloped habitats. Where within the SDC property will riparian habitat and other sensitive natural communities be directly or indirectly impacted by implementation of the proposed plan? The EIR must support its conclusions with substantial evidence and thorough analysis.	
Sonoma Land Trust	9/26/2022	B11-194	The first full sentence states that no new building development is proposed to occur within open space areas. However, this conflicts with the Specific Plan (p. 4-14 and following), which permits uses in that zone including tasting rooms, mushroom farms, utility development, and parking. Which is correct? This section must analyze the specific impacts from all uses permitted under the Specific Plan.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-195	The first paragraph states that "implementation of the Proposed Plan may result in the degradation or removal of riparian habitat" and that such projects will require measures to reduce, avoid, or compensate for impacts. The EIR needs to identify these impacts as potentially significant, and must design and analyze appropriate mitigation measures. At present, the EIR does nothing to ensure that these impacts would actually be mitigated to less-than-significant levels.	Refer to response to comment MR-1 and MR-3.
Sonoma Land Trust	9/26/2022	B11-196	BIO-1 though BIO-14 address special-status wildlife species. It is not clear from the EIR whether or how these policies would reduce the impact on riparian habitat or other sensitive natural communities to less-than-significant levels. The EIR needs to	Refer to response to comment B11-104 and B11-135.

Commenter	Date	Letter	Comment	Response
			explain how individual species protection measures protect riparian or sensitive natural communities in general? What are the mitigations necessary for the loss of riparian habitat?	
Sonoma Land Trust	9/26/2022	B11-197	How will development impact sensitive valley oak habitat? What will the impacts from the increased presence of people and pets be on wildlife in valley oak habitat? The EIR needs to discuss these impacts and analyze in sufficient detail how these impacts will be mitigated to less-than-significant levels.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-198	The EIR fails to identify the specific impacts on riparian and sensitive natural communities from the two public infrastructure projects? What specifically could be impacted and which sensitive natural communities could be present in the construction area? How would BIO-1 through BIO-14, which address special-status species, reduce these impacts? What are the specific mitigations needed in the event the project results in the loss of riparian habitat or sensitive natural communities? How specifically do the policies listed reduce the impacts?	Refer to response to comment MR-1 and MR-3. In addition, the Specific Plan includes policies that would ensure buffers and protection of riparian areas around creeks, including Asbury Creek. Specific Plan Policies 2-25 (protective buffer of Sonoma Creek), 2-27 (County's Municipal Code for riparian corridor protection), and 2-30 (maintain standard project protection measures for any development adjacent to riparian corridors) would ensure protection of streams and riparian resources during any adjacent ground disturbing actions.
Sonoma Land Trust	9/26/2022	B11-199	Is there new trail construction included as part of the project? If so, the potential impacts on riparian and sensitive natural vegetation must be analyzed and mitigated.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-200	The EIR fails to disclose the potential impact of increased vehicle trips be on individual wildlife species. This impact must be analyzed fully. At present, there is not sufficient evidence or analysis to indicate whether or	Refer to response to comment MR-1 and MR-3.

Commenter	Date	Letter	Comment	Response
			how this impact would be mitigated to a less-than-significant level.	
Sonoma Land Trust	9/26/2022	B11-201	BIO-14 is deferred mitigation. The EIR must expand on what might be included in an aquatic resources mitigation plan and describe how development of this plan will reduce impacts to less-than-significant levels. The EIR must provide clear performance standards that any future mitigation plan must meet.	Refer to response to comment MR-1 and MR-3.
Sonoma Land Trust	9/26/2022	B11-202	The analysis indicates a potentially significant impact could occur if construction impacts federally protected wetlands. This analysis improperly excludes wetlands that fall under State jurisdiction without justification. Figure 3.4-1 serves as the basis for the location of known wetlands and vernal pools (but see comments on potential errors in that figure, above). What are the proposed plan elements that could potentially cause the impact and why was this analysis not provided? It further appears the Highway 12 connectors could impact a large mapped wetland (incorrectly shown as vernal pool). These potential impacts are not analyzed in the EIR. The EIR must analyze and mitigate all foreseeable potentially significant impacts, including impacts related to the Highway 12 connector(s).	Refer to response to comment B11-99.
Sonoma Land Trust	9/26/2022	B11-203	The EIR fails to identify performance standards for its de factor proposed mitigation. What are the requirements in the permits that would mitigate impacts? Why are these measures not included as mitigation(s) in the EIR?	Refer to response to comment MR-1 and MR-3.

Commenter	Date	Letter	Comment	Response
			How, specifically, will these measures mitigate the impact?	
Sonoma Land Trust	9/26/2022	B11-204	Operation. The first sentence states that no new building development is proposedto occur within open space areas. However, this conflicts with the Specific Plan (p. 4-14 and following), which permits uses in that zone including tasting rooms,mushroom farms, utility development, and parking. Which is correct? The EIR must analyze the specific impacts from all uses permitted under the Specific Plan before it can determine whether those impacts will be significant.	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-205	The introductory paragraph does not discuss the Sonoma Valley Wildlife Corridor. The paragraph also notes there will be a significant impact on migratory species, corridors, and nursery sites; however, the impact analysis does not support this statement. The EIR states that implementation of the Proposed Plan would have a significant impact on migratory species, corridors, or nursery sites if the siting, construction, or operation of develop allowed under the Proposed Plan would impede on or remove migratory corridors or nursery sites. The EIR must define what is considered impede on and what might trigger an individual species to not fully use or stop using habitat for migration. The Proposed Plan would impact species differently.	Refer to response to comment MR-7.
Sonoma Land Trust	9/26/2022	B11-206	The EIR must evaluate how the potential impacts on individual species resulting from development identified in the Specific Plan and addressed under Impact 3.4-1 potentially alter wildlife movement and migration	Refer to response to comment MR-7.

Commenter	Date	Letter	Comment	Response
			patterns across the property and across the larger corridor. How would the introduction of light sources, noise, human activity, domestic animals, trails, new roadways and increased use of existing roadways directly and indirectly impact permeability of the wildlife corridor and alter use pattern? The EIR must identify mitigation measures for any significant impacts on migratory species, use of migration corridors, or nursery sites to less-than-significant levels?	
Sonoma Land Trust	9/26/2022	B11-207	It is an error to assume trails and use of trails would not impact wildlife movement simply because the use is consistent with open space management. Trails and trail use, especially increased use, can directly impact individual species. The EIR must analyze the specific impacts of the proposed trail and explain how those impacts will relate to wildlife movement through the SDC property. How will new trails be designed to minimize impacts to wildlife movement and prevent habitat fragmentation? What mitigation measures are needed to reduce the impacts to lessthan-significant levels?	Refer to response to comment B11-102.
Sonoma Land Trust	9/26/2022	B11-208	The EIR does not explain why the requirements of a 401 or 404 permit or CDFW authorization would fully protect fish and wildlife resources in terms of wildlife movement and wildlife corridors. The EIR must support its conclusions with analysis and substantial evidence, and the current EIR does not do so.	Refer to response to comment MR-1 and MR-3

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-209	The EIR fails to identify what specific policies would minimize impacts on wildlife migration or explain how implementation of each individual policy listed in the analysis would mitigate those impacts. The EIR states that the proposed plan preserves a majority of the site within the Sonoma Valley Wildlife Corridor. What is the impact caused on the portions of the migration corridor that are not preserved? Will access be limited and how will access impact wildlife use? What other impacts could occur and how will these impacts be mitigated? The EIR must specifically identify impacts and analyze their potential for mitigation in order to comply with CEQA.	Refer to response to comment MR-7.
Sonoma Land Trust	9/26/2022	B11-210	The EIR fails to analyze the potential wildlife migration issues associated with theincreased daily vehicle trips for each length of roadway and for each scenariopresented in Table 3.14-3: Projected Traffic Volumes in Plan Area (page 440). It appears the proposed plan would result in 13 percent more vehicular traffic than historic uses. What effect could this increase have on biological resources?	Refer to response to comment MR-7.
Sonoma Land Trust	9/26/2022	B11-211	The EIR fails to explain what specific impact(s) the implementation of the “dark skies” standards would address in terms of wildlife movement. The potential impact from increased light is not addressed in the wildlife impacts analysis. The EIR must analyze unmitigated impacts before defining mitigation measures. The EIR fails to analyze light impacts on wildlife movement or explain	Refer to response to comment MR-7 and B11-106.

Commenter	Date	Letter	Comment	Response
			why, based on substantial evidence, it believes that dark sky standards would reduce those impacts to lessthan-significant levels. What are the potential impacts on biological resources from residential housing, buildings and other facilities in terms of nighttime lighting?	
Sonoma Land Trust	9/26/2022	B11-212	The EIR fails to explain how these general policies apply specifically to the Sonoma Valley Wildlife Corridor and what potentially significant impacts these policies address. What proposed plan elements could encroach on the wildlife corridor and into existing open space, and what are the potential impacts on wildlife?	Refer to response to comment MR-7.
Sonoma Land Trust	9/26/2022	B11-213	Operation. The addition of 1,000+ housing units and 900 jobs will substantially increase the number of recreational users. The EIR fails to quantify or analyze the effect of this increase. What is the anticipated increase in recreational use? Will this increase have a significant impact on wildlife usage? How will the impacts of this greater human and pet presence on trails be mitigated?	Refer to response to comment B11-104.
Sonoma Land Trust	9/26/2022	B11-214	Similarly, the increase in housing and jobs will increase vehicle traffic. The EIR fails to analyze the effect of this increase on wildlife corridor permeability. How will the increase in vehicle traffic generated by 1000 new homes and 900 jobs affect wildlife corridor permeability? How will these impacts be mitigated? Research has found a strong negative correlation between wildlife corridor use and traffic quantity and	Refer to response to comment MR-7.

Commenter	Date	Letter	Comment	Response
			development intensity (see, for example, Charry and Jones 2009, and Smith 2019).	
Sonoma Land Trust	9/26/2022	B11-215	The EIR provides no justification for limiting restrictions on nighttime noise based on feasibility. Nor does the EIR analyze or disclose how frequently adherence to residential nighttime noise standards would be infeasible or discuss what additional impacts would occur and mitigation would be required in that case. What are the potential impacts on wildlife migration should adherence not be feasible and what are the proposed mitigation measures to reduce the impact?	Refer to response to comment MR-7.
Sonoma Land Trust	9/26/2022	B11-216	The EIR fails to identify what plans were evaluated to determine the proposed plan would not conflict with any local, regional, or state habitat conservation plan. The EIR must document its analysis and support its conclusions with substantial evidence.	The comment is noted. There are no Habitat Conservation Plans (HCPs) that apply within the Planning Area. There are no Natural Community Conservation Plans at the county level that include land within the Planning Area. See the Regulatory Setting starting of page 203 for other plans and regulations that the Proposed Plan would comply with.
Sonoma Land Trust	9/26/2022	B11-217	The proposed plan would result in significant and unavoidable impacts related to transportation (Impact 3.14-2) and historic resources (Impact 3.5-2). The biological resources impact evaluation does not address potential wildlife impacts resulting from the increased traffic; therefore, the alternatives may not adequately address potentially significant and unavoidable impacts on biological resources. Traffic volume and density of development are key factors that must be addressed in evaluating impacts to wildlife movement.	Refer to response to comment MR-7.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-218	It is unclear what the no project alternative is and how the EIR evaluates it. Itappears the no project alternative is development without a Specific Plan butfollowing the County General Plan. Does the EIR evaluate a true no action alternative(no development)? If not, why not? It appears the EIR concludes that State law requires development of the site, and this is not adequately explained in the text. Discussion of a no project alternative does not provide a complete picture without a true “no development” alternative.	The comment is noted. See MR-2. While this EIR cannot pre-judge the State’s actions, the EIR tries to frame these in light of the State Legislature’s established land use objectives for the site, per Govt. Code Section 14670.10.5 for the No Project Alternative.
Sonoma Land Trust	9/26/2022	B11-219	The EIR does not adequately explain how the impact of increased vehicle trips on individual special status species and wildlife corridor permeability would differ between the proposed buildout and its project alternatives. Different types and magnitudes of uses in different locations would likely have different impacts on individual special-status species, since special-status species are not uniformly distributed throughout the SDC site. So it is foreseeable that a given alternative could improve impacts on one special-status species while worsening impacts on another. These distinctions and impacts must be analyzed and fleshed out in the EIR in order for decision-makers and the public to fully understand the merits of each of the alternatives presented.	Refer to response to comment MR-7.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-220	The assessment for cumulative impacts on biological resources is simply a summary of the project impacts and fails to identify other projects or impacts to which the Specific Plan will add or compound impacts. What other projects in the geographical context of biological resources could have similar impacts as the proposed plan? Is there an existing cumulative impact on biological resources throughout the County and does the proposed plan have a considerable contribution to a cumulative impact on biological resources? These questions are particularly relevant to the EIR's analysis of the Sonoma Valley Wildlife Corridor, which spans a significant east-west divide and is subjected to impacts from a broad range of projects across its geographic range. The EIR must consider the Project's cumulative impacts to the wildlife corridor in light of the corridor's full geographic range.	The comment is noted. Development resulting from the Proposed Plan, as well as future development projects that could occur within the Planning Area or in the vicinity of the Planning Area, would be subject to the requirements of biological resource protection laws, including FESA, CESA, MBTA, and the California Fish and Game Code, as well as protection policies and provisions in the City's 2040 General Plan and Municipal Code. With implementation of the relevant policies and implementing actions, the Proposed Plan's contribution to cumulative biological resources impacts would be less than cumulatively considerable.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-221	Comment: The DIER states that the project will not interfere substantially with themovement of any wildlife species with an established native resident or migratory wildlifecorridors (Figure 1; EIR at 19). This conclusion is not supported by substantial evidenceand is likely incorrect. For example, there has been documented mountain lion movementthrough the Sonoma Development Center property (Figure 2). Two mountain lions inparticular, P1 and P5, have been recorded traveling through the SDC property routinelythroughout the study period and the property is part of these two mountain lions' home range (Figure 2). Mountain lions are also of particular concern when designing new development because they are uniquely threatened by human activity and encroachment into their habitat. Mountain lions are known to be sensitive to human disturbance, light, and noise (Suraci, Justin P., et al 2019, Wilmers et al. 2013). Largely as a result of increasing development pressures, local mountain lion populations in California are increasingly under threat, and some—including populations within the Bay Area—are currently under review by CA Dept. of Fish and Wildlife to be a listed species for special protection under State law (Yap, TA, JP Rose, and B Cummings. 2019). It is therefore foreseeable that the Project, which would site more than 1,000 residential units and additional commercial and recreational uses immediately adjacent to a bottleneck in the Sonoma Valley Wildlife Corridor—will impede mountain lion movement through this corridor and negatively impact the resident mountain lion population (Wilmers et al. 2013). Impeding mountain	The SDC Specific Plan EIR is a program EIR, presenting a comprehensive assessment of the potential impacts of the proposed SDC Specific Plan. At a programmatic level, the Specific Plan is designed to be self-mitigating and EIR include numerous policies and measures that would ensure impacts to biological resources are avoided and minimized as development takes place. This includes minimizing potential impacts to the Sonoma Valley Wildlife Corridor. The DEIR notes on page 235 that the overall site is of regional significance as a wildlife corridor. The Specific Plan would also expand the Sonoma Valley Wildlife Corridor at the pinch point close to Suttonfield Lake by removing existing buildings in the northeastern portion of the Planning Area and providing that land for wildlife movement. The Specific Plan would also preserve the entirety of the approximately 755 acres outside the Core Campus as open space, including improved open space within the Core Campus through 30-50 acres of buffer open space (including riparian, wildlife corridor, and Arnold Drive buffers). Additionally, the Specific Plan includes policies designed specifically to minimize the impacts to wildlife at the interface of the built and natural environment (proposed policies 2-6 through 2-26). In response to received comments on the Sonoma Valley Wildlife Corridor, Policy 2-6 has been amended to clarify: "Remove existing development along the north edge of the Core Campus, from area shown as Open Space in Core Area in Figure 2.2-1, and re-introduce compatible native species to expand the wildlife corridor. This includes removing existing buildings

Commenter	Date	Letter	Comment	Response
			lion movement would constitute significant impacts under Biological Resources significance Criteria 1 and 4. Notwithstanding this foreseeable impact, however, the EIR fails to identify or analyze the Project's impacts to mountain lions. It does not discuss how the Project's uses and associated impacts, including light and noise, would carry into the corridor and influence mountain lion behavior or other species. Nor does the EIR discuss movements of particular species, including mountain lions, through the corridor. As a result, decisionmakers and the public neither know where and how frequently mountain lions or other wildlife species occur on the SDC site or whether and to what degree the development proposed under the Specific Plan would impact their behavior. The Project's impacts to mountain lion and other species mobility could thus be significant, but decisionmakers and the public have no way to know because the EIR failed to include necessary data and studies.	Paxton, Thompson/Bane, and Residence 126 and buildings on the northeast side of campus and ensuring that new development remains within the smaller development footprint as shown in Figure 2.2-1. Ensure that the wildlife corridor is not further restricted at its narrowest point along the north side of the campus. The project sponsor shall be responsible for demolishing buildings within the expanded wildlife corridor and establishing new planting and landscaping to support expanded wildlife movement and safety, prior to Certificate of Occupancy on any redevelopment on the eastside of Arnold Dr." Additionally, Specific Plan Policies 2-9 and 2-10 require fuels management to be minimized within wildlife corridors to limit disturbance to species. Lastly, Policy 2-31 has been amended to add: "Construct and maintain a managed landscape buffer along western and eastern edges of the Core Campus to aid in fire defense consisting of a shaded fuel break in wooded areas and grazed or mown grassland. Shrubs and chaparral should be limited within the managed landscape buffer. Management of this landscape buffer should aim to enhance biodiversity, reverse weed invasion, and protect water resources." As a programmatic analysis, the DEIR does not assess project-specific impacts of potential future projects under the proposed Plan. Future projects would be required to comply with CEQA, as applicable, including preparation of more precise, project-level analyses regarding potential impacts to biological resources. Appendix A of the Specific Plan also lays out standard conditions of approvals that would apply to all projects based on Specific

Commenter	Date	Letter	Comment	Response
				Plan policies and CEQA analysis, regardless of whether subsequent environmental analysis is conducted or not. This includes Condition of Approval (COA) Policy BIO-1, which would require a biological resource assessment be prepared for any specific project in the Proposed Plan area, including identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level (DEIR page 243). The evidence presented in this comment related to two mountain lions and some common mesopredators do not reach the level of substantial evidence that would indicate that a significant impact determination is warranted. The Specific Plan approach to increase net open space, enhance protection of wildlife corridors through incorporation of proposed policies and conditions of approval, and the requirement for future projects to comply with applicable CEQA requirements supports the DEIR's analysis that potential impacts to mountain lions and associated wildlife corridors would be less than significant.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-222	In fact, there have been no wildlife connectivity studies conducted to document what wildlife species are traveling through or residing on the SDC property. See EIR at 236 ("No new field studies were conducted for the preparation of this EIR."). This type of study must be conducted to be able to analyze what the project's impacts will be to wildlife movement and resident wildlife populations, and therefore to determine whether the project's impacts would be significant or could be mitigated. See EIR at 236 (Criterion 4, providing that impacts would be significant if the project would "[i]nterfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors"). How will the FEIR resolve this issue?	As a programmatic analysis, the DEIR does not assess project-specific impacts of potential future projects under the proposed Plan. Future projects would be required to comply with CEQA, as applicable, including preparation of more precise, project-level analyses regarding potential impacts to biological resources. Appendix A of the Specific Plan also lays out standard conditions of approvals that would apply to all projects based on Specific Plan policies and CEQA analysis, regardless of whether subsequent environmental analysis is conducted or not. This includes Condition of Approval (COA) Policy BIO-1, which would require a biological resource assessment be prepared for any specific project in the Proposed Plan area, including identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level (DEIR page 243). In the DEIR, the determination of less than significant impacts to wildlife movement was supported by the Specific Plan's self-mitigating approach to increase net open space, enhance existing open space areas through incorporation of proposed policies and conditions of approval, and the requirement for future projects to comply with applicable CEQA requirements.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-223	The EIR also does not include any specific mitigation measures that would reduce impactsto mountain lion and other species mobility to less-than-significant levels. For example,while the EIR acknowledges that wildlife and their habitat may be sensitive to noiseimpacts (EIR at 337-338), and while mountain lions in particular are known to be sensitive to noise, the EIR does not include any mitigation measures that are designed to or capable of mitigating noise impacts to mountain lions to less-than-significant levels. Instead, the EIR relies on Specific Plan policies that regulate noise and vibration-based thresholds for humans and buildings. EIR at 347-349. This approach does not and cannot ensure that noise impacts to mountain lions would be sufficiently mitigated. Similarly, the de facto mitigation included in the Biological Resources section of the EIR fails to address mountain lions. For example, Conditions of Approval BIO 1 through BIO 14 ostensibly address construction impacts to special-status plants and wildlife. As discussed in the letter prepared by Prunuske Chatham, Inc., which comments are incorporated herein by reference, these conditions are not sufficiently detailed or enforceable to ensure that impacts would actually be reduced to less-than-significant levels. But even if they were sufficient for the species identified, Conditions of Approval BIO 1 through BIO 14 do not require mitigation specific to mountain lions or mountain lion activity. See EIR at 243-251. The EIR thus cannot conclude that the Project's impacts to mountain lion mobility would be	Refer to response to comment MR-1. In addition, the Specific Plan has been prepared to be fully self-mitigating, thus no mitigation measures were prepared. In lieu of mitigation measures multiple conditions of approval pertaining to biological resources (pages 243-251 of the DEIR) have been developed to help reduce impacts to species that use the wildlife corridor, including mountain lions.

Commenter	Date	Letter	Comment	Response
			less than significant because those impacts have neither been studied nor mitigated.	
Sonoma Land Trust	9/26/2022	B11-224	Comment: The SDC project will further constrain Sonoma Valley Wildlife Corridor. The landscape is already fragmented for wildlife movement Because of the existing infrastructure and roads, the wildlife corridor within the project area already constrains the corridor, resulting in a bottleneck of the linkage. Any further development or increase in people, cars, or intensity of land use would further constrain the linkage. The proposed project could ultimately sever this critical linkage and result in isolating wildlife populations, their ability to find resources like food and water, the ability to find mates, or juveniles dispersing out of their parental home range to establish their own. How does the County propose to avoid or mitigate the foreseeable constricting effects of increased human activity on the wildlife corridor?	Refer to response to comment MR-3 and MR-7. In addition, Policy 2-1 has been amended to state: "Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The owner/operator of the Preserved Open Space shall prepare an open space plan, to be approved by the County to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, conduct a formal aquatic resources delineation for habitat protection, and consider delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation." Incorporation of the amended policy would require future uses within open space areas to be consistent with the Specific Plan's resource protection policies (policies 2-6 through 2-26) and would involve multiple partners to further refine open space preservation goals for "Preserved Open Space" areas. This assessment would refine allowable uses based on meeting multiple objectives, including function as a wildlife corridor. potential sensitive habitats and species and make recommendations for mitigation of any project-specific impacts to biological resources to a less

Commenter	Date	Letter	Comment	Response
				than significant level. The commenter speculates that future development could further constrict the corridor but does not present substantial evidence to demonstrate increased human activity will alter wildlife movements in the context of the Specific Plan approach to increase net open space, enhance existing open space areas through incorporation of proposed policies and conditions of approval(refer to response to comment B11-221), expand the size of the existing wildlife corridor through removal of buildings, and the requirement for future projects to comply with applicable CEQA requirements.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-225	The proposed project will further constrict the wildlife corridor by significantly increasingthe amount and intensity of human activity in and immediately adjacent to the corridor.The Specific Plan proposes more than 1,000 units of residential development in addition tocommercial and visitor-serving development. By contrast, in recent years, the humanactivity at SDC has been considerably reduced. Even before facility closure, the site onlysupported approximately 415 clients living there, 470,000 sf of client housing, 49,000 sfstaff housing, and 643,400 sf offices, shops, etc. California Department of DevelopmentalServices. (2012). Sonoma Developmental Center Building Use Survey. Department ofDevelopmental Services. October 2012. The increase in activity from new construction andoccupation of the SDC site would therefore represent a sizeable increase in human activityencroaching on the Wildlife Corridor. Loss of habitat, increased noise and light disturbance within the Corridor, and human or domestic animal intrusion could reduce the width of animal dispersal corridors and disrupt movement through the Wildlife Corridor.	Refer to response to comment MR-7. As stated on page 55 of the DEIR, the Proposed project would protect approximately 755 acres of land that currently exists as open space, including areas that include the narrowest part of the Sonoma Valley Wildlife Corridor. The proposed Specific Plan would restore an already developed part of the site, widening a narrow portion of the Wildlife Corridor. Please refer to response to comment B11-221 for the polices described in the DEIR that will minimize impacts to wildlife through implementation of Dark Sky standards and noise restrictions.
Sonoma Land Trust	9/26/2022	B11-226	The EIR's failure to describe the already fragmented nature of the landscape results in an incomplete picture of the environmental setting of the Project and prevents decisionmakers and the public from understanding fully the consequences of the Project's impacts. Without a complete understanding of how development will further constrict the Wildlife Corridor, the EIR cannot develop adequate mitigation to reduce the Project's constricting impacts. And without targeted and enforceable mitigation, the Wildlife Corridor would predictably see an increase in potentially	Refer to response to comment MR-7. In addition, the DEIR provides multiple maps showing the current land use, habitat distribution and proposed land use. The commenter is referred to figures 3.2.2 to 3.24, and Figure 3.4.1. Narrative descriptions of habitats and current land uses are found on pages 211-220 and pages 234-235.

Commenter	Date	Letter	Comment	Response
			significant impacts from noise, light, habitat loss, and other consequences of development.	
Sonoma Land Trust	9/26/2022	B11-227	That analytical and informational gap is apparent on the face of the EIR. For example, as discussed above, the EIR admits that wildlife and their habitat may be sensitive to noise impacts. EIR at 337-338. But the EIR fails to quantify or otherwise describe how construction and operational noise might impact wildlife, including the use of the Wildlife Corridor by relevant species. The species that populate the Wildlife Corridor may respond to noise and other impacts in unique ways. For example, noise has been shown to impact wildlife usage of habitat, resulting, for example, in reduced foraging time and efficacy, and reduced nesting use, in birds (Burger and Gochfeld 2002, Stone 2000, Aubrey and Hunsaker 1997, Shannon et al. 2016). Other species may respond differently. The EIR must therefore analyze noise impacts on the Wildlife Corridor on a species-by-species basis if it is to provide a full understanding of the Project's potentially significant impacts to wildlife and wildlife mobility. The EIR does not provide that analysis. Nor does the EIR mitigate for effects to the wildlife corridor. For example, as discussed above, noise impacts are addressed based on thresholds for human and building exposure; the EIR does not contain performance standards relevant to wildlife or explain	Refer to response to comments MR-1, MR-3, and MR-7. Additionally, Specific Plan Policies 2-11 through 2-17 were prepared to generally minimize and avoid light and noise impacts to any species that move through the SDC project area.

Commenter	Date	Letter	Comment	Response
			why thresholds for human and building exposure are applicable to wildlife. See EIR at 347-349.	
Sonoma Land Trust	9/26/2022	B11-228	The EIR's remaining analysis and mitigation similarly fails to ensure that the Project's impacts on the wildlife corridor will be less than significant. For example, Conditions of Approval BIO 1 through BIO 14 require future mitigation for construction-related impacts to specific special-status species. EIR at 243-251. But none of those conditions specify what "impacts" to those special-status species might entail. EIR at 243-251. Nor do any of the conditions establish performance standards related to wildlife movement within the corridor. EIR at 243-251.	Refer to response to comments MR-1, MR-3, and MR-7. Construction and operational impacts to wildlife are described on pages 253 to 256 in the DEIR, and the finding was made that impacts would be less than significant for all significance thresholds.
Sonoma Land Trust	9/26/2022	B11-229	The fourth significance criteria chosen by the EIR requires the EIR to demonstrate that"Implementation of the Proposed Plan would not interfere substantially with themovement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites." EIR at 254-255. But the EIR does not specify what species constitute "native resident or migratory fish and wildlife species" that could be impacted. The EIR also does not explain how much interference with species' movement would constitute "substantial" interference or how the County would determine whether "substantial" interference has occurred. The EIR cannot treat the Wildlife Corridor or the species that use it as a monolith. Different species use the wildlife corridor in different ways. Different species are also	Please see response to comment B11-222.

Commenter	Date	Letter	Comment	Response
			differentially impacted by various elements of human development and activity. An impact that is insignificant for one species may be extremely significant for another. Thus, before the EIR can claim that impacts to the wildlife corridor are less than significant, the EIR must first identify the species that use the corridor and identify the specific impacts of the Project that are likely to affect those species. Vague and generalized mitigation, such as the policies referenced on pages 255 to 256 of the EIR, are not sufficient to ensure that impacts to wildlife movement in the wildlife corridor will categorically be less than significant. For example:	
Sonoma Land Trust	9/26/2022	B11-230	2-12 Restrict development in the wildlife corridor and creek corridor to limited trails/paths and informational signage, and design trail networks to minimize travel through wildlife and creek corridors. The EIR cannot assume that limiting development in the wildlife corridor to trails and paths would not significantly impact wildlife movement. Wildlife is known to respond to human activity, even when that activity is restricted to trails. For example, mountain lions are known to avoid trails where domestic dogs are present. Since the corridor is going to be significantly impacted and restricted by the proposed developments, the only habitat left will be the creeks and rivers for wildlife to travel along. Trails should be set back from creeks and the EIR must analyze the impacts of trails and trail use on surrounding wildlife. Allowing limited development could have impacts on	Page 252 of the DEIR states that access to creek corridors will be limited to designated paths in an effort to protect (minimize impacts to?) wildlife movements. Page 255 of the DEIR discloses impacts of new trails on wildlife.

Commenter	Date	Letter	Comment	Response
			the wildlife corridor, and the EIR must analyze the significance of those impacts.	
Sonoma Land Trust	9/26/2022	B11-231	2-13 Restrict access to the wildlife corridor and creek corridor to designated pedestrian paths marked with clear signage and delineated by strategic wildlife-permeable fencing. The same principles apply here. Allowing limited access could have impacts on the wildlife corridor, and the EIR must analyze the significance of those impacts.	Page 255 of the DEIR discloses impacts of new trails on wildlife.
Sonoma Land Trust	9/26/2022	B11-232	2-14 Prohibit all unleashed outdoor cats, and restrict off-leash dogs and other domesticanimals to private fenced yards and designated areas. How will this policy be enforced? Prohibiting off-leash pets is important to do but can be difficult to enforce. The EIR and Specific Plan must include an enforcement mechanism to ensure that this policy would actually reduce impacts to wildlife.	Refer to response to comment MR-1 and MR-3.
Sonoma Land Trust	9/26/2022	B11-233	2-15 Collaborate with local wildlife protection groups to create and distribute educational information and regulations for residents and employees to guide safe interactions with wildlife onsite. Materials should be accessible to all ages and abilities and could include posted signs, disclosures, fliers, or informational sessions, among other things. This policy does not clearly mitigate for any of the project's impacts and habitat loss of the wildlife corridor. What specific regulations would be developed? Until the County knows what regulations will be imposed, it cannot analyze whether those regulations would be	Please refer to response to comment MR-1.

Commenter	Date	Letter	Comment	Response
			sufficient to avoid negative interactions between people and wildlife. Further, this policy fails to specify how regulations would be enforced. Major national parks such as Yellowstone struggle with enforcement of regulations regarding interactions with wildlife despite having a full-time staff of rangers patrolling and enforcing those regulations. The EIR cannot conclude that information and regulations would reduce impacts to wildlife without providing clear standards and a mechanism for enforcement.	
Sonoma Land Trust	9/26/2022	B11-234	2-16 All fencing within the open space must be wildlife permeable, with at least 18 inches of clearance between the ground and the bottom of the fence, and shall not cross or bisect streams or otherwise discourage wildlife movement. For any barbed wire fences, a smooth bottom wire at least 18 inches above the ground must be used. The EIR and Specific Plan fail to explain how this policy would be enforced. In my professional experience, these types of guidelines are often ignored. For example, ranchers often do not adhere to fencing guidelines because of the risk that calves or smaller farm animals might get out onto the roads, which is dangerous both for the animals and for drivers. How will the County enforce these critical fencing requirements? Further, because the Specific Plan permits agricultural uses within the "Preserved Open Space," this policy must make clear that these fencing standards apply throughout areas shown as Preserved Open Space in Figure 2.2-2.	Please refer to response to comment MR-1.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-235	2-17 Adhere to residential nighttime noise standards to the extent feasible. This policy is vague and unenforceable. It states that occupants of the SDC site must adhere to residential nighttime noise standards only to the extent feasible. It does not specify who determines whether compliance is feasible or indicate how frequently compliance may not be feasible. Further, this policy does not provide for any additional mitigation that may be required if and when adhering to residential nighttime noise standards is not feasible.	Please refer to response to comment MR-1.
Sonoma Land Trust	9/26/2022	B11-236	There is simply no basis on which the EIR can conclude that this policy would reduce noise impacts to wildlife.	Please refer to response to comment MR-1.
Sonoma Land Trust	9/26/2022	B11-237	Why did the DEIR fail to analyze specific impacts to the wildlife corridor?	Refer to response to comment B11-221. The degree of specificity in the analysis is consistent with the programmatic nature of the proposed Specific Plan. The Sonoma Valley Wildlife Corridor will remain undeveloped and in some areas may be expanded through removal of existing structures.
Sonoma Land Trust	9/26/2022	B11-238	Why is there no formal mitigation set up for the impacts to the wildlife corridor? Even if the mitigating policies are baked into the Specific Plan, mitigation measures need to be included in a mitigation monitoring and reporting program to ensure they are effectively followed.	Please refer to response to comment MR-1.
Sonoma Land Trust	9/26/2022	B11-239	Why was there no study developed to determine impacts to wildlife movement within the wildlife corridor?	CEQA Guidelines 15064 indicate impacts should be evaluated on the basis of scientific and factual information “to the extent possible.” There is no CEQA requirement for new studies to evaluate the significance of impacts.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-240	Without a detailed analysis, how will the FEIR evaluate and set up mitigation for impacts to the wildlife corridor?	Please refer to response to comment B11-239.
Sonoma Land Trust	9/26/2022	B11-241	Comment: During a site visit, Pathways for Wildlife observed tracks and scat from multiplespecies, including deer, bobcat, coyote, and gray fox, throughout the main sections of theproposed development site. Yet the EIR does not disclose whether these species or othersare present at the site because the County has not conducted the necessary surveys todocument the site's biological resources. A site survey is a simple and necessary tool toconfirm the presence of special-status species and other plants and wildlife at the Project site. A survey would allow the County to identify not only whether species are present on the site, but also where those species are documented to occur.	Please refer to response to comment MR-2 and COA BIO-1.
Sonoma Land Trust	9/26/2022	B11-242	A spatial understanding of species distribution at the SDC site is key to understanding the full scope and intensity of impacts to plants and wildlife, because the impacts of development will vary based on what types of development the Specific Plan permits at different locations around SDC. While a specific development proposal has not yet been selected by the State, the Draft Specific Plan is sufficiently detailed and development plans are sufficiently congealed to know where certain types of development would be permitted under the Specific Plan. See, e.g., Draft Specific Plan Figs. 1.6-1, 3.1-1, 3.1-2, 4.1-1, and 4.1-2. Therefore, a major roadblock standing in the way of a complete understanding of the Project's impacts to biological resources is the EIR's failure to collect relevant data about	Please refer to response to comment MR-2 and COA BIO-1.

Commenter	Date	Letter	Comment	Response
			the occurrence and distribution of species at the SDC site. Until those data are collected, the EIR cannot fully analyze the Specific Plan's impacts to biological resources or intelligently mitigate for the effects. Why were simple data like these not collected and analyzed by the authors of the DEIR? Comments on the Notice of Preparation, including those by Sonoma Land Trust, identified the need for this type of data collection to support any analysis or mitigation in the EIR. In addition, prior comments identified the need for an in-depth wildlife linkage assessment to fully characterize the scope, use, and impacts to the Sonoma Valley Wildlife Corridor. The Sonoma Valley Wildlife Corridor broadly recognized as a critical and regional linkage. An analysis of the impacts of the proposed development needs to be conducted so that the EIR can identify linkage-level impacts and develop appropriate mitigation measures to reduce those impacts to less-than-significant levels. CDFW expects all DEIRs for projects that impact that impact documented wildlife corridors to include this analysis. The EIR must include surveys of biological resources so that it can fully analyze and mitigate impacts to less-than-significant levels.	
Sonoma Land Trust	9/26/2022	B11-243	Comment: Pathways for Wildlife also conducted a wildlife connectivity study along Hwy12, adjacent to the prosed development (Sonoma Valley Wildlife Corridor Road UnderpassUse Report 2013-2014). We recorded multiple species' movements under the highway on aconsistent basis throughout the study period. These species included bobcat, coyote, deer,gray fox,	Please refer to response to comment B11-222. Also refer to CEQA Guidelines Section 15064 (g). If there is disagreement among experts as to a project's environmental impacts, an EIR must be prepared.

Commenter	Date	Letter	Comment	Response
			mountain lion, raccoon, skunk, and opossum. This study illustrated theimportance of the wildlife movement with the Sonoma Valley Floor and documented thatthe highway is currently permeable for wildlife movement. However, no equivalent studywas prepared for or included the DEIR. There is no actual analysis of wildlife movement inthe DEIR, and therefore there is no evidence on which to base the EIR's so-called "analysis"of impacts. See EIR at 254-257 (concluding that impacts to wildlife movement would beless than significant without studying or fully describing how wildlife actually moves through or around the SDC site). In order to understand how the Project will impact wildlife movement, the DEIR first needs to study and analyze how wildlife actually use the SDC property. Only after comparing actual wildlife movement against the Specific Plan's development proposal can the EIR begin to determine what the specific impacts and magnitude of impacts to wildlife movement will occur as a result of that development. A thorough study is therefore a predicate to impact analysis or mitigation. The final EIR must incorporate all relevant studies and data.	
Sonoma Land Trust	9/26/2022	B11-244	The EIR's conclusion that the proposed project will not impact wildlife movement is completely unsupported and false as there is no data or documentation to support an assumption of that magnitude. An adequate wildlife connectivity study needs to be conducted to mitigate the project's impacts and to ensure that they are less than significant. The study proposal that Pathways for Wildlife prepared for Sonoma Land Trust, which was included in Sonoma Land Trust's	Please refer to response to comment B11-243.

Commenter	Date	Letter	Comment	Response
			comments on the Notice of Preparation and which is reproduced as Attachment 2 to this letter, is representative of the vetted and scientifically proven methodology for conducting wildlife connectivity studies to be able to analyze any types of development impacts on a wildlife corridor. This type of study is necessary to be able to determine and analyze the impacts to wildlife corridor by the proposed project (Safe Passages, Beier, P. & Loe. S. 1992, Forman, R. T. 2012).	
Sonoma Land Trust	9/26/2022	B11-245	Finally, the DEIR is clear that important riparian corridors run through the SDC project area. Why was there no study or analysis of wildlife movement within these important riparian corridors? How will the FEIR avoid or mitigate impacts to these key riparian corridors in light of the current absence of data about wildlife movement in those corridors?	Please refer to response to comment B11-243.

Sonoma Land Trust	9/26/2022	B11-246	Flawed Analysis of Plan Consistency – Impact 3.14.4.5 (DEIR p. 443) addresses the issue of potential Project-related conflicts with "a program, plan, ordinance, or policy addressing the circulation system." Among the plans considered here is the Sonoma County General Plan 2020. The DEIR states that: Objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan pertain to upholding vehicle level of service standards. As individual development projects occurring within the Proposed Plan complete traffic impact studies as required by the Sonoma County Department of Transportation and Public Works (DTPW), the potential exists for identification of locations where LOS [Level of Service] targets would be exceeded. The General Plan objectives referenced here require operation at LOS C on roadway segments (except where exceptions have been adopted) and LOS D at intersections. Attachment 1 contains an excerpt from the General Plan, including the figure illustrating where LOS exceptions have been approved. The DEIR (p. 444) goes on to state: . . . while traffic congestion effects of the Proposed Plan or development of individual sites within the Planning Area may not comply with the LOS targets established in Sonoma County General Plan Objectives CT-4.1 and CT-4.2, for the purposes of the Proposed Plan's CEQA assessment this would not be considered an adverse environmental impact. We believe this conclusion is erroneous. In fact, we believe that the failure to conform to level of	The commenter states that the DEIR transportation analysis is flawed because the proposed Specific Plan would be inconsistent with the traffic level of service (LOS) objectives contained in the County's General Plan. The commenter refers to the standalone traffic analysis contained in the Focused Traffic Operations Analysis for the SDC Specific Plan, W-Trans, July 2022, which identifies two intersections and two roadway segments where LOS objectives would be unmet if no roadway improvements were made. As described on DEIR page 444, automobile delay and LOS are no longer considered significant impacts on the environment per Public Resources Code §21099(b)(2). Recognizing the potential for confusion when assessing a project's consistency with General Plan policies and objectives pertaining to LOS for CEQA purposes, the California Governor's Office of Planning and Research (OPR) provided the following guidance, provided online at https://opr.ca.gov/ceqa/sb-743/faq.html#general-plans-with-los (accessed 10/4/2022): *Even if a general plan contains an LOS standard and a project is found to exceed that standard, that conflict should not be analyzed under CEQA. CEQA is focused on planning conflicts that lead to environmental impacts. (The Highway 68 Coalition v. County of Monterey (2017) 14 Cal.App.5th 883; see, e.g., Appendix G, IX(b) [asking whether the project will "Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?"].)*

Commenter	Date	Letter	Comment	Response
			service standards established within the County's adopted General Plan constitutes a clear "conflict with a program, plan, ordinance, or policy addressing the circulation system." Further, the failure to include any documentation within the DEIR regarding conformance to the General Plan LOS objectives is a significant deficiency. We note that a detailed traffic impact analysis has been conducted for the Project, although that document has not been included in the DEIR. Specifically, Footnote 118 (DEIR p. 410) references the Focused Traffic Operations Analysis for the SDC Specific Plan (W-Trans, August 2022 [actually July 6, 2022]). Although the traffic analysis is not part of the DEIR, we reviewed it to establish whether the Project conforms to General Plan Objectives CT-4.1 and CT-4.2. Our review revealed that the WTrans report (p. 3) states: Under future conditions with implementation of the SDC Specific Plan, two intersections are projected to operate unacceptably if no modifications to the current roadway configurations are made. The intersection at Arnold Drive/Harney Street would operate unacceptably at LOS F during the p.m. peak hour . . . The future new intersection on SR 12 at the new SDC Connector Road would have unacceptable LOS E operation on the stop-controlled connector road approach . . . Although improvements are identified that would remedy these deficiencies, no assurance is provided that those measures would be implemented. The focused traffic study (p. 5) also says: With the additional traffic generated by the buildout of the SDC Specific Plan, the segment	*Auto delay, on its own, is no longer an environmental impact under CEQA. (See Pub. Resources Code, § 21099(b)(2).)* The DEIR transportation analysis does not identify a significant CEQA impact associated with traffic congestion and LOS. This is consistent with CEQA requirements and does not constitute a flaw in the transportation analysis. Please also note that the Focused Traffic Operations Analysis for the SDC Specific Plan document was prepared as a standalone document separate from the DEIR because it specifically addresses a non-CEQA topic area.

Commenter	Date	Letter	Comment	Response
			of SR 12 between Arnold Drive and Trinity Road would continue to operate below the County's standard at LOS D, as would the segment of Arnold Drive between SDC and Madrone Road. Although these road segments are also identified as falling short of the County LOS standard without the Project, no mitigation measures were proposed to allow operation at an acceptable LOS. In any event, it is clear that these two roadway segments will fail to meet the County LOS standard upon completion of the Project, thereby violating the General Plan objectives. In conclusion, the information necessary to address conformance with General Plan Objective CT-4.1 and CT-4.2 exists, but was not included within the DEIR, which would have allowed public review. As described here, that information indicates that the Project fails to conform to the County's LOS standard, as two intersections and two road segments will operate at unacceptable levels of service upon completion of the Project, and no assurance was provided that these deficiencies will be remedied. Thus, a significant impact exists with respect to conflicts with the adopted General Plan. Finally, the focused traffic study must be incorporated into the DEIR. The provision of this new information within the DEIR provides grounds for recirculation of the document.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-247	Project Trip Generation is Underestimated – The DEIR (p. 440) states that the Project will generate 5,736 daily trips. Of that total, 1,398 of those trips (i.e., 24.4 percent of the total) will be "captured within the campus itself," resulting in net external trip generation of 4,338 trips. We believe the DEIR has substantially underestimated the volume of traffic associated with the Project. The DEIR's Project trip generation estimate was developed using the SCTM19 travel demand forecasting model maintained by the Sonoma County Transportation Authority (SCTA). The specific trip generation factors employed were not revealed in the DEIR. Consequently, it is impossible for the reviewing public to evaluate the reasonableness of either those factors or the resulting trip generation estimates. Traffic impact analyses for proposed development projects commonly use information presented in the Institute of Transportation Engineers (ITE) document Trip Generation Manual (Eleventh Edition, 2021) to develop project-related trip generation estimates. Although we acknowledge that the ITE trip rates often differ from corresponding rates contained within travel demand forecasting models such as the SCTM19 model, comparison of an estimate based on the ITE information versus the estimate documented in the DEIR provides a valuable perspective on the credibility of the DEIR Project's Two scenarios are addressed here. The first employs the Project plan as described in DEIR Section 3.14 - Transportation, and the second considers a maximum residential development scenario based on information in the Specific Plan document. DEIR Section 3.14 – Transportation Project Plan	The commenter asserts that the vehicular trip generation for the project was underestimated and provides an alternative means of calculating the project's daily trip generation through application of rates published by the Institute of Transportation Engineers (ITE) in the Trip Generation Manual, 11th Edition. The trip generation characteristics of the proposed Specific Plan were extracted from the SCTM19 regional travel demand model operated and maintained by the Sonoma County Transportation Authority (SCTA). The model includes sophisticated algorithms to predict traveler behavior, and has been calibrated against real-world observations both through comparison of traffic volume projections versus observations, as well as aggregated "big data" obtained through mobile devices that provides real-world data on how residents, employees, and visitors travel within and beyond Sonoma County. As with all travel demand models, SCTM19 considers the proximity of housing, jobs, and services to one another, and accordingly does account for travel occurring within the Plan area (i.e., the component of travel that does not add traffic volumes to the roadway network beyond the immediate area). In the earliest steps of producing travel demand estimates, the SCTM19 model uses trip generation rates published by ITE, similar to those referenced by the commenter. The model proceeds through numerous additional steps, however, before outputting vehicular volumes. A key component of these additional steps entails the balancing of trips, wherein trip "productions" and "attractions" are matched in order to eliminate the double-counting

Commenter	Date	Letter	Comment	Response
			Scenario Table 1 provides a trip generation estimate for the Project based on the plan as described in DEIR Section 3.14 - Transportation and on commonly-accepted procedures documented in the ITE Trip Generation Manual. That estimate reflects the following parameters: • The land use values described in DEIR Section 3.14 – Transportation, including the specific housing type breakdown, were evaluated. • The ITE Trip Generation Manual typically provides two methods to develop an estimate of project-related traffic: one using an average rate and one using a fitted curve equation. For this analysis, we have reported whichever of those two methods provides a lower value, so as to provide a conservative estimate of Project trips. The trip generation data sheets for this estimate are presented in Attachment 2. • Within each housing type, it was assumed that 25 percent of the residential units would be inclusionary income-restricted units, in order to conform to Specific Plan Policy 4-14 (Specific Plan, p. 4-25). Because these units generally produce lower volumes of traffic, this assumption again results in a conservative trip generation estimate. • Because the specific uses included within the public/institutional land use are not currently well-defined, no trip generation estimate was included for that land use category. As shown in Table 1, the Project is estimated to generate 12,253 daily trips. This is obviously substantially (i.e., 114 percent) greater than the DEIR estimate of 5,736 daily trips. As we stated	that would otherwise occur, and to calibrate the model's theoretical volume projections to those that are actually occurring in the field. Examples of trips that would be double-counted without balancing include an outbound commute trip generated from a residence in the morning that is also counted as an inbound morning trip to the office or employment site. Direct application of ITE trip generation rates would count these as two separate trips even though only one trip is actually being made. Direct application of ITE Trip Generation Manual rates constitutes standard traffic engineering practice when analyzing the effects of a proposed single-use development in a focused geographic area, as is commonly done in traffic impact studies focused on level of service. In such project-level analyses, use of a full-scale regional travel demand model such as SCTM19 is typically unwarranted except in cases of very large or complex projects. With a complex programmatic plan such as the proposed Specific Plan, however, use of a sophisticated regional model is required to fully account for the conditions occurring both within the project itself (including presence of multiple land use types) as well as conditions reflective of the project's context within the broader area and region. The SCTM19 model is the best-available tool to produce traffic volume forecasts in this manner. The root of the commenter's suggestion that the trip generation estimates output from the SCTM19 model should be comparable to those resulting from a straightforward application of ITE Trip Generation rates by land use is understood, since it is how project-level analyses for discreet projects are often

Commenter	Date	Letter	Comment	Response
			above, model-based trip generation factors often differ from the ITE trip rates. However, a difference of this magnitude is exceptional and is greater than we have ever seen. Consequently, we question the validity of the DEIR trip generation estimate. Maximum Residential Development Scenario As we indicated above, we have questions regarding certain aspects of the proposed development plan. One such question concerns how many residential units will be constructed. Although the DEIR transportation analysis addresses development of 1,000 residential units, the Specific Plan indicates that a greater number of units is possible. Table 4-2: Minimum and Maximum Housing Units by District (Specific Plan, p. 4-12) provides detailed information regarding how many housing units could be constructed within various subareas of the Project. That table reveals that the maximum number of housing units that could potentially be built is 1,210. Further, the notes to the table state that "[u]p to 10% deviations from the minimum and maximum by district are subject to approval by the Community Development Director." If such a deviation from the maximum values were to be approved, the total number of residential units would increase to 1,331 (1,210 X 1.10 = 1,331). To assess the impacts of this maximum development scenario with respect to the volume of traffic associated with the Project we have performed a second trip generation analysis, as summarized in Table 2. The basic parameters of this analysis are similar to those described above for the Table 1 analysis. Attachment 3 contains the data sheets for the residential uses; the non-residential data sheets are unchanged from the previous analysis.	conducted, but is inappropriate for application to a complex programmatic Specific Plan with multiple uses since it would have a propensity to substantially overestimate actual impacts. The commenter also refers to language regarding the number of residential units in the Specific Plan, and estimates that the total number of residential units could be 1,331 rather than the 1,000 analyzed in the EIR, resulting in an underestimation of traffic. Section 2.5.1 of the DEIR includes a discussion on the methodology used to estimate the number of residential units. Based on this methodology, the analyses contained in the DEIR assume a total of 1,000 residential units which include market rate, inclusionary, adaptive reuse, and additional County-provided affordable housing. The transportation analysis is consistent with this estimate. The commenter also notes that underestimation of daily trips affects the VMT analysis, since VMT is calculated by multiplying the number of daily trips by their lengths. As described above, the trip generation estimated by the SCTM19 model is appropriate and is not an underestimation. Further the commenter's simplified representation of VMT is correct at a broad level but does not reflect the way VMT is calculated for transportation CEQA purposes, including the use of efficiency (or "per person") metrics as produced by the SCTM19 model. For instance, the applied VMT analysis produces "partial VMT" efficiency metrics for residential and employment uses, focusing on home-based travel and home-based commute travel, respectively, consistent with OPR guidance. These

Commenter	Date	Letter	Comment	Response
			With consideration of the larger number of residential units, the Project's total daily trip generation increases to 14,290. This is 149 percent greater than the value claimed in the DEIR. Summary The analysis presented here indicates that the Project's daily trip generation has been substantially underestimated. This finding relates directly to the Project's impact with respect to vehicle-miles traveled (VMT). The DEIR acknowledges the relationship between trips and VMT at p. 447, where it says: . . . trip reductions should in theory translate to roughly equivalent VMT reductions. Thus, trip increases, as we have described, will similarly translate to roughly equivalent increases in VMT. Further, as described at DEIR p. 425, the calculation of VMT: . . . is based on the estimated number of vehicles [actually, vehicle-trips] multiplied by the distance traveled by each vehicle. If, as we have found, the number of vehicle trips is 2.14 – 2.49 times greater than the value considered in the DEIR, then the VMT values associated with the Project will also be 2.14 – 2.49 times greater than the DEIR findings. Although the DEIR has already concluded that the Project's VMT impact will be significant and unavoidable, it has failed to accurately portray the magnitude of that impact. This is a serious deficiency in the DEIR, which suggests a need to reevaluate the Project's impact and recirculate the DEIR for further public review. transportation analysis.	types of efficiency metrics require the use of a regional model such as SCTM19 to develop and are not the products of a simple multiplication of aggregated trips by trip lengths. It is also noted that a review of the land use inputs that were entered for the proposed Specific Plan in the SCTM19 model, as well as review of the population and employment estimates output from the model for those land uses, was conducted by both W-Trans and SCTA staff to confirm that no data entry errors occurred. This review confirmed that the land use quantities entered in the model match those described in DEIR section 3.14.4.2. With respect to population and employment, the SCTM19 model estimates that the proposed Specific Plan would result in an increase of 2,510 persons and 1,014 jobs, which are very close to the estimated values cited in the DEIR Project Description section 2.5.1.2. Note: The project description includes an estimated population of 2,400 and 940 jobs; the SCTM19 model uses somewhat different methodologies to estimate population and employment, though since the resulting estimates are within 4 to 7 percent of that stated in the project description, it is clear that the full land use inventory is being reflected in the SCTM19 results.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-248	Internal Trips are Substantially Overestimated – As described above, the DEIR transportation analysis (p. 440) claims that 1,398 of the Project's total 5,736 daily trips will occur completely within the Project site. In other words, 24.4 percent of the vehicle-trips resulting from the Project would never leave the Project site. These trips, which are typically referred to as internal trips, would have no impact on any element of the transportation system beyond the Project boundaries. Because this a substantial percentage, it seemed appropriate to test the validity of this claim. Various tools are available to develop estimates of internal tripmaking at mixed-use developments such as the proposed Project. Three such tools have been employed here: • Institute of Transportation Engineers/NCHRP 684 Internal Trip Capture Estimation Tool – As described in the ITE Trip Generation Handbook (Third Edition, September 2017, p. 46), this approach is based on procedures documented in National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Trip Capture Estimation for Mixed-Use Developments. That report documents the extensive research, data collection, and analysis undertaken in developing and validating the recommended procedure. • U.S. Environmental Protection Agency (EPA) Mixed Use Trip Generation Model – As described at the EPA website (https://www.epa.gov/smartgrowth/mixed-use-trip-generationmodel), this model was developed cooperatively between EPA and ITE. Six metropolitan	The commenter states that the internal trips assumed in the analysis are overestimated, and provides alternative internal trip estimates from three off-model sources. Rather than using off-model sources such as the ITE/NCHRP 684, EPA Mixed Use Trip Generation Model, or SANDAG spreadsheet tool mentioned by the commenter to reduce the trips projected to occur by applying conventional ITE rates, the applied analysis utilizes the SCTM19 travel demand model to assess the proposed Specific Plan's travel characteristics. As discussed above in the response related to the Plan's trip generation, it is common for traffic impact studies for individual development projects to use standard ITE trip generation rates, which are sometimes adjusted for mixed-use projects using the referenced off-model sources. While this approach can be appropriate to assess project-level impacts in a defined area, it was determined that a more robust analytical tool, the SCTM19 travel demand model, would be appropriate to gauge the effects of the proposed programmatic Specific Plan. Please see the response to the above question pertaining to trip generation for additional detail on the SCTM19 model and how it was applied.

Commenter	Date	Letter	Comment	Response
			regions were evaluated in detail and the resulting model was validated against actual traffic counts at mixed-use developments across the country. This model is in use in California, Washington, and New Mexico, and according to EPA the model has been adopted as a statewide standard by the Virginia Department of Transportation. • San Diego Association of Governments (SANDAG) Smart Growth Trip Generation Spreadsheet Tool – Similar to the EPA method, this tool employs trip generation rates specific to the San Diego region. Although the trip rates vary from the ITE rates, the internal trip capture results should be representative of a development similar to the proposed Project. The results of these analyses are summarized below. ITE/NCHRP 684 Internal Trip Capture Estimation Spreadsheet Tool Attachment 4 contains a copy of the spreadsheet illustrating the results of this analysis procedure. Although the spreadsheet tool allows for adjustments to be made to reflect transit usage and changes to vehicle occupancy, no such modifications were made. Doing so would simply reduce the number of vehicle-trips estimated (internal, external, and total) with no effect on the resulting internal trip percentages. As shown in Attachment 4, the model projects an internal capture percentage of nine percent (actually 8.8 percent). The gross total of 12,256 daily trips would be reduced to 11,180, with 1,076 internal trips estimated. (Note that three of the individual daily trip totals were rounded up to ensure equal numbers of entering and exiting daily trips in the	

Commenter	Date	Letter	Comment	Response
			spreadsheet. Thus, the total trip generation in the model is 12,256 instead of the 12,253 described earlier.) EPA Mixed Use Trip Generation Model The results of this analysis are presented in Attachment 5. According to the EPA tool, the Project's 12,253 daily trips would be reduced to 11,291 external vehicle-trips (a difference of 962 trips). Those 962 internal trips include 796 vehicle-trips, 114 external walking trips, and 53 external transit trips. Considering only vehicle-trips (and ignoring external walking and transit trips), the 796 internal vehicle-trips represent an internal capture rate of 6.5 percent. SANDAG Smart Growth Trip Generation Spreadsheet Tool As described above, the SANDAG tool is very similar to the EPA tool, but with minor modifications to reflect local San Diego conditions. Nonetheless, it is believed to provide valuable perspective regarding the level of internal tripmaking at the proposed Project. The SANDAG results are provided in Attachment 6. The SANDAG model estimates that a total of 996 trips will be in the form of 821 internal vehicletrips, 120 external walking trips, and 55 external transit trips. The 821 internal vehicle-trips constitute 6.7 percent of the 12,253 gross total daily trips. Summary The internal trip values derived from the three models presented here range from 6.5 to 8.8 percent, and all are substantially lower than the 24.4 percent value employed in the DEIR analysis. By substantially overstating the volume of traffic to be captured within the Project site, the number of external trips was excessively reduced. Consequently,	

Commenter	Date	Letter	Comment	Response
			the DEIR analysis has failed to accurately assess the off-site impacts of the Project. Specifically, by underestimating the number of external trips, the analysis has similarly understated the Project-related VMT, which serves as basis for determining the significance of the Project's transportation impact. In short, the Project's transportation impact has been greatly understated due to a failure to provide an accurate estimate of the volume of traffic resulting from the Project.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-249	Flawed Project Traffic Assignment – DEIR Table 3.14-3: Projected Traffic Volumes in Plan Area (DEIR p. 441) presents traffic volume information for the three road segments that provide access to the site – Arnold Drive north and south of the site and the proposed Highway 12 connector. (Orchard Road connects to Jack London State Park to the west of the site, but would not be expected to carry a meaningful volume of Project traffic. That road is not included in the DEIR analysis.) Information is presented for various scenarios, both with and without the Project and with and without the Highway 12 connector. Based on this information, it is possible to derive the Project traffic assignment – that is, how many of the Project's claimed 4,338 external daily trips are estimated to be added to each of these three road segments. Table 4 below summarizes that information. (We should note that we were unable to confirm all of the existing traffic volumes, as DEIR p. 419, which apparently includes some of that information, was missing from the document that was available for downloading from the county website.) In each scenario analyzed, the volume of Project traffic assigned to the regional access roads falls substantially short of the 4,338 external trips claimed to be generated by the Project. In both scenarios involving implementation of the Highway 12 connector, the volume of traffic projected on Arnold Drive between Harney and Glen Ellen is actually shown to be reduced upon completion of the Project, which seems unlikely. The volume of Project traffic and its relationship to the claimed Project trip generation is summarized as follows: • Existing + Project (With Highway 12 Connector):	The commenter states that the traffic assignment is incorrect. In developing estimates of daily project volumes on individual roadway links, the commenter relied on information shown in DEIR Table 3.14-3 (Projected Traffic Volumes in Plan Area). As noted at the introduction of the "Transportation Data" section containing this table, the volume data is being provided in the DEIR for informational purposes but was not directly applied in the CEQA transportation analysis. Table 3.14-3 provides summaries of daily volumes, rounded to the nearest ten, on key roadway links as projected by the SCTM19 model; it includes the effects of not only project traffic, but on influences created by the proposed new roadway link to SR 12. It was not intended to provide a summary of project-only traffic volumes as used by the commenter though a coarse approximation of project trips can be extracted. Through reviewing the information in Table 3.14-3, W-Trans did identify four incorrectly-reported volumes that were the result of offset cell references in a summary spreadsheet. These errors did not affect the conclusions of the analysis but do affect the results of the commenter's approach in estimating project-only volumes. The corrected daily volumes are as follows: • Arnold Drive – Harney to Glen Ellen o Future plus Project volume 6,710; incorrectly reported in the DEIR as 6,310 o Future plus Project (no Hwy 12 connector) volume 7,810; incorrectly reported in the DEIR as 7,410 • Arnold Drive – Harney to Madrone

Commenter	Date	Letter	Comment	Response
			4,070 Daily Trips (93.8% of Project trips) • Existing + Project (No Highway 12 Connector): 3,410 Daily Trips (78.6% of Project trips) • Future + Project (With Highway 12 Connector): 3,320 Daily Trips (76.5% of Project trips) • Future + Project (No Highway 12 Connector): 2,650 Daily Trips (61.1% of Project trips) The DEIR analysis apparently fails to include a substantial portion of the Project traffic. Oftentimes, this sort of oddity is described as being due to existing or "background" traffic being diverted to other routes when the Project traffic demand is added to the study area roads. This can occur in a travel demand forecasting model when the added traffic causes a particular route to become congested and have high travel times, so the model redirects traffic to other, less congested routes so as to create an equilibrium condition on the study area road network with respect to travel time. In this case, though, no such alternative routes are available, so this explanation would not apply. The only explanation that does seem to apply is that the analysis is defective, and that it fails to accurately account for the full volume of Project traffic. The significance of this deficiency is magnified by the fact that the DEIR analysis only includes about 38 percent of the actual volume of Project traffic (i.e., 4,338 external trips compared to the corrected values of 11,180 – 11,291 documented in Table 3). The transportation analysis must be revised to remedy these substantial deficiencies, and the new analysis must recirculated for public review.	o Future plus Project volume 10,480; incorrectly reported in the DEIR as 9,960 o Future plus Project (no Hwy 12 connector) volume 10,160; incorrectly reported in the DEIR as 9,640 For the purposes of providing clarification and responding to the commenter's question about traffic assignment, following is a breakdown of "project only" daily volumes by segment under the year 2040 buildout condition. Note that the SCTM19 model assigned 100 daily vehicle trips to a traffic analysis zone (TAZ) adjacent to the SDC site between the campus and Madrone Road that are not included in the reported segment volumes because they do not traverse the entire segment. **Segment/Zone Daily Project Volume** Arnold Drive – North of SDC: -20 Arnold Drive – South of SDC: 2,810 New Highway 12 Roadway Link: 1,450 TAZ 192: 100 Total: 4,340 The rounded total project-only volume of 4,340 daily vehicles matches the external trips forecast by the SCTM19 model to be generated by the proposed Specific Plan, confirming that all trips have been effectively assigned to the roadway network.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-250	Defective Vehicles-Miles Traveled Analysis – The analysis of VMT impacts (Impact 3.14-2, DEIR p. 445) indicates that the Project will have a significant and unavoidable impact, with a significant impact relative to Household VMT and less than significant impacts regarding Employment VMT and Total VMT per Service Population. A significant impact was also found with respect to induced VMT associated with the proposed connector to Highway 12 (which is described as an "east-west emergency access connection from the site"). (DEIR p. 447) We believe the VMT analysis is flawed, as described in the following sections. Transportation Demand Management Effects The VMT analysis is summarized in DEIR Table 3.14-4: Planning Area VMT Metrics. (DEIR p. 446) That table includes a section labeled "Proposed Plan with 15% TDM Reduction," which is described as being for informational purposes and "reflect[s] a theoretical 15% reduction in VMT associated with required TDM measures." We believe this information is misleading, as no support is provided with respect to the feasibility of actually achieving a 15 percent reduction in VMT. Further, based on this "theoretical" information the DEIR makes the questionable and conclusory statement that (DEIR p. 447): . . . it is likely that actual VMT will be less than the projections above. Our analysis has suggested that, to the contrary, the actual VMT will be substantially greater than those projections. In fact, only one paragraph later the DEIR contradicts itself and recognizes the questionable nature of the suggested TDM benefits (DEIR p. 447):	The commenter asserts that the DEIR's informational discussion regarding the effects of Transportation Demand Management (TDM) are misleading, that the employment based VMT assessment lacks substantiation, and that the VMT reduction strategies required by Specific Plan Policy 3-14 would be ineffective. With respect to the discussion of TDM strategies criticized by the commenter, the results presented in DEIR Table 3.14-4 showing the proposed Specific Plan's VMT performance metrics with a 15 percent reduction due to required TDM are presented for informational purposes and are not relied upon in making a significance determination. As described on DEIR pages 448-449, this approach was intentionally chosen in acknowledgement of the fact that the most effective forms of TDM strategies will need to be tailored to individual projects, that they will evolve over time, and that uncertainty exists as to whether 15 percent reductions can be guaranteed at every stage of development (particularly in early years when the positive synergies among housing, jobs, and services may not yet be realized). Despite this uncertainty, the proposed Specific Plan requires TDM to be implemented by all development, and requires establishment of a Transportation Management Association (TMA) to oversee and coordinate TDM strategies in an efficient manner. While the DEIR conservatively concludes that there would be a significant and unavoidable impact, the expectation remains that land uses within the proposed Specific Plan will be able to achieve the 15 percent reduction targets that are shown informationally in Table 3.14-4, particularly once

Commenter	Date	Letter	Comment	Response
			However, the ability for individual development projects to achieve a 15 percent reduction in VMT is uncertain. Clearly, any statement regarding the potential benefits of implementing TDM measures at the Project must be taken with a sizable grain of salt. Employment VMT Analysis As noted above, the DEIR analysis found a less than significant impact with respect to Employment VMT (also referred to as "Home-Work VMT per Worker" in the DEIR), with a finding of 4.8 homebased commute VMT per worker. (DEIR p. 445) Table 3.14-4 lists values for other pertinent geographical areas near the Project, as follows: • Planning Area Baseline Average: 7.1 home-based commute VMT per worker, • Countywide Baseline Average: 12.4 home-based commute VMT per worker, and • Regional Baseline Average: 16.9 home-based commute VMT per worker. These values raise questions regarding the validity of the DEIR's employment VMT finding of 4.8 home-based commute VMT per worker. This value is about 67 percent of the corresponding value for the Planning Area, 39 percent of the Countywide value, and only 28 percent of the Bay Area Region value. Without further substantiation of the DEIR's VMT analysis procedures and background parameters and inputs, it is difficult to readily accept that the Project's VMT result would be so vastly different from the other areas referenced above. Unfortunately, the reviewing public is expected to blindly accept the output of the SCTM19 travel demand forecasting model even though, as described above, the model has obvious flaws with respect	sufficient development levels have been achieved to support a broad spectrum of TDM measures. The commenter also questions the DEIR findings related to employment based VMT, including how the proposed Specific Plan could have a projected VMT per worker that is lower than broader geographical area averages. Please see responses above regarding the applicability of using the SCTM19 travel demand model, which was used to analyze and estimate VMT. Regarding the specific VMT outputs produced by the model for employee-related VMT, which is analyzed using a home-based commute VMT per worker performance metric, the commenter is correct that the proposed Specific Plan is expected to result in a lower value per worker than the countywide and regional averages. While not entirely unexpected given the proposed uses within the Specific Plan (and associated jobs-housing balance), in 2021 W-Trans did collaborate with SCTA to investigate the employee-based results when the model was being used to test various land use alternatives, prior to initiation of work on the DEIR. Staff at SCTA examined how the model was calculating and projecting employee VMT, confirming that the model's employment VMT projections properly aligned with related factors including calculated average trip lengths, home-based work attractions, home-based work person trips, employment estimates, origin-destination trip tables, and the land use quantities used as inputs. SCTA staff observed that the model is favoring home-based work attractions from areas near the Specific Plan and from within the Specific Plan TAZ itself; this is not unexpected given that,

Commenter	Date	Letter	Comment	Response
			to its ability to estimate Project-related traffic volumes. In short, we question whether the employment VMT value derived for the Project is credible. Proposed Policies Reducing VMT Impact In recognition of the Project's significant and unavoidable VMT impact, the DEIR addresses ways to reduce that impact. The primary approach to achieving this goal is apparently Specific Plan Policy 3-41, which states, in part (Specific Plan p. 3-12): Require all development to reduce vehicle trips by at least 15 percent below rates listed by the Institute of Transportation Engineers Trip Generation manual using transportation demand management strategies. As we described above, however, the Project's supposed trip generation, as reflected in Section 3.14 – Transportation, is already extremely low. According to the DEIR, the total daily trip generation is 5,736 trips/day. This includes trips associated with 1,000 residential dwelling units and substantial non-residential development types although, unfortunately, no trip generation breakdown is provided between the residential and non-residential land uses. For perspective, if we totally ignore the non-residential development (a frankly ridiculous notion, given that this ignores 190,000 SF of office space and 40,000 SF of commercial space), the Project's trip generation rate would be 5.736 trips per dwelling unit (i.e., 5,736 trips / 1,000 DU = 5.736). If the non-residential land uses were included, the overall Project trip rate would be substantially lower. For comparison, the current ITE daily trip generation rates for various types of residential uses that are potentially applicable to the Project are as follows:	like most travel demand models, SCTM19 is a "gravity" model wherein the likelihood for trip origins and destinations to be matched decreases as the distances between origins and destinations increases. Based on these findings, it was determined that the SCTM19 model remained the appropriate and best-available tool to complete the VMT assessment prepared for the DEIR. The commenter opines that Specific Plan Policy 3-41 is virtually meaningless given the low trip generation estimated in the DEIR analysis. Policy 3-41 requires all development occurring within the proposed Specific Plan to reduce vehicle trips by at least 15 percent below the level that would be calculated through application of standard ITE trip generation rates. These TDM measures would be determined during the entitlement process for individual development projects, at which time they would also need to be quantified to confirm that the 15 percent reductions (below levels estimated using ITE trip generation rates) would be achieved. Thus, the traffic generation characteristics analyzed at the programmatic level in the DEIR have no bearing on this requirement, in contrast to the opinion offered by the commenter. The requirements set forth in Policy 3-41, in addition to establishment of a TMA to oversee TDM strategies for the overall campus as required in Policy 3-42, would lead to quantifiable reductions in VMT. The commenter continues by again challenging the proposed Specific Plan's overall trip generation methodology and results applied in the DEIR; these references to the trip generation estimates contained in the DEIR are extraneous as they would play no role in the

Commenter	Date	Letter	Comment	Response
			• Single-Family Detached Housing: 9.43 daily trips/dwelling unit, • Single-Family Attached Housing: 7.20 daily trips/dwelling unit, • Multifamily Housing (Low Rise – Not Close to Rail Transit): 6.74 daily trips/dwelling unit. Therefore, it appears that, if the Project's trip generation estimate is to be believed, the Project trip rate is already substantially less than 15 percent below the ITE trip rates. Two conclusions can be derived from this information: • The Project's trip generation as presented in the DEIR is not to be believed, and • Specific Plan Policy 3-14 is specious. Summary As we have described above, the DEIR transportation analysis is significantly flawed and those flaws relate directly to the validity of the VMT analysis. To briefly summarize: • The Project trip generation estimate substantially understates the volume of traffic that will result from the Project. • The internal trip capture rate is excessive, resulting in further reduction of the Project's traffic volumes. • Only a portion of the Project's trips have actually been assigned to the study area roads. • The purported benefits of implementation of TDM strategies are unlikely to be realized. • The Project's derived Employment VMT value is highly questionable, when viewed in light of corresponding values for nearby geographical areas. • Specific Plan Policy 3-41, which is claimed as a means to reduce Project VMT, is virtually meaningless, unless the Project's trip generation	requirements for individual developers to reduce their projects' VMT levels. For additional information on how trip generation was otherwise assessed in the DEIR, please see the responses to prior comments provided above.

Commenter	Date	Letter	Comment	Response
			estimate is substantially modified to reflect reality. The VMT analysis must be modified to correct the deficiencies described above. Upon completion of that revised VMT analysis, the DEIR must be recirculated for further public review.	
Sonoma Land Trust	9/26/2022	B11-251	I have been asked to review and comment on the Sonoma Developmental Center (SDC) Specific Plan and associated Draft Environmental Impact Report	See response to comment C109-1.

Commenter	Date	Letter	Comment	Response
			(DEIR). I write this as a research scientist who has spent more than two decades studying wildfire science and fire ecology, global change, and conservation biology. From this perspective, I appreciate the intention to balance human welfare and economic development with plans for preservation of historical and natural resources in the area. Nevertheless, my review of the plan and DEIR have led me to conclude that many issues relative to wildfire risk have been overlooked. The discussion of fire risk in the DEIR reflects several misconceptions concerning fire ecology, fire history, and the consequences and effectiveness of different fire mitigation strategies. The SDC property is situated within a highly fire-prone landscape, and based on evidence from the scientific literature, the Proposed Plan has high potential to significantly increase fire risk even further to new and existing structures at the SDC property as well as to the surrounding communities. A rise in human-caused ignitions due to increased population growth and expansion of human infrastructure could increase fire frequency to the point that wildfire would significantly affects public health, ecological functioning, and provision of ecological services (e.g., erosion and flood control). Unfortunately, research on recent destructive fires shows that the proposed mitigation strategies to reduce fire risk are unlikely to eliminate these significant impacts. Below please find an explanation for my conclusions summarized in three main points.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-252	RELIANCE UPON FIRE HAZARD SEVERITY ZONES IS INAPPROPRIATE FOR CONCLUDING THERE IS NO FIRE RISK. The reliance upon existing Fire Hazard Severity Zones as the basis of the findings reflects a misunderstanding of the purpose of the maps, their scale of accuracy, and their potential for uncertainty at specific locations. They are also out of date. The Cal Fire maps were not designed with the intention of indicating precisely where structures are most at risk for wildfire. Instead, the objective for these maps is for use in general planning and policy guidance. For example, defensible space practices are only enforceable within high hazard zones; homeowners are required to disclose upon sale whether the property is in a in high hazard zone; and county governments can use the zones to enforce building codes or other fire safety measures. The maps were developed in 2007 using a simple set of variables, map overlays, and general assumptions to delineate the relative degree of fire hazard across the landscape – that is, areas where fire behavior is likely to become extreme given a fire occurs. In other words, the hazard areas shown on Fire Hazard Severity Zones are delineated in very broad classes and have limited precision. Given the uncertainty and coarse scale of these maps, they are not appropriate for predicting where buildings are likely to be destroyed. This is something that Cal Fire has been transparent about (Sapsis 2018), as the appropriate use of these maps has been misinterpreted elsewhere.	See response to comment C109-2.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-253	Part of the reason they are inappropriate to predict structure loss is that the location and behavior of fire is stochastic and unpredictable at any given time or location. Fire occurrence, behavior, spread, and eventual destruction of a house depends upon a large suite of random factors, such as where and when an ignition occurs; what the fire weather at the time of ignition is; what direction the wind is blowing; what the fuel and topography conditions are at the point of ignition; what kind of housing density and arrangement are in the surrounding area; whether any other fires are burning and the availability of firefighters, etc. This does not mean that the maps of fire hazard are useless. It means that they need to be interpreted with an understanding of what they can or cannot do; and that they are not completely accurate. This is true of fire mapping in general. For example, a map delineating probability of ignition will look completely different than a map delineating probability of a large fire (e.g., Syphard et al. 2019). Unlike the Cal Fire maps, some maps are designed with the specific objective of delineating fire risk to structures (e.g. Syphard et al. 2012), but even these maps have substantial uncertainty given the random nature of wildfire. A study comparing maps of fire risk to structures in southern California with the Cal Fire maps in the same regions found significant differences in the areas mapped as high risk, and the Cal Fire maps performed poorly compared to the other maps (Syphard et al. 2012).	See response to comment C109-3.
Sonoma Land Trust	9/26/2022	B11-254	Another source of uncertainty in the Cal Fire maps is the assumption that hazard is likely to be governed by the same factors in the same way across the state. Science shows that the relative weighting and direction of variables that influence the locations of fire occurrence,	See response to comment C109-4.

Commenter	Date	Letter	Comment	Response
			size, and risk vary from region to region (e.g., Syphard et al. 2019). Therefore, accuracy of the Cal Fire maps is likely to vary from place to place, and there is no guarantee that the maps near the SDC are accurate, even in a general sense or for their intended purpose. There are examples of recent highly destructive fires where substantial structure loss occurred in areas not mapped as high risk in the Cal Fire maps (e.g., Coffee Park in the Tubbs Fire, Malibu City in the Woolsey Fire). This should serve as an important illustration of why the maps should not be the final word in a conclusion about fire risk to structures. An important point is that the current maps - the ones used for the DEIR - were developed in 2007. The current landscape reflects very different environmental and housing conditions than those that were there 15 years ago. The factors used to create the 2007 the maps, such as fuel type, fire history, and housing, have all changed substantially. Cal Fire has been putting significant effort into updating their maps with new variables and assumptions, and these may be more appropriate for future decisions. However, those maps are not available yet - and maps developed in 2007 should not be trusted to assess the fire risk for a development to be constructed after 2022.	
Sonoma Land Trust	9/26/2022	B11-255	The Proposed Plan Is Likely To Increase Regional Fire Risk Although the DEIR acknowledges that the location of the proposed development is in a fire-prone part of the landscape, it does not thoroughly establish the baseline conditions that this is an area with a long history of wildfires that have already resulted in serious impacts. It was only a few years ago that structures were destroyed by wildfire at this very site and many more structures were destroyed nearby. Even without the new residents	See response to comment C109-5.

Commenter	Date	Letter	Comment	Response
			and visitors proposed for the site, the evacuation situation has apparently been extremely problematical in recent fires - and evacuation is often the time when people lose their lives to wildfires. These baseline conditions have not been adequately described in the DEIR despite the need to establish them before assessing the impact of the project. Based on data regarding repeat fires in the same locations, there is reason to believe that the area proposed for development on the SDC site is susceptible to more wildfires in the future. There is also reason to believe that the SDC development will lead to an increase in the number of wildfires in the region, not only due to the potential for climate change to exacerbate fire risk, but also because of the probable increase in human-caused ignitions. In addition, the DEIR lacks a description of how the Proposed Project will not only be impacted by fire, but also how it will impact fire in the vicinity in the future.	
Sonoma Land Trust	9/26/2022	B11-256	As evidenced by the almost perfect overlap of the nearby 2017 Tubbs fire with the 1964 Hanley Fire (Keeley and Syphard 2020), fires often recur in the same locations. This is because certain locations are more fire-prone than others given their topography, location within a wind corridor, climate, and vegetation. Research on structure loss in California has demonstrated that structures located in areas with a history of recurring fire are among those that are most likely to be destroyed by fire (Syphard et al. 2012). Although the 1964 Hanley Fire occurred in nearly the same location as the 2017 Tubbs Fire, there were only about 100 structures lost, and there were no fatalities. However, in 2017, more than 5500 structures were destroyed and 22 people lost their lives. The difference	See response to comment C109-6.

Commenter	Date	Letter	Comment	Response
			is the rapid growth of human population and housing in the footprint of the fire during the interim.	
Sonoma Land Trust	9/26/2022	B11-257	The placement of new housing in fire-prone locations, like the proposed Project, not only increases the exposure of those structures to wildfire, but it also increases the likelihood of more fire occurring in the surrounding region due to human-caused ignitions. As recognized in the DEIR, humans cause more than 95% of the fire ignitions in Sonoma County, and studies repeatedly show that fire frequency is highest in low-intermediate-density development patterns, particularly when surrounded by wildland vegetation (i.e., the Wildland Urban Interface) (Syphard et al. 2007, Syphard et al. 2019, Radeloff et al. 2018). This is because, as low-medium density housing development expands (the kind proposed for this development), there is an increase in the number of people and opportunities for fires to ignite; and there is still ample continuous vegetation in the surrounding landscape for wildfires to spread. Larger numbers of people also increase the odds of fires starting during severe fire-weather conditions that lead to the most catastrophic outcomes. Recent research shows that human-caused ignitions are the top-ranking reason for area burned in Santa Ana wind-driven fires; and that human-caused fires have worse outcomes than lightning-caused fires.	See response to comment C109-7.
Sonoma Land Trust	9/26/2022	B11-258	Extensive research also shows that the location of human ignitions tends to occur closest to roads and human infrastructure (Syphard et al. 2008, Molina et al. 2019, Chen and Jin 2022). Therefore, the addition of people coming into and out of the region because of the new development increases the likelihood of more fires starting near the area. The lack of public transport is a concern not only in terms of greenhouse gas emissions,	See response to comment C109-8.

Commenter	Date	Letter	Comment	Response
			but also in terms of ignitions and increasing fire risk. Given that the most likely form of transportation to and from the development is via automobiles, many more people will be on the roadways, and thus, many more opportunities will arise for fire ignitions to occur. The increased access to open space areas also would provide more opportunities for humans to unintentionally start fires. In turn, the type of low-medium density development proposed in the plan is not only where fire frequency tends to be highest, but this is also where structures are most likely to be destroyed by fire (Syphard et al. 2012, 2019, Kramer et al. 2018). Also, it is not just housing location and density that drives risk exposure; it is the overall location and pattern of development (Syphard et al. 2012). Isolated or remote clusters of development are particularly vulnerable (Syphard et al. 2013). In other words, fire risk is a multi-scale issue (Syphard and Keeley 2021), and the landscape context is critical. Developments surrounded by large amounts of continuous wildland vegetation, such as is the case here, are particularly dangerous because they are exposed to potential fire on all sides. This scenario is similar to what happened in the town of Paradise in the 2018 Camp Fire. To that end, "community separation" of urban areas seems like a risky design strategy in the proposed plan - that adds edge between development and wildland. As acknowledged in the EIR, the potential for destructive wildfires is increasing in many parts of California due to climate change. Recent research also shows that proximity to the WUI is the top explanation for why fires have become destructive in the project region (Syphard et al. 2022).	
Sonoma Land Trust	9/26/2022	B11-259	Policies For Mitigation Do Not Eliminate Fire Risk Although studies show that community planning and	See response to comment C109-9.

Commenter	Date	Letter	Comment	Response
			fire-safe design and landscaping can significantly enhance fire resilience, statistics from recent wildfires indicate that these actions are not guaranteed to reduce impacts to less than significant levels (Syphard and Keeley 2019, Baylis and Boomhower 2022). While having a strong and well-enforced community wildfire resilience plan is critically important for reducing fire risk to the largest extent possible, constructing a significant number of residences and businesses will add more frequent ignitions to an already highly fire-prone region. This will exacerbate fire risk in the region regardless of the mitigation policies put in place. Therefore, although the DEIR relies on policies and mitigation measures to conclude that the project would not exacerbate wildfire risk, the initiation and enforcement of these measures do not ensure that significant impacts would be sufficiently mitigated.	
Sonoma Land Trust	9/26/2022	B11-260	Vegetation Management One of the measures that the DEIR relies upon to claim no significant wildfire impacts is vegetation management to reduce fire risk. Vegetation management includes mechanical fuel breaks surrounding the development, clearance of woody shrublands or understory woody trees, defensible space, and controlled burning of vegetation. There are several common misconceptions about, and overestimations of the relative effectiveness of, these measures for reducing structure loss, especially during severe fire weather when most structures are destroyed. Fuel reduction through vegetation management is often viewed as a means of stopping or slowing the spread of fire; however, treatments typically only do this under mild weather conditions. In severe fire weather, with strong winds, vegetation treatments generally do not prevent or stop fires on their own.	See response to comment C109-10.

Commenter	Date	Letter	Comment	Response
			Policy 2-31 would require construction and maintenance of a managed landscape buffer along western and eastern edges of the Core Campus to aid in fire defense, consisting of a shaded fuel break in wooded areas and grazed or mown grassland. The construction of these types of fuel breaks can be helpful for protecting communities, when done strategically, by providing safe fire-fighter access. They may also slow fire spread enough to buy time for defensive activities (Syphard et al. 2011).	
Sonoma Land Trust	9/26/2022	B11-261	Despite these benefits, the big issue with placing too much trust in fuel breaks and other forms of vegetation management is that most structures are destroyed because they are exposed to the millions of wind-borne embers that are generated during severe fire-weather. Although woody vegetation is the primary source of firebrands, wind-borne embers are known to fly kilometers ahead of a fire front, crossing vegetation treatments, and landing on or near structures. In fact, wind-borne embers often jump California's widest freeways. Therefore, although fuel breaks can facilitate safe firefighter access in some circumstances, they cannot prevent embers from flying past them. Furthermore, despite the role of fuel breaks for providing safe firefighter access, it is often unsafe for firefighters to be present during the worst fire-weather conditions. In a historical survey of fires and fuel breaks in southern California national forests, 22- 47% of fires stopped at fuel breaks when they encountered them (Syphard et al. 2011).	See response to comment C109-11.
Sonoma Land Trust	9/26/2022	B11-262	The creation of defensible space around structures at the parcel level, as suggested in policies 2-34 and 2-36, is a mitigating policy proposed for the DEIR, and I concur that this should be implemented to increase community resilience. Studies show that properly created defensible	See response to comment C109-12.

Commenter	Date	Letter	Comment	Response
			space (https://www.fire.ca.gov/programs/communications/defensible-space-prc-4291/) can significantly reduce the probability of a structure being destroyed in a fire (although there is no additional benefit to extending the distance of defensible space beyond 100 feet (Syphard et al. 2014, Miner 2014)). Nevertheless, as with other vegetation treatments, defensible space should not be considered as something that can definitively prevent structure loss. Many embers directly penetrate a structure without vegetation playing a role, and many structures with well-designed defensible space have been destroyed in recent wildfires. If embers land near the property, they may ignite new fires depending upon the flammability of the surroundings. While the recommended reduction of biomass near the property lowers flame lengths and enhances firefighter safety, the fuel moisture of the vegetation in the vicinity of structures is often more important than the amount of vegetation. Evergreen shrubs and trees are often referred to as "ember catchers" because of this – because the embers may be extinguished if they land on green vegetation. This argues for retaining some green vegetation near the structure and across the landscape.	
Sonoma Land Trust	9/26/2022	B11-263	Research in Australia also shows significant protective effects of irrigated land (Gibbons et al. 2018). Thus, a concern I have about the vegetation management approach described in the DEIR is the proposal to remove chaparral and other woody shrublands and to allow establishment and expansion of grass. Although fire in grass has lower flame lengths, grass is the most flammable and easily ignitable vegetation type in California (Syphard and Schwartz 2021, Syphard et al. 2022). Grass is dryer for a much longer period in the	See response to comment C109-13.

Commenter	Date	Letter	Comment	Response
			year than chaparral, and when it does ignite, it is the fastest spreading vegetation type. Most firefighters who lose their lives in fires have been killed in grass fires. Therefore, while the practice of mowing or grazing grass can enhance fire safety (if mowing does not occur during severe fire weather), removing shrublands and converting them to grass is likely to make the landscape more flammable.	
Sonoma Land Trust	9/26/2022	B11-264	Compliance With Fire-safe Building Codes In addition to defensible space, the DEIR relies upon class A roof retrofits and the compliance with fire-safe building codes in the construction of new buildings to mitigate fire risk. Although fire-safe building practices, such as those required in new building codes, increase the possibility that structures will survive wildfires (Syphard and Keeley 2019), they also do not guarantee prevention of structure loss. The extent to which enforcement of building codes increases the rate of structure survival in wildfires is yet unknown. For example, one study shows that building codes that enforce fire-safe construction helped to decrease rates of structure loss compared to rates of loss before the codes were enforced (Baylis and Boomhower 2021). On the other hand, an analysis of the Camp Fire, where more than 18,000 structures were destroyed, showed that homes built before and after the enforcement of building codes were destroyed at roughly equal rates (Knapp et al. 2021). Therefore, as with defensible space, many new homes with fire-resilient construction have been destroyed in recent California wildfires.	See response to comment C109-14.
Sonoma Land Trust	9/26/2022	B11-265	Although fire-safe building practices improve the odds of survival for new homes, these codes do not protect the existing homes at the site and in the surrounding areas. The increase in population and human activity in the region at large increases the odds for more human-	See response to comment C109-15.

Commenter	Date	Letter	Comment	Response
			caused fires to start, as people will be moving in and out of the area, engaging in more activities that could generate sparks, and spending more time recreating in flammable open-space areas. Given that humans are mobile, ignitions are numerically more likely to occur anywhere in the surrounding area that experiences an increase in human presence and activity, and this exposes more existing structures to wildfires at a landscape scale. In other words, because wildfires occur over large areas, with the most destructive wildfires becoming very large (Syphard et al. 2022), impacts can be expected to occur in areas much larger than the project footprint. Furthermore, new building codes will not benefit the older structures within the project footprint, some of which have significant historical and cultural value. Policy 2-38 suggests retrofits of new roofs, siding, and windows for existing structures, but this is not a complete list of needed retrofits for fire safety, and the details of this policy are vague. Would these retrofits be applied to all existing buildings, even the historical ones? They also would not apply to buildings outside of the SDC site.	
Sonoma Land Trust	9/26/2022	B11-266	Shelter in Place The DEIR relies in part on proposed Policy 2-54, which requires the Project proponent to build or designate an on-site shelter-in-place facility. DEIR at pages 510 and 511. This alternative of sheltering in place is a dangerous proposition, as evidenced by the Black Saturday Fires in Australia in 2009. In those fires, 173 people lost their lives, and more than half of those people had been sheltering in place. (https://www.sciencedirect.com/science/article/abs/pii/S221242091730050X). As a result of these fires, the Australians have now shifted thinking away from their	See response to comment C109-16.

Commenter	Date	Letter	Comment	Response
			stay and defend policy and now have a system in which all residents are encouraged to evacuate when weather conditions meet a "catastrophic threat" level. In short, buildings are replaceable, but human lives are not. While having a shelter-in-place facility may benefit those who are simply unable to evacuate, this should be a last resort, and the SDC project should not rely on this method as mitigation for wildfire risk related impact. Finally, I question the enforceability and endurability of many of the proposed policies. Who is ultimately responsible for ensuring that the policies are followed? Activities such as fire-safe education, defensible space maintenance, or maintenance of buildings require ongoing, permanent attention. Who will ensure that these activities will continue after the structures have been built? Will a permanent staff position be created to ensure ongoing compliance? In short, people will move in and move out over time, but the houses and the landscape will remain.	
Sonoma Land Trust	9/26/2022	B11-267	Conclusion In conclusion, contrary to the assertions made in the DEIR, there is a strong likelihood that the proposed development, and its alternatives, will have significant impacts relative to wildfire. The potential for increased numbers of wildfires – and more wildfires during severe fire weather - are likely to significantly affect public health and ecological functioning. There are also likely to be increased economic costs for management and suppression, from damage/destruction to human infrastructure or agricultural lands, and from post-event hazards such as mudslides or debris flows. Sufficient homeowners insurance for wildfire, which is becoming increasingly expensive, will also be difficult to attain, particularly for the low-income residents that are supposed to be supported by this plan.	See response to comment C109-17.

Commenter	Date	Letter	Comment	Response
			Public health may be threatened not only from direct injury and mortality during a fire, but from smoke. The evacuation plans described in the DEIR only account for fires coming in two directions and spreading through other towns before reaching the project site. These analyses should also incorporate scenarios in which fires are spreading directly from the roads east of or from Sonoma Mountain west of the project site. In these cases, if the fire weather is severe and the fires are burning toward the project site, there would likely be less time for residents to evacuate, and this puts human lives at risk. Another potential impact to public health and safety is that, if fire frequency increases regionally due to additional opportunities for human-caused ignitions, secondary hazards may occur post-fire, such as flooding, landslides, runoff, or debris flows. Not only may these secondary events be potentially harmful during the event, but there may be subsequent impacts to water quality.	
Sonoma Land Trust	9/26/2022	B11-268	While my letter is aimed at explaining the wildfire-related potential and costs associated with the project, there are also ecological impacts that may result from the increased fire risk in the area. For example, there are ecological costs associated with vegetation management and construction of fuel breaks. There are also potential ecological impacts that will result from the potential for increased fire frequency in the area. Many vegetation types in the western USA are experiencing fire-driven conversion, often from native vegetation to invasive species (Guiterman et al. 2022). Therefore, the DEIR's conclusion that the project would result in no potential loss of forest is inaccurate because it fails to account for the potential effects of increased wildfire. While the policies to reduce fire risk at the site may work to lessen some of these impacts, the proposed	See response to comment C109-18.

Commenter	Date	Letter	Comment	Response
			policies are unlikely to offset the increase in fire risk to the property and surrounding area that results from the project. Fire hazards will nevertheless likely be significant.	
Sonoma Land Trust	9/26/2022	B11-269	Finally, in my reading of the DEIR, I was unable to understand some of the statements. Therefore, it would be helpful to have additional clarification on the following questions: 1) Why does the plan state that the Historic Preservation Alternative leads to higher fire risk? Based on its reduced population and housing, the Historic Preservation alternative appears to be more fire-safe than the proposed project or its other alternatives. 2) On what basis does the DEIR assume that low-lying creeks and riparian areas would increase fire safety? While these areas are less flammable in general, they do not appear to be close to the proposed housing. Also, when riparian areas dry out, they can burn rapidly at high intensity. 3) On what basis does the DEIR assume that the housing in low-elevation or flat areas would not be at high risk? While it is true that topographically complex areas can often have highly erratic fire behavior, many structures are lost in low-elevation, low-relief areas (Syphard et al. 2021).	See response to comment C109-19.
Sonoma Land Trust	9/26/2022	B11-270	There are several local and state regulations applicable to the SDC Specific Plan that are not included in the Hydrology/Water Quality Regulatory Setting section (3.9.1 on pg. 270) of the DEIR. These include the following. a. Sonoma County General Plan 2020 Policy C-WR-2f, which states, “Discretionary projects in Urban Service Areas, where the density of development thus extent of impervious surface area is greater than in Rural Communities, shall be required to maintain the	Comment incorporated. Local and state regulations mentioned in this comment are added into the Regulatory Section of Hydrology and Water Quality.

Commenter	Date	Letter	Comment	Response
			site's pre-development recharge of groundwater to the maximum extent practicable/feasible. Develop voluntary guidelines for development in Rural Communities that would accomplish the same purpose. (GP2020 Revised)". b. Sonoma County General Plan 2020 Policy C-WR-4b, which states, "Use water effectively and reduce water demand by developing programs to: (1) Increase water conserving design and equipment in new construction, including the use of design and technologies based on green building principles; (2) Educate water users on water conserving landscaping and other conservation measures; (3) Encourage retrofitting with water conserving devices; (4) Design wastewater collection systems to minimize inflow and infiltration; and (5) Reduce impervious surfaces to minimize runoff and increase groundwater recharge. (GP2020)". c. Sonoma County General Plan 2020 Policy C-WR-4f, which states, "To minimize generation of wastewater and encourage conservation of Coastal water resources, require use of water saving devices as prescribed by the local water provider in all new developments. (New)". d. California statutes and regulations (e.g., California Code, Division 3. Dams and Reservoirs) related to dam safety. As elaborated below, the missing County policies and state regulations are directly relevant to the water supply and flood hazard assessments for the project as elaborated below.	

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-271	The DEIR Project Description is not detailed enough to evaluate potential impacts on hydrology and the environment. The DEIR does not contain a project plan with sufficient detail about land use change to complete the necessary hydrologic and water quality assessments to determine impacts from the project. Due to the lack of an adequate Project Description, I don't agree with the DEIR determinations that potential hydrologic and water quality impacts are less than significant and that no mitigation measures will be required for the following reasons. a. Impact 3.9-1 - The DEIR states that potential impacts to federal, state, and local water quality standards are less than significant. However, the DEIR has not analyzed how changes in site runoff and associated erosion potential will change. Based on my experience, this analysis would require detailed hydrologic and hydraulic modeling that incorporates all changes in land use (esp. impervious surfaces) and runoff estimates to determine where and by how much flow rates (and erosion potential) may impact receiving waterways both on- and off-site. BMPs and other measures would then be designed correctly to mitigate these impacts. This is the primary way the DEIR can address the significance of the impact before and after mitigation. b. Impact 3.9-2 - The DEIR states that the project will not interfere with groundwater recharge such that the project may impede sustainable groundwater management of the basin and associated potential impacts are less than	The commenter's main point is that there is not detailed analysis and therefore the impacts cannot be assessed. It should be pointed out that the potential impacts are discussed (3.9-1 to 3.9-4) and it is shown that development does have the potential to impact water resources. However, the impact analysis also makes specific references to county and state policies that will require specific mitigations prior to developing any of the parcels in the Specific Plan area. There are 28 County General Plan policies that are intended to minimize water resource impacts. There are also specific County design and mitigation thresholds that any development in the Specific Plan area must comply with. The impact discussions regarding the potential changes in water quality and water resources cite specific policies that address those potential impacts and are therefore built in mitigations required for any Specific Plan developments and therefore no mitigations are specifically called for other than complying with existing State and County development policies and requirements during detailed planning and project proposals. In regards Comment 2a. County and State have specific policies which regulate the discharge of storm water and specific requirements for detention and in some cases retention of storm water runoff. These types of features can only be effectively designed once detailed information on development footprints is known. In the case of this Specific Plan, these detailed specific footprints are not known and therefore complying with State and County regulations will guarantee these facilities are designed so that they reduce any specific project

Commenter	Date	Letter	Comment	Response
			significant. However, the DEIR does not contain any detailed technical analysis of how the project development will alter groundwater recharge. The DEIR has an obligation to describe any potential changes in recharge. Simply stating that BMPs that support groundwater recharge will be integrated into the Project does not demonstrate that they will be sufficient to mitigate potential impacts. c. Impact 3.9-3 - The DEIR states that Project development would not substantially alter the existing drainage patterns or result in substantial erosion and flooding on- or off-site or contribute runoff that would exceed the capacity of existing or planned storm drain systems. Thus, the DEIR concludes that associated impacts are less than significant. These conclusions are not substantiated as the DEIR does not present results from any hydrologic on hydraulic analyses to demonstrate to what degree the project may increase runoff rates and erosion potential from new or improved development. The assumption that adhering to County mandated BMPs will reduce flooding and erosion impact to below significant has not been demonstrated. Instead, the DEIR defers analysis and mitigations for hydrologic and water quality impacts. d. Impact 3.9-4 – The DEIR states that the potential to expose people and structures to significant risk or loss, injury or death involving flooding from dam failure is less than significant. However, this is completely contrary to the	water resource impacts to a less than significant level. In regards to Comment 2b. The commenter does not acknowledge the fact that the proposed development area already has nearly 74% of the core campus area consisting of impervious structures. There is no current groundwater recharge BMPs on the site. Specific Plan development will provide an opportunity to retrofit existing areas to enhance groundwater recharge above what the site contributes now. In regards to comment 2c. Developments within the Specific Plan area will undergo detailed hydrologic analysis to determine the size and extent of detention basins and other storm water management options. Each development will be required to calculate its runoff impact and demonstrate that it will not have an impact on existing facilities. In some cases it may be easier and more appropriate to upgrade the facilities. In either case, review by County Public Works and floodplain managers as well as building permit specialists will ensure that each proposed project complies with current building codes and development regulations regarding storm water management. In regards to Comment 2d. Every dam that is regulatory size and is under the California Division of Safety of Dams (DSOD) jurisdiction is required to have a dam failure inundation map. This is a map that shows the areas of flooding during a dam failure event. It does not indicate the likelihood of such a failure. The dams in the Specific Plan area are old dams that were constructed prior to the oversight of the State. Deferring the studies of dam failure potential is not deferred analysis. The

Commenter	Date	Letter	Comment	Response
			California Division of Safety of Dams (DSOD) conclusions about Project dam safety presented in Section 3.9.2.5 (Flooding – Flooding from Dam Failure, pg. 286-287) of the DEIR. Page 286 of the DEIR states, "The DSOD has classified the downstream hazard of a failure at Fern Lake as high". On page 287, the DEIR states, "The DSOD has classified the downstream hazard of a failure at Suttonfield Lake as extremely high." These statements alone suggest this potential impact is not "less than significant". The DEIR does present inundation maps associated with these failures but provides no further analysis on how these potential impacts will be mitigated apart from the statement (pg. 287) "Specific geotechnical investigations of the dams at Fern and Suttonfield Lakes would need to be conducted to determine their potential for failure." However, this is a deferred analysis, which does not support the findings of "less than significant" impacts and "not applicable" mitigations. e. Impact 3.9-5 - The DEIR states that implementation of the Project would not conflict or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Thus, the DEIR concludes that associated impacts are less than significant. However, for the same reasons presented above (items 2a. – 2c.), the DEIR does not present any technical justification for this determination and should be considered inadequate and incomplete.	area of inundation is known, however, the potential for failure of these dams is unknown. The Specific plan does not intend to make any changes to the dams or their operations, therefore, there would be no increase in risk associated with these dams. Also in 2021 the DSOD determined that the condition of the dams was satisfactory and thus the risk from dam failure was acceptable to DSOD. In regards to Comment 2e. The commenter questions the less than significant impact determination for water resources. At this stage of the planning it is not realistic to expect technical justification for this determination. There are numerous State and County policies which clearly dictate the steps that any proposed development within the Specific Plan area must comply with in order to obtain specific project approval. These policies regulate how much, how fast, and what types of facilities are needed to protect water quality, enhance groundwater recharge and protect residents from flooding. These studies are mandated by current regulations and are not needed to show Specific Plan feasibility but to ensure that there are less than significant impacts for the identified projects in the Specific Planning area.

Commenter	Date	Letter	Comment	Response
Sonoma Land Trust	9/26/2022	B11-272	An important analysis of the SDC project is the determination if there are sufficient water supplies to meet proposed project water demands. Appendix D of the DEIR presents the results of this analysis. Based on my review of Appendix D, I've identified several mistakes and other issues that suggest the DEIR does not demonstrate there is sufficient water supply to meet future (2045 full buildout) demands. Table 2 (pg. 14) of Appendix D indicates that estimated Project annual water demands by the year 2045 will be 342 acre-feet per year (AFY). Table 9 (pg. 31) of Appendix D indicates that available annual supply that will be 100% reliable for the period 2030-2045 is 356 AFY. Comparison of available and reliable water supply (356 AFY) to full buildout demands (342 AFY) suggest there is very little margin for error in terms of future water supply management. The DEIR supply estimate is also concerning to me in that the historic (1969-2007) water use (demands) for the SDC averaged 622 AFY and peaked at 1,143 AFY in 1986 (pg. 12, Appendix D). I'm suspect that the historic SDC water use is nearly twice the volume of estimated future full buildout (2045) Project water demands, especially when the Project proposes to build an additional 1000 residential units and hotel and reoccupy and/or expand the commercial and industrial uses (see Table 1, pg. 13 of Appendix D). Even with conservation measures, I would expect that Project water demands would be similar to if not larger than historic use. The next paragraphs elucidate this opinion. In reviewing and cross-checking the data and	As discussed in the Water Supply Assessment (WSA), the water supply and demand estimates for the Proposed Project are both conservative estimates. For example, as mentioned in the comment, the available supply generated by the surface water rights associated with the Sonoma Developmental Center (SDC) Property used for the purposes of the supply and demand comparison represent the modeled supply that is 100% reliable for all year types. As mentioned in Section 6.2.3 of the WSA, modeling suggests that the available supplies and water rights would allow for additional diversions of approximately 280 acre feet per year (AFY) on average and as much as 808 AFY above the 100% reliable yield if the diversions were not constrained by the current storage capacity and Proposed Project demands. Thus, projected available normal year supplies would be able to accommodate up to 636 AFY in demands, which is in line with the average historical water production at the SDC site (i.e., 622 AFY). Additionally, the modeling presented in the WSA does not account for any potential operational improvements to the SDC supply infrastructure (e.g., automated Sonoma Creek intake pump controls and other supervisory control and data acquisition [SCADA] improvements), which could increase diversions. The Proposed Project's demand estimates are also intended to be conservative. For example, community landscaping water use is estimated according to the Maximum Applied Water Allowance (MAWA) per the California Model Water Efficient Landscape Ordinance (MWELO), which represented the upper limit of annual applied water for established landscaped areas. However, it

Commenter	Date	Letter	Comment	Response
			information presented in Tables 1 and 2 of Appendix D, I identified several questionable results that suggest the DEIR water demands are significantly underestimated. These findings are as follows. a. Table 2 (pg. 16 of Appendix D) only provides employee water use estimates for the proposed hotel. Water use by guests staying in the 100,000 square foot hotel is not accounted for in the annual water demand estimate. Incorporating guest water use into the demand estimate could easily result in total annual project demands greater than reliable supply. b. To better evaluate the DEIR demand estimates, I created Table A (below), which merges data from Tables 1 and 2 in DEIR Appendix D. In doing this exercise, I identified a significant math error in the DEIR demand estimates for General Commercial, Office, Public/Industrial, and Research & Development land uses presented in Table 2 of Appendix D. When independently calculating water demands using the 2045 land use areas and Water Use Factors provided in Appendix D, the respective 2045 water demands for the General Commercial, Office, Public/Industrial, and Research & Development land uses result in values that are two orders of magnitude higher than those reported, which results in an increased annual Project water demand of 9846 AFY (see Table A). c. The Permit Sonoma website1 provides guidelines (8-2-1 Water Supply, Use and	is likely that actual plantings will be less water-intensive than the MAWA estimates. The demand estimates also do not account for the Proposed Project's potential use of recycled water, which could offset a portion of the projected potable demands. Lastly, the demand and supply comparisons do not account for any demand reductions that would occur due to implementation of a water shortage contingency plan (WSCP) during dry years. Valley of the Moon Water District's 2020 WSCP presents options for the District to achieve more than 50% reduction in dry year demands, if required. Any development at the SDC would be required to comply with this and future WSCPs developed and implemented by the District. While the historical production at the SDC site provides a useful comparison for estimated supply yields from the water supplies associated with SDC property (see Response 3-1), they are not representative of future Project demands. The land uses associated with the historical demands will be fully replaced by the those associated with the Proposed Project (i.e., the Proposed Project demands are not additive to existing demands). As discussed in WSA Section 4.4, the selected hotel water demand factor is based on a literature values included in Waste Not, Want: The Potential for Urban Water Conservation in California (Pacific Institute, 2003, https://pacinst.org/publication/waste-not-want-not/). The commercial demand factors developed in that document were derived based on the total water use for each land use type and then normalized by gallons of water per employee per day. As such,

Commenter	Date	Letter	Comment	Response
			Conservation Assessment Guidelines) for the preparation of Water Supply Assessments. The purpose of this policy is to provide guidance to applicants and their representatives on how to prepare a Water Supply, Use, and Conservation Assessment (henceforth, the "Assessment"). The Assessment may be a standalone document, or supplemental to a hydrogeologic study, Zero Net Use report, or other water supply related report. These guidelines are intended for discretionary and ministerial projects. Discretionary projects that are dependent on groundwater or surface water will typically require an Assessment with the use permit application. The Assessment will inform the environmental review process and conditions of approval. The authority of the Assessment falls under Sonoma County General Plan, Water Resource Element Goals WR-2 and WR-4, Objective WR-4.1, WR-4.2, and WR-4.3, and Policies2 WR-2c, WR-2d, WR-2e, WR-4b, and WR-4f. Therefore, the DEIR Water Supply Assessment (Appendix D) should adhere to County Guidelines. Appendix A to the County's Guidelines has water use estimates for residential, landscape, agricultural, and Commercial and Industrial uses that are greater than those factors presented in Table 2 of Appendix D (see Table B). Applying the Sonoma County water use estimates to Project water demand estimates results in higher residential and irrigated area water demands than presented in the DEIR (see Table B below).	while the water demand factor is based on the number of employees, it includes all the water use associated with hotels (e.g., water used for cooling, pools, restaurants, banquet rooms, showers, toilets, faucets, etc.). No change to the factor is required to account for guest water use as it is already built into the estimate. The commenter has identified that the units for the commercial/industrial and research and development (R&D) water use factors are incorrectly reported in Sections 4.2 and 4.3 and Table 2 of the WSA as "AFY/100 square feet (sf)". The correct units are actually "AFY/10,000 sf". While the units are labeled incorrectly, the reported water use estimates in the WSA are correct and are based on the correct units. See revised Table 2 attached with changes highlighted in blue. The commercial/industrial factor used for General Commercial, Office, and Public/Institutional factors were derived from the average commercial sector water use per account between 2017 and 2019 (1,195 gallons per day [gpd]/account or 1.34 AFY/account) (EKI, 2020. 2020 Water Demand Analysis and Water Conservation Measure Update, prepared for Valley of the Moon Water District, December 2020) divided by the average building area of all commercial accounts (7,490 sf/account) (Average billing area for commercial accounts was calculated based on the tax records for all commercial accounts within the District's service area) in the Valley of the Moon Water District Service Area, per the equation below: $1.34\frac{AFY}{account}\ x\ \frac{account}{7{,}490\ sf} = 0.000179\frac{AFY}{sf} = 1.79\frac{AFY}{10{,}000\ sf}$ The R&D water use factor was derived from the

Commenter	Date	Letter	Comment	Response
			In summary, correcting math errors and applying the Sonoma County guidelines water use estimates to the DEIR demand estimate tables results in a total annual Project water demand of 10,231 AFY, a values three times higher than reported reliable supply (356 AFY). This annual total demand will be even higher when hotel guest water use is considered.	Redwood City Engineering Standards Volume 3. Water Demand Projection Worksheet (https://www.redwoodcity.org/home/showpublisheddocument/20382/637183931771200000), which reports an R&D water use factor of 0.21 gpd/sf [Note that the water demand factor used in the WSA for R&D is likely conservative. The Genentech Campus Master Plan Public Review Draft (https://www.gene.com/assets/frontend/downloads/media/genentech_campus_plan_2019/Genentech_Campus_Plan_2019.pdf) studied 2016 water use at the Genentech campus in South San Francisco found that average annual water use equaled 180 gpd/1,000 sf (equivalent to 2.02 AFY/10,000 sf) or 14% lower than the factor used in the WSA], per the equation below: $0.21\frac{gpd}{sf} x\ 0.00112\frac{AFY}{gpd} = 0.000235\frac{AFY}{sf} = 2.35\frac{AFY}{10{,}000\ sf}$ While the units for the factors were incorrectly reported the water use estimates reported for estimated water use in Table 5 and other sections of the WSA are correct. As noted in the referenced website on the 8-2-1 Water Supply, Use and Conservation Assessment Guidelines, the purpose of this policy is to provide guidance to applicants and their representatives on how to prepare a Water Supply, Use, and Conservation Assessment (henceforth, the "Assessment"). This Assessment is triggered by a "use permit application" and is not the same as a Senate Bill (SB) 610-compliant WSA. The website also notes that the "water use rates may deviate from the above listed default use rates with site-specific data or published reference, and approval of the review authority." The residential

Commenter	Date	Letter	Comment	Response
				water use factors presented in the Assessment Guidelines of 0.5 AFY per dwelling unit (446 gpd/du) is over 80% more than the single-family water use factors for Valley of the Moon Water District, which were based on average 2017-2019 residential water use within the District and serve as the basis for the Proposed Project residential water demand estimates (EKI, 2020. 2020 Water Demand Analysis and Water Conservation Measure Update, prepared for Valley of the Moon Water District, December 2020). It is not realistic to assume that water use for the Proposed Project's new homes, all of which would be constructed according to current CalGreen building code standards, would be significantly higher than the District's existing low density residential use. The Assessment Guidelines residential water use factors also do not account for reduced water use associated with higher density residential units, as are planned for the project. Additionally, consistent with the Making Water Conservation a California Way of Life legislation, on September 29, 2022, the Department of Water Resources (DWR) submitted the recommendations on guidelines and methodologies that urban water suppliers will be required to use to calculate their annual urban water use objective (referred to as "Objective") to the State Water Board for approval. Compliance with the Objective will be calculated as the sum of an urban water supplier's: (1) residential indoor water use standard, (2) residential outdoor water use standard, (3) large commercial, industrial, and institutional (CII) landscape outdoor water use standard, (4) water loss standard, (5) bonus, and (6) variance. Further, on September 28, 2022, Governor Gavin

Commenter	Date	Letter	Comment	Response
				Newsom signed Senate Bill (SB) 1157. This bill reduces the previously adopted residential indoor water use standard of 55 gallons per capita per day (GPCD) by 2025 and 50 GPCD by 2030 to a new standard of 47 GPCD by 2025 and 42 GPCD by 2030. With the water demand factors included in the Assessment Guidelines, the Proposed Project would not be able to achieve the developed and pending water use Objectives and thus the Assessment Guideline factors are no longer applicable and should not be considered a reasonable basis for the demand projections included in this WSA.

Commenter	Date	Letter	Comment	Response
Amanda Zangara	8/19/22	C1-1	I am writing to express my concern for the recently released Draft and Environmental Impact Report and Draft Specific Plan for the Sonoma Developmental Center. The drafts' proposal for 1,000 residential units along with commercial development brings about great concern for the environmental impacts in an area where wildfire and drought continue to be of great concern. These issues rise to the forefront of concern due to their potential effects on human well being; for me, the impact on wildlife is also of great concern, though unfortunately in our current human-centric existence, the flora and fauna that are so important within the larger ecosystem seem to gain less of our attention. Overall, the loss of biodiversity, one of the greatest gifts of living in Northern California, will ultimately impact us all. This should be given great weight when determining land use and planning.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Amanda Zangara	8/19/22	C1-2	I am urging the county to engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. Furthermore, I am calling for a re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.	This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Amanda Zangara	8/19/22	C1-3	I have dedicated myself to working with young children in the outdoors in efforts to cultivate their connection to nature and hopefully inspire them to act as individuals who seek to preserve it. I hope that you will consider the existence of the future generations and consider the impact such a project could have on the environment they will one day live.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Betsy Donnelly	8/19/22	C2-1	Thank you for taking the time to read my email today. I would like to ask that the County engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. Because the Specific Plan and EIR were released before the State selected a development proposal, the Specific Plan is hypothetical. Neither it nor the EIR disclose the characteristics or environmental impacts of the proposal that will ultimately be accepted by the State.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.

Commenter	Date	Letter	Comment	Response
Betsy Donnelly	8/19/22	C2-2	I also ask that for a re-drafting of the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide. Thank you for your time and attention to this matter.	This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Brad McCarty	9/14/22	C3-1	The DEIR doesn't seem to look at the impact on cyclists and pedestrians OUTSIDE the campus: it does acknowledge that VMT along Arnold Dr and Hwy 12 will increase and cannot be mitigated. Does the traffic impact analysis estimate the corresponding increase in the number of bicycle and pedestrian collisions along Arnold Drive and Hwy 12 both with and without bike and pedestrian infrastructure improvements? If so, what are those numbers?	Thank you for your comment letter. As outlined on page 428 fof the DEIR, per CEQA requirements, the EIR is not required to analyze a projected increase in bicycle and pedestrian collisions. Instead, regarding traffic safety, the EIR is required to assess the impact of the plan on Impact 3.14-3, "Implementation of the Proposed Plan would not substantially increasehazards due to a geometric design feature (e.g., sharp curves ordangerous intersections) or incompatible land uses (e.g., farm equipment)." As outlined on page 450, the impact of the Proposed Plan is considered Less Than Significant, and no mitigation measures are required. In addition the policies and implementing actions outlined in Section 3.14.4.3 address proposed safety and roadway improvements in the Specific Plan.
Brad McCarty	9/14/22	C3-2	It is not valid to assume that the County or Caltrans will make the needed improvements as part of future development: they have, to date, been unable to make ANY improvements on those roadways in the impacted area: both roadways have ZERO shoulder width sections which require cyclists and pedestrians to be in the vehicle lanes.	This comment is noted, however it pertains the the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Brad McCarty	9/14/22	C4-1	The SDC DEIR states that traffic modelling was done to estimate evacuation travel times throughout the Sonoma Valley during various emergency conditions. Its conclusion is that evacuation times are barely impacted at all (worse case less than a 2 minute additional delay I believe) by the addition of 1,000 new housing units and 2,000	This comment is noted. Please see MR-4 regarding the adequacy of the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			residents. Obviously many of us who did evacuate during the 2017 wildfires found those results difficult to believe.	
		C4-2	Well, yesterday afternoon (8/30/22) there was a single structure fire in Boyes Hot Springs which caused emergency responders to close Hwy 12 in both directions for about 1.5 hours. That closure snarled traffic throughout the valley and travel times WELL exceeded an additional 2 minutes over normal times. Arnold Dr, Agua Caliente Rd and Boyes Blvd were complete stand stills. Perhaps the impact was even greater due to the diverted Northbound and Southbound traffic from Hwy 12 intersecting each other at the roundabout on Arnold Dr. This huge snarl was due to a single structure fire! This is why valley residents are VERY sceptical of the evacuation traffic impacts of the proposed plan.	This comment is noted. Please see MR-4 regarding the adequacy of the wildfire evacuation analysis.
Brian Bollman	9/14/22	C5-1	I have the following concerns regarding the Sonoma Developmental Center Specific Plan --The Specific Plan does not appear to address the issue of embodied carbon within existing buildings to be removed.	Thank you for your comment letter. This comment is noted. Please see MR-8 regarding the historic preservation of existing buildings on the core campus.
Brian Bollman	9/14/22	C5-2	--The Specific Pan does not appear to address the consequences of creating a high density development at a great distance from jobs and other facilities. specifically it doesn't adequately address commute and errand times.	This comment is noted, however it pertains the the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Brian Bollman	9/14/22	C5-3	In these times of global warming these concerns need to considered in the planning of any new development. Any development in this area needs to re-purpose existing buildings to the greatest degree possible without building any new buildings, and either be extremely limited in size, or be entirely selfcontained, having all of the industry and facilities needed to support the new community within the community.	This comment is noted, however it pertains the the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Brian Bollman	9/14/22	C5-4	Building removal and construction is a major contributor to global warming, and should only be done when clearly necessary. Sonoma County is into its sixth straight year of population decline. It is unclear as to why we would need to do a great deal of construction and development in such and out-of-the-way corner of the county. And such construction and development is clearly not consistent with our county's stated goal of reducing greenhouse gas emissions.	Thank you for your comment letter. This comment is noted. Please see MR-8 regarding the historic preservation of existing buildings on the core campus.

Commenter	Date	Letter	Comment	Response
Carol Carr	9/14/22	C6-1	PLEASE protect the natural treasure of SDC!!!! The intricacies of what is being moved on by your agencies are difficult for the lay person to follow, but I do understand that the county has an opportunity to proceed in a respectful and environmentally protective fashion at SDC or not - and that your agencies are willing to manipulate the regulations and the process in order to circumvent environmental impact and protection, despite the desires of the Board of Supervisors and the constituencies they represent. I ask you to please have a conscience that includes longterm impacts for the quality of life and nature and the planet as a whole and protect the incredible resource of SDC. I ask that you do not exploit that space for gain and development, creating more damage and loss of the ecosystem and precious habitat that currently exists. Truly, those are not yours to squander, yet unfortunately, you apparently have the power and willingness to do. Please, as followed by the Sonoma Land Trust and the rest of us who care deeply about this very important issue, -until after October 24th- pause this review of the Specific Plan and EIR pending completion of the RFP process so that the county specific plan can be aligned with an environmental impact that respects the grave issue of the development of SDC. You may think that what you do is not crucial and that rationales of development and profit support your abuse of power, but we need leaders who are no longer motivated by exploitation, greed, and profit. Please act both consciously and conscientiously on this very important decision. If you are in a position of authority, you have a mandate to act responsibly and with conscience for the greater good.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Carole Harbard	9/14/22	C7-1	It seems the community has not been heard and vital considerations like the actual boundaries of the properties and how they relate to the wildlife corridor, the fire risk and evacuation of so many residence, the increased use of water in a drought ridden environment to name a few.	Thank you for your comment letter. This comment is noted. Please see MR-7 regarding impacts on wildlife movement and MR-4 regarding the adequacy of the wildfire evacuation analysis.
Carole Harbard	9/14/22	C7-2	1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. 2. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the	This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.

Commenter	Date	Letter	Comment	Response
			actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.	
Charles G. Tsegeletos	9/14/22	C8-1	I am a 30 year resident of Sonoma Valley and I ride and hike the trails above SDC almost every week. I feel the current plan of 1,000 homes and 900 on-site jobs will destroy the uncrowded and rural character of the area. This magical place will become just another crowded, housing place and it will be lost to all Sonomans now and into the future.There just aren't places like this anymore and it would be a terrible loss to our community. Perhaps half the numberof houses would be okay but even that is a risk. Please work to align the Specific Plan and the EIR with the states RFP.	This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Chris Gralapp	9/14/22	C9-1	The August Draft Specific Plan for Sonoma Developmental Center was released in advance of the State's RFP for selection of a developmental proposal, way too soon. Sonoma County should align the SDC Specific Plan with the State's RFP, not work completely independently before you know the parameters set by the State. You are putting the cart before the horse. Sonoma County must engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. Please redraft the Specific Plan and the EIR to match and analyze the impacts of the actual proposal that the State selects for this site! It only makes sense, and will help to make for a much smoother process.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Chris Gralapp	9/14/22	C9-2	The SDC site cannot support 1000 residential units--adding that much would put massive pressure on Bennett Valley Road, which already has problems with traffic and a high accident rate. As a Bennett Valley homeowner, I cringe at the thought of multiple times the high speed traffic moving through our quiet valley. Also, that much density would also disastrously impact the native environment. We have the chance of a lifetime to protect this stunning habitat, and link some significant corridors. Please reduce proposed population density. We know the state has mandated new housing, but it doesn't have to all be at SDC!	This comment is noted, however it pertains the the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Christina Carasch	9/14/22	C10-1	I am horrified that a 1000 homes and commercial developments are proposed for the developmental property in Glen Ellen and especially because the proposal was released before the EIR. This is a precious area and I have lived here for 33 years and I know how fragile this environment is in everyway (water, traffic, wild life, recreation,population growth to mention a few). I worked for the county for many years and I know you can do better then this. For the sake of town and our county I implore you to carefully consider the impact these ideas and implementing them will have and will have forevermore.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
David Eichar	9/14/22	C11-1	The board of supervisors directed staff to pursue an SDC specific plan with 750 residential units. Despite this, the main EIR project is for the 1000 residential unit plan. This provides less details about the environment impacts of a 750 unit plan, mainly just saying the impacts are less than the 1000 unit plan. If the 750 unit plan had been the main plan under review, more details regarding environmental mitigation would have been defined.	Thank you for your comment letter. This comment is noted, however it pertains the the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
David Eichar	9/14/22	C11-2	The draft EIR does not take into account the full impact of the hotel for Vehicle miles traveled and Greenhouse gas emissions. Hotels with conference rooms, especially one in the SDC, would be a destination hotel and draw more visitors to the Sonoma Valley. The entire trip,door to door, needs to be counted, including visitors' travel to their airport, air travel, and the trip from the airport to the hotel at SDC. Many EIRs I have seen assume that a hotel would not bring any more visitors to Sonoma County, arguing that they are coming for other destinations within Sonoma, such as wineries. You need to look nofurther than MacArthur Place Hotel and Sonoma Mission Inn, which have business conferences during the week. These business conferences bring visitors to Sonoma Valley, who would not have traveled here if it were not for the conference.	Thank you for your comment letter. This comment is noted. Please see MR-6 regarding the adequacy of the transportation analysis.

Commenter	Date	Letter	Comment	Response
David Eichar	9/14/22	C11-3	The estimate of increase in traffic times during wildfire evacuations iscompletely inadequate. In Oct 2017, wildfires started Sunday night. We did not need to evacuate immediately. But by Wednesday, with the Nunns fire spreading towards us from the north, and another spreading from the east, we left early that evening. Arnold Drive southbound was back up almost to Boyes Blvd. It was stopand go to Watmaugh Road. It took us an additional hour or more to travel from Boyes Hot Springs to get to the intersection of Arnold Drive and Watmaugh Road, than usual. In order to get an accurate estimate of increased travel time during an evacuation, the DEIR must start with a valid base. At survey of residences' experiences evacuating from wildfires needs to be conducted.	This comment is noted. Please see MR-4 regarding the adequacy of the wildfire evacuation analysis.
Denise Sobel	9/14/22	C12-1	I am not sure this is the place to send this email. But, I hope it finds someone who might listen. 1000 homes in SDC means at least 2000 people, 2 to 4000 cars, noise, lights, pollution, traffic, destruction of Sonoma's wild life corridor, to name a few concerns. People employed there would bring another 1000 cars to the now overcrowded Arnold Drive, more pollution, noise and destruction. A road cutting across to Hwy 12 will do nothing to alleviate the problem and destroy the beauty of this wild area. Yes, at one time there were 3000 people living at SDC, but during that time, the population of Sonoma was way less. And, most of those people didn't drive!	Thank you for your comment letter. This comment is noted, however it pertains the the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Denise Sobel	9/14/22	C12-2	Is anyone looking at where the water will come to supply the 1000 homes. Right now,everyone in Sonoma is counting each drop of water they use. I have heard no oneaddressing this problem. Plans are to take out the Pillsbury dam and end divertingwater to the eel river which feeds into the Russian River where Sonoma gets 30% ofits water. Where is more water going to come from?	This comment is noted. Please see MR-5 regarding the adequacy of the Water Supply Analysis.
Denise Sobel	9/14/22	C12-3	And, what about evacuation if there is a fire? I am asking you to drive down Arnold Drive or Hwy 12 one of these weekday mornings or late afternoon. Bumper to bumper traffic on both roads. The intersection of Hwy 12 and Verano is at a standstill most days after 3pm. I cannot imagine what will happen if evacuation is required during commute times. People died in Paradise when their	This comment is noted. Please see MR-4 regarding the adequacy of the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			city burned down, there was only one way out,and it could not handle all the people needing to get out.	
Douglas C. Rice	9/14/22	C13-1	The different proposals, some of which have true merit, must be weighed against what is sensible and feasible and not in a monetary calculation from a developers perspective but from a communityperspective.I was an employee of SDC for more than 37 years. My position was with work development as theDirector of Sunrise Industries the Sheltered Workshop for the clients living at SDC. My 'dream' was totake the egress from Hwy 12 onto what is called the soccer field adjacent to the vineyards of the Tellerfamily and make this an industrial site set up to do limited manufacturing for start up companies. This site would be leased by DGS to individuals living at SDC/community who would own and operate thismanufacturing site aided by a Board to assist in helping to make decisions and how to grow. This, along with housing for the worker/owner of this company would be a hand and glove providing a true base forthis population to become self-reliant and self-funded. Alas, this never came to be. However, this email is not about what could have been but what it will become.I am a very strong proponent of affordable housing, but not a strong proponent of attempting to solve thisissue in one fell swoop dedicating it all to property at SDC. I understand that SDC's land is a perfect sitefor this sort of endeavor but to what degree is the meaningful question. Given all of the objections I am sure that you have received related to the proposal of allowing 1,000 housing units to the property should be strongly considered. A plan to set aside property for some housing is reasonable and should be competed in stages. When you look at developments such as Oakmont and its process to develop their property should be an example of how SDC might be developed and also learn what they did wrong and how not to make the same mistakes. So many lessons to be learned from previous attempts that should not be over looked or reinvented. I would also like to see a scaled back version of quantity of affordable housing allowed. A caveat for future expansion if all goes well could be put into place to allow for controlled and limited growth witheach phase and in turn each phase to be reviewed with the same conditional parameters and community input. Even though there appears to have been little to no consideration for any of the use	Thank you for your comment letter. This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			plans with regard to the population that lived at SDC, it is a shame that some sort of accommodation for those that lived here and those in the community to avail themselves of some part in this development for their better good. Thank you for taking the time to read my input...I hope it helps in some small way in making decisions on what SDC will become tomorrow.	
Douglas C. Rice	9/14/22	C13-2	I would like to see, as I believe most locals, a dedicated pathway across this land for wildlife to use freelyand without the threat of harm.	This comment is noted. Please see MR-7 on wildlife movement.
Douglas C. Rice	9/14/22	C13-3	A few of my essential worries is the ongoing drought and our ability to handle more housing withdiminishing water supplies, traffic mitigation and how our roads would look, not if but when we have arepeat of the fire storm in 2017 let alone the daily traffic we will see increased with no possibility forwidening any of the corridors, Hwy 12 or Arnold Dr. This is a major safety issue	This comment is noted. Please see MR-4 on wildfire evacuation.
David Eichar	9/16/22	C14-1	The addition of the road from SDC out to Highway 12 (highway 12 connection) would result in significant impact on wildlife. This area is a wildlife corridor. As wildlife currently traverse this area, the addition of vehicles in this area would disrupt the wildlife movement. This is especially true during construction. It is best not to add this road.If the road is built, despite the significant impact, then the following mitigation measure can be taken to reduce the	Thank you for your comment letter. This comment is noted. Please see MR-7 on wildlife movement.

Commenter	Date	Letter	Comment	Response
			impact. 1. Limit construction of the road to certain hours and months, where wildlife movement through the corridor is less. 2. Make the road one-way only, east bound. 3. Close the road, except for emergency evacuation.	
Deborah Eppstein	9/16/22	C15-1	SAFRR appreciates the opportunity to present our concerns regarding the Sonoma Developmental Center DEIR. If you have any comments or questions regarding this letter, please contact Deborah Eppstein by email (deppstein@gmail.com) or phone (801-556-5004). The two articles referenced in the letter are also attached.	Thank you for your comment letter. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Denise Lacampagne	9/16/22	C16-1	I am ordinary citizen that is concerned about the future of Sonoma Developmental Center. I have lived on Marty Drive in the Glen Ellen neighborhood adjacent to SDC since 1976. I own my home. I worked at the Center for 33 years. I am not opposed to reasonable renovation, housing and development. I appreciate this opportunity to share my thoughts. Overall, it has been disheartening and unbelievable to see this report indicate thatthis project, overall, would have less than significant impact in so many areas that seem directly related to quality of life and environmental issues. Already, since the facility has closed, the campus portion has been impacted by the lack of care and upkeep of the grounds as evidenced by overgrown foliage and dying andfallen trees. Although I have reviewed parts of the DEIR, I make no claim to understanding everything, following the format or what some of the references to acronyms and regulations of this tool are. I am the first to admit my comprehension is minimal. I must trust the experts to address the impact of numerous outstanding water, light,noise, climate/environmental, fire safety, traffic, demolition, wildlife and habitat,etc. issues.	Thank you for your comment letter. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Denise Lacampagne	9/16/22	C16-2	3.10-1 indicates this project as having no impact regarding dividing an established community and 3.12-1 speaks to the population growth as less than significant. As I understand this document, a separate development of with 1000 homes, shops, adjacent buildings and businesses and over twice the number of vehicles appears to directly contradict the terms “no impact” and “less than significant”. As proposed, this development would divide an established community. My concerns are primarily the number of homes and businesses that are being considered (along with other Sonoma Valley proposed developments at Hanna Boys Center and Elnoka Lane) and how this will impact evacuation throughout Sonoma Valley and our everyday life in Glen Ellen. As you are well aware, both Arnold Drive and Highway 12 are one lane roads to/from Santa Rosa, Napa or Highway 37. Petaluma and Rohnert Park can only be reached by one lane roads, as well.	This comment is noted. As described on page 318 of the DEIR, while the Proposed Plan does include the construction of linear features or other barriers, such as roads, the emphasis of the plan is on increasing connectivity within the Planning Area and improving linkages between the larger Sonoma Valley communities. As stated in the DEIR, "Such features include car-free circulation options within the site and transportation connections between the SDC site and the larger Sonoma Valley and Bay Area, such as transit access, safe sidewalks and crossings, and regional bicycle routes. Two new intersections on Arnold Drive immediately north and south of the Main Entry Road will be added to improve connectivity to the entire SDC site. The Proposed Plan will also establish a new community bikeway connecting Railroad in Eldridge to Carmel Avenue in Glen Ellen in addition to the development of a multi-use creek trail running parallel to Sonoma Creek that connects to a greater Glen Ellen-Eldridge community bikeway. Further, multimodal neighborhood connections will be added to connect the Campus east and west of Arnold Drive. ... By improving connectivity and land use consistency around the Core Campus and larger Sonoma Valley region, the Proposed Plan would make it easier for residents and employees to travel within the Planning Area and beyond. Therefore, because the Proposed Plan would not introduce any physical barriers to the Planning Area and would generally improve connectivity for all users, including vehicles, bicyclists, and pedestrians, it would result in no impact

Commenter	Date	Letter	Comment	Response
				with respect to physically dividing an existing community."
Denise Lacampagne	9/16/22	C16-3	Please note that references to population and vehicles at Sonoma Developmental Center when it was an active community are skewed. Overall, the number of people that lived there at any time did not drive or own vehicles. They lived incongregate housing. The staff who worked there came in at least 3 separate shiftsand were not on the roads at all times of day or simultaneously.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Denise Lacampagne	9/16/22	C16-4	Fire in this area has been a very real threat. Some tables in the original reports showed the fire line of the 2017 Nun's fire within the SDC grounds. In fact, the fire extended beyond the SDC grounds, burning a home on Burbank St. and continuing along the creek bordering several more homes. During that evacuation, cars were bumper to bumper, taking over two hours to get out of this end of the valley.	This comment is noted. Please see MR-4 on wildfire evacuation.

Commenter	Date	Letter	Comment	Response
Denise Lacampagne	9/16/22	C16-5	Many questions have come up after reviewing pieces of this DEIR for Sonoma Developmental Center. I do have several simple questions that jumped out at me that I am hoping to get direct answers to. 1) I would like to NOTE that the yellow area identified as Eldridge North area on pages 75-76 DOES NOT border on Eldridge South. It is part of Eldridge and the SDC campus. It DOES border on Martin St. which is part of the town of Glen Ellen. Labeling the Martin St., Burbank St., Cecilia Dr., Lorna Drive and Marty Drive as Eldridge has been a confusing and misleading misnomer and continued to not be addressed or corrected throughout the SDC planning documents.Would you please consistently cIarify the correct boundaries in ALL of the maps, tables and ALL documents pertaining to this SDC. 2) Will a barrier/fenceremain in place between the the yellow area identified as Eldridge North on page 76 and the current Glen Ellenn eighborhood where Martin St. and Burbank St. intersect? Will the proposed streets of Eldridge North merge onto Burbank St.? 3) Where exactly does the possible road from the SDC campus to Highway 12 comeout at? How would the cars trying to merge onto Highway 12 be managed? I have personally tried mergingon to Highway 12 past Temelec during an ordinary accident where traffic was at a lengthily, complete stop because of emergency vehicles (not threatened by fire) and other drivers were unwilling to let other cars onto the majort horoughfare. 4) Land Use Classifications indicates that the Institutional area-page 72- Walnut Circle identified in blue on page 76 could allow short term residential housing andevents. What is meant by short term residential housing? What type of additional events other than the types noted for the Historic Core (purple), Firehouse Commons (hot pink) and the MakerPlace (coral) are intended?With these combined events, itis reasonable that a significant number of attendees/tourists/employees will need daily access and egress from the venues as well as convenient parking on campus. How is this traffic generated by other than residential housing, being accounted for in terms of the single road/narrow bridge coming in and out of this campus?	This comment is noted. As outlined on page 520 of the DEIR, "infrastructure facilities would be subject to separate project-level CEQA review as applicable at the time the design is proposed in order to identify any potential project-specific impacts and identify any mitigation as may be appropriate." Therefore, the details and impacts of the proposed Highway 12 connection and any other major infrastructural changes will be outlined in a dedicated CEQA review process. Please see MR-6 for more detail on the transportation analysis. Further comments pertain to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Denise Lacampagne	9/16/22	C16-6	5) There are references Paratransit/Dial-a- Ride options beingpresented. Although, they provide a great service, there are eligibilityand time frame requirements that do not make it simply a matter ofmaking an appointment whenever a ride is needed. Whose oversightwill the proposed Transportaion Management Association(TMA) be under?6) As a resident that lives veryclose to the proposed projectand a retired employee thatsigned annual asbestos waivers,I am concerned how theasbestos issues will becontained during demolition. Isee references to “should, may,could”, but no definitive “willor must” terms.Who exactly will actually bemonitoring and ensuring thisprocess is carried outcorrectly?I look forward to your responses.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Elisa Stancil Levine	9/19/22	C17-1	There is no mention of mercury contamination in the report, and the evaluation of numerous buildings, based on casual visual examination, is suspect. Many of these buildings deemed ingood condition are not. As a historic restoration specialist I find the absence of mention of mercury very concerning, just as I find the minimal testing of actual building materials on the site concerning. I appreciate the detail and depth of the report but must raise a flag for full disclosure and proper testing, thank you.	The comment is noted. Please see Appendix G of the DEIR regarding soil analysis results. The objective of the RBM Surveys was to provide information regarding the presence of RBMs at the site including lead-containing coatings, PCB-containing light ballasts, PCB-containing caulking, miscellaneous universal wastes, and mercury-containing sources, and the presence, location, and quantity of ACMs and assumed ACMs, for the purposes of site planning and decision-making. There were mercury-containing fluorescent light tubes, HID lamps, pressure gages, and assumed PCB-containing light ballasts observed during the assessment. One soil sample was collected from the water treatment plant exterior sink drain location and analyzed for mercury content via CA-ELAP EPA Method 245.1. Detectable mercury was found in the soil sample. The Hazards and Hazardous Materials Impact Analysis starting on page 261 of the DEIR is informed by these assessments. Proposed policies and Standard Conditions of Approval would address potentially significant risks and mitigate them to a less than significant level.

Commenter	Date	Letter	Comment	Response
Elisa Stancil Levine	9/19/22	C18-1	Please explain why mercury contamination is not included in the EPA report. Elisa Stancil Levine, concerned citizenand historic restoration specialist	The commment is noted. See response to comment C17-1.
Elizabeth Crabtree	9/19/22	C19-1	I am deeply concerned by the vague and misleading way that the SDC DEIR addresses the very real and growing risk of catastrophic wildfire and drought in Sonoma Valley. The current proposal to create a densely populated community (with low-ball estimates of the number of future residents—3,000+ is far more likely) on the SDC campus, under the guise of building much-needed affordable housing, is untenable. Such development will create a town with a population over 4 times the size of Glen Ellen, and nearly a third the size of Sonoma, on a relatively small parcel of land, with one way in and out. This ill-conceived development plan puts our community at tremendous risk in the event of an uncontained wildfire. During rush hour, it can take 3-5 minutes to safely merge onto Arnold Drive. Imagine thousands more vehicles on this two-lane country road, trying to flee a fast-moving fire. To the extent that the DEIR addresses the possibility of wildfire at all, it envisions an orderly evacuation with ample time for residents to get to safety—or, if that is not feasible, to "shelter in place." As a survivor of the 1991 Oakland Hills fire, I know that wildfire is neither orderly nor predictable. The 2018 Camp Fire that leveled the town of Paradise came upon the residents so quickly that hundreds of people—including children—were forced to abandon their gridlocked cars (bumper-to bumper on a two-lane road) and "shelter in place" on a concrete pad for hours as propane tanks blew up around them. Those people survived, with severe PTSD; 85 others did not. It is beyond my comprehension that in 2022, in the midst of a years-long drought, knowing what we now know about wildfire risk in California, Sonoma County officials would put forth such an extravagant development plan without adequately considering the danger to its constituents, present and future. Insurance companies have stopped writing policies in high-risk fire areas; we feel lucky to have insurance, but the cost of our policy has doubled in the past year. The County of Sonoma owes its constituents responsible, realistic, honest, and thoughtful planning. This DEIR falls far short of that minimum standard.	Thank you for your comment letter. This comment is noted. Please see MR-4 regarding wildfire risk and evacuation times.

Commenter	Date	Letter	Comment	Response
Fred Hodgson	9/19/22	C20-1	After reading the last SDC plans, I am reminded again that very little thought is given to water. If we are to triple the local population in the near future, where is the water to come from. As we are already restricted and have been off and on for a number years, it seems ludicrous to build hundreds of housing units and very little if any water for them. Please give some thoughts on how this problem will be solved.Thank You	Thank you for your comment letter. This comment is noted. Please see MR-5 regarding the Water Supply Assessment.
Geri Brown	9/19/22	C21-1	The recent proposal for development of the SDC contains a housing element and commercial space that is too dense for the area and is not in alignment with the community engagement process and proposals. The latest plan increases the extensive risks of congested traffic, inadequate evacuation routes, inadequate water sources, encroachment of wildlife corridors and watershed, and is basically just too big for this part of Sonoma County. I live in Oakmont and dread the resulting additional daily traffic congestion along highway 12 and Arnold Drive as a result of over 1000 new homes and 900+ new jobs contained in this latest proposal, especially given our recent wildfire evacuations.This influx of new residents and workers will destroy the peaceful nature of our community. Let's be more creative with the use of SDC and keep in alignment with the community needs. I urge the County to: 1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022.2. Re-draft the County Specific Plan and EIR to describe and analyze the impactsof the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.

Commenter	Date	Letter	Comment	Response
Greg Guerrazzi	9/19/22	C22-1	I am a 28 year resident of Glen Ellen and lifelong resident of Sonoma County. My family has been in the County for over 100 years.I have diligently participated in the SDC Specific Plan process with the local community. It is very apparent that the local community input, guaranteed to be included in the plan by Permit Sonomaand required by DGS, has been thoroughly ignored. The local community feels they have been placated to during this entire process and no longer can rely on Permit Sonoma to conduct a fair, honest and equitable EIR process. Please engage the community in a meaningful planning process for SDC. The draft EIR and records of the community input substantiate that a meaningful and truthful planning process has not been undertaken. Align the County Specific Plan with the State's Request for Development Proposals and adhere to the General Plan, local zoning and historical preservation guidelines. It is very apparent that the County and State are not in sync on this process, which is obvious as the State awaits responses to the RFP due October 24, after the proposed adoption of the EIR.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Greg Guerrazzi	9/19/22	C22-2	I understand that the County of Sonoma is under a State mandate to build many housing units and Permit Sonoma plans to force a large percentage of this housing into the historic village of Glen Ellen by tripling our population. It is the fault of Permit Sonoma and the negligence of our County leadership, that the County is in this dire housing situation due to years of ignorance, denial and favoritism to developers by Permit Sonoma and County leaders. So much so that now the village of Glen Ellen must bear the brunt of the County's woeful housing plans of the last decades. This is completely unacceptable. Would other historic Sonoma County villages, such as, Occidental,Bodega, Graton, Forestviille and others be subject to destruction by adding 1,000 homes? We all agree that housing must be a part of the redevelopment of SDC but at a reasonable level of400+/- units, with all being affordable. The Sonoma Valley does not have a need for a new commercial area as the existing commercial areas are not fully utilized. We all agree that SDC is a unique property of great biodiversity and value to our environment. Thedestruction of this property, and the surrounding area by adding 1000 homes and thousands of people, is a violation of your personal commitments to protect the citizens of Sonoma County. Below are some comments to the Draft EIR:	Thank you for your comment letter. This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Greg Guerrazzi	9/19/22	C22-3	1. The entire Specific Plan process and the resulting EIR are negligent in their approach, rendering them hypothetical. I understand and appreciate that the State has allowed the County to develop a plan, however the County is woefully unprepared to conduct such aprocess, which I have witnessed very closely. Aligning the Specific Plan and EIR with the State's RFP, would increase efficiency, save valuable taxpayer resources, and ensure thorough planning and environmental review. Review of the Specific Plan and EIR must be paused pending completion of the RFP process. 7. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.	This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Greg Guerrazzi	9/19/22	C22-4	2. We spent several hours trying to evacuate Glen Ellen in 2017, on our own accord as there was not notification. The Draft EIR states that only a minute or so would be added to the evacuation timeline with the addition of thousands of people at SDC. How can this be possible? The addition of an evacuation route to Hwy 12 is incomprehensible. History has proven that the fires will come out of the northeast and east and this evacuation route will send people into the face of the fire, rendering this route unusable in an emergency situation. This study is obviously flawed.	This comment is noted. Please see MR-4 regarding wildfire risk and evacuation times.
Greg Guerrazzi	9/19/22	C22-5	3. Building dense housing and commercial space in the wildland fire/urban interface is completely irresponsible. People will perish due to the negligence of this process. 6. Approval and development according to the Specific Plan will result in the densest development in all of Sonoma Valley, completely out of scale with the surrounding area and not in accord with the General Plan. 8. Over 700 market rate homes will not adequately address the dire housing situation created by Permit Sonoma and County leaders. 9. The total number of housing units the County must provide should not be the driving force of the Specific Plan. Simply evaluate the subject property based on the biodiversity and surrounding community. The housing need has extremely clouded this process.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Greg Guerrazzi	9/19/22	C22-6	4. We are under strict water controls in Sonoma Valley, see attached. The entire area is experiencing a severe drought. The Sonoma Valley water supply cannot support thousands of additional people. How can an entire new city be built in an area under severe water restrictions that are expected to remain in place indefinitely? The Draft EIR does not adequately address the water needs of the entire area.	This comment is noted. Please see MR-5 regarding the Water Supply Assessment.
Greg Guerrazzi	9/19/22	C22-7	5. Climate change is real and obvious in our area. Protecting biodiverse lands and precluding over development of areas such as the SDC campus are paramount to survival of the human race.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Greg Guerrazzi	9/19/22	C22-8	10. The traffic study is erroneous and does not address the stress that will be created on Arnold Drive and Hwy 12.	This comment is noted. Please see MR-6 regarding the transportation analysis.
Greg Guerrazzi	9/19/22	C22-9	11. Protection of the Wildlife Corridor is woefully understated. How can thousands of people live and work within yards of a critical wildlife corridor?	This comment is noted. Please see MR-7 regarding the interface with the wildlife corridor.
Greg Guerrazzi	9/19/22	C22-10	12. The Specific Plan and resulting Draft EIR are flawed, and the process must be re-started with preservation of the biodiversity of SDC and the existing community being paramount. Please consider the community and the environment before pushing development on a pristine property.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Linda Hale	9/19/22	C23-1	The following letter was sent to Governor Gavin Newsom and the DGS via Gerald McLaughlin. This letter was also sent to the Sonoma County Board of Supervisors,Senators Mike McGuire and Bill Dodd, and the Sonoma Index Tribune. This letter is written in support of the Sonoma Land Trust's request to engage inmeaningful planning for the SDC by aligning the County Specific Plan with the State's request for development proposals. Stating that no specific plan has been selected and that no mitigations are available for water, traffic, and wildlife is not a viable EIR. To the Office of Governor Gavin Newsom: The Office of the California DGS has rescinded its earlier premature offering of the Sonoma Developmental Center to a developer prior to the completion of an EIR. The 894 acre property has been held as a public trust to benefit both the disabled and the community. It also serves as the major water recharge shed for Sonoma Valley and is directly in the path of Sonoma Creek which crosses Sonoma Valley and exits through Petaluma to the San Francisco Bay. The community recognizes the need for affordable housing, but the proposed 1,000+ home development with only 250 affordable units, a high	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.

Commenter	Date	Letter	Comment	Response
			end hotel, and visitor services as businesses on site ignores the public input andwill be an environmental disaster for Sonoma Valley. The EIR process was fast tracked when the DGS released the property for sale. This is against the law since no project has been designated by the Board of Supervisors norhad the EIR process even been started. The EIR findings were released with thefollowing legal concerns:	
Linda Hale	9/19/22	C23-2	1. Where is the Response to Public Comments in the Draft EIR?	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Linda Hale	9/19/22	C23-4	3. The county is using a "Self-Mitigating Plan" approach. What is the rationale for doing this? How will implementation of mitigations work, since they won't appear in the EIR itself but only as a "condition" of moving forward with development?	This comment is noted. Please see MR-1 regarding the adequacy of a self-mitigating plan.
Linda Hale	9/19/22	C23-5	4. How, when, and through what mechanism will the open space lands at SDC be permanently protected and kept in public hands?	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Linda Hale	9/19/22	C23-6	Also Permit Sonoma states: “Public participation identified three key areas of concernamong the 16 areas studied: open space and wildlife, water, and wildfire risk and evacuation routes. The draft Environmental Impact Report finds that the proposed specific plan would not create significant and unavoidable impacts in these areas.” The problem is that the impacts are significant and unavoidable.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Linda Hale	9/19/22	C23-7	There is really no proposed specific plan. The traffic and water studies were done when the SDC was permanently closed by the state, so no impacts were shown due to low traffic and water use in the area. Permit Sonoma has done the EIR only allowing public	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			comments via zoom and the US Mail with no responses to critical concerns.	
Linda Hale	9/19/22	C23-8	Sonoma Valley is congested. It has two main roads and one of them had to evacuate 1,000s of Oakmont residents by bus during the last fire since there are no exit routes that can handle evacuation traffic. Three other major developments are now permitted between the city of Sonoma and Santa Rosa and in process along the Highway 12 corridor. Traffic in Sonoma Valley is already impacted, especially in the Boyes Springs area and the city of Sonoma with only one road out. People say that they no longer come to Sonoma because of the traffic. And Sonoma County has been sued for not meeting its own emission standards.	This comment is noted. Please see MR-6 regarding the transportation analysis.
Linda Hale	9/19/22	C23-9	Sonoma Valley is already in a state mandated Groundwater Study with well restrictions in place for commercial growth and homeowners' wells being monitored throughoutthe valley. We have asked for a reduction to 450 homes and no hotel. Please intervene before this goes any further. We need the State of California to come forward to protect what makes Sonoma Valley the destination it is and to protect local resources. This development will add a new city to the valley floor, deplete our vanishing water sources, and create urban sprawl. Please consider resources and action to protect a California resource. Thank you for being the Governor of California!	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Heather Gallagher	9/19/22	C24-1	My name is Heather Gallagher, I was born and raised in Sonoma, I now reside in Petaluma California. I have been following the recent planning proposals for the SDC. Since I was a little girl and still now as an adult, Every time I drive thru the SDC I feel a sence of magic. I remember looking out the windows of the car with my brothers as the car drove slowly thru the SDC in the morning or early hours of the evening, we would look for deer grazing on the grassy noles. We almost always saw them and if we didn't we were so sad. Since 1986. I have watched Sonoma county go through lots of changes. Over time things start to settle in and many of the changes years later have a lasting impact on the landscape and environmental impacts that are detrimental to the wild life, water ways and environmental impacts. I haven't seen the full scale of the plans for 1000 residential and commercial spaces planned for theSDC, but I know that if even half that amount were planned that it would be detrimental to the land, environment, wildlife, and the catastrophic effects on Sonomas water will be felt even before the first faucet is turned on in one of the homes. In the 90's I was under the impression that Sonoma developed an act that nothing like this would happen, it seems the laws have changed on expending, and that California is turning a blind eye to the environmental impact. I thought the state adopted a 30 in 30 plan, where we use 30% less resources in 2030. Without doing the research I know that this proposal isn't good enough for the SDC, I know that the detrimental building even half the proposal would be detrimental to the impact of ourlocal city's and county, with demolitions environmental impacts, new water, gas and electricity lines, and all the carsongen is that will be released and pollute the land, the neighborhood and the water directly on the other side of the levee.Please, employ you, to do the research, take the time and the resources to develop a new proposal for the land, get a land grant and work with the community to make better choices. Thank you for taking the time to read this message and consideration your actions.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Holly Hertogs	9/19/22	C25-1	I find it incredulous that the EIR to put 1000 new homes on the SDC would not “ significantly impact” the wildlife corridor, fire evacuate routes and water resources. As usual, it sounds like the County priorities the revenue it will receive by issuing permit fees and property taxes over the safety of current Valley residents and environmental protection.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Jan Bowen	9/19/22	C26-1	The State of California is poised to sell Sonoma Developmental Center to Big Money Developers in order to enrich themselves. As long as there is ONE person standing in the rain holding a sign asking for help, SDC still has a purpose. It's legacy is about helping people, not developers. PLEASE DO NOT ALLOW THE SALE OF THAT PROPERTY. I don't need an EIR to know I don't want to see 1000+ homes appear on the property that was known as Sonoma Developmental Center. There's nothing about that that would make it OK to ravage that land.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Jan Humphreys	9/19/22	C27-1	I oppose this draft EIR 1,000 housing units in the heart of Sonoma Valley and in the middle of the Sonoma Valley Wildlife Corridor will have significant and unavoidable impact on these four main areas of concern: 1) open space/wildlife, 2) water, 3) wildfire risk/evacuation routes, 4) quality oflife for all.There is not enough land in the Draft EIR for protected open space. 1050 + acres should be considered, especially around the campus. The only way to reduce impacts is to adopt a smaller project The "Historic Preservation Alternative" with only 200-300 low income homes. No market rate homes. Strict building guidelines to protect impact to the environment/wildlife.	This comment is noted. Please see MR-8 regarding the adequacy of the Historic Preservation Alternative.
Jan Humphreys	9/19/22	C27-2	The Draft plan does not speak to the hazards of fencing on the campus, which any kind wouldstrongly affect wildlife movement as would the introduction of thousands of people and vehicles.This draft is wrong for SDC.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Jan Humphreys	9/19/22	C27-3	What is needed 1- The protection of more lands than 700 acres 2- a plan to reuse and re-purpose current buildings and not to expand beyond the current footprints. 200-300 low income home max. No market rate housing. 3- allow for non-profits/ trade schools/ oceanic research or other environmental friendly to come and residence, rather than housing. 4- To not allow fences of any kind as all prevent wildlife movement. 5- SDC should remain a park friendly campus with no commercial use or investment. Please reject this Draft and find a smaller, kinder, more protective alternative.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Janet Bosshard	9/20/22	C28-1	Review of the Specific Plan and EIR must be paused pending completion ofthe RFP process. I am very concerned about this beautiful pristine area, extremely needed by wildlife. Also, Highway 12 cannot handle more traffic, especially during emergencies as wildfires, accidents, and earthquakes. there are few alternatives to move people and cars out of the area safely and quickly. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Janet Greene	9/20/22	C29-1	I am very concerned about the SDC property. My position is fewer houses, more low cost housing, and keep the remainder as a wildlife preserve. Increasing the population in this area will impact water, fire response and already crowded roads.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Janet Laurain	9/20/22	C30-1	Who is the applicant for the Sonoma Development Center Specific Plan? Are any developers involved?	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Jeanette & Brett Newman	9/20/22	C31-1	We have lived at the address below for more than 20 years. We are happy with much of the SDC Plan however, weare vehemently opposed to putting 1000 residences on that property for two reasons:1. Wildfire- There are only two roads out of this valley, Highway 12 and Arnold Drive. These roads are alreadyheavily used. In the case of an evacuation I fear the added 2000 cars from these new residences could clog the roadsand lead to life threatening situations.	This comment is noted. Please see MR-6 regarding the transportation analysis.
Jeanette & Brett Newman	9/20/22	C31-2	2. Drought- How do you expect to provide the water for these additional residences with our dwindling water supplies?	This comment is noted. Please see MR-5 regarding the Water Supply Assessment.

Commenter	Date	Letter	Comment	Response
Jessica Strachan	9/20/22	C32-1	Thank you for taking the time to read my email. I have lived in Glen Ellen for the past 20 years, and have just finished reading the draft report on the SDC. As a person that still walks in the SDC every day, raised my children adventuring at the SDC's farm, hikes Camp Via, went to every Halloween parade put on by the SDC residents (and cried and cheered as each house went by)- I am sincerely invested in what happens less than a mile from our family home. We all realize that eventually there will be additional homes to take the place of where residents once lived. However- those residents did not drive- or have multiple cars at their houses. And having the three shifts of the workers cut down on the number of cars that were ever on site at one time, of course- the fires weren't as prominent THEN. In this vein I must tell you that I am very frightened of adding additional homes (cars)- when the fire risk is always high, and our lack of water is a problem. In the past two decades, the environment has so substantially changed that fire season is year round. AND adding houses and cars NOW- with the knowledge that we have, does not seem appropriate. ... I would be happy to discuss any of these issues with you, or anyone else, when possible, but lastly - I have to ask this: Please come and look at Glen Ellen. It is not ready for a fire, and neither is the SDC. Until it is- building any homes is a bad idea. The MOST important part of the plan is the egress to highway 12. It is listed as PROPOSED- but it has to be mandatory because the 2017 fire proved we did not have enough ways to leave Glen Ellen. Thanks again for your time.	Thank you for your comment letter. This comment is noted. Please see MR-4 regarding wildfire risk and evacuation times.
Jessica Strachan	9/20/22	C32-2	I really enjoyed reading the dates of when each structure was built. I love each one. I appreciate the research, although I am a little hesitant reading about the possibility of night construction. Even if it were far away from humans- I don't think all of the animals that you listed would enjoy the vibration and sounds day and night.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Jill Koenigsdorf	9/20/22	C33-1	Hello. I received the draft for the Developmental Center's future in today's email, and it still begs the question: How will Arnold drive accommodate the cars of 1000 new residents??	This comment is noted. Please see MR-6 regarding the transportation analysis.
Jill Koenigsdorf	9/20/22	C33-2	Also: will a viable and critical wildlife crossing be destroyed? Hikers, bikers and dog walkers so enjoy and appreciate this green space and cannot imagine such massive development! Thank-you	This comment is noted. Please see MR-7 regarding the interface with the wildlife corridor.

Commenter	Date	Letter	Comment	Response
Joan Geary	9/20/22	C34-1	The attached compressed PDF file illustrating Sonoma wildlife was created in a two-page horizontal book format. If you have an app that can view a PDF file in a two-page format that would be best. If not, it can be viewed page by page on a vertical basis (please ignore the blank pages in this format). Having spent 18+ years documenting Sonoma Mountain wildlife and domesticated animals on ours and neighboring properties, I created a photographic summary of these beautiful creatures. It is my hope that you areable to utilize this information in helping preserve the wildlife corridors onSonoma Mountain. These thoroughfares represent an extension of the SDC corridor as well as other connecting lands. Please take a few minutes to marvel at the creatures that share Sonoma Mountain. These include an array of birds, mammals, reptiles and more. They deserve the protection of these land and water resources so that they may continueto survive. Just in the last few months 19 acres of neighboring virgin land have been planted with grapes and new fences installed surrounding these acres, as well as cutting off access to a seasonal stream. These directly block the passage of many of thes ecreatures on portions of this 90-acre property. Additional buildings are proposedand will block further areas. This, in addition, to other developing properties and SDC spell disaster for the animals. If you would like to share this with others that are able to help in this fight to save these creatures please feel free to do so. I believe this is a one-of-a-kind visual history of this area.	This comment is noted. Please see MR-7 regarding the interface with the wildlife corridor.
Joan Geary	9/20/22	C34-2	Thank you Brian….hope so…..and up the road (check out what they are doing to the 17700 Carriger property (as well as others)…it is an extension of the SDC Corridor and it is getting cut off.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Joan Geary	9/20/22	C35-1	In response to your email requesting suggestions on how we can further protect the wildlife below are a few ideas: -Require wildlife access to ALL seasonal and ongoing creeks, waterways, reservoirs/ponds-Restrict/limit/ban development impacting free movement along wildlife corridors -Require wildlife easements for all new developments (structural and agricultural) Conduct ongoing reviews by Sonoma County to monitor that these easements are maintained. For example, The Carriger Lane development (former Hanna Property) was required to include a wildlife easement. Was this established in the building plans and is it continued to be followed for compliance issues? -Create a map of all wildlife corridors -Limit/ban fencing that restricts free movement of wildlife-Limit noise/lights in sensitive areas including, but not limited to, breeding and nesting. Additional input: -All recommendations from a biological assessment conducted in conjunction with a new vineyard or agriculturepermit that are incorporated into the permit must be reviewed and enforced. For example, if fields are to bedisturbed during nesting bird season and the property owner is required to conduct a survey 7 days in advance of any ground disturbance and that study should be submitted to either the Ag Commission or Permit Sonoma. There does not appear to be sufficient follow-up after initial biological assessments are filed by owners. -Design review and planning for any new homes in the Taylor/Sonoma Mountain corridor should take into account wildlife needs when approving the location of buildings, setbacks from creeks, fencing and potential noise and lighting impacts.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Joe Lieber	9/20/22	C36-1	Introduction: Almost without exception, the plan is opposed by very many individuals and organizations. This should be asign that something is wrong, one would think. The County keeps pointing to the State as the one who is controlling the direction of the planning. Our State legislators chose not to do anything to improve the situation. This will have a massive impact upon our valley and it is wasting a great opportunity to make things better if it were not solely driven by what a developer would want. This is ass-backward as the saying goes. I have contacted Governor Newsom about this with hopes that he can intervene. After all, the State has a huge surplus and using some of this would greatly improve the outcome of the plan. Let’s think out of the box, please. Specific Comments: With the understanding that we should not be confined to the boundaries of the present plan here are some of my additional	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			comments: • Look at this as a wonderful opportunity to do something great rather than sticking to the general formula of developing a plan that would be appealing to a developer. Perhaps set up a non-profit that would handle the project similar to what was done at the San Francisco Presidio. If we had spent the last 3 years developing such an entity, we would not be in the present situation.	
Joe Lieber	9/20/22	C36-2	• All new housing should be "affordable" as there is such a huge need for this not only in the Valley but in the entire state. The numbers of units should be dictated by what the area can broadly comfortably absorb (water capacity, sewer capacity, road capacity, fire safety and so on). • This should be seen as a opportunity to solve other problems such as training people for good-paying jobs. Perhaps the SRJC or some other educational organization could set up a satellite campus for thispurpose? • Perhaps there could be some high-tech businesses set up to bring in good paying jobs? • Homeless services are a possibility, but are very controversial. To me, it is preferable to get people into homes so that these services would not be needed. • Some of the state's huge budget surplus should be used to make the SDC responsive tothe community's needs and the needs of average people who cannot afford to live here. This can also be a means of addressing homelessness as it is caused by the lack of affordably of housing in this area. We are spending millions of dollars on the homelessand not solving the problem. Let's take a bigger picture approach and, again, the SDC is a gift in this regard. So, in general, I am not commenting on numbers of units, etc. but instead have concerns about the general direction this is heading.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Joe Lieber	9/20/22	C37-1	Without getting into the weeds as the saying goes, the big picture is what concerns me. There are so many problems with the way this study has been conducted. Here are a few: • It has been strongly driven by what a developer would want, not what the communitywants. This is wrong! The County always points to the State as the driver of this. The State needs to be pressured to do the right thing. After all, the state works for us, right? • This is a HUGE opportunity to address the state's and the country's affordable housing issues. The myopia of this study is numbing! From this standpoint, this is not only a local valley issue. • Some of the state's huge budget surplus should be used to make the SDC responsive to the community's needs and the needs of average people who cannot afford to live here. This can also be a means of addressing homelessness as it is caused by the lack of affordably of housing in this area. We are spending millions of dollars on the homeless and not solving the problem. Let's take a bigger picture approach and, again, the SDC is a gift in this regard. • Adding to the myopia issue, this project should not be viewed within its own bubble, but, instead it should be viewed within the context of the massive housing issues we have. Again, having this driven heavily by what a developer wants is not the right way to look atthis. This should be seen as an opportunity to solve some significant problems in the area. Are there sources of funds that could subsidize the project so that it can be solely affordable housing, for example? After the tons of money that has been spent on checking the boxes (this study), let's instead step back and take a broader view of this. • There does not seem to be any evidence of creative thought with this study. It is way toomarket driven for something that should be of a public benefit. After all, this is the taxpayer's property.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Jon Greenslade	9/20/22	C38-1	Supervisor Gorin & Mr. Oh, I am writing this email in support of the Permit Sonoma planwhich proposes building the most housing & work opportunities at SDC. SDC has been a source of employment and housing for this community since its inception and it is completely in line with the needs of our community to continue using it along thoselines. Development at SDC will help our community in many ways, most importantly in providing housing, employment, and bolstering education opportunities at our schools. I work in Sonoma Valley & live off Madrone Road with my wife & raised our 4 children there since 2003 when we sold our affordable housing unit off Broadway in Sonoma to buy a house in the Rancho Madrone housing tract. When we first moved up here 25 years ago, our first apartment was the large apartment complex on Madrone Road. This area is theright area for more housing, both affordable & for first time home buyers. The Rancho Madrone tract is a mix of relatively large apartments, smaller, ~1000sq. ft. homes like mine that are generally considered "starter" homes, and larger homes. The mix of the 1000 units planned for SDC seems to fit in perfectly with the character of the Rancho Madrone tract, probably SDC's closest neighborhood. When I first got a job up here in the Valley, the Madrone Apartments was one of the few places myself & my then pregnant wife could afford to live in. Later, when our family expanded to 6, the affordable housing units on Marcy Court allowed us to start to build equity and to be able to live and work in this community. After we built up equity, we were able to sell our affordable housing unit & buy one of the modest homes in the Rancho Madrone tract. The development of SDC will allow others to follow the same type of path we were fortunate enough to have.	Thank you for your comment letter. This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Jon Greenslade	9/20/22	C38-2	SDC is the perfect location for many jobs that seem to pay decently and be abundant in our area, especially warehouse & storage facilities jobs. During my 27 years living here in the Valley, I have been fortunate enough to be able to work closely to where I live, sometimes close enough to bike to work. Many SDC employees have lived in the Rancho Madrone tract over the years. Work opportunities at the new development at SDC will give many others that same opportunity. Assuming many of those jobs will be blue collar-type jobs, this is a tremendous opportunity for average working people. Many people in the Valley have amore "white collar" type job that might allow them to afford a larger house in this area and to have an office or work from home in this area, but that generally is not the case for many of the types of jobs that	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			would be created at SDC, so having affordable housing there will be a great opportunity for them.	
Jon Greenslade	9/20/22	C38-3	Building more homes at SDC will give families a better chance of being able to afford to live in this Valley. Having raised 4 kids through the local public schools, it is no secret that this is not the type of area where young families start out and our schools generally reflect that with lower enrollment and parent participation, partially due to parents having to work further from where they live. Dunbar, the school closest to SDC, has seen both the decline of families living in its area & the "white flight" of many families there choosing to send their children up to the Kenwood School District, as Dunbar had to enlarge its boarders to findmore children to fill its school as enrollment declined. Having more young families and allowing them to live where they work will create more opportunities for parents to be more active in their children's schools and bring more children to our schools. Having development at SDC that can pay for itself is also the fair thing to do. While I enjoy the feeling of walking our dog around Lake Suttonfield in almost complete solitude, I can in no way say it is fair for the taxpayers of the State, County, or Valley pay for me to enjoy such privilege. People could choose to create a special district and tax themselves to keep SDC exactly as it is, but no one is willing to do that. It is only fair that the development, care & upkeep of the SDC area come from development at SDC. Our State & County have more pressing financial needs such as schools, roads, and homeless than to pay for a property in one of the more exclusive and valuable land areas in the State. Those opposing having more people live in their backyard have thrown almost anything that they thought would stick against the wall to stop this development. They are well involved in the community, vocal and organized, but I do not feel they represent the best interest of our community on this issue, especially when you take into account how unaffordable it is to live in our community and state. I applaud	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			you and Permit Sonoma for forging ahead with a plan that offers solid housing and working opportunities for all. Thank you	
Juliet Langley	9/20/22	C39	I am writing to ask you to urge Sonoma County to engage in meaningful planning for SDC - to align the County specific plan with the State's request for developmental proposals. Specifically, to re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide. As I understand it, earlier this month the County released its draft Environmental Impact Report and draft Specific Plan for SDC. And, despite the Board of Supervisor's direction to pursue a specific plan with fewer than 1,000 home, the drafts propose 1,000 residential units and extensive commercial development. : Align the County Specific Plan with the State’s Request for Development Proposals The draft specific plan fails to respond to the challenges of our time—including wildfire, drought, and biodiversity loss. Further, because the Specific Plan and EIR were released before the State selected a development proposal, the Specific Plan is hypothetical. Neither it nor the EIR disclose the characteristics or environmental impacts of the proposal that will ultimately be accepted by the State. I believe it is critical that review of the Specific Plan and EIR must be	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.

Commenter	Date	Letter	Comment	Response
			paused pending completion of the RFP process. Aligning the Specific Plan and EIR with the State's RFP, would increase efficiency, save valuable taxpayer resources, and ensure thorough planning and environmental review. Thank you in advance for your attention to this matter.	
Justin Beck	9/20/22	C40-1	In 2000, the main building of the Sonoma Development Center was listed in the National Register of Historic Places. I am not sure if the new plans involve demolition of the building but just imagine if California had historical buildings like other interesting parts of the world instead of a bunch of lifeless, soulless money-comes-first structures. Just imagine for a moment.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Karen Robidoux	9/20/22	C41-1	please put me down for a no to your plan. This little community can not support 1000 housing units.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Kate Cooper	9/20/22	C42-1	Good morning, I am concerned about the proposal to build a substantial amount of homes and buildings at SDC. This site is a critical wildlife corridor, and protecting this corridor should be the top priority. These wildlife corridors are dwindling, but are so important and relied on by species we need to protect. Therefore, I urge the following:	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Kate Cooper	9/20/22	C42-2	1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. 2. Re-draft the County Specific Plan and EIR to describe and analyze the impactsof the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide. Thank you for your consideration.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.

Kathy Pons	9/20/22	C43-1	I just finished watching the video of the joint CAC and MACs meeting on August 24th. That was a long one! I wanted to let you know that I thought your presentation was very professional and personal. I know you and others have done a LOT of work on this project and seem to be between a rock and a hard place....Would it help if there was consensus among the community? If the community could get behind the "Historical option" with 450 units, could that "footprint" fly? Who wouldn't like it? If it became the "Specific Plan", I understand that would be for 20 years... but how specific does the plan need to be? Could there be changes made as needed? There are always changes to the General Plan or other specific plans too...right? So if the plan starts out on the smaller side (450 units) as a precautionary attitude, maybe after 10 -15 years it is shown that this number works and there may be a need for more units, could this be remedied up to 1000 in steps? We would be able to see how the water supply works, what kind of jobs might be on campus, setbacks from the creek and wildlife corridor could be increased initially and I believe that the 450 number of units is considered economically feasible...This Historical option may also increase the possible re-use of existing buildings too. What do you think? Appreciate your answer.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Chris Gralapp		C44-1	Commercial Cannabis Projects Violate the Bennett Valley Plan. The Board of Supervisors adopted the Bennett Valley Plan (BV Plan) in 1979 with a goal of preserving and protecting the traditional rural character and natural environment of Bennett Valley. The BV Plan was supported by a full environmental impact report. Its area-specific policy requirements were adopted to avoid significant environmental impacts within Bennett Valley. Policy LU-1a of the General Plan states: A Specific or Area Plan may establish more detailed policies affecting proposed development, but may not include policies that are in conflict with the General Plan. In any case where there appears to be a conflict between the General Plan and any Specific or Area Plan, the more restrictive policy or standard shall apply. The BV Plan has three unique features that are pertinent to commercial cannabis development.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Chris Gralapp		C44-2	Commercial Marijuana Development Violates Land Use Policy 2 of theBennett Valley Plan.Land Use Policy 2 of the BV Plan provides “Commercial developmentis not considered appropriate to the rural character of Bennett Valley(emphasisadded).” U.S. Attorney McGregor Scott in Sacramento describes marijuanagrows as“industrial agriculture.”1The processinvolves manipulation and processing of plants as much as growing them. The Cannabis Ordinance, § 26-02-40, defines “cultivation” as commercial cannabis activity. A letter from Adam Brand, Sonoma County Deputy County Counsel, to Kevin Block (January 18, 2019, pp. 2-4) concluded that that any use permit is by law “development.”Growingcannabis commerciallyis obviouslycommercialdevelopment. Thisinevitable conclusion was drawn by Commissioner Greg Carr during the November 2019 BZA hearing for 4065 Grange Road.On April 10, 2018, Supervisor James Gore remarked at a Board of Supervisors meeting that acommercial cannabis operation on Lakeville Highway was "definitely commercial industrywithin a small area with a lot of neighborhood impact."2Commercialcannabis operationsareboth in fact and in law commercial development, and violateLand Use Policy 2.They do not belong in Bennett Valley.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Chris Gralapp		C44-3	Under Land Use Policy 3 Commercial Marijuana Development Cannot Be Approved in Bennett Valley Without Enhanced Law Enforcement. Under Land Use Policy 3 (“Development shall be coordinated with the public's ability to provide schools, fire, police and other needed services”), permitting commercial marijuana in Bennett Valley must be coordinated with improved law enforcement. Cannabis businesses attract crime, and § 26-02-140 of the Cannabis Ordinance notes that growing cannabis poses unique risks to the health, safety, and welfare of residents.3 Home invasions related to marijuana grows are increasingly common in Sonoma County, and the risks of criminal activity is a major concern to Bennett Valley residents. Non-growing neighbors have been terrorized when the “wrong” home was invaded. Crime increases in the immediate neighborhood where cannabis businesses are located and in adjacent areas. While no one can predict which homes and individuals will be victimized, statistically, it is much more likely that residents of Bennett Valley will become crime victims if a commercial cannabis operation is located there. There are already insufficient sheriffs on duty, especially at night when home	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			invasions tend to occur. It can take thirty to forty-five minutes for a sheriff to respond to a call. According to the Sheriff's office, since 2013 ten marijuana-related murders and 22 marijuana-related home invasions have been reported in the unincorporated areas of Sonoma County. During the past 18 months, 59 marijuana-related crimes were reported (five per month) that do not involve murder or home invasions. These numbers would increase substantially if data from the county's nine cities were included.	
Chris Gralapp		C44-4	Commercial marijuana grows open the door to a dangerous activity in Bennett Valley that is inimical to the polices in the BV Plan. The county recognizes the dangers of marijuana cultivation when it comes to protecting its own employees. In eliminating the mandatory minimum 24-hour notice for an inspection of a cultivation, the code enforcement staff "for safety" will still call in advance so the visit is expected."4 The county is rightfully concerned for the safety of its staff, but lacks concern for residents. The county has done nothing to improve public safety while inviting widespread commercial marijuana cultivation in Bennett Valley. For example, the county might establish a sheriff's substation in Bennett Valley at the fire station to reduce response time. The county might ban permits on properties located on shared access roads as a means to minimize home invasions of non-growers. Ordinary residents should not have to share milelong dead-end roads with growers.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Chris Gralapp		C44-5	Bennett Valley Plan's Development Guidelines Require Adequate Roads. The Planning Director must find for any development located in Bennett Valley that "private streets and driveways, both existing and proposed, are properly designed." Under the plain language of the BV Plan (p. 21), the requirements for existing and new streets are identical. Thus, the county's argument that developments on older, pre-1991 roads (but not driveways) are exempt from the	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			CalFire SRA Fire-Safe Regulations does not apply to roads in Bennett Valley. Under the BV Plan, both existing private roads and driveways where development occurs must meet new road requirements. There is no exemption for commercial cannabis operations. Existing private roads that serve new development and are under 20 feet wide must be substantially upgraded to new street standards.	
Chris Gralapp		C44-6	There Are Too Many Commercial Marijuana Projects in Bennett Valley. Since 2017, thirteen marijuana projects have been proposed in Bennett Valley (Table). Many, for now, are not going forward but could be resurrected. Bennett Valley has about 1.3% of Sonoma County's land, and about 6% or more of the proposed commercial marijuana projects. This is far too many and reflects gross over-concentration.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Chris Gralapp	September 19, 2022	C45-1	On behalf of the Bennett Valley Community Association (BVCA) and the residents of Bennett Valley, the BVCA Board of Directors wants to express its concerns about the Draft EIR and Specific Plan for the Sonoma Developmental Center (SDC). The BVCA was established in 1970 and is dedicated to promoting and preserving the rural, residential character and natural environment of Bennett Valley. Specific Plan Policies Do Not Provide Sufficient Protection. The centerpiece of this planning effort is a specific plan, which is intended to adopt area-specific policy requirements to avoid or mitigate significant environmental impacts within the plan's boundaries. Bennett Valley residents are familiar with how the county implements such plans. The attached Bennett Valley Area Plan was adopted over 40 years ago and, like the SDC Specific Plan, was supported by an environmental impact report. Policy LU-1a of the General Plan states "a Specific or Area Plan may establish more detailed policies affecting proposed development . . . where there appears to be a conflict between the General Plan and any Specific or Area Plan, the more restrictive policy or standard shall apply. Our experience in Bennett Valley is that the supposed protections offered in an area plan can be illusory and unenforced. Land Use Policy 2 in the Bennett Valley Area Plan provides "Commercial development is not considered appropriate to the rural character of Bennett Valley." Yet PRMD and county counsel distort the plain words and concluded that commercial cannabis development and operations are not "commercial development." In addition, any new structure must undergo design review to preserve scenic vistas and corridors. The county has	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			decided that large and unsightly hoop houses that can be in place six months each year need not undergo design review. Residents who think the SDC Specific Plan contains policies that forbid or regulate certain activities may learn that the county has made a closed-door decision that is the opposite of any logical interpretation of the plan's provisions.	

Commenter	Date	Letter	Comment	Response
Chris Gralapp	September 19, 2022	C45-2	Evacuation Issues. The BVCA endorses and incorporates by reference the comments filed by the State Alliance for Firesafe Road Regulations on September 13, 2022. About 30% of the land area of Sonoma County has burned since 2017, making wildlife and evacuation issues paramount. Although the DEIR acknowledges that 95% of wildfires are caused by human activity (p. 500), it fails to analyze the extent to which 2,500 new residents, new hotel guests, and new business patrons will exacerbate this risk. All four criteria from the CEQA checklist for Wildfire (XX) would create a significant impact. The DEIR ignores that areas downwind from or adjacent to high or very high fire hazard zones can be consumed by wildfires, as experienced recently in Sonoma County. The 2017 Nuns fire consumed areas near the SDC that are rated as moderate fire hazard, and this occurs across California. Hoping that much of the area is safe because it is only in a moderate fire hazard zone is not a strategy. The DEIR concludes that the proposal would increase wildfire risk to new residents and visitors, but only proposes policies for future consideration without requiring mitigation measures. The DEIR fails to describe existing wildfire hazards or properly analyze potential impacts. It is impossible to evaluate evacuation safety and the associated impacts on existing residents and employees when no baseline is provided for their evacuation utilizing the same routes. We know from the 2017 Nuns Canyon Fire, 2019 Kincaid Fire, and 2020 Glass Fire that Highway 12 was blocked, with traffic often at standstill for hours. The proposal jeopardizes the lives of Bennett Valley residents who need to flee from a fire driving east to Sonoma Valley using Route 12 or Arnold Drive. Moreover, because those routes are known bottlenecks, residents of Sonoma Valley might elect to escape a conflagration by driving west using Bennett Valley Road or even Sonoma Mountain Road. This could congest the escape routes for Bennett Valley residents who need to flee to the west.	Thank you for your comment letter. This comment is noted. Please see MR-4 regarding wildfire risk and evacuation times.

Commenter	Date	Letter	Comment	Response
Chris Gralapp	September 19, 2022	C45-3	The evacuation analysis for Bennett Valley needs to include the fact that during normal conditions Penngrove has become a chokepoint for traffic because of massive housing developments along Petaluma Hill Road. The Board of Supervisors has recognized this problem and recently approved the "Railroad Avenue traffic circulation study." The evacuation route for Bennett Valley residents via Petaluma Hill Road toward Penngrove is already compromised. The DEIR's lack of subregional traffic circulation studies to identify such problems, let alone mitigate them, jeopardizes not only Bennett Valley residents but also the thousands of others sharing these evacuation routes. This violates Public Safety Goal PS-3 of the Sonoma County General Plan ("prevent unnecessary exposure of people and property to risks of damage or injury from wildland and structural fires"), as well as Objective PS-3.2 (new development must minimize fire hazards to acceptable levels). The conclusion that the proposed development would not substantially impair an adopted emergency response plan or evacuation plan (p. 511) is unsupported and contradicted by experience. We know that Highway 12 already gets rapidly congested during mass evacuations, turning it into a parking lot for hours. Depending on the direction of the fires, residents may either need to evacuate south, thus combining with traffic from Boyes Hot Springs and Sonoma, or north, with additional traffic from eastern Santa Rosa. To conclude that adding thousands more people would not impair existing evacuation is incomprehensible. Emergency alarm systems are now implemented (e.g., during the September 13, 2022 earthquake), and residents will flee simultaneously. Assuming that a maximum of 65% of residents would evacuate in the first hour (Figures 3.16-3 and 3.16-4) is unrealistic. The fire may be upon them within the hour.	Thank you for your comment letter. This comment is noted. Please see MR-4 regarding wildfire risk and evacuation times.
Chris Gralapp	September 19, 2022	C45-4	A shelter-in-place facility is never a first choice; studies have shown that people want to flee a fire, not let it burn over them. Most fire professionals say that shelter-in-place is a last resort and emergency plans cannot rely upon it to mitigate fire risks. Fires kill people with smoke and oxygen deprivation, not just flames. The proposal has not mitigated the potentially significant impacts related to wildfire.	Thank you for your comment letter. This comment is noted. Please see MR-4 regarding wildfire risk and evacuation times.

Commenter	Date	Letter	Comment	Response
Chris Gralapp	September 19, 2022	C45-5	Normal Traffic Circulation in Bennett Valley. The proposal will force more traffic onto the few east-west arterial routes in Sonoma County, especially Bennett Valley Road and Sonoma Mountain Road. The most recent Bennett Valley Road study was done in 2011, when over 3,500 vehicle trips were recorded per day. There is no adequate sub-regional traffic circulation study of these impacts. Bennett Valley Road is notoriously tortuous, especially the section between Warm Springs Road and Walker Road. More traffic on this section would be especially dangerous. The portion of Bennett Valley Road that approaches Santa Rosa has had 5 investigated accidents during the last six months, and scores in recent years. The BVCA is very concerned about increases in these already unacceptable statistics. The DEIR concludes there will be significant and unavoidable impacts regarding increased traffic, and proposes no mitigation. This is unacceptable.	This comment is noted. Please see MR-6 regarding the transportation analysis.
Chris Gralapp	September 19, 2022	C45-6	Conclusion The DEIR and Specific Plan ignore the unenforceability of specific plans and gives short shrift to evacuation issues and general traffic issues in Sonoma Valley and Bennett Valley. It must be revised to address them. The proposal risks not only the lives of future residents of the SDC, but also residents of Bennett Valley. The DEIR ignores current and potential wildfire risk factors and assessment methods, and bizarrely dismisses them as insignificant. We recommend drastically reducing the number of housing units and eliminating hotel and new businesses.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Craig S. Harrison	September 19, 2022	C46-1	The proposed specific plan inherently fails to mitigate environmental impacts. In Bennett Valley the County arbitrarily refuses to implement our area plan, despite the requirement in Policy LU-1a of the General Plan whereby the more restrictive policies in a specific or area plan apply if there is a conflict with the General Plan. The Bennett Valley Area Plan forbids commercial development in Bennett Valley (Land Use Policy 2), yet the County supports and encourages commercial cannabis development and operations there. The plan also requires new structures to undergo design review to protect our bucolic viewsheds, but the County allows ugly hoop houses without design review because they are taken down during winter. Thus, according to the County, the viewsheds of Bennett Valley residents are protected only for 6 months of any year. This violates the plan and insults the intelligence of anyone who is not a county employee.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			For these reasons, any mitigations in the proposed Specific Plan for the Sonoma Developmental Center fail to meet the requirements of CEQA.	
David Eichar	September 19, 2022	C47-1	in significant impact on wildlife. This area is a wildlife corridor. As wildlife currently traverse this area, the addition of vehicles in this area would disrupt the wildlife movement. This is especially true during construction. It is best not to add this road. If the road is built, despite the significant impact, then the following mitigation measure can be taken to reduce the impact. 1. Limit construction of the road to certain hours and months, where wildlife movement through the corridor is less. 2. Make the road one-way only, east bound. 3. Close the road, except for emergency evacuation.	This comment is noted. Please see MR-7 regarding the interface with the wildlife corridor.
Jerry Bernhaut	September 19, 2022	C48-1	The SDC Campus Project has proposed the adaptive reuse of five of the existing residential buildings in the southeast corner of the SDC Campus for affordable co-housing. This would serve the needs of low wage workers currently forced to make long commutes to jobs in the Sonoma Valley due to housing costs and the needs of other people for basic housing. This proposal has been submitted to Permit Sonoma. Thus far the County has declined to give this proposal any consideration. The buildings proposed by the SDC Campus Project for adaptive reuse are in the area designated as the Agrihood District on the Specific Plan maps. The Agrihood District is envisioned as a new neighborhood that is a nod to historic agricultural lands with physical and visual connections to the historic agricultural areas, low-impact development at a lower intensity, and a smooth visual transition between higher intensities to the west and the agricultural open space at the east. The clear implication is that existing buildings in this area will be	This comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
			demolished. The adaptive reuse of the former residential buildings for affordable co-housing would be consistent with the vision for this area. Adaptive reuse of existing buildings is environmentally superior to new construction when the energy use and GHG emissions from the mining, processing, transportation and assembling of new materials are considered. Adaptive reuse can also be more cost effective if done properly by people with experience in this type of construction. Permit Sonoma should at least have provided some evaluation of this proposed alternative to new construction.	
Jerry Bernhaut	September 19, 2022	C48-2	An agency may not approve a project that will result in significant impacts unless it first finds that mitigation measures or alternatives are infeasible. (PRC section 21081; Guidelines 15091, 15093) The Supreme Court of California decided that considering alternatives is one of the most important functions of an EIR (Wildlife Alive v. Chickering (1976) 18 Cal.3d 190, 197) Without evidence why the alternatives are insufficient to meet the project or CEQA goals, meaningful analysis is impossible. An EIR must "explain in meaningful detail the reasons and facts supporting the conclusion." (Marin Municipal Water Dist. V. KG Land Corp. (1991)235 Cal.App.3d 1652,1664) The SDC Campus Project proposal will serve the goal of providing affordable housing, which was emphasized in State legislation as one of the primary objectives for the future use of the SDC site. The SDC Campus Project has presented a credible cost-benefits analysis of this adaptive reuse co-housing project. To comply with the requirement under CEQA that a lead agency must evaluate a reasonable range of alternatives, Permit Sonoma must either include the SDC Campus Project in its SDC Specific Plan or present evidence why this project is insufficient to meet the SDC Specific Plan or CEQA goals. The EIR must set forth the alternatives necessary to permit a reasoned choice and in a manner that will allow "meaningful evaluation". (Guidelines 15126.6(a),(d),(f); San Bernardino Valley Audubon Soc. Inc. v. County of San Bernardino (1984) 155 Cal.App.3d 738,750-751).)	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Josette Brose-Eichar	September 19, 2022	C49-1	As it states that the Historic Preservation Alternative is environmentally superior, why is it not considered in the DEIR? As there is really no definition of what is required for financial feasibility, how can any plan then be considered or analyzed with an EIR? The lack of what is required for this so called financial feasibility makes it hard to understand why an assumption of 1000 to possibly 1200 homes or residential units, and a very large tourist hotel are what is being spelled out as the basis for this EIR. The starting point seems to be that this much market rate housing and a large hotel must be the only plan and the only one addressed in the EIR, even though it is not known what the actual costs are and what a developer will want as a return on this project. And what about the state's financial responsibility for this site?	This comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.
Josette Brose-Eichar	September 19, 2022	C49-2	The impacts on water use and needs are totally unrealistic. Planning and mitigation for a water shortage are just pushed to the future which is not allowed in an EIR. For a project this size the EIR does not take into account how much water will be needed for all the planned residents, tourists, employees. There is no analysis of what our local water districts have now and if they could support it. The EIR seems to rely on the two existing reservoirs. All you have to do is take a hike around them right now to see how low the water level is. Climate change is the new normal, more heat and less rain. Climate change is not factored into this EIR in relation to water usage. Why would an EIR not have the mitigation of recycling water in it right now? Should not all water be recycled and used on site be mandated in the EIR?	This comment is noted. Please see MR-5 regarding the Water Supply Assessment.

Commenter	Date	Letter	Comment	Response
Josette Brose-Eichar	September 19, 2022	C49-3	Vehicle miles traveled is also given an unrealistic treatment. The simple fact that if you have a luxury hotel you will have hundreds of lower wage workers driving from other locations every day, in addition to the residents of the 1000 to 1200 homes, and any other employees of commercial use at SDC. As most people can not afford housing in the valley today, having only 25% of the housing as affordable in no way assures these employees will be housed on the SDC campus. It guarantees that they will be driving long distances from other locations. I see no real mitigation for these facts as it relates to VMT. Real measures would include mandated changes to public transportation, if the development is as large as planned. Or that actual affordable housing be included in the plan specifically for the low wage employees at the SDC site. The planned connector road to Highway 12 is shown as being needed for fire evacuation. This road would only be environmentally sound as it relates to the campus being a wild life corridor if it was a gravel road, with no lighting and only used for fire evacuation and closed at all other times. Then there is the simple fact that it will be useless in a real fire. Simply routing two or three thousand people over to Highway 12 will do nothing if the fire behaves as it did in 2017, from east to west, in addition to from the north. And given what we have seen with wild fires since 2017, the situation could be even worse.	This comment is noted. Please see MR-6 regarding the Transportation Analysis.

Commenter	Date	Letter	Comment	Response
Josette Brose-Eichar	September 19, 2022	C49-4	I know that we are to keep our comments on the DEIR and not the Specific Plan, but it still baffles me why we have this plan, when almost no one in the valley wants, nor do we need an other large tourist hotel and another 700 or 800 units of market rate housing for wealthy or second home owners. Would we be not be better served economically and environmentally by adapting and saving what we have and creating all affordable housing for those that already live in the Sonoma Valley? And let's be realistic, market rate is not for the so called "missing middle". I have crunched the numbers based on actual real estate values and these market rate homes would have to sell for under $600,000 to be for those at 120% AMI. We all know that is not what two bedroom homes are selling for in the Sonoma Valley, nor would any for profit developer build with that as the selling price.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Lauren Reed	Thursday, September 15, 2022	C50-1	Please do not support the SDC Specific Plan or DEIR as proposed by Permit Sonoma. The DEIR does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by few actual requirements and many vague words such as “promote” or “encourage” or “if feasible.” The DEIR needs to be revised and the Conditions of Approval strengthened and moved into a legally enforceable Mitigation and Monitoring Program. Instead: Scale back size of development to 450 or fewer homes and require that most or all of them be affordable to the majority of people who live in Sonoma Valley. Eliminate the hotel, retail and commercial space that is already provided in Glen Ellen. Protect Open Space by providing enforceable timeline, boundaries and actions for permanently preserving open space and keeping it in public hands. In the DEIR, analyze the impacts of and add enforceable measures to reduce impacts of proposed new uses in the open space including agriculture, agricultural processing, tasting rooms, farm stands, recreation, parking lots, geothermal development and sports facilities (see Table 4-3 of Specific Plan). Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed. Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new county wildfire risk and hazard maps. Revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as reusing and demolishing fewer buildings and providing transit.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Lawrence A. Wilcox	Monday, August 22, 2022	C51-1	Certainly have some respect for the land and open space. We are in a serious drought situation and Sonoma County can only think about tax dollars, but that has always been the mantra of Sonoma county officials. We live in one of the most beautiful lands in California and that is a tribute to those in continue to fight, donate,	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			and encourage the development of open space, trails and wildlife corridors. Stop the incessant development of mega homes and shopping areas and get outdoors.	
Lena Chyle	Friday, August 19, 2022	C52-1	Please do not rush the planning of the SDC. It could be a wonderful addition to our county but needs to be approached with a thorough, realistic and meaningful process that includes, amongst many considerations, wildfire, drought and bio-diversity. Please engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. Also please re-draft the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.	This comment is noted. Please see MR-2 regarding the RFP timeline.
Linda Curry	Wednesday, August 24, 2022	C53-1	Congratulations on compiling alot of data and public feedback into SDC Specific Plan. Just a little confused at the magnitude of the housing element proposed as most of the community input I remember seeing/hearing said that 400-500 units is the maximum density tolerable to the existing community when considering impacts to traffics, schools and services. However, if 500 out of the 1000 units are going to be used as housing for those that were displaced from SDC or newer clients with similar needs, I think a high density structure that assumes residents that will neither drive or require individual cooking accommodations could be a possibility. In no case should the emphasis shift from low income housing to market rate mini mansions. Keeping the wildlife corridor intact and stream protections for Sonoma Creek can only enhance the health of the watershed and regional community. However, any plan must consider impacts on transient wildlife and one element had the Maker element positionned where wildlife would undoubtedly be disturbed by the noise and dust of any creative work. No point in having a corridor if you are going to scare wildlife away.	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Linda Curry	Wednesday, August 24, 2022	C53-2	I am concerned that with the shift in State timeline for the RFP being extended to 9/9/22, the timeline for draft specific plan and EIR should be adjusted accordingly so that the documents can reflect the potential of qualified proposals for the facility. Less than 2 weeks for review of specific plan and EIR is too tight a schedule to allow the thorough review and careful consideration that many members of the community who have been involved thus far would need for comment. Why end comments for specific plan today and extend comments for EIR till 9/23? Why not pause the whole review process until the State selects qualified proposal so that we are talking about what is actually proposed for the site? I know I have only had time for specific plan review and that has been less than I would usually devote to a project of this magnitude. Sonoma Development Center is a jewel that has served Sonoma County and the State for over a century. After the careful collections of public concerns since 2018, it seems more than a little strange that there should be the last minute disconnect between county and state processes. Please get them back into tandem so that Sonoma County does not miss out on the biggest opportunity this generation will have for continuing our traditions of forward thinking, environmentally sensitive public planning while serving the State in relieving them of a burden. For goodness sake don't let the neglect that was shown in the Community Hospital property handoff be the model for this project. Too much is at stake.	This comment is noted. Please see MR-2 regarding the RFP timeline.

Linda Hale	Saturday, August 20, 2022	C54-1	This letter is written in support of the Sonoma Land Trust's request to engage in meaningful planning for the SDC by aligning the County Specific Plan with the State's request for development proposals. Stating that no specific plan has been selected and that no mitigations are available for water, traffic, and wildlife is not a viable EIR. To the Office of Governor Gavin Newsom: The Office of the California DGS has rescinded its earlier premature offering of the Sonoma Developmental Center to a developer prior to the completion of an EIR. The 894 acre property has been held as a public trust to benefit both the disabled and the community. It also serves as the major water recharge shed for Sonoma Valley and is directly in the path of Sonoma Creek which crosses Sonoma Valley and exits through Petaluma to the San Francisco Bay. The community recognizes the need for affordable housing, but the proposed 1,000+ home development with only 250 affordable units, a high end hotel, and visitor services as businesses on site ignores the public input and will be an environmental disaster for Sonoma Valley. The EIR process was fast tracked when the DGS released the property for sale. This is against the law since no project has been designated by the Board of Supervisors nor had the EIR process even been started. The EIR findings were released with the following legal concerns: 1. Where is the Response to Public Comments in the Draft EIR? 2. Where in the DEIR are the actual Specific Plan mitigations listed? (Executive Summary refers to Appendix A, but mitigations are not included) 3. The county is using a "Self-Mitigating Plan" approach. What is the rationale for doing this? How will implementation of mitigations work, since they won't appear in the EIR itself but only as a "condition" of moving forward with development? 4. How, when, and through what mechanism will the open space	This comment is noted. Please see MR-1 regarding the Self-Mitigating approach. Please see section 1.3 starting on page 45 of the DEIR in regards to the legal requirements and state guidelines for public involvement. Please see Table ES-2: Summary of Impacts in regards to identified mitigation requirements. Other questions are not related to the adequacy of the DEIR.

			lands at SDC be permanently protected and kept in public hands?	
Linda Hale	Saturday, August 20, 2022	C54-2	Also Permit Sonoma states: "Public participation identified three key areas of concern among the 16 areas studied: open space and wildlife, water, and wildfire risk and evacuation routes. The draft Environmental Impact Report finds that the proposed specific plan would not create significant and unavoidable impacts in these areas." The problem is that the impacts are significant and unavoidable. There is really no proposed specific plan. The traffic and water studies were done when the SDC was permanently closed by the state, so no impacts were shown due to low traffic and water use in the area. Permit Sonoma has done the EIR only	This comment is noted. Please see MR-6 in regards to the adequacy of the transportation analysis and number of proposed housing units. Please see section 1.3 starting on page 45 of the DEIR in regards to the legal requirements and state guidelines for public involvement.

			allowing public comments via zoom and the US Mail with no responses to critical concerns.	
Linda Hale	Saturday, August 20, 2022	C54-3	Sonoma Valley is congested. It has two main roads and one of them had to evacuate 1,000s of Oakmont residents by bus during the last fire since there are no exit routes that can handle evacuation traffic. Three other major developments are now permitted between the city of Sonoma and Santa Rosa and in process along the Highway 12 corridor. Traffic in Sonoma Valley is already impacted, especially in the Boyes Springs area and the city of Sonoma with only one road out. People say that they no longer come to Sonoma because of the traffic. And Sonoma County has been sued for not meeting its own emission standards. Sonoma Valley is already in a state mandated Groundwater Study with well restrictions in place for commercial growth and homeowners' wells being monitored throughout the valley. We have asked for a reduction to 450 homes and no hotel. Please intervene before this goes any further. We need the State of California to come forward to protect what makes Sonoma Valley the destination it is and to protect local resources. This development will add a new city to the valley floor, deplete our vanishing water sources, and create urban sprawl. Please consider resources and action to protect a California resource.	This comment is noted. Please see MR-6 in regards to the adequacy of the transportation analysis and number of proposed housing units. Please see MR-4 in regards to the fire evacuation analysis.

Linda Hale	Wednesday, September 14, 2022	C55-1	I have specific concerns about information released in the DEIR regarding the land use, hydrology and water, and the methodology used and assumptions made. 1) In Article 64 the DEIR states that the property is "located in a local voter-approved Community Separator overlay that preserves lands with low densities between communities....to maintain natural (rural) character and low intensities of development in open spaces between cities and communities." The SDC traditionally served as a buffer between the communities of Sonoma, El Verano, and Glen Ellen because of the open space between buildings and the land available for clear vistas and access. As noted in the DEIR, voters approved the preservation of open space specifically here now and until renewal in 2036. How can "the high density of the development" as stated later in the report regarding buildings, businesses, parking lots, water runoff and paving throughout the development along with bus stops with lights, shelters, and concrete pads in any way meet the criteria for a Community Separator?	This comment is noted. Please see chapter 3.1 starting on page 85 of the DEIR in regards to the potential impacts of the Proposed Plan on the environmental setting and MR-6 in regards to the adequacy of the traffic analysis.

Commenter	Date	Letter	Comment	Response
Linda Hale	Wednesday, September 14, 2022	C55-2	Nowhere under Hydrology and Methodology (39.3.2) is the current state mandated Groundwater Study mentioned. Sonoma Valley is currently at the limit of groundwater usage and Russian River resources for the city of Sonoma. Aquifers are not recharging and have reached historic lows. All local wells are now being monitored. The four wells mentioned on the SDC property are subject to the same drought conditions as all the other wells in the valley. Sonoma County just added new, stricter requirements for well permits. In this DEIR you state that "surface water diversions from local creeks supply the majority of water for domestic uses at the site such that groundwater supplies would not be interfered with substantially." How is this possible? Keep in mind that the reservoirs on the property are already earmarked by most water agencies four times over for emergency backup. 3) Your methodology and assumptions made regarding groundwater supply, water bodies, impervious surfaces, and drainage patterns seem to imply that developers or homeowners will be responsible for creating "drainage, permeable pavements, and the use of porous concrete" by providing them with educational materials about these alternatives. This is not credible. The restraints on water, traffic, and the impacts this development will have on the cities around it deserve a realistic plan. This DEIR points that out.	This comment is noted. Please see MR-5 in regards to disagreement with water supply analysis.

Maite Iturri	Wednesday, September 14, 2022	C59-1	The Springs Municipal Advisory Council (SMAC) approved on September 14, 2022, the following recommendation in response to the Draft Environmental Impact Report presentation received on August 24, 2022 for the future use of the Sonoma Developmental Center (SDC) in Eldridge, California. The following paragraph is an amendment to the previously submitted letter dated January 12, 2022 Affordable Housing: That any future SDC housing development be affordable; either owner occupied or long-term rental units. Our recommendation is that housing be for people who work and/or live in Sonoma Valley. The development should be a phased project, incorporating multiple developers and should periodically evaluate the impact to fire, roads, climate, equity, and infrastructure. Could the percentages of housing be reversed so that affordable housing is 75% in all its permutations and market rate housing be 25% of the ratio?	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Maite lturri	Wednesday, September 14, 2022	C59-2	Dear Sonoma County Board of Supervisors: The Springs Municipal Advisory Council (SMAC} approved on January 12, 2022 the following recommendation for the future use of the Sonoma Developmental Center (SDC} in Eldridge, California. We want to urge the Board of Supervisors (BOS) to consider a fourth alternative that is inclusive of the ideas and vision of our Sonoma Valley community. The information provided by local organizations was not incorporated into the plans. There needs to be an effort to outreach to Latinx, low income elder communities, renters, disabled and other disenfranchised populations. Locally gathered information will be useful in addressing the recent, pressing and ongoing concerns not exclusive of but including drought and fire. As a guiding principle, we urge the BOS to require local knowledge and experience in formulating a fourth option. We acknowledge that during a Global Pandemic, outreach can be challenging and for that reason alone, we request adequate time-up to a 2-year period-to find another alternative. In addition, we urge the BOS to lobby the State of California to financially support the remediation and repair of the SDC campus.	This comment is noted. Please see MR-2 in regards to allowing more time before finalizing the Specific plan.
Maite lturri	Wednesday, September 14, 2022	C59-3	We have heard the variety of interests regarding the development of SDC. Some are competing and others are complimentary. The following are some commonalities and agreements among the stakeholders that we represent:. Affordable Housing: That any future SDC housing development be affordable; either owner occupied or long-term rental units. Our recommendation is that housing be for people who work and/or live in Sonoma Valley. The development should be a phased project, incorporating multiple developers and should periodically evaluate the impact to fire, roads, climate, equity, and infrastructure. Road Access and Transportation: Consider and evaluate a second access to HWY 12 from the Eastside of SDC campus for emergency egress with the possibility of a permanent thoroughfare if modeling agrees. Provided that said road not have an impact on the wildlife corridor. Any plan should include a class 4 bike lane through the existing SDC and the new egress road. Vegetation/wildlife/land Preservation: Maintain the rural nature of our valley. Develop and plan to maintain the wildlife corridor while preserving in perpetuity the currently undeveloped/natural lands of the site. Community Services & Facilities: That the development provide the following	This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			community services at the new SDC: Education and Employment Training facilities, Community facilities that include: a plaza, community hall, park, and a performing arts theater, Recreation: Swimming pools, sports fields, fitness classes, Mental Health outreach or crisis center for youth and adults, Community Health Center. Funding: Explore creative funding from all levels of government and non-government organizations. These suggestions were developed based upon information provided by the Springs Municipal Advisory Council members, Sonoma Valley Housing Group and community members. Thank you for your consideration.	
Marcia Johnson	Wednesday, August 24, 2022	C60-1	I ask that you please review the Specific Plan as well as the EIR of the Sonoma Development Center. Taxpayerresources can be saved if aligned with the State's RFP. We must wait for completion of the RFP. Rushing to push through something without all parts being completed defeats the purpose of working together, plus not considering the importance of what environmental damage may occur.	This comment is noted. Please see MR-2 in regards to allowing more time before finalizing the Specific plan.
margandbo@gmail.com	Tuesday, August 23, 2022	C61-1	We've lived next to SDC for 44 years. The dramatic density increase proposed would forever transform us. Gone would be the pastoral small town setting we treasure. Even more importantly, please realize that our snail-paced, stop and go, vehicle-packed evacuation during the 2017 fires was absolutely terrifying and full of danger. So to add 1000 more homes with thousands of additional vehicles to our drought stricken, wildfire prone area is absurd! How can that make sense to anyone? In addition, the drought is serious and real. We're already not watering our gardens, limiting flushes, shortening showers, not washing cars, etc., etc. Adding thousands of people makes no sense since there's already not enough water for those currently here. Of major importance also is that our wildlife's survival depends on our intelligent and realistic planning ....the wildlife corridor must be much wider! Thank you for all the time and effort you are putting	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			into this issue. It can't be easy to have the future of Sonoma Valley in your hands.	
Marie Andel	Monday, August 22, 2022	C62-1	I am writing to express my disappointment with the County's August 10, 2022 Draft Specific Plan and Draft EIR for the future of SDC -- and to urge needed action to align the State and County processes. While we need housing, SDC can't solve it all at once. The proposed addition of 1000 residential units is far too many and feels completely tone deaf to issues of wildfire and drought - much less traffic. I strongly urge the county to engage in a truly meaningful planning process that aligns with the State's RFP process. Draft the plan and EIR to effectively and thoroughly analyze the impacts of the proposal. Listen to your constituents! Thank you for your attention to this matter. A thoughtful and thorough process can result in a great outcome for thevalley, for our safety and the welfare of generations of humans, animals and flora!	This comment is noted. Please see MR-3 for clarification of the level of detail of analysis and programmatic nature of the Draft EIR.
Mark Speer	Tuesday, September 13, 2022	C63-1	I just wanted to convey how important it is to preserve the open space, along with keeping a wildlife corridor available at the former SDC campus. We have all studied the maps and have seen how critical this area is to protecting wildlife in Sonoma/Marin county! To allow corporate greed to take over, and destroy this precious habitat we have in Glen Ellen would be very sad for mankind. Just the other day I saw two species cross the road in front of me on my way to Sonoma as I drove through the SDCcampus. To choke them off through more development would be a mistake forever, and a true pity.	This comment is noted. Please see MR-7 in regards to the adequacy of the DEIR's analysis of the impact on wildlife.

Commenter	Date	Letter	Comment	Response
Mary Currie	Friday, August 19, 2022	C64-1	I am submitting the following comments: 1. The Sonoma County Board of Supervisors gave direction to pursue a specific plan for SDC with fewer than 1,000 homes, yet the Drafts (EIR and SDC) propose 1,000 residential units with extensive commercial development. This leaves the drafts inadequate as the environmental impacts and challenges of today that include wildfire, drought, and biodiversity loss are not addressed.	This comment is noted. Please see MR-7 in regards to disagreement with the proposed number of homes and MR-3 for clarification of the DEIR's level of analysis.
Mary Currie	Friday, August 19, 2022	C64-2	2. Aligning the Specific Plan and EIR with the State's RFP selection process, would increase efficiency, save valuable taxpayer resources, and ensure thorough planning and environmental review. Review of the Draft Specific Plan and Draft EIR must be paused pending completion of the RFP process. The State is due to announce the RFP selection on October 24, 2022.	This comment is noted. Please see MR-2 in regards to allowing more time before finalizing the Specific plan.
Mary Currie	Friday, August 19, 2022	C64-3	3. Re-draft the Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the Specific Plan and EIR provide the streamlined process they are designed to provide	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Mary Poppic-Reeves & Brian Reeves	Wednesday, September 14, 2022	C65-1	We have lived within a mile of the Sonoma Developmental Center for over 20 years. We have raised our two children here, walking its streets and trails while appreciating the truly special place it is, from its diverse community of residents, to its rich wildlife population, and its verdant landscape. It is a unique resource for our community--- for the entire North Bay, that requires a well-considered, thoughtful approach to its transition. While the process may have started out this way, this push to approve an inadequate, nonspecific and unenforceable Draft EIR and Specific Plan is a dangerous and unconscionable rush to judgement. Undertaking this process simultaneous to the State's Request for Proposal is a waste of precious resources; these tools should react to a specifc development proposal that has yet to be produced. The Draft EIR and Specific Plan before you makes it clear the process is out of order. Simply, the cart has been placed before the horse. Your overarching question has to be: What happens if the RFP generates a proposal that this Draft EIR and Specific Plan doesn't specifically address, or worse, is so broad that the room for interpretation allows a full range of unintended and unacceptable consequences? The requisite comprehensive detail of this proposal mandates an EIR and Specific Plan that analyzes point by point all the merits and drawbacks of this enormously complicated project.	This comment is noted. Please see MR-2 in regards to allowing more time before finalizing the Specific plan.

Commenter	Date	Letter	Comment	Response
Mary Poppic-Reeves & Brian Reeves	Wednesday, September 14, 2022	C65-2	3.4 Biological Resources To bring development to the SDC necessitates adding additional roadways to handle the traffic associated with such an overload of residential and commercial units. A new Arnold Drive to Highway 12 connector is proposed—one that would cut a path right though the critical Valley of the Moon Wildlife Corridor. How can this have a “less than significant impact” on the black bears, mountain lions, bobcats, and dozens of other species that have all been documented in the area? If left undisturbed, studies have shown the Wildlife Corridor through the SDC can continue to provide critical connectivity. If development is more important to our environment, what is the plan to mitigate this unrecoverable loss?	This comment is noted. Please see MR-7 in regards to the DEIR's findings on wildlife impacts.
Mary Poppic-Reeves & Brian Reeves	Wednesday, September 14, 2022	C65-3	3.9 Hydrology and Water Quality Where is the water coming from to support 2,400 new residents? The Draft EIR suggests there will be no impact on groundwater. For those who have been asked to conserve water because of a local dwindling supply, development on this scale makes no sense. How will this undeniable impact during a drought emergency be mitigated?	This comment is noted. Please see MR-5 in regards to the DEIR's water supply analysis.
Mary Poppic-Reeves & Brian Reeves	Wednesday, September 14, 2022	C65-4	3.10 Land Use and Planning How can we know that “development under the Proposed Plan would not physically divide an established community” if the Draft EIR isn’t even reacting to a specific development proposal? Those of us on the southside of Glen Ellen would argue any type of major development in the SDC corridor could sever our connection to the village on the north side of Glen Ellen. The project should work to unify, not divide, our historic community, but without specifics,	This comment is noted. Please see MR-8 in regards to the DEIR's historic preservation analysis.

Commenter	Date	Letter	Comment	Response
			we cannot know what impacts might occur and how they might be mitigated.	
Mary Poppic-Reeves & Brian Reeves	Wednesday, September 14, 2022	C65-5	3.12 Population and Housing While we are aware how much Sonoma County needs affordable housing (with two sons who've regretfully had to settle elsewhere to afford their homes), using the SDC to resolve this issue is unrealistic. From a practical standpoint, this project's horizon is not even within ABAG's Regional Housing Needs Allocation time frame (2040 vs. 2023-2030). As broadly conceived as it is now, the Draft EIR and Specific Plan can't even ensure development that complies with the requirements that new housing be firesafe, reduce environmental impacts and traffic, and mitigates the drought emergency. Right now, there are about 700 dwelling units in the Village and 350 in the concentrated southside. You don't need an expert to see that doubling—not to mention potentially tripling, the housing units in Glen Ellen by building them all in the acres between the two will have an impact. Even the lowest increase of 450 units in the Historic Preservation Plan would represent a 45% increase and have an impact of at least equal measure. Trying to solve Sonoma County's housing crisis all in one project located in a narrow Valley with one road in and out is poor planning pure and simple; nothing in this Draft EIR suggests how	This comment is noted. Please see MR-4 in regards to the DEIR's fire evacuation analysis and MR-6 in regards to the DEIR's analysis of housing and traffic.

			the attendant problems of this scale of development might be resolved.	
Mary Poppic-Reeves & Brian Reeves	Wednesday, September 14, 2022	C65-6	3.14 Transportation Again: one road in, one road out. Then layer in at least one car in every new garage. Even in its heyday in the 1950's the SDC didn't have as much traffic as this scale of development will generate, and the Valley of the Moon, had a much lower surrounding population back then. Adding 1,000 homes could easily add as many cars, particularly given the limited public transportation and limited services in the area. These new residents will need cars and they will need a great deal more time for commuting when they are stuck on that one road in, one road out. Adding another crossing between Arnold Drive and Highway 12 will still place all these cars, a substantial increase, on two two-lane roads that are	This comment is noted. Please see MR-6 in regards to the DEIR's analysis of housings and traffic.

Commenter	Date	Letter	Comment	Response
			already heavily travelled—and have a devastating record for traffic fatalities in this very area. There will be a transportation impact regardless of the scope of the project—it must be comprehensively and specifically analyzed and the impacts duly mitigated.	
Mary Poppic-Reeves & Brian Reeves	Wednesday, September 14, 2022	C65-7	3.16 Wildfire In 2017, we packed up our family and pets as we were ordered to evacuate our home due to the Nuns Fire and were stuck in gridlock on Arnold Drive for hours as we joined our neighbors attempting to flee the flames. The suggestion that adding 2,400 residents would not "not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan," would be laughable, if the consequences were not so frightening. The location proposed for an additional crossing between Arnold Drive and Highway 12? In 2017, it was in flames. We urge you to set this process aside and wait the short time until a development proposal has been chosen by the State. Then a Draft EIR and Specific Plan can be prepared to react to specific issues, impacts can be better analyzed and reasonable mitigation measures proposed. Please do not make a	This comment is noted. 			rush to judgement; this resource is too valuable to put at risk.	
Mary Poppic-Reeves	Friday, August 19, 2022	C66-1	I am deeply concerned about the recently released Draft Environmental Impact Report (EIR) and Draft Specific Plan for the Sonoma Developmental Center (SDC). Initiating this review is premature as the California State's Request for Proposal (RFP) has not yet concluded. Spending time and resources reviewing hypotheticals is unnecessary and wasteful, particularly when predominant, critical issues of wildfire, drought and biodiversity loss are not even being addressed. Continuing the review process at this point would be irresponsible. I urge you to pause this process until such time that the Specific Plan and EIR can be aligned with the State's RFP. Specifically: 1. Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. 2. Re-draft the County Specific Plan and EIR to describe and analyze the impacts of the	This comment is noted. Please see MR-2 in regards to allowing more time before finalizing the Specific plan.

Michael Lockert	Saturday, September 10, 2022	C68-1	As a 46 year resident of Sonoma Valley, I am infuriated by the total dismissal of public input and disregard for public safety reflected in the SDC Plan and Draft EIR. Virtually ALL of the public comments at various meetings over several years have been in support of a much smaller development, with a MAXIMUM of 400 (affordable) units, no hotel, little to no businesses, and honoring the historic significance of the site. The current proposal has so many problems I hardly know where to begin. First and foremost, the impact on fire safety and emergency evacuation cannot be overstated. Valley residents well remember the 2017 wildfire which came into Glen Ellen, and forced the evacuation of hundreds of residents, who found themselves stuck in traffic, taking 2-3 hours just to get to Hwy 37. The idea that adding 2-3000 residents and their pets to the Eldridge area will not have a significant impact on that traffic would be laughable if it were not so potentially dangerous. Adding one connector between Arnold Drive and Hwy 12 will not seriously mitigate that problem. In my opinion, anybody approving the plan, as is, will have blood on their hands when the next wildfire happens. And it will. Secondly, the impact on daily traffic is summarily dismissed as minimal, needing no mitigation whatsoever. I don't know where the authors of this report live, but it is not in Sonoma Valley. It's insane and ridiculous on its face. If we are adding 1000 units of housing, AND a hotel, we are talking about a daily increase of AT LEAST a couple thousand car trips daily without the hotel. The hotel will add who knows how many guests, and staff working 24/7. This will be true even if, decades from now, everyone will be driving electric cars.	This comment is noted. Please see MR-4 in regards to the DEIR's fire evacuation analysis and MR-6 in regards to the DEIR's analysis of housing and traffic.

Commenter	Date	Letter	Comment	Response
Michael Lockert	Saturday, September 10, 2022	C68-2	Although that should lead us to a discussion of the Greenhouse Gas Emissions involved in such a plan, which are required to be considered by any EIR in California, I want to mention another factor that no one seems to be considering, namely the effect of all these residents having pets. There is an explosion of the number of people owning dogs and cats in the USA, and I presume this will be the case for any residents of this project. Inevitably, many of these will escape, having a huge impact on the current and proposed wildlife corridor. Since 1970, the songbird population in the US has declined by 30%, and according to the American Bird Conservancy, cats are the leading cause of direct, human-caused bird mortality. The International Union for Conservation of Nature (IUCN) lists domestic cats as one of the world's worst non-native invasive species. Dogs, both on leash and off, will also have a negative impact on the wildlife corridor, but no one is even considering these impacts let alone recommending any mitigations. Apparently, all of the meetings and requests for public input by the State and County have been a sham. Not one of our governmental representatives has worked as public servants, taking the voice of the people to the halls of power. Not one of our state reps, for instance, has objected to the onerous burden of the estimated $100 million cost of cleaning up the neglected water system and other sources of pollution, caused by the State of California, sole owner of the property for over 100 years. Shame on the Department of Governmental Services and shame on all our state and county representatives for betraying the public trust.	This comment is noted. Please see MR-7 in regards to the DEIR's findings on wildlife impacts.

Commenter	Date	Letter	Comment	Response
Moira Jacobs	Wednesday, August 24, 2022	C70-2	I request you please consider a much smaller housing footprint in this area, no more than 400 units. The proposed 1,000 units in that hard to access area is a very bad idea. The traffic would be terrible and our rural roads can't sustain this. Why couldn't the county focus instead on beautifying and redeveloping the already developed areas all over Sonoma County, especially the Santa Rosa Ave corridor, the downtown mall and the admin center on Mendocino? Santa Rosa avenue is practically an urban blight. After decades of haphazard development from Rohnert Park up to Santa Rosa downtown, it's a hodgepodge with many undeveloped lots, businesses that seem on brink of closing, and overall it's an eyesore. Instead, as other urban renewal projects have done very successfully, a long term plan for 1,000+ new housing units closer to our core, with better public transport and bike/walk paths lining a beatified tree lined boulevard from RP to SR would be the best plan for our County's future. This can be done in partnership with private sector developers and a voluntary program attractive to property owners in this corridor. Many of these owners might be happy to sell to a developer, especially with a creative program.	This comment is noted. Please see MR-6 in regards to the DEIR's analysis of traffic and housing and MR-2 in regards to allowing more time for the selection of a developer.

Commenter	Date	Letter	Comment	Response
Moira Jacobs	Wednesday, August 24, 2022	C70-3	Imagine our future with a beautiful tree lined Santa Rosa Ave, with wide bike/walk path from RP to SR, along with small sitting/resting parks/gardens along the way. The area can include new housing units, some 5 stories high or higher, yet all along the boulevard the set backs would be tree lined and park like looking. With a model like this you could provide enough housing in Sonoma County for the next 50+ years. Commercial and retail could remain and be integrated into this model, yet they should be more consolidated to take up less space, multi story retail mini malls integrated with shared work sites and housing as an example. It can be done, it would take a 25 year plan, but that is better than destroying the few open spaces we have left. The SDC is best developed as mostly a park like resource for Sonoma County, and something far less traffic creating or sprawl inducing. That land is far better left to very sparsely populated development, a small number of large private residential parcels, a few dense low/mid income units, and mostly a beautiful park like area with some land set aside as wildlife corridors to help sustain what we have left here of our native flora and fauna. This SDC area should have open space land set aside connecting the Sonoma Valley and Jack London State Park with the greater Mayacamas wildlife corridors. Please, before it’s too late, reconsider this Sonoma County knee jerk decision of sprawl everywhere. This will only cause more problems than it solves. At the very least, decrease the numbers of units to no more than 400.	This comment is noted. Please see in regards to the DEIR's analysis of traffic and housing and MR-2 in regards to allowing more time for the selection of a developer.
Monica A Menco	Wednesday, August 24, 2022	C71-1	RFP process is complete? This seems like a waste of time and will only lead to confusion and great frustration for the residents affected by what happens to the SDC. Please wait until the State selects a speciic proposal so that the County Specific Plan	Thank you for your comment letter. This comment is noted. 			and EIR will actually address the chosen developmental strategy. We need to have this done correctly.	
Nancy Murray	Monday, August 22, 2022	C72-1	Sonoma County's Specific & EIR Plans should be working in tandem and in conjunction with the State's RFP, & both should address the threats of wildfires drought, climate change & loss of wildlife habitat and biodiversity. Commercial development of this unique property would be a travesty that would profit a few developers & enrich County & State coffers with the resulting property taxes. I encourage you to work together in designing a futuristic plan for SDC that will preserve it's unique, pristine and natural beauty for the enjoyment and health of all the citizens of CA . Once commercially developed this jewel, SDC, is gone forever, never to be replaced.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Orlando O'Shea		C73-1	Introduction The Sonoma Developmental Center site closure has affected many individuals with developmental disabilities. Many have been successfully integrated into their communities through the group home, supported living services, and enhanced behavioral support home (EBSH) models. This has allowed many individuals greater access to their community than may have been previously afforded to them. One population, individuals with developmental disabilities and high behavioral needs, have been less successful integrating into the new community model.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Orlando O'Shea		C73-2	What are the issues that are prohibitive to successful integration? There are several issues that are prohibitive to successful integration. Individuals with high behavioral needs often display aggressive or disruptive behaviors in their neighborhoods while attempting to access natural walking paths or enter into staff vehicles. Even with trained behavioral staff, staff may at times need to implement restraint measures to assist an individual to a safe environment to emotionally regulate. An individual may yell, cuss, or attempt to kick or hit staff during an episode, as well as engage in self-injurious behaviors. In their residence and yards, individuals may yell, cuss, engage in self injury and property destruction. These behaviors can be alarming to neighbors who are unfamiliar with the population and neighbors often feel angry and resentful that an enhanced behavioral support (EBSH) home has been built in their neighborhood. Neighbors often rally together to prevent homes from being developed in their neighborhoods and to shut down existing homes, which has happened successfully in Sonoma County in 2022 when pressure from neighbors shut down a new EBSH home on Hunter Lane in Santa Rosa. As a result, it is currently slated as a home for medical clients with developmental disabilities.	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Orlando O'Shea		C73-3	What is the current status of housing for individuals with high behavioral needs who cannot successfully enter into community? Many of these individuals are in and out of long-term crisis units when they are not successfully integrated into their communities. Many are warehoused outside of Sonoma County and away from their families and communities because there is more affordable access to acreage in less expensive counties. What are the housing needs of this community that can be uniquely served by Sonoma Developmental Center Site planning committee? Our community members with developmental disabilities and high behaviors previously served by Sonoma Developmental Center would benefit from the following structure: 1. Five parcels dedicated to enhanced behavioral support (EBSH) homes, and/or acute or long term (up to 13 months) crisis homes for individuals with developmental disabilities. 2. Homes would be developed on 1-2 acre parcels/and or parcels situated away from dense housing and busy commercial structures to allow for adequate space and privacy for individuals with high behavioral needs. State legislation mandates that the housing needs of individuals	This comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			with developmental disabilities must take priority in planning measures. The above model is the most advantageous way to meet the needs of those who have not been served by the closure of the Sonoma Developmental Center and continue to have outstanding needs.	
Pamela Merchant	Monday, September 19, 2022	C74-1	Please accept these comments on the Draft EIR for the Sonoma Development Center issued in August 2022. My partner and I are homeowners in Glen Ellen and will be adversely affected by the proposal to build over 1000 homes without taking into account the tremendous impact such a large for- profit development will be on the limited fire/police/highway/water infrastructure. PROJECT SCALE and HOUSING Why isn't the Preservation of Historic Resources and Balancing Redevelopment with Land Use (DEIR pages 5 and 6) which would allow for the largest project in Sonoma Valley – 450 new homes – being considered since it is consistent with the state's statutory objectives? Moreover, even the 450 homes are too many to support the existing infrastructure. During the 2017 fires, Highway 12, Arnold Road and Bennett Valley Road couldn't handle current traffic flow. As many have already commented, scale is the best way to mitigate	This comment is noted. Please see MR-6 in regards to the DEIR's analysis of traffic and housing.

Commenter	Date	Letter	Comment	Response
			environmental and resource impact.	
Pamela Merchant	Monday, September 19, 2022	C74-2	UTILITY INFRASTRUCTURE PG&E has not been able to keep up with fire mitigation responsibilities with the current housing stock – it's unlikely that they will be able to handle 450, 1000 or 1200 more housing units. By way of example, we live on Warm Springs Road – the PG&E utility pole for our neighborhood has been slated for replacement for 4 years now due to safety and fire concerns. Will PG&E preference bringing utilities to a new hotel over maintaining its' existing infrastructure?	This comment is noted. Please see MR-4 in regards to the fire evacuation analysis.
Pamela Merchant	Monday, September 19, 2022	C74-3	WILDLIFE CORRIDOR Why is there no analysis of the impacts on the wildlife corridor through the campus? POPULATION AND GROWTH ASSUMPTIONS The proposed plan represents double or tripling of community housing numbers and an extraordinary increase in traffic on already crowded rural roads. The urban sprawl growth scenario is in direct conflict with climate change policies to encourage smart/dense growth near existing transit.	This comment is noted. Please see MR-7 in regards to wildlife.

Commenter	Date	Letter	Comment	Response
Pamela Merchant	Monday, September 19, 2022	C74-4	FIRE/EMERGENCY PREPAREDNESS Having experienced all the disruption of the 2017 fires, it's shocking that the DEIR did not consider a fire scenario where the fire comes from the West. It's also troubling that the DEIR does not take into account an evacuation scenario where the broadband and cell service is out (which would replicate the 2017 fires). Building on-site shelter (Section 16.1.3.4) makes no sense given how devastating fire can be in this area. During the 2017 fire it took between 1 and 2 hours for Oakmont residents to get onto Hwy 12 and it took our neighborhood (Glen Ellen near Kenwood) hours. Adding 450, 1000, or 1200 homes (and twice or 3x as many cars given the lack of public transportation in Sonoma) will create unprecedented traffic jams during a fire. The SR 12 connector road will only work if the fire doesn't cross the road (during the 2017 fires the fire jumped Hwy 12 and Bennett Valley Road in a number of places). In sum, we strongly recommend that the DraftEIR be rejected and that instead of focusing on for profit housing and hotel development, that the County reopen the process for the development of the SDC to take into account fire, safety, community, wildlife, climate change considerations. My personal preference would be that the site be used to support nonprofits and nonprofit run temporary supportive housing for the homeless, those escaping sex trafficking, and the recently incarcerated at a scale more suitable to the space. The space could also be used for 30-60-90 day addiction treatment programs.	This comment is noted. Please see MR-4 in regards to the wildfire evacuation analysis and MR-6 in regards to the housing and traffic analysis.

Commenter	Date	Letter	Comment	Response
Patricia Spicer	Saturday, August 20, 2022	C75-1	After decades of climate investigation and repeated and prolonged episodes of drought, I think it is vital for the county to engage in an alignment of the Specific Plan and EIR with the State's RFP. "Development," even for tax base purposes, is no longer defensible in this region, mostly owing to lack of water, but for many other environmental and traffic considerations. I need not elaborate, as these problems are already well known. I would only suggest that lack of water is a major factor in this case. I would also suggest that anyone involved in current planning leave their offices to visit the sad remains of Sonoma Creek and the lake at Jack London Park. What lake? The old era of expanding commercial and residential growth has ended. Conservation and preservation are essential. The SDC acreage is a gem of Sonoma County and even of northern California, an invaluable remnant of historical importance and wildlife sustainability. I grant that SDC property is owned by the State, but any State property also belongs to state residents and native wildlife. State ownership is more a matter of responsible guardianship than control for the sake of commercial exploitation. On my personal involvement: As a longtime Glen Ellen property owner, I realize that any further reduction in ground water could result in the need to deepen my water well, which I could not afford. I trust we are all aware of the dire situation in Klamath County, Oregon, and other desert regions. Water is life and must be conserved, not depleted.	This comment is noted. Please see MR-5 in regards to the water supply analysis, MR-6 in regards to the housing and traffic analysis, MR-8 in regards to the historic analysis, and MR-7 in regards to the wildlife analysis.
Paul Rockett	Aug. 29, 2022	C76-1	(p. 469 of the DEIR) The DEIR claims that "The WSA concludes all future demands within its service area can be met, inclusive of the Proposed Project in normal and multiple dry hydrologic years from 2025 through 2045." This same DEIR only acknowledges the likelihood of "single dry years", rather than a concatenation of multiple dry years. 1. Recognizing that we are already in our second year of a severe drought in Sonoma County and are still under water restrictions that date back to 2014, what justification does Permit Sonoma use to assert that the only issues concerning water availability were for "single dry years?" 2. Does Permit Sonoma accept that a) Climate Change is driving new drier, hotter climates worldwide, including that in Sonoma County, b) that these changes are man-made, and c) that they will	This comment is noted. Please see MR-5 regarding the adequacy of the Water Supply Analysis.

Commenter	Date	Letter	Comment	Response
			continually worsen until the atmosphere's load of CO2 diminishes significantly?	
Paul Rockett	Aug. 29, 2022	C76-2	(p. 15 of Appendix D) Climate Change as described by the UN Intergovernmental Panel on Climate Change is a cumulative phenomenon. The more CO2 we place in the atmosphere, the more dry, warm years we will have, NOT LESS. 3. If Permit Sonoma accepts man-made Climate Change, and that our dry, warming pattern will only get worse, then why does it presume that there will "Rebound" years, and why does it presume that the Rebound will be sufficient to make up for the dry years? 4. In Appendix D, p. 41, your own model predicts that "starting in 2030, water demands will exceed water supplies due to Lake Sonoma declining below 100,000 Acre-Feet before July 15. For the last two years Lake Sonoma water supplies were below 130,000 Acre-Feet. With recognition that Climate Change is forcing even dryer conditions, how can Permit Sonoma glibly add more total hookups from not just the SDC Specific Plan (1000+ hookups), but also the Springs Specific Plan (480+ hookups), the Sonoma Airport Specific Plan --- with such a small margin of error regarding the water levels in Lake Sonoma? 5. The last option for Sonoma Water is to obtain water from its groundwater pumps. While capacity is high today, groundwater depends upon rainfall plus snowmelt, both of which will be diminishing for the foreseeable future. Where can I find your predictions of rainfall and snowmelt for the next two decades, and their comparison to the 2000-2010 decade? 6. Snowpack in the Northern Sierra's 8-Station Index fell to 61% of normal between 2019-2022. Santa Rosa has received only 55% of normal rainfall in the 2019-2022 period. Using these conditions, and given that they were not included in any estimate or calculation of water supplies in the DEIR, what is the Permit Sonoma	This comment is noted. Please see MR-5 regarding the adequacy of the Water Supply Analysis. As stated on page 292 of the DEIR, groundwater supply and recharge are assessed by comparing existing conditions within the site area and after implementation of the Proposed Plan. Surface water and groundwater quality is analyzed by using information on existing water quality conditions. See Impact 3.9-2 on page 296 regarding Proposed Plan impacts on groundwater recharge. Given existing regulations and proposed policies, the Proposed Plan would not substantially decrease groundwater supplies and would not impede sustainable groundwater management of the basin, and this impact would be less than significant.

Commenter	Date	Letter	Comment	Response
			prediction of expected water supplies for the Valley of the Moon Water District for the next decade?	
Paul Rockett	Aug. 29, 2022	C76-3	Table 13 of Appendix D attempts to show that even in multiple dry years the supply exceeds the demand. Yet on its face, this cannot be true. Multiple dry years imply that demand exceeds supply for several years in a row. This never occurs in Table 13. In fact supply remains exactly as it was during normal years. 7. How can the yearly supply not diminish during multiple dry years? 8. Why is the VOMWD supply in a normal year 3200 AFY and in a multiple dry year still 3200 AFY? 9. Where is there evidence of ANY dry year??	This comment is noted. Please see MR-5 regarding the adequacy of the Water Supply Analysis.

Commenter	Date	Letter	Comment	Response
Paul Rockett	Aug. 29, 2022	C76-4	The SDC Specific Plan DEIR utilized the study by Wong, Broader, and Shaheen to establish the fraction of the working and living population present during a wildfire evacuation. 10.Many if not most of the evacuations used in the Wong et al. study occurred at night, not during rush hours. How would your two scenarios' results change if a scenario had been provided at midnight? 11. The Wong study was used to establish the number of people needing to evacuate. However, at the chosen time, rush hour, many residents would be returning home. Did the studied scenarios include the presence of residents returning against the evacuating traffic to retrieve their spouses and important documents? 12. Did your two scenarios include the neighborhoods of Glen Ellen, Kenwood, Oakmont, the Springs, and/or Sonoma? 13. Having seen multiple evacuations since 2017, it is typical that state and local police routinely force traffic to go ONLY in the evacuating direction. Was this included in the two utilized evacuation scenarios? 14. If such police action was not simulated, then how are your time results changed by such an addition of forced traffic directions? 15. All such evacuation/traffic computer codes require benchmark testing to establish their credibility. What benchmark evacuation was utilized to confirm your code's credibility?	This comment is noted. Please see MR-4 regarding the adequacy of the wildfire evacuation analysis. The evalaution of evacuation times for a nighttime scenario would be expected to be less signficant than the peak hour analysis included in the DEIR. The DEIR assumed full PM peak hour traffic activity to and from all areas outside the evaucation zones. Nightime basline traffic would be much less than PM peak horu traffic. The DEIR assumed 75% of residents and 75% of employees would need to evacuate during the daytime peak hour. A nighttime evacuation would involve a higher perecntage of residents, but almost no employees. The ttoal number of avacuating vehicles would be expected to be less than the peak hour assumptions. The evacaution analysis assumed that 25 percent of normal weekday peak hour activity would occur in the evacuation areas, in addition to the evacuation traffic. This would account for residents returning home before evacuating. The evacuation analysis included evacuation traffic from all neighborhoods shown in Figures 3.16-3 and 3.16-4. Most if not all of the neighborhoods mentioned in the comment are included in one or both of these scenarios. Specific police control strategies were not included in the evacuation analysis. The analysis assumed that each driver would find the fastest avaialable route considering congestion from other drivers. Police control would be expected to facilitiate this priocess by directing drivers to less congested routes. The evacuation analysis did not assume forced control to specific evacuation routes. If such control was

Commenter	Date	Letter	Comment	Response
				implemented, there are a range of potential outcomes depending on how officials react to congestion on various routes. This range of potential outcomes due to different control strategies m,ay affect the overall magnitude of evacuation times but would not significantly change the project impacts on evacuation times disclosed in the DEIR. The travel time analysis is based on the calibrated relationships in the Sonoma County travel model. While there is a great deal of anecdotal information on evacuation times from prior wildfires, there are no comprehensive measured evacuation times that provide for benchmarking of evacuation time modeling. The DEIR therefore uses the best available information. There is anecdotal information on evacuation times from the Nuns fire. However, there are no comprehensive measured evacuation times that provide for benchmarking of evacuation time modeling.
Paul Rockett	Aug. 29, 2022	C76-5	You have multiple individual experiences from the Nun's Fire of Oct. 8, 2017 that cascaded through Glen Ellen at 11:30PM. Participants can tell you exactly how long they took to evacuate. (Most times were in the hour range, not minutes as you O 16.Why did you not use the Nun's fire as your benchmarking calculation? 17.What results would you get, if you ran your calculation for Glen Ellen at 11:30PM at night? • On Aug. 17, 2022 the Board of Forestry approved the updated Minimum Fire Safe Regulations, applicable state-wide. 15. How will the new regulations impact SDC Specific Plan housing density, road configurations, road widths, dead-end roads, etc. to maintain consistency with the new rules?	The comment is noted. The Proposed Plan would comply with all State, regional, and local regulations regarding fire safety. See response to B76-4.

Commenter	Date	Letter	Comment	Response
Paul Rockett	Aug. 29, 2022	C76-6	Cal Fire Hazard Zone maps were last published in 2007. New maps are being redrawn to account for the many wildfires beginning in 2017 that are largely the result of a warming, drier climate. The map changes are mostly going from lower hazard levels to higher hazard levels and are expected to be published during the Fall 2022. 16. Did estimates of fire susceptibility of the SDC area take such changes into consideration? 17. Did estimates of fire susceptibility of the SDC area account for the wildfires of 2017 that penetrated Glen Ellen? Did they account for the multitude of wildfires in Sonoma County during 2018-2021?	The comment is noted. See responses to comments B3-25 and B3-27.
Paul Rockett	Aug. 29, 2022	C76-7	SDC DEIR p. 183 uses the same tired argument that since the Specific Plan VMT adds only 1.1% to the whole of Sonoma County, that thus its contribution is Less than Significant. This absurd argument is deafened by the observation that most auto trips are less than 5 miles in length, and thus the correct VMT for comparison is the local VMT, not the County VMT. 18. Why did this calculation not compare the VMT added from the Specific Plan to that of existing Glen Ellen, where in fact this traffic will reside?	The comment is noted. Please see response to comment B3-15.

Commenter	Date	Letter	Comment	Response
Paul Rockett	Aug. 29, 2022	C76-8	(p. 364 of DEIR) Sonoma County appealed its original RHNA for the unincorporated County, of which the Springs Specific Plan is a part. HCD did not accept the appeal and kept the RHNA at 3881 new dwelling units during 2023-2031. Within the RHNA Appeal Request, Sonoma County accepted the 7% growth estimate which has no factual basis. The HCD uses Population Projection data from the Dept of Finance Demographics Research Unit (DRU), whose data is presented below for Sonoma County: These data come directly from both DRU Estimates (actual census data plus births, deaths, DMV registrations, and more), and DRU Projections (based upon decades of prior history plus demographics). Their spreadsheets are available to all online from the Dept. of Finance and are attached to this email. Note the great difference between the speculation of the DRU Projection, when compared to the Actual DRU Population Estimates. The actual population of Sonoma County has been decreasing since 2016, continuously decreasing, and NOT INCREASING. Thus the push for added market-rate housing to accommodate a growing population is an unsupportable assumption. This DEIR on p. 364 blindly accepts their projections for population growth. Clearly the writers of this EIR did not read the source DRU data. 19.Why did the DEIR accept the 9% growth rate, since County population has been decreasing from 2017 through Jan. 2022, based upon Dept. of Finance DRU data, and since there is no factual basis upon which to base the Projection? 20. How could the County rewrite the SDC Specific Plan to demonstrate the greater likelihood that County population will be static or slightly decreasing? 21. On p. 367 the SDC DEIR acknowledges that from 2010 to 2020 the Sonoma County total population increased by only 1.3% (also seen in plotted data above), however, they then, without evidence, presume that the total County population will INCREASE by 9% during 2020-2040. Since the actual on-the-ground evidence is that Sonoma County's population has been continuously decreasing, how does this DEIR justify its supposed population increase? 22. Did the writers of this DEIR look at the actual County population data before writing this section on Population and Housing?	The comment is noted. Page 367 of the DEIR recognizes that the County's population decreased between 2010 to 2020. The DEIR uses the most recent and reliable population data porovided by the California Department of Finance and Association of Bay Area Governments for its analysis. Please see Impact 3.12-1 on page 376 regarding impacts on induced population growth. buildout of the Proposed Plan would help fulfill State legislature requirements to develop affordable housing within the Planning Area and help mitigate the severe housing shortage facing Sonoma County. Further, the Sonoma County General Plan 2020 Housing Element specifies that future re-use of the SDC facility should include affordable housing. Therefore, given that the Proposed Plan's projected population growth is commensurate with State legislative requirements to prioritize affordable housing development as well as General Plan goals and policies, the Proposed Plan would not induce substantial unplanned population growth in the Planning Area and the impact would be less than significant. Please see also Section 5.1 on page 579 of the DEIR for further analysis on growth-inducing impacts.

Commenter	Date	Letter	Comment	Response
R. Thornton	4-Sep-22	C77-1	I am being asked to reduce my water by 20% while you are considering allowing the Sonoma Developmental Center to add hundreds of homes, commercial development and a hotel. You are also considering adding hundreds of new residences on the Elnoka Property next to Oakmont, where my residence is and where I live. The homes, commercial development, landscaping and other water use tells me that you are not drought conscience. Please consider the rest of us who rely on water and stop the development of the Sonoma Developmental Center and Elnoka and save us all water. You can't have it both ways, we are either in a drought and we need to save at least 20% or we aren't and development is OK.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
R. Thornton	4-Sep-22	C77-2	During the Nuns Fire, I was awakened on October 8, 2017 around 2:30 AM by a neighbor who said “Get out, get out now, a fire is approaching!” You cannot imagine the fear and worry as I got dressed, grabbed my medication and tried to leave my residence in Oakmont. It took 2 hours of trying to drive out and we all felt we were lucky not to burn in our cars. The backup on Highway 12 was miles long. When we finally were able to come home, 3 weeks later, the devastation along Highway 12 with burned out homes, cars, vegetation and anything that was in the fire’s wake was horrifying. Oakmont lost 2 homes including Supervisor Susan Gorin’s and a lot of vegetation. This is well documented. On September 27th, 2020, the Glass Fire reared its ugly head and this time we were sent a voluntary evacuation notification and then a mandatory evacuation notification. The backup along Hwy 12 was again miles long even for those of us who evacuated when we got the voluntary notification. It took many of us another 2 hours to get out safely. Nine days later, I came home to 3 homes that burned to the ground within walking distance of me and Oakmont had a triplex that burned to the ground. I had damage as did my neighbors. This is well documented. We have lost hundreds of homes due to these fires along Hwy 12 from Calistoga Rd through Sonoma. I feel that it is irresponsible to build on the Elnoka property, which is right next door to my sub-HOA in Oakmont and to build in the Sonoma Developmental Center due to the amount of traffic just on a normal day/night not to mention in a fire event and water usage. It appears that widening Highway 12 is not a priority, so then stop more cars from using this highway by not building in this corridor.	This comment is noted. Please see MR-4 regarding the adequacy of the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
R. Thornton	4-Sep-22	C77-3	It is very important to build housing in Sonoma County, in due time. The wrong place to build is in the Valley of The Moon corridor from Elnoka through to Sonoma. Some of the brightest minds live in Sonoma County and I know that they can figure out how to properly balance housing, drought and fire corridors to come up with a better solution. Remember for every gallon of water used in new housing, landscaping and new hotels is one less gallon of water for the rest of us.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Robert Holloway	Monday, September 12, 2022	C78-1	As a retired professional historic preservationist for the National Park Service, I would like to submit my strong support for the Historic Preservation Alternative outlined in the Executive Summary Section ES.3.3 of the SDC Specific Plan Draft EIR (August 2022). A loss of 28% of Contributing historic resources, combined with new, dense infill construction of 30' to 45' heights and alteration and reconstruction of remaining Contributing structures within the National & State Register-eligible Historic District is simply too great a loss of historic fabric to retain the district's historic feeling and character. This would cause the property to lose its eligibility for listing in the National and California Registers and as a California Historic Landmark. These impacts are described in the Draft EIR 3.5.3.4 (Impacts) as "significant because they would cause a substantial adverse change to the historical district as defined by CEQA Guidelines Section 15064.5." These Contributing structures provide much of the historic district's sense of place and honor the legacy of the Developmental Center's former uses and staff. The historic story can best be told with as much of the original character as possible, even with re-purposed original buildings.	This comment is noted. Please see MR-8 regarding the adequacy of the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Robert Holloway	Monday, September 12, 2022	C78-2	The County's preferred alternative, outlined as the Specific Plan/Public Draft (August 2022), provides some very thoughtful preservation guidelines in the form of Goals and Policies in the Cultural, Historic, and Tribal Cultural Resources Chapter 3.5.3.3 (Relevant Policies and Implementing Actions). However, these don't go far enough to protect important contributing historic resources using words like "to the greatest extent feasible" (Policy 4-23) and "shall seek to avoid demolition" (Policy LU-1). These policies and actions "encourage" but do not guarantee the preservation of the historic character of the Core Campus. I am a strong advocate for the overall project's mandated goal of creating affordable housing and housing for individuals with developmental disabilities, as well as other types of housing but feel that the Draft Specific Plan's proposal to create 1,000 units of housing is way too impactful. I feel the Historic Preservation Alternative's plan for 450 units is much more in keeping with the scale of the adjacent communities and minimizes additional traffic impacts. Likewise, I would like to see the idea of an additional connection to Highway 12 added to the Historic Preservation Alternative as a way of further minimizing traffic impacts. I don't understand why the Highway 12 connector idea wasn't included in the Historic Preservation Alternative as it would be outside the Historic District footprint. I also feel that the concept of adding a small to medium-sized hotel could be accomplished with architectural sensitivity through the use of rehabilitated existing structures, perhaps the Historic Admin Building, the Sonoma House, or a cluster of the existing cottages. Otherwise, an Agritourism-type hotel could be accomplished as new construction as part of the Specific Plan's Agri-hood concept east of Arnold Drive, allowing its patrons to participate in the Agri-hood goals and practices as part of their stay, learning what makes the Sonoma Valley such a special place. Thank you in advance for including my comments in the final evaluation for the future plan of the SDC property, a place of unparalleled beauty and historical significance.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Roger Peters	Thursday, September 15, 2022	C79-1	You have a lot coming at you on SDC for today's first meeting.on SDC. Rather adding detailed comments to the input load, I will just frame four questions that I hope you will ask of the DEIR sponsors. 1. Why did you (PS) not do Phase II environmental assessments re hazardous materials and substances in the gap areas of recognized environmental conditions (RECs) identified in the prior Phase I and Limited Phase II investigations? The Valley of the Moon Alliance Alliance (VOTMA) filed comments on the need for further environmental assessment work on March 24, 2022 in response for requests for comments in the NOP for the EIR. Those comments are included in pages 459-464 of the appendix to the DEIR. The DEIR acknowledged those comments on page 236 of Section 3.8 Hazards and Hazardous Waste. But the subsequent portion of Section 3.8 of the DEIR does not add any new analysis of RECs that VOTMA referenced. Instead, the discussion for the most part addresses hazardous materials and substance issues that were identified as known or likely to exist in the Core Planning Area. The discussion acknowledged that the 2017 Limited Phase II report identified a variety of areas, both in the Core Planning Area (CPA) and in the lands outside of the CPA where "further investigation was needed." (pg DEIR 248; download, pg 425) For reason unexplained, it appears that no such further investigation was undertaken. Deferral of investigation and mitigation are not an allowed strategy under CEQA. The DEIR appears incomplete and defective on this issue. Since the DEIR indicates at various points that the use of non-Core Planning Areas for agriculture, recreation and other uses is anticipated, it is reasonable to conclude that in developing facilities necessary for and in carrying out operations of that sort there will be the need for grading and other soil disturbance that would upset and uncover hazardous material and substances. The DEIR's approach to study those situations at some time in the future and if they occur constitutes an inadequate and incomplete DEIR. Since the DIER here is likely intended to serve as the environmental review document that will cover the transfer of the preserved lands outside of the Core Planning Area this gap in analysis is problematic.	The comment is noted. As noted on page 261 of the DEIR, the Hazards and Hazardous Materials Impact Analysis considers the nature of foreseeable hazardous materials use, storage and disposal resulting from the redevelopment of the Sonoma Developmental Center. It also identifies ways that hazardous materials could be exposed to the environment or individuals. The analysis includes a qualitative evaluation of impacts associated with the presence or hazardous materials. The analysis is based on a review of materials ranging from online databases such as Envirostar and Geotracker, hazard maps, Phase I & II Site Assessments (see Appendix G), and relevant plans and regulations at the Federal, State, and local levels. Therefore, upon implementation of the Specific Plan and regular operations of the site, compliance with the regulations for hauling hazardous substances would continue to reduce the potential of an accidental release of hazardous materials (Impact 3.8-1) to a less than significant level. Further, Standard Condition of Approval HAZ-3 would require implementation of Best Management Practices to reduce exposure of workers to contaminated materials during construction, icluding a soil management plan and a health and safety plan. Compliance with the Standard Conditions of Approval Measure HAZ-3 and existing regulations would reduce impacts related to the release of hazardous materials due to foreseeable upset or accident conditions to less than significant. Therea are no

Commenter	Date	Letter	Comment	Response
				schools located or are proposed to be located within one-quarter mile of the Planning Area. Thus, implementation of the Proposed Plan would have no impact regarding hazard emissions or materials in within one-quarter mile of an existing or proposed school. Regarding Impact 3.8-4, implementation of HAZ-3 prior to construction would reduce the potential risks associated with releases of contaminated media as a result of Proposed Plan to a less-than-significant level. Please also see MR-3 for a discussion of the limited nature of a programmatic EIR, and the subsequent analysis that will be required at the project level.

Commenter	Date	Letter	Comment	Response
Roger Peters	Thursday, September 15, 2022	C79-2	2. Where is the W-Trans traffic operations analysis that you (PS) suggested in DEIR footnote 118 had been done? The DEIR analysis of transportation, and specifically traffic issues is inadequate. VMT analysis is great for dense urban projects, but does not capture the nuance of rural transportation impacts. The requirement to use VMT and the adverse impact preclusion of LOS for projects CEQA analysis does no preclude the PC or The Board from requiring a traffic impact analysis to assist decision making for land use policy planning purposes and for assessing fire/flood/earthquake evacuation risk parameters. PS recognizes that reality and tries to avoid that issue by implying that WTrans has done an LOS study. In the text associated and associated footnote 118, PS suggests that it has done a traffic impact analysis. When asked to provide that analysis referenced in fn 118, PS responded that the analysis was in Appendix F of the DEIR appendix. Appendix F at pg 748 consists of a one page set of "Traffic Volume Data."There is no text, no interpretation, no assumptions, no contextual analysis. PS should explain why it did not use the Sonoma Valley Traffic Study done in connection with the winery events ordinance, and why it did not use the SCTA Traffic Demand Model to assess congestion associated with the preferred project.	This comment is noted. Please see MR-6 regarding the transportation analysis.

Commenter	Date	Letter	Comment	Response
Roger Peters	Thursday, September 15, 2022	C79-3	3. Where is the stand-alone project specific VMT analysis for this project? Perhaps I missed it in the 3534 page appendices, but I did not see a stand-alone VMT study that could be reviewed for assumptions and whether all the appropriate TAZ had been included, and the overall documents could have been reviewed for completeness. Appendix F is exactly one page and relates to the W-Trans non-analysis of traffic impacts. The textual analysis in the DEIR itself is full of summary and conclusory statements. On its face the findings 1) on page 442 that traffic from Harney to Glen Ellen would be reduced from peak, 2) on pages 445-446 that household, employment, and total service VMT would be reduced by the project compared to peak, and 3) on page 451 that the project would not result in inadequate emergency access, all seem particularly unsupported, counter-intuitive, and problematic. It would seem relevant in that context for the PC to ask some simple foundational questions like where will the people working at SDC be coming from to work there, where will the people who live at SDC but work off site be traveling to, where would guests at the hotel be coming from, where is the nearest pharmacy, where is the nearest full service affordable market, where are the nearest medical and dental general and specialist services, where is the nearest medical complex, and what will be the impact on Highway 12 traffic of having another traffic signal at the new proposed connector? The answers to those questions are not obvious in the transportation	This comment is noted. Please see MR-6 regarding the transportation analysis.

			segment of the DEIR.	

Commenter	Date	Letter	Comment	Response
Sandra Mauerhan	Saturday, August 20, 2022	C80-1	I read that the Draft Environmental Impact Report was released for the Sonoma Developmental Center on 10 August 2022 with a plan for at least 1,000 residential units and extensive commercial development. This report is premature because the State has not yet completed the RFP process. I request that you please wait to further this development until after the completion of the RFP Proposal. I realize that there is a need for more housing in Sonoma County but, as a resident who has evacuated four times and came close to losing their home during the Tubbs fire I truly hope that the safety and possible evacuation of residents be taken into account. We know that there will be more fires and Highway 12 is just not equipped for the additional people that all of the proposed new developments (Oakmont, Skyhawk, Mahonia Glen etc) plus all of us who already live in this area. It is terrifying to be stuck in traffic when you know that a wildfire is heading towards you and adding so many new homes is nothing short of reckless and will potentially result in loss of life. Add to this the lack of available water for everyone due to the drought and the loss of wildfire habitat I ask that you seriously take all of these issues into account when making future decisions for the Developmental Center - lives will be endangered by poor decisions.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Sharon Bard	Saturday, August 20, 2022	C81-1	I am a long-time Sonoma County resident who has been interested in and have been following the history of the Sonoma Development Center and the property it sits on, for decades--way before the sale from the State of California and the beginning of a redevelopment plan for it's new use. I had understood that the State of California, the former owner of the property, was part of the developmental proposal process and that the sale and purchase of the land was intended to create a plan which would mitigate wildfire, drought and biodiversity loss, huge issues impacting our community currently and even more so in the future. I have now learned that you recently released a draft of an Environmental Impact Report	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			and Specific Plan for SDC which has changed the intentions of the original vision to now include more than 1,000 residential units and extensive commercial development. I am very concerned that this recent draft is not aligned with the State's proposal and is not honoring the original intent of the sale and redevelopment plan.	
Sharon Bard	Saturday, August 20, 2022	C81-2	I am asking that you re-draft your plan which was released on August 10, 2022. That you wait until after the State announces their RFP selection which I understand is to take place on October 24, 2022, and then revise your plan to incorporate their findings. And that in your revision, you include a description and an analysis of the impacts of the actual proposal that the State is selecting for this SDC property. From my prospective, it is important that Sonoma County's plans for this somewhat fragile wildlife corridor be aligned with the State's process and that the ultimategoal protects the land as well as serves the human endeavors which benefit from it.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Sharon Church	Wednesday, September 14, 2022	C82-1	Can you certify and provide documentation that the traffic model referenced in the DEIR included the cumulative impacts of all development (including those not yet built) impacting Highway 12 from Santa Rosa to Sonoma and Arnold Drive, including special events? Claims that adding up to 1,000 housing units (2,400 residents) with an estimated 2 vehicles per household plus 940 jobs in the commercial area (and special events) would not impact our ability to evacuate during the next emergency are irresponsible. The "models" used defy common sense, ignore the already burdened two lane roads (Highway 12 and Arnold Drive), paint a rosy picture of available public transportation and thus demand for vehicles and are clearly a transparent attempt to move past this life or death matter. The draft EIR clearly hasnot sufficiently considered the cumulative impact of development at the SDC, the Highway 12 corridor (from Santa Rosa to Sonoma), and Arnold Drive, including special events, on our ability to evacuate. A Highway 12 connector would only serve to send people toward the fire in a futile circle which could make evacuation even worse and removes an obstacle to growth	This comment is noted. Please see MR-6 regarding the transportation analysis.

Commenter	Date	Letter	Comment	Response
			in protected areas which would further exacerbate our ability to evacuate during a wildfire. Note that the Elnoka Senior Community project on Highway 12 in Santa Rosa was recently reduced by 60% (from 676 units to 272 units) to address concerns raised by the community and to address potential traffic impacts.	
Sharon Church	Wednesday, September 14, 2022	C82-2	"Shelter-in-place", seems like a death warrant, given the extreme devastation caused by wildfires. That concept would certainly reduce vehicles exiting for your models and would also likely increase deaths. Why not address this matter honestly now? CLIMATE CHANGE. The Fire Hazard Severity Zone Map referenced in Figure 2.3-1 of the Specific Plan is undated—what is the date of the information you are relying upon? Figure 2.3-1 of Specific Plan in inaccurate. It does not reflect the fire damage along Sonoma Creek to the nursery on Trestle Glen or the loss of a home and other structures along Burbank Drive in the 2017 Nuns Fire. CalFire is updating the Fire Hazard Severity Zones Maps for the first time since 2007. The new maps are to be released before the end of the year. Have these been taken into consideration? Climate change is here and affecting us now, with forecasts to get much worse. This must be addressed!	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Sharon Church	Wednesday, September 14, 2022	C82-3	How can Risk Factor tell me that properties near Sonoma Creek have a MAJOR risk of flooding which is in direct conflict to the Statement in Section 2.3 of the draft Specific Plan and the 100-year flood plain in Figure 5.3-1 titled "Maximum Heights" that "all 100 year and 500 year floods can be accommodated within the banks of Sonoma Creek without additional flooding". What recent analysis has been performed on flood risk or are you using old data? Last October, per Sonoma Water, an Atmospheric River brought 9" of rain on Sonoma Mountain, causing waste water collections systems to overflow in several locations, including all along Sonoma Creek and notably, at Burbank Drive in Glen Ellen. Is that public health hazard being addressed? The fact that so much water fell at one time is another piece of data pointing to climate change and the potential for flooding along Sonoma Creek.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Sharon Church	Wednesday, September 14, 2022	C82-4	PARKING. How will you ensure that our Glen Ellen neighborhood on the South side of the SDC will not have to support parking for those seeking free parking not available at the campus? Parking policy 3-27 in the draft Specific Plan says there will be NO free parking within the campus. Further, the plan is to provide less parking than would typically be required, to encourage biking and walking. What a disaster for the neighborhood to the South! People will park and store vehicles along Martin, Lorna, Cecelia, Burbank, Sonoma Glen Circle and Marty due to lack of parking spaces and to avoid charges. In addition, the concept of shared parking between residential and commercial is not realistic in practice. This will clearly burden an existing neighborhood to allow for increased development and profit for the developer and pretend there are fewer vehicles. Unacceptable!	This comment is noted. Please see MR-6 regarding the transportation analysis.

Commenter	Date	Letter	Comment	Response
Sharon Church	Wednesday, September 14, 2022	C82-5	GLEN ELLEN, NOT ELDRIDGE. PLEASE explain why the Glen Ellen neighborhood South of the SDC continues to be disrespected by calling us Eldridge? Are you unilaterally deciding to change our name from Glen Ellen to Eldridge so you don't have to acknowledge that you are in fact dividing our Glen Ellen community? Reference Table 4.5-1, Summary of Impacts for Alternatives, Page 575, Item 3.9-1 (sic) which is under 3.10 Land Use and Planning. We are Glen Ellen. Our property tax bills say Glen Ellen, as do our driver's licenses and passports. Eldridge was the SDC campus only and they had their own post office. The SDC and post office are closed. As such, the SDC property is the donut hole of Glen Ellen and should be considered a part of Glen Ellen, not a new town to divide our Glen Ellen community. The development should be in scale that fits the character of the existing community and open space. The proposed scale is simply too much and would be appropriate for San Jose, not Glen Ellen.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Sharon Church	Wednesday, September 14, 2022	C82-6	I participated in the outreach over the years, believing the County was listening to the Community and that the County would embrace a reasonable plan that the Community could support. Instead, you are pushing for the maximum and driving an incompatible plan. Despite pushing an overbuilt plan, you are failing to provide the amount of affordable housing we would support. Clearly there is another agenda which has nothing to do with our Community and affordable housing. I ask that you scale back and restore our faith in our County government.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Sharon Church	Tuesday, August 23, 2022	C83-1	Susan, some preliminary comments below. We really need you to firmly step up and advocate that the scale of the proposed plan be reduced to something more appropriate for this area. We aren't NIMBY's and sensible development can take place at the SDC; however, there is no need to destroy our community for developer profit. Permit Sonoma is not representing the community. GLEN ELLEN, NOT ELDRIDGE. The area south of the SDC is Glen Ellen, not Eldridge. Eldridge was the SDC only and they had their own post office. The SDC and post office are closed. As such, the SDC property is the donut hole of Glen Ellen and should be considered a part of Glen Ellen, not a new urban area to divide our community. The development should be in scale that fits the character of the existing community and open space. The proposed scale is simply too much.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Sharon Church	Tuesday, August 23, 2022	C83-2	EVACUATIONS. Claims that adding up to 1,000 housing units (2,400 residents) with an estimated 2 vehicles per household plus 940 jobs in the commercial area would not impact our ability to evacuate during the next emergency are irresponsible. The "models" used defy common sense, ignore the already burdened two lane roads (Highway 12 and Arnold Drive) and are clearly a transparent attempt to move past this life or death matter. The draft EIR has not sufficiently considered the cumulative impact of development at the SDC, the Highway 12 corridor, and Arnold Drive on our ability to evacuate. A highway 12 connector would only serve to send people in a futile circle which could make evacuation even worse. Note that the Elnoka Senior Community project on Highway 12 in Santa Rosa was recently reduced by 60% (from 676 units to 272 units) to address concerns raised by the community and to address potential traffic impacts.	This comment is noted. Please see MR-4 regarding the adequacy of the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sharon Church	Tuesday, August 23, 2022	C83-3	CLIMATE CHANGE. CalFire is updating the Fire Hazard Severity Zones Maps for the first time since 2007. The new maps are to be released before the end of the year. Have these been taken into consideration? What analysis has been performed on flood risk? Risk Factor now lists properties near Sonoma Creek as having MAJOR risks of flooding. Last October, per Sonoma Water, 9" of rain fell on Sonoma Mountain, causing waste water collections systems to overflow in several locations, including all along Sonoma Creek and notably, at Burbank Drive in Glen Ellen. Climate change is here and affecting us now, with forecasts to get much worse. This must be addressed!	This comment is noted. Please see Table ES-2 and 3.9-3 of the DEIR for the less than significant impact finding regarding flooding.
Sharon Church	Tuesday, August 23, 2022	C83-4	PARKING. Parking policy 3-27 in the draft Specific Plan says there will be NO free parking within the campus. What a disaster for the neighborhood to the South! People will park and store vehicles along Martin, Lorna, Cecelia, Burbank, Sonoma Glen Circle and Marty due to lack of parking spaces and to avoid charges. In addition, the concept of shared parking between residential and commercial is not realistic in practice. This is clearly an attempt to burden an existing neighborhood to allow for increased development and profit for the developer. Unacceptable!	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Sharon Church	Wednesday, September 14, 2022	C84-1	EVACUATIONS. Can you certify and provide documentation that the traffic model referenced in the DEIR included the cumulative impacts of all development (including those not yet built) impacting Highway 12 from Santa Rosa to Sonoma and Arnold Drive, including special events? Claims that adding up to 1,000 housing units (2,400 residents) with an estimated 2 vehicles per household plus 940 jobs in the commercial area (and special events) would not impact our ability to evacuate during the next emergency are irresponsible. The "models" used defy common sense, ignore the already burdened two lane roads (Highway 12 and Arnold Drive), paint a rosy picture of available public transportation and thus demand for vehicles and are clearly a transparent attempt to move past this life or death matter. The draft EIR clearly has not sufficiently considered the cumulative impact of development at the SDC, the Highway 12 corridor (from Santa Rosa to Sonoma), and Arnold Drive, including special events, on our ability to evacuate. A Highway 12 connector would only serve to send people toward the fire in a futile circle which could make evacuation even worse and removes an obstacle to growth in protected areas which would further exacerbate our ability to evacuate during a wildfire. Note that the Elnoka Senior Community project on Highway 12 in Santa Rosa was recently reduced by 60% (from 676 units to 272 units) to address concerns raised by the community and to address potential traffic impacts.	This comment is noted. Please see MR-4 on the adequacy of the wildfire analysis and MR-6 on the Highway 12 connector.

Commenter	Date	Letter	Comment	Response
Sharon Church	Wednesday, September 14, 2022	C84-2	"Shelter-in-place", seems like a death warrant, given the extreme devastation caused by wildfires. That concept would certainly reduce vehicles exiting for your models and would also likely increase deaths. Why not address this matter honestly now? CLIMATE CHANGE. The Fire Hazard Severity Zone Map referenced in Figure 2.3-1 of the Specific Plan is undated—what is the date of the information you are relying upon? Figure 2.3-1 of Specific Plan in inaccurate. It does not reflect the fire damage along Sonoma Creek to the nursery on Trestle Glen or the loss of a home and other structures along Burbank Drive in the 2017 Nuns Fire. CalFire is updating the Fire Hazard Severity Zones Maps for the first time since 2007. The new maps are to be released before the end of the year. Have these been taken into consideration? Climate change is here and affecting us now, with forecasts to get much worse. This must be addressed!	The comment is noted. The comment is noted. As described on page 503 of the DEIR, the primary responsibility for preventing and suppressing wildland fires in Sonoma County is divided between local firefighting agencies and the State of California, Department of Forestry and Fire Protection. The SDC Planning Area is currently located in an area identified as a State Responsibility Area (SRA). Fire management in the SDC Planning Area is located in the Sonoma-Lake-Napa Unit SRA. Government Code Sections 51175-89 advises CAL FIRE, to identify areas, or zones, of very high fire hazard severity potential under the Fire and Resources Assessment Program (FRAP). These zones are mapped and identified based on expected burn probabilities, potential fuels over a 30–50-year time period, and their correlated expected fire behavior, to better predict the possible vegetation fire exposure to buildings and developments. Under the FRAP, the Planning Area is located in the Sonoma Creek watershed and includes areas of high to very high Fire Hazard Severity Zones west of Highway 12, areas of high fire hazard severity in the hills, and areas of moderate fire hazards severity zones in the vicinity of Suttonfield Lake and Fern Lake (Figure 3.16-2). The Core Campus is not included in any of these FHSZs. The DEIR uses the most up to date CAL FIRE FRAP mapping data currently available. The CAL FIRE FRAP mapping shows fire severity zones for both SRA and LRAs. Currently the site is in a SRA but the EIR assumes that this responsibility will shift to local agencies once the State disposes the land, and the wildfire and evacuation

Commenter	Date	Letter	Comment	Response
				analyses in the EIR is based on that premise. Thus, this does not change the significance of the wildfire Impact Analysis of the DEIR. On page 518, the DEIR does note that development under the Proposed Plan could result in potentially significant impacts from exacerbating wildfire risks. This increased risk can be due to the site's history of wildfire and proximity to VHFSZs or from increasing the potential for wildfire ignition and spread with development. However, the Proposed Plan includes a plethora of policies and Standard Conditions of Approval to adequately mitigate potentially significant wildfire risks to a less than significant level. Such measures, as described under the Wildfire Impact Analysis starting on page 551 of the DEIR, require the Proposed Plan to construct and maintain a managed landscape buffer to aid in fire defense; enhance creek buffers; remove surface and aerial fuels; implement fuel management methods (such as fuel separation, defensible space with continuous tree canopy, and irrigated agriculture); plant fire resilient landscaping; include a five-foot buffer of defensible space around all developments; prohibit wooden fencing; require all new construction and retrofitting of existing buildings use Class A fire-rated roofing materials, fire-resistant siding, and dual-paned tempered glass windows; prohibit the storage of flammable materials under decks or porches; prune branches of trees; cover all building vent openings with wire mesh screens to prevent infiltration from embers of sparks; and ensure that all property owners are informed and

Commenter	Date	Letter	Comment	Response
				educated about wildfire resiliency requirements at the site at the time of purchase. Further, Policy 6-21 would require all new and existing utility lines be buried underground to mitigate additional wildfire risk. Policy 2-40 would reduce ember ignitions and fire spread by requiring trimming of branches that overhang the home, porch, and deck and prune branches of large trees up to 6 to 10 feet (depending on their height) from the ground. Policy 2-40 would remove dead vegetation and debris from under decks and porches and between deck board joints.The Proposed Plan would also comply with all State and local codes and regulations, such as the California Fire Code and Sonoma County Code, which would further mitigate potential impacts.

Commenter	Date	Letter	Comment	Response
Sharon Church	Wednesday, September 14, 2022	C84-3	How can Risk Factor tell me that properties near Sonoma Creek have a MAJOR risk of flooding which is in direct conflict to the Statement in Section 2.3 of the draft Specific Plan and the 100-year flood plain in Figure 5.3-1 titled "Maximum Heights" that "all 100 year and 500 year floods can be accommodated within the banks of Sonoma Creek without additional flooding". What recent analysis has been performed on flood risk or are you using old data? Last October, per Sonoma Water, an Atmospheric River brought 9" of rain on Sonoma Mountain, causing waste water collections systems to overflow in several locations, including all along Sonoma Creek and notably, at Burbank Drive in Glen Ellen. Is that public health hazard being addressed? The fact that so much water fell at one time is another piece of data pointing to climate change and the potential for flooding along Sonoma Creek.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Sharon Church	Wednesday, September 14, 2022	C84-4	endif]-->PARKING. How will you ensure that our Glen Ellen neighborhood on the South side of the SDC will not have to support parking for those seeking free parking not available at the campus? Parking policy 3-27 in the draft Specific Plan says there will be NO free parking within the campus. Further, the plan is to provide less parking than would typically be required, to encourage biking and walking. What a disaster for the neighborhood to the South! People will park and store vehicles along Martin, Lorna, Cecelia, Burbank, Sonoma Glen Circle and Marty due to lack of parking spaces and to avoid charges. In addition, the concept of shared parking between residential and commercial is not realistic in practice. This will clearly burden an existing neighborhood to allow for increased development and profit for the developer and pretend there are fewer vehicles. Unacceptable!	The comment is noted. The presence of priced parking near an area with free parking can cause motorists to search for spaces on those free streets (commonly known as "spillover"). However, there is a limited distance motorists are willing to walk from their vehicles. In the case of SDC, on-street parking pricing would only be considered in non-residential areas, primarily in the "core campus". The core campus is located roughly one-third mile from the nearest residential uses in Eldridge and almost two-thirds mile to Glen Ellen, walking distances that would be too lengthy and inconvenient for most motorists. Thus, the potential for spillover parking is minimal. The presence of free parking often leads to many motorists seeking spaces in the same highly-desired locations, resulting in vehicles circling the area. This can have

Commenter	Date	Letter	Comment	Response
				the unintended effect of marginally increasing VMT and creating potential safety issues as drivers spend a greater amount of time searching for parking spaces.
Sharon Church	Wednesday, September 14, 2022	C84-5	GLEN ELLEN, NOT ELDRIDGE. PLEASE explain why the Glen Ellen neighborhood South of the SDC continues to be disrespected by calling us Eldridge? Are you unilaterally deciding to change our name from Glen Ellen to Eldridge so you don't have to acknowledge that you are in fact dividing our Glen Ellen community? Reference Table 4.5-1, Summary of Impacts for Alternatives, Page 575, Item 3.9-1 (sic) which is under 3.10 Land Use and Planning. We are Glen Ellen. Our property tax bills say Glen Ellen, as do our driver's licenses and passports. Eldridge was the SDC campus only and they had their own post office. The SDC and post office are closed. As such, the SDC property is the donut hole of Glen Ellen and should be considered a part of Glen Ellen, not a new town to divide our Glen Ellen community. The development should be in scale that fits the character of the existing community and open space. The proposed scale is simply too much and would be appropriate for San Jose, not Glen Ellen.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Sharon Church	Wednesday, September 14, 2022	C84-6	I participated in the outreach over the years, believing the County was listening to the Community and that the County would embrace a reasonable plan that the Community could support. Instead, you are pushing for the maximum and driving an incompatible plan. Despite pushing an overbuilt plan, you are failing to provide the amount of affordable housing we would support. Clearly there is another agenda which has nothing to do with our Community and affordable housing. I ask that you scale back and restore our faith in our County government.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Sherry Smith	14-Sep-22	C85-1	I was a social worker at Sonoma State Hospital (SDC) from 1979-1981 when over 1,000 employees, including Psychiatric Technicians, worked at least 4 different shifts to provide services and care to over 1,000 residents with developmental disabilities. I oppose the development of 1,000 new homes and a hotel in Eldridge. I support the transfer of 765 acres for open space conservation to protect the wildlife corridor, historic Eldridge Cemetery, two lakes, and Camp Via. This would help meet both the federal and state goals for land and water protection. Organizations, including the Sonoma Ecology Center and Sonoma Land Trust, have previously discussed concerns about preservation and I believe their experts will further address the issues of aligning the County Specific Plan process and EIR only after the State of California annoU11ces the RFP selection. The driving force behind the Site Specific Plan is to be "fiscally feasible." (Bradley Dunn, The Sonoma Index-Tribune, 8/17/22, page A9) Fiscal feasibility is linked to the State of California's plan to pass along to a developer approximately $100 million in toxic clean-up costs at SDC. The Site Specific Plan briefly mentions some of the past abuses to clients at SDC. Over 5,400 men, women, and children from ages 7 to 70 were sterilized without their consent. The State apologized and offered $25,000 to sterilized victims. https://victims.ca.gov ; https://dredf.org If none of the SDC victims apply for and collect compensation, perhaps because none of them are alive, I suggest	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			that California allocate the $100 million that should have compensated these victims to pay for the toxic clean-up at SDC. I don't know if the State apologized or compensated any clients for other violations of civil and legal rights and abuses at SDC during the past 100+ years. Another option might be to allocate $100 million for affordable and accessible housiµg and services for people with developmental disabilities at SDC and infill housing in urban areas.	

Commenter	Date	Letter	Comment	Response
Sherry Smith	14-Sep-22	C85-2	Traffic: The EIR should fully address the impact of increased traffic. I see no reference to traffic patterns when SDC was open. I observed traffic slowdowns on Arnold Drive during shift changes. Stop signs on Arnold Drive and surrounding streets within Eldridge slowed down rush hour traffic. During shifts, most employees walked between buildings. Staff who commuted by bicycle along Arnold Drive to SDC risked getting hit by cars since there were no bicycle lanes. In the past 40 years, though various groups have lobbied for more and better bike lanes, the County of Sonoma and Cal Trans haven't significantly improved Arnold Drive for bicyclists traveling between Glen Ellen and Boyes Hot Springs or on Highway 12. The report recommends installing a new traffic light at Harney and Arnold in Eldridge, which might have reduced congestion during shift changes 40 years ago. Traffic lights are currently located at Arnold Drive and Highway 12 in Glen Ellen and a few miles down the road on Arnold Drive at Boyes Blvd in Boyes Hot Springs. A roundabout was installed at Aqua Caliente Road and Arnold Drive a few years ago. During construction of new homes, businesses, etc. there are few mitigation measures suggested. Attached are photos of a construction site of what will be one new home on Chestnut A venue in Aqua Caliente. Large trucks travel on several different narrow streets during the week. Neighbors hear the noise, dust is a problem, there's increased traffic, and a section of the road has been damaged. Imagine what Arnold Drive will be like if 1,000 homes are built in Eldridge.	This comment is noted. Please see MR-6 in regards to the adequacy of the transportation impacts. Please see page 595 of the DEIR that states standard Conditions of Approval HAZ 1 and HAZ 2 impose limits on construction hours and implement construction noise control measures to mitigate the impact of noise from construction impacts. Additionally, all new construction would be required to comply with noise and vibration level restrictions which regulate the time and intensity of construction in the Sonoma County Municipal Code.
Sherry Smith	14-Sep-22	C85-3	3.6 Energy and Greenhouse Gas Emissions: The Summary oflmpacts in the Draft EIR claims no mitigation measures are required for increased traffic and heavy equipment during construction, or when new buildings are completed. If each new home includes 1 car, the hotel is filled with over 100 guests, plus employees drive to work at the hotel and new businesses in Eldridge, unless everyone owns an electric vehicle or bicycles to the village, how can "none required" and "not applicable" be listed under the impact and mitigation measures for energy and greenhouse gas emissions?	Thank you for your comment. Please see MR-6 in regards to the adequacy of the traffic analysis.

Commenter	Date	Letter	Comment	Response
Sherry Smith	14-Sep-22	C85-4	3.7-1 Earthquake: "No mitigation measures required." I disagree. The report doesn't discuss the Rodgers Creek Fault in Sonoma County. Refer to https://us_gs.gov which details a higher resolution map of this fault within the past few years. They predict a 33% chance of a "6.7 earthquake on the combined Rodgers Creek-Hayward fault system" sometime between now and 2043.To give an example of what might happen, during the October 17, 1989 Loma Prieta earthquake (magnitude of 6.9), 3,757 people reported injuries, 63 people died, buildings collapsed, infrastructure-pipelines, overpasses, bridges, and roadways-destroyed, and a World Series game stopped.	As noted on page 226 of the DEIR, Policy GEO-1 of the Standard Conditions of Approval, "Geotechnical investigations shall be performed in areas of existing structures to be rehabilitated or new proposed structures to establish appropriate mitigation technique." As noted on page 233 of the DEIR, "Implementation of GEO-1 will reduce the potential for hazards associated with development on expansive soils or unstable geologic units/soils to a less-than-significant level." Please see MR-1 on the adequacy of a self-mitigating Specific Plan. Please see MR-9 on Mitigation Monitoring and the implementation of the Standard Conditions of Approval.
Sherry Smith	14-Sep-22	C85-5	.8-6 Emergency Response or emergency evacuation plan: I disagree that no mitigation measures are required. Eldridge is part of Evacuation Zone SON-6A5. In past public comments, I mentioned that during the Nuns Fire evacuations in 2017, my friends drove for over four hours from Agua Caliente to reach a hotel in Rohnert Park. The drive normally takes between 30-45 minutes. With approximately 2,000+ new residents in Eldridge, it would take more than an extra minute or two for residents and employees to evacuate safely from Arnold Drive north to Highway 12, west to Bennett Valley Road, or south to Highway 161. A new road from Arnold to Highway 12 might not reduce evacuation times since the fires of 1964 (Hanly Fire, Nuns Canyon Fire), 1966 (Cavedale Fire) and 2017 (Tubbs and Nuns Canyon Fires) spread from the hills and the wind blew and spread the fire west. Cal Fire and the County of Sonoma can provide more details on emergency evacuation routes and historical data about past fires.	This comment is noted. Please see MR-4 in regards to the disagreement with the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sherry Smith	14-Sep-22	C85-6	3.8-7 Exposure to significant risk of loss, injury or death involving wildland fires 3.16 Wildfire: I disagree that no mitigation measures are required. If there's no risk, then why has my insurance more than tripled since 20 I 7? Will new home owners in Eldridge be able to purchase fire insurance? Even if "affordable homes" are built at Eldridge, the insurance policies may not be affordable because companies, including CSAA, State Farm, etc. are well aware of the future risks of wildland fires to the destruction of homes and property in Eldridge. During the Nuns and Tubb Fires in 2017 and since then, residents have also been exposed to "pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire" each year. Climate change has increased risks throughout Sonoma Valley to the possibility of wildland fires in the future as well as smoke drifting into our region from fires in other areas of California.	This comment is noted. Please see MR-4 in regards to the disagreement with the wildfire evacuation analysis.
Sherry Smith	14-Sep-22	C85-7	3-14 Transportation: The County of Sonoma doesn't plan to increase bus service along Arnold Drive. There's no service overnight. Paratransit is an option for disabled residents, though not at night, on major holidays, and service is limited on other holidays. Any new resident of Eldridge who doesn't have a vehicle would be at increased risk of injury or death during a disaster or evacuation. Many of the residents who died during the Tubbs and Nuns fires were elderly or disabled.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Sherry Smith	14-Sep-22	C85-8	Storm water and storm drain systems page 58: My father was an engineer for the Water Resources Division of the United States Geological Survey. He measured gauges along rivers, streams, and creeks, and was knowledgeable about flooding. When my friend decided to purchase a house in Glen Ellen, he asked my father to give an opinion about the possibility of Sonoma Creek flooding in the future. My dad walked the property and explained where the creek had risen in the past. It was his professional opinion, as a retired engineer, that there wouldn't be a "100 year" storm flooding Sonoma Creek. My father was wrong. In about 1997, Sonoma Creek flooded in Glen Ellen, then a catastrophic flood severely damaged my friend's home on New Year's Eve 2006/2007. He rebuilt. The Sonoma Index-Tribune followed the stories about the flooding. Supervisor Valerie Brown knew about this, as did the County of Sonoma Permit and Planning Department. Any discussion about a possible "100-year storm" and Sonoma Creek not flooding is misguided because of Climate Change and past flooding in the region. Storm drains are inadequate elsewhere in Sonoma Valley, including on Mountain Avenue. Homes have flooded and excess water pools on the street during heavy rainfall. Adding 1,000 homes, a hotel, and businesses will change both the surface and subsurface water flow in Eldridge. Infrastructure planning and construction needs to mitigate potential problems. The USGS California Water Science Center and National Weather Service are perhaps the agencies most familiar with stream gauges along Sonoma Creek and the likelihood of flooding in the future.	This comment is noted. Please see Table ES-2 and 3.9-3 of the DEIR for the less than significant impact finding regarding flooding.

Commenter	Date	Letter	Comment	Response
TOM BENTHIN	Thursday, September 15, 2022	C86-1	We live in Glen Ellen and are asking you to please not support the SDC Specific Plan or DEIR as proposed by Permit Sonoma. Instead, please direct Permit Sonoma to: 1. Scale Back Size of Development to 450 or fewer homes and require that most of them be affordable to the majority of people who live in Sonoma Valley. Eliminate the hotel, retail and commercial space that is already provided in Glen Ellen. 2. Support Historic Preservation Alternative as it is the most environmentally sound. 3. Protect Open Space by providing enforceable timeline, boundaries and actions for permanently preserving open space and keeping it in public hands. a. In the DEIR, analyze the impacts of and add enforceable measures to reduce impacts of proposed new uses in the open space including agriculture, agricultural processing, tasting rooms, farm stands, recreation, parking lots, geothermal development and sports facilities (see Table 4-3 of Specific Plan). b. Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed. 4. Wildfire: Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives. Develop and add enforceable Conditions of Approval for Wildfire to reduce and prevent risk as there currently are none. 5. Climate Crisis: Given the County's Climate Crisis Resolution and commitments to reduce climate changing emissions (GHGS) from driving and other sources, revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as building fewer homes, reusing and demolishing fewer buildings, providing transit. 6. DEIR is Inadequate While the so-called self-mitigated Specific Plan contains many general policies, goals and conditions of approval to address environmental impacts, the DEIR falls short of CEQA requirements. The DEIR does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by few actual requirements and many vague words such as "promote" or "encourage" or "if feasible." The DEIR needs to be revised and the	This comment is noted. Please see MR-3 in regards to the programmatic nature and detail of analysis of the draft DEIR, MR-7 in regards to the adequacy of the wildlife movement analysis, MR-8 in regards to the adequacy of the historic preservation analysis, and MR-1 in regards to the self-mitigating plan.

Commenter	Date	Letter	Comment	Response
			Conditions of Approval strengthened and moved into a legally enforceable Mitigation and Monitoring Program.	
TOM BENTHIN	Thursday, September 15, 2022	C86-2	We are asking this as residents whose home burned in the 2017 fires and who have rebuilt. Having had to flee the Nunn Canyon fire, we are intimately aware of the dangers posed by a greatly increased population here to evacuation, since there are only two roads leading out of the Valley to the south and one to the north. We are already concerned about our ability to have adequate water from our well due to the ongoing climate crisis-fueled drought. We are concerned about plans that would massively increase the population and traffic, leading to dramatic changes to our town. Imagine if we proposed more than doubling the size of the town you lived in. And we are concerned about the ecological impact on our wildlife and watershed area.	This comment is noted. Please see MR-4 in regards to the disagreement with the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Steve Sherer	Monday, August 22, 2022	C87-1	As a resident of Glen Ellen and, as a result, a neighbor of the Sonoma Development Center, we are writing to express our great concern over the lack of planning for the SDC being transferred from its present configuration and control. In spite of the Board of Supervisor's instructions to have a specific plan with fewer than 1,000 homes, the Drafts propose 1,000 residential units. In addition, substantial commercial development is proposed. Shouldn't we STOP and weigh the consequences of not having all the vital information related to the proposed SDC plan?? We think of the impact of 1,000 homes and commercial development with the potential population increase of between 2,000 and 4,000 people should make you take notice and consider the proposed change in the character of our community. This proposal will change the look and landscape of the entire Sonoma Valley. If this type of population density is permitted, it should take place among the already existing cities in our County.	This comment is noted. Please see chapter 3.1 starting on page 85 of the DEIR in regards to the potential impacts of the Proposed Plan on the environmental setting and MR-6 in regards to the adequacy of the housing and traffic analysis.
Steve Sherer	Monday, August 22, 2022	C87-2	We would also point out that the size of the proposed population increase would materially increase the traffic on Arnold Drive, downtown Glen Ellen and Highway 12. This could have a very serious impact on the ability of people to get out and emergency vehicles to get in whenever there was a fire or other emergency. I hope you will remember the traffic blockage at Oakmont that prevented people leaving at the time of the big 2017 & 2020 fires. Thank you for considering and passing on our concerns while taking action to prevent irreversible damage to our Sonoma Valley and its residents.	This comment is noted. Please see MR-4 in regards to the disagreement with the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
sue rankin	Monday, September 19, 2022	C88-1	Regarding the Proposal to develop the Sonoma Developmental Center, the following reasons demonstrate why this ill-conceived idea is not feasible: Sonoma County has become heavily impacted by: Increased traffic & congestion Increased traffic violations & accidents – many of which go unnoticed & unprosecuted Excessive speed & traffic on Hwy 12, Bennett Valley Road, Sonoma Mountain Road, Grange, Pressley Roads Bikers cannot ride safely on Hwy 12, Bennett Valley Road, Pressley, Grange, Sonoma Mountain Roads – too much speed, too many cars, no enforcement – no one should risk their life on Bennett Valley Road! Clogged access streets, arteries and highways – causing unsafe situations Difficulty to access shopping centers, businesses & lack of parking Inability for first responders to readily access emergencies due to excessive traffic Inadequate funds for first responders, police, fire to handle the increasing volume of calls - if on the ballot, many people will not even contribute No, we don't need more traffic lights! They only impede the already slow, congested traffic!	This comment is noted. Please see MR-6 in regards to the disagreement with the traffic analysis.

Commenter	Date	Letter	Comment	Response
sue rankin	Monday, September 19, 2022	C88-2	More houses? More high density living? LESS WATER?? YOU'VE GOT TO BE KIDDING! We, in Bennett Valley & Rincon Valley, are already seeing our wells run dry; are being forced to move or drill new, more expensive, deeper wells, spending thousands and thousands of dollars to drill and maintain a small, private well system – while the developers, wineries and commercial growers should be paying their fair share! Talk about unfairness! The county could be making a fortune from those commercial developers and vineyards.. exactly like Sonoma Development Center! Where does the county actually think the necessary water supplies will come from by over-populating and over-building? Is it not the time to seriosuly prepare for the future? Is it not the time to be responsible and prepare for the global warming issues NOW?	This comment is noted. Please see MR-5 in regards to the disagreement with the analysis of the water supply.

Commenter	Date	Letter	Comment	Response
sue rankin	Monday, September 19, 2022	C88-3	The excuse for allowing wildlife to more freely is an excuse for the handful of nonprofits to channel private funds for collaring mountion lions and watching them roam onto private citizens/rancher properties for a free meal. This "political" issue should not be part of the decision to develop such a high density project. Wildlife management belongs to California Fish & Wildlife, not to those profiting from the wild animals that roam freely in Sonoma County! As for "historic preservation" or a "more reasonable footprint" that will not provide more open space. Even those developments will clog more streets, highways, require more water and cause more havoc within the county. Look at Fountain Grove and Coffey Park. Those high density houses burned to the ground! They did not reduce wildfire risk at all.. and will not do so in the future. If anyone understands basic psychology, they'd understand that a few rats living in a box can survive.. but when you put far too many rats in a box, they cannot prosper or survive. To many, this so-called "development" is, again.. all about money for the county and the rich & greedy developers! The Sonoma Developmental Center will certainly not enhance the lives or happiness of the residents who chose to live here first!	This comment is noted. Please see MR-6 in regards to the disagreement with the housing and traffic analysis.

Commenter	Date	Letter	Comment	Response
Sydney Randazzo	Saturday, August 20, 2022	C89-1	I sat in on the Zoom calls that were held prior to the development and release of the SDC Specific Plan and Draft Environmental Impact Report. I appreciate that on the surface it was determined that the major concerns of the Community and the Board of Supervisor's were considered, but not deemed to be in conflict with the Report. However, having lived in this area for 14+ years, traveling on Hwy 12 and/or Arnold daily+, both two-lane "highways," that traffic flow will absolutely be impacted by the increase in of 1,000 homes (with potentially 2.5+ residents per home) —particularly if/when there is need for evacuation. This disconnect highlights the inadequacy and inefficiency of our current approach to planning and development. The draft specific plan fails to respond to the challenges of our time—including wildfire, drought, and biodiversity loss.	This comment is noted. Please see MR-6 in regards to the disagreement with the housing and traffic analysis.
Sydney Randazzo	Saturday, August 20, 2022	C89-2	As a resident I encourage you to: Engage in meaningful planning for SDC by aligning the County Specific Plan process with the State's RFP process and by moving forward with the County Specific Plan and EIR only after the State announces the RFP selection on October 24, 2022. Re-draft in meaningful planning for SDC by aligning the County Specific Plan and EIR to describe and analyze the impacts of the actual proposal that the State selects for the SDC property. Only after a specific development proposal is identified can the County Specific Plan and EIR provide the streamlined process they are designed to provide.	Thank you for your comment letter. This comment is noted. Please see MR-2 regarding the need for more time and the selection of a developer before finalization of the Specific Plan.
Teri Shore	Thursday, September 8, 2022	C90-1	Please do not support the SDC Specific Plan or DEIR as proposed by Permit Sonoma. I will be submitting more detailed comments by the deadline. At this time, I urge you to please direct Permit Sonoma to: 1. REVISE DEIR TO MEET CEQA: Revise and strengthen the Draft Environmental Impact Report to meet the requirements of California Environmental Quality Act by analyzing and preventing or reducing all negative environmental impacts by scaling back project, avoiding impacts and providing legally enforceable mitigation measures in a Mitigation and Monitoring Program. As drafted the DEIR is not	The comment is noted. Please see MR-6 in regards to the traffic analysis and MR-8 in regards to the historic analysis.

Commenter	Date	Letter	Comment	Response
			adequate to meet CEQA. It has zero mitigations for any environmental impacts, including two that are “significant and unavoidable:” historic preservation and VMTs.	
Teri Shore	Thursday, September 8, 2022	C90-2	REVISE SELF-MITIGATED SPECIFIC PLAN: Revise and strengthen the Specific Plan Conditions of Approval to be legally enforceable requirements and recast as mitigation measures in the DEIR, as above. As drafted, the “self-mitigating” Specific Plan does not mitigate significant negative environmental impacts. The Conditions of Approval only apply to half of the environmental areas required for study under CEQA. And there are none for critical issues such as wildfire. Most of the C of As for biological resources apply only to construction, not operations or maintenance, and are based mostly on existing state law or Best Management Practices, which are not in statute. All Specific Plan Goals and Policies need to be specific, strong and enforceable. Otherwise, they are practically meaningless. Please remove vague words such as “promote” or “encourage” or “if feasible.” Replace with “require”, “shall” or “must.” These strengthened Goals and Polices then need to be made Conditions of Approval and recast as Mitigations in the DEIR in a Mitigation and Monitoring Program. If CofAs, policies or goals can’t be made specific, then remove them as they do not	This comment is noted. Please see MR-1 about the adequacy of the self-mitigating plan.

Commenter	Date	Letter	Comment	Response
			mitigate environmental impacts. Having a Self-Mitigated Plan is not part of CEQA and does not necessarily meet CEQA; and certainly not in the case of the SDC Specific Plan and DEIR.	
Teri Shore	Thursday, September 8, 2022	C90-3	SCALE BACK DEVELOPMENT AND CHANGE PREFERRED ALTERNATIVE: Scale back the development to 450 or fewer homes and require that most of them be affordable to the majority of people who live in Sonoma Valley. Eliminate the hotel, retail and commercial space that is already provided in Glen Ellen. Change the Preferred Alternative to the Historic Preservation Alternative, which is the most environmentally sound.	Thank you for your comment letter. This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Teri Shore	Thursday, September 8, 2022	C90-4	DEVELOP A NEW ALTERNATIVE – Climate and Conservation: All the alternatives are variations on a major mixed-use development that maximizes urban style use. In response to the public and elected officials, and to avoid and reduce significant environmental impacts per CEQA, the County of Sonoma must provide an alternative focused on keeping the entire property in public lands through donation or transfer to state or county parks, a non-profit, trust or other entity. This alternative would prioritize the permanent protection of the open space and the historic main campus to serve conservation, wildlife movement, natural resource protection, and climate benefits with no housing, no commercial development and no hotel or retail. The Marin Headlands and Presidio Trust are good examples of how public land was repurposed without overdevelopment.	This comment is noted. Please see the Historic Preservation Alternative crafted in response to commenters who requested an alternative that would maximize open space preservation.

Commenter	Date	Letter	Comment	Response
Teri Shore	Thursday, September 8, 2022	C90-5	PROVIDE SPECIFICS AND ADDRESS IMPACTS TO OPEN SPACE – The Specific Plan and the DEIR mentions open space protection in general terms in several places, in various ways, but fails to provide a clear definition of “preserved open space,” or to give the exact boundaries (other than in one general overlay map), or give details on how or when it will be protected, transferred or managed. Please direct Permit Sonoma to provide those details. Preserved Open Space and Agriculture: The Specific Plan and DEIR make sweeping statements about “historic agriculture” but do not explain the extend of past agriculture in terms of types or amount of acreage. The impacts of allowing agriculture on open space that is currently not in agriculture must be analyzed and the environmental impacts avoided or mitigated in the DEIR. Unacceptable New Uses in Preserved Open Space: Table 4-3 (attached) of the Land Use Section of the Specific Plan outlines many new uses in “preserved open space” including wine tasting rooms, timber conversion, wholesale nurseries, sports facilities and several others that have not been analyzed under CEQA or addressed at all in the goals, policies or C of As of the Specific Plan. These “permitted” new uses in Preserved Open space must be analyzed, avoided or prevented and mitigated as required under CEQA and in my view NOT ALLOWED OR PERMITTED in Preserved Open Space. SHOULD NOT ALLOW AS PROPOSED THESE USES IN PRESERVED OPEN SPACE TABLE 4-2 SPECIFIC PLAN Agricultural Crop Production and Cultivation Agricultural Processing	This comment is noted. The Proposed Plan's definition of Preserved Open Space is a land use designation intended to preserve open spaces outside of the Core Campus for habitat, recreation, ecological services, water resources and agricultural uses. The impacts listed within the DEIR include the consideration of these uses.

Commenter	Date	Letter	Comment	Response
			Animal Keeping: Beekeeping Animal Keeping: Confined Farm Animals Animal Keeping: Farm Animals Animal Keeping: Pet Fancier - Farm Retail Sales Farm Stands Indoor Crop Cultivation Mushroom Farming Nursery, Wholesale Timberland Conversions, Minor Nursery, Wholesale Tasting Rooms SHOULD NOT ALLOW AS PROPOSED IN SPECIFIC PLAN WITH CONDITIONAL USE PERMIT Recreation and Sports Facilities: Recreation Facility, Outdoor Recreation and Sports Facilities: Rural Sports and Recreation	
Teri Shore	Thursday, September 8, 2022	C90-6	SONOMA VALLEY WILDLIRE CORRIDOR AND RIPARIAN SETBACKS: Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed.	Thank you for your comment letter. This comment is noted, however it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Teri Shore	Thursday, September 8, 2022	C90-7	WILDFIRE: Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives. Develop and add enforceable Conditions of Approval for Wildfire to reduce and prevent risk as there currently are none.	This comment is noted. Please see MR-4 in regards to the adequacy of the wildfire evacuation analysis.
Teri Shore	Thursday, September 8, 2022	C90-8	CLIMATE CRISIS: Given the County's Climate Crisis Resolution and commitments to reduce climate changing emissions (GHGS) from driving and other sources, revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as building fewer homes, reusing and demolishing fewer buildings, providing transit. If the county is really serious about the climate emergency, it would not propose building a new town in the middle of open space and a high wildfire area. It should maintain its commitment to city-centered growth and open space protection	This comment is noted. The DEIR is required to make findings on the impact the project could have on energy consumption and GHG emissions. Please see section 3.6 of the DEIR.

Commenter	Date	Letter	Comment	Response
Teri Shore	Thursday, September 8, 2022	C90-9	STATE STATUTE: The County of Sonoma needs to revisit its interpretation of the state statute in respect to the Specific Plan and EIR as follows: Housing: State Statute says the following: It is the intent of the Legislature that priority be given to affordable housing in the disposition of the Sonoma Developmental Center state real property. The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be appropriate for the property shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that is deed restricted to provide housing for individuals with developmental disabilities. Nowhere does the statute call for maximum urbanization of the SDC nor to create a new town, hotel, commercial or retail. The scale of housing and development is not appropriate for the rural property surrounded by ag land. Therefore, the County of Sonoma's Specific Plan and DEIR are not consistent with and misinterpret the state statute. Both need to be revised to align with state statute and public comment by scaling back the development, eliminating market rate housing and other development, and providing deed-restricted affordable housing to individuals with developmental disabilities.	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Teri Shore	Thursday, September 8, 2022	C90-10	Open Space: State Statute says the following: The Department of General Services recognizes the exceptional open-space, natural resources, and wildlife habitat characteristics of the Sonoma Developmental Center. It is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as public parkland and open space. The disposition of the property or property interests shall provide for the permanent protection of the open space and natural resources as a public resource to the greatest extent feasible and shall be upon terms and conditions the director deems to be in the best interests of the state. The state statute makes clear that the permanent protection of open space lands is for public parkland and natural resources as a public resource. The County's Specific Plan and DEIR are inconsistent with state statute as they propose introducing agriculture, sports fields and other uses without consider the negative environmental impacts of doing so. However, the state statute also conditions protection of the open space "to the extent feasible" and to "be in the best interests of the state." That is why the county Specific Plan and DEIR must provide details on how, when and with what entities that the open space will be protected. If not, then the state legislature will need to act to ensure the protection of the open space and that none of it is sold off for development or other inappropriate use.	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Teri Shore	Thursday, September 8, 2022	C90-11	Economic Feasibility: State Statute says the following: The planning process shall facilitate the disposition of the property by amending the general plan of the county and any appropriate zoning ordinances, completing any environmental review, and addressing the economic feasibility of future development. The County of Sonoma's entire Specific Plan and DEIR is tied to this one mention of economic feasibility to the exclusion of just about everything else. The state did not mandate that the project be economically feasible or financially feasible but to address it. Economic feasibility changes constantly with market conditions. Specific Plans and General Plans are written for long periods of time when economic feasibility is certain to change. The County is misinterpreting state statute to maximize urban development at the SDC site. The proposal could also be economically feasible if, for example, the state paid to clean up the site, then transferred it to state parks or another public conservation entity. A bond measure or initiative could be written. However, the County looked at only one option or alternative: making profits for a private developer. This lacks vision and is inconsistent with state statute and CEQA The Planning Commission must direct Permit Sonoma to revise the Specific Plan and DEIR to be consistent with state statute and public comment and provide new alternatives that don't focus entirely on urbanization and developer profits. Well, that's about it from me for now. Thanks for your consideration.	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Teri Shore	August 24, 2022	C91-1	ORAL TESTIMONY As two minutes isn't adequate time to make meaningful comments on the SDC Draft EIR and proposed Self-Mitigated Specific Plan regarding: the preservation and transfer of the open space, the proposed overdevelopment of the historic campus or the significant and unavoidable environmental impacts that will increase driving and exacerbate the climate crisis, prevent robust historic preservation, degrade biodiversity and compromise the wildlife corridor, increase wildfire risk and hazards and that it will do little to address the housing crisis or increase equity in Sonoma Valley, I will say that right now we members of the public and the community are overwhelmed and need professional legal advice to help us provide productive and detailed written comments. I urge the county, the city and elected officials to provide pro-bono legal advice now or help us fund raise to hire a legal advisor. I also call on interested members of the public to help us raise funds to hire an attorney with expertise in the California Environmental Quality Act. Please contact me at terishore@gmail.com and I will connect you with our SDC teams.	This comment is noted. Please see MR-1 in regards to the adequacy of the self-mitigating plan.
Teri Shore	August 24, 2022	C91-2	INITIAL DRAFT WRITTEN COMMENTS EIR MITIGATIONS VERSUS SELF-MITIGATED SPECIFIC PLAN The County of Sonoma must immediately provide a detailed and legally accurate written explanation, description and rationale for preparing a DEIR with no environmental mitigations at all; and instead relying on a "Self-Mitigating" Specific Plan that contains goals, policies and a few "conditions of approval" that are based almost entirely on existing state laws as "mitigation." The county must explain the legal enforceability of the goals, policies and "conditions of approval." My primary concern is that the goals and policies along with the Conditions of Approval that serve to "self-mitigate" the project do not meet the same level of legal and enforceable mitigation as in EIR mitigations and required Mitigation Monitoring and Reporting Programs. A CEQA expert I recently talked to informally indicated no familiarity with the term "self-mitigated" projects under CEQA, and it does not appear in the current CEQA manual.	This comment is noted. Please see MR-1 in regards to the adequacy of the self-mitigating plan.

Commenter	Date	Letter	Comment	Response
Teri Shore	August 24, 2022	C91-3	VMTs – Significant and Unavoidable: The DEIR finds that the proposed SDC Specific Plan will undermine local, regional and state policies and commitments to address the climate crisis as it found significant and unavoidable impacts in the areas of vehicle miles traveled. That means that there is NO WAY to offset or mitigate the extra driving generated by all the new housing, retail, commercial development proposed at SDC. The County must not approve this project as proposed with these impacts if it is serious about addressing the climate crisis.	This comment is noted. Please see MR-6 in regards to the traffic analysis.
Teri Shore	August 24, 2022	C91-4	PRESERVE OPEN SPACE: The DEIR and SDC Specific Plan states that the open space will be preserved in several places; and provides a general overlay map. There are also statements about "working with Sonoma County to preserve the Open Space" and several other general reference. However, it does not provide any specific information on exact open space boundaries or when or through what mechanism the preservation and transfer will occur. A timeline and approach for transferring and preserving the open space must be added to the DEIR and Specific Plan Conditions of Approval to ensure that the open space gets transferred to county parks, regional parks and/or a public conservation entity and does not get transferred to a developer or other private owner.	This comment is noted. The Proposed Plan's definition of Preserved Open Space is a land use designation intended to preserve open spaces outside of the Core Campus for habitat, recreation, ecological services, water resources and agricultural uses. The impacts listed within the DEIR include the consideration of these uses.
Teri Shore	August 24, 2022	C91-5	GENERAL PLAN AMENDMENT: If the county moves forward to approve the DEIR and Specific Plan as proposed, it will amend the General Plan to forever change the Zoning at SDC from public facilities to residential, commercial, retail and hotel even if the community opposes it; and even if the state fails to accept the Specific Plan. The county should not rezone the SDC lands and its land use and zoning until a final plan for SDC is adopted that is acceptable to the community and/or any lawsuits are resolved.	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.
Teri Shore	August 24, 2022	C91-6	CONDITIONS OF APPROVAL: The Executive Summary states that the Conditions of Approval are listed in Appendix A. They are not or at least I can't find them with a search for "Conditions of Approval." It appears that they are scattered throughout the DEIR. They need to be listed together in one place. Right now, the COA only apply to a few categories such as Biological Resources, Hazards, Air Quality and Geology. Most are boilerplate text from existing state laws that would be required anyway. That does not seem adequate to address the environmental impacts as required under CEQA.	This comment is noted. Please see MR-9 on the implementation of the Conditions of Approval.

Commenter	Date	Letter	Comment	Response
Teri Shore	August 24, 2022	C91-7	WILDFIRE: There are no conditions of approval for wildfire; and the goals and policies are based on a future Emergency Response Plan that will be developed at some point. The Evacuation Time analysis seems unrealistic as it suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. It took people HOURS to evacuate from Kenwood and Sonoma Valley during recent fires. Also, the DEIR calls for the "requirement" for a shelter-in-place facility at SDC after 200 homes are built. There is no proven rationale for sheltering in place particularly in a High Fire Risk Area. The DEIR and Self-Mitigating SDC Specific Plan do not eliminate risk or wildfire hazard to insignificant levels.	This comment is noted. Please see MR-1 in regards to the self-mitigating plan and MR-4 in regards to the wildfire evacuation analysis.
Teri Shore	August 24, 2022	C91-8	HISTORIC ALTERNATIVE PREFERRED: If I had to choose one of the alternatives, I would choose the Historic Alternative as it is the environmentally preferred alternative. NO PROJECT ALTERNATIVE: The DEIR fails to provide a true No Project Alternative which fails to meet CEQA.	This comment is noted. Please see MR-2 in regards to the level of detail of analysis and programmatic nature of the Draft EIR.
Terry and Carolyn Harrison	Wednesday, September 14, 2022	C92-1	We keep encouraging more people to come into Sonoma County without any long range plans concerning transit, roads, water, energy and food (as we drive up the price of farmland). 300 new residences is plenty for SDC. Recondition present ones if possible. Regenerative grazing and wild animals and open space are compatible and exist in many parts of the world including the US. The sheep, cows or goats are within enclosed fields rotating from one to another, leaving plenty of open space where grasses and other feed have been consumed without destroying the plants which are recovering and getting ready for the next rotation. The upper part of SDC should be zoned for this.	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

The Filipello Family **The Thomsen Family** **F. Horne,** **A. Chavez,** **J. Hansen**	Wednesday, August 24, 2022	C93-1	Comments and Questions regarding the Draft EIR Water: Water availability concerns are at a crisis level. What exactly is the the water source for 1000 new homes or even for 450 new homes in the draft EIR? Housing versus Houses: Why is building new houses proposed when the SDC housed 3000 in existing structures? Why not renovate, restore and repurpose the historic, beautiful buildings on the SDC campus before any new construction? The EIR must be modified to insure the first use of existing buildings. Fire Prevention: New home construction is a magnet for wild fires. What special fire resistant construction will be used if these homes are built? Will this include fire resistant tile roofs and heavy plaster walls like those found on most of the historic buildings which were built to last and have lasted? Wildlife: The SDC campus is an extension of an important wildlife corridor and passage between Sonoma Mountain and the Mayacamas Range. The area must remain open to wildlife coming through Jack London Park and traveling to the Audubon and Oak Hill preserves. What plans insure wildlife safe passage? We look forward to hearing your response to our concerns.	This comment is noted. Please see MR-5 in regards to the lack of, or inadequacy of, or disagreement with water supply analysis.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	27-Aug-22	C94-1	Though Permit Sonoma worked hard, produced >4000pgs, & created many potential alternatives within their Specific Plan/EIR process, they have overshot the mark creating a plan for the past, “fighting the last war” as we often do, and not taking advantage of the opportunity to present a plan for the future. Why does it appear the SDC EIR and associated Specific Plan (characterized by the County’s preferred Proposed Project Alternative) have defined and committed the County of Sonoma, as Lead Agency under CEQA, to a series of specific decisions, plans, and/or alternatives without fully considering other acceptable plans (under legislation 14670.10.5), alternatives, mitigation measures, and the Null Project. Please explain why the County (Permit Sonoma) has allowed the EIR to be produced which does not address the mitigatable cumulative effects of waste generated by the proposed alternative over the Null Project hypothesis, to the extent where recommended building demolition of ~1.2M sq-ft produces a minimum of 161,000 cy of debris equal to 67 years of operation of the Proposed Project Alternative in addition to the equal amount of debris produced by the eventual demolition of the Proposed 1.2M sq-ft Project (Σ=322,000 cy, or 134 years at the rate of the Proposed Project at completion); together with the project waste there will be an average cumulative waste of 19.8 tons/day or 1.5% of daily averages (2016-2020, per SP pg 603) ? Since we are already transferring all our solid waste away from Sonoma County because we do not have local landfill capacity, and our waste charges ($135/ton) are double the charge for Hazardous Waste ($50.97/ton asbestos waste) taken to Kettleman Hills landfill, this must be considered a significant mitigatable impact by Reuse and Historic Preservation of the existing buildings. At the local waste costs, this represents >$960,000/yr = ~$65M over the 67 years, from these 3 sources.	As noted on page 486-487 of the DEIR regarding solid waste generation from construction and operation, "Demolition and construction activities associated with implementation of the Proposed Plan would result in a temporary increase in solid waste generation periodically during construction. However, the increase would be minimal and temporary. Standard Conditions of Approval UTIL-5 is included to ensure preservation of top soil removed during construction for reuse in revegetation.The Proposed Plan would not generate solid waste in excess of State or local standards or in excess of the capacity of local infrastructure during construction. This impact would be less than significant. Additionally during site operation, "the daily solid waste generated by the Proposed Plan would be approximately 0.27 percent of the permitted daily capacity of the landfill. The Proposed Plan would not be a substantial contributor to the County’s solid waste at the Central Disposal Site." Therefore, the impact of construction and operational waste generation is less than significant.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	27-Aug-22	C94-2	Why is no mention made in the EIR or SP of GHG's which were imbedded and carried within the existing constructed buildings which will be released into the atmosphere by their demolition, nor is any men-tion made of the GHG emissions which are imbedded in the production of the new materials and resour-ces which are expected to replace the demolished SDC buildings, these are significant long term mitigat-able cumulative effects? Why has the EIR not addressed either of these cumulative GHG effects, from demolition, neither the before demolition GHG emissions sequestered in the existing buildings which will be released, nor the GHG emissions released in the production of the replacement 1.2M sq-ft of buildings together with their own lifecycle emissions released upon their demolition? These GHG's must be considered a significant mitigatable impact by their Reuse. TCEFINANCIAL 154 Butterfly Ln, #232 Santa Rosa, CA 95407 Phn 707-508-8011 thomasells40@gmail,com Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish?	This comment is noted. Please see MR-3 in regards to level of detail of analysis and programmatic nature of the Draft EIR
Thomas Chase Ells	27-Aug-22	C94-3	Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-of-the-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building?	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	27-Aug-22	C94-4	Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to "In-Situ" mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the buildings? Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, "a death by 1000 cuts" to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation? Can you explain how you are mitigating this neglect, in producing a cycle of demolition and reconstruction which has a cumulative effect on the environment due to exploitative expectations, the expectation that 'everything I have should be new', 'we need the new', 'I need the new'? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis?	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.
Thomas Chase Ells	26-Aug-22	C95-1	Galen's Gardens/Samaritan Housing Society's offer is $1B for "Improvements to the Environment" at Sonoma Developmental Center (SDC) to such an extent as to offset the value & price of any other offer. The current process has gone off track, while Permit Sonoma's efforts at creating an EIR & Specific Plan process for development of SDC have produced Yeomen's effort of planning & exceptional avenues for creative visioning at SDC, they have shot clear past the demarcations of the community's desires/needs. Galen's Gardens/Samaritan Housing Society offer is a "Null Hypothesis Project" proposal for "Improve-ment of the Environment" at SDC and Historic Restoration of the Historic main building ("Professional Education Building/PEC"), which exempts the proposal from CEQA. We in America suffer from a lack of vision, we have been convinced that the proper thing to do is to	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			"Think Globally, but Act Locally" only. This is not correct, this is unscientific, it is anti-scientific and anti-American, we need to "Think Locally, and Act Globally", because that is scientific. What we want locally around us, we should want for all, and similarly with what we don't want near us. We've lost the Public will. See Appendix"A"Term Offer Sheet.	
Thomas Chase Ells	Aug 26, 2022	C95-2	Our offer is simple: create a Climate Crisis Center; establish a Polytechnic Environmental Institute; reuse as many of the buildings and facilities as possible; prevent waste & GHG emissions in the demolition of the County Proposed Project Alternative (CPPA) of ~161,000 tons waste along with the replacement of these same buildings with another ~161,000 tons of future waste (Σ=134yrs waste); establish 6-Agencies with 100units/ each of affordable housing, with each reserving 10 of these units for "short term rentals". We will use Camp Via as an RV site, and re-establish the water & waste treatment systems for wetlands. The value of this proposal to the State is $1.133 Billion, and we would return all the property to the State at any time they wish (subject to the Housing & School Leases, and $100M Rehab Loan). Our only conditions for the creation of the Climate Crisis Center, the Polytechnic Environmental Institute and the affordable housing is $100M Endowment from California Coastal Conservancy, $25M/yr Operating Budget (per CalPoly Humboldt) for the Polytechnic Institute, and the use of the property until it's return to the State. Please see attached Appendices for details.	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	18-Sep-22	C96-1	Why has County Staff/Consultants done the following, and what are your mitigation recommendations?: The EIR & SP preparation violates BPC6731, without a Civil Engineer in responsible charge of Planning? The EIR has committed the County to a course of action, new development, prior to EIR's Certification? Historic Reuse appears proper, yet each price consequence results in expanded project impacts. What is the economic obsolescence impact to the Springs/Glen Ellen of the proposed project? The EIR and SP propose demolition of 1.2M sq-ft of buildings, along with the 1M+0.35M gal fresh water tanks, see Figure 4.3-1: "Historic Assets", without reference to local Wildfire protection. Why? The EIR & SP propose demolition of Historic Firehouse (c1932) without wildfire impact consideration? EIR & SP neglect wildfire consideration, as not "High Fire Risk", though analysis excluded SDC?	This comment is noted. Please see MR-9 in regards to mitigation monitoring, MR-7 in regards to the adequacy of impacts on wildlife movement or disagreement with analysis/findings, and MR-4 in regards to Inadequacy or disagreement with wildfire evacuation analysis.
Thomas Chase Ells	Sept 18, 2022	C96-2	Why does EIR & SP use uncalibrated (unrealistic) models, eg without reference to actual fire evacuation? The EIR develops a series of conclusions as analysis, beginning after point in time of project completion? The EIR assumes no cumulative effects to the proposed project; eg. GHG's and solid waste, but does not include project specific demolition, nor constructed lifecycle, GHG's & wastes? Why? The EIR assumes no cumulative effects from combining the proposed project wastewater into a down-stream waste treatment facility when a historic facility is located on site to recharge the wetlands/creek. SDC is an Historic opportunity to propose and develop an integrated environmental & climate protective response to wildfire, in a traumatized and sensitized area, without which this proposal has a significant cumulative negative impact to the local & regional environment due to unrealized wildfire protections. Why is EIR & SP preparation biased in favor of Standard-Operating-Procedure for new development? There is, at great expense, no Professional caliber analysis within these documents, explain?	This comment is noted. Please see MR-3 in regards to level of detail of analysis and programmatic nature of the Draft EIR.

Thomas Chase Ells	Sept 18, 2022	C97-1	Though Permit Sonoma worked hard, produced >4000pgs, & created many potential alternatives within their Specific Plan/EIR process, they have overshot the mark creating a plan for the past, “fighting the last war” as we often do, and not taking advantage of the opportunity to present a plan for the future. Why does it appear the SDC EIR and associated Specific Plan (characterized by the County’s preferred Proposed Project Alternative) have defined and committed the County of Sonoma, as Lead Agency under CEQA, to a series of specific decisions, plans, and/or alternatives without fully considering other acceptable plans (under legislation 14670.10.5), alternatives, mitigation measures, and the Null Project.	This comment is noted. Please see MR-3 in regards to level of detail of analysis and programmatic nature of the Draft EIR.
Thomas Chase Ells	Sept 18, 2022	C97-2	Please explain why the County (Permit Sonoma) has allowed the EIR to be produced which does not address the mitigatable cumulative effects of waste generated by the proposed alternative over the Null Project hypothesis, to the extent where recommended building demolition of ~1.2M sq-ft produces a minimum of 161,000 cy of debris equal to 67 years of operation of the Proposed Project Alternative in addition to the equal amount of debris produced by the eventual demolition of the Proposed 1.2M sq-ft Project (Σ=322,000 cy, or 134 years at the rate of the Proposed Project at completion); together with the project waste there will be an average cumulative waste of 19.8 tons/day or 1.5% of daily averages (2016-2020, per SP pg 603) ? Since we are already transferring all our solid waste away from Sonoma County because we do not have local landfill capacity, and our waste charges ($135/ton) are double the charge for Hazardous Waste ($50.97/ton asbestos waste) taken to Kettleman Hills landfill, this must be considered a significant mitigatable impact by Reuse and Historic Preservation of the existing buildings. At the local waste costs, this represents >$960,000/yr = ~$65M over the 67 years, from these 3 sources.	As noted on page 486-487 of the DEIR regarding solid waste generation from construction and operation, "Demolition and construction activities associated with implementation of the Proposed Plan would result in a temporary increase in solid waste generation periodically during construction. However, the increase would be minimal and temporary. Standard Conditions of Approval UTIL-5 is included to ensure preservation of topsoil removedduring construction for reuse in revegetation. The Proposed Plan would not generate solidwaste in excess of State or local standards or in excess of the capacity of localinfrastructure during construction. This impact would be less than significant.", and "the daily solid waste generated by the Proposed Plan would be approximately 0.27 percent of the permitted daily capacity of the landfill. The Proposed Plan would not be a substantial contributor to the County’s solid waste at the Central Disposal Site." Therefore the impact from solid waste produced at the site would be less than significant.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	Sept 18, 2022	C97-3	Why is no mention made in the EIR or SP of GHG's which were imbedded and carried within the existing constructed buildings which will be released into the atmosphere by their demolition, nor is any men-tion made of the GHG emissions which are imbedded in the production of the new materials and resour-ces which are expected to replace the demolished SDC buildings, these are significant long term mitigat-able cumulative effects? Why has the EIR not addressed either of these cumulative GHG effects, from demolition, neither the before demolition GHG emissions sequestered in the existing buildings which will be released, nor the GHG emissions released in the production of the replacement 1.2M sq-ft of buildings together with their own lifecycle emissions released upon their demolition? These GHG's must be considered a significant mitigatable impact by their (building) Reuse. Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish?	This comment is noted. Please see MR-8 on the GHG effects of the Historic Preservation Alternative.
Thomas Chase Ells	Sept 18, 2022	C97-4	Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-of-the-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building?	This comment is noted. Please see MR-8 on the ability of the Historic Preservation Alternative to meet project objectives.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	Sept 18, 2022	C97-5	Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to “In-Situ” mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the housing, hospital, and office buildings? Lack of consideration of this impact has direct impacts of needlessly and costly filling existing hazardous waste landfills, both individually and cumulatively, though mitigatable.	The comment is noted. As noted on page 261 of the DEIR, the Hazards and Hazardous Materials Impact Analysis considers the nature of foreseeable hazardous materials use, storage and disposal resulting from the redevelopment of the Sonoma Developmental Center. It also identifies ways that hazardous materials could be exposed to the environment or individuals. The analysis includes a qualitative evaluation of impacts associated with the presence or hazardous materials. The analysis is based on a review of materials ranging from online databases such as Envirostar and Geotracker, hazard maps, Phase I & II Site Assessments (see Appendix G), and relevant plans and regulations at the Federal, State, and local levels. Therefore, upon implementation of the Specific Plan and regular operations of the site, compliance with the regulations for hauling hazardous substances would continue to reduce the potential of an accidental release of hazardous materials (Impact 3.8-1) to a less than significant level. Further, Standard Condition of Approval HAZ-3 would require implementation of Best Management Practices to reduce exposure of workers to contaminated materials during construction, icluding a soil management plan and a health and safety plan. Compliance with the Standard Conditions of Approval Measure HAZ-3 and existing regulations would reduce impacts related to the release of hazardous materials due to foreseeable upset or accident conditions to less than significant. Therea are no

Commenter	Date	Letter	Comment	Response
				schools located or are proposed to be located within one-quarter mile of the Planning Area. Thus, implementation of the Proposed Plan would have no impact regarding hazard emissions or materials in within one-quarter mile of an existing or proposed school. Regarding Impact 3.8-4, implementation of HAZ-3 prior to construction would reduce the potential risks associated with releases of contaminated media as a result of Proposed Plan to a less-than-significant level.
Thomas Chase Ells	Sept 18, 2022	C97-6	Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, "a death by 1000 cuts" to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation (HP)? Can you explain how you are mitigating these neglected impacts which should be further compared to the environmentally preferred HP, in producing a cycle of demolition and reconstruction which has a cumulative effect due to volume of waste, and on the environment due to exploitative expectations, the expectation that 'everything I have should be new', 'we need the new', 'I need the new'? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis?	This comment is noted. Please see MR-3 in regards to level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	29-Aug-22	C98-1	Why has County Staff/Consultants done the following, and what are your mitigation recommendations?: The EIR & SP preparation violates BPC6731, without a Civil Engineer in responsible charge of Planning? The EIR has committed the County to a course of action, new development, prior to EIR's Certification? Historic Reuse appears proper, yet each price consequence results in expanded project impacts. What is the economic obsolescence impact to the Springs/Glen Ellen of the proposed project? The EIR and SP propose demolition of 1.2M sq-ft of buildings, along with the 1M+0.35M gal fresh water tanks, see Figure 4.3-1: "Historic Assets", without reference to local Wildfire protection. Why? The EIR & SP propose demolition of Historic Firehouse (c1932) without wildfire impact consideration? EIR & SP neglect wildfire consideration, as not "High Fire Risk", though analysis excluded SDC?	This comment is noted. Please see MR-9 in regards to mitigation monitoring, MR-7 in regards to the adequacy of impacts on wildlife movement or disagreement with analysis/findings, and MR-4 in regards to Inadequacy or disagreement with wildfire evacuation analysis.
Thomas Chase Ells	Aug 29, 2022	C98-2	Why does EIR & SP use uncalibrated (unrealistic) models, eg without reference to actual fire evacuation? The EIR develops a series of conclusions as analysis, beginning after point in time of project completion? The EIR assumes no cumulative effects to the proposed project; eg. GHG's and solid waste, but does not include project specific demolition, nor constructed lifecycle, GHG's & wastes? Why? The EIR assumes no cumulative effects from combining the proposed project wastewater into a down-stream waste treatment facility when a historic facility is located on site to recharge the wetlands/creek. SDC is an Historic opportunity to propose and develop an integrated environmental & climate protective response to wildfire, in a traumatized and sensitized area, without which this proposal has a significant cumulative negative impact to the local & regional environment due to unrealized wildfire protections. Why is EIR & SP preparation biased in favor of Standard-Operating-Procedure for new development? There is, at great expense, no Professional caliber analysis within these documents, explain?	This comment is noted. Please see MR-3 in regards to level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Tim Portwood	Wednesday, August 24, 2022	C99-1	I am writing to urge you to pause any further review or action on the Specific Plan and EIR for the Sonoma Developmental Center. This is necessary in order to ensure that: 1. The County Specific Plan process is aligned with the State's RFP process (i.e., after the State announces the RFP selection on October 24), and 2. The County Specific Plan and EIR describe and analyze the impacts of the actual proposal that the State selects rather than a hypothetical plan. Even though I live in West Sonoma County, I know that the SDC property is of vital importance as open space and as a critical part of a wildlife corridor, benefitting the entire county, region, and state. It would be disastrous and shameful for Sonoma County and the State of California to rush forward with a development plan that fails to adequately and meaningfully address climate change, wildfire, drought, and biodiversity loss. Thank you for your consideration of my input.	This comment is noted. Please see MR-2 in regards to the need for more time/selection of a developer before finalizing the Specific Plan.
Vicki Hill	13-Sep-22	C100-1	I am a land use planner and CEQA specialist in Sonoma County and have many concerns regarding the proposed large-scale SDC Specific Plan and the adequacy of the SDC Specific Plan Draft EIR. I am still reviewing the Plan and EIR and will submit detailed comments by the comment due date. However, I wanted to bring to your attention a few of the many issues that need to be addressed. Overall, the DEIR reflects a bias towards the proposed dense development and tends to dismiss the proposed plan's environmental disadvantages when comparing it to other reduced-scale alternatives. Substantial revisions are necessary to the EIR and Specific Plan to make the EIR adequate, under CEQA, and to create a plan that represents sound land use planning.	This comment is noted. Please see MR-3 in regards to level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Vicki Hill	13-Sep-22	C100-2	Specific Plan Scale The planning process has failed to result in a plan that even remotely resembles a community-supported alternative. The promised community-driven process has not occurred. Despite widespread, valid public concerns about the proposed high-density plan and the Board of Supervisors direction to evaluate a plan with 450 to 800 residential units, the proposed Specific Plan still includes an extreme amount of development (1000 plus homes, 410,000 square feet of commercial), which is totally out of scale for this location outside of an urban growth boundary and in the middle of the semi-rural village of Glen Ellen. There is no project comparable to this size in the entire Sonoma Valley. This urban sprawl development, including a 120-room hotel and potential conference center, will, in effect, create a new city, in direct conflict with good land use planning principles and County growth policies. Yes, we need and want housing, but there must be a balanced approach that factors in site constraints, impacts, surrounding land uses, historic resource values, and limited transportation network. This balanced approach is even reflected in the plan's guiding principles (see DEIR page 5-6) but the plan fails to conform to these principles. Project objectives to "balance redevelopment with existing land uses" and "balance development with historic resource conservation" have been ignored. The Draft EIR identifies significant, unavoidable impacts on historic resources and traffic from the proposed Specific Plan due to its size. There is no mitigation identified for destroying so many historic buildings and converting the site to a new urban development. These issues could be addressed with a smaller alternative.	This comment is noted. Please see MR-8 for an explanation of how the historic preservation alternative was considered.

Commenter	Date	Letter	Comment	Response
Vicki Hill	13-Sep-22	C100-3	Environmentally Superior Alternative DEIR page 570 states: "Overall, the Historic Preservation Alternative is the environmentally superior alternative…" The text goes on to dismiss this alternative and minimize its environmental benefits. To say that the proposed plan's impacts are "largely comparable" to the impacts of smaller alternatives is false and misleading. The types of impacts may be the same, but the magnitude of impacts on traffic, climate change, historic resources, noise, biological resources, public services and land use would be much less with a reduced-scale alternative. The Historic Preservation Alternative is feasible and its size and scale should be pursued as the preferred plan. Some modifications to this alternative could be incorporated to further reduce impacts, such as even more adaptive reuse and more compact development design. It appears that some impact-reducing elements included in the proposed plan were arbitrarily excluded from this alternative (e.g., the road connection to Highway 12 for emergency access), thus making this alternative appear less environmentally advantageous. Also, there is no reason to conclude that this alternative couldn't achieve affordable housing goals. Compared to current and projected high construction costs for new development, adaptive reuse can be an effective strategy to reduce overall project costs and impacts.	This comment is noted. Please see MR-8 for an explanation of how the historic preservation alternative was considered.
Vicki Hill	13-Sep-22	C100-4	Deferral of Analysis The Draft EIR defers analysis of impacts on some resources to a future time when individual projects are proposed. However, most if not all future projects will be exempt from CEQA under permit streamlining legislation so there will be no means to limit full buildout or implement much-needed future mitigation measures.	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR.
Vicki Hill	13-Sep-22	C100-5	Specific Plan Phasing SDC Planning Advisory Team (PAT) members and public comments stressed the importance of project phasing to reduce impacts on the environment and on the community. There is only one requirement for phasing (Policy 4-3, which requires completion of at least 10,000 square feet of retail businesses and at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive) and this policy does not reduce any environmental impacts. The Specific Plan itself has a section on "Recommended Phasing" but these provisions are advisory and not mandatory. The EIR must identify phasing as mitigation to help further reduce traffic and other impacts.	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Vicki Hill	13-Sep-22	C100-6	Need for Performance Standards Project phasing should be based on performance standards adopted for each environmental issue area. In this way, impacts can be monitored and additional mitigation measures developed, as needed. For example, there is no certainty that massive demolition and construction activities, as well as the introduction of a large mobile population to the site, will not dramatically affect the surrounding open space resources. Before proceeding with full buildout, it should be proven that the site can actually accommodate the projected buildout.	This comment is noted. Please see MR-9 in regards to mitigation monitoring and performance standards.
Vicki Hill	13-Sep-22	C100-7	Specific Plan Policy Language and Enforceability Many of the policies in the proposed plan are intended to reduce/avoid impacts but the wording is such that it is not mandatory and many policies are not carried forward to Appendix A, Standard Conditions of Approval. Thus, these policies cannot be relied on to be implemented and fully mitigate impacts. Any policy that does not have a strong "shall" statement is not enforceable.	This comment is noted. Please see MR-9 in regards to mitigation monitoring and performance standards.
Vicki Hill	13-Sep-22	C100-8	Jobs/Housing Growth (DEIR Section 5.1.1.2) It is completely inaccurate to say that the proposed job growth of 940 jobs outside of an urban growth boundary is a "modest" number. The number of jobs cannot be compared to the county-wide number – this methodology purposefully minimizes the impact. Compared to the rest of Sonoma Valley, which is a distinct planning region, the addition of 940 jobs is significant and is growth-inducing. Also, there is no documentation of the need for these jobs in Sonoma Valley. The market study conducted as part of the Specific Plan alternatives report (November 2021, see sdcspecificplan.com/documents) determined that non-residential development did not generate overall revenues and did not contribute to financial feasibility. The alternatives report states: "Commercial and industrial uses may support building construction costs but are unlikely to have a significantly positive impact on overall development feasibility." Also, the EIR (page 11) states: "…the market demand for non-residential uses (with the exception of a hotel) is limited and higher employment levels will reduce financial feasibility." While there is a large demand for affordable housing in Sonoma Valley, creating over 700 market-rate homes is definitely a significant growth-inducing impact because there is no existing demand for this high number. These housing units will not serve	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			the existing Sonoma Valley population – they will attract people from outside the valley and outside of Sonoma County.	
Vicki Hill	13-Sep-22	C100-9	Comparison to Previous Institutional Use The EIR analysis, including the growth-inducing section as well as other sections, attempts to justify the large-scale plan by erroneously comparing the proposed plan population and employee growth to the previous institutional use and number of clients/employees. This comparison is invalid and should not be used as a basis for over-developing the site due to the fact that: • As an institution, SDC tread very lightly on the environment and adjacent community. At its most populous, most of the residents of SDC did not leave the property. They did not drive cars, they didn't go offsite to schools, doctors, restaurants, etc. • Vehicle trips were primarily limited to employees divided into three shifts so that traffic was spread out, rather than concentrated at peak hours. There were no retail commercial uses or a hotel to generate trips. • Because of the limited outdoor activities and absence of constant vehicle traffic onsite, people and cars did not interfere with wildlife movement; the campus was open, peaceful, and not occupied with uses that generated a substantial amount of traffic (e.g., hotel, restaurants, etc.). • Employment and resident numbers at SDC reached a peak during a time over 50 years ago when there was very little cumulative growth in Sonoma Valley and both Arnold Drive and Highway 12 were still well-functioning roadways.	This comment is noted. Please see Impact 3.12-1 on page 376 regarding impacts on induced population growth and buildout of the Proposed Plan would help fulfill State legislature requirements to develop affordable housing within the Planning Area and help mitigate the severe housing shortage facing Sonoma County. Further, the Sonoma County General Plan 2020 Housing Element specifies that future re-use of the SDC facility should include affordable housing. Therefore, given that the Proposed Plan's projected population growth is commensurate with State legislative requirements to prioritize affordable housing development as well as General Plan goals and policies, the Proposed Plan would not induce substantial unplanned population growth in the Planning Area and the impact would be less than significant. Please see also Section 5.1 on page 579 of the DEIR for further analysis on growth-inducing impacts.

Commenter	Date	Letter	Comment	Response
			Nor is it valid to compare existing building square footage to proposed square footage in an attempt to minimize impacts, as it is the proposed use of the buildings that drives most of the impacts.	
Vicki Hill	13-Sep-22	C100-10	EIR Traffic Assumptions There is no guarantee that people who live onsite will work there. That cannot be assumed for purposes of analyzing traffic impacts. Also, it cannot be assumed that the roadway connection to Highway 12 will be developed. Therefore, the traffic impacts are substantially underestimated in the EIR.	This comment is noted. Please see MR-6 in regards to the traffic analysis.
Vicki Hill	13-Sep-22	C100-11	Wildlife Corridor Impacts Despite many scoping comments, impacts on wildlife movement through the campus are not addressed in the EIR. The campus itself is part of the wildlife corridor and must be acknowledged as such. Furthermore, there is no overall prohibition or restrictions on fencing within the campus (only prohibition on wooden fences) so wildlife will likely be blocked from movement through the campus . There will be significant impacts on wildlife movement from the introduction of thousands of people and vehicles, as well as fences.	This comment is noted. Please see MR-7 in regards to the adequacy of impacts on wildlife movement or disagreement with analysis/findings.
Vicki Hill	13-Sep-22	C100-12	No Project Alternative Definition Under the No Project alternative, it cannot be assumed that the state will take control of the site and that the county will have no land use authority. If the state proceeds with sale of the property, any private developer would be subject to county land use controls. The RFP issued by the State clearly states that the property is being offered for sale. The RFP contains no reference to the possibility	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			for a long-term ground lease with private developers. Therefore, this is not a reasonable assumption.	
Vicki Hill	13-Sep-22	C100-13	Financial Feasibility Despite making references to financial considerations, there is no definition or accurate assessment of the financial feasibility of the proposed plan or alternatives. While financial feasibility is required, there is no mandate to maximize revenues at the cost of other resources and values, or at the cost of reasonable land use planning. Thank you for considering my comments. Please feel free to contact me if you have any questions or need clarification on any of these comments. Regards,	This comment is noted. Please see page 18 which states the Proposed Project fulfills the project objectives most completely, including providing greater levels of housing including affordable housing, and superior financial feasibility, with overall environmental impacts that are largely comparable between the Proposed Plan and the alternatives, with the exception of greater preservation of historic resources in the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Victor Gonzalez	Monday, August 29, 2022	C101-1	I previously sent you some excerpts from the body and Appendix of the DEIR regarding the treatment of the water situation (attached). The reason for my interest in this specific topic is 2-fold: 1. We are in a severe and long-term drought environment due to increasing temperature and climate changes 2. SDC is blessed with an abundance of water resources which is highly unusual for any new development. The language in the water section uses term “assumes”. You cannot assume anything about utility services. Without all clear & adequate utility services development is challenged. Buried in the appendix is a definitive statement that VOMWD can serve the full buildout over the next 25 years so why is the Department not being crystal clear about this in the water section? The bulk of the Water Study (Appendix and paid for by the State) concerns obtaining the State Water rights and the existing water facilities (reservoirs & presumably pipes/pumps) which have held 800 ac feet or more every year since records have been recorded. SDC needs only 340 at full build out so there is a surplus available for the district to mitigate the long-term drought scenarios. This benefits the whole County. Now I understand that the water facilities are “off-site” and not part of the core campus DEIR discussion so I think a declarative paragraph should state that rather than mixing up the “surface water” discussion between off-site and on-site is required. There is no discussion of what it would take financially and personnel wise to operate the Water Treatment Plant (“WTP”) so use of the actual water resources is still a very open question. As it stands publicly there are no plans to turn all that water into a potable resource for the district. If true, that should be stated. It is just the weirdest discussion of a major utility for a major development that I have ever read so being clear and straightforward about it will aid the defense of the document and better inform the public. Just one last thought: I wrote a letter to the editor of the Sonoma Index Tribune that was published this Wednesday that might interest you.	This comment is noted. Please see MR-5 for clarification of the water supply analysis.

Commenter	Date	Letter	Comment	Response
Victor Gonzalez	Monday, August 29, 2022	C101-2	Pg. 465 The District's most recently adopted Urban Water Management Plan (UWMP) acknowledges the District's plans to annex and serve the Proposed Project site. It is assumed the Planning Area will be served by local, on-site surface water sources, and the District will be the water service provider.122 122 Water Supply Assessment for the SDC Specific Plan. EKI / VOTMWD July 2022. Pg 466 All riparian water rights shall remain with the property. The state owns riparian water rights and pre-1914 and post-1914 appropriative water rights and owns and operates a municipal water supply, treatment, and distribution system on the property. These rights may be held by the state for existing and future domestic uses on the property. Pg 467 Raw water transmission lines from the Sonoma Creek diversion and pump house to Suttonfield Lake, the lakes to the treatment plant, and water transmission lines between transfer tanks may need to be replaced based on the age of the piping, however an assessment of their condition is needed to determine if they can continue to be used to serve the Planning Area. The water treatment plant will be evaluated for re-use by the water system operator.	This comment is noted. Please see MR-5 for clarification of the water supply analysis.
Victor Gonzalez	Monday, August 29, 2022	C101-3	Water Supply Assessment Sonoma Developmental Center Specific Plan Valley of the Moon Water District – July,2022 However, details of the Proposed Project were not known at the time that the 2020 UWMP was published, and thus the Proposed Project was not included in the 2020 UWMP demand and supply analyses. It is assumed that the Proposed Project will be served by local, on-site surface water sources, and VOMWD will be the water supplier for the Proposed Project. This WSA concludes that, provided that all surface water rights associated with the SDC Property are available to be utilized by VOMWD to serve the Proposed Project, the Proposed Project will not adversely affect water supply reliability within the VOMWD Service Area. Based on currently available information and conservative estimates of projected demand, the VOMWD expects to be able to meet all future demands within its existing service area, inclusive of the Proposed Project in normal and multiple dry hydrologic years from 2025 through 2045. The shortfalls that are currently projected during single dry years will be addressed	This comment is noted. Please see MR-5 for clarification of the water supply analysis.

Commenter	Date	Letter	Comment	Response
			through planned implementation of the VOMWD Water Shortage Contingency Plan (WSCP).	
Victor Gonzalez	Monday, August 29, 2022	C101-4	Specific Plan 6.2 it is anticipated that following the adoption of this Specific Plan the site will be served by the Valley of the Moon Water District (VOMWD). The majority of water distribution pipes in the Core Campus will need to be replaced, a cost assumed to be borne by the development 6.3 The existing infrastructure is primarily located outside of the Core Campus, so determining the ongoing operations and ownership of the assets will be a critical discussion between the State, County, and eventual master developer or developers. The State owns a variety of water rights associated with the SDC property, including riparian water rights and pre-1914 and post-1914 appropriative water rights. State legislation mandates that the riparian water rights—rights to the water that physically touches the land, such as from Sonoma Creek—remain with the property and limit water usage to within the site, and that the State may continue to hold the other rights for existing and future uses on the property. Determining the ownership and use of these water rights will be another critical decision for SDC's water supply going forward. GOALS 6-E Water Supplies: Safeguard SDC's water supplies and water rights, ensuring adequate availability of water for residents, businesses, fire suppression needs, ecosystem services, and groundwater recharge.	This comment is noted. Please see MR-5 for clarification of the water supply analysis.

Commenter	Date	Letter	Comment	Response
Victor Gonzalez	Monday, August 29, 2022	C101-5	EKI Stud 2207 "This WSA concludes that, provided that all surface water rights associated with the SDC Property are available to be utilized by VOMWD to serve the Proposed Project, the Proposed Project will not adversely affect water supply reliability within the VOMWD Service Area. . Based on currently available information and conservative estimates of projected demand, the VOMWD expects to be able to meet all future demands within its existing service area, inclusive of the Proposed Project in normal and multiple dry hydrologic years from 2025 through 2045. The shortfalls that are currently projected during single dry years will be addressed through planned implementation of the VOMWD Water Shortage Contingency Plan (WSCP)."	This comment is noted. Please see MR-5 for clarification of the water supply analysis.
Victor Gonzalez	Monday, August 29, 2022	C101-6	6.2.2 Surface Water Rights Associated with the SDC Property The State of California Department of Developmental Services - Sonoma Developmental Center holds several water rights at multiple PODs on the SDC Property. The watercourses and PODs present on the property are identified in Figure 4. As summarized in Table 7, the water rights associated with the SDC Property include two appropriative rights and three combined riparian rights and pre-1914 rights.7 Each water right includes specific temporal and/or volumetric restrictions, described further in Appendix B, which govern diversions at each respective POD. The restrictions associated with the water rights summarized in Table 7 govern how much water can be diverted from each POD on the Proposed Project site, when it can be diverted, and how the water can be beneficially used. The statements on the Hill/Mill Creek, Roulette Springs, and Asbury Creek (Applications #S019164, #S019167, #S019167) have claims to both riparian and pre-1914 use. The pre-1914 claim is currently being used to divert from Hill/Mill Creek and Asbury Creek to Fern Lake for regional fire storage. The other two sources are used pursuant to appropriative water rights (License #3082 and #2451). By actively managing the on-site water rights, the SDC has historically been able to provide reliable year-round domestic water supply to serve all uses on the SDC site at least up to the recorded peak historical demand of 1,143 AFY (Appendix A). In 2019, the State of California enacted Government Code Section 14670.10.5 (SDC Legislation) that outlines the State's goals and objectives for the SDC Property, including the language pertaining to the existing water rights. Paragraph (f) states the following: (f) All riparian water rights shall remain with the	This comment is noted. Please see MR-5 for clarification of the water supply analysis.

			property. The state owns riparian water rights and pre-1914 and post-1914 appropriative water rights and owns and operates a municipal water supply, treatment, and distribution system on the property. These rights may be held by the state for existing and future domestic uses on the property. Based on the SDC Legislation, this WSA assumes that the water rights associated with the SDC Property and associated water supply infrastructure will be available to be utilized by VOMWD to serve water demands associated with the Proposed Project	

Commenter	Date	Letter	Comment	Response
Victor Gonzalez	Monday, August 29, 2022	C101-7	As discussed above, this WSA assumes that all existing water rights and water supply infrastructure associated with the SDC Property will be available for use by VOMWD to serve the Proposed Project demands on the occasion that the SDC Property is annexed into VOMWD's service area. Given that the total annual water demand for the Proposed Project at full buildout and occupancy is estimated to be 342 AFY, it is assumed that the local surface water supplies at the SDC Property will be sufficient to meet the demands associated with the Proposed Project under all conditions (i.e., current and projected, and for normal, single dry, and multiple dry years including a five-year drought period) based on the estimated 100% reliable yield of 356 AFY 6.6 Thus, this WSA assumes that all existing water rights associated with the SDC will be available to be utilized by the VOMWD to serve the Proposed Project on the occasion that the SDC Property is annexed by the VOMWD. As discussed in Section 6.2.3, the available volume of local surface water is conservatively estimated to be 356 AFY in all year types, which is assumed to be supplemental to the VOMWD's collective supply portfolio for purposes of serving the Proposed Project. VOMWD has no current plans to develop groundwater supplies on the SDC Property. Table 11 Projected Normal Year Water Supply and Demand (Scenario C) Sonoma Developmental Center Specific Plan, Sonoma County, California Scenario C: Inclusive of Local SDC Supplies and Proposed Project Demands Table 12 Comparison of Single Dry Year Water Supply and Demand (Scenario C) Sonoma Developmental Center Specific Plan, Sonoma County, California Scenario C: Inclusive of Local SDC Supplies and Proposed Project Demand	This comment is noted. Please see MR-5 for clarification of the water supply analysis.

Victor Gonzalez	Monday, August 29, 2022	C102-1	Brian you requested comments on the DEIR and I focused on what I believe to the one on the most important topics that is treated in a casual and unclear way. Attached are sections of the water discussion that requires clarification: 1. If Valley of the Moon Water District is committed to serving and capable of serving the full buildout of the Specific plan that should be clearly stated rather than being buried in the Appendix of a recent report. 2. ". It is assumed the Planning Area will be served by local, on-site surface water sources, and the District will be the water service provider." a. This is the wariest and vaguest statement I have ever read in in an EIR on such an important topic. EIR cannot "assume" utility services for a development site. b. What does "on-site water source's" mean? Are these sources limited to the project area – the 200-acre campus? If so, there are no such sources. If it means the 800+ acre feet stored off campus and the water rights that provide that water than that should be made clear that VOM is committed to develop that tremendous source of water. i. To me the later should happen: 1/3rd of the stored water can be sold to the core campus customers and 1/3 can be sold to existing customers leaving 1/3 to in reserve. This would decrease the burden on the SCWA aqueduct which provides most of VOM's water currently. ii. Utility District's can float revenue anticipation bonds for the upfront costs and after that it is long term revenue and a proven long-term source of water.	This comment is noted. Please see MR-5 for clarification of the water supply analysis.

Commenter	Date	Letter	Comment	Response
Victor Gonzalez	Monday, August 29, 2022	C102-2	The conclusion from the water discussion is that the treatment plant and transfer pipes/pumps are to be abandoned and possibly those reservoirs will be drained or left to silt up. If so be clear about it. i. There is no estimate of the cost to repair the treatment plant or distribution system outside of the core campus. ii. The likelihood that that the ultimate developer will be about to take on that responsibility is not discussed and probably unrealistic d. If as the State says that the water rights go with the "land" which land do they mean: core campus or future park property. i. I do not believe that any park district is going to want the responsibility of 2 reservoirs and certainly are not in the water rights business so why can this not be made clearer? So why not be clear or describe the options for any future buyer.	This comment is noted. Please see MR-5 for clarification of the water supply analysis.
Victor Gonzalez	Monday, August 29, 2022	C102-3	3. On the "straight face" test when the district report of July, 2022 says that they can serve the campus for the next 25 years I would appreciate it if I did not get threatening letters from them about the dire need to cut back irrigation to 3 days a week and only after midnight. Everybody knows we are going to have decades of drought going forward so this statement does not pass the "straight face" test unless SCWA steps ups and backs it up…	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Vivien MacDonald	Thursday, September 15, 2022	C103-1	I am STRONGLY opposed to the selling of the Sonoma developmental Center to a developer. The land must be contributed to state or county Parks and protected for the public enjoyment and for a wildlife corridor. The housing should be appropriate for a rural village setting with the smallest number of houses possible. I believe there is one proposal for 450 houses. The county roads CANNOT support the amount of traffic that will be generated by more housing. I live on Bennett Valley Rd and there is already a dangerous amount of fast moving traffic and MANY accidents a year as you perfectly well know. The more traffic, the more deaths and they will be on your and the other officials that approve an outscaled plan's hands. Your traffic analysis does not even include BVR which shows it's inadequacy because cars heading into Santa Rosa will divert onto BVR to avoid the traffic build up elsewhere. The voices of the community must be heard. Thank you	This comment is noted. Please see MR-6 in regards to the adequacy of the traffic analysis.

Commenter	Date	Letter	Comment	Response
Will Shonbrun	Monday, September 12, 2022	C104-1	In its official Specific Plan/ DEIR, Permit Sonoma is proposing the building of 1000 houses, plus a hotel, plus an indeterminate number of businesses at the former Sonoma Developmental Center. This means anywhere from 2500 to 3000 people living there. All these people will be using cars. All these people will be needing goods & services. How many of these commercial businesses will also be on the SDC land or travelled to by homeowners daily? Many of these people will have pets. I'd like to know how all these fine folks and their adorable animals will safely evacuate their homes at SDC? In the 2017 wildfire in the City of Sonoma and its environs it took an hour and a half to two hours to go a few miles on Hwy. 12 and Arnold Drive (the only roads going south in and out of Sonoma Valley). That's not anecdotal, that's a plain fact. In this same Specific Plan, it boldly states that these additional 3000 folks and their cars will add 1 to 2 minutes travel time in that evacuation from a raging wildfire. When questioned in a previous meeting about its projections about fire evacuation from the new town the county is proposing on Sonoma Mountain, its planners, Permit Sonoma, cite that its numbers and conclusions are all based on statistics they've compiled, regardless of the reality we have all experienced. So how does one logically argue with this? This begs the question ... why should we, the public, accept at face value anything stated in this Specific Plan, including their data regarding environmental impacts on the wildlife corridor, the traffic studies, the re-use of many buildings and the preservation of 750 acres of open space from future development? In addition, how are our schools going to absorb another thousand or so students?	This comment is noted. Please see MR-6 in regards to the adequacy of the traffic analysis and see MR-7 in regards to the adequacy of impacts on wildlife movement or disagreement with analysis/findings.
William B Hirsch	Tuesday, August 23, 2022	C105-1	I live on Arnold Drive, just below the church. I have now read the SDC Specific Plan Draft Environmental Impact Report and am quite disturbed by many of the assumptions and conclusions included in the report. I was initially struck by how little the authors understood the impact this project will have on the community, by the cavalier statements about how this plan would "benefit local communities and residents." The authors disengenuously make claims about consulting the community to "better understand community priorities," but in fact little regard was given to the overarching concerns of most community members that this plan will adversely impact the character of the community and, more importantly, the safety of the residents due to the monumental scope of the proposed project. Although I am	This comment is noted. Please see starting on page 15 of the DEIR, Table ES-3: Summary of Impacts and starting on page 45, the Public Involvement chapter.

Commenter	Date	Letter	Comment	Response
			appalled by the thought of creating a new town at the SDC site that dwarfs Glen Ellen and rivals Sonoma itself, my chief concerns are how that new town will impact traffic, wildlife, water, and most importantly, fire evacuation plans.	
William B Hirsch	Tuesday, August 23, 2022	C105-2	The Vision and Guiding Principles are full of references to “well-planned evacuation routes” and "proactively planning for community safety in natural disasters,” but in fact they somehow conclude that pouring a couple of thousand cars onto Arnold Drive in the event of a disastrous fire will somehow not have a significant impact on emergency evacuation plans. Oddly, the analysis of traffic during a massive explosive fire emergency focuses only on daily traffic patterns and employees and residents of the new town, but ignores the significantly increased volume of traffic that would occur from all the other residents of Glen Ellen and along Arnold Drive. The DEIR also does not take into account the guests at the proposed 120 room hotel or the visitors to the new commercial and recreational space they seek to build. I take little comfort in their conclusion that only 25% of the residents will flee when they get the first alert - it seems risky and irresponsible to bet the lives of so many people on that assumption, rather than assuming that there will most likely be widespread panic if disaster strikes, especially now that we all know about what happened in Paradise and other communities.	This comment is noted. Please see MR-4 in regards to the adequacy of the wildfire evacuation analysis and MR-6 in regards to the traffic analysis.
William B Hirsch	Tuesday, August 23, 2022	C105-3	Despite these unrealistic assumptions, the authors conclude that travel time in the event of an evacuation will increase by only 1.2 minutes - actually, in my experience, even during normal traffic, sometimes it takes several minutes before I can even get onto Arnold Drive, so it seems unlikely that a huge influx of traffic will delay me, and many others, no more than a minute. It seems that the DEIR overlooks the basic fact that Arnold Drive is a two lane country road with hundreds if not thousands of residents on either side if the road with no other escape route. The authors' decision to ignore the fire danger from the west is also hard to understand, since even the lower likelihood of a fire coming from the west is based on historical records that are less and less relevant given the	This comment is noted. Please see MR-4 in regards to the adequacy of the wildfire evacuation analysis and MR-6 in regards to the traffic analysis.

Commenter	Date	Letter	Comment	Response
			impact of climate change. A fire from the west, through Jack London Park and down Sonoma Mountain, would hit the SDC with devastating force.	
William B Hirsch	Tuesday, August 23, 2022	C105-4	Finally, the issue is not how the project impacts an approved Emergency Response Plan, but how it impacts the safety of the entire community in the event of a fire emergency and evacuation. All this is to say that this DEIR should not be approved until there is a serious evidentiary based Emergency Response Plan in place and only after there has been a comprehensive and objective study of how this project will impact public safety and traffic conditions on Arnold Drive during a fire emergency. Moreover, to save time and resources, the entire process should be delayed until the State of California completes its RFP and chooses a development proposal - the DEIR and the Specific Plan should then be aligned with the State's development plan, I have other concerns with the proposed plan, and seek specific details about the preservation of open space, more realistic analysis of water resources during times of ongoing drought, and serious consideration of the overall environmental impact due to increased VMT. I am especially concerned about the questionable conclusion that a smaller, less grandiose project would not be economically feasible. That is a highly dubious assumption, which seems to be self-serving and reductive. The various alternative plans - with reduced housing, lodging and commercial space - need to be more carefully analyzed and considered in light of the constant threat of a devastating fire and the public's need for a sensible and workable evacuation plan on Arnold Drive.	This comment is noted. Please see MR-2 in regards to the need for more time/selection of a developer before finalizing the Specific Plan

Commenter	Date	Letter	Comment	Response
Andrew Harper	Wednesday, September 14, 2022	C106-1	Sonoma. Instead, please direct Permit Sonoma to: 1. Scale Back Size of Development to 450 or fewer homes and require that most of them be affordable to the majority of people who live in Sonoma Valley. Eliminate the hotel, retail and commercial space that is already provided in Glen Ellen. In the DEIR, analyze the impacts of and add enforceable measures to reduce impacts of proposed new uses in the open space including agriculture, agricultural processing, tasting rooms, farm stands, recreation, parking lots, geothermal development and sports facilities (see Table 4-3 of Specific Plan). b. Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed.	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Andrew Harper	Wednesday, September 14, 2022	C106-2	Wildfire: Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives. Develop and add enforceable Conditions of Approval for Wildfire to reduce and prevent risk as there currently are none. 5. Climate Crisis: Given the County's Climate Crisis Resolution and commitments to reduce climate changing emissions (GHGS) from driving and other sources, revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as building fewer homes, reusing and demolishing fewer buildings, providing transit. 6. DEIR is Inadequate While the so-called self-mitigated Specific Plan contains many general policies, goals and conditions of approval to address environmental impacts, the DEIR falls short of CEQA requirements. The DEIR does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by few actual requirements and many vague words such as "promote" or "encourage" or "if feasible." The DEIR needs to be revised and the Conditions of Approval strengthened and moved into a legally enforceable Mitigation and Monitoring Program. On a personal note, this place is special to my family, as we have enjoyed hiking in the area and love all the nature. Please don't spoil this pristine space!	This comment is noted. Please see MR-1 in regards to the self-mitigating plan.

Commenter	Date	Letter	Comment	Response
Arthur Dawson	13-Sep-22	C107-1	I am a thirty-three year resident of Glen Ellen and the owner of a small business. My wife Jill grew up in Glen Ellen and is a teacher. Together we raised our two children here. We lost our home in the 2017 fire and have subsequently rebuilt. I currently serve as the Chair of the North Sonoma Valley Municipal Advisory Council as well as the Vice Chair of Sonoma Mountain Preservation, a local non-profit. Despite their daunting page count, I believe the Draft Environmental Impact Report (DEIR) and Specific Plan for the redevelopment of Sonoma Developmental Center (SDC) are inadequate. They fail to fully evaluate and reasonably describe the severity and extent of impacts from the proposed project. Many of the DEIR's conclusions lack factual support and many of the Specific Plan policies intended to serve as mitigation measures are deferred and not enforceable. In spite of soliciting extensive input, Permit Sonoma and the consultants have continued to push a proposal that does not have broad support in the community and ignores the well-documented preference of the public for a smaller project. This public recognizes the many significant site constraints on the development at SDC, including: the wildlife corridor, traffic, cultural resources, population, wildfire hazards and others.	This comment is noted. Please see MR-9 in regards to mitigation monitoring and performance standards. Please see MR-6, MR-7, and MR-8 in regards to the site constraints listed.
Arthur Dawson	13-Sep-22	C107-2	Before commenting on specific aspects of the DEIR, I would like to make a request and an observation: I encourage Permit Sonoma and/or the Planning Commission to revise the DEIR and Specific Plan to create a multi-phased project with a mitigation monitoring program. The Specific Plan touches briefly on this idea (SP 4-22): of completing "at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive." No other phases are mentioned and there is no mention at all of a mitigation monitoring program. The DEIR analysis points to a lot of uncertainty in the impacts, making the proposed mitigations uncertain as well. Such uncertainty suggests the need for a robust monitoring program. Downsizing provides the most obvious mitigation. Impacts from wildfire hazards, traffic, the wildlife corridor and other issues are all improved with a smaller project. The DEIR states that "the Historic Preservation Alternative is the environmentally superior alternative." This was also the smallest project analyzed in the DEIR.	This comment is noted. Please see MR-9 in regards to mitigation monitoring and performance standards.

Commenter	Date	Letter	Comment	Response
			Given time limitations, I will restrict my comments and questions to a few specific aspects of the DEIR and Specific Plan:	

Commenter	Date	Letter	Comment	Response
Arthur Dawson	13-Sep-22	C107-3	It goes without saying that an Environmental Impact Report is site specific. A project's location is fundamental to the analysis of its impacts. A poorly framed site location potentially skews the impacts identified and analyzed in the EIR. This is as true for a site's human geography as it is for biological and other aspects. Local residents have repeatedly affirmed the Planning Area analyzed in the Draft Environmental Impact Report (DEIR) is in the middle of Glen Ellen and completely surrounded by that community. Based on our shared geography, history and common interests, Glen Ellen as a 'place' forms a cohesive part of our community identity. Local citizens have supported this identification through numerous public comments and a petition circulated during the Specific Plan process. In response to the concerns of our citizens, the North Sonoma Valley Municipal Advisory Council (NSVMAC) passed a "Declaration of Glen Ellen Boundaries" in April of this year, affirming our historic and commonly recognized boundaries, which include the Planning Area. The U.S. Census Bureau recognizes and supports this viewpoint, stating, "a commonly used community name and the geographic extent of its use by local residents is often the best identifier of the extent of a place." https://www.govinfo.gov/content/pkg/FR-2008-02-13/pdf/E8-2667.pdf The DEIR consistently misplaces the project's location as "between the unincorporated communities of Glen Ellen and Eldridge" (e.g. Section 2.1.1, page 51). Eldridge is a 'census-designated place' (CDP) but does not exist as a community according to the Census definition. Glen Ellen is also the name of a CDP, but that CDP is only a small part of the much larger Glen Ellen community, as defined by local residents. The Census Bureau defines CDPs as "statistical geographic entities" and, as stated above, leaves the question of the extent of named places to local citizens rather than to government agencies. It should "not be a name developed solely for planning or other purposes." https://www.federalregister.gov/documents/2018/11/13/2018-24571/census-designated-places-cdps-for-the-2020-census-final-criteria. 1. Why were the requests of citizens pertaining to the project's location, given in public comments, letters, a petition and a declaration by the Municipal Advisory Council, not incorporated into the Planning Area description in the Draft Environmental	This comment is noted. The DEIR uses the census designated place name Eldridge because the project falls within its boundaries. It is not within the scope of the EIR to address community names and boundaries.

Commenter	Date	Letter	Comment	Response
			Impact Report? 2. Why was the more accurate term ‘census-designated place’ not used in the EIR? Why was this term replaced with the word ‘community’? 3. Placing the project “between communities” suggests it is outside of an existing community. Did you make this assumption? If so, how did it affect the DEIR’s analysis? If not, how did you avoid this bias in your analysis? I strongly request that the project’s location be accurately and consistently described in the Final EIR as: “Surrounded by the existing community of Glen Ellen as defined by local residents.”	
Arthur Dawson	13-Sep-22	C107-4	This section states that “New development complements” the surrounding community of Glen Ellen (p. 64). In this context, ‘complement’ appears to mean “adding to something in a way that enhances or improves it.” 1. How was the ‘complementary’ nature of the new development evaluated? Please provide details about how this development will enhance or improve the existing local community.	This comment is noted, however it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			2. What evidence (or metrics) on population, housing density, and community scale are being used to back up this statement?	
Arthur Dawson	13-Sep-22	C107-5	The assessment of wildfire hazards in the DEIR appears to have a number of errors and omissions, the most serious of which lead to unwarranted conclusions that underestimate this hazard ("Impact 3.8-7 Implementation of the Proposed Plan would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. (Less than Significant)" p. 268). Page 503: "Primary responsibility for preventing and suppressing wildland fires in Sonoma County is divided between local firefighting agencies and the State of California, Department of Forestry and Fire Protection. The SDC Planning Area is currently located in an area identified as a State Responsibility Area (SRA)." 1. The Planning Area "includes the approximately 180-acre SDC Core Campus…" (DEIR, pg. 51) According to the State Fire Marshall's map: https://osfm.fire.ca.gov/media/6822/fhszs_map49.pdf, the Core Campus is within a Local Responsibility Area (map on following page), not the State's. Is this correct? Page 503: "Under the Fire and Resources Assessment Program (FRAP) "the Planning Area…includes areas of high to very high Fire Hazard Severity Zones west of Highway 12, areas of high fire hazard severity in the hills, and areas of moderate fire hazards severity zones in the vicinity of Suttonfield Lake and Fern Lake (Figure 3.16-2). The Core Campus is not included in any of these FHSZs " While it is true that "The Core Campus is not included in any of these FHSZs," the State Fire Marshall's final map is not intended to show moderate and high FHSZs within the Local Responsibility Area. The State's draft map (next page), however does show moderate and high FHSZs covering a substantial portion of the Core Campus. While not finalized, this appears to be the best available fire risk data for the Planning Area.	This comment is noted. Please see MR-4 in regards to the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Arthur Dawson	13-Sep-22	C107-6	Goal PS-3 from the Sonoma County General Plan 2020 (DEIR, page 497), reads: "Prevent unnecessary exposure of people and property to risks of damage or injury from wildland and structural fires," with Objective PS-3.1 stating, "Continue to use complete data on wildland and urban fire hazards." 2. The Sonoma County General Plan How was the data gap between the SRA and the LRA within the Planning Area addressed during the DEIR's analysis of wildfire threat? What evidence was the statement about the Core Campus (DEIR, pg 503. See above) based on? Was this conclusion reached because there is data showing low fire risk there or because lack of data was equated with low risk? 3. The Fire Constraints map (13.16-2) shows the Core Campus being almost entirely outside of any Fire Severity Hazard Zones. How would the Fire Severity Hazard data for the Core Campus, shown in the State's draft map, change the analysis of fire hazards there? Does this change the calculus for significance under 16.1.3.1 Criterion 2: "Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire."? 4. In addition, the Sonoma County Community Wildfire Protection Plan Update 2022 states that: "Wildland fires that start in the woods and spread into adjacent areas with relatively dense housing often result in the greatest losses of property and life. Efforts to save lives and property will take precedence over losses of wildland resources, so firefighters' response must focus on protecting populated areas rather than fighting a fire in the most efficient way." Even if we assume there are no FHSZs within the Core Campus, this suggests that building dense housing at SDC adjacent to wildlands could result in high "losses of property and life." Responding to such a fire might prevent firefighters from efficiently working to prevent further fire spread. How was this scenario taken into account during the DEIR analysis?	This comment is noted. Please see response to comment B3-27.

Commenter	Date	Letter	Comment	Response
Arthur Dawson	13-Sep-22	C107-7	The two scenarios chosen for evaluation accurately represent historical fire patterns. However, the goals stated on page 507 include "Provide protections at the site against the growing risk of climate change exacerbated wildfire hazards and limit the potential impacts of wildfire to development through intelligent site and building design, and open space management." If the 2017 Nunn's Fire (and other recent wildfires) is an indication, predicting future fire patterns is highly uncertain, given that many homes in moderate FHSZs (including my own), in places with no recorded history of wildfire, burned in that conflagration. 1. How would a third scenario, with a fire starting in the Planning Area near the Core Campus, change the calculus for wildfire risk and evacuation? How would this change the calculus for wildfire risk and evacuation for the neighborhood between the Core Campus and Madrone Road, and the Rancho Madrone neighborhood (south of Madrone)? 2. Wildfire ignitions are known to increase with the size of a population. How was this relationship evaluated in the calculation of fire risk in the Planning Area?	This comment is noted. Please see response to comment B3-27.

Commenter	Date	Letter	Comment	Response
Alex Krem	Sunday, September 25, 2022	C108-1	You have invited comments from the public on the future of the Sonoma Development Center, with a deadline of Monday 9/25 at 5pm. I write as a person with more than 60 years professional and personal experience with the developmentally disabled. My views follow: 1. SDC was created for the benefit of the vulnerable and should remain so. There was a time when State legislators saw their duty to protect the vulnerable. Frank Lanterman was a visionary in this regard. Now, it seems that Susan Gorin is the rare leader who understands the original purpose and true value of the Sonoma Development Center. She was joined by the SDC's Parent Hospital Association which fought to keep the center open, and by many others who are able to understand that there truly are people whose intellectual or developmental condition requires full time care. for the benefit of people with intellectual or developmental disabilities, or (at the least) retained for similar charitable purposes: housing for the homeless, for battered women, for our disabled veterans, for the mentally ill or for others in need. These vulnerable populations have been disenfranchised and ignored. The property is now at risk of being carved up by hungry property developers. I view the current potential transformation of Sonoma Development Center as a land grab that would make Christopher Columbus or Andrew Jackson proud	Thank you for your comment letter. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Alex Krem	Sunday, September 25, 2022	C108-2	Safe places for our must vulnerable The word “institution” means a respected place that meets the needs of society. Universities are institutions. Courts of law are institutions. Somehow the meaning has changed when applied to institutions which house intellectually, developmentally or physically or mentally ill people. Such institutions are now seen differently. Robert Kennedy, who carried his own tragic understanding, described Willowbrook in New York as a "snake pit" because … it was. Smart solution to fix it? Fund it fully and staff it generously. Dumb solution? Close it and wishfully assume the residents have another place to go. We went dumb. Since the Nixon era, institutional care of the severely disabled has been steadily eliminated. Dark Joke: Q. What were California’s homeless called before Ronald Reagan was Governor? A. Patients! Ha ha. Not funny. But, sadly, true.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Alex Krem	Sunday, September 25, 2022	C108-3	And, as the joke says, the prior patients are now homeless. Estimates hold that 40% of the homeless are intellectually or developmentally disabled. People now living in the beautiful modern property development where Agnews Development Center once stood in San Jose, witness disoriented people with special needs occasionally wandering the streets looking for the home they once shared with others like them. These are the lucky ones. Those who are men are less likely to be raped each night than the women. They are alive and out of jail. A tragic fact is that jails have become warehouses for the mentally disabled and vulnerable. As tragically, a significant portion of those killed by police – perhaps as many as one-quarter -- are people with intellectual or developmental disabilities, the very people once safely housed at SDC and other similar places. They are simply unable to read body language or respond appropriately to police demands. A young man with disabilities was recently confronted by a policeman who ordered him to raise his hands. The policeman squatted in a shooter's stance. The boy imitated him. The policeman wrongly assumed that the unarmed simple-minded boy was about to shoot… and shot him. Another was at the movies and tried to sneak into another multiplex theater, ignored requests to leave and was strangled to death by the security guard in the ensuing struggle (despite the fact that the boy's caregiver was there unsuccessfully attempting to intercede). The cold, mean streets of America are no place for such innocents – mature men and women with minds of three-year old's. The current concept that	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			they can be better cared for on a one-on-one basis is simply not true – even if we could afford it, and even if there were sufficient numbers of trained caregivers. Frank Lanterman understood this and managed to get enough of his colleagues to agree to create the wonderful laws we now have that distinguish us (as do our universities) from the rest of the US. Question: Does beautiful Sonoma County really need more McMansions, more nice shopping arcades, more golf courses? Or does it need a safe place for its vulnerable? The answer seems easy. Doesn't it?	

Commenter	Date	Letter	Comment	Response
Alex Krem	Sunday, September 25, 2022	C108-4	Swept up with the noble but misguided believe that institutions were per se bad, California closed its Sonoma Development Center at the end of 2018. No longer would SDC provide shelter to the disabled. More than 300 residents were forced to leave. Food, clothing, care and comfort would be provided by the cold, cruel free market. Fat chance! Reliable estimates indicate that the mortality rate among medically fragile residents increased 500% once they left SDC. The babies were thrown out with the bathwater. The reality that many with I/DD were incapable of caring for themselves is clearly not understood by well-meaning people who have no direct experience with the severely disabled. Post hoc eugenics are now in play. How do we protect and care for our disabled? Civilizations have grappled with these issues since towns were first formed in the mists of pre-history. The intellectually, developmentally and physically disabled, the mentally ill, the dangerous, the walking wounded our many wars have produced, the old, the demented all need care. The way we care for our vulnerable, like our support for the arts, is the true measure of our civilization. California normally gets high marks.Until recently, institutional settings were identified as ideal solutions to protect the vulnerable. These institutions provided a place for birds of a feather to flock together, impressive economies of scale, the ability to concentrate experts and the opportunity to create pleasant, comfortable, safe places for our vulnerable. Families with disabled children once had the choice of caring for these vulnerable children as long as they could and then rely on friends or	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			relatives or the state to take the job – or placing these children as wards of the court in fine, well established and well-run institutions like the Sonoma Development Center. No longer! Using examples of bad apples (and there were plenty) to spoil the barrel (mostly good apples), California accepted the flawed thinking that institutions are pariah. Agnews Developmental Center serving people with developmental disabilities since1965 was closed in 2011. SDC has followed suit.	

Commenter	Date	Letter	Comment	Response
Alex Krem	Sunday, September 25, 2022	C108-5	: In 1883, the California Home for the Care and Training of Feeble Minded Children was established at White Sulphur Springs, near Vallejo. After a short stay in Alameda and then Santa Clara counties, the home moved to its current location in Eldridge in 1891. It became the Sonoma State Home in 1909, the Sonoma State Hospital in 1953and was finally rebranded as the Sonoma Developmental Center in 1986. I first visited it in 1960 and several times thereafter to meet the residents and give them presents collected from wellwishers in Alameda County. It was a nice place then. Residents were cared for by professionals. They were healthy, happy, fed, clothed, warm, safe and loved. Now all is changed. The zeitgeist no longer allows such safe places. The Lanterman Developmental Disabilities Services Act was passed in 1969. This visionary California law establishes a service system to meet the needs of developmentally and intellectually disabled people (and their families). No other state in America has such a generous and comprehensive system; one that should make all Californians proud. For our brightest, our public and private university system is the best in the world. For our disabled, too, we have ourselves proud. Assembly member Frank D. Lanterman was a visionary. Would that we had more like him in Sacramento. His Mental Retardation Services Act (AB 225) became law in 1969 and mandated services and supports for individual with intellectual or developmental disabilities. This was followed by Lanterman Developmental Disabilities Act (AB 846) initially proposed in 1973 and passed in	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			1977. The Lanterman Act declares that persons with developmental disabilities(expanded to include persons with cerebral palsy, epilepsy, autism) are protected. "The State of California accepts a responsibility for persons with developmental disabilities and an obligation to them which it must discharge." Section 4501. Susan Gorin, County Supervisor of District 1 where SDC is located, did her best to stop the Land Grab. She voted to keep SDC open. But she was out-voted. Public hearings have been few and far between. My efforts to reach appropriate state officials we ignored. I personally made numerous attempts to identify the time and location of public hearings, without success. I can provide numerous examples of my emails, most of which were not answered – except by others as frustrated as I am that this process was happening behind closed doors. 5.	

Commenter	Date	Letter	Comment	Response
Alex Krem	Sunday, September 25, 2022	C108-6	Recommendations A. Preserve this beautiful property for its intended use as a “home for life” for the vulnerable. Ensure permanent housing for those with I/DD (at a minimum), and possibly extended to include other vulnerable people who require housing and care (battered women, homeless, disabled veterans, mentally ill, etc.). B. If the Land Grabbing momentum is inexorable, then (at a minimum) reserve a significant portion of the property for its intended population, a large portion also for affordable housing in general, some for other civic uses, then retain title to the remaining property and lease it to commercial groups at a rate that provides full financial support to those with disability. As Jack London, who knew the Sonoma State Home well and knew politics even better, once wrote: “An institution like this oughtn't to be run on politics.”	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-1	I have been asked to review and comment on the Sonoma Developmental Center (SDC) Specific Plan and associated Draft Environmental Impact Report (DEIR). I write this as a research scientist who has spent more than two decades studying wildfire science and fire ecology, global change, and conservation biology. From this perspective, I appreciate the intention to balance human welfare and economic development with plans for preservation of historical and natural resources in the area. Nevertheless, my review of the plan and DEIR have led me to conclude that many issues relative to wildfire risk have been overlooked. The discussion of fire risk in the DEIR reflects several misconceptions concerning fire ecology, fire history, and the consequences and effectiveness of different fire mitigation strategies. The SDC property is situated within a highly fire-prone landscape, and based on evidence from the scientific literature, the Proposed Plan has high potential to significantly increase fire risk even further to new and existing structures at the SDC property as well as to the surrounding communities. A rise in human-caused ignitions due to increased population growth and expansion of human infrastructure could increase fire frequency to the point that wildfire would significantly affects public health, ecological functioning, and provision of ecological services (e.g., erosion and flood control). Unfortunately, research on recent destructive fires shows that the proposed mitigation strategies to reduce fire risk are unlikely to eliminate these significant impacts. Below please find an explanation for my conclusions summarized in three main points.	Thank you for your comment letter. The comment is noted. This is introductory text that doesn't relate to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-2	RELIANCE UPON FIRE HAZARD SEVERITY ZONES IS INAPPROPRIATE FOR CONCLUDING THERE IS NO FIRE RISK. The reliance upon existing Fire Hazard Severity Zones as the basis of the findings reflects a misunderstanding of the purpose of the maps, their scale of accuracy, and their potential for uncertainty at specific locations. They are also out of date. The Cal Fire maps were not designed with the intention of indicating precisely where structures are most at risk for wildfire. Instead, the objective for these maps is for use in general planning and policy guidance. For example, defensible space practices are only enforceable within high hazard zones; homeowners are required to disclose upon sale whether the property is in a in high hazard zone; and county governments can use the zones to enforce building codes or other fire safety measures. The maps were developed in 2007 using a simple set of variables, map overlays, and general assumptions to delineate the relative degree of fire hazard across the landscape – that is, areas where fire behavior is likely to become extreme given a fire occurs. In other words, the hazard areas shown on Fire Hazard Severity Zones are delineated in very broad classes and have limited precision. Given the uncertainty and coarse scale of these maps, they are not appropriate for predicting where buildings are likely to be destroyed. This is something that Cal Fire has been transparent about (Sapsis 2018), as the appropriate use of these maps has been misinterpreted elsewhere.	The comment is noted. Please see response to comment B3-25.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-3	Part of the reason they are inappropriate to predict structure loss is that the location and behavior of fire is stochastic and unpredictable at any given time or location. Fire occurrence, behavior, spread, and eventual destruction of a house depends upon a large suite of random factors, such as where and when an ignition occurs; what the fire weather at the time of ignition is; what direction the wind is blowing; what the fuel and topography conditions are at the point of ignition; what kind of housing density and arrangement are in the surrounding area; whether any other fires are burning and the availability of firefighters, etc. This does not mean that the maps of fire hazard are useless. It means that they need to be interpreted with an understanding of what they can or cannot do; and that they are not completely accurate. This is true of fire mapping in general. For example, a map delineating probability of ignition will look completely different than a map delineating probability of a large fire (e.g., Syphard et al. 2019). Unlike the Cal Fire maps, some maps are designed with the specific objective of delineating fire risk to structures (e.g. Syphard et al. 2012), but even these maps have substantial uncertainty given the random nature of wildfire. A study comparing maps of fire risk to structures in southern California with the Cal Fire maps in the same regions found significant differences in the areas mapped as high risk, and the Cal Fire maps performed poorly compared to the other maps (Syphard et al. 2012).	The comment is noted. The DEIR adequately details baseline conditions and recognizes that the site's physical setting is prone to wildfires and details the site's wildfire history and potential for wildfire risk in the Environmental Setting starting on page 500 of the DEIR. This information is also incorporated into the Wildfire Impact Analysis.
Alexandra D. Syphard	26-Sep-22	C109-4	Another source of uncertainty in the Cal Fire maps is the assumption that hazard is likely to be governed by the same factors in the same way across the state. Science shows that the relative weighting and direction of variables that influence the locations of fire occurrence, size, and risk vary from region to region (e.g., Syphard et al. 2019). Therefore, accuracy of the Cal Fire maps is likely to vary from place to place, and there is no guarantee that the maps near the SDC are accurate, even in a general sense or for their intended purpose. There are examples of recent highly destructive fires where substantial structure loss occurred in areas not mapped as high risk in the Cal Fire maps (e.g., Coffee Park in the Tubbs Fire, Malibu City in the Woolsey Fire). This should serve as an important illustration of why the maps should not be the final word in a conclusion about fire risk to structures. An important point is that the current maps - the ones used for the DEIR - were developed in 2007. The current landscape reflects	The comment is noted. The DEIR uses the most up to date CAL FIRE FRAP mapping data which represents the best and most currently available information. See also response to comment B109-3.

Commenter	Date	Letter	Comment	Response
			very different environmental and housing conditions than those that were there 15 years ago. The factors used to create the 2007 the maps, such as fuel type, fire history, and housing, have all changed substantially. Cal Fire has been putting significant effort into updating their maps with new variables and assumptions, and these may be more appropriate for future decisions. However, those maps are not available yet - and maps developed in 2007 should not be trusted to assess the fire risk for a development to be constructed after 2022.	
Alexandra D. Syphard	26-Sep-22	C109-5	The Proposed Plan Is Likely To Increase Regional Fire Risk Although the DEIR acknowledges that the location of the proposed development is in a fire-prone part of the landscape, it does not thoroughly establish the baseline conditions that this is an area with a long history of wildfires that have already resulted in serious impacts. It was only a few years ago that structures were destroyed by wildfire at this very site and many more structures were destroyed nearby. Even without the new residents and visitors proposed for the site, the evacuation situation has apparently been extremely problematical in recent fires - and evacuation is often the time when people lose their lives to wildfires. These baseline conditions have not been adequately described in the DEIR despite the need to establish them before assessing the impact of the project. Based on data regarding repeat fires in the same locations, there is reason to believe that the area proposed for development on the SDC site is susceptible to more wildfires in the future. There is also reason to believe that the SDC development will lead to an increase in the number of wildfires in the region, not only due to the potential for climate change to exacerbate fire risk, but also because of the probable increase in human-caused ignitions. In addition, the DEIR lacks a description of how the Proposed Project will not only be impacted by fire, but also how it will impact fire in the vicinity in the future.	The comment is noted. See MR-4 regarding the adequacy of the wildfire evacuation analysis. See also response to comment B109-3. The DEIR adequately anlayzes wildfire risk through the impact thresholds provided by CEQA. The DEIR does not state that there is no wildfire risk from development under the Proposed Plan, but compliance with State, regional, and local regulations as well as proposed policies and Standard conditions of Approval would mitigate these impacts to a less than significant level. See also response to comment B3-27. See also section 5.2 on page 584 of the DEIR for a discussion of wildfire cumulative impacts.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-6	As evidenced by the almost perfect overlap of the nearby 2017 Tubbs fire with the 1964 Hanley Fire (Keeley and Syphard 2020), fires often recur in the same locations. This is because certain locations are more fire-prone than others given their topography, location within a wind corridor, climate, and vegetation. Research on structure loss in California has demonstrated that structures located in areas with a history of recurring fire are among those that are most likely to be destroyed by fire (Syphard et al. 2012). Although the 1964 Hanley Fire occurred in nearly the same location as the 2017 Tubbs Fire, there were only about 100 structures lost, and there were no fatalities. However, in 2017, more than 5500 structures were destroyed and 22 people lost their lives. The difference is the rapid growth of human population and housing in the footprint of the fire during the interim.	The comment is noted. See response to comment C109-5.
Alexandra D. Syphard	26-Sep-22	C109-7	The placement of new housing in fire-prone locations, like the proposed Project, not only increases the exposure of those structures to wildfire, but it also increases the likelihood of more fire occurring in the surrounding region due to human-caused ignitions. As recognized in the DEIR, humans cause more than 95% of the fire ignitions in Sonoma County, and studies repeatedly show that fire frequency is highest in low-intermediate-density development patterns, particularly when surrounded by wildland vegetation (i.e., the Wildland Urban Interface) (Syphard et al. 2007, Syphard et al. 2019, Radeloff et al. 2018). This is because, as low-medium density housing development expands (the kind proposed for this development), there is an increase in the number of people and opportunities for fires to ignite; and there is still ample continuous vegetation in the surrounding landscape for wildfires to spread. Larger numbers of people also increase the odds of fires starting during severe fire-weather conditions that lead to the most catastrophic outcomes. Recent research shows that human-caused ignitions are the top-ranking reason for area burned in Santa Ana wind-driven fires; and that human-caused fires have worse outcomes than lightning-caused fires.	The comment is noted. See response to comment B3-27.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-8	Extensive research also shows that the location of human ignitions tends to occur closest to roads and human infrastructure (Syphard et al. 2008, Molina et al. 2019, Chen and Jin 2022). Therefore, the addition of people coming into and out of the region because of the new development increases the likelihood of more fires starting near the area. The lack of public transport is a concern not only in terms of greenhouse gas emissions, but also in terms of ignitions and increasing fire risk. Given that the most likely form of transportation to and from the development is via automobiles, many more people will be on the roadways, and thus, many more opportunities will arise for fire ignitions to occur. The increased access to open space areas also would provide more opportunities for humans to unintentionally start fires. In turn, the type of low-medium density development proposed in the plan is not only where fire frequency tends to be highest, but this is also where structures are most likely to be destroyed by fire (Syphard et al. 2012, 2019, Kramer et al. 2018). Also, it is not just housing location and density that drives risk exposure; it is the overall location and pattern of development (Syphard et al. 2012). Isolated or remote clusters of development are particularly vulnerable (Syphard et al. 2013). In other words, fire risk is a multi-scale issue (Syphard and Keeley 2021), and the landscape context is critical. Developments surrounded by large amounts of continuous wildland vegetation, such as is the case here, are particularly dangerous because they are exposed to potential fire on all sides. This scenario is similar to what happened in the town of Paradise in the 2018 Camp Fire. To that end, “community separation” of urban areas seems like a risky design strategy in the proposed plan - that adds edge between development and wildland. As acknowledged in the EIR, the potential for destructive wildfires is increasing in many parts of California due to climate change. Recent research also shows that proximity to the WUI is the top explanation for why fires have become destructive in the project region (Syphard et al. 2022).	The comment is noted. See response to commebt B3-27. Further, the Proposed Plan aims to support other modes of travel not dependent on automobiles by developing Complete Streets (Goal 3-C). See also polices 3-22 to 3-26 which would also serve to help mitigate this impact. As noted in Goal 3-B, development would support greater connectivity with the surrounding region and Policyy 6-1 would construct a new fire station in the Core Campus to conitinue to reduce risk.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-9	Policies For Mitigation Do Not Eliminate Fire Risk Although studies show that community planning and fire-safe design and landscaping can significantly enhance fire resilience, statistics from recent wildfires indicate that these actions are not guaranteed to reduce impacts to less than significant levels (Syphard and Keeley 2019, Baylis and Boomhower 2022). While having a strong and well-enforced community wildfire resilience plan is critically important for reducing fire risk to the largest extent possible, constructing a significant number of residences and businesses will add more frequent ignitions to an already highly fire-prone region. This will exacerbate fire risk in the region regardless of the mitigation policies put in place. Therefore, although the DEIR relies on policies and mitigation measures to conclude that the project would not exacerbate wildfire risk, the initiation and enforcement of these measures do not ensure that significant impacts would be sufficiently mitigated.	The comment is noted. See response to comment B3-27.
Alexandra D. Syphard	26-Sep-22	C109-10	Vegetation Management One of the measures that the DEIR relies upon to claim no significant wildfire impacts is vegetation management to reduce fire risk. Vegetation management includes mechanical fuel breaks surrounding the development, clearance of woody shrublands or understory woody trees, defensible space, and controlled burning of vegetation. There are several common misconceptions about, and overestimations of the relative effectiveness of, these measures for reducing structure loss, especially during severe fire weather when most structures are destroyed. Fuel reduction through vegetation management is often viewed as a means of stopping or slowing the spread of fire; however, treatments typically only do this under mild weather conditions. In severe fire weather, with strong winds, vegetation treatments generally do not prevent or stop fires on their own. Policy 2-31 would require construction and maintenance of a managed landscape buffer along western and eastern edges of the Core Campus to aid in fire defense, consisting of a shaded fuel break in wooded areas and grazed or mown grassland. The construction of these types of fuel breaks can be helpful for protecting communities, when done strategically, by providing safe fire-fighter access. They may also slow fire spread enough to buy time for defensive activities (Syphard et al. 2011).	The comment is noted. Vegetation management is only one such strategy of a plethora of strategies in the Proposed Plan to reduce wildfire risk. See response to comment B3-27. Policy 2-31 is adequate in mitigating wildfire risk. The Goveror's Office of Planning and Research published the Wildland-Urban Interface Planning Guide in August 2022 located here: https://opr.ca.gov/docs/20220817-Complete_WUI_Planning_Guide.pdf. Best practices identified in this document include denfisble space guidelines to maintain managed landscape buffers. Thus, Policy 2-31 is in accordance with State planning guidance.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-11	Despite these benefits, the big issue with placing too much trust in fuel breaks and other forms of vegetation management is that most structures are destroyed because they are exposed to the millions of wind-borne embers that are generated during severe fire-weather. Although woody vegetation is the primary source of firebrands, wind-borne embers are known to fly kilometers ahead of a fire front, crossing vegetation treatments, and landing on or near structures. In fact, wind-borne embers often jump California's widest freeways. Therefore, although fuel breaks can facilitate safe firefighter access in some circumstances, they cannot prevent embers from flying past them. Furthermore, despite the role of fuel breaks for providing safe firefighter access, it is often unsafe for firefighters to be present during the worst fire-weather conditions. In a historical survey of fires and fuel breaks in southern California national forests, 22- 47% of fires stopped at fuel breaks when they encountered them (Syphard et al. 2011).	The comment is noted. See response to comment C109-10.
Alexandra D. Syphard	26-Sep-22	C109-12	The creation of defensible space around structures at the parcel level, as suggested in policies 2-34 and 2-36, is a mitigating policy proposed for the DEIR, and I concur that this should be implemented to increase community resilience. Studies show that properly created defensible space (https://www.fire.ca.gov/programs/communications/defensible-space-prc-4291/) can significantly reduce the probability of a structure being destroyed in a fire (although there is no additional benefit to extending the distance of defensible space beyond 100 feet (Syphard et al. 2014, Miner 2014)). Nevertheless, as with other vegetation treatments, defensible space should not be considered as something that can definitively prevent structure loss. Many embers directly penetrate a structure without vegetation playing a role, and many structures with well-designed defensible space have been destroyed in recent wildfires. If embers land near the property, they may ignite new fires depending upon the flammability of the surroundings. While the recommended reduction of biomass near the property lowers flame lengths and enhances firefighter safety, the fuel moisture of the vegetation in the vicinity of structures is often more important than the amount of vegetation. Evergreen shrubs and trees are often referred to as "ember catchers" because of this – because the embers may be extinguished if they land on green vegetation. This argues for retaining some green vegetation near the structure and across the landscape.	The comment is noted. See response to comment C109-10.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-13	Research in Australia also shows significant protective effects of irrigated land (Gibbons et al. 2018). Thus, a concern I have about the vegetation management approach described in the DEIR is the proposal to remove chaparral and other woody shrublands and to allow establishment and expansion of grass. Although fire in grass has lower flame lengths, grass is the most flammable and easily ignitable vegetation type in California (Syphard and Schwartz 2021, Syphard et al. 2022). Grass is dryer for a much longer period in the year than chaparral, and when it does ignite, it is the fastest spreading vegetation type. Most firefighters who lose their lives in fires have been killed in grass fires. Therefore, while the practice of mowing or grazing grass can enhance fire safety (if mowing does not occur during severe fire weather), removing shrublands and converting them to grass is likely to make the landscape more flammable.	The comment is noted. See response to comment C109-10.
Alexandra D. Syphard	26-Sep-22	C109-14	Compliance With Fire-safe Building Codes In addition to defensible space, the DEIR relies upon class A roof retrofits and the compliance with fire-safe building codes in the construction of new buildings to mitigate fire risk. Although fire-safe building practices, such as those required in new building codes, increase the possibility that structures will survive wildfires (Syphard and Keeley 2019), they also do not guarantee prevention of structure loss. The extent to which enforcement of building codes increases the rate of structure survival in wildfires is yet unknown. For example, one study shows that building codes that enforce fire-safe construction helped to decrease rates of structure loss compared to rates of loss before the codes were enforced (Baylis and Boomhower 2021). On the other hand, an analysis of the Camp Fire, where more than 18,000 structures were destroyed, showed that homes built before and after the enforcement of building codes were destroyed at roughly equal rates (Knapp et al. 2021). Therefore, as with defensible space, many new homes with fire-resilient construction have been destroyed in recent California wildfires.	The comment is noted. Compliance with fire-safe building codes is only one such strategy of a plethora of strategies in the Proposed Plan to reduce wildfire risk. See response to comment B3-27.

Commenter	Date	Letter	Comment	Response
Alexandra D. Syphard	26-Sep-22	C109-15	Although fire-safe building practices improve the odds of survival for new homes, these codes do not protect the existing homes at the site and in the surrounding areas. The increase in population and human activity in the region at large increases the odds for more human-caused fires to start, as people will be moving in and out of the area, engaging in more activities that could generate sparks, and spending more time recreating in flammable open-space areas. Given that humans are mobile, ignitions are numerically more likely to occur anywhere in the surrounding area that experiences an increase in human presence and activity, and this exposes more existing structures to wildfires at a landscape scale. In other words, because wildfires occur over large areas, with the most destructive wildfires becoming very large (Syphard et al. 2022), impacts can be expected to occur in areas much larger than the project footprint. Furthermore, new building codes will not benefit the older structures within the project footprint, some of which have significant historical and cultural value. Policy 2-38 suggests retrofits of new roofs, siding, and windows for existing structures, but this is not a complete list of needed retrofits for fire safety, and the details of this policy are vague. Would these retrofits be applied to all existing buildings, even the historical ones? They also would not apply to buildings outside of the SDC site.	The comment is noted. See response to comment C109-14. Policy 2-38 would apply to all new construction and properly retrofit adaptive reuse buildings.
Alexandra D. Syphard	26-Sep-22	C109-16	Shelter in Place The DEIR relies in part on proposed Policy 2-54, which requires the Project proponent to build or designate an on-site shelter-in-place facility. DEIR at pages 510 and 511. This alternative of sheltering in place is a dangerous proposition, as evidenced by the Black Saturday Fires in Australia in 2009. In those fires, 173 people lost their lives, and more than half of those people had been sheltering in place. (https://www.sciencedirect.com/science/article/abs/pii/S221242091730050X). As a result of these fires, the Australians have now shifted thinking away from their stay and defend policy and now have a system in which all residents are encouraged to evacuate when weather conditions meet a “catastrophic threat” level. In short, buildings are replaceable, but human lives are not. While having a shelter-in-place facility may benefit those who are simply unable to evacuate, this should be a last resort, and the SDC project should not rely on this method as mitigation for wildfire risk related impact. Finally, I question the enforceability and endurability of many of	The comment is noted. An on-site shelter-in-place facility is only one such strategy of a plethora of strategies in the Proposed Plan to reduce wildfire risk. See response to comment B3-27. See also Impact 3.16-1 on page 511 of the DEIR. Development under the Proposed Plan would not significantly impair an adopted emergency response plan or emergency evacuation plan if evacuation is needed in the event of a wildfire. Please see MR-9 regarding mitigation monitoring/performance standards.

Commenter	Date	Letter	Comment	Response
			the proposed policies. Who is ultimately responsible for ensuring that the policies are followed? Activities such as fire-safe education, defensible space maintenance, or maintenance of buildings require ongoing, permanent attention. Who will ensure that these activities will continue after the structures have been built? Will a permanent staff position be created to ensure ongoing compliance? In short, people will move in and move out over time, but the houses and the landscape will remain.	
Alexandra D. Syphard	26-Sep-22	C109-17	Conclusion In conclusion, contrary to the assertions made in the DEIR, there is a strong likelihood that the proposed development, and its alternatives, will have significant impacts relative to wildfire. The potential for increased numbers of wildfires – and more wildfires during severe fire weather - are likely to significantly affect public health and ecological functioning. There are also likely to be increased economic costs for management and suppression, from damage/destruction to human infrastructure or agricultural lands, and from post-event hazards such as mudslides or debris flows. Sufficient homeowners insurance for wildfire, which is becoming increasingly expensive, will also be difficult to attain, particularly for the low-income residents that are supposed to be supported by this plan. Public health may be threatened not only from direct injury and mortality during a fire, but from smoke. The evacuation plans described in the DEIR only account for fires coming in two directions and spreading through other towns before reaching the project site. These analyses should also incorporate scenarios in which fires are spreading directly from the roads east of or from Sonoma Mountain west of the project site. In these cases, if the fire weather is severe and the fires are burning toward the project site, there would likely be less time for residents to evacuate, and this	The comment is noted. See MR-4 regarding the adequacy of the wildfire evacuation analysis. See also response to comment B3-23 regarding a fire from the west. See also Impact 3.16-4 on page 521 of the DEIR regarding potential secondary impacts from a wildfire.

Commenter	Date	Letter	Comment	Response
			puts human lives at risk. Another potential impact to public health and safety is that, if fire frequency increases regionally due to additional opportunities for human-caused ignitions, secondary hazards may occur post-fire, such as flooding, landslides, runoff, or debris flows. Not only may these secondary events be potentially harmful during the event, but there may be subsequent impacts to water quality.	
Alexandra D. Syphard	26-Sep-22	C109-18	While my letter is aimed at explaining the wildfire-related potential and costs associated with the project, there are also ecological impacts that may result from the increased fire risk in the area. For example, there are ecological costs associated with vegetation management and construction of fuel breaks. There are also potential ecological impacts that will result from the potential for increased fire frequency in the area. Many vegetation types in the western USA are experiencing fire-driven conversion, often from native vegetation to invasive species (Guiterman et al. 2022). Therefore, the DEIR's conclusion that the project would result in no potential loss of forest is inaccurate because it fails to account for the potential effects of increased wildfire. While the policies to reduce fire risk at the site may work to lessen some of these impacts, the proposed policies are unlikely to offset the increase in fire risk to the property and surrounding area that results from the project. Fire hazards will nevertheless likely be significant.	The comment is noted. The DEIR adequately anlayzes impacts on forest land pursuant to CEQA thresholds. As noted on page 135 of the DEIR, proposed Goal 2-A will preserve the open space surrounding the core campus in perpetuity, preventing further development in undeveloped areas and ensuring ongoing stewardship in partnership with neighboring State and regional parks and other institutions and organizations. Further, proposed policies 2-20 and 2-22 require that new development preserve existing trees to the fullest extent feasible and leave standing or downed dead trees in place for wildlife habitat whenever they do not present a hazard for fire safety or recreational users. Therefore, implementation of the Proposed Plan would preserve forest lands to the greatest extent feasible with respect to the loss of forest land or

Commenter	Date	Letter	Comment	Response
				conversion of forest land to non-forest use in the Planning Area, resulting in a less than significant impact. Please see response to comment B3-27 regarding the policies and regulations that would help mitigate wildfire risk to a less than significant level.
Alexandra D. Syphard	26-Sep-22	C109-19	Finally, in my reading of the DEIR, I was unable to understand some of the statements. Therefore, it would be helpful to have additional clarification on the following questions: 1) Why does the plan state that the Historic Preservation Alternative leads to higher fire risk? Based on its reduced population and housing, the Historic Preservation alternative appears to be more fire-safe than the proposed project or its other alternatives. 2) On what basis does the DEIR assume that low-lying creeks and riparian areas would increase fire safety? While these areas are less flammable in general, they do not appear to be close to the proposed housing. Also, when riparian areas dry out, they can burn rapidly at high intensity. 3) On what basis does the DEIR assume that the housing in low-elevation or flat areas would not be at high risk? While it is true that topographically complex areas can often have highly erratic fire behavior, many structures are lost in low-elevation, low-relief areas (Syphard et al. 2021).	The comment is noted. The Historic Preservation Alternative does not include a connector road to Highway 12 which would impair evacuation in the event of a wildfire. As noted on page 500 of the DEIR, low-lying areas near yearround creeks such as Sonoma Creek have higher moisture contents reducing fire potential. In upland areas, slopes tend to become drier and more likely to be a wildfire hazard earlier and for more of the year. The Sonoma Creek does run through the Core Campus which is where development will be located. The DEIR does not assume that the housing in low-elevation areas or flat areas would not be high risk. The DEIR does note that development under the Proposed Plan could result in potentially significant impacts from exacerbating wildfire risks. See response to comment B3-27.

Alice Horowitz	26-Sep-22	C110-1	Participation in the grassroots effort to shape the future of the SDC has opened our eyes to the fact that, like an intricate spiderweb, the strength of our community lies in our interconnectivity. While frame threads connect multiple anchor points and give the spiderweb its shape, it is the radius threads, from center to frame, that hold the web together, give it strength, and make it a home. Like radius threads every heartfelt action taken to further the cause of protecting the SDC, no matter how small, has made this movement that much stronger and helped define a vision for a future Eldridge that, if realized we can all be proud of. Unfortunately given overwhelming community opposition to the inclusion of 1 000 housing units and a boutique hotel in the preferred alternative, Permit Sonoma's proposed SDC Specific Plan including these very things can hardly be seen as an action of which anyone involved in this years-long process can be proud. Furthermore, and continuing with the spiderweb metaphor, the Draft EIR appears to be wielded by Permit Sonoma as if it were a broom with which bureaucrats and planners hope to simply destroy the entire web with one swift stroke: no significant or unavoidable impacts here, let's just sweep this mess away, spiders be damned.	Thank you for the comment letter. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Alice Horowitz	26-Sep-22	C110-2	But, like the industrious legion of determined web spinners that we are, Permit Sonoma can rest assured - community opposition to this faulty plan is not going away. We will not scamper for the exits in the face of hollow threats of the State taking over the property and cramming even more housing units down our throats. We will not be mollified by offers of counterintuitive wildfire shelter-in-place facilities. We will not be placated by the touting of low-wage hospitality jobs in a boutique hotel that those hoping to occupy the plan's paltry percentage of affordable housing units could H1 afford to book a room. Nor will we be tempted by bright shiny objects such as the grandiose growth-inducing Climate Center for which Permit Sonoma just received a timely $250,000 grant to carve out a space on the SDC core campus. Until Permit Sonoma comes up with a scaled-down plan around which we can all rally, we will continue to spin our web of community opposition, and that is something of which we are and will forever be incredibly proud. We were disheartened to learn that verbal comments submitted during the 8/24/22 special meeting of the NSVMAC, Springs MAC, and SVCAC will not be accepted as comments to which Permit Sonoma is legally obligated to respond in the Final EIR To that end, it is our understanding that submission of said comments in the form of this link to the digital recording of that meeting, will suffice as official submittal, thus requiring response from Permit Sonoma in the Final EIR: https://www.youtube.com/watch?v=LvE6dSvf9Y g&t=3s	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Alice Horowitz	26-Sep-22	C110-3	Some key points we would like planners to re-examine: 1) Apply all of the financial tools listed as part of the preferred specific plan to the Historic Preservation alternative, which has been identified as the environmentally superior alternative and most closely resembles the scale of development advocated for by the North Sonoma Valley Municipal Advisory Council and other stakeholders. 2) Fix the Figure 1.1-3 in the preferred Specific Plan document so that it shows the Eldridge Cemetery in the correct location by the curve of Orchard Road near its base, not up by the water treatment facility. 3) Require any developer/property owner, now and in the future, to ensure public access to the surrounding open space both during construction and after. 4) Re-examine the traffic analysis, particularly in view of wildfire	This comment is noted. Please see MR-4 for clarification and explanation of the traffic analysis for wildfire evacuation.

Commenter	Date	Letter	Comment	Response
			evacuation. It makes absolutely no sense that adding 2,000 cars to the property would add only a minute of extra evacuation time. Minimizing the impacts of adding that many vehicles to the roadways no matter a connection between Arnold Drive and Highway 12 is potentially a death sentence and certainly guarantees a good deal of post-traumatic stress, for the people who will be inside those cars as they attempt to flee disaster.	
Alice Horowitz	26-Sep-22	C110-4	We agree with and support the comments submitted by the Sonoma Land Trust (SLT). We also agree with and support the comments identified in the North Sonoma Valley MAC comment letter. In addition to the issues identified in those two letters, we agree with comments identified by Sonoma Mountain Preservation (SMP), the Sonoma County Transportation & Land-Use Coalition (SCTLC) the State Alliance for Firesafe Road Regulations (SAFRR), the Bennet Valley Community Association (BVCA), Vicki Hill (Environmental Land-Use Planner), and Teri Shore (Environmentalist) among others, all of which have been submitted to Permit Sonoma and posted on eldridgeforall.org: https://eldridgeforall.orn:/ p-%26-deir-talking-points In closing, as our logo proclaims, the Glen Ellen Forum SDC Committee is collaborative, determined, and hopeful. Time and time again, we have shown up, we have participated, and we have persisted in our efforts to educate and mobilize our community for the creation of an acceptable SDC Specific Plan and to act in good faith for the greater good. We will continue to do so, and we urge Permit Sonoma to commit to doing the same.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	Thursday, September 15, 2022	C111-1	Note that the MAC letter included with the email below was endorsed by the Sonoma City Council, Sonoma Land Trust, Valley of the Moon Association, Sonoma Valley Citizens Advisory Commission, Sonoma Mountain Preservation, Glen Ellen Historical Society, Painter Preservation, the Oakmont Village Association as well as Steve Akre, Fire Chief, Sonoma Valley District.	Thank you for the comment letter. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	Thursday, September 15, 2022	C111-2	As Chair of the North Sonoma Valley MAC I'm attaching the letter and appendix that was approved by our council and sent to the Supervisors in January pertaining to SDC. This letter details the community's vision for SDC, which has remained quite consistent since the first large community meeting in 2015 and represents years of thinking and work by hundreds of people. Its broad support has been demonstrated by a petition circulated early in the year, which at the time (January) had been signed by a thousand people, the vast majority in Sonoma Valley and elsewhere in the County. It now has over 2500 signatures. The MAC is intended to serve as our community's voice and this is a strong and clear expression of that voice. Thank you for taking this letter under serious consideration as you deliberate the Sonoma Developmental Center Specific Plan and EIR.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	Thursday, September 15, 2022	C111-3	In view of your meeting on the Sonoma Developmental Center Specific Plan draft EIR tomorrow, I would like to share a link to the comment letter being drafted by the North Sonoma Valley Municipal Advisory Council in response to this document. This is a draft and will be finalized at our next meeting on September 21: https://sonomacounty.ca.gov/Main%20County%20Site/Administrative%20Support%20%26%20Fiscal%20Services/BoS/BCCs/Documents/NSV%20Municipal%20Advisory%20Council/September%202022 /NSV-MAC-DEIR-Comment-Letter-Draft4-09-12-22.pdf Given the timely nature of this letter we wanted to make sure you could review our draft. Once finalized I will submit our letter to Permit Sonoma and include the Planning Commission as a recipient.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	Friday, September 23, 2022	C112-1	On behalf of the North Sonoma Valley Municipal Advisory Council (NSV MAC), I respectfully submit the attached comments pertaining to the Public Review Draft of the Sonoma Developmental Center (SDC) Specific Plan (Proposed Plan) and the SDC Specific Plan Draft Environmental Report (DEIR), issued in August 2022. As the NSV MAC serves as the voice of the community within county government, we intend this letter to be reflective of community input. However, it is not intended to be exhaustive or to take the place of individual comments from community members and other interested parties. As you will read in the attachments, we do not believe this DEIR adequately and completely evaluates the environmental and safety impacts of the Proposed Plan. Furthermore, we remain committed to the Sonoma Valley community's consistent input calling for both affordable housing and a lower density plan alternative. A plan closer to the Historic Preservation Alternative –determined as "environmentally preferred" in the DEIR analysis – successfully meets the project objectives and the established Guiding Principles for this project and should be given strong consideration. Thank you for your attention to the issues raised. We look forward to your response	This comment is noted. Please see MR-4 for clarification and explanation of the traffic analysis for wildfire evacuation, and MR-8 for explanation of why the historic preservation alternative does not meet the project objectives.
Arthur Dawson,	September 21, 2022	C113-1	On behalf of the North Sonoma Valley Municipal Advisory Council (NSV MAC), we respectfully submit the following comments pertaining to the Public Review Draft of the Sonoma Developmental Center (SDC) Specific Plan (Proposed Plan) and the SDC Specific Plan Draft Environmental Report (DEIR), as issued by Sonoma County in August 2022. While this letter is reflective of community input, it is not intended to be exhaustive or to take the place of individual comments from community members and other interested parties. Given the tremendous amount of input from Sonoma Valley residents and business owners concerned about the project size and its impacts, as well as this MAC's own request and the Board of Supervisors' direction to scale back the Specific Plan, it is surprising that the proposed Specific Plan still contains over 1,000 homes and approximately 940 jobs. It appears that the DEIR fails to disclose the full extent of impacts that will result throughout Sonoma Valley from this large-scale development outside of an urban growth area, as is further detailed in this letter. The Specific Plan represents one of the largest, if not THE largest,	This comment is noted. Please see MR-3 for clarification of the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
			developments in the history of Sonoma Valley and is in conflict with County General Plan policies calling for city-centered growth. Furthermore, the proposed plan is inconsistent with its own guiding principles calling for a balance between redevelopment and historic preservation; the plan will destroy the very qualities that make the historic SDC site unique and its implementation will have far-reaching, significant adverse impacts on Sonoma Valley residents. With this in mind, we provide the following comments, by general category. Please explain the following inconsistencies in the DEIR:	
Arthur Dawson,	September 21, 2022	C113-2	PROJECT SCALE & HOUSING Increasing the supply of affordable and workforce housing is broadly supported by the Sonoma Valley Community, but not at any cost to the environment and the health and safety of Sonoma Valley residents. Our understanding is that the DEIR should help the community better understand the scale of the environmental impacts of the Specific Plan, how they will be mitigated, what options were considered, and why these options were dismissed. We do not believe the DEIR has yet met these objectives. For example, the DEIR identifies the smaller-scale Historic Preservation Alternative (Historic Alternative) as the environmentally superior alternative. It is not ruled out in the DEIR because it meets the required objectives, but it is dismissed from full consideration. Why?	This comment is noted. Please see MR-8 for an explanation of how the historic preservation alternative was considered.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-3	If this alternative is environmentally superior and substantially reduces impacts of the proposed plan; if it more effectively meets some of the fundamental project objectives as outlined in the Specific Plan guiding principles, including Preservation of Historic Resources and Balancing Redevelopment with Land Use (DEIR pages 5 and 6); if it provides 450 new homes (still the largest project in Sonoma Valley); and meets the state's statutory objectives regarding the disposition of the SDC site, why is this alternative (or a version of it that addresses some of the issues identified) not being put forward as the proposed plan? "Overall, the Historic Preservation Alternative is the environmentally superior alternative, although significant impacts of the Proposed Plan and the two alternatives are largely comparable, and the Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks. Additionally, this alternative would not support key project objectives related to increased housing supply, varied housing opportunities, community vibrancy, and long-term fiscal stability to the same degree as the Proposed Plan." (DEIR page 14)	This comment is noted. Please see MR-8 for an explanation of how the historic preservation alternative was considered.
Arthur Dawson,	September 21, 2022	C113-4	We do not find adequate data in the DEIR that supports the "less superior" distinctions above, or any reason why these couldn't be readily addressed. There is no requirement that maximum housing be developed, especially if it means significant impacts in several issue areas. In terms of biological resources, the analyses on page 563 of the DEIR indicates that the Historic Preservation Alternative would be "similar or slightly better" than the Specific Plan. In terms of energy use, the older historic buildings are presumed to be less energy efficient, but it's not clear how the net calculation was made since "energy use" is also cited in conjunction with construction and demolition GHGs, which would be significantly higher in the Specific Plan. The increased wildfire risk with this lower density plan is presumably solely because of the arbitrary exclusion of the Hwy 12 connector road in this alternative. How would the proposed Specific Plan fare in comparison to the Historic Preservation alternative if it also excluded the Hwy 12 connector road, or if both included the Hwy 12 connection? Scale is the most obvious way to mitigate impact. While the types of impacts of the Historic and proposed Specific Plans may be the same, they are not equal in magnitude.	This comment is noted. Please see MR-8 for an explanation of how the historic preservation alternative was considered.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-5	FEASIBILITY If the Historic Preservation alternative was dismissed because of an assumption that feasibility will require higher development densities, how is a feasibility analysis considered in the DEIR and shouldn't this be more transparently addressed in the Proposed Plan? Since it's unclear what "economic feasibility" means for the SDC campus at this time, shouldn't there be an economic feasibility analysis as part of this evaluation process? The market demand study that was prepared for the alternatives report does not fill this need (and is inconsistent with the Specific Plan in any case in that it reports little demand for non-residential uses).	This comment is noted. Please see MR-8 for an explanation of how the historic preservation alternative was considered. Economic feasibility is addressed within the Specific Plan and is not an analysis area for an Environmental Impact Report; please see MR-3 for an explanation of the analysis and level of detail for a programmatic EIR.
Arthur Dawson,	September 21, 2022	C113-6	MITIGATION MONITORING / PERFORMANCE STANDARDS It's of concern to the community that most of the policies in the proposed Specific Plan are not enforceable, generally because of the use of "should" in the descriptive language rather than "shall" in many instances. Terms such as "if feasible" and "assumed" are also used repeatedly and the DEIR analysis acknowledges considerable uncertainly in the impacts and thus in the mitigation measures as well. Will the policies and conditions of the approval of the Specific Plan be put into a mitigation monitoring plan or program to ensure mitigation compliance for the project? Given the scale of the proposed Specific Plan and absence of any phasing requirements, it's critical that performance standards be developed and tied into the phasing of the project, especially since the DEIR calls for future studies and mitigations that are not yet identified. Will performance standards be put into place, potentially to consider impacts that might include Traffic, Wildlife Function, Resources, Noise?	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	September 21, 2022	C113-7	HOUSING NUMBERS The Specific Plan states that it will result in 1,000 units and the DEIR uses that assumption, but as noted in Specific Plan Table 4.2 more units are suggested, even without likely density bonuses. That means that most of the environmental impacts in the DEIR are underestimated for the number of units permitted. If the analysis is limited to 1,000 units, why is the possibility of 1,100 or more of units included in the Specific Plan?	This comment is noted. Please see MR-3 for an explanation of the analysis and level of detail for a programmatic EIR, particularly for how a programmatic EIR does not assess project-specific impacts of potential future projects under the proposed Plan, all of which are required to comply with CEQA as applicable.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-8	CULTURAL RESOURCES / HISTORIC PRESERVATION Isn't it true that the Historic Alternative meets the fundamental project objectives listed on pages 5-6 of the DEIR? Isn't it true that the proposed Specific Plan is inconsistent with the fundamental project objective calling for balancing development with historic resource conservation? Regarding policies and impacts on cultural resources, isn't it true that the DEIR does not specifically address impacts on Contributing Resources. Please amend the EIR to include such impacts in its own section, not embedded in the discussion of impacts on the district as a whole or explain why not. Isn't it violative of CEQA for the EIR to assume that the project will be approved as proposed, without mitigations and alternatives to reduce impacts on historic resources having been determined feasible or infeasible? Wouldn't the loss of eligibility for the National Register of Historic Places remove protections for contributory resources? What environmental impacts would attend such losses of eligibility? What mitigations could avoid that loss? Please consider and analyze the benefits of the pending efforts to list SDC in the National Register.	The comment is noted. Please see MR-8 for a discussion of why the historic preservation alternative does not meet project objectives, and MR-3 for an explanation of the level of detail and programmatic nature of the Draft EIR. Impacts to contributing historic resources are addressed in pages 294-296 of the Draft EIR. Per State CEQA Guidelines Section 15126.6(a), (c) & (f), the Lead Agency is not obligated to select the Environmentally Superior Alternative for implementation if it would not accomplish the basic project objectives and/or is infeasible. State law stipulates that the SDC Specific Plan prioritize housing at the site per Government Code Section 14670.10.5.
Arthur Dawson,	September 21, 2022	C113-9	What are the performance-based standards to determine which buildings can feasibly be restored or adaptively reused? How is demolition of any building to be decided? What type of analysis and performance-based standards will be applied to permit demolition under the Specific Plan? Please amend the Specific Plan so that demolition of any qualified historic resource will require a Plan amendment based on codified criteria. If not, why not? Isn't protection of National Register eligibility required by CEQA if feasible? Regarding the Sonoma House and the main building, Specific Plan Policy 2-47 uses terms like "consider" and "if feasible." How will feasibility be determined? In light of significant impacts, why are mitigation measures not identified or analyzed? Doesn't CEQA disallow deferral of analysis and mitigation of the Specific Plan's foreseeable impacts on historic resources? Isn't it true that projects consistent with the Specific Plan, including those involving demolition of currently listed or eligible historic resources will not be subject to discretionary CEQA review? If not, under what circumstances would CEQA review be required?	The comment is noted. Please see MR-8 for an explanation of historic resource analysis and MR-3 for an explanation of further CEQA review that would be required following this Draft EIR.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-10	UTILITY INFRASTRUCTURE The Valley of the Moon Water District (VOMWD) consistently contacts customers requesting a 20% reduction in water use, further stating that penalties will be assessed if the reduction is not met. Yet, for the purposes of the DEIR and the water assessment section, the DEIR and VOMWD assert they have the resources to serve the SDC project. What assumptions underpin this assertion? There are contradictions that should be addressed in the DEIR. For example: VOMWD's own estimates for future water deliveries and shortages are based upon single dry years, not the multiple dry year shortfalls we are already experiencing. Additionally, the Sonoma Valley Groundwater Sustainability Agency has made increasing projections for the need for groundwater re-charge throughout the Sonoma Valley, but the VOMWD has not estimated its own required contribution to groundwater re-charge and has maintained an increased groundwater "draw down" in the SDC water assessment report. What are the groundwater re-charge assumptions for the SDC site and are they included in the DEIR?	This comment is noted. Please see MR-5 for clarification of the water supply analysis.
Arthur Dawson,	September 21, 2022	C113-11	Additional areas of the water assessment report that require clarification in the DEIR: The report assumes the planning area will be served by local, on-site surface water sources. However, for Fern and Suttonfield Lakes, the treatment plant and the pipes/infrastructure are not a part of the core campus development. For the purposes of the DEIR and water assessment, those resources do not exist. - What, specifically are the surface water sources the DEIR is stating are available for use? - What becomes of those "non-available" water sources (the lakes, treatment plant)? - Who is responsible for the evaluation of the dams that contain all of that water? - Are the lakes going to be drained, filled in, maintained? The riparian rights contradict the findings of both the Sonoma Ecology Center and the Sonoma Valley Water Sustainability study that urges an elimination of riparian water rights in order to provide groundwater recharge to diminishing Sonoma Valley aquifers. Who maintains the riparian water rights? The VOMWD, the state, the developer? The SDC water treatment plan has not been licensed for operation in many years. The DEIR states it will be evaluated for re-use by the water system operator. - Who will pay for the evaluation? If the plant requires re-construction, or is not	This comment is noted. Please see MR-5 for clarification of the water supply analysis.

Commenter	Date	Letter	Comment	Response
			salvageable, who pays for these updates? - Where, on the Specific Plan, will it be located?	
Arthur Dawson,	September 21, 2022	C113-12	ENERGY MICROGRIDS: The DEIR language is vague in the section that pertains to an electrical microgrid. By definition, a microgrid is a locally controlled and maintained electrical grid with defined electrical boundaries. It is able to operate in both a grid-connected and “island” mode. A stand-alone or isolated microgrid only operates off-the-grid and cannot be connected to a wider electric power system. - Which type of system is being proposed, grid-connected or stand alone? - Will the system have localized generating capacity? - Where is the dedicated space on the Specific Plan for any proposed generation? - Who pays for it and maintains it? - Where is the electrical use projection data for microgrid design?	The comment is noted. The projected energy use used for Draft EIR analysis is an estimate of future operations (e.g. land use and transportation) outlined in the Specific Plan. As the Specific Plan is a programmatic land use plan, it does not have specific information about how/where future development would interface with the microgrid; these decisions would be made later as the development progresses. Moreover, actual electrical usage is highly dependent on a multitude of factors including individual behavior and environmental conditions. In the absence of highly specific electrical usage information, CalEEMod, a statewide land use emissions model designed to provide a uniform platform to quantify potential air emissions, was used to analyze the impact of Project operations. As a conservative estimate, a microgrid has potential to reduce GHG or reliance on electricity providers but it is very difficult to say to what extent. Please see MR-3 for more information about the level of detail contained in a

Commenter	Date	Letter	Comment	Response
				programmatic EIR. Please also see the Specific Plan policies on page 6-11 of the Public Draft Specific Plan for more details about the type of microgrid envisioned for SDC.
Arthur Dawson,	September 21, 2022	C113-13	VEHICLE MILES TRAVELED (VMT) The Specific Plan indicates that there will be no free parking on campus. Has the DEIR studied the VMT and traffic safety impacts of this policy with respect to visitor vehicle trips to find parking off-site; the impacts on the narrow streets in the adjacent neighborhoods, particularly the Glen Ellen streets south of the SDC (Martin, Lorna, Burbank, Sonoma Glen Circle, Marty and Madrone) where parking is free; or the public safety or emergency evacuation impacts of this policy? Has the potential limit on public access been evaluated? In addition, was there analysis done on the safety implications of increased VMT on the routes used by cyclists and commuters to travel from Glen Ellen to other county locations (Santa Rosa and Rohnert Park), specifically Warm Springs and Bennett Valley Roads. These narrow, winding roads are commonly traveled at relatively high speeds; their road shoulders are significantly deteriorated (no shoulder at all for significant portions). The safety implications on these roads due to the increased VMT in the Proposed Plan must be considered in the DEIR.	The presence of priced parking near an area with free parking can cause motorists to search for spaces on those free streets (commonly known as “spillover”). However, there is a limited distance motorists are willing to walk from their vehicles. In the case of SDC, on-street parking pricing would only be considered in non-residential areas, primarily in the “core campus”. The core campus is located roughly one-third mile from the nearest residential uses in Eldridge and almost two-thirds mile to Glen Ellen, walking distances that would be too lengthy and inconvenient for most motorists. Thus, the potential for spillover parking is minimal. The presence of free parking often leads to many motorists seeking spaces in the same highly- desired locations, resulting in vehicles circling the area. This can have the unintended effect of marginally increasing VMT and creating potential safety issues as drivers spend a greater amount of time searching for parking spaces. Additionally, VMT is a measure of the amount of automobile travel

Commenter	Date	Letter	Comment	Response
				occurring in a region, as measured in miles. Consistent with State requirements, the VMT effects of the Proposed Specific Plan's land uses and Highway 12 road connection were assessed using performance metrics including VMT per capita, VMT per employee, total VMT per service population, and total regional VMT. VMT is a measure of distance and does not directly affect bicyclists, though increased use of bicycling as a travel mode does reduce automobile VMT. With respect to broader bicycling conditions on Warm Springs Road and Bennett Valley Road, the 2010 Sonoma County Bicycle and Pedestrian Master Plan identifies a proposed Class II (bike lanes) facility along the length of Warm Springs Road, a proposed Class III (bike route) facility on Bennett Valley Road between Warm Springs Road and Grange Road, and a proposed Class II (bike lanes) facility on Bennett Valley Road between Grange Road and the City of Santa Rosa. With respect to bicycle commuting to and from Santa Rosa, the Bike Plan identifies the future Central Sonoma Valley Trail along the Highway 12 corridor, to which the proposed Specific Plan would include connections. The Central Sonoma Valley Trail bicycling route is anticipated to be the primary regional connection for commute and recreational travel, and will establish a much more comfortable route for bicyclists than Warm Springs and Bennett Valley Roads since it would be off-street, flatter, and straighter. Please see MR-6 for more explanation of VMT analysis.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-14	There is no evidence at this juncture that anyone living on the SDC site will be employed at the site so this cannot be assumed. Has the DEIR considered this in one of its VMT scenarios? On a related note, while it's noted that institutional uses associated with the former SDC have been removed from the SCTM19 model's existing land use database (DEIR page 426), historical VMT numbers are still cited in the Historical Use section (DEIR 427-428) and implied to be relevant. VMT under the Proposed Plan will not be directly comparable to the historic SDC site in terms of either resident (non-driving) or single-employer shift work VMT per capita; any assumptions made pertaining to historical VMT need to be made clearer in the DEIR analysis and narrative. Finally, the DEIR cites a VMT increase of ~631, with the existing VMT at 59,654, and the Proposed Plan VMT at 60,285 in 2040 (DEIR, page 183). How can this be accurate based on the anticipated population and the VMT summaries cited throughout the DEIR? The DEIR's Project trip generation estimate was developed using the SCTM19 travel demand forecasting model maintained by the Sonoma County Transportation Authority (SCTA). The specific trip generation factors are not included in the DEIR. Thus, it is impossible to evaluate the reasonableness of either those factors or the resulting trip generation numbers.	The VMT analysis was conducted using the Sonoma County Travel Model 2019 (SCTM19) operated and maintained by the Sonoma County Transportation Authority (SCTA). The model includes extremely sophisticated algorithms to predict traveler behavior, and has been calibrated against real-world observations both through comparison of traffic volume projections versus observations, as well as aggregated "big data" obtained through mobile devices that provides real-world data on how residents, employees, and visitors travel within and beyond Sonoma County. As with all travel demand models, SCTM19 considers the proximity of housing, jobs, and services to one another, and accordingly does assume that some persons will both live and work within the proposed Specific Plan boundaries or adjacent areas. Such travel synergies are expected in areas with a mix of housing and employment, and attempting to override these assumptions in the VMT analysis would not only be speculative, but would substantially overstate potential impacts and mischaracterize the proposed Specific Plan's design, land use mix, and policies. The applied VMT analysis is a superior approach that reflects application of the best-available tools and information. Please see MR-6 for additional information about VMT analysis that was performed as part of this Draft EIR analysis. Lastly, The VMT analysis contained in the transportation section of the DEIR relies on no comparisons to the historical VMT generated at the former SDC facility. The VMT analysis treats all land uses proposed by the Specific Plan as

Commenter	Date	Letter	Comment	Response
				new. Any references to historical traffic characteristics contained in the DEIR are provided solely for informational purposes.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-15	Can the DEIR appropriately consider the completion of the Sonoma Valley Trail multi-use path, connecting the SDC site with Santa Rosa, as part of the SDC site VMT mitigation if this is a Caltrans controlled project? Why is the downscaling or elimination of the hotel not considered part of VMT mitigation? The hotel is no identified as a priority in the state legislation pertaining to the SDC site and will contribute significantly to VMT. In Table ES-2, the DEIR determines that VMT reduction measures cannot be guaranteed, and they may be insufficient to reduce VMT per capita below the applicable significance threshold or fully offset the effect of induced VMT. "There are no other feasible mitigation measures available." Why is this an allowed conclusion when there are certainly mitigation measures available that might justifiably be considered, even if reductions might not reduce impacts to levels that are less than significant? Examples of mitigation include a reduced scale alternative or elimination (or reduction of size) of the hotel or other commercial development.	The comment is noted. The DEIR includes no mitigation measures related to VMT impacts, so does not rely on completion of the Sonoma Valley Trail as part of a VMT mitigation strategy. VMT reductions intended to reduce the Specific Plan's VMT impacts are tied to Specific Plan Policy 3-41, which requires all development allowed by the proposed Specific Plan to implement TDM strategies. This requirement will be enforced through standard conditions of approval. VMT reductions intended to reduce impacts will also be achieve through implementation of Specific Plan Policy 3-42, which requires establishment of a Transportation Management Association (TMA) that will develop and oversee trip reduction strategies for uses within the proposed Specific Plan. Neither of these approaches require or rely upon implementation of the Sonoma Valley Trail. The hotel use identified in the proposed Specific Plan would contribute to the project's total VMT per service population as well as employee-related VMT per worker. Both of these VMT performance metrics would achieve the applied significance thresholds. The proposed Specific Plan would not meet VMT significance thresholds for residential uses; however, this performance metric is unaffected by the hotel use. Because downscaling or eliminating the hotel would have no beneficial effect in reducing residential VMT per capita, it was not considered as a mitigation strategy. VMT reductions intended to reduce the Specific Plan's VMT impacts are incorporated in Specific Plan Policies 3-41 and 3-42, which

Commenter	Date	Letter	Comment	Response
				require development to implement TDM strategies, and the establishment of a TMA to develop and oversee trip reduction strategies. Policy 3-41 calls for development to reduce its daily trip generation by 15 percent below standard ITE rates, allowing individual developments flexibility in determining how those reductions are achieved. This strategy allows developments and the TMA to effectively design trip reduction strategies that are tailored to the characteristics of each project as well as the synergies among individual uses that will evolve over time. This approach allows a wide range of VMT reduction strategies to be implemented as long as their effectiveness can be supported by evidence, and the DEIR's conclusion that there are no other feasible VMT mitigation measures must be considered in the context that the applied strategy already allows any viable measure(s) to be applied. Regarding the VMT reduction mitigations suggested by the commenter, please see MR-6 which addresses the viability of reducing scale as a VMT mitigation strategy, and the response above addressing removal or elimination of the hotel as a VMT reduction strategy (commercial development is similar to the hotel, in that reducing scale or uses would not improve the impacts related to residential VMT per capita and induced VMT that are identified in the DEIR).
Arthur Dawson,	September 21, 2022	C113-16	WILDLIFE CORRIDOR There is no analysis of the impacts on the wildlife corridor through the campus and no acknowledgement of the fact that animals currently use the campus and will be impacted. Also, there is no assessment of the impacts of fencing on wildlife. (Only wooden fences are prohibited on the campus.) The fencing policies appear	The comment is noted. Please see MR-7 for more detail on wildlife movement within the Core Campus.

Commenter	Date	Letter	Comment	Response
			to apply only to the open space and human/wildlife interface areas, not the campus.	
Arthur Dawson,	September 21, 2022	C113-17	LAND USE IMPACTS The proposed Specific Plan is both inconsistent with several project objectives, as noted above, and inconsistent with existing County General Plan policies encouraging growth in transit-oriented, urban areas. It is also inconsistent with General Plan policies calling for an overall reduction in VMT since it introduces urban uses in a non-urban area; this will necessarily increase vehicle trips to reach services in either Sonoma or Santa Rosa.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	September 21, 2022	C113-18	COMMERCIAL SPACE / JOB CREATION There appears to be no policy saying that the hotel can't be built first. Is there anything in the proposed Specific Plan requiring the developer to build housing first? Why is such a large-scale hotel being proposed when it's not a defined project objective, and when VMT is listed as a challenge?	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	September 21, 2022	C113-19	POPULATION and GROWTH ASSUMPTIONS The DEIR analysis of growth-inducing impacts is based on a comparison of the project size to county-wide population and employment numbers, which is an unrealistic and invalid comparison. As a distinct planning unit, Sonoma Valley should be the region of comparison. Given the relatively small population of Sonoma Valley, the proposed plan represents a substantial growth-inducing project. Alone, it will double (triple?) the community housing numbers and draw population and employees from other parts of the county as well as from outside the county. Given its location away from necessary goods and services, it will generate pressure for additional urban land uses on surrounding and nearby unincorporated lands. This urban sprawl growth scenario is in direct conflict with climate change policies to encourage compact, in-city growth.	The comment is noted. As described in pages 579-584 of the DEIR, the Proposed Plan is consistent with the overarching regional need for both market rate and affordable housing in the Sonoma Valley and throughout the Bay Area, as well as with historic residential and employment uses of the site: SDC has facilities that housed up to 3,700 clients, and SDC was one of the largest employers in the County and the largest in Sonoma Valley. Further, the new development would be entirely concentrated within the existing urbanized footprint of the historic campus, with all surrounding open space acreage preserved as open space.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-20	MPACTS ON NEIGHBORHOODS SOUTH OF SDC The Glen Ellen neighborhoods adjacent to SDC will take the brunt of both the construction and operation impacts – not to mention the ongoing impacts of traffic and safety related to parking if there is no free parking on the SDC campus. The over 200 apartments and small lot single family homes directly south of the SDC property will be subject to the aggregate effects of noise, traffic, air emissions, and visual effects. These residents' daily routines will be disrupted during a very long-term construction period. This area is home to many low to moderate-income families who have arguably not had an adequate voice in this planning process. Has the DEIR adequately studied the effect of the Specific Plan on this neighborhood, to include the narrow Glen Ellen streets from Martin Street south to Madrone Road and along Madrone Road?	The comment is noted. Please see MR-3 for an explanation of the scope of a programmatic EIR, and MR-6 for an explanation of traffic and VMT analysis.
Arthur Dawson,	September 21, 2022	C113-21	CUMULATIVE EFFECTS There are several foreseeable projects within 15 miles of the SDC site that will contribute to cumulative growth and related impacts, including but not limited to: the Graywood Ranch Hotel, Elnoka Village Senior Citizens housing project, Milestone Siesta Senior Citizens housing project, Donald Street housing development project, Verano hotel and housing project, Hanna Boys Center residential development program, and the proposed ~70% membership license increase at the Sonoma Golf Club. In the Transportation Methodology section (page 432), the DEIR states," The model's 2040 cumulative year includes growth that is consistent with adopted general plans within the County and with regional projections contained in Plan Bay Area 2040." Were the above-mentioned projects, and any additional foreseeable projects, considered either in the general plans or by Plan Bay Area 2040? Is Permit Sonoma able to share what was included in the model?	The comment is noted. The potential impacts to vehicular travel that may occur with the proposed Specific Plan are assessed using a VMT performance metric, which considers the amount of vehicular travel (measured in miles) that would be generated on a per-person basis, rather than a LOS metric which measures the amount of traffic congestion and delays occurring on a given roadway or intersection. VMT is assessed using the Sonoma County Transportation Authority's SCTM19 travel demand model. While regional travel and land use characteristics play a key role in how the model estimates VMT, the influences of individual development projects such as those listed by the commenter would not measurably influence the number of miles that future residents and employees within the proposed Specific Plan area drive on an average day. Stated another way, while the projects would be expected to increase traffic volumes, they would not individually or collectively result in substantial changes to existing or cumulative travel patterns with respect to

Commenter	Date	Letter	Comment	Response
				the number of daily miles that residents or employees typically drive. The DEIR transportation analysis is consistent with guidance provided by OPR on how to assess potential VMT impacts, and examines the per-person VMT levels that the proposed Specific Plan would result in as compared to existing levels as well as levels forecast to be present under cumulative conditions. In summary, while the approved and proposed development identified by the commenter would be expected to increase traffic volumes in the Sonoma Valley area (and potentially have an effect on congestion levels), they would have no discernible effect on the proposed Specific Plan's VMT analysis as presented in the DEIR.
Arthur Dawson,	September 21, 2022	C113-22	FIRE / EMERGENCY PREPAREDNESS The DEIR did not consider a fire scenario in which the fire comes in from the west, down from Sonoma Mountain. "Historically, a fire approaching from the west may be less likely, and therefore did not warrant further specific analysis" (DEIR page 515). We know that fires are now burning in ways that are outside of historical precedent due to climate change and related impacts, and that this area has not burned in recent history. With this in mind, we believe a west-approaching fire scenario west must be considered. Did the DEIR consider an evacuation scenario where broadband and/or cell service is out, or is unreliable, affecting receipt of alerts? This occurred in both the 2017 and 2020 fires – land lines and cell service were knocked out or overloaded and people had limited information to guide evacuation. In Section 16.1.3.4 (page 511), the DEIR states that to further mitigate potential impacts, Policy 2-54 requires that the project sponsor proactively plan for emergency wildfire safety by building or designating an on-site shelter-in-place facility, to be open to both SDC residents and the general public. In our community conversations to date, Sonoma County fire and emergency experts have not condoned or recommended this as appropriate for the SDC site, so we question this as an appropriate mitigation measure.	This comment is noted. Please see MR-4 for an explanation of the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-23	The DEIR indicates no significant increases in evacuation times with the Specific Plan. Tables show evacuation times in the order of 15-20 minutes, with and without the proposed project. The Evacuation Time analysis suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. These hypothetical scenarios defy residents' reality and the actual evacuation times experienced during recent fires: Nuns Canyon fire (2017) resulted in evacuation times out of Sonoma Valley of 1 hour or more; Glass Fire (2020) resulted in evacuation times from nearby Oakmont onto Hwy 12 of one to two hours; evacuations from Kenwood during recent fires took hours, not minutes; adding thousands of vehicles will exacerbate the problem. Page 520 of the DEIR states that, "The additional SR 12 connector road will provide additional fire access and evacuation routes." However, during a wildfire, it's quite possible that residents and workers in the proposed project area will not be able to take this connector route east toward highway 12 due to the high probability of a wildfire advancing from the highway 12 direction (see Specific Plan, figure 2.3-1). Has this possibility been considered in the DEIR analysis of evacuation times? Also, can the analysis assume the Hwy 12 roadway connection when it will be subject to a separate CalTrans review and approval process and might not be approved? The DEIR indicates that the SDC core campus is in the Local Responsibility Area (LRA) versus the State Responsibility Area (SRA) with respect to fire-related development governance. In Figure 3.16-2, it appears that the LRAs are outside of any fire hazard severity zone. However, given that parts of the LRA are immediately adjacent to medium, high and very high fire hazard severity potential zones (FHSZs), can this be accurate?	This comment is noted. Please see MR-4 for an explanation of the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-24	The assessment of wildfire hazards in the DEIR appears to have a number of errors and omissions, the most serious of which lead to unwarranted conclusions that underestimate this hazard ("Impact 3.8-7 Implementation of the Proposed Plan would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. (Less than Significant)" p. 268). Page 503: "Primary responsibility for preventing and suppressing wildland fires in Sonoma County is divided between local firefighting agencies and the State of California, Department of Forestry and Fire Protection. The SDC Planning Area is currently located in an area identified as a State Responsibility Area (SRA)." The Planning Area "includes the approximately 180-acre SDC Core Campus…" (DEIR, pg. 51) According to the State Fire Marshall's map: https://osfm.fire.ca.gov/media/6822/fhszs_map49.pdf, the Core Campus is within a Local Responsibility Area (LRA. See map on page 4), not the State's. Is this correct? Page 503: "Under the Fire and Resources Assessment Program (FRAP) "the Planning Area…includes areas of high to very high Fire Hazard Severity Zones west of Highway 12, areas of high fire hazard severity in the hills, and areas of moderate fire hazards severity zones in the vicinity of Suttonfield Lake and Fern Lake (Figure 3.16-2). The Core Campus is not included in any of these FHSZs. " The State Fire Marshall's final map is not intended to show moderate and high FHSZs within the Local Responsibility Area. The State's draft map (page 4), however does show moderate and high FHSZs covering a substantial portion of the Core Campus. While not finalized, this appears to be the best available fire risk data for the Planning Area.	The comment is noted. On page 518, the DEIR does note that development under the Proposed Plan could result in potentially significant impacts from exacerbating wildfire risks. This increased risk can be due to the site's history of wildfire and proximity to VHFSZs or from increasing the potential for wildfire ignition and spread with development. However, the Proposed Plan includes a plethora of policies and Standard Conditions of Approval to adequately mitigate potentially significant wildfire risks to a less than significant level. Such measures, as described under the Wildfire Impact Analysis starting on page 551 of the DEIR, require the Proposed Plan to construct and maintain a managed landscape buffer to aid in fire defense; enhance creek buffers; remove surface and aerial fuels; implement fuel management methods (such as fuel separation, defensible space with continuous tree canopy, and irrigated agriculture); plant fire resilient landscaping; include a five-foot buffer of defensible space around all developments; prohibit wooden fencing; require all new construction and retrofitting of existing buildings use Class A fire-rated roofing materials, fire-resistant siding, and dual-paned tempered glass windows; prohibit the storage of flammable materials under decks or porches; prune branches of trees; cover all building vent openings with wire mesh screens to prevent infiltration from embers of sparks; and ensure that all property owners are informed and educated about wildfire resiliency requirements at the site at the time of purchase. Further, Policy 6-21 would

Commenter	Date	Letter	Comment	Response
				require all new and existing utility lines be buried underground to mitigate additional wildfire risk. Policy 2-40 would reduce ember ignitions and fire spread by requiring trimming of branches that overhang the home, porch, and deck and prune branches of large trees up to 6 to 10 feet (depending on their height) from the ground. Policy 2-40 would remove dead vegetation and debris from under decks and porches and between deck board joints.The Proposed Plan would also comply with all State and local codes and regulations, such as the California Fire Code and Sonoma County Code, which would further mitigate potential impacts. There are several proposed policies that would serve to mitigate impacts from wildland-urban interface areas. Such policies would implement managed landscape buffers, limit surface fuels, minimum clearances between fuels and each building or structure, defensible space, fire resilient landscaping, and fire-resistant construction practices. Further, development would comply with Fire Code Section 4906 which contains existing regulations for vegetation and fuel management to maintain clearances around structures. This code includes provisions for ignition-resistant construction standards for new buildings.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	September 21, 2022	C113-25	Goal PS-3 from the Sonoma County General Plan 2020 (DEIR, page 497), reads: "Prevent unnecessary exposure of people and property to risks of damage or injury from wildland and structural fires," with Objective PS-3.1 stating, "Continue to use complete data on wildland and urban fire hazards." 2. How was the data gap between the SRA and the LRA within the Planning Area addressed during the DEIR's analysis of wildfire threat? What evidence was the statement about the Core Campus (DEIR, pg 503. See above) based on? Was this conclusion reached because there is data showing low fire risk there or because lack of data was equated with low risk? 3. The Fire Constraints map (13.16-2) shows the Core Campus being almost entirely outside of any Fire Severity Hazard Zones. How would the Fire Severity Hazard data for the Core Campus, shown in the State's draft map, change the analysis of fire hazards there? Does this change the calculus for significance under 16.1.3.1 Criterion 2: "Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire."?	This comment is noted. Please see response to comment C113-24.
Arthur Dawson,	September 21, 2022	C113-26	In addition, the Sonoma County Community Wildfire Protection Plan Update 2022 (referenced in the DEIR, 16.1.1.3. Regional and Local Regulations, p. 496) states that: "Wildland fires that start in the woods and spread into adjacent areas with relatively dense housing often result in the greatest losses of property and life. Efforts to save lives and property will take precedence over losses of wildland resources, so firefighters' response must focus on protecting populated areas rather than fighting a fire in the most efficient way." Even if we assume there are no FHSZs within the Core Campus, this suggests that building dense housing at SDC adjacent to wildlands could result in high "losses of property and life." Responding to such a fire might prevent firefighters from efficiently working to prevent further fire spread. How was this scenario taken into account during the DEIR analysis?	This comment is noted. Please see response to comment C113-24.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	Septembe r 21, 2022	C113-27	3.16.1.3.4. Wildfire Evacuation 1. Wildfire ignitions are known to increase with the size of a population. How was this relationship evaluated in the calculation of fire risk in the Planning Area? CLOSING COMMENTS As evidenced through the comments above, we do not believe this DEIR yet adequately and completely evaluates the environmental and safety impacts of the Proposed Plan. Furthermore, we remain committed to the Sonoma Valley community's consistent input calling for both affordable housing and a lower density plan alternative. A plan closer to the Historic Preservation Alternative – determined as "environmentally preferred" in the DEIR analysis – successfully meets the project objectives and the established Guiding Principles for this project and should be given strong consideration. We remain committed to a plan that we can all support and appreciate this opportunity to provide comment. The NSV MAC letter process did not allow to adequately address all topic areas. Please respond to the public comments in the attached addendum that we received in advance of the NSV MAC meeting on 9/21/22, relating to the Specific Plan and the DEIR, which we are incorporating by reference, and give them full consideration.	This comment is noted. Please see MR-4 on the wildfire evacuation analysis and MR-8 on the Historic Preservation Alternative.
Arthur Dawson,	Friday, September 23, 2022	C114-1	The North Sonoma Valley Municipal Advisory Council (NSV MAC) has prepared this letter for consideration by the Board of Supervisors (Board) and Sonoma County planning staff regarding the proposed land use and design alternatives for the SDC Specific Plan. The primary purpose of this letter is to summarize public input received by the NSV MAC in response to the SDC Specific Plan Alternatives Report prepared by Dyett & Bhatia and published by the County in early November 2021. This letter incorporates the extensive community input from public meetings on November 17, 2021, December 15, 2021 and January 5, 2022, the Sonoma Valley community survey, as well as written correspondence and NSV MAC comments, and synthesizes this information into several main themes to create the framework for a community-supported land use alternative. The intent of this exercise is to provide sufficient information to enable the Board to direct Permit Sonoma staff to develop a preferred alternative that truly reflects the community vision for SDC as articulated in the January 2021 Draft Vision and Guiding Principles.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	Friday, September 23, 2022	C114-2	As reflected in the hundreds of comments received since publication of the Alternatives Report, the Sonoma Valley community does not support any of the three alternatives proposed by the County; 71% of participants rejected all three alternatives when polled during the SDC Alternatives Workshop on November 13, 2021. We also reference a non-affiliated Sonoma Valley survey (community survey) conducted by Sonoma Valley resident Dr. Shannon Lee, Biology Department Faculty at Sonoma State University in December 2021. The survey received 672 responses, 95% of which were from Sonoma Valley and Sonoma County residents. The SDC is not suitable as an "urban infill site" and the community's rejection of the proposed alternatives reflects the incompatibility of the scale of proposed development with the adjacent Glen Ellen communities and the site's environmental constraints.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	Friday, September 23, 2022	C114-3	Request for Community-Driven Process for Preferred Alternative On behalf of the community, the NSV MAC requests the Board to delay the initiation of the California Environmental Quality Act (CEQA) process to prepare an Environmental Impact Report (EIR) for a preferred alternative until after a new alternative reflective of site constraints and community input is developed as promised in the December 17, 2019 agreement between the State of California and Sonoma County. The NSV MAC requests the Board to direct staff to pursue this new alternative as outlined in this letter.	The comment is noted. Please see MR-2 for an explanation of the State-mandated project timeline.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	Friday, September 23, 2022	C114-4	Community Input as Framework for a Preferred Alternative The community continues to support the January 2021 Vision and Guiding Principles that have underpinned community workshops, Sonoma County requests for proposals for preparation of the Specific Plan, and related efforts during this multi-year SDC redevelopment process. These principles are most recently expressed on pages 10-11 of the Specific Plan Alternatives Report. The community feedback conveyed in this letter reflects these principles through an integrated vision of development at an appropriate scale, with an intention to balance affordable, inclusive housing and related commercial development with the protection of SDC's open space (a California public trust resource), the Sonoma Valley Wildlife Corridor, the historic district portions of the SDC campus, fire safety and climate resiliency, and the rural character of the surrounding region. An alternative with substantially reduced density is necessary to ensure that the negative impacts of development on traffic, public safety, wildlife corridors, water/water treatment, and related issues do not cause environmental and social harm. The nine community priorities are summarized below and detailed in the Appendix to this letter. OPEN SPACE. Community input consistently emphasizes the singular opportunity the SDC campus represents in terms of protecting the open space and wildlife corridor in the context of a vibrant, sustainable community. Over 90% of community survey respondents ranked "preservation of open space" as the highest priority; this is consistent with the state's 30x30 goals. This concern goes beyond setting aside open space lands and creating creek and sensitive habitat setbacks. The density of development planned within the SDC campus must not exceed the carrying capacity of the site's resources. In other words, it must not result in overuse of open space resources or interference with wildlife movement and permeability.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	Friday, September 23, 2022	C114-5	HOUSING DENSITY. The community unequivocally supports the creation of additional housing on the SDC site, particularly affordable housing, however at a lower density (450 or fewer housing units) than that included in any of the alternatives published to date. Higher housing density will move the surrounding communities from a "rural" to "urban" designation based on current U.S. census definitions (see Appendix) and is a	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			primary driver of unacceptable impacts, including environmental, infrastructure, traffic and related public safety issues.	
Arthur Dawson,	Friday, September 23, 2022	C114-6	AFFORDABLE HOUSING. The community supports a considerably higher percentage of affordable housing than the approximately 25% included in the published alternatives, with 76% of community survey respondents indicating a preference for 50-75% (or more) affordable units. Use of available funding mechanisms and incentives—including revisiting the State's obligations for SDC site cleanup and remediation—must be included in the financial feasibility assumptions to maximize the affordable housing percentage (see Site Governance / Funding below). ADAPTIVE REUSE OF EXISTING BUILDINGS. Public and NSV MAC member comments indicate that the County should revisit the potential reuse of existing buildings to satisfy some of the housing needs on the East Side of the SDC campus. UTILITY INFRASTRUCTURE. An energy sustainability plan, including a microgrid design, should accompany any SDC development, as should a thorough review of the potential benefits of an on-site sewage treatment facility in light of the challenges to the existing Sonoma Valley infrastructure.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	Friday, September 23, 2022	C114-7	FIRE SAFETY/ CLIMATE RESILIENCY: Fire safety and climate resiliency will be impacted by the other elements of the site plan—water use/recycling, energy grids, housing density—and their impacts on traffic and public safety. These interconnected factors must be more intentionally considered in any preferred alternative for this site. The Sonoma Valley community has expressed particular concern that fire risk, evacuations and related community preparations have evolved significantly during the course of the SDC re-development process. 71% of community survey respondents indicated that the County has not adequately addressed fire hazard, traffic and other impacts to the community in the proposed alternatives.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	Friday, September 23, 2022	C114-8	HISTORIC PRESERVATION. The community recognizes the importance of preserving the historic, architectural, and aesthetic character of the SDC campus, and envisions permanent protection, preservation and management of selected buildings and structures within the historic district. More specifically, the community has consistently supported the preservation of an historic district on the west side of the SDC campus which could include a museum, library, research hub and visitor center, all of which would be linked with the cemetery and open space. COMMERCIAL SPACE / JOB CREATION: The community supports innovative use of commercial space (education, training, research) and inclusive job creation at a scale suitable for this semi-rural site. In addition, the community wants to see commercial space set aside for COMMUNITY-oriented functions, e.g., a community center or school, and is prepared to explore funding options for these uses.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Arthur Dawson,	Friday, September 23, 2022	C114-9	SITE GOVERNANCE / FINANCING: Many members of the public have requested consideration of establishing a trust or similar management entity to oversee redevelopment and implementation of the Specific Plan rather than a private developer. A trust mechanism would open opportunities for public financing and site management that would broaden the potential for successful redevelopment AND community compatibility. In fact, the Board's April 2019 resolution "Supporting a Land Use Planning process and considerations for disposition of the Sonoma Developmental Center Site," states: "Be it further resolved that the Board may also consider in the future a Joint Powers Authority, Trust or other mechanism to facilitate the disposition and transition of the site to meet the desired outcomes." Community members have clearly articulated the conflict inherent in creating a plan that is both appropriate for Sonoma Valley and financially feasible, with these economics driven in large part by the dilapidated infrastructure and environmental cleanup liabilities left by the State. The State must help defray the significant costs to clean up the site that it has left in poor condition to ensure that the plan is not merely driven by economic factors. 89% of community residents surveyed believe that the State should be responsible for clean-up and other remedial maintenance of the site.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Arthur Dawson,	Friday, September 23, 2022	C114-10	Conclusions The Sonoma Valley community's reasons for rejection of the proposed alternative plans are aligned and consistent. The alternatives do not reflect the themes heard over and over in multiple Valley-wide workshops regarding the appropriate size and scale of development, and adequate protection of the wildlife corridor and surrounding open space. None of the current alternatives reflect the many environmental constraints on the site, nor do any strike a balance between financial interests, affordable housing, and environmental and community well-being. The community has spoken clearly. On its behalf, the NSV MAC respectfully reiterates its request that the Sonoma County Board of Supervisors direct staff to work with the community to develop an alternative using the framework as outlined above and detailed in the accompanying Appendix.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Barbara Roy	Sunday, September 25, 2022	C115	it is disappointing that in spite of the grave issues for the Glen Ellen community, the DEIR essentially dismisses any creative way to achieve a reasonable balance of additional housing with the rural nature of the area. The majority of residents and Sonoma Valley groups favor a 450 housing unit plan and yet it is tied to the Historic Preservation Alternative which the DEIR rejects, however, no attempt is made to pattern that density with a modified preservation model which could be a reasonable plan. The document is clearly biased toward a plan that has been consistently rejected by the populace. A main tenet when this process began was for it to "complement" the surrounding community. In as much as, according to ABAG, the entire County is to supply 3881 housing units by 2031, it is not reasonable to put 1000 of them in tiny rural Glen Ellen. Under Aesthetics 3.1 LU3 is to locate future growth using infill parcels. Building a city in the middle of the Glen Ellen community is not infill. Table2.5-3 indicates a hotel which has also been soundly rejected by the residents of the Valley as inappropriate and growth inducing. Biological 3.4 OSRC-7.5 Maintain connectivity between natural habitats. Who bears responsibility in perpetuity for maintaining and enforcing the "mitigating policies" once the units are sold?	Your comment is noted. Please see MR-8 for an explanation of why the historic preservation alternative does not meet the project objectives.

Commenter	Date	Letter	Comment	Response
Barbara Roy	Sunday, September 25, 2022	C115	Hydrology 3.9 The Plan states it does not use groundwater. How is this possible in that Sonoma Creek does draw groundwater from the Shallow Aquifer and the Plan diverts water from Sonoma Creek? How is it determined that the water rights (to divert water from various creeks) which are sought to be safeguarded are not affecting groundwater gaining into the creeks? SDC has 4 groundwater wells which are not currently drawing. Where is the guarantee that they will never be reactivated? 3.9.3.3 item 6D and 6E seek to ensure water to the Plan residents and safeguard SDC water rights. What safeguards are in place for the existing residents whose water supply are also tied to creek and stream flow as affected by SDC diversions? 630 says the diversions cannot result in a net increase of withdrawals or diversions from various springs and streams including the four main sources used by SDC during low-flow periods including summer, fall, and drought conditions or as "annual averages". Please define "annual averages" as used here. Averages over drought years differs from non drought years and also years where climate change has caused a heavy but short-lived precipitation that drains away before being absorbed.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Barbara Roy	Sunday, September 25, 2022	C115	Land Use 3.10 The Plan conflicts with Land Use Policy, which calls for growth utilizing vacant parcels in urban areas. It is a manipulative definition of infill to describe building 100 housing units where few exist, as "infill". Physical Barrier: While it may not be what the DEIR calls a "typical reference", how is building a city in the middle of the Glen Ellen community in its entirety, not, in fact, a "physical barrier"?	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Barbara Roy	Sunday, September 25, 2022	C115	Housing 3.12 Again, it is not against reasonable County Housing Element policy which references "Fair Share" distribution to support 1000 units of the ABAG figure of 3881 units in rural Glen Ellen? The Plan claims it does not induce substantial population growth. Please explain and justfy how virtually doubling by adding 2400 people to a community of 2542 is not inducing substantial population growth.	The comment is noted. As described in pages 579-584 of the DEIR, the Proposed Plan is consistent with the overarching regional need for both market rate and affordable housing in the Sonoma Valley and throughout the Bay Area, as well as with historic residential and employment uses of the site: SDC has facilities that housed up to 3,700 clients, and SDC was one of the largest employers in the County and the largest in

				Sonoma Valley. Further, the new development would be entirely concentrated within the existing urbanized footprint of thre historic campus, with all surrounding open space acreage preserved as open space.
Barbara Roy	Sunday, September 25, 2022	C115	Transportation 3.14 The Plan hopes that residents will not use their cars. The Plan hopes that residents will not work off site. How does the Plan justify figures based on hopes? How will no free parking on site impact existing neighborhood streets and the existing rural Glen Ellen community which the Plan hopes to entice with recreation etc? Emergency access only addresses emergencies within the site.	The comment is noted. Please see MR-4 for more detail about emergency evacuation analysis, and MR-3 for more detail about what is considered in the preparation of a Draft EIR. The presence of priced parking near an area with free parking can cause motorists to search for spaces on those free streets (commonly known as "spillover"). However, there is a limited distance motorists are willing to walk from their vehicles. In the case of SDC, on-street parking pricing would only be considered in non-residential areas, primarily in the "core campus". The core campus is located roughly one-third mile from the nearest residential uses in Eldridge and almost two-thirds mile to Glen Ellen, walking distances that would be too lengthy and inconvenient for most motorists. Thus, the potential for spillover parking is minimal. The presence of free parking often leads to many motorists seeking spaces in the same highly-desired locations, resulting in vehicles circling the area. This can have the unintended effect of marginally increasing VMT and creating potential safety issues as drivers spend a greater amount of time searching for parking spaces. Additionally, The VMT analysis was conducted using the Sonoma County Travel Model 2019 (SCTM19) operated and maintained by the Sonoma County

Commenter	Date	Letter	Comment	Response
				Transportation Authority (SCTA). The model includes extremely sophisticated algorithms to predict traveler behavior, and has been calibrated against real-world observations both through comparison of traffic volume projections versus observations, as well as aggregated "big data" obtained through mobile devices that provides real-world data on how residents, employees, and visitors travel within and beyond Sonoma County. As with all travel demand models, SCTM19 considers the proximity of housing, jobs, and services to one another, and accordingly does assume that some persons will both live and work within the proposed Specific Plan boundaries or adjacent areas. Such travel synergies are expected in areas with a mix of housing and employment, and attempting to override these assumptions in the VMT analysis would not only be speculative, but would substantially overstate potential impacts and mischaracterize the proposed Specific Plan's design, land use mix, and policies. The applied VMT analysis is a superior approach that reflects application of the best-available tools and information.
Barbara Roy	Sunday, September 25, 2022	C115	Wildfire 3.16 The DEIR continues to deal with this issue, as with others, as if the SDC core was somehow not in the middle of a rural community and that what happens on site does not impact the surrounding area. Evacuation Issues. Historical first-hand information from those who have evacuated from multiple wildfires in recent years does not support the time figures used in this report. Again, the planning treats the situation as if only SDC needs to evacuate. Experienced survivors know that 1.2 minutes of extra evacuation time is not realistic. Most evacuees have spent hours on clogged roads. A wildfire evacuation entails residents from all the areas possibly in the shifting track of fire. Furthermore, assumptions seem to be	The comment is noted. Please see MR-4 for more information about the wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			made that everyone in the path gets instant notification, which has not been the case as both land line and cell communications may easily be compromised. As the County knows, wildfire is swift and unpredictable. How are these time frames justified as they do not reflect real time experience?	
Betsy Donnelly	Thursday, September 22, 2022	C116-1	Thank you for taking the time to read and respond to my comments. I am confused and hope you can help clarify several statements in the EIR that seem contradictory. On the one hand it says there will be no significant impact on wildlife species yet on the other hand for each species and each special project a biologist will do an environmental assessment prior to the start of each special project. Also, no new field studies were done for the EIR because existing resources contained enough detail for a program level environmental assessment and yet the EIR states that operations could result in loss of habitat or harm species if they are present. Another thing I am unclear about, is that I was under the impression that environmental impact was not allowed to be deferred, but relying on the "future studies" seems to be doing just that. Here are just a handful of the statements in the EIR that seem to contradict each other.	Thank you for your letter. The comment is noted. Please see MR-3 for more information about how a programmatic Draft EIR addresses future studies.
Betsy Donnelly	Thursday, September 22, 2022	C116-2	From section 3.4.3.2: No new field studies were conducted for the preparation of this EIR, because existing resources contained information on pertinent aspects of biological resources in the Planning Area at level of detail appropriate for a program level environmental assessment. Future project specific detailed biological surveys will be necessary to confirm presence or absence of sensitive resources on future development sites. Cumulative impacts related to biological resources are discussed in Chapter 5: CEQA Required Conclusions. Page 241-242: In terms of potential operations and maintenance related impacts, some increased risk to special-status species may result from increased vehicular traffic, increased recreational use, and domestic pets. Direct impacts to streams and surrounding	Thank you for your letter. The comment is noted. Please see MR-3 for more information about how a programmatic Draft EIR addresses future studies, and MR-7 for more infomation about the biological resources analysis.

Commenter	Date	Letter	Comment	Response
			habitat could result in the loss of suitable habitat or harm of these species if they are present	
Betsy Donnelly	Thursday, September 22, 2022	C116-3	Page 221: Lack of information in the CNDDB and other reports about a species or an area does not imply that the species does not occur or that there is a lack of diversity in that area. This lack of information may reflect a lack of Project or reporting more than absence of special-status species. Thus, there may be additional occurrences of special-status species within this area that have not yet been surveyed and/or mapped. BIO-1 Prior to the commencement of the approval of any specific project in the Proposed Plan area, Project Sponsors shall contract a qualified biologist to conduct studies identifying the presence of special-status species and sensitive habitats at proposed development sites and ensure implementation of appropriate mitigation measures to reduce impacts to sensitive habitat or habitat function to a less than significant level. Thank you again for you time and attention and for working with the community to help reach a solution we can all agree on.	Thank you for your letter. The comment is noted. Please see MR-3 for more information about how a programmatic Draft EIR addresses future studies, and MR-7 for more infomation about the biological resources analysis.

Commenter	Date	Letter	Comment	Response
Bonnie Brown	Monday, September 26, 2022	C117-1	Comment: The statements underlined in the analysis below do not provide substantial evidence for these statements. Energy use can be initiated just as well as the Proposed Plan and biological resources preserved as well. No proof of the statements below are included in the analysis. Wildfires risks would be much less with the Historic Preservation Alternative since 1500 to 1700 less vehicles would be evacuating. The environmental features of wildlife protection would be enhanced with less housing, noise, lights, intrusion of their habitat. This analysis of the Historic Preservation Alternative is incomplete and makes unsubstantiated remarks. ES.4.2 Identification of Environmentally Superior Alternative "Overall, the Historic Preservation Alternative is the environmentally superior alternative, although significant impacts of the Proposed Plan and the two alternatives are largely comparable, and the Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks."	The comment is noted. Please see MR-8 for explanation of why the historic preservation alternative does not meet the project objectives.
Bonnie Brown	Monday, September 26, 2022	C118-1	"This EIR conservatively assumes that VMT reduction due to implementation of these strategies would be inadequate to reduce residential VMT per capita and induced VMT to less-than significant levels, resulting in significant and unavoidable impacts, with no other feasible mitigation measures available. These impacts would also be cumulatively considerable." Comment: Because of these significant and unavoidable traffic impacts which are cumulatively considerable in the Proposed Plan, the Historic Preservation Alternative is the Environmentally Superior Alternative. Lower housing numbers and development will result in VMT reduction to a level safer and acceptable to the community and not destroy the safety or quality of life of current residents of Sonoma Valley. The density of housing in the Historic Preservation Alternative is the one requested by Supervisor Gorin, with support by other supervisors. The analysis of the Historic Preservation Alternative in the DEIR is insufficient and incomplete for these reasons. There is no analysis of financial feasibility in this alternative or benefit to the community and beyond.	The comment is noted. Please see MR-6 for an explanation of the VMT analysis, and MR-8 for more information on the analysis of the historic preservation alternative.

Commenter	Date	Letter	Comment	Response
Bonnie Brown	Monday, September 26, 2022	C119-1	Comment: There is no substantial evidence given in the below analysis in chapter 3.8 of the DEIR, page 268, that 1500 to 1700 more vehicles, as planned by the Proposed Plan in the SDC Specific Plan. evacuating from a wildfire will not impair, physically interfere, or endanger the lives of current residents attempting to evacuate during a wildfire emergency. My personal experience shows these to be false statements. I evacuated from the 2017 fires from my home at Verano Avenue and Arnold Drive. Vehicles were moving at a snail's pace. It took me an hour and one half to reach a location in south Sonoma Valley where I was meeting my daughter and could spend the night where evacuation was not required and I felt somewhat safe. If the fires had progressed farther south from Glen Ellen, the Springs and all of Sonoma would have been engulfed, which was a possibility and the reason for all of the valley to be ordered to evacuate. In the 2020 evacuation of just Oakmont, I witnessed traffic going south on both Highway 12 and Arnold Drive. Both evacuation routes were just as impacted as the 2017 fires, and that was just Oakmont residents. To claim that the additional vehicles of 1500 to 1700 in the Proposed Plan would only increase evacuation time by less than a minute is completely false and relies on an unsubstantiated opinion. It does not take into account actual experience. Clearly, from my actual experience during evacuations, it is evident that adding 1500 to 1700 vehicles to a wildfire evacuation in Sonoma Valley will cause extreme danger to current residents and significant risk of loss, injury or death involving wild land fires. When a wildfire is approaching, no County Emergency Operations Plan will help "to the extent feasible". People will evacuate when they feel in danger. This is NOT less than significant. For this reason, the Historic Preservation Alternative is the Environmentally Superior Alternative. It lessens housing numbers and traffic impacts to the extent that evacuations can be safer.	The comment is noted. Please see MR-4 for an explanation of wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Bonnie Brown	Monday, September 26, 2022	C119-2	Comment: The statements in red below do not give substantial evidence and bear no semblance to the actual conditions that local people have experienced during evacuations. "Compliance with existing State and local codes and regulations as well as proposed policies...and structures to the extent feasible" go out the window when people fear for their lives. Chapter 3.8: Hazards and Hazardous Materials. Impact 3.8-6 Implementation of the Proposed Plan would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. (Less than Significant)" "In addition, see Impact 3.16-1 in Section 3.16: Wildfire for further analysis. The County's Emergency Operations Plan establishes the emergency management organization for emergency response, establishes operational concepts associated with emergency management, and provides a flexible platform for planning emergency response in the county. Development facilitated by the Proposed Plan would be constructed in accordance with federal, state, regional, and local requirements, which are intended to ensure the safety of county residents and structures to the extent feasible. Compliance with these standard regulations would be consistent with the County's Emergency Operations Plan. Thus, implementation of the Proposed Plan would not impair an emergency response or emergency evacuation plan and impacts would be less than significant. Mitigation Measures None required". "Impact 3.8-7 Implementation of the Proposed Plan would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. (Less than Significant) See Impacts 3.16-1 and 3.16-2 in Section 3.16: Wildfire for analysis on this impact. Compliance with existing State and local codes and regulations as well as proposed policies would reduce impacts to a less-than-significant level related to exacerbating wildfire risks during construction, operation, and implementation of the Proposed Plan.	The comment is noted. Please see MR-4 for an explanation of wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			Mitigation Measures None required".	

Commenter	Date	Letter	Comment	Response
Bonnie Brown	Monday, September 26, 2022	C120-1	Comment: The analysis of the Historic Preservation Alternative is inadequate and does not provide substantial evidence in its statements. In the statement below, ES.3.3, there are no facts to verify that development would be more constrained than with the Proposed Plan. If the assumption is that adaptive reuse would not be successful and used for future development, then that is in conflict with the statement in 4.3 Historic Resources. It also does not give substantial evidence that there would be fewer jobs. Adaptive reuse of existing buildings can provide space for jobs, with the possibility of that near the Proposed Plan. The number of jobs estimated in the analysis is speculative and no evidence is provided. ES.3.3 Historic Preservation Alternative "Further, because the historic character of the existing buildings within the Sonoma State Home Historic District would be retained as much as possible, intensity and density of future development would be more constrained than with the Proposed Plan. As a result, overall development would be less than that of the Proposed Plan…..roughly 340 fewer jobs than envisioned by the Proposed Plan." 4.3 Historic Resources "There are several compelling reasons for striving to reuse contributing buildings in the SSHHD (Sonoma State Home Historic District), to the greatest extent practical. Adaptive reuse is recognized as a highly sustainable approach to construction."	The comment is noted. Please see MR-8 for an explanation of why the historic preservation alternative does not meet the project objectives. While adaptive reuse was studied as part of the Specific Plan process (see in particular the Adaptive Reuse Potential Evaluation prepared by Hornberger + Worstell Architects in March 2021), adaptive reuse of many of the buildings at the SDC site would involve extensive renovations/seismic retrofitting/hazardous material remediation. Development would be more constrained because many existing historic buildings on site are single-story buildings; reuse would allow less flexibility in building footprints and development style than new buildings.

Commenter	Date	Letter	Comment	Response
Bonnie Brown	Monday, September 26, 2022	C120-2	"The Historic Preservation Alternative also does not include a new connection to Highway 12." Comment: This is a benefit of the Historic Preservation Alternative and its proposed elimination was not analyzed in this alternative, thus the analysis is inadequate This connector road would cause oil and gas run-off in the open space, cause wildlife road kill, especially at night, necessitate a stop light on Highway 12, and bisect the open space that was promised to be preserved. Any drivers who attempt to go from Arnold Drive to Highway 12 or vise versa during an evacuation will find the exact same vehicle back-up as on the other route. There is an existing wide EW connector road three block south of SDC: Madrone Road. To not add a new road through the open space would preserve the historic open space. This was not analyzed in this Alternative, making it inadequate.	The comment is noted. Please see MR-7 for an explanation of the adequacy of impacts on wildlife movement, including for the proposed Highway 12 connector road.

Commenter	Date	Letter	Comment	Response
Bonnie Brown	Monday, September 26, 2022	C121-1	"The Proposed Plan would result in significant and unavoidable impacts related to transportation (Impact 3.14-2), and historic resources (Impact 3.5-2)." 4.3 Historic Resources "There are several compelling reasons for striving to reuse contributing buildings in the SSHHD (Sonoma State Home Historic District), to the greatest extent practical. Adaptive reuse is recognized as a highly sustainable approach to construction. Additionally, SDC is a fixture in the Sonoma Valley, reinforced by strong collective community memory. The sense of place, complete with historic buildings and mature landscape, offers an established location for the campus's next life. The SDC site also offers an existing sense of community that is respected and can be reinforced through a mixture of adaptively reused historic buildings and contextually responsive new buildings. The level of detail and design present on the SDC site is not easily replicated with modern building practice and economics." Footnote page 533: "141 Rehabilitation and adaptive reuse at SDC is generally more expensive than new construction. See Alternatives Report, November 2021 (Updated), available at https://www.sdcspecificplan.com/documents" Comment: Regarding the footnote statement above and information in the Alternatives Report, November 2021, the conclusions are not based on substantial evidence. No proof of the statement is given. Adaptive reuse is being successfully done all over this country. Community Housing Sonoma County (Keith Christopherson) has adaptively reused buildings in Sonoma County for veterans housing, even an old firehouse. The reason it is not done is because of developers' lack of imagination and will to develop anything except with demolition and new construction. There is no evidence of proof that adaptive reuse is more expensive than new construction. To re-quote other statements is not proof. Substantial evidence is required.	The comment is noted. Please see MR-8 for an explanation of why the historic preservation alternative does not meet the project objectives. Estimates for costs associated with adaptive reuse of existing buildings at the SDC site, including those cited in the Alternatives Report and Adaptive Reuse Potential Evaluation, are estimates based on high-level surveys of the buildings, architectural expertise, and current industry trends, and are not intended to be definitive per-building detailed cost-estimates.

Commenter	Date	Letter	Comment	Response
Bonnie Brown	Monday, September 26, 2022	C121-2	Impact 3.5-2 - Implementation of the Proposed Plan would cause a substantial adverse change to the significance of a historic district, as defined as physical demolition, destruction, relocation, or alteration of the historic district or its immediate surroundings such that the significance of the historic district would be materially impaired pursuant to § 15064.5. Page 296 -" Implementation of future development and redevelopment permitted under the Proposed Plan would allow more dense new development adjacent to contributing resources, as well as alteration and reconstruction of contributing resources in the Core Campus area. New construction has the potential to disconnect the remaining contributing resources in the Core Campus from those in Community Separator and Regional Parks lands to the east and west, consequently disrupting the feeling and character within the historic district. This would affect the cohesiveness of SSHHD's overall integrity to the point that it would no longer be eligible for listing in the NRHP, CRHR, or as a California Historic Landmark. The impact of such activities is considered significant because they would cause a substantial adverse change to the historical district as defined by CEQA Guidelines Section 15064.5. While proposed policies noted above and the Standard Conditions of Approval (LU-1, LU-2, LU-3, LU-4, LU-5, and LU-6) would help reduce these impacts to the maximum extent practicable, there are no mitigation measures available to avoid impacts entirely. As such, this impact would remain significant and unavoidable. Mitigation Measures None required." Comment: Because of these significant and unavoidable impacts to the Historic District of SDC in the Specific Plan's Proposed Plan, it is clear that the Historic Preservation Alternative is the Environmentally Superior Alternative and should be adopted by the Board of Supervisors. Its density was requested by Supervisor	The comment is noted. Please see MR-8 for an explanation of why the historic preservation alternative does not meet the project objectives.

Commenter	Date	Letter	Comment	Response
			Gorin and other Board members agreed. This alternative was not studied in detail and does not include substantial evidence of its analysis.	

Commenter	Date	Letter	Comment	Response
Bonnie Brown	Monday, September 26, 2022	C122-1	Footnote page 533: "141 Rehabilitation and adaptive reuse at SDC is generally more expensive than new construction. See Alternatives Report, November 2021 (Updated), available at https://www.sdcspecificplan.com/documents" Comment: This statement provides no substantial evidence and conflicts with Hazardous Materials study documents by Van Brunt Associates in the WRT report and reiterated by consultants for the Specific Plan, as quoted below. The last paragraph is significant: All hazardous materials must be removed before demolition. Then the building is demolished and all of that is transported to landfills, some to hazardous landfills out of state since some hazardous materials may be left in the rubble. Then the costs of labor and new materials for new construction are added. No study of the total costs of all of the processes required for demolition and new construction have been substantially studied and compiled to make the statement that adaptive reuse is more expensive than demolition and new construction. And the GHG emitted by demolition and new construction were not studied or included, as requested in my original comments to the DEIR, and no substantial evidence was given. This is especially important since all of the buildings east of Arnold Drive, constructed of cement and tile roofs, are planned to be demolished in the Proposed Plan.	The comment is noted. Please see MR-8 for an explanation of why the historic preservation alternative does not meet the project objectives. Estimates for costs associated with adaptive reuse of existing buildings at the SDC site, including those cited in the Alternatives Report and Adaptive Reuse Potential Evaluation, are estimates based on high-level surveys of the buildings, architectural expertise, and current industry trends, and are not intended to be definitive per-building detailed cost-estimates. Plase also see MR-3 for more information on the level of detail and analysis appropriate for a programmatic EIR.
Bonnie Brown	Monday, September 26, 2022	C122-2	Van Brunt Associates/WRT Report: "Prior to any construction or demolition, all of these hazardous and potentially hazardous materials will be inspected, sampled, or inventoried. The ultimate goal for this work is to ensure workers and the environment is protected during building repairs, renovations, or demolition." "The presence of most hazardous materials in buildings is not necessarily illegal or dangerous. Most potentially hazardous building components in good condition may be left in place. Upgrades involving new finishes such as paint and floor coverings may not trigger expensive abatement and remediation actions. If a building is planned for renovation, the extent and scope of renovation determines which hazardous materials must be abated, removed, stabilized, or even left in place." "Building demolition would trigger the most costly hazardous	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			materials abatement program. Generally speaking, all hazardous materials must be removed in order to demolish a building."	
David Brigode	Monday, September 26, 2022	C123-1	I have done a preliminary examination of the draft Specific Plan prepared and just released by the County for the Sonoma Developmental Center SOME POINTS OF REVIEW –Of the approximately 1100 housing units proposed, only 283, at most, will be affordable to households at an AMI of 80% or less. • At the presumptive density of 20 units per acre, that means only 14 acres out of 180 acres in the core area are dedicated to affordable housing • The Plan falsely claims that housing for the "Missing Middle" is for households at 120-160% of AMI. Nobody uses that range – the Missing Middle is usually defined as 80-120% of AMI • 75% of the housing proposed is essentially market rate, with unrestricted sale and resale prices. No residency requirements. These units are designed for absentee investors and second homeowners. • The bulk of all housing is to be on the East side of Arnold – however, it is forbidden for that to start construction until the non-residential West side is well underway • There is no discussion of ADU's as an affordable housing resource. • Entire portions of buildable land within the core 180 acres are set aside for "Open Space", even though the SDC is surrounded by thousands of acres of open space. • The Specific Plan and EIR is vague on the "Arnold to Highway 12" connector, which is essential for a project of this scope.	The comment is noted. Please see MR-3 and MR-7 for more detail regarding the level of detail in the Highway 12 connection.

Commenter	Date	Letter	Comment	Response
David Brigode	Monday, September 26, 2022	C123-2	Continued reference is made to the need for "financial sustainability" as the reason for so much market rate housing. Yet we have seen no financial projections justifying that. NOTE: I continue to maintain that the denial of affordable housing, and the preponderance of market rate housing, is being driven by the need to pay for the infrastructure for the non-residential component of the SDC Specific Plan, including the 120 unit hotel (which nobody wants); and the proposed "conference center", which is completely undefined as to size and scope, and is the pet project of an environmentalist lobby which has been so influential over this process from behind the scenes going back a decade.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
David Brigode	Monday, September 26, 2022	C123-3	see violations of State and Federal Law in this proposed Specific Plan, leading to prolonged litigation to either modify the affordable housing componenet or deny the entire flawed Specific Plan: 1) Failure to comply with the State guidelines implementing the SDC conversion which mandate a meaningful emphasis on affordable housing; (SB 82 Government Code 14670.10.5/Governor's Executive Order N-06-19) 2) A clear failure to Affirmatively Advance Fair Housing (a HUD federal requirement) by targeting higher income, predominantly non-minority households leading to increased racial, ethnic and family status exclusion. 3) The obvious failure to implement Sonoma County RHNA allocations for affordable housing in a sincere and meaningful manner to address Sonoma County's worsening housing crisis. In my opinion, the plan is designed to create a "cash cow" for the yet unspecified private, for-profit developer. This is not the plan the public wants, yet it just keeps moving ahead in disregard of public opinion.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
David Eichar	Friday, September 23, 2022	C124-1	More comments on the Draft EIR and SDC Specific Plan. The DEIR overstates the GHG and VMT. This is partially due to the assumption at least 50%of the housing units will be for the "missing middle." As shown below, most teachers and firefighters will not be able to afford the "missing middle" housing units. As a result, these housing units will go to higher income families. Studies have shown that higher income families drive more and take public transportation less. From the SDC Specific Plan: "Missing Middle Income households make between 121 percent and 160 percent of Sonoma County AMI, - too much to qualify for Affordable Housing , but not enough to buy a median priced home. Missing middle housing will make up 50 percent of the total market rate housing at the site. These homes will be accessible for Sonoma County's middle income workforce, such as teachers and firefighters, to help keep these professionals from being priced out of Sonoma Valley"	It is assumed that the commenter intended to use the word "understates" instead of "overstates." The commenter is correct that the affordability level of residential units has an effect on VMT, with mid- to lower-income housing generating less VMT per capita than housing occpuied by those with higher income. It is important to distinguish, however, that such income-based adjustments are not performed by the SCTM19 travel demand model when producing VMT outputs. The SCMT19 VMT outputs were directly applied in the DEIR transportation analysis and do not include income adjustments. When assessing project-level VMT impacts for a proposed development, it is typically appropriate to post-process VMT outputs to account for affordability levels using published methodologies and research. Because the proposed Specific Plan is a programmatic document and project-level details are unknown at this time, these forms of affordability adjustments were conservatively not applied. Income is not a factor for GHG emissions for CEQA. It could be indirectly tied based on housing types, which are regulated under the SP. CalEEMod/CAPCOA has generation rates tied to the land uses, which each have a certain level of development that is used to calculate operational emissions. Therefore, income level does not have a bearing on the GHG emissions analysis.

Commenter	Date	Letter	Comment	Response
David Eichar	Friday, September 23, 2022	C124-2	salary would be $58,557 and the highest base pay would be $103,959." https://www.sonomanews.com/article/news/95-of-teachers-authorize-strike-due-to-budgetimpasse/ "The average Firefighter/EMT II salary in Sonoma, CA is $69,590 as of August 29, 2022, but the range typically falls between $64,560 and $87,550." https://www.salary.com/research/salary/alternate/firefighter-emt-ii-salary/sonoma-ca As you can see, only single teachers making the maximum salary, which very few do will be in the 121%-160% AMI. Teachers and firefighters salaries are below 120% AMI. Therefore, teachers and firefighters would not be able to afford the "missing middle" housing, thus needing deed restricted Affordable Housing; otherwise GHG and VMT will be greater. This means much more than the 25% of units need to be deed restricted Affordable Housing. This should be 100% Affordable Housing.	The comment is noted. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Deb McElroy Pool	Sunday, September 18, 2022	C125-1	Instead, please direct Permit Sonoma to support the Historic Preservation Alternative as “it is the most environmentally sound” and reflects largely what the public, NVMAC, Springs MAC, and Sonoma Land Trust has repletely imputed as an alternative to Permit Sonoma. Specifically, please direct Permit Sonoma to take these steps: 1. Reduce the size of development to 450 or fewer homes and require that the majority of them be affordable for the people who already actually live and work in Sonoma Valley and for people with disabilities. Eliminate the hotel, and do not duplicate retail and commercial space that is already provided in Glen Ellen. Keep in mind, this is a rural community. 2. Riparian areas are crucial when it comes to Open Space. Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed. 3. Protect Open Space by providing enforceable timeline,	The comment is noted. Please see MR-8 for an explanation of why the historic preservation alternative does not meet the project objectives.

Commenter	Date	Letter	Comment	Response
			boundaries and actions for permanently preserving open space and keeping it in public hands.	
Deb McElroy Pool	Sunday, September 18, 2022	C125-2	In the DEIR, analyze the impacts of and add enforceable measures to reduce impacts of proposed new uses in the open space including but not limited to agriculture, agricultural processing, tasting rooms, farm stands, recreation, parking lots, geothermal development and sports facilities. 4. Wildfire: Revise wildfire evacuation impacts to reflect actual experiences which occurred during recent wildfires using new county wildfire risk and hazard maps. Adding 11/2 minutes to the timeline of evacuation is meaningless! 5. Climate Crisis: Think 30X30 Initiative, which California embraces. Given the County's Climate Crisis Resolution and commitments to reduce climate changing emissions (GHGS) from driving and other sources, revise the Specific Plan and DEIR with legally enforceable measures to reduce climate emissions, such as building fewer homes, reusing and demolishing fewer buildings, providing transit and permanently securing the maximum amount of Open Space. 6. The DEIR falls short of CEQA requirements. The DEIR is	The comment is noted. Please see MR-4 for more explanation of wildfire evacuation, MR-8 on why fewer homes will not accomplish the project objectives, and MR-3 for an explanation of the legal requirements for a programmatic EIR, and how later phases of the project will be required to complete additional CEQA analysis.

Commenter	Date	Letter	Comment	Response
			inadequate and the so-called selfmitigated Specific Plan contains many weak general policies, goals and conditions of approval, to address the environmental impacts.	
Deb McElroy Pool	Sunday, September 18, 2022	C125-3	The DEIR does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by few actual requirements and many vague words such as “should” or “could occur” “may result” or “if feasible.” The DEIR needs to be revised and the Conditions of Approval strengthened and moved into a legally enforceable Mitigation and Monitoring Program. There is still so much work to do with the Specific Plan and the DEIR. I support Commissioner Carr’s request (Planning Commissioners Meeting 9/15/22) for additional time to get this right. He repeatedly stated that in order for the Planning Commission to do their job with integrity, they would need addition time to go page by page. This was even at the expense of more frequent meetings to accomplish the task, getting it to the Board of Supervisors as soon as is possible. There is a willingness to do the hard work, we	The comment is noted. Please see MR-2 for a response regarding the project timeline, and MR-3 for a response regarding the level of detail included in a programmatic Draft EIR.

			just need the courage to take the bold steps, and do the right thing for the future.	
Deborah C. Nitasaka	9/26/22	C126-1	We have been asked to select from the three options laid out in the SDC Alternatives Report released just a few weeks ago (November 1, 2021). Each offering little realistically plausible beyond an audacious open door for upscale developers to bring in projects bound to fail if past is prologue (i.e., Rohnert Park's Sonoma Mountain Village]aka Hewlett-Packard] and Petaluma's telecom boom (and bust). Beyond some open space promises (with little detail), the rest in no way addresses the very real and urgent needs of Sonoma County residents. More tourist-serving accommodations? This valley has been decimated by the county's cash-cow (Transient Occupancy Tax), converting units built for, zoned for, subsidized for, intended for - residents to live in - now operating as disruptive commercial enterprises in residential neighborhoods. The costs to our communities are innumerable. It is clear we have been sold out by our civic leaders. Any further moves toward "tourist-trapping" our community will not go down well. Forget the hotel! Give us back our housing stock!	Thank you for the letter. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	9/26/22	C126-2	Industrial parks? For which segment of our undereducated population? According to The Sonoma County Workforce Investment Board's draft Local Workforce Development Plan 2021 – 2024: Over the next five years, the following are the top five occupations that will be in-demand for Sonoma County: 1. Office and Administrative Support 2. Sales 3. Food Preparation and Serving 4. Transportations and Material Moving 5. Management Unless Sonoma County changes course, opting for a more enriching, visionary future, these will be the jobs of tomorrow. I see no reason to settle, to offer so little to our children, to our community. My vision is one calling for opportunity, advancement, growth, fulfillment in work and play.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Deborah C. Nitasaka	9/26/22	C126-3	The people of Sonoma County have been told there must be a plan covering how anything we ask for will be paid for. Curiously, I see no such level of detail in this consultant's report. Why the dichotomy? Maybe it's time to get real, to try a bit more transparency, to actually explore feasible options that will bring to the county what residents so urgently need, with top of the list being decent affordable housing for agricultural workers, students, developmentally disabled, the unhoused, and others most sorely in need. This housing might well be thought of as that needed to replace the hundreds of homes lost to the vacation rental industry as well as to the fires of 2017 - 2020. Sonoma County may not have fulfilled its promise of a community-driven process, but the people of Glen Ellen and beyond are stepping up on their own. For my part, I am pushing past what some say is the line of possible to envision the day students live, learn, and work on SDC's campus. Imagine SDC as a place flourishing with innovation, preserving history, expanding its role to enrich the surrounding community with lifelong learning opportunities, special needs housing and education, visiting professor lecture series, and all while graduating people prepared with the skills essential for fulfilling, well-paying careers, ably set to meet and exceed the demands of today and the future.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	9/26/22	C126-4	I am in full agreement with the thoughts and recommendations sent to you by the Sonoma Land Trust concerning the need to preserve the wildlife corridor. Therefore, the remainder of my comments will pertain to the built portion of the campus. To start, I have to say that the prospect of jamming together thousands of homes in the southern end of SDC is appalling. How does such a banal idea enrich the quality of life for Sonoma County residents? As a housing advocate clocking in more than 30 years, I endorse incorporating housing into SDC's future, especially special needs housing. To do so well will require far more thought than we see here. Questions remain as to how many homes can safely be added to the this part of the valley, how the units would be protected from further loss to Sonoma County's Vacation Rental Conversion Program or to any other misuse. As well, I need to see much more detail regarding the intended population. As others have said (and I concur), "The alternatives do not provide for adequate emergency egress in the event of wildfire, are not compatible with the rural character of the surrounding communities within the Sonoma Valley, and do not realistically address impacts on infrastructure, such as water recharge, inadequate roadways, sewage system capacity, etc."	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Deborah C. Nitasaka	9/26/22	C126-5	Too often Sonoma County officials have ignored what is needed for what is easiest, furthering the human toll. I've seen it all. The matter of public safety became alarmingly clear as a planning oversight when we learned, through the series of meetings held within a single week earlier this month (11/13/21, 11/16/21, 11/17/21), that the consultants did not meet with CalTrans when developing their traffic outline, yet calculated traffic flow by comparing apples and oranges. Able-bodied drivers (2,000-4,000 new local residents, those traveling into Glen Ellen for work, tourists, and others are likely not comparable to developmentally disabled people who have never driven. Their traffic pattern predictions would be laughable if they weren't also potentially deadly (as we have seen when residents attempting to escape the Paradise fire and who were incinerated while desperately fighting to escape the flames). A related shock, we also learned the consultants never met with local fire agencies. Simply appalling comes nowhere close to my outrage that Sonoma County is, once more, cashing in at the expense, at an ultimate cost of the very lives of the people who live and work here.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	9/26/22	C126-6	Yes, the pressures for change have arrived. Sonoma County's needs are: • Development (commercial: housing imbalance) - We need to plan for a rebalancing; • Poverty escalation due to promotion of industrial sectors paying less than living wages (hospitality, tourism, and agriculture) must be addressed by accepting nothing less than living wage jobs. We need to prepare our young people for a brighter future; • Economic collapse following the housing bust; • Brain drain: SDS closure, the relocation of well-paying industries (telecommunications, Hewlett-Packard, etc.; • An insatiable hunger for revenue derived from new sources such as recreational drug production and sales, vacation rental conversion of thousands of Sonoma County homes; • A growing homeless population; • Escalating real estate prices - pricing most local residents out of the market; • Housing codes prejudicing construction of large homes over more modest sized units; • The impact of a collapsing infrastructure (fires, contaminated drinking water, unkept electrical systems); • The decline of our professional and degreed populace; • Climate change; • Questionable practices at the county level (planning, code enforcement, zoning, emergency services); • Student housing shortage: Santa Rosa Junior College opted to use bond revenue for the construction of an elaborate parking structure instead of desperately needed student housing - resulting in thousands of students now sleeping in their cars (some in that very parking structure [PD article about JC students living in their cars]); • Low to middle income and special needs housing loss due to VACATION RENTAL industry & lack of building; • Shortage of skilled tradespersons: Sonoma County lacks cutting-edge jobs training for a sorely-needed workforce - one able to meet national trades workforce shortage.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	9/26/22	C126-7	What is the best possible use for SDC as one answer to the issues listed above? Let's start with the dilapidated SDC structures. Their condition is undoubtedly the result of the state's neglect. Therefore, it is incumbent upon Sonoma County to insist that the state acknowledge it is theirs to repair. Not only must the restoration be paid for by the state, we have recently learned that California has a revenue surplus to cover those costs. And those resources have attached to them some stringent guidelines as to how the reported surplus can be spent. Lucky for us infrastructure and colleges are among the options: "California is — once again — overflowing with money, and will likely have a $31 billion budget surplus next year, according to a Wednesday report from the independent Legislative Analyst's Office. And because the state is forbidden from spending more tax dollars per Californian than it did in 1978, once adjusted for inflation, it only has a few options for handling most of the cash windfall: slashing taxes; issuing tax rebates; funneling it to schools and community colleges; or earmarking it for certain purposes, such as infrastructure." (Hoeven, 11/18/21)	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	9/26/22	C126-8	As indicated above, Sonoma County's workforce predictions are not encouraging. They mirror a sad national trend wherein opting out of college are also coming up short on the skills needed to succeed in the workplace: Two-thirds of Americans over 25 don't have a bachelor's degree or higher. A Harvard study uncovers inconsistent efforts to give these workers skills for economic mobility and calls for improving the problem. Academic work on training programs has been somewhat static, says Rachel Lipson, director of the Harvard Project on Workforce. A paper from 30 years ago might not look much different from one published today. "There's been a lot of attention on K-12 quality and college access and completion, but a lot less on the types of educational and training pathways that sit in between high school and four-year college," she says. These pathways are critical to the future of economic mobility, and the Project on Workforce hopes to raise the research community's interest in them. "The plurality of the U.S. labor force does not have a four-year college degree," says Lipson. "We can't throw up our hands and say four-year colleges are the only answer." (Smith, 2021)	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Deborah C. Nitasaka	9/26/22	C126-9	Having outlined the need and some substantial financial avenues, I will now outline how to put SDC to work for the betterment of the people of Sonoma County. Instead of continuing to produce cooks and tourism graduates, we need to give our kids a better future, one promising living wage opportunities, not a serf's subsistence; one grounded in an understanding of California's history as essential to knowing how best to go forward! Some Educational & Housing Models As Best Fits For The SDC Campus: ▪ High Tech "Trade Tech College" - ▪ Satellite Junior College Campus: Vocational Tech! ▪ Berea College: I have learned that Berea is interested in expanding to develop this unique college model in every state: Every student attends tuition-free! Every student works on campus, putting to work the lessons learned in the classroom. Majors include education, agriculture, the trades, the arts, and much more. ▪ The University of Oregon, Phil and Penny Knight Campus for Accelerating Scientific Impact: a 160,000-square-foot campus built to accelerate groundbreaking scientific discovery and development in a collaborative multidisciplinary environment <https://inhabitat.com/leed-goldtargeted-knight-campus-advances-scientific-innovation/> ▪ Career Technical Education, (Sonoma County) also referred to as CTE, is a multi-year sequence of courses that integrates core academic knowledge with technical and occupational knowledge to provide students with a pathway to post-secondary education and careers. CTE programs deliver an enriched educational experience that promotes student interest and academic success while developing technical and career readiness skills necessary for the workplace of the future. Graduates of today's rigorous and relevant CTE programs are better prepared for high-wage, high-skill and high demand careers. ▪ "State-supported technical college" - Clark Howard 9/13/18 show ▪ "Upskilling For Today & Tomorrow" - The Hill Event: Streamed	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Dianne Brinson	Sunday, September 25, 2022	C127-1	AESTHETICS (Light and Glare) Development at the level provided for in the Specific Plan — up to 1000 residences, a hotel, a conference center, employment centers — will create an urban village in a semi-rural area (Glen Elle, Eldridge). The development would create a new source of substantial light which would adversely affect both nighttime views and wildlife movement. At night, a considerable amount of street lighting will be required for the safety of the residents, hotel guests, and employees leaving their workplaces after dark. Light will be spilling out of residence windows, hotel rooms, the conference center— and, in the winter, workplaces. The DEIR says that thick vegetation and compliance with dark-sky requirements will buffer wildlife from exposure to human activities. I don't think so. Are the building going to be single-story? No. How can thickly-planted trees and shrubs block light from second-story (or higher) windows? Newly-planted vegetation is unlikely to be tall enough to block even first-floor window light. Who will decide if the vegetation is sufficiently thick — the developer? Policies 5-32, 5-39, and 5-43 are vague, making meaningful enforcement— to protect views and wildlife — unlikely. I often walk in Oakmont as dawn is breaking. There is considerable light spillage from windows of early-rising residents. Take a walk through a developed neighborhood early some morning to see what light spillage from home windows looks like.	The comment is noted. As described under Impact 3.1-4 on page 106 of the DEIR, the DEIR analyzes impacts on light and glare and outlines policies that would mitigate these impacts. With adherence to existing and proposed policies and County Code and General Plan standards, development under the Proposed Plan would not substantially increase the amount of nighttime lighting or glare in the already previously developed Core Campus or surrounding open space areas. Development would be substantially similar to existing buildings and development on campus, but with the addition of new "dark sky" protections, not previously instituted at the SDC site, as required under Policy 2-11 of the Public Review Draft Specific Plan. Impacts associated with light and glare would be less than significant.
Dianne Brinson	Sunday, September 25, 2022	C127-2	BIOLOGICAL RESOURCES The DEIR states that the wildlife corridor is 3/4 of a mile wide. Where's the support for that statement? If the wildlife corridor is wider than that, then the statement that the "southern edge SLIGHLTLY (emphasis added) infringes into the northern portion of the Core Campus" is incorrect. All planned buildings and lighting could be closer to the wildlife corridor. The conclusion that no mitigation is required (Impact 3.4-4 on 254) needs another look, once the width of the wildlife corridor is established.	The comment is noted. Development must be located within the boundaries of the development footprint, as shown in Figure 4.1-2 of the Public Review Draft Specific Plan, ensuring the wildlife corridor is protected and expanded.

Commenter	Date	Letter	Comment	Response
Dianne Brinson	Sunday, September 25, 2022	C127-3	WILDFIRE EVACUATION The DEIR considers two potential fire scenarios — fire from the NE, fire from the SE. What if a fire comes from the north or northwest (Sugarloaf, Hood Mountain, Calistoga) — as the 2020 Glass Fire did? If the fire comes from the north or northwest, vehicles of 5000 Oakmonters will be added to the flow of vehicles fleeing the area. Evacuation times will be slower if Oakmonters are added. When I evacuated from Oakmont in September of 2020, I was only allowed to go toward Kenwood. It took me a while to get out of Oakmont, but once I reached 12, I made my way smoothly to Madrone Road to Arnold Drive and south to a San Francisco hotel. However, if the vehicles of 2400 residents and 120-plus hotel guests from the SDC area had needed to evacuate, they would have gotten there before me and choked the route.	The comment is noted. Please see MR-4 for more information about wildfire evacuation analysis.
Dianne Brinson	Sunday, September 25, 2022	C127-4	ALTERNATIVES (Choice of) All of the Alternatives that were considered provide for at least 750 housing units. The DEIR concludes that dropping the number of housing units from 1000 to 750 would mean a less economically viable project because of the high level of infrastructure and other costs involved. Those costs include cleaning up asbestos, lead, and pesticides left behind by the State of California. The assumption, I assume, is that the developer will have huge expenses to clean up the property and so must be allowed to build a huge number of housing units in order to recover those costs and make a profit. The State should be putting money in for clean-up. Otherwise, existing residents of this area (not just Glen Ellen and Eldridge, but Oakmont/Rincon Valley/Bennett Valley) are going to suffer from increased traffic, increased lighting, and slower fire evacuations so that the cleanup costs can be absorbed by the developer. Could we look at a combination of low density (400 units) plus a public/institutional use such as a climate research center?	The comment is noted. Per State CEQA Guidelines Section 15126.6(a), (c) & (f), the Lead Agency is not obligated to select the Environmentally Superior Alternative for implementation if it would not accomplish the basic project objectives and/or is infeasible. State law stipulates that the SDC Specific Plan prioritize financial feasibility at the site per Government Code Section 14670.10.5.

Commenter	Date	Letter	Comment	Response
Douglas A McKinley	Monday, September 26, 2022	C128-1	1) Traffic on Arnold Drive is already insufferable. The additional thousands and thousands of daily vehicles will increase traffic jams especially at known choke points getting in and out of Sonoma heading to the Bay Area or Petaluma. QUESTION: Will funding for this project include improvements to these locations that already back up and the additional traffic will warrant a stoplight. Arnold and Carneros Hwy (121). Stage Gulch Road (116) and Old Adobe Road - When returning for the Bay Area you often get routed this way. 2) Electricity -We are already told to conserve electricity and have impending rolling power outages. QUESTION: Where is the additional electricity coming from? 3) Water - We are already told to conserve water and droughts are getting worse. QUESTION: Where is the additional water coming from?	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
William Bucklin		C129-1	I am the owner of Old Hill Ranch. Our property shares approximately a half mile border with the Sonoma Developmental Center property from Butler Creek to Trestle Glen Drive. You have already received my comments dated 4/7/2022 regarding the "3 alternatives." In my comments I expressed my concern regarding the proposed road between the Proposed Development and Hwy 12. The Proposed Plan acknowledges that the connection to Highway 12 as a "known controversy." While it is true, as stated, that some community members felt that the proposed connection would improve traffic conditions and wildfire evacuations, my experience of the many meetings I attended was most community members stated that the road was not essential and that it would be detrimental to wildlife habitat and the wildlife corridor.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
William Bucklin		C129-2	Furthermore, the Draft EIR states no mitigation is required because "Implementation of the Proposed Plan would not have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service" And furthermore, the Draft EIR indicates that potential special	The comment is noted. Please see MR-7 for a discussion of further environmental review that would be required before construction of a Highway 12 connector road.

Commenter	Date	Letter	Comment	Response
			status wildlife are, among others, the Golden Eagle considered to be a state species of special concern and protected by the Bald and Golden Eagle Act.	
William Bucklin		C129-3	And Furthermore table 3.4-2 states that "The species has not been documented in or immediately near the Planning Area." I would like to draw attention to my letter sent to Brian.Oh@sonoma-county.org on 4/7/22 that stated I had recently seen a pair of Golden Eagles on the SDC property along the proposed road. Furthermore, I direct you to my Instagram account @willbuckzin to a post that is dated November 6th 2021 with 4 photos clearly identifying these majestic birds. Over the next two months I witnessed them on at least 6 different occasions, two of which they were situated in the trees along the proposed road. My question is, if the Eagles were hunting along the proposed access road, doesn't that suggest that the proposed road would have a potentially adverse effect on this special status species?	The comment is noted. Thank you for your comment. The list of documented special-status species and assessment of potential for special-status species to occur (Table 3.4-2 and Table 3.4-3) has been amended to include Sonoma Ecology Center provided observations for special status species. Some of the comment's designations of individual species do not meet the criteria to be considered "special status" under CEQA. However, these species will all benefit from the above-mentioned policies and would not be significantly adversely affected by future projects. The Specific Plan places a high priority on biodiversity preservation, preservation of wildlife corridors and protection of special-status species (Vision Statement; existing County, State and Federal policies; please refer to Specific Plan Goals 2-D, 2-E; Specific Plan Policies 2-6 through 2-30). Though the comment does identify some special-status species that were not identified as observed in the DEIR, all potential significant impacts to these species would be mitigated to a less than significant level with the implementation of existing Local, State and Federal policies and the specific and general policies in the DEIR. Please also see MR-7 for a discussion of further environmental review that would be

Commenter	Date	Letter	Comment	Response
				required before construction of a Highway 12 connector road.
William Bucklin		C129-4	Another area of concern regarding the proposed road as it relates to Biological Resources. 3.4-1 of the Draft EIR states no mitigation is required because "Implementation of the Proposed Plan would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites." This statement is false and I would you to address my concerns. Can you please help me understand why no mitigation would be necessary in the event the proposed road was built across Butler Creek? For example, just last month on September 9th I was contacted by Jacob Harvey who works for the Audubon Canyon Ranch and "Living with Lions." P13, a collared lion that they monitor had been prowling our ranch. (See detailed map enclosed.) The lion had traversed through the SDC campus, across the proposed Hwy 12 access road onto our ranch to take a deer. The map of P13's movements are attached.	The comment is noted. Please see MR-7 for a discussion of further environmental review that would be required before construction of a Highway 12 connector road.
William Bucklin		C129-5	Furthermore, in 2019, for over a year, the Audubon Canyon Ranch hosted a wild life camera on Butler Creek, approximately 10 feet from the Developmental Center property. The quantity and scope of wildlife photographed was remarkable with Mt Lions, Bobcats, Racoons, skunks and squirrels being plentiful. I personally know of a Coyote who has raised her litter besides Butler Creek every year since I can remember. I have seen Western Pond Turtles on our access road traversing into SDC property. There are numerous Horned and Barn Owls. I have heard Spotted owls there too. A direct connection between the Proposed Development and Hwy	The comment is noted. Please see MR-7 for a discussion of further environmental review that would be required before construction of a Highway 12 connector road.

Commenter	Date	Letter	Comment	Response
			12 will scare, kill, and maim wildlife and would interfere substantially with the movement of native resident species.	
Elisa Stancil Levine	26-Sep-22	C130-1	Hello, my public comments in the past two rounds have not been addressed. I had high hopes the EIR would require direct samples and studies of the buildings on site, whether for adaptive re-use or demolition. Let me make this clear, I do not trust your analysis because you have done no studies on the actual buildings and report the condition of various buildings incorrectly. How can you say there will be LESS THAN SIGNIFICANT hazard when you do not know what the hazards are? See the copy below from text* following Figure 3.8-2, below. There is no mention of mercury, asbestos, cadmium, or other prevalent building materials used in construction prior to 1979. Remediation and encapsulation options for adaptive reuse are not reviewed herein at all. As a professional in historic restoration I find this report suspect and tailored to drive conclusions to a predetermined outcome, an outcome that is fraudulently substantiated. Here is my public comment: TEST THE BUILDINGS AND THE INFRASTRUCTURE throughout the footprint for building materials and conditions that affect the adaptive re-use and the demolition that would ultimately transform the site. Make the testing plan and the findings known to the public ASAP. Respond as promised. There are no actual studies done and all the conclusions about hazards on the site are unsubstantiated.	The comment is noted. As noted on page 261 of the DEIR, the Hazards and Hazardous Materials Impact Analysis considers the nature of foreseeable hazardous materials use, storage and disposal resulting from the redevelopment of the Sonoma Developmental Center. It also identifies ways that hazardous materials could be exposed to the environment or individuals. The analysis includes a qualitative evaluation of impacts associated with the presence or hazardous materials. The analysis is based on a review of materials ranging from online databases such as Envirostar and Geotracker, hazard maps, Phase I & II Site Assessments (see Appendix G), and relevant plans and regulations at the Federal, State, and local levels. Therefore, upon implementation of the Specific Plan and regular operations of the site, compliance with the regulations for hauling hazardous substances would continue to reduce the potential of an accidental release of hazardous materials (Impact 3.8-1) to a less than significant level. Further, Standard Condition of Approval HAZ-3 would require implementation of Best Management Practices to reduce exposure of workers to contaminated

Commenter	Date	Letter	Comment	Response
				materials during construction, icluding a soil management plan and a health and safety plan. Compliance with the Standard Conditions of Approval Measure HAZ-3 and existing regulations would reduce impacts related to the release of hazardous materials due to foreseeable upset or accident conditions to less than significant. Therea are no schools located or are proposed to be located within one-quarter mile of the Planning Area. Thus, implementation of the Proposed Plan would have no impact regarding hazard emissions or materials in within one-quarter mile of an existing or proposed school. Regarding Impact 3.8-4, implementation of HAZ-3 prior to construction would reduce the potential risks associated with releases of contaminated media as a result of Proposed Plan to a less-than-significant level.
Elizabeth Crabtree	Sept. 22, 2022	C131-1	My husband and I live about two miles south of the SDC site, on a lane off Arnold Drive. As survivors of the Oakland Hills fire in 1991 and the Nuns fire in 2017, we have intimate knowledge of how unpredictable and destructive fast-moving wildfires can be. Thus, we are deeply concerned about the proposal of the SDC Specific Plan that will put 2,500+ new vehicles on a two-lane country road that is already inadequate for traffic at peak hours, and the DEIR's conclusion that this will have no significant impact on fire evacuation plans. When trying to determine accurate traffic data, it is common practice to commission a comprehensive study of traffic patterns. DEIR Appendix F, Traffic Model Data, raises far more questions than it answers. How was that information gathered? Was a study conducted that counted vehicles on multiple days at peak hours to establish an accurate baseline upon which to build projections for evacuation time in the event of a fast-moving wildfire? When was this study done? The data included in Appendix F as presented is virtually meaningless.	Thank you for the letter. Your comment is noted. Please see MR-4 for an explanation of the methodology in developing the wildfire evacuation scenarios and analysis.

Commenter	Date	Letter	Comment	Response
Elizabeth Crabtree	Sept. 22, 2022	C131-2	Between Madrone and Petaluma streets, Arnold Drive is lined with over 20 non-through roads, many of which connect to other non-through roads, whose only access out is Arnold Drive. This includes the relatively densely populated Grove, Sobre Vista, Carriger and Morningside Mountain/Vigilante roads, along with multiple smaller roads and lanes. How was the existing population accounted for when the DEIR assessed the proposed time it would take to evacuate in a wildfire emergency? When determining proposed evacuation times (DEIR, Table 3.16-1, p. 517), were people fleeing wildfire in the Mayacamas on the east side of Sonoma, for whom Arnold Drive would likely be the only escape route, considered? Answering each of these questions with the best information possible is essential to determining accurate evacuation data.	Your comment is noted. Please see MR-4 for an explanation of the methodology in developing the wildfire evacuation scenarios and analysis.
Elizabeth Crabtree	Sept. 22, 2022	C131-3	Further, the SDC DEIR envisions a plan that, in the event of approaching wildfire, encourages residents "to shelter in place." (DEIR, p. 511). I urge you to view the 2019 documentary film "Fire in Paradise" (Netflix) that clearly shows the human cost of minimizing wildfire danger in favor of development. During the 2018 catastrophic Camp Fire in Paradise, CA dozens of residents were forced to shelter in place as a last resort or risk dying in their cars trying to flee on a two-lane road engulfed in fire. They huddled for hours on a concrete pad as propane tanks exploded around them. They survived, but the trauma they experienced will likely stay with them forever. To propose "sheltering in place" as a reasonable option, rather than a last-chance way to survive catastrophic wildfire, is highly irresponsible.	Your comment is noted. Please see MR-4 for an explanation of the methodology in developing the wildfire evacuation scenarios and analysis.
Elizabeth Crabtree	Sept. 22, 2022	C131-4	Regarding the day-to-day impact of adding 2500+ cars to traffic on Arnold Drive, the Specific Plan notes a goal to "Ensure that new development takes into consideration resultant traffic and levels of transportation activity from when SDC was operational." The SDC was operational throughout the 20th and into the 21st century. Which period when the SDC was operational does the Specific Plan refer to? And where will that data come from? As SDC residents didn't use Arnold Drive, it can be assumed it means the employees of the SDC. It was a 24-hour facility; any data used should reflect that, as well as take into consideration that Arnold Drive—especially south of the SDC—is far busier now than it was when the SDC was at peak operation. I drive Arnold Drive every day, and at peak hours, traffic between the rotary and Petaluma Street is sometimes bumper-to-bumper.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Elizabeth Crabtree	Sept. 22, 2022	C131-5	In the Aug.24 meeting, Mr. Oh noted that he envisioned the SDC proposed development as a vibrant activity hub for locals and visitors alike, akin to, in his words, "Sonoma Square." There is a key difference: the town of Sonoma, with its approximately 12,000 residents, is a community spread across thousands of acres with a complex grid of roads and streets. There are seven through streets that intersect Sonoma Square, including four-lane Broadway. The SDC Specific Plan proposes to build a community with a population far larger than neighboring Glen Ellen, including a hotel and a significant amount of commercial space, on a single two-lane country road with a possible connector to another two-lane road. Arnold Drive cannot reasonably support traffic for the kind of community hub that the Specific Plan proposes. I understand that the proposed SDC Specific Plan will bring significant financial benefits to the County of Sonoma. However, to disregard the solicited input of the majority of local residents and community organizations about its visions and hopes for the site, when we will have to live with its day-to-day consequences, is extremely poor governance. Thank you, and I look forward to receiving your answers to the questions above.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Elizabeth Pastore	Sunday, September 25, 2022	C132-1	Hello, I have both attached my letter as a pdf and copied it into the body of the email. Attached images are the trackings of a mountain lion P-13 seen to have been all over the SDC as well as on our property, right where the proposed HWY 12 connector road would be. Also included is a photo taken by a wildlife camera on our property at Butler Creek.	Thank you for the letter. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Elizabeth Pastore	Sunday, September 25, 2022	C132-2	Thank you for reading my comments. My husband and I live on the land adjacent to the John Mesa soccer fields/Regional Park off of Trestle Glen. We are the 40-acre parcel (vineyard) between BR Cohn and the Regional Park. In other words, we are SDC's next-door neighbors, literally. While we are pro-housing, we have MANY concerns about this development's scope and size. While I have numerous concerns about water, fire, night sky pollution…I will focus primarily on the connector road between the SDC and Hwy 12, which as proposed in the figures in your plans, basically parallels our dirt driveway, appearing to be mere feet away from our property line and would forever disrupt a critical part of the wildlife corridor that folks don't seem to know about.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Elizabeth Pastore	Sunday, September 25, 2022	C132-3	I will begin with a positive comment. Point 1. Re: Page 11—"ES.3.2 Reduced Development Alternative" I am a big fan of the Reduced Development Alternative. I am pro-housing, but am more pro-wildlife, safety, and common sense. A population increase of 3000 individuals, a road bisecting an important wild-lands corridor, and many thousands of cars and visitors to this precious area is frightening and would alter not only the beauty of the land, but endanger the entire wildlife population. Nature must be part of our community, not separate from it. Both my husband and I had given input for the Hwy 12 connector road to be for emergency use only, and we continue to think this would be an excellent compromise given the importance of this land to the local wildlife, who would be displaced with cars. Even with bikes and pedestrians, they will still suffer. I support reduced development because it is more respectful of the wild-lands and wildlife.	The comment is noted. Please see MR-8 for an explanation of why the historic preservation alternative does not meet the project objectives.
Elizabeth Pastore	Sunday, September 25, 2022	C132-4	Point 2. The DEIC has no mitigation measures. Rather, you have "Goals" and "Policies." Please explain in detail, why and how this plan is "self-mitigating" and how the community can trust that SP (Specific Plan) will meet requirements for mitigation? Who is overseeing the process of your policies being met? What assurance is there that your "goals and policies" will be honored and met? My understanding is that CEQA requires specific mitigation measures for environmental impacts. You offer none.	The comment is noted. Please see MR-1 for an explanation of a self-mitigating plan.
Elizabeth Pastore	Sunday, September 25, 2022	C132-5	Point 3. On page 417 of the EIC, "Arnold Drive–South of Proposed Plan Area To the south of the Proposed Plan area between Harney Street and Madrone Road, daily volumes in 2021 were approximately 6,200 vehicles, as compared to approximately 7,100" …?? This section appears incomplete and I'd like to know what the rest of the paragraph says. It is incomplete. "7,100…??"	This comment is noted. The following edit has been made: DEIR p. 417: "To the south of the Proposed Plan area between Harney Street and Madrone Road, daily volumes in 2021 were approximately 6,200 vehicles, as compared to approximately 7,100 vehicles in 2019. Historical daily traffic volumes on this segment Arnold Drive reflect a peak of approximately 8,000 vehicles in 2014." This is a minor correction made to clarify and does not affect the findings of the DEIR.

Commenter	Date	Letter	Comment	Response
Elizabeth Pastore	Sunday, September 25, 2022	C132-6	Point 4. Re: Section "3.14.4.2 Methodology and Assumptions" "Land Use and Transportation Network Assumptions Consistent with Chapter 2: Project Description, the analysis presented in this section is based on an assumption that implementation of the Proposed Plan would result in 1,000 residential units with State and County density bonuses, including 435 single family units, 345 multifamily units, and 220 senior housing units. The Proposed Plan also includes 40,000 square feet of commercial/retail space, 190,000 square feet of office uses (likely including a mix of office, research and development, and other employment-based functions), 70,000 square feet of institutional uses (including work and meeting spaces including a conference center), a 120-room hotel, and 12.1 acres of recreational uses. In total, build out of the Proposed Plan is estimated to result in an added population of 2,400 persons and 940 jobs at buildout.ad" How many cars are you estimating will be on the roads? My estimate, conservatively, is 1 to 2 cars per household, 1 car for each job held, 1 car for each hotel guest room, plus at least 500-1000 more cars for guests, tourists, shoppers. Are you calculating traffic estimates and driving times for just the population or the workers too? Are we looking at over 4,000 more cars in this tiny area per day?	The comment is noted. Please see MR-6 for an explanation of methodology used in calculating traffic and VMT.
Elizabeth Pastore	Sunday, September 25, 2022	C132-7	Point 5. Please elaborate on the "Goals and Policies" section 3.14.4.3. Some of them seem overly optimistic: "no gaps in the sidewalk networks," "limit vehicle speeds," "work with Sonoma County Transit," "Fare-free bus rides," "Require development to reduce vehicle trips by 15%," but you have not included mitigation plans and have NO assurances that your "Goals" and "Policies" will succeed, let alone even be enacted. What if your "Goals" and "Policies" fail? Who is responsible?Why should we take your word that your "Goals" and "Policies" will even be considered and enacted by the developers? How does this suffice in an EIR? My understanding is that there must be stated mitigation measures to satisfy CEQA. Please explain and ensure to me that "goals and policies" are sufficient and mitigation is waived.	The comment is noted. Please see MR-9 for an explanation of how goals, policies, and the SDC Specific Plan Standard Conditions of Approval will be used and enforced by Sonoma County.

Commenter	Date	Letter	Comment	Response
Elizabeth Pastore	Sunday, September 25, 2022	C132-8	Point 6. "Proposed Hwy 12 Connection" Figures 3.14-3 and 3.14.4 And Policy 3.5 (page 437) "Reuse existing street network to the greatest extent feasible. Improve multi-modal access from the SDC to SR 12 by exploring the feasibility of providing an additional east-west emergency access connection from the site that includes high quality pedestrian and bicycle facilities" As diagramed in figures 3.14-3 and 4, the "proposed Hwy 12 connection" is situated within feet of our existing driveway as we live on the land immediately adjacent to the soccer fields of John Mesa Dr. We live on Trestle Glen. It appears that no one has actually walked this land (have you?) and observed the beautiful and important wildlife lands that exist there along with hilly terrain, a creek that the road would have to cross midway, and where our wildlife camera has just this past year snapped shots of mountain lions, bobcats, deer, fox, turkeys, really, every animal you could imagine being here. My husband photographed a pair of Golden Eagles this year on the SDC. This little corner of the property is an important and overlooked part of the wildlife corridor. A road here would utterly upend this precious corridor and change the land forever. My question to you is this, where will the animals go? How do you account for more pavement, cars, noise, pollution, speeding, and danger? There are already paved roads in this section, and the above "Policy 3.5" suggests "using existing street network to the greatest extent possible," yet you have a road going in a straight line parallel to our property line, ignoring the existing roads already present. If someone had actually walked this area, they would see it as an illogical place to construct a road, it's hilly and there is a creek it would have to cross. Has someone actually walked this site? I am formally inviting you to come. I'll state our suggestion again, if you must construct another road, use the existing roads already present, and please keep it a bike/pedestrian roadway only and only open it to cars for emergency usage..	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Elizabeth Pastore	Sunday, September 25, 2022	C132-9	Point 7: RE: page 580 “While the Planning Area currently has no residents, historically SDC was home to over 3,500 patients. With the Proposed Plan, the Planning Area would accommodate a total population of approximately 2,400 people.” I question the continued comparison of the population of patients at the SDC vs the expected population of the SP’s project, and I’d like you to explain to me why you think comparing the population of a group of patients who lived full-time in an institution with no interaction with the local community is equivalent to a population of people living in individual housing who all drive cars and will directly interact with our community at all times of the day and night. The SDC’s clients were stationary patients, not one of them owned or drove a car! They didn’t drive to the market, receive countless items from Amazon delivery trucks every day, take extra-long showers, buy plastic water bottles and litter them, or waste water washing their hair every day. The SDC was a fairly self-contained organization. Furthermore, most of the workers at the SDC worked in shifts that did not interfere with commute traffic/rush hours. I know this, because I have lived next door to the SDC since 2002! I also see discrepancies in the SP’s projection of the total population of residents, in some parts of the SP you say 3000 people and in others, such as above, you say 2400. Please explain that disparity. I could question 100 more items in the EIC but I’ll leave it there. Please listen to the community, and remember that our wildlife neighbors do not have a voice. They were here long before we were and it’s up to us to do right by them. I know we need more housing, but we must do everything possible to care for this sacred land and honor the foxes, big cats, and even the lowly skunks and lizards’ right to exist here.	The comment is noted. As described in pages 579-584 of the DEIR, the Proposed Plan is consistent with the overarching regional need for both market rate and affordable housing in the Sonoma Valley and throughout the Bay Area, as well as with historic residential and employment uses of the site: SDC has facilities that housed up to 3,700 clients, and SDC was one of the largest employers in the County and the largest in Sonoma Valley. While there is no direct perfect comparison for new residents at the SDC site, the numbers are provided to give contextual reference to the fact that the site has been previously developed and has served as a home to a substantial population of residents and employees previously. Ultimately, the DEIR's environmental impact analysis considers the existing conditions of the site.

Commenter	Date	Letter	Comment	Response
Greg Carr	Aug-22	C133-1	1. Please revise all determinations of "less than significant" to "significant and unavoidable" for impacts where the effectiveness of mitigation measures is uncertain. The following impact analyses include mitigation measures that either postpone analysis to future studies or contain "feasibility" qualifiers in their application. Since these measures cannot be relied upon to fully reduce these impacts, it is misleading to suggest that they do so. Aesthetics: 3.1-1, 3.1-2 Air Quality: 3.3-1, 3.3-2, 3.3-3 Biological Resources: 3.4-1, 3.4-2, 3.4-3 Cultural, Historic, and Tribal Cultural Resources: 3.5-1, 3.5-3 Energy and Greenhouse Gas Emissions: 3.6-1, 3.6-2, 3.6-3, 3.6-4 Geology, Soils, and Mineral Resources: 3.7-1 Hazards and Hazardous Materials: 3.8-2, 3.8-4 Hydrology an Water Quality: 3.9-1, 3.9-4 Noise: 3.11-1 Public Services and Recreation: 3.13-1, 3.13-3 Utilities and Service Systems: 3.15-1, 3.15-3 Wildfire: 3.16-1, 3.16-2	Thank you for the letter. The comment is noted. Please see MR-3 for an explantation of the level of analysis and programmatic nature of this Draft EIR.
Greg Carr	Aug-22	C133-2	2. In addition to the above changes, the EIR should identify changes in the Proposed Plan that would further mitigate the significance of impacts, including a lesser level of development, a fully fleshed out financial plan, and more firm and effective policies.	Thank you for the letter. The comment is noted. Please see MR-3 for an explantation of the level of analysis and programmatic nature of this Draft EIR.
Greg Carr	Aug-22	C133-3	A major omission in the Draft EIR is the lack of analysis of potential impacts of future uses of the Preserved Open Space Area. Since the project description includes agricultural and recreational uses, the impact analysis should identify the likely impacts, at least at a programmatic level of specificity. While the DEIR is correct in suggesting that these uses would be speculative in nature, the likely impacts are easily predictable and, like the analyses of development in the Core Campus, can be described with some accuracy. Please include these analyses, particularly in the discussions of Agriculture and Forestry Resources; Biological Resources; Cultural, Historical, and Tribal Cultural Resources; Energy and Greenhouse Gas Emissions; Geologic, Soil, and Mineral Resources; Hydrology and Water Quality; Noise; Public Services and Recreation; and Transportation. In addition, under Impact 3.4-1, the DEIR identifies Measure 2-12 limiting development in the wildlife corridor to limited trails/paths. Does this limitation apply to future agriculture use?...to future park use? Also, the Impact 3.13-2 analysis states that park and	The comment is noted. Please see revised policy 2-1: Ensure that land shown In Figure 2.2-1 as Preserved Open Space is dedicated or maintained as permanent public open space, and the Managed Landscape/Fire Buffer is designed and maintained for that purpose. The eventual owner/operator of the Preserved Open pace should prepare an open space plan in collaboration with the community, agencies, and organization to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs. As part of the open space plan development, consider demarcating or delineating wetlands if

Commenter	Date	Letter	Comment	Response
			recreation uses would be limited to urban and built-up lands. Please clarify the above and make corrections as needed.	helpful for habitat protection, and delineating a cohesive system of trails and pathways that balances recreation and wildlife conservation. Please also see new Policy 2-58: Ensure that any agricultural use in the open space is limited to the historic agricultural area on the east side of the preserved open space area, and is focused on community gardening, education, or integrated with farm-to-table needs of SDC residents and businesses. Do not permit large-scale commercial agricultural uses. As the commenter notes, per policy 2-12, development within the wildlife corridor and along creeks would be limited to trails; no agriculture or active recreation uses would be allowed in these areas.
Greg Carr	Aug-22	C133-4	The DEIR lacks a complete analysis of the consistency of the Proposed Plan with the County General Plan. First, the project description does not identify the proposed General Plan land use and zoning designations necessary to achieve consistency. Second, the DEIR lacks the analysis of General Plan objectives and policies that are applicable to the proposed plan, including the Circulation and Transit Element (Objectives CT-4.1, 4.2, and 4.3 and related policies), the Open Space and Resource Conservation Element (Objectives OSRC-7.1 and OSRC-8.1 and 8.2 and related policies), and the Land Use Element (Objective LU-3.1 and related policies as well as Policy LU-20ff). Third, the DEIR statement under Impact 3.10-2 that the Specific Plan is generally consistent with the General Plan is incorrect in as much as "some updates" are necessary. Finally, Impact 3.12-1 fails to analyze population and housing growth enabled by the proposed plan in relation to the County General Plan, incorrectly asserting consistency in light of Bay Area growth rather than planned growth in the local area, the Sonoma Valley, and the County. Please include the appropriate analyses and corrections in the EIR.	The comment is noted. Please see page 7-2 of the Specific Plan for an explanation of how the General Plan and Zoning Code will be updated for consistency with the Specific Plan. Additionally, impact 3.10-2 is less than significant because, as described on page 321 of the DEIR, the Proposed Plan is consistent with the General Plan's goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency.
Greg Carr	Aug-22	C133-5	5. In general, the analysis of alternatives lacks objective comparisons of the relative impacts and instead arbitrarily defends the proposed plan as superior. Please provide objective substantiated comparisons.	The comment is noted. Please see MR-8 for a further explanation of the analysis of the historic preservation alternative and why it does not meet project objectives.

Commenter	Date	Letter	Comment	Response
Greg Carr	Aug-22	C133-6	Section 2.5 of the Project Description (Project Buildout) provides for flexibility in the level and profile of development allowed in each of the proposed subareas/districts. This flexibility leads to greater uncertainty in the significance of the Plan's impacts. More certainty and more effective mitigation would result from capping future development (#units, square footage, etc) in each subarea/district in phases. These caps could be accompanied by a provision in the monitoring program requiring periodic reports at the predetermined phases. These reports would include important parameters such as traffic and service capacities prior to the next phase of development.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Greg Carr	Aug-22	C133-7	7. Please clarify the applicability of Public Resources Code 21080.7 and Govt Code 65457 with respect to processing of future housing and non-residential project applications. This discussion should distinguish between environmental review and review for policy compliance for different types of projects.	The comment is noted. Please see MR-9 for a discussion of how the County will administer and process project applications.
Greg Carr	Aug-22	C133-8	8. Several sections are unclear with respect to the Hwy 12 connector. Goal 3-B suggests that the proposed connector to Hwy 12 would reduce air quality impacts. If the collector is not included in the plan, would air quality impacts be significant and unavoidable…or is there substitute mitigation available to minimize these impacts? Similarly, would GHG emissions be more or less significant without the connector? Third, the focused traffic analysis states that traffic levels of service in Glen Ellen would be improved with the connector, but did not analyze the levels without the connector.	The comment is noted. Given the programmatic nature of this Draft EIR, not every combination of Plan components could be analyzed. Please see MR-3 for more information on the level of analysis included in a programmatic EIR, and MR-6 for more information about VMT analysis undertaken.
Greg Carr	Aug-22	C133-9	9. Table 3.6-2 estimates existing mobile energy consumption at 176,922 million BTUs per year. What is the source of this figure? Please provide the calculations.	The comment is noted. Energy consumption estimates were derived using CalEEMod, a statewide land use emissions model designed to provide a uniform platform to quantify potential air emissions. For further information, please see Appendix B: Air Quality and GHG Data of the Draft EIR.
Greg Carr	Aug-22	C133-10	10. As mentioned above, the DEIR does not address the Plan's consistency with level of service objectives in the General Plan Circulation and Transit Element. Nonetheless, the County commissioned a focused traffic study in order to establish future levels of service for area roadways and intersections. Notwithstanding the fact that LOS is not a CEQA impact, these results should be presented and discussed in the EIR and the	The comment is noted. Please see MR-6 for more detail regarding traffic and LOS analysis. Please also see Figure 3.2-1: Bicycle/Pedestrian System, which shows the proposed signalized interection at Arnold Drive and Harney.

Commenter	Date	Letter	Comment	Response
			recommended mitigation measures, such as a signal at Arnold and Harney, should be included.	
Greg Carr	Aug-22	C133-11	11. In the discussion of the impacts of the Reduced Development Alternative, the statement is made that State Law stipulates that the plan must ensure financial feasibility. This is not true. Please include the exact language from the legislation enabling the County to develop a specific plan for SDC.	The comment is noted. Per Government Code Section 14670.10.5, "The planning process shall facilitate the disposition of the property by amending the general plan of the county and any appropriate zoning ordinances, completing any environmental review, and ***addressing the economic feasibility of future development***. [Emphasis added.] (2) In carrying out the land use planning and disposition process pursuant to the agreement, the director and county shall provide for the expeditious planning of future land uses for the site and an opportunity for community input, with the intent to reduce uncertainty, increase land values, expedite marketing, and maximize interested third-party potential purchasers."
Greg Carr	Aug-22	C133-12	12. In spite of the fact that CEQA allows the option of addressing cumulative impacts based upon future development under the County General Plan, the fact that there are two major land use initiatives underway involving amendments to the General Plan suggest that this is not the best approach. The Draft Springs Specific Plan calls for significant additional growth in the SDC vicinity and the Draft Housing Sites Rezoning calls for establishing additional affordable housing sites in the valley. The Public Review Drafts and DEIRs for these two plans have been released and should be included in this analysis.	The comment is noted. Please see MR-3 for more information on the level of detail and analysis included in a programmatic DEIR.
Greg Carr	Aug-22	C133-13	In general, it appears that the preparers of the DEIR have used the comparison of the alternatives to rationalize approval of the proposed plan rather than to describe the differences among them, particularly in the discussion of the cumulative impacts of growth enabled by the plan.	The comment is noted. Please see MR-8 for more detail about the comparison of alternatives in the Draft EIR.

Commenter	Date	Letter	Comment	Response
Greg Guerrazzi	Friday, September 23, 202	C134-1	Sonoma County Planning Commission and Board of Supervisors and State Senators: I am a 28 year resident of Glen Ellen and lifelong resident of Sonoma County. My family has been in the County for over 100 years. Please do not support the SDC Specific Plan or Draft EIR, which are woefully inadequate and inaccurate. The County is legally required to respond to the below Draft EIR comments.	Thank you for the letter. The comment is noted. Please see MR-3 for an explanation of the level of detail appropriate for a programmatic EIR.
Greg Guerrazzi	Friday, September 23, 202	C134-2	Specifically, the traffic analysis lacks basis and is unrealistic. The size of the re-development must be scaled back to a realistic number of housing and commercial units to allow for an orderly and safe evacuation, such as proposed in the Historic Preservation Alternative. 1. On the night of October 8 & 9 it took us over an hour to evacuate Glen Ellen due to the Nuns Fire. Arnold Drive was gridlocked with cars, trucks and trailers shrouded in smoke. Hwy 12 was closed as the fire jumped the Hwy into Glen Ellen. 2. It is completely irresponsible to consider an emergency exit route from Arnold Drive to Hwy 12, as historically every wildfire has come from the east which where this “escape route” would lead residents to a wall of flames and gridlock due to the likely evacuation of Oakmont. 3. Proposing to shelter in place at the SDC campus is ridiculous as the wildfire will consume the new development as was the case in Glen Ellen and many Santa Rosa neighborhoods. 4. The Draft EIR does not adequately address the Vehicle Miles Travelled for the people and support required for 1,000 homes and 940 jobs, as this amount of traffic will overwhelm the two lane roads of Arnold Drive, Hwy 12, Bennett Valley and Warm Springs Roads. 5. How will evacuation and safety measure put in place since the 2017 and 2020 fires even begin to protect the lives of 5,000 additional people? 6. The Draft EIR does not adequately address the above items.	The comment is noted. Please see MR-4 for an explanation of the wildfire evacuation analysis, and MR-6 for more detail about methodology used to anaylze VMT.
Greg Guerrazzi	Friday, September 23, 202	C134-3	1. Environmental & Climate Impacts: The Draft EIR does not meet CEQA requirements. 2. The Draft EIR does not have conditions that will be legally enforceable such as a Mitigation and Monitoring Program. 3. The Draft EIR must be revised to align with the County’s own Climate Crisis Resolution. 4. The Draft EIR lacks realistic mitigation measures and conditions	The comment is noted. Please see MR-1 for an explanation of a "self-mitigating plan," and MR-9 for an explanation of how the County will enforce Specific Plan policies and Standard Conditions of Approval (as delineated in Appendix A of the Specific Plan).

Commenter	Date	Letter	Comment	Response
			to address the environmental and climate impacts of 1,000 homes and 940 jobs in a rural, wildlife corridor, setting.	
Greg Guerrazzi	Friday, September 23, 202	C134-4	1Historic Preservation Alternative ("Historic Alt"). The Draft EIR must be revised to adequately address the Historic Alt, as it is identified as "the environmentally superior alternative". 2. The Historic Alt meet the state's statutory objectives. The Draft EIR must be revised to include a detailed analysis of this alternative. 3. The Historic Alt is the plan the community supports and the County has been specifically directed by the State to follow community input and secure community support.	The comment is noted. Please see MR-8 for an explanation of why the historic preservation alternative does not meet the project objectives.
Greg Guerrazzi	Friday, September 23, 202	C134-5	Cumulative Impacts 1. The Draft EIR does not adequately assess the future impact of the Elnoka Development. 2. The Draft EIR does not adequately assess the Sonoma Valley infill housing. 3. The Draft EIR does not adequately assess the future development in Rincon Valley, such as the new development at Hwy 12 and Calistoga Road. 4. All of these above projects and more will increase traffic in the Hwy 12 Glen Ellen corridor especially during an emergency evacuation.	The comment is noted. Please see MR-3 for an explanation of the level of analysis appropriate to a programmatic Draft EIR. Further, the potential impacts to vehicular travel that may occur with the proposed Specific Plan are assessed using a VMT performance metric, which considers the amount of vehicular travel (measured in miles) that would be generated on a per-person basis, rather than a LOS metric which measures the amount of traffic congestion and delays occurring on a given roadway or intersection. VMT is assessed using the Sonoma County Transportation Authority's SCTM19 travel demand model. While regional travel and land use characteristics play a key role in how the model estimates VMT, the influences of individual development projects such as those listed by the commenter would not measurably influence the number of miles that future residents and employees within the proposed Specific Plan area drive on an average day. Stated another way, while

Commenter	Date	Letter	Comment	Response
				the projects would be expected to increase traffic volumes, they would not individually or collectively result in substantial changes to existing or cumulative travel patterns with respect to the number of daily miles that residents or employees typically drive. The DEIR transportation analysis is consistent with guidance provided by OPR on how to assess potential VMT impacts, and examines the per-person VMT levels that the proposed Specific Plan would result in as compared to existing levels as well as levels forecast to be present under cumulative conditions. In summary, while the approved and proposed development identified by the commenter would be expected to increase traffic volumes in the Sonoma Valley area (and potentially have an effect on congestion levels), they would have no discernible effect on the proposed Specific Plan's VMT analysis as presented in the DEIR.
Greg Guerrazzi	Friday, September 23, 202	C134-6	Water & Power 1. The Valley of the Moon Water District has contacted me to advise we must reduce or water consumption by 20%. The Draft EIR must be revised to address how the water demand of 1,000 homes and 940 jobs will impact the current users. 2. The Draft EIR must be revised to specifically analyze the water sources to be utilized to support 1,000 homes and 940 jobs/commercial activities during a wild fire event. 3. The Draft EIR must be revised to fully evaluate the assumptions made to assert that the water resources are available for this size of development. If they are why and I being asked to reduce my use by 20%? 4. During the recent heat wave, we were instructed to not use electrical power between 3 PM and 10 PM and this situation will recur. The Draft EIR does not adequately address how the power grid can accommodate 1,000 homes and 940 jobs/commercial activities without impacting the existing residents and commercial uses.	The comment is noted. Please see MR-5 for an explanation of the water supply analysis performed for this Proposed Plan, and MR-3 for an explanation of the level of detail appropriate for inclusion in a programmatic EIR. Electrical power demand during extreme heat waves is a statewide strain on the electric grid; thus, analysis of these effects is not included in this Draft EIR. As per analysis of electrical capacity in Impact 3.15-1 on page 479 of the Draft EIR, "'service to this facility will be made in accordance with PG&E's Electric Rules and Tariffs on file with the State of California Public Utilities Commission at the time the Applicant applies for service and in

Commenter	Date	Letter	Comment	Response
				accordance with any required Land and Environmental reviews.'"
Greg Guerrazzi	Friday, September 23, 202	C134-7	Wildlife Corridor & Sonoma Creek 1. The Draft EIR does not adequately address, and it must be revised as to how 1,000 homes and extensive commercial activity will impact a crucial wildlife corridor. 2. The Draft EIR does not adequately address, and it must be revised as to how 1,000 homes and extensive commercial activity will impact the crucial water source of Sonoma Creek for wildlife and salmon restoration. Ultimately the Draft EIR will need to be revised to address the project selected by the State for redevelopment of SDC. The Historic Alt must be analyzed as the most likely scenario.	This comment is noted. Please see MR-8 in regards to the historic preservation alternative and MR-7 in regards to the adequacy of impacts on wildlife movement or disagreement with analysis/findings.
Greg Kamman	26-Sep-22	C135-1	I am a hydrologist with over thirty years of technical and consulting experience in the fields of hydrology, geology, and hydrogeology. I have been providing professional hydrology and geomorphology services in California since 1989 and routinely manage projects in the areas of surface- and groundwater hydrology, water supply, water quality assessments, water resources management, and geomorphology. Most of my work has been in the Coast Range watersheds of California. My areas of expertise include: characterizing and modeling watershed-scale hydrologic and geomorphic processes; evaluating surface- and ground-water resources/quality and their interaction; assessing hydrologic, geomorphic, and water quality responses to land-use changes in watersheds and causes of stream channel instability; assisting and leading in the development of CEQA environmental compliance documents and project environmental permits; and designing and implementing field investigations characterizing surface and subsurface hydrologic and water quality conditions. I earned a Master of Science degree in Geology, specializing in	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			sedimentology and hydrogeology as well as an A.B. in Geology from Miami University, Oxford, Ohio. I am a Certified Hydrogeologist (CHG #360) and a registered Professional Geologist (PG #5737) in the state of California. A copy of my resume is attached.	
Greg Kamman	26-Sep-22	C135-2	I have reviewed the Draft Environmental Impact Report (DEIR) for the Sonoma Developmental Center Specific Plan in Sonoma County, California, and evaluated if the project may impact surrounding properties and the environment. Specifically, I have reviewed the DEIR and technical appendices. Based on my review of these materials, it is my professional opinion that the DEIR is inadequate in evaluating the potential significant impacts of project actions on hydrology, water quality and biological resources. The rationale for this opinion is based on multiple findings presented below.	This comment is noted. There is no specific assertion of howthe DEIR is inadequate, therefore no futher response is required.

Commenter	Date	Letter	Comment	Response
Greg Kamman	26-Sep-22	C135-3	1. There are several local and state regulations applicable to the SDC Specific Plan that are not included in the Hydrology/Water Quality Regulatory Setting section (3.9.1 on pg. 270) of the DEIR. These include the following. a. Sonoma County General Plan 2020 Policy C-WR-2f, which states, “Discretionary projects in Urban Service Areas, where the density of development thus extent of impervious surface area is greater than in Rural Communities, shall be required to maintain the site’s pre-development recharge of groundwater to the maximum extent practicable/feasible. Develop voluntary guidelines for development in Rural Communities that would accomplish the same purpose. (GP2020 Revised)”. b. Sonoma County General Plan 2020 Policy C-WR-4b, which states, “Use water effectively and reduce water demand by developing programs to: (1) Increase water conserving design and equipment in new construction, including the use of design and technologies based on green building principles; (2) Educate water users on water conserving landscaping and other conservation measures; (3) Encourage retrofitting with water conserving devices; (4) Design wastewater collection systems to minimize inflow and infiltration; and (5) Reduce impervious surfaces to minimize runoff and increase groundwater recharge. (GP2020)”. c. Sonoma County General Plan 2020 Policy C-WR-4f, which states, “To minimize generation of wastewater and encourage conservation of Coastal water resources, require use of water saving devices as prescribed by the local water provider in all new developments. (New)”. d. California statutes and regulations (e.g., California Code, Division 3. Dams and Reservoirs) related to dam safety.	This comment is noted. The Proposed Plan is compliant with all relevant regulations and plans including the County Municipal Code and the General Plan.

Commenter	Date	Letter	Comment	Response
Greg Kamman	26-Sep-22	C135-4	As elaborated below, the missing County policies and state regulations are directly relevant to the water supply and flood hazard assessments for the project as elaborated below. The DEIR Project Description is not detailed enough to evaluate potential impacts on hydrology and the environment. The DEIR does not contain a project plan with sufficient detail about land use change to complete the necessary hydrologic and water quality assessments to determine impacts from the project. Due to the lack of an adequate Project Description, I don't agree with the DEIR determinations that potential hydrologic and water quality impacts are less than significant and that no mitigation measures will be required for the following reasons. a. Impact 3.9-1 - The DEIR states that potential impacts to federal, state, and local water quality standards are less than significant. However, the DEIR has not analyzed how changes in site runoff and associated erosion potential will change. Based on my experience, this analysis would require detailed hydrologic and hydraulic modeling that incorporates all changes in land use (esp. impervious surfaces) and runoff estimates to determine where and by how much flow rates (and erosion potential) may impact receiving waterways both on- and off-site. BMPs and other measures would then be designed correctly to mitigate these impacts. This is the primary way the DEIR can address the significance of the impact before and after mitigation.	This comment is noted. The Proposed Plan is compliant with all relevant regulations and plans including the County Municipal Code and the General Plan. Please see Section 3.9 on the hydrology impacts of the Proposed Plan.
Greg Kamman	26-Sep-22	C135-5	b. Impact 3.9-2 - The DEIR states that the project will not interfere with groundwater recharge such that the project may impede sustainable groundwater management of the basin and associated potential impacts are less than significant. However, the DEIR does not contain any detailed technical analysis of how the project development will alter groundwater recharge. The DEIR has an obligation to describe any potential changes in recharge. Simply stating that BMPs that support groundwater recharge will be integrated into the Project does not demonstrate that they will be sufficient to mitigate potential impacts.	This comment is noted. Please see Section 3.9 on the hydrology impacts of the Proposed Plan.

Commenter	Date	Letter	Comment	Response
Greg Kamman	26-Sep-22	C135-6	c. Impact 3.9-3 - The DEIR states that Project development would not substantially alter the existing drainage patterns or result in substantial erosion and flooding on- or off-site or contribute runoff that would exceed the capacity of existing or planned storm drain systems. Thus, the DEIR concludes that associated impacts are less than significant. These conclusions are not substantiated as the DEIR does not present results from any hydrologic on hydraulic analyses to demonstrate to what degree the project may increase runoff rates and erosion potential from new or improved development. The assumption that adhering to County mandated BMPs will reduce flooding and erosion impact to below significant has not been demonstrated. Instead, the DEIR defers analysis and mitigations for hydrologic and water quality impacts.	This comment is noted. Please see Section 3.9 on the hydrology impacts of the Proposed Plan.
Greg Kamman	26-Sep-22	C135-7	Impact 3.9-4 – The DEIR states that the potential to expose people and structures to significant risk or loss, injury or death involving flooding from dam failure is less than significant. However, this is completely contrary to the California Division of Safety of Dams (DSOD) conclusions about Project dam safety presented in Section 3.9.2.5 (Flooding – Flooding from Dam Failure, pg. 286-287) of the DEIR. Page 286 of the DEIR states, "The DSOD has classified the downstream hazard of a failure at Fern Lake as high". On page 287, the DEIR states, "The DSOD has classified the downstream hazard of a failure at Suttonfield Lake as extremely high." These statements alone suggest this potential impact is not "less than significant". The DEIR does present inundation maps associated with these failures but provides no further analysis on how these potential impacts will be mitigated apart from the statement (pg. 287) "Specific geotechnical investigations of the dams at Fern and Suttonfield Lakes would need to be conducted to determine their potential for failure." However, this is a deferred analysis, which does not support the findings of "less than significant" impacts and "not applicable" mitigations. Impact 3.9-5 - The DEIR states that implementation of the Project would not conflict or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Thus, the DEIR concludes that associated impacts are less than significant. However, for the same reasons presented above (items 2a. – 2c.), the DEIR does not present any technical justification for this determination and should be considered inadequate and incomplete.	This comment is noted. Please see response to comment B11-271.

Commenter	Date	Letter	Comment	Response
Greg Kamman	26-Sep-22	C135-8	An important analysis of the SDC project is the determination if there are sufficient water supplies to meet proposed project water demands. Appendix D of the DEIR presents the results of this analysis. Based on my review of Appendix D, I've identified several mistakes and other issues that suggest the DEIR does not demonstrate there is sufficient water supply to meet future (2045 full buildout) demands. Table 2 (pg. 14) of Appendix D indicates that estimated Project annual water demands by the year 2045 will be 342 acre-feet per year (AFY). Table 9 (pg. 31) of Appendix D indicates that available annual supply that will be 100% reliable for the period 2030-2045 is 356 AFY. Comparison of available and reliable water supply (356 AFY) to full buildout demands (342 AFY) suggest there is very little margin for error in terms of future water supply management. The DEIR supply estimate is also concerning to me in that the historic (1969-2007) water use (demands) for the SDC averaged 622 AFY and peaked at 1,143 AFY in 1986 (pg. 12, Appendix D). I'm suspect that the historic SDC water use is nearly twice the volume of estimated future full buildout (2045) Project water demands, especially when the Project proposes to build an additional 1000 residential units and hotel and reoccupy and/or expand the commercial and industrial uses (see Table 1, pg. 13 of Appendix D). Even with conservation measures, I would expect that Project water demands would be similar to if not larger than historic use. The next paragraphs elucidate this opinion.	This comment is noted. Please see MR-5 on the adequacy of the Water Suppy Assessment.
Greg Kamman	26-Sep-22	C135-9	In reviewing and cross-checking the data and information presented in Tables 1 and 2 of Appendix D, I identified several questionable results that suggest the DEIR water demands are significantly underestimated. These findings are as follows. a. Table 2 (pg. 16 of Appendix D) only provides employee water use estimates for the proposed hotel. Water use by guests staying in the 100,000 square foot hotel is not accounted for in the annual water demand estimate. Incorporating guest water use into the demand estimate could easily result in total annual project demands greater than reliable supply. b. To better evaluate the DEIR demand estimates, I created Table A (below), which merges data from Tables 1 and 2 in DEIR Appendix D. In doing this exercise, I identified a significant math error in the DEIR demand estimates for General Commercial, Office, Public/Industrial, and Research & Development land uses presented	This comment is noted. Please see MR-5 on the adequacy of the Water Suppy Assessment.

Commenter	Date	Letter	Comment	Response
			in Table 2 of Appendix D. When independently calculating water demands using the 2045 land use areas and Water Use Factors provided in Appendix D, the respective 2045 water demands for the General Commercial, Office, Public/Industrial, and Research & Development land uses result in values that are two orders of magnitude higher than those reported, which results in an increased annual Project water demand of 9846 AFY (see Table A).	
Greg Kamman	26-Sep-22	C135-10	The Permit Sonoma website1 provides guidelines (8-2-1 Water Supply, Use and Conservation Assessment Guidelines) for the preparation of Water Supply Assessments. The purpose of this policy is to provide guidance to applicants and their representatives on how to prepare a Water Supply, Use, and Conservation Assessment (henceforth, the "Assessment"). The Assessment may be a standalone document, or supplemental to a hydrogeologic study, Zero Net Use report, or other water supply related report. These guidelines are intended for discretionary and ministerial projects. Discretionary projects that are dependent on groundwater or surface water will typically require an Assessment with the use permit application. The Assessment will inform the environmental review process and conditions of approval. The authority of the Assessment falls under Sonoma County General Plan, Water Resource Element Goals WR-2 and WR-4, Objective WR-4.1, WR-4.2, and WR-4.3, and Policies2 WR-2c, WR-2d, WR-2e, WR-4b, and WR-4f. Therefore, the DEIR Water Supply Assessment (Appendix D) should adhere to County Guidelines. Appendix A to the County's Guidelines has water use estimates for residential, landscape, agricultural, and Commercial and Industrial uses that are greater than those factors presented in Table 2 of Appendix D (see Table B). Applying the Sonoma County water use estimates to Project water demand estimates results in higher residential and irrigated area water demands than presented in the DEIR (see Table B below). In summary, correcting math errors and applying the Sonoma County guidelines water use estimates to the DEIR demand estimate tables results in a total annual Project water	This comment is noted. Please see MR-5 on the adequacy of the Water Suppy Assessment.

Commenter	Date	Letter	Comment	Response
			demand of 10,231 AFY, a values three times higher than reported reliable supply (356 AFY). This annual total demand will be even higher when hotel guest water use is considered.	
Hugo Dwyer	25-Sep-22	C136-1	By way of introduction, VOR – A Voice Of Reason - is a national non-profit founded in 1983. For nearly forty years, we have been advocating for high quality care and human rights for all individuals with intellectual and developmental disabilities (I/DD). I write you today on behalf of those individuals with the most severe and profound I/DD and autism in California, in regard to the county's plans for the property that was once home and community for many of our loved ones with I/DD at the Sonoma Development Center. It is my understanding that the property is being divided and parceled out to property developers and investors. We would like to ask that you please keep a substantial portion of the property available to providers of services for those individuals most deeply impacted by I/DD and autism, in keeping with the original intent of those who first developed this property. Sonoma County is known around the world for its beauty, its amazing vineyards, and for its people. Forest fires may change the landscape. Drought may ruin a season of grapes. But the people of Sonoma County have a chance to retain their heart, their soul, and their dignity, by determining to continue to provide for California's most vulnerable citizens. Business schools used to teach about the value of "Goodwill". You cannot set a price on it, but it is an asset that can bring greater value to all of the other assets a business, or a county, holds. We urge the	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

			corridor and passage between Sonoma Mountain and the Mayacamas Range. The area must remain open to wildlife coming through Jack London Park and traveling to the Audubon and Oak Hill preserves.	
Jack Allan	Friday, September 23, 2022	C138-1	I have a comment on the accessibility of the open space during construction. How will this work and will there be access throughout the building process from Arnold drive to the open spaces on the west side of the campus? For example the parking spaces on Wilson which many cyclists use as their starting point. This is a crucial entry point for plenty of folks who do not wish to park at Jack London and enter from the other side, as well as the current residents of the Glen Ellen/Eldridge neighbourhood.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
jason enzenzensperger	Monday, September 26, 2022	C139-1	The land was deeded in perpetuity to the feeble minded. Please don't sell it to the greedy.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Jerry Bernhaut		C140-1	Thank you for the opportunity to submit further comments on the recently issued Sonoma Developmental Center (SDC) Specific Plan and Program Environmental Impact Report (PEIR). The following comments are submitted on behalf of the SDC Campus Project 1. Permitted Uses in Preserved Open Space It has come to our attention that in the Draft Specific Plan, Table 4-3, Permitted Uses, under Preserved Open Space, the following uses are included as P, permitted: Agricultural Crop Production and Cultivation Agricultural Processing Animal Keeping: Confined Farm Animals Animal Keeping: Farm Animals Farm Retail Sales Farm Stands Indoor Crop Cultivation Mushroom Farming Nursery, Wholesale Timberland Conversions, Minor Tasting Rooms In the Draft EIR, Section 3.4.3.4 Impacts: "Summary of Proposed Plan The Proposed Plan would include residential development in the following districts: Marker Place, Core North Residential, Historic Core, Fire House Commons, Core South Residential, Creek West Residential, Agrihood, and Eldridge North. Approximately 1,000 housing units are planned to be developed throughout these districts as well as commercial, institutional, and public land uses and an Highway 12 connector road. The existing undeveloped portions of the Planning Area would be designated as Preserved Open Space land use. Development is not proposed to occur within Preserved Open Space, where current daytime recreational uses would continue." (emphasis added)	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Jerry Bernhaut		C140-2	The DEIR concludes as follows: "3.4-1 Impact. Implementation of the Proposed Plan would not have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. (Less than Significant)" (DEIR p.241) While residential development is not proposed within Preserved Open Space, the permitted uses identified in Table 4-3, including Agricultural Crop Production and Cultivation and Timberland Conversions, clearly contemplate vineyard development. Vineyard development involves deep soil disturbance, vegetation and tree removal, with likely significant habitat impacts for Special Status Species Yellow Legged Frog and California Giant Salamander, listed as present on SDC land in DEIR Table 3.4-1. The deep ripping of the soil to plant grape vines will be especially harmful to salamanders, who live part of their lives in underground tunnels.	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR.
Jerry Bernhaut		C140-3	"Agricultural Processing" likely is meant to permit wineries. This reading is supported by permitting tasting rooms. These uses, in addition to habitat destruction, will also involve construction activities, vehicular traffic. Farm retail sales will generate vehicular traffic. Keeping farm animals raises concerns about impacts on wildlife. The Relevant Policies and Implementing Actions listed in Section 3.3.3.3 of the DEIR, do not adequately address the reasonably foreseeable significant impacts on wildlife likely to result from these permitted uses. Allowing these permitted uses is not consistent with the reasonable understanding by the public of what is meant by protecting the preserved open space. While the SDC Campus Project supports organic food crop agriculture in a specifically designated approximately five -acre area in the southern end of the east open space, we do not support the permitted activities in the Preserved Open Space listed in Draft Specific Plan Table 4-3. Food agriculture in this limited area will provide a public benefit without significant impacts on biological resources.	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Jim Price,	Saturday, September 24, 2022	C141-1	I have lived in the Springs of Sonoma Valley since 2008 when my late wife Pamela and I moved to the Sonoma Valley. I am a homeowner, a Viet Nam era Army veteran and a graduate of UC Santa Cruz with degrees in Economics and Planning and Public Policy in Environmental Studies. I'm also a member the Sonoma Land Trust and and avid hiker of the Sonoma Valley Parks and Jack London State Park as well as the lands of the SDC currently owned by the State. I have a love of this land and place as well as the people of this community that I call home. The SDC is a public treasure that demands our best efforts at preservation and protection. That said, I support the North Valley Municipal Advisory Council's vision for future development at the SDC. I do not support the Sonoma Developmental Center (SDC) Specific Plan as proposed by Permit Sonoma and find that the DEIR is inadequate to meet the requirements of the California Environmental Quality Act. While I'm not a resident of Glen Ellen, I nonetheless have been actively following the advocacy the North Valley Municipal Advisory Council have performed on behalf of the citizens of Glen Ellen and all of Sonoma Valley and I strongly urge you to follow their recommendations. I will confine my comment to one important issue that I have not seen addressed in the DEIR: The conflicts created by domestic animals that a population of ~ 2,400 people and their pets will have on the wildlife corridor and other native species.	This comment is noted. Please see MR-7 in regards to the adequacy of impacts on wildlife movement or disagreement with analysis/findings.
Jim Price,	Saturday, September 24, 2022	C141-2	1) What specific empirical studies has Permit Sonoma and/or their consultants conducted to determine the probable effects of domestic animals (specifically cats, dogs, reptiles, amphibians) on the wildlife known to use the corridor and other native wildlife know to inhabit the SDC and environs? 2) If such studies have been conducted where are they available for review? 3) If such studies have been conducted what mitigating measures have been identified for each species of domestic animal studies?	This comment is noted. Please see the Open Space Management Framework, Policy 2-14 of the Specifci plan which prohibits all unleashed outdoor cats, and restrict off-leash dogs and other domestic animals to private fenced yards and designated areas.

Commenter	Date	Letter	Comment	Response
Jim Price,	Saturday, September 24, 2022	C141-3	In the Specific Plan, it has been suggested that cat owners will be required to keep their cats on leashes as a mitigating measure. At what specific locations in California has this strategy been implemented? What studies have been done to suggest that such a stratagem works? How would this be enforced and by whom? What penalties will the cat owner face for not following the mitigation measure? Can these measures be overturned by subsequent Homeowners Associations that might be expected to be constituted at a later date? How do you ensure these measures in perpetuity? 5) Cats are know to carry disease that may have ill effects on our native mountain lions and bobcats that are known to frequent the corridor and the environment in and around the SDC. What specific diseases has the DEIR considered? What specific mitigating measures are recommended to keep our wild cats safe from these diseases? 6) In my own experience, dogs have a keen sense of hearing a smell and it is not unusual for them to bark at wildlife that strays onto their owner's property. What studies has the DEIR relied upon to inform them of the probable effects that domestic dogs will have on the wildlife corridor? What mitigating measures have proven effective at preventing domestic dogs from barking at wildlife expected to use the wildlife corridor? How and who will be responsible for enforcing your recommended mitigating measures? 7) What diseases do domestic dogs carry that may be threat to native animals that are know to use the wildlife corridor? What mitigating measures have proven effective are preventing the spread of these diseases to the wildlife know to use the corridor?	This comment is noted. The Open Space Management policies of the Specific plan are meant to promote a balanced approach to the open space in the Planning Area, with an emphasis on conservation, biological resources and recreational access, and to provide guidance and requirements that prepare the Planning Area for the natural and man-made hazards that future development may face.
Jim Price,	Saturday, September 24, 2022	C141-4	8) Domestic reptiles and amphibians are known to carry diseases that may have deleterious effects on native species. What studies have been done to identify these diseases? What mitigating measures are recommended to prevent the transfer of these diseases to native species? What enforcement measures are contemplated? How and who will be responsible for endorsement? 9) Light pollution may have a negative impact on the wildlife corridor. What light mitigation measures are contemplated at the core campus to limit these effects? What science is/or will Permit Sonoma and/or their consultant use to identify and mitigate these effects? 10) Lions and Bears are native to the SDC. There is a strong probability that domestic animals may be considered food by these apex predators. What protocols will be put into place to ensure	This comment is noted. The Open Space Management policies of the Specific plan are meant to promote a balanced approach to the open space in the Planning Area, with an emphasis on conservation, biological resources and recreational access, and to provide guidance and requirements that prepare the Planning Area for the natural and man-made hazards that future development may face.

Commenter	Date	Letter	Comment	Response
			native apex predators are not euthanized because they kill domestic animals? What measure will human pet owners be required to follow to mitigate domestic animals from falling pray to apex predators? How and who will be responsible for enforcement of these protocols/laws?	
Johanna M. Patri	22-Sep-22	C142-1	Please address the following questions and issues regarding the analyses contained in the Sonoma Developmental Center Specific Plan Draft Environmental Impact Report (DEIR) and its compliance with the California Environmental Quality Act (CEQA). Project Description While the DEIR may satisfy Section 15124 of the CEQA Guidelines under Section 2 Project Description, the project description is the foundation upon which environmental analysis is constructed and the DEIR project description is inadequate. The DEIR project description does not contain enough detailed information or all of the components of the project as identified in the Specific Plan as required by CEQA provisions and case law to allow the public, reader, or decision makers to understand thoroughly the components of the project and the types and intensities of the project's environmental effects and impacts. How does the DEIR adequately address all the components and potential environmental impacts of the project as the DEIR project description contains only conceptual and board-stroked project concepts? Explain why most of the DEIR project description refers to historical facilities, data, infrastructure, conditions and assumptions, including, but not limited to: e.g.	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR

Commenter	Date	Letter	Comment	Response
Johanna M. Patri	22-Sep-22	C142-2	2.1.2.2 Transportation: Does not include any project description for proposed or additional local or regional public transportation to serve the proposed total buildout of approximately 2,400 residents and 940 jobs – approximately twice the population of current Glen Ellen, CA. 2.1.2.4 Utility Infrastructure: Wastewater: ends with "assuming that additional connections can be made to the main sewer line at the south side of the site" with no verifiable conclusions; Stormwater: refers to "additional measures will ensure" is speculative without describing what those measures are or would be; Natural Gas and Electricity: refers to a system of distributed energy resourced (DERS) that could include solar, wind, geothermal, and methane gas co-generation is speculative without specifics; such facilities as wind machines, solar arrays, and geothermal systems cannot be evaluated, quantified, or analyzed. 2.1.3.1 SDC Core Campus: If all new development is proposed to be located in the already previously developed Core Campus, where in the project description are activities associated with demolition including a demolition plan, travel routes for off-haul, disposable sites, recycling, etc.?	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR
Johanna M. Patri	22-Sep-22	C142-3	The DEIR does not have sufficient information in the project description about the actions and activities that would occur under the proposed project and is misleading and incomplete to enable the public and decision makers to understand the logic and facts that link the proposed project to the intensity of the project and the environmental impact conclusions contained in the DEIR. When is construction of the proposed project expected to be initiated; how long will it take to complete construction; when would project operations, occupancy, use begin? What is the quantitative measure of the intensity of each component? e.g. • square footage of commercial space; • width and linear feet of new roadways; • number and size of windmills or solar arrays; • limits and quantities of grading, including material imported or exported What is the expected schedule and details for the phases of build-out?	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR

Commenter	Date	Letter	Comment	Response
Johanna M. Patri	22-Sep-22	C142-4	Hotel Overly Zone Allowing for a 120-room Hotel Where in the DEIR is the project description and analysis of the proposed 120-room hotel, including, but not necessarily limited to: VMT Analysis: The DEIR states: "Given the programmatic nature of the Proposed Plan, all potential future development within the Proposed Plan boundaries is included in the VMT analysis." Where is the analysis and data for tourist traffic?	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR
Johanna M. Patri	22-Sep-22	C142-5	Housing Allocations and Build-out Population The DEIR states: "According to the Final 2023-2031 RHNA, ABAG has determined that unincorporated Sonoma County's fair share of regional housing needs for the 2023 to 2331 period would be 3,881 units. Approximately 1,632 of these units would be allocated as housing affordable to very low- and low-income households." This is a ratio of approximately 42% of housing needs allocated to very low- and low-income households as determined by ABAG. The Specific Plan proposes a total buildout of 1,000 housing units, but it appears that only 283 units are designated as low-income housing units or a ratio of approximately 28% units are low-income housing units. How does the DEIR justify this allocation given the counties need for housing very low- and low-income households? How does the DEIR justify a build-out population of 2,400, twice the size of the current population of Glen Ellen?	This comment is noted. Please see page 376 of the DEIR for a discussion on the Proposed plan's role in meeting the very low and low income household portion of the RHNA.
Johanna M. Patri	22-Sep-22	C142-6	Future and Additional Environmental Review Analysis Under CEQA Provisions with Mitigation Measures and a Verifiable Mitigation Monitoring Plan The proposed Sonoma Developmental Center Specific Plan provides a vision for the future possibilities of development in the defined planning area and utilizes a Programmatic EIR. While Government Code section 65457 may exempt from further CEQA requirements, subject to certain exceptions, residential development projects if they are consistent with a specific plan for which an EIR has been certified, it does not exempt other types of development such as commercial and recreational development. What additional environmental review will be required for all the commercial, retail, educational, medical, office, administration, tourist-serving, and recreational development components as proposed in the Sonoma Developmental Center Specific Plan?	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Johanna M. Patri	22-Sep-22	C142-7	Provisions and Analyses of Adequate Alternatives to the Project, While CEQA establishes no categorical legal imperative as to the scope of alternatives to be analyzed, an EIR must describe a reasonable range of alternatives to the project that could feasibly attain most of the basic objectives of the project while avoiding or substantially lessening any of the significant effects of the project. The DEIR fails to provide and evaluate a reasonable range of alternatives with meaningful detail analysis. Why is an alternative project that best fits the Glen Ellen and Sonoma Valley communities not evaluated? This would consist of a smaller project with a more robust equation of affordable housing units over market-rate housing, elimination of any hotel project and reducing commercial development as these types of development exist in nearby communities. While tourism may seem to have a positive impact on employment opportunities and revenue to governmental jurisdiction coffers, the effects of the tourist industry as it regards the distribution of revenue among the different social groups must be analyzed. The DEIR fails to analyze the impacts of tourism on the environment, the wildlife resources and income inequality. An Alternative Project must be presented and analyzed with more educational and community facilities and benefits resulting in higher-paying job opportunities with the goal of effective economic distribution policies designed to improve the living standards of the work force.	This comment is noted. Please see a discussion of the rationale for determining the alternatives on page 524 of the DEIR. Case law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 1 5126.6(f) states that the alternatives in an EIR should be governed by a "rule of reason." The alternatives addressed the two impacts the DEIR identified: transportation (Impact 3.14-2), and historic resources (Impact 3.5-2).
Johanna M. Patri	22-Sep-22	C142-8	How does the DEIR justify a development model, which consists primarily of lower-income paying jobs with no provisions that ensure employee housing on the Sonoma Development Center campus and would require those workers to live outside of the community and commute long distances, as a worthy or sustainable model. Why are not: • a reduced Development Alternative project with a minimum of 50% affordable housing; and • an Historic Preservation Alternative Project prepared with a sufficient degree of analyses to provide decision makers with information that enables them to evaluate and review environmental, aesthetic and community-oriented superior projects thoroughly? Where is the substantiated, quantifiable, and verifiable evidence, data, and analyses in the DEIR that the project objectives cannot be met with reduced development and robust historic	This comment is noted. Please see a discussion of the rationale for determining the alternatives on page 524 of the DEIR. Case law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 1 5126.6(f) states that the alternatives in an EIR should be governed by a "rule of reason." The alternatives addressed the two impacts the DEIR identified: transportation (Impact 3.14-2), and historic resources (Impact 3.5-2).

Commenter	Date	Letter	Comment	Response
			preservation of the existing campus? Are not the outlined objectives broad enough that a reasonable, less impacting range of alternative projects can be analyzed?	
Johanna M. Patri	22-Sep-22	C142-9	Travel Demand Management Plan (TDMP) Transportation Mobility and Access Goal 3-1 and Policy 3-4.2 are totally inadequate to address the provisions for an effective TDMP. The DEIR does not provide an adequate and verifiable Travel Demand Management Plan (TDMP) with Best Employer-Based Practices and Implementations as encouraged by Caltrans to significantly reduce Vehicle Miles Traveled (VMT) and reduce green-house gases and improve air quality by providing employees with: • Financial incentives such as transit passes for using Sonoma County Transit routes; • Transportation information; • Employer-provided shuttle buses and vanpools; • Ride-sharing opportunities; • Transportation options; • Dedicated employee on-site parking spaces for carpoolers; • Staggered work hours and flexible scheduling; • Compressed workweek; • Commute during off-peak times of day; • Affordable employee on-site housing; • Secure workplace parking for bikes, as well as shower and locker facilities for those who bike and walk to work; and • Guaranteed-ride-home for unplanned trips home.	This comment is noted. Please see MR-6 in regards to the traffic analysis.

Commenter	Date	Letter	Comment	Response
Johanna M. Patri	22-Sep-22	C142-10	Evaluation of Vehicle Miles Traveled (VMT) for Hotel Visitors The Technical Advisory on Evaluating Transportation Impacts in CEQA (April 2018) makes a clear distinction between "Trip-based" and "Tour-based" assessments of Vehicle Miles Traveled (VMT). The DEIR fails to assess VMT of Hotel Visitors. "A tour-based assessment counts the entire home-back-to-home tour that includes the project… a tour-based assessment of VMT is a more complete characterization of a project's effect on VMT. The DEIR fails to make any attempt to use such "tour-based" methods for hotel visitors. Because the proposed Specific Plan would enable a new hotel project, the DEIR must include and analyze all visitor trips from their beginning, ending at the hotel, and back home, as these trips are 100% "project induced". The DEIR fails to address the job-housing-vehicle miles traveled crises of Sonoma Valley, which is an example of why the State passed in 2013, SB743. It reflects a State Legislative mandate to more appropriately address the regional picture of traffic congestion management related to development and reduction of GHG emissions because of Vehicle Miles Traveled. The DEIR fails to analyze Vehicle Miles Traveled (VMT) and promote the State's smart mobility goals, thereby aligning with the County's long-range transportation plans and reduction of greenhouse gases. The DEIR fails to analyze traffic and the increase in VMT in sync with Caltrans' mission, vision, and goals to reduce statewide vehicle miles traveled (VMT) and to promote the State's smart mobility goals with only the availability of Arnold Drive, which bisects the Town of Glen Ellen.	This comment is noted. Please see MR-6 in regards to the traffic analysis.
Johanna M. Patri	22-Sep-22	C142-11	Conclusion The DEIR does not adhere to the basic principal of CEQA, which is simple: design, shape, and analyze the total project and sufficient alternatives to avoid significant impacts before deciding to certify an EIR and subsequently approve a project. The DEIR fails CEQA provisions which require the analysis and shaping of a project in quantifiable terms, not assumptions. Figuring it out later after certification of an EIR is neither a sound approach for the decision makers, the Lead Agency, the State, nor likely a defensible approach under CEQA. Thank you for your consideration and responses.	This comment is noted. Please see MR-3 in regards to the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Julie Cade	Monday, September 26, 2022	C143-1	Although the State mandates changes to the SDC, the recommended changes in this Specific Plan and the DEIR go far beyond what is desirable or wise. The increased groundwater usage due to additional population in an increasingly dry and hot climate; the increased traffic as new residents travel to Santa Rosa or Sonoma for goods and services, which will necessitate more roads, infrastructure, and vehicle miles traveled and will add to the difficulty and danger of driving on narrow, curvy, two-lane roads such as Bennett Valley and Warm Springs Roads and Arnold Drive (especially during evacuations); the addition of people and structures placed at risk due to more and larger wildfires; and the impacts on the rural nature of the area, will negatively affect everyone in the Sonoma Valley. The Proposed Plan is not the environmentally superior alternative. In 3.8-7, the DEIR specifically states that "the Proposed Plan would not expose people or structures to significant risk of loss, injury, or death involving wildland fires." This is patently not possible with the addition of thousands of new residents and buildings to the area! In 3.14-4, "Implementation of the Proposed Plan would not result in inadequate emergency access". This defies the experience of many in the Tubbs and Glass fires. In 3.16-1 and 3.16-2, the comments here are entirely understating the current and future wildfire risks and challenges of emergency response or evacuation plans.	This comment is noted. Please see MR-4 in regards to Ithe inadequacy or disagreement with wildfire evacuation analysis, MR-5 in regards to the lack of, or inadequacy of, or disagreement with water supply analysis, and MR-6 in regards to the traffic analysis.
Julie Cade	Monday, September 26, 2022	C143-2	Having evacuated in 2017 and 2020 from Oakmont in the Tubbs and Glass Fires and in each case, virtually being parked on the two-lane Highway 12 for hours in traffic while flames wrapped around us, we know beyond any doubt that more people feeding out to Highway 12 in an emergency will be a massive problem. There are already insufficient ways to leave the area, whether going towards Sonoma or Santa Rosa. Building more roads and emergency egress/access will take years and add to the fossil fuel usage/emissions, if these roads can ever be built (note that nothing has changed around Oakmont since the Tubbs fire to fix the egress concerns). Adding cars will only make things worse, risking more lives and increasing liability for the governmental parties involved in this decision. It seems this EIR was written without regard to how challenging and dangerous it is to live here. In 3.9-2 "Implementation...would not substantially deplete groundwater supplies…" Wells in the area are already going dry	This comment is noted. Please see MR-4 in regards to Ithe inadequacy or disagreement with wildfire evacuation analysis, MR-5 in regards to the lack of, or inadequacy of, or disagreement with water supply analysis, and MR-6 in regards to the traffic analysis.

Commenter	Date	Letter	Comment	Response
			and as yet, there is no monitoring of them by the County or water agencies. Adding 1000 + residents, new businesses, possibly including wineries (already heavy water users), hotels, and restaurants, will increase the draw on groundwater. The Specific Plan will deplete existing local residents' water availability at what is already a critical time of shortage.	
Julie Cade	Monday, September 26, 2022	C143-3	Why we are qualified to make these statements: We are ten-year residents of Oakmont. We lived in a house adjacent to the SDC property for a year while our Oakmont home was being remodeled. We walked daily on the grounds of the SDC and beyond and became acquainted with the natural beauty, charm and character of this rural area. Julie worked at the former Valley of the Moon Winery (now Abbot's Passage) and was a volunteer and then an employee of the former Quarryhill Botanical Garden (now Sonoma Botanical Garden). All of these experiences deepened our knowledge, understanding, and appreciation of the natural treasures of the area. Having lived in 17 towns and traveled to many parts of the world, we say with enthusiasm that the Sonoma Valley is unique for its history, scenery, and rural nature and must be preserved to the greatest extent possible. Accepting this Specific Plan at the Proposed Plan level would be disastrous for Sonoma Valley. The EIR needs to be updated based on climate change, wildfires, and water scarcity that have gotten worse since this one was written. Putting 1000-2400 additional residents in the area, no matter whether the homes are affordable or not, will create environmental damage and risk of the lives of the entire population of existing and new residents. If this Plan is in any way accepted, it should be at the lowest population increase level, "Historic Preservation Alternative", which will still create the significant issues highlighted above.	This comment is noted. Please see MR-4 in regards to the inadequacy or disagreement with wildfire evacuation analysis, MR-5 in regards to the lack of, or inadequacy of, or disagreement with water supply analysis, and MR-6 in regards to the traffic analysis.

Kaitlyn Garfield	23-Sep-22	C144-1	Dear Sonoma County Board of Supervisors, Planning Commission, Permit Sonoma, Advisory Team and Consultant Team, My name is Kaitlyn Garfield, I am Housing Administrator at Housing Land Trust of Sonoma County (HLT). This letter represents HLT's public comments on the SDC Specific Plan draft. Thank you for all your time and hard work on creating this plan and we look forward to seeing the final result. HLT supports the plan's 25% inclusionary requirement for ownership units. We ask that ownership units at a variety of income levels are created, at values based on the economic framework and affordable housing needs at the time of project construction. HLT also supports the opportunity for developers to use density bonuses to increase the overall housing stock created.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Kaitlyn Garfield	23-Sep-22	C144-2	HLT strongly supports the requirement that all inclusionary units must be built onsite of the SDC campus and must be fully integrated into the community. Inclusionary units should be scattered not clustered together, and co-located with the market rate units. Inclusionary units should also be built concurrently with market rate units and be comparable in size, basic finish options, construction quality, and exterior design to adjacent market rate units. Onsite and integrated inclusionary housing has been shown to produce a host of individual and social benefits, including equality of access to resources, a more cohesive community of diverse citizens, less stigma and pushback, and greater upward mobility and wealth building for residents. HLT also strongly supports the requirement that all affordable units must be affordable in perpetuity. There is no benefit to short term affordability covenants on affordable homeownership units: the developer has the same cost, the city will either eventually lose or must fight to keep an affordable unit, and the community will inevitably end up with a smaller housing stock than they would with permanent affordability. A model that creates affordability in perpetuity by design without any future re-upping should be used.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

KATHLEEN FERRIS	26-Sep-22	C145-1	I write as a Glen Ellen homeowner and a water policy expert. I served as Executive Director of the Arizona Groundwater Management Study Commission, Director and Chief Counsel of the Arizona Department of Water Resources, and Executive Director of the Arizona Municipal Water Users Association. I am currently a Senior Research Fellow at the Kyl Center for Water Policy at Arizona State University. As explained below, the Draft Environmental Impact Report (EIR) for the Sonoma Development Center Specific Plan (Project) inadequately evaluates the potential hydrologic and water supply impacts of the Project.	Thank you for your comment letter. This comment is noted. Please see MR-5 regarding the Water Supply Assessment.
KATHLEEN FERRIS	26-Sep-22	C145-2	The Project and Valley of the Moon Water District (VOMWD) are located within the Sonoma Valley Subbasin that is designated under the California Sustainable Groundwater Management Act as a high priority basin because of the density of wells, groundwater reliance and documented impacts of declining groundwater levels.1 Water users in the Subbasin have already reported wells going dry and many residents are concerned about the long-term sustainability of the Subbasin's groundwater.2 As water levels drop and wells dry up, some Sonoma County officials have suggested a moratorium of new well drilling may be needed.3 Following a ruling by the California Court of Appeals, Sonoma County must now adopt standards for new well permits to ensure that new wells "do not harm resources that belong to everyone, including future generations."4 The Draft EIR acknowledges at page 296 that "there could be a significant impact on groundwater if it were drawn to serve the needs of new residents, visitors, and businesses in a way that would substantially impede with groundwater recharge." But the potential impacts are dismissed because "future development at SDC would use surface water . . . and not be reliant on groundwater." Yet the Draft EIR fails to analyze what might happen to those surface water supplies as drought and climate change continue. Additionally, because the Project is not well-defined, it is impossible to know if its development will impede groundwater recharge. Impacts on	The comment is noted. Please see MR-5 for imformation regarding the Water Supply Assessment and coordination with Valley of the Mood Water District.

Commenter	Date	Letter	Comment	Response
			the fragile Sonoma Creek seem all but ignored.	
KATHLEEN FERRIS	26-Sep-22	C145-3	The Planning Area is insufficient to consider the impacts of the Project. The Draft EIR limits its evaluation to the 945-acre SDC Specific Plan Planning Area. But water supplies for the Sonoma Valley are inter-related. As the Sonoma County Civil Grand Jury advised in 2020: "Today there are more water users in the Valley than ever. Valley residents still depend on surface and groundwater resources throughout the Valley. These resources are not sufficient to sustain current population without importing additional water from the Russian River. Water resource planning, development, regulation and use take place primarily in four local organizations: the City of Sonoma, the Valley of the Moon Water District, the Sonoma Developmental Center, and Sonoma Water. These are separate entities, but they all depend on the same limited resources. The actions of each affect all the others."5 (Emphasis added)	Thank you for your comment letter. This comment is noted. Please see MR-5 regarding the Water Supply Assessment.

Commenter	Date	Letter	Comment	Response
KATHLEEN FERRIS	26-Sep-22	C145-4	Estimated water use and impacts on VOMWD are not fully considered. The projected water use of the Project, 342 acre-feet per year at build-out, seems significantly underestimated for 1,000 dwelling units, 940 employees and 390,000 square feet of commercial, hotel, office, public and institutional space. For example, the Proposed Plan contemplates a population of 2,400 at build-out, with an estimated residential water use of 172 acre-feet per year, which amounts to about 64 gallons per capita per day (GPCD). However, VOMWD had a potable water use of 102 GPCD in 20206 and there is no explanation why the estimated residential per capita water use for the Project would be 38 gallons per capita less than VOMWD's 2020 GPCD. Of concern is that the Draft EIR admits that VOMWD will see "shortfalls" in being able to meet future demands within its service area during "single dry years," which VOMWD will address through its Water Shortage contingency Plan—meaning existing customers will bear the brunt of these shortages. Even under current conditions, VOMWD has already declared a Phase 2 shortage seeking a 20 percent cut in water usage. Further, the Draft EIR Water Supply Assessment looks at projected water demand only from 2025 through 2045, a mere 20 years. That might be all that the law requires, but it is not an acceptable standard for sustainable large-scale planning in a time of increasing water scarcity. What's more, the Water Supply Assessment conclusion—that sufficient water is estimated to be available to the VOMWD to meet future demands within its service area and the Project—is based on past water supplies available to VOMWD and several assumptions, including future supply augmentation and increasing state-mandated efficiency and drought requirements. This is not a confidence-building conclusion given the questionable nature of these assumptions and the likelihood that water supplies will be reduced going forward.	Thank you for your comment letter. This comment is noted. Please see MR-5 regarding the Water Supply Assessment.

Commenter	Date	Letter	Comment	Response
KATHLEEN FERRIS	26-Sep-22	C145-5	The recent drying of the Colorado River has painfully illustrated that it is unwise to base our projections of future water supplies on the past. Climate change, mega-droughts, aridification, and overuse have radically altered the Colorado River, which now is freefalling towards “dead pool” when no water can be released from Lakes Powell and Mead. In the space of less than a year, Colorado River water managers have crossed the divide from “we have this handled” to “our Colorado River water may be cut off completely.” This and other stark realities must alter how we look at managing our finite and threatened water supplies moving forward. I urge Sonoma County to take the time necessary to conduct an in-depth assessment of how development of the SDC will affect the entire Sonoma Valley’s water resources in the long-term (100 years), considering the impacts of climate change, population increases, groundwater overdraft, and other stresses on our finite and inter-related water supplies. This is a time to be cautious and conservative about the level of development our threatened water supplies can support, as the crisis of the Colorado River has proved to us all.	Thank you for your comment letter. This comment is noted. Please see MR-4 regarding wildfire risk and evacuation times and MR-5 regarding the lack of, or inadequacy of, or disagreement with water supply analysis.
Ladd J. Miyasaki		C146-1	3.9-2 Implementation of the Proposed Plan would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin. Provided that the entire project be under management of the Sonoma Valley Groundwater Management Plan	This comment is noted. Please see MR-5 regarding the lack of, or inadequacy of, or disagreement with water supply analysis.
Ladd J. Miyasaki		C146-2	3.9-3 Implementation of the Proposed Plan would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would result in substantial erosion, siltation, or flooding on- or offsite; substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or impede or redirect flood flows. Increased runoff from	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			impervious surfaces of the project will increase downstream flow to areas at approximatley18 feet above sea level of Sonoma Creek Schell Creek Arroyo Seco	
Ladd J. Miyasaki		C146-3	3.9-5 Implementation of the Proposed Plan would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Provided that the entire project be under management of the Sonoma Valley Groundwater Management Plan	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Ladd J. Miyasaki		C146-4	3.13-3 Development under the Proposed Plan would not require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment. The proposed project would decrease recreational activity due to the loss of the existing softball diamond on the project site	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Ladd J. Miyasaki		C146-5	3.15-2 Development under the Proposed Plan would have sufficient water supplies available to serve the Planning Area and reasonably foreseeable future development during normal, dry and multiple dry years. Provided that the entire project be under management of the Sonoma Valley Groundwater Management Plan	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Marina Abbott	Monday, September 26, 2022	C147-1	> 1. What happened to the green belts we have consistently voted for? > 2. What about our abysmal public transit? In CA, statistics show that 1 home means 3 cars, adding pollution and traffic in a rural area. > 3. Evacuation in emergency? Already a problem in our valley. Add 3,000 cars? Death trap. > 4. While additional housing is needed, adding single family dwellings is foolhardy. If housing must be placed here, make it a reduced number of multi family units, clustered only along the road and have funding and plans in place to offer robust, frequent, affordable public transportation. > 5. Reject any plans for a resort hotel. This unavoidably degrades the environment, doesn't benefit valley residents and further complicates evacuation in emergencies. Currently it's rare for valley hotels and vacation rentals to be fully booked. If more hotel rooms are needed, let current properties add rooms by building upward. > 5. This land is a rare and precious wildlife corridor. The tiny sliver allocated in the plan is woefully inadequate. Putting housing there will inevitably put more animals into contact with residents or their cars resulting in injuries and/or death to threatened species. > 6. The suggestion that new residents will find employment onsite in new retail shops or restaurants is ludicrous on its face. Glen Ellen has numerous commercial spaces that sit empty or turn over frequently because the community can't support the current businesses. Adding more just adds to the problem. > Wrong plan, wrong place.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Mary Martinez	21-Sep-22	C148-1	The DEIR is inadequate and does not define a specific project, nor does it adequately analyze, prevent or reduce the environmental impacts – specifically wildfire, evacuation and the existing wildlife corridor. 1) There is no analysis of the impacts on the wildlife corridor through the campus and acknowledgement of the fact that animals currently use the campus and will be severely impacted by any development. The property and the campus itself are part of the WILDLIFE CORRIDOR and must be acknowledged as such. (Page 8 DEIR) • What mitigation measures will be required and enforced to protect and preserve this critical WILDLIFE CORRIDOR that	This comment is noted. Please see MR-2 in regards to the level of detail of analysis and programmatic nature of the Draft EIR, MR-7 in regards to the adequacy of impacts on wildlife movement or disagreement with analysis or findings, and MR-4 in regards to the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			was established by the late, prominent environmentalists and Sonoma Valley residents, Otto & Ann Teller prior to the closing of the Sonoma Developmental Center? Will performance standards be put into place to consider the impacts of traffic on wildlife function, resources, light and noise if, or when, an intermediary road cuts through the heart of the corridor to mitigate wildfire evacuation? • Will the wildlife corridor be considered essential or will the development of the "open space" have priority? What comes first? The cart or the horse?	
Mary Martinez	21-Sep-22	C148-2	2) The DEIR needs to be revised with conditions of approval strengthened and moved into a legally enforceable mitigation and monitoring program. It fails to disclose the full extent of impacts that will result throughout Sonoma Valley from this large-scale development in an area currently zoned AG and Rural Residential and outside of the urban growth area. Employment and resident numbers at SDC reached a peak over 50 years ago when both primary traffic arteries in the Valley were still well-functioning roads. Vehicle trips were limited to employees with the VMT were spread out over the period of the work day. • Why is a large-scale hotel being proposed when it's not a defined project objective, and when VMT is listed as a significant challenge?	This comment is noted. Please see MR-9 in regards to the mitigation monitoring and performance standards. Please see MR-6 in regard to the traffic analysis.
Mary Martinez	21-Sep-22	C148-3	3) The current plan will destroy the very qualities that make the historic SDC site unique and the environmental impacts of the Specific Plan – what is the intended scale of the project? • Why has the Historic Alternative been dismissed even though it is identified as the "superior alternative"? (DEIR page 14). • What mitigation measures will be required and included? • What are the other options were considered and why was this option dismissed?	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Mary Martinez	21-Sep-22	C148-4	4) The DEIR has failed to describe existing fire hazards and risks nor does it properly address the increased frequency, severity, intensity and spreading speed of wildfires due to climate change. Fire evacuation is a current and future concern for ALL residents of Sonoma Valley. • What mitigation measures will be required to ensure the safety of the residents of Sonoma Valley during future wildfires	The comment is noted. See response to comment B3-27.

Commenter	Date	Letter	Comment	Response
			should this AG-Rural Residential property be fully developed as proposed? • How will any mitigation measures be enforced?	
Mary Martinez	21-Sep-22	C148-5	5) The DEIR (pg. 515) dismissed "a fire approaching from the west (Sonoma Mountain) may be less likely, and did not warrant further specific analysis". The residents of Sonoma Valley lived through several major fires within the last 60 years and know that possibility must be considered in the DEIR. The DEIR states that "the additional SR12 connector will provide additional fire access and evacuation routes." (pg. 520) • Has the DEIR considered that previous fires have approached Sonoma Valley from the SR12 direction to the EAST? During recent wildfires the primary road arteries were clogged with traffic for 24 - 48 hours in the valley, thus creating dangerous conditions.The DEIR has presented no project alternative reflecting the community values of the residents of Sonoma Valley neither as an educational, cultural or recreational campus for the residents of Sonoma Valley. The current DEIR does not meet these objectives and the concerns that have been voiced by the residents of the of Sonoma Valley throughout the process. The DEIR has failed to acknowledge and address these and other primary issues that must be included in any future development at the Sonoma Developmental Center property in Sonoma Valley, California. Please answer all questions and concerns before the final DEIR is adopted.	The comment is noted. See response to comment B3-27 and MR-4 in regards to wildfire evacuation.

Commenter	Date	Letter	Comment	Response
Mary Poppic-Reeves	14-Sep-22	C149-1	We have lived within a mile of the Sonoma Developmental Center for over 20 years. We have raised our two children here, walking its streets and trails while appreciating the truly special place it is, from its diverse community of residents, to its rich wildlife population, and its verdant landscape. It is a unique resource for our community--- for the entire North Bay, that requires a well-considered, thoughtful approach to its transition. While the process may have started out this way, this push to approve an inadequate, nonspecific and unenforceable Draft EIR and Specific Plan is a dangerous and unconscionable rush to judgement. Undertaking this process simultaneous to the State's Request for Proposal is a waste of precious resources; these tools should react to a specifc development proposal that has yet to be produced. The Draft EIR and Specific Plan before you makes it clear the process is out of order. Simply, the cart has been placed before the horse. Your overarching question has to be: What happens if the RFP generates a proposal that this Draft EIR and Specific Plan doesn't specifically address, or worse, is so broad that the room for interpretation allows a full range of unintended and unacceptable consequences? The requisite comprehensive detail of this proposal mandates an EIR and Specific Plan that analyzes point by point all the merits and drawbacks of this enormously complicated project.	This comment is noted. Please see MR-2 in regards to allowing more time before finalizing the Specific plan.
Mary Poppic-Reeves	14-Sep-22	C149-2	3.4 Biological Resources To bring development to the SDC necessitates adding additional roadways to handle the traffic associated with such an overload of residential and commercial units. A new Arnold Drive to Highway 12 connector is proposed—one that would cut a path right though the critical Valley of the Moon Wildlife Corridor. How can this have a "less than significant impact" on the black bears, mountain lions, bobcats, and dozens of other species that have all been documented in the area? If left undisturbed, studies have shown the Wildlife Corridor through the SDC can continue to provide critical connectivity. If development is more important to our environment, what is the plan to mitigate this unrecoverable loss?	This comment is noted. Please see MR-7 in regards to the DEIR's findings on wildlife impacts.

Commenter	Date	Letter	Comment	Response
Mary Poppic-Reeves	14-Sep-22	C149-3	3.9 Hydrology and Water Quality Where is the water coming from to support 2,400 new residents? The Draft EIR suggests there will be no impact on groundwater. For those who have been asked to conserve water because of a local dwindling supply, development on this scale makes no sense. How will this undeniable impact during a drought emergency be mitigated?	This comment is noted. Please see MR-5 in regards to the DEIR's water supply analysis.
Mary Poppic-Reeves	14-Sep-22	C149-4	3.10 Land Use and Planning How can we know that "development under the Proposed Plan would not physically divide an established community" if the Draft EIR isn't even reacting to a specific development proposal? Those of us on the southside of Glen Ellen would argue any type of major development in the SDC corridor could sever our connection to the village on the north side of Glen Ellen. The project should work to unify, not divide, our historic community, but without specifics, we cannot know what impacts might occur and how they might be mitigated.	This comment is noted. Please see MR-8 in regards to the DEIR's historic preservation analysis.
Mary Poppic-Reeves	14-Sep-22	C149-5	3.12 Population and Housing While we are aware how much Sonoma County needs affordable housing (with two sons who've regretfully had to settle elsewhere to afford their homes), using the SDC to resolve this issue is unrealistic. From a practical standpoint, this project's horizon is not even within ABAG's Regional Housing Needs Allocation time frame (2040 vs. 2023-2030). As broadly conceived as it is now, the Draft EIR and Specific Plan can't even ensure development that complies with the requirements that new housing be firesafe, reduce environmental impacts and traffic, and mitigates the drought emergency. Right now, there are about 700 dwelling units in the Village and 350 in the concentrated southside. You don't need an expert to see that doubling—not to mention potentially tripling, the housing units in Glen Ellen by building them all in the acres between the two will have an impact. Even the lowest increase of 450 units in the Historic Preservation Plan would represent a 45% increase and have an impact of at least equal measure. Trying to solve Sonoma County's housing crisis all in one project located in a narrow Valley with one road in and out is poor planning pure and simple; nothing in this Draft EIR suggests how the attendant problems of this scale of development might be resolved.	This comment is noted. Please see MR-4 in regards to the DEIR's fire evacuation analysis and MR-6 in regards to the DEIR's analysis of housing and traffic.

Commenter	Date	Letter	Comment	Response
Mary Poppic-Reeves	14-Sep-22	C149-6	3.14 Transportation Again: one road in, one road out. Then layer in at least one car in every new garage. Even in its heyday in the 1950's the SDC didn't have as much traffic as this scale of development will generate, and the Valley of the Moon, had a much lower surrounding population back then. Adding 1,000 homes could easily add as many cars, particularly given the limited public transportation and limited services in the area. These new residents will need cars and they will need a great deal more time for commuting when they are stuck on that one road in, one road out. Adding another crossing between Arnold Drive and Highway 12 will still place all these cars, a substantial increase, on two two-lane roads that are already heavily travelled—and have a devastating record for traffic fatalities in this very area. There will be a transportation impact regardless of the scope of the project—it must be comprehensively and specifically analyzed and the impacts duly mitigated.	This comment is noted. Please see MR-6 in regards to the DEIR's analysis of housings and traffic.
Mary Poppic-Reeves	14-Sep-22	C149-7	3.16 Wildfire In 2017, we packed up our family and pets as we were ordered to evacuate our home due to the Nuns Fire and were stuck in gridlock on Arnold Drive for hours as we joined our neighbors attempting to flee the flames. The suggestion that adding 2,400 residents would not "not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan," would be laughable, if the consequences were not so frightening. The location proposed for an additional crossing between Arnold Drive and Highway 12? In 2017, it was in flames. We urge you to set this process aside and wait the short time until a development proposal has been chosen by the State. Then a Draft EIR and Specific Plan can be prepared to react to specific issues, impacts can be better analyzed and reasonable mitigation measures proposed. Please do not make a rush to judgement; this resource is too valuable to put at risk.	This comment is noted. Please see MR-2 in regards to allowing more time before finalizing the Specific plan and MR-4 in regards to the fire evacuation analysis.
Mary Poppic-Reeves	Thursday, September 15, 2022	C150-1	Please accept our correspondence into the record for the Sonoma County Planning Commission's consideration of the Sonoma Developmental Center Draft EIR and Specific Plan. Feel free to reach out if you have questions.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Maud Hallin	Thursday, September 22, 2022	C151-1	Chapter 3.3 "Air Quality and Environmental Impact " manages to defer any decision about autos to PG&E and Sonoma Electrical. This is not acceptable. As early as 2025, we are required to operate a large number of electrical vehicles. In other words, property owners will need access to charging stations. It would be ecologically correct to encourage auto owners to have charging stations connected to their home el system. Whether they decide to install el panels or not! In addition the shopping center should have a number of charging stations. Eager to make money, I presume, that you would exempt the hotel complex from parking fees on campus.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Maud Hallin	Thursday, September 22, 2022	C151-2	The authors of the Environmental impact study do not live in this area. They appear to have no knowledge of the fact that workers in the construction or remodeling, or repair industry very often commute over an 1 hour away from SDC. Just as in the wine industry, staff are expected to arrive on the job, wherever, by their own auto. Housing is outside their budget. This is one reason, why we have asked for more low income housing. The first people to be allowed to get temporary or purchase housing should be in the construction business. Then you could limit some of the trucks on Arnold Drive. We currently have 1 bus line between Sonoma and Sta Rosa every 45 minutes. It looks as if you have preferred to defer this problem to others!	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Maud Hallin	Thursday, September 22, 2022	C151-3	In most households in the age bracket of 23-65 you will find that 2 grown up persons are working outside the home. Calculating that retired people have no need for vehicle transportation(???) nor would people in the housing for mentally disturbed. You still only calculate that there will be rather low income jobs on the campus for 700+ people. As the construction costs are around $725/sq/ft in this area, one person in each family would have to work outside the Campus. With the jobs that you outline, people can't afford those single family homes. Dreams are wonderful! It is easy in a large city to limit auto transportation as buses, etc. are available. Around Glen Ellen, that is not possible. I would like to see the people over 70 who would volunteer to hop on a scooter to go shopping. As to construction a new connection between Arnold Drive and Highway 12 - this makes no sense, as Highway 12 is more	The comment is noted. Please see MR-6 for more information on VMT and traffic analysis of the Proposed Plan.

			We currently have 1 bus line between Sonoma and Sta Rosa every 45 minutes. It looks as if you have preferred to defer this problem to others!	
Maud Hallin	Thursday, September 22, 2022	C152-3	In most households in the age bracket of 23-65 you will find that 2 grown up persons are working outside the home. Calculating that retired people have no need for vehicle transportation(???) nor would people in the housing for mentally disturbed. You still only calculate that there will be rather low income jobs on the campus for 700+ people. As the construction costs are around $725/sq/ft in this area, one person in each family would have to work outside the Campus. With the jobs on campus that you outline, people can't afford those single family homes. Dreams are wonderful! It is easy in a large city to limit auto transportation as buses, etc. are available. Around Glen Ellen, that is not possible. I would like to see the people over 70 who would volunteer to hop on a scooter to go shopping.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Maud Hallin	Thursday, September 22, 2022	C152-4	The word Microgrid is dropped as a Goal. Chapter 3.6-19 This concept should be developed, and not just listed as a 20-year Goal. It is clear that the authors are clueless about solar/wind etc. energy usage. If you try to reduce pollution, how can you then ignore looking deeper into the needs for solar panels? They obviously know more about composting. Ah - I may be able to sell worms!	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Maud Hallin	Thursday, September 22, 2022	C152-5	As to construction of a new connection between Arnold Drive and Highway 12 - this makes no sense, as Highway 12 is more blocked on a regular basis, and ha higher average traffic than Arnold Drive. Plus that road would have to run right through the current wild life corridor. Besides Madrone has bicycle lanes, and is very nearby! What is needed is widening of Arnold Drive so that people may walk, or bicycle along that road.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Maud Hallin	Thursday, September 22, 2022	C152-6	Construction crews will all arrive in gas or diesel operated autos. I wonder how many people will want to buy a home at the SDC campus, if they are told they cannot operate an auto, nor connect an electrical auto to their own garage/parking space attached to their million dollar home? At what prices is the developer going to be able to sell? The Air Quality Station in Sebastopol clearly has difficulty in measuring from the SDC campus!	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Maud Hallin	Thursday, September 22, 2022	C152-7	You are trying to please some people by setting a 30' height limit for new construction. You state that existing construction is often above this height. Setting the limit to 35' would make more sense from an architectural point of view. That slight flexibility would allow for more interesting design of 3-story buildings for low income housing. Yes, you do want to make that housing attractive and pleasant for the $1 million plus owners to look at. While you tear down and/or remodel housing you could be intelligent and get some prefab housing. There are now some great companies that could ship in 20'x20' units for $50,000 with kitchen and bath all ready to connect. Later on, you could move them, stack them, etc. and create some great low income housing. Sorry for that idea, cuts into the profit of the developer!	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Maud Hallin	Thursday, September 22, 2022	C152-8	The present design has a road and lights too close to the creek. Wild life is not considered in the Report, only humans. I object! It is obvious, that the single family homes and the hotel are just there, to attract a developer. None of those are what is needed. All the housing should be low income housing, at different levels. I object to the intention to make 1 person rich at the benefit of so many hardworking people, who have to live over an hour away from their jobs, because of the cost of construction.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Meg Beeler	Wednesday, September 21, 2022	C153-1	Like many in the community, I believe the County has a once in a lifetime opportunity to stand out and lead at SDC in these times of climate crisis. Yet the DEIR fails in significant ways to offer clear goals and standards (policies) for protecting the riparian corridors, the rights of nature, and our precious natural resources. In fact, there are no stated goals for the creeks, wetlands, or beautiful lakes on the property, and minimal policies are included. The DEIR needs significant modifications to be used as a tool for systematic implementation, as required by the State. I'd like your help with this. I am commenting as a neighbor (living five minutes south of campus), a long-time hiker and passionate defender of the property, and a participant in the planning process for nearly 10 years in my role as Chair of Sonoma Mountain Preservation. Thank you for the opportunity.	The comment is noted. Please see MR-3 for an explanation of the level of detail of analysis and programmatic nature of the Draft EIR.
Meg Beeler	Wednesday, September 21, 2022	C153-2	Water is life, and by setting goals and policies to protect wetlands and riparian zones as a resource and respite for the community, and to protect migrating Coho and Steelhead, both the DEIR and Specific Plan can be enhanced, set precedent, and lead the State. Two specific goal-setting areas are central: Elevate creek protection and wildlife corridor flexibility by expanding buffers significantly; and enhance and protect rare, vulnerable wetlands and species there through setting them aside and abandoning the road through them. Just because buildings and asphalt were placed too close to the creeks in the past, there is no justifiable reason to continue outmoded practices. We know better, and the lack of studies done during this process is no excuse either. If there were goals and policies that supported wetlands, there would be no proposed new road from Arnold Drive to Highway 12. A road will create substantive, adverse effects: on the protected wetlands that support documented endangered species, the wildlife corridor, and fire egress in the face of Diablo winds coming from the East (the road will be in the direct path of 2017 fires.)[1] These impacts are not mentioned or addressed in the DEIR; goals do not support the wetlands, and "best practices" do not address the cumulative effects of such a road; or the fact that roads and wildlife corridors do not mix well. The approach of "We'll do needed studies later"	The comment is noted. Please see MR-7 for more detail on the proposed Highway 12 connector road's potential impact on wildlife. Please see also MR-4 for more detail regarding wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			gives developers no clear direction up front, and does not guarantee wetland and species protection or mitigation policy.	
Meg Beeler	Wednesday, September 21, 2022	C153-3	Riparian zone protection also lacks goals and policies to prioritize riparian protection. The DEIR ignores current studies that say creek setbacks should be up to 325 feet.[2] In addition, the DEIR and Specific Plan are in conflict. Sometimes they propose a 50-foot setback next to Sonoma Creek; sometimes they refer to existing County standards of 30-foot setbacks; sometimes they ignore Mill Creek setbacks entirely (P 41 people/wildlife interface policies). In fact, some of the proposed "Institutional development" (map 2.4-1) is right on top of Mill Creek.	Thank you for your comment. This comment is noted. As noted on page 252 of the DEIR, Policy 2-25 requires inclusion of protective buffers of at least 50 feet along Sonoma and Mill creeks, as measured from the top-of-bank, to protect the sensitive communities. Section 7-14.5 of the Sonoma County Code establishes stream setbacks for structures requiring a building permit, with minimum setbacks equal to the greatest of 1) two and one-half times the height of the stream bank plus 30 feet, 2) 30 feet outward from the top of the stream bank, or 3) any distance established in the general plan and/or zoning code. Future development would be subject to these setbacks' requirements. If riparian habitat and other sensitive natural communities are present and disturbance is required, federal and State regulations would require measures to reduce, avoid, or compensate for impacts to these resources. The requirements of these regulations are implemented through the permit process as indicated in Conditions of Approval Measure BIO-14. In addition, Conditions of Approval Measure BIO-1 requires conducting specific project biological resource assessments prior to commencement of any project. With implementation of Measure BIO-1 and Conditions

Commenter	Date	Letter	Comment	Response
				of Approval Measure BIO-14, impact of future development under the Proposed Plan on riparian habitat or sensitive natural communities would be less than significant. See also response to comment B8-5 and B8-9 regarding riparian area policy amendments. Please see MR-6 on the impact of the Highway 12 connector.
Meg Beeler	Wednesday, September 21, 2022	C153-4	I request that you please: 1) Analyze current studies relating to riparian protection, wetlands protection, and related groundwater sustainability to conform to State and County climate goals and best environmental practices. 2) Set goals and policies for protection. 3) Cite studies used to support your decisions on creek buffers, wetlands incursions, wildlife travel, and lake protection. 4) Analyze the cumulative impacts and potential degradation of floral and faunal habitats, groundwater supply, and riparian zones caused by the increased housing density, noise, construction, traffic, and demolition proposed under the Preferred Plan. Provide analysis of the impacts of redevelopment on migratory fish species, such as coho and steelhead salmon. Also analyze whether these impacts would be mitigated by a smaller redevelopment such as the HPA. 5) In the DEIR, add creeks/riparian zones and wetlands to goals, significance criteria, and section 3.1.3.3 relevant policies, implementing actions, and policies. Note that in section 3.4.1.3, local land use regulations, Sonoma County General Plan 2020, the DEIR mentions policy LU10-a for establishing maximum densities and siting standards for wetlands, sensitive natural communities, and areas of essential habitat connectivity, yet the same DEIR offers none of these. 6) Adhering to the above studies, delineate—in both the Preferred Plan and the DEIR—clear boundaries for riparian setbacks, identify the entities that a developer must work with to facilitate creek and wetland protection, or explicitly require a	Thank you for your comment. Commenter	Date	Letter	Comment	Response
Meg Beeler	21-Sep-22	C154-7	5) In the DEIR, add creeks/riparian zones and wetlands to goals, significance criteria, and section 3.1.3.3 relevant policies, implementing actions, and policies. Note that in section 3.4.1.3, local land use regulations, Sonoma County General Plan 2020, the DEIR mentions policy LU10-a for establishing maximum densities and siting standards for wetlands, sensitive natural communities, and areas of essential habitat connectivity, yet the same DEIR offers none of these.	This comment is noted. As noted on page 94 of the DEIR, "Appreciation of aesthetics and visual resources is generally subjective by nature, and therefore the extent of visual impact associated with adoption and implementation of the Proposed Plan can be difficult to quantify." Therefore, the impacts to creeks, riparian zones and wetlands were addressed in Section 3.4 on Biological Resources. Please see page 236 of the DEIR for specific criterions used to assess impacts on creeks, riparian zones and wetlands. Policy LU-10a: The proposed plan is compliant with all applicable regulations and plans including the county code and General Plan.
Meg Beeler	21-Sep-22	C154-8	6) Adhering to the above studies, delineate—in both the Preferred Plan and the DEIR—clear boundaries for riparian setbacks, identify the entities that a developer must work with to facilitate creek and wetland protection, or explicitly require a developer to ensure that redevelopment of the core campus be done in such a way, and with sufficient buffers, as to protect the natural values of the open space.	This comment is noted. Please see Section 3.4.3.3 on page 237 of the DEIR for relevant policies and implementing actions on riparian corridors, including 2-18, 2-27, and 2-30.
Meg Beeler	21-Sep-22	C154-9	7) Add specific, enforceable guidelines for riparian and wetland protections, specifying acreages and minimum boundaries on both the east and west sides of Arnold Drive, and limit allowed uses on these acreages to passive recreational uses such as hiking, mountain biking, horseback riding, photography, etc. If agricultural or commercial uses are permitted, ensure mitigations are identified and enforceable.	This comment is noted. Please see updated Table 4-3 in the Specific Plan.
Meg Beeler	21-Sep-22	C154-10	8) Please make sure that policies in the Specific Plan are consistent in Wildlife Corridor Policies (p40), People/Wildlife Interface (p 41), and policy 2-25 (p 42). 9) Please ensure that policies in the DEIR, notably policies 2-21, 2-23, 2-25, 2-27, and 2-30 are consistent.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Meg Beeler	21-Sep-22	C154-11	I appreciate the work done to date. As a private citizen reading the documents and preparing this letter, I have recently spent over ten hours, so I fully support Commissioner Carr’s imperative that more time is needed for the Planning Commission to do its job. I know that with the political will to make this project right, in line with community values, we can succeed together.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Michael Gill		C155-1	From: Michael Gill, Glen Ellen resident Thank you for the preparation of the DEIR and Specific Plan and earlier documents and for the opportunity to review and comment on them. I certainly am aware that outlining a future path for this valuable property is not easy, but we all need to get it right before redevelopment starts. My comments result from my experiences of working with environmental cleanup and land reuse issues at closed military bases around the Bay Area, as well as living part time in Glen Ellen. I look forward to receiving Permit Sonoma's responses to my comments and hope the final documents presented to the County are modified to reflect what I see is a very consistent call for a reduction in scope of the project. These changes will ensure that the open space is protected and the nearby small communities retain their charm and value, while meeting the goals of adding some needed housing.	Thank you for the letter. The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Michael Gill		C155-2	Specific Plan General Comments. SP-1. Reduce the Scale. I understand the State of California drivers for the turnover and redevelopment of this property (housing and financial stability). It is a valuable piece of land, which makes sense to reuse to help alleviate the shortage of housing stock for our residents. The question is how to most appropriately mesh it with the existing neighborhoods of Glen Ellen. According to wikipedia, the population of Glen Ellen is less than 1000 people (2010 census showed 784, in 2000 it was 992 people). If the proposal to build 1000 new residences happens, the estimate in the Specific Plan is that the town will grow by 2400 people. Or even more for the "High Development" alternative (1250 residences and 3000 people). This does not even include the 900+ workers. Given the current population and semi-rural makeup of the area, that growth will totally change Glen Ellen. Growth is predictably inevitable in most of California, but this kind of growth would strain existing services and from what I've read, isn't palatable for the existing residents. Given the need for housing, perhaps a more acceptable number of residences would be 300 units here, while other parts of the Sonoma County can share the load to provide additional housing. This would still amount to about 720 new residents, which almost doubles the current population. That alone is a challenge for all of the resource needs covered in the	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			Specific Plan and EIR (water supply, schools, utilities and services, roads, fire access/egress, etc.), but much less so than 1000 new units.	
Michael Gill		C155-3	A visual tool that Permit Sonoma could use to better illustrate what "x" residences looks like would be to provide a map overlay example of an existing neighborhood where 300 or 1000 or whatever housing units already exists. This is something people can envision and get a better idea of what the proposed numbers really mean. One example is University Village in Albany, CA, which is a residential neighborhood of dense homes. This is the development where many UC Berkeley married grad students reside. It has 974 units (multi-family attached townhouse style) on 77 acres (per wikipedia). I'm uncertain of the population. Locally, an example might highlight the Madrone or Grove Apartments in Eldridge or the "Springs" area along Hwy 12. How many people reside in those homes over how many acres? Those comparisons could offer readers something tangible to envision what this proposal means for SDC.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Michael Gill		C155-4	SP-2. Adjust the Mix. Understandably, there is a need to provide housing and that the plan be financially sustainable. To achieve that, I would propose that the SDC management more closely mimic the Presidio model in San Francisco. That is, a "Trust" would be created to oversee the mix of non-profits and some businesses that would co-exist with housing on the 200 acres. I would also propose that all housing be "affordable" housing, as that would provide a bigger dent than the current proposal. Three hundred affordable homes meet more need than 250 affordable homes (25% of 1000). They could be of medium/flex density as outlined in the Plan. Those people with the financial ability can still buy property in the Valley of the Moon. But they don't need the SDC. SDC housing should fill a bigger need and provide affordable housing. Part of the guiding principles in the Plan call for a mixed use scenario. I'd propose putting more weight on non-profits and small businesses than housing to utilize the existing 200 acres and keep the population lower. With today's world tending towards more work-at-home than in-office work for white collar jobs, less space per non-profit would be needed, therefore offering a quieter campus feel than what would have been possible pre-pandemic to support the venture. Non-profits should be encouraged to put forth plans, not just a housing developer.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Michael Gill		C155-5	SP-3. Power. I'm glad to see that renewable energy is to be used on site, as mentioned in Section 6.2. Perhaps implicit in the text, it should be noted more clearly that current California construction rules require new homes in California to install solar as part of the project. The text should state that requirement for the SDC residential development. This "California Solar Mandate" took effect January 1, 2020.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Michael Gill		C155-6	SP-4. Water. Water supplies are noted in Section 6.3, but it appears that the issue is not really settled. The text states: "Determining the ownership and use of these water rights will be another critical decision for SDC's water supply going forward." This is a huge challenge and needs early resolution. This could be a deal breaker and needs to be settled before approval of any plans. Has anyone from Permit Sonoma asked the VOMWD for data about water use and/or availability? VOMWD allows local residents to track our water use by the hour and this helps detect leaks. We are also asked to be diligent with our irrigation uses. It's clear they are concerned about limited supply due to the drought. Even with grey water and recycled water as part of the mix (Policy 6-10), can VOMWD actually supply enough water for the proposed development?? SP-5. Open Space. I totally agree with the plan's protection of the 700+ open space acres. It is a valuable space that I have enjoyed many times and hope to in the future.	The comment is noted. Please see MR-5 for imformation regarding the Water Supply Assessment and coordination with Valley of the Mood Water District.
Michael Gill		C155-7	Draft Environmental Impact Report Comments DEIR-1. Safe Cycling. In both the Specific Plan and DEIR, multi-modal transportation alternatives are discussed often, including high quality bicycle facilities. This is a good thing, given the increased population and little new road infrastructure. The current roads are small and sometimes already busy. It is an important part of the transportation equation and very welcome. But any details and "regulatory teeth" to actually make this happen seem missing. Many of the improvement plans have been around for 10 years or more (e.g., 2010 Sonoma County Bicycle and Pedestrian Master Plan). They are outlined in Section 3-14.3 and include the Sonoma Valley Trail, Class II bike lanes along the entirety of Arnold Drive between Glen Ellen and Highway 116, and more. While implementing these plans would go a long way to making cycling safer in the SDC area, how will the SDC project actually make these proposals a reality? It's not difficult to envision waiting more years for the County and State to take action, which will result in longer term unsafe cycling from new traffic growth around SDC. The real safety improvements necessary are beyond the north/south borders of SDC. If the developer is serious about making SDC multi-modal, then bike routes north and south of	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			SDC must be safe. It's not just about riding on the 200 acres. It needs to go beyond the borders. People will rides their bikes to and from SDC if it's safe. Maybe the SDC redevelopment can be the catalyst to get these projects rolling!	
Michael Gill		C155-8	DEIR-2. Existing Bike Trails. These two policies are from the DEIR (page 438) and they appear elsewhere as well: 3-15 Establish a new community bikeway connecting Railroad in Eldridge to Carmel Avenue in Glen Ellen by removing barriers and installing appropriate signage and crossings. 3-16 Create a multi- use creek trail running parallel to Arnold Drive that connects to a greater Glen Ellen-Eldridge community bikeway. I would note that this bikeway already exists. While a little work still needs to be done (open a gate and add signs), the Specific Plan isn't really presenting anything new here. Please recognize what's already there and don't take credit for something that is already done.	The comment is noted. These policies are intended to reinforce and formalize the existing bicycle network, and make connections where necessary.
Michael Gill		C155-9	DEIR-3. Support for Additional Comments. In addition to my cycling related comments above, I agree with the DEIR analysis provided by the following entities, who are much more articulate than me on many topics. I would defer to them for additional comments on the DEIR. We are consistent in concluding that no one wants the kind of proposed large-scale growth from the redevelopment of SDC. Some housing and other uses are needed and inevitable, but not the proposed amount. What they say makes total sense and I wish to add my voice to the comments from the following groups, which appear on the Save Our Space website. http://www.eldridgeforall.org/	The comment is noted. Please see MR-8 for more detail on why a lower number of housing units does not accomplish the project objectives.

Commenter	Date	Letter	Comment	Response
Meg Beeler	21-Sep-22	C156-1	We appreciate this opportunity to comment on the draft environmental impact report (DEIR) and preferred Specific Plan for redevelopment of the Sonoma Developmental Center (SDC). While we acknowledge the conflicting directives laid out in the legislation authorizing the specific planning process for the property and recognize the difficulty of making meaningful connections with stakeholders in pandemic times, we must express our overall disappointment with the DEIR and Preferred Plan, which do not reflect community input as we've witnessed in public meetings and in letters over the years-long planning process. The scale of proposed redevelopment of the 180-acre core campus is fundamentally incompatible with the rural character of the surrounding community and the north Sonoma Valley, presents a clear danger to the safety of current and future residents of the Valley in the inevitable event of wildfire, and threatens the integrity of Sonoma Mountain's irreplaceable natural resources — habitats for keystone flora and fauna, the health of the Sonoma Valley Wildlife Corridor, water quality, air quality, recreational opportunities, and historic, tribal, and modern cultural values.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Meg Beeler	21-Sep-22	C156-2	The DEIR fails to adequately or clearly describe meaningful, enforceable mitigations for the environmental impacts of redevelopment at the scale proposed, as required by the California Environmental Quality Act (CEQA). It fails to clearly delineate cumulative impacts. It does not provide sufficient analysis to give decision-makers all the information they need to satisfactorily draw conclusions about the environmental consequences of the Preferred Plan. It is our hope that by addressing the questions that follow, applicable, effective, enforceable mitigations will be identified and instituted that materially decrease or eliminate those impacts.	The comment is noted. Please see MR-3 for more information on the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Meg Beeler	21-Sep-22	C156-3	General concerns/questions The DEIR indicates that, across the board, the environmental impacts of the Preferred Plan and the Historic Preservation Alternative (HPA), which is acknowledged as environmentally superior per CEQA, are “largely comparable.” The DEIR also states that the HPA is less superior in terms of energy use, biological resources, and wildfire risk (ES.4.2). Given the significant differences in scale of the two alternatives — the HPA is half the size of the Preferred Plan — these conclusions defy logic. 1) Please explain how construction of 1,000 homes occupied by 2,500 people has the same environmental impact across virtually every category studied in the DEIR as does providing 450 homes occupied by 1,125 people (a 55% reduction)? Which studies support this finding? 2) Please explain how providing workspace for 900 people has the same environmental impact across virtually every category studied in the DEIR as does providing workspace for 600 people (a 33.3% reduction). Which studies support this finding? 3) Please explain how the HPA—which translates to less demolition through adaptive reuse of historic structures, less construction, fewer vehicle miles traveled, and fewer people on the property—uses more energy, has a greater impact on biological resources, and increases wildfire risk than the Preferred Plan, as stated in the DEIR (ES 4.2). Which studies support this finding?	This comment is noted. Please see MR-8 on the impacts of the Historic Preservation Alternative. Due to the programmatic nature of the DEIR, analysis of Project Alternatives is only required to qualitatively assess the relative impacts. The DEIR does not attempt to quantify the impacts of the Project Alterantives to the same degree as the Proposed Plan. Instead, analysis is done to assess the significance level of the impacts and compare those with those of the Proposed Plan. Case law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 15126.6(f) states that the alternatives in an EIR should be governed by a “rule of reason.”
Meg Beeler	21-Sep-22	C156-4	Impacts specific to Sonoma Mountain The entire 945-acre SDC property, including the developed core campus, is located within one of the last rural regions on the Sonoma Valley floor, with the mostly undeveloped slopes of Sonoma Mountain forming the entire western boundary and serving as a viewshed/mountain backdrop; as an informal natural reserve/safe haven for native flora and fauna; and as an informal recreational resource for hikers, cyclists, and equestrians from throughout Sonoma County and beyond. Further, historic residential use of the SDC by individuals with developmental disabilities and their caregivers had minimal human-caused environmental impacts on the property’s open spaces. Redevelopment at the scale in the Preferred Plan creates an urban footprint within this historically rural zone, significantly increasing human-caused environmental impacts	This comment is noted. No specifics on the adequacy of the DEIR are presented therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			on a number of areas identified under CEQA (i.e., Aesthetics [3.1]; Biological Resources [3.4], and Public Services and Recreation [3.13], to name a few). To mitigate impacts of any redevelopment on the historic, minimal-impact, rural quality of the property, and to ensure the viewscape is preserved, we request that:	
Meg Beeler	21-Sep-22	C156-5	1) The DEIR include mitigation measures to compensate for the loss of the rural attributes of the property at its current baseline, or a baseline that dates back no further than 10 years. Please specify which measures in the current DEIR address these impacts, and which studies support them. 2) Please study, provide mitigation measures, and document how incorporating adaptive reuse of buildings into the HPA proposal, with its smaller human footprint, would impact environmental goals.	This comment is noted. Please see Section 3.1 of the DEIR regarding impacts from the Proposed Plan on aesthetic resources at the site. Please see Section 3.4 of the DEIR on impacts from the Proposed Plan on cultural, historic and tribal cultural resources at the site. Please see MR-8 on the impacts of the Historic Preservation Alternative.
Meg Beeler	21-Sep-22	C156-6	3) The SDC's open space currently sees frequent use by recreationalists from all over Sonoma County and beyond. That use increased markedly during the pandemic, despite restrictions on travel. The level of use has remained high as the pandemic has waned. The addition of 2,500 residents, 900 workers, visitors to the proposed hotel and conference center, and their friends and family, as outlined in the Preferred Plan, will add an exponential burden on the property's open space, much of which is on the skirts of Sonoma Mountain. Please analyze what that increase in recreational use means for aesthetics, biological resources, cultural, tribal, and historic resources, and water and air quality, and identify mitigations for those impacts.	This comment is noted. Please see Section 3.1 of the DEIR regarding impacts from the Proposed Plan on aesthetic resources at the site. Pleas see Section 3.4 on impacts to Biological Resources. Please see Section 3.5 of the DEIR on impacts from the Proposed Plan on cultural, historic and tribal cultural resources at the site. Please see Sections 3.3 and 3.9 for air quality impacts and hydrology and water quality impacts. As noted on page 404 of the DEIR, "construction of new parks would be subject to separate project-level CEQA review at the time the design and exact location is proposed in order to identify and mitigate any project-specific impacts as appropriate. As such, compliance with existing regulations would reduce impacts to a less-than-significant level related to the provisions of park facilities."

Commenter	Date	Letter	Comment	Response
Meg Beeler	21-Sep-22	C156-7	4) Please analyze the cumulative impacts and potential degradation of floral and faunal habitats, groundwater supply, and riparian zones across the site, including the 750+ acres identified as open space, caused by the increased housing density, noise, construction, traffic, and demolition proposed under the Preferred Plan. Please provide analysis of the impacts of redevelopment on migratory fish species, such as coho salmon. Please also analyze whether these impacts would be mitigated by a smaller redevelopment such as the HPA.	The comment is noted. Please see MR-3 for an explanation of the level of detail of analysis and programmatic nature of this Draft EIR, and MR-7 for an explanation of the analysis of biological resources. Please also see analysis provided in Impact 3.4-1 of the Proposed Plan's potential impact on special status species on page 241 of the Draft EIR. Additionally, please see MR-8 for an explanation of why the historic preservation alternative does not meet project objectives.
Meg Beeler	21-Sep-22	C156-8	The intent to preserve and protect the 750+ acres of open space surrounding the 180-acre core campus has been codified by the state in its enabling legislation and has been promised by the county in the Preferred Plan. However, neither the Preferred Plan and nor the DEIR delineate clear boundaries for the open space to be transferred, identify a mechanism of transfer, clearly identify the entities that a developer must work with to facilitate transfer, or explicitly require a developer to ensure that redevelopment of the core campus be done in such a way, and with sufficient buffers, as to protect the natural values of the open space. Please add specific, enforceable guidelines for the open space transfers, specifying acreages and minimum boundaries on both the east and west sides of Arnold Drive, and limiting allowed uses on these acreages to passive recreational uses such as hiking, mountain biking, horseback riding, photography, etc.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Meg Beeler	21-Sep-22	C156-9	) Agricultural and commercial uses should not be permitted in open space intended to be parkland. Please clarify that uses such as those identified in Table 4.3 will not be permitted in open space identified for transfer to park agencies, and that mitigations for such uses on other open space parcels are identified and enforceable. Thank you for the time and effort you have put into developing the DEIR and preferred Specific Plan for the property. We look forward to receiving Permit Sonoma’s responses to our concerns, and hope the final plan and EIR presented to the Planning Commission for comment and to the Board of Supervisors for approval reflect substantive changes that ensure the integrity of the natural values of Sonoma Mountain, and the communities that surround it, remain intact.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required. Please also see amended Policy 2-1 of the Specific Plan, which requires that the eventual owner/operator of the open space prepare an open space plan in collaboration with the community, agencies, and organization to manage the rich diversity of resources on site, including habitat, vegetation, wetlands, native species, and other critical resources, balanced with recreation and wildfire protection needs.

Commenter	Date	Letter	Comment	Response
Tracy Salcedo	Wednesday, September 21, 2022	C157-1	Thank you Tracy for your hard work, time and effort in putting this comment together for Sonoma Mountain Preservation. We are all hopeful that Permit Sonoma will in fact take community input seriously and consider the amount of oft repeated volunteer effort and informed and educated thought that went into most all the comments. After all it is our lives that will be impacted by this misconceived and miscalculated DEIR and Specific Plan.	Your comment is noted. Please see MR-3 for an explanation of the programmatic nature of this Draft EIR.
Tracy Salcedo	Wednesday, September 21, 2022	C157-2	On behalf of Sonoma Mountain Preservation, I have attached our comments on the draft environmental impact statement and preferrred specific plan for the Sonoma Developmental Center. Thank you for your consideration. We all hope, with the incorporation of community input into a plan that is truly community driven, we will create a wholesome, viable future for this very special place and for the people who love it.	The comment is noted, however it does not pertain to the adequacy of the DEIR, thus no further response is required.
Neal K. Liddicoat	26-Sep-22	C158-1	Griffin Cove Transportation Consulting, PLLC (GCTC) has completed a review of the transportation analysis completed with respect to the proposed Sonoma Developmental Center Specific Plan project (Project) in Sonoma County, California. Details regarding the Project are presented in the Sonoma Developmental Center Specific Plan Public Review Draft (Dyett & Bhatia, August 2022). The proposed Project is the subject of a Draft Environmental Impact Report (DEIR) prepared for the County of Sonoma (Reference: Dyett & Bhatia, Sonoma Developmental Center Specific Plan Draft Environmental Impact Report, August 2022). Section 3.14 of the DEIR presents the transportation analysis. No separate technical report was prepared, although Appendix F to the DEIR is labeled “Traffic Model Data.” We should note, however, that no traffic model data are actually presented in that appendix; instead, it simply provides a table that is virtually identical to DEIR Table 3.14-3: Projected Traffic Volumes in Plan Area. (DEIR p. 441) Our review focused on the technical adequacy of the transportation analysis presented in DEIR Section 3.14, including the detailed procedures and conclusions documented there.	The comment is noted. Please see MR-6 regarding the use of VMT rather than LOS for CEQA analysis. The Proposed Plan would still adhere to objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan which pertain to vehicle level of service (LOS) standards. While most of the intersections are projected to meet the County’s LOS D standard under future conditions with buildout of the SDC Specific Plan, modifications would be necessary to achieve acceptable operation at Arnold Drive/Harney Street and SR 12/New SDC Connector Road.

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-2	BACKGROUND The proposed Sonoma Developmental Center (SDC) Specific Plan project involves the potential redevelopment of the 180-acre “Core Campus” within the overall SDC site. According to the DEIR Executive Summary (p. 7), the Project would result in buildout of 1,000 housing units, 2,400 residents, and 940 jobs. More specific development plans are described in DEIR Section 3.14 – Transportation, as follows: • 435 single-family residential units, • 345 multifamily residential units, • 220 senior residential units, • 40,000 square feet (SF) of commercial/retail space, • 190,000 SF of office space, • 70,000 SF of institutional space (described in DEIR Table 2.5-3 – Planning Area Non-Residential and Employment Buildout Summary (p. 80) as 30,000 SF of public space and 40,000 SF of institutional space), • 120 hotel rooms, and • 12.1 acres of recreational uses. We note that the specific breakdown of housing unit types addressed in the transportation analysis is not presented in either the DEIR Project Description or in the Specific Plan document. Questions regarding the specific development plan are discussed in our comments below.	Thank you for your comment letter. The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-3	TRANSPORTATION ANALYSIS REVIEW Our review of the DEIR transportation analysis for the proposed Sonoma Developmental Center Specific Plan project revealed several issues that must be addressed prior to certification of the environmental document and approval of the project by the County of Sonoma. These issues are presented below. Flawed Analysis of Plan Consistency – Impact 3.14.4.5 (DEIR p. 443) addresses the issue of potential Project-related conflicts with "a program, plan, ordinance, or policy addressing the circulation system." Among the plans considered here is the Sonoma County General Plan 2020. The DEIR states that: Objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan pertain to upholding vehicle level of service standards. As individual development projects occurring within the Proposed Plan complete traffic impact studies as required by the Sonoma County Department of Transportation and Public Works (DTPW), the potential exists for identification of locations where LOS [Level of Service] targets would be exceeded. The General Plan objectives referenced here require operation at LOS C on roadway segments (except where exceptions have been adopted) and LOS D at intersections. Attachment 1 contains an excerpt from the General Plan, including the figure illustrating where LOS exceptions have been approved.	The comment is noted. Please see MR-6 regarding the use of VMT rather than LOS for CEQA analysis. The Proposed Plan would still adhere to objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan which pertain to vehicle level of service (LOS) standards. While most of the intersections are projected to meet the County's LOS D standard under future conditions with buildout of the SDC Specific Plan, modifications would be necessary to achieve acceptable operation at Arnold Drive/Harney Street and SR 12/New SDC Connector Road.

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-4	The DEIR (p. 444) goes on to state: . . . while traffic congestion effects of the Proposed Plan or development of individual sites within the Planning Area may not comply with the LOS targets established in Sonoma County General Plan Objectives CT-4.1 and CT-4.2, for the purposes of the Proposed Plan's CEQA assessment this would not be considered an adverse environmental impact. We believe this conclusion is erroneous. In fact, we believe that the failure to conform to level of service standards established within the County's adopted General Plan constitutes a clear "conflict with a program, plan, ordinance, or policy addressing the circulation system." Further, the failure to include any documentation within the DEIR regarding conformance to the General Plan LOS objectives is a significant deficiency.	The comment is noted. Please see MR-6 regarding the use of VMT rather than LOS for CEQA analysis. The Proposed Plan would still adhere to objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan which pertain to vehicle level of service (LOS) standards. While most of the intersections are projected to meet the County's LOS D standard under future conditions with buildout of the SDC Specific Plan, modifications would be necessary to achieve acceptable operation at Arnold Drive/Harney Street and SR 12/New SDC Connector Road.
Neal K. Liddicoat	26-Sep-22	C158-5	We note that a detailed traffic impact analysis has been conducted for the Project, although that document has not been included in the DEIR. Specifically, Footnote 118 (DEIR p. 410) references the Focused Traffic Operations Analysis for the SDC Specific Plan (W-Trans, August 2022 [actually July 6, 2022]). Although the traffic analysis is not part of the DEIR, we reviewed it to establish whether the Project conforms to General Plan Objectives CT-4.1 and CT-4.2. Our review revealed that the WTrans report (p. 3) states: Under future conditions with implementation of the SDC Specific Plan, two intersections are projected to operate unacceptably if no modifications to the current roadway configurations are made. The intersection at Arnold Drive/Harney Street would operate unacceptably at LOS F during the p.m. peak hour . . . The future new intersection on SR 12 at the new SDC Connector Road would have unacceptable LOS E operation on the stop-controlled connector road approach . . . Although improvements are identified that would remedy these	The comment is noted. Please see MR-6 regarding the use of VMT rather than LOS for CEQA analysis. The Proposed Plan would still adhere to objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan which pertain to vehicle level of service (LOS) standards. While most of the intersections are projected to meet the County's LOS D standard under future conditions with buildout of the SDC Specific Plan, modifications would be necessary to achieve acceptable operation at Arnold Drive/Harney Street and SR 12/New SDC Connector Road.

Commenter	Date	Letter	Comment	Response
			deficiencies, no assurance is provided that those measures would be implemented.	
Neal K. Liddicoat	26-Sep-22	C158-6	The focused traffic study (p. 5) also says: With the additional traffic generated by the buildout of the SDC Specific Plan, the segment of SR 12 between Arnold Drive and Trinity Road would continue to operate below the County's standard at LOS D, as would the segment of Arnold Drive between SDC and Madrone Road. Although these road segments are also identified as falling short of the County LOS standard without the Project, no mitigation measures were proposed to allow operation at an acceptable LOS. In any event, it is clear that these two roadway segments will fail to meet the County LOS standard upon completion of the Project, thereby violating the General Plan objectives. In conclusion, the information necessary to address conformance with General Plan Objective CT-4.1 and CT-4.2 exists, but was not included within the DEIR, which would have allowed public review. As described here, that information indicates that the Project fails to conform to the County's LOS standard, as two intersections and two road segments will	The comment is noted. Please see MR-6 regarding the use of VMT rather than LOS for CEQA analysis. The Proposed Plan would still adhere to objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan which pertain to vehicle level of service (LOS) standards. While most of the intersections are projected to meet the County's LOS D standard under future conditions with buildout of the SDC Specific Plan, modifications would be necessary to achieve acceptable operation at Arnold Drive/Harney Street and SR 12/New SDC Connector Road.

Commenter	Date	Letter	Comment	Response
			operate at unacceptable levels of service upon completion of the Project, and no assurance was provided that these deficiencies will be remedied. Thus, a significant impact exists with respect to conflicts with the adopted General Plan. Finally, the focused traffic study must be incorporated into the DEIR. The provision of this new information within the DEIR provides grounds for recirculation of the document.	

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-7	Project Trip Generation is Underestimated – The DEIR (p. 440) states that the Project will generate 5,736 daily trips. Of that total, 1,398 of those trips (i.e., 24.4 percent of the total) will be "captured within the campus itself," resulting in net external trip generation of 4,338 trips. We believe the DEIR has substantially underestimated the volume of traffic associated with the Project. The DEIR's Project trip generation estimate was developed using the SCTM19 travel demand forecasting model maintained by the Sonoma County Transportation Authority (SCTA). The specific trip generation factors employed were not revealed in the DEIR. Consequently, it is impossible for the reviewing public to evaluate the reasonableness of either those factors or the resulting trip generation estimates. Traffic impact analyses for proposed development projects commonly use information presented in the Institute of Transportation Engineers (ITE) document Trip Generation Manual (Eleventh Edition, 2021) to develop project-related trip generation estimates. Although we acknowledge that the ITE trip rates often differ from corresponding rates contained within travel demand forecasting models such as the SCTM19 model, comparison of an estimate based on the ITE information versus the estimate documented in the DEIR provides a valuable perspective on the credibility of the DEIR Project's transportation analysis.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-8	Two scenarios are addressed here. The first employs the Project plan as described in DEIR Section 3.14 - Transportation, and the second considers a maximum residential development scenario based on information in the Specific Plan document. DEIR Section 3.14 – Transportation Project Plan Scenario Table 1 provides a trip generation estimate for the Project based on the plan as described in DEIR Section 3.14 - Transportation and on commonly-accepted procedures documented in the ITE Trip Generation Manual. That estimate reflects the following parameters: • The land use values described in DEIR Section 3.14 – Transportation, including the specific housing type breakdown, were evaluated. • The ITE Trip Generation Manual typically provides two methods to develop an estimate of project-related traffic: one using an average rate and one using a fitted curve equation. For this analysis, we have reported whichever of those two methods provides a lower value, so as to provide a conservative estimate of Project trips. The trip generation data sheets for this estimate are presented in Attachment 2. • Within each housing type, it was assumed that 25 percent of the residential units would be inclusionary income-restricted units, in order to conform to Specific Plan Policy 4-14 (Specific Plan, p. 4-25). Because these units generally produce lower volumes of traffic, this assumption again results in a conservative trip generation estimate. • Because the specific uses included within the public/institutional land use are not currently well-defined, no trip generation estimate was included for that land use category. As shown in Table 1, the Project is estimated to generate 12,253 daily trips. This is obviously substantially (i.e., 114 percent) greater than the DEIR estimate of 5,736 daily trips. As we stated above, model-based trip generation factors often differ from the	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
			ITE trip rates. However, a difference of this magnitude is exceptional and is greater than we have ever seen. Consequently, we question the validity of the DEIR trip generation estimate.	

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-9	Maximum Residential Development Scenario As we indicated above, we have questions regarding certain aspects of the proposed development plan. One such question concerns how many residential units will be constructed. Although the DEIR transportation analysis addresses development of 1,000 residential units, the Specific Plan indicates that a greater number of units is possible. Table 4-2: Minimum and Maximum Housing Units by District (Specific Plan, p. 4-12) provides detailed information regarding how many housing units could be constructed within various subareas of the Project. That table reveals that the maximum number of housing units that could potentially be built is 1,210. Further, the notes to the table state that "[u]p to 10% deviations from the minimum and maximum by district are subject to approval by the Community Development Director." If such a deviation from the maximum values were to be approved, the total number of residential units would increase to 1,331 (1,210 X 1.10 = 1,331). To assess the impacts of this maximum development scenario with respect to the volume of traffic associated with the Project we have performed a second trip generation analysis, as summarized in Table 2. The basic parameters of this analysis are similar to those described above for the Table 1 analysis. Attachment 3 contains the data sheets for the residential uses; the non-residential data sheets are unchanged from the previous analysis. With consideration of the larger number of residential units, the Project's total daily trip generation increases to 14,290. This is 149 percent greater than the value claimed in the DEIR.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts. Furthermore, the Proposed Plan evaluates a total of 1,000 residential units, and this is reflective in the Specific Plan.

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-10	Summary The analysis presented here indicates that the Project's daily trip generation has been substantially underestimated. This finding relates directly to the Project's impact with respect to vehicle-miles traveled (VMT). The DEIR acknowledges the relationship between trips and VMT at p. 447, where it says: . . . trip reductions should in theory translate to roughly equivalent VMT reductions. Thus, trip increases, as we have described, will similarly translate to roughly equivalent increases in VMT. Further, as described at DEIR p. 425, the calculation of VMT: . . . is based on the estimated number of vehicles [actually, vehicle-trips] multiplied by the distance traveled by each vehicle. If, as we have found, the number of vehicle trips is 2.14 – 2.49 times greater than the value considered in the DEIR, then the VMT values associated with the Project will also be 2.14 – 2.49 times greater than the DEIR findings. Although the DEIR has already concluded that the Project's VMT impact will be significant and unavoidable, it has failed to accurately portray the magnitude of that impact. This is a serious deficiency in the DEIR, which suggests a need to reevaluate the Project's impact and recirculate the DEIR for further public review.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-11	Internal Trips are Substantially Overestimated – As described above, the DEIR transportation analysis (p. 440) claims that 1,398 of the Project's total 5,736 daily trips will occur completely within the Project site. In other words, 24.4 percent of the vehicle-trips resulting from the Project would never leave the Project site. These trips, which are typically referred to as internal trips, would have no impact on any element of the transportation system beyond the Project boundaries. Because this a substantial percentage, it seemed appropriate to test the validity of this claim. Various tools are available to develop estimates of internal tripmaking at mixed-use developments such as the proposed Project. Three such tools have been employed here: • Institute of Transportation Engineers/NCHRP 684 Internal Trip Capture Estimation Tool – As described in the ITE Trip Generation Handbook (Third Edition, September 2017, p. 46), this approach is based on procedures documented in National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Trip Capture Estimation for Mixed-Use Developments. That report documents the extensive research, data collection, and analysis undertaken in developing and validating the recommended procedure.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-12	U.S. Environmental Protection Agency (EPA) Mixed Use Trip Generation Model – As described at the EPA website (https://www.epa.gov/smartgrowth/mixed-use-trip-generationmodel), this model was developed cooperatively between EPA and ITE. Six metropolitan regions were evaluated in detail and the resulting model was validated against actual traffic counts at mixed-use developments across the country. This model is in use in California, Washington, and New Mexico, and according to EPA the model has been adopted as a statewide standard by the Virginia Department of Transportation. • San Diego Association of Governments (SANDAG) Smart Growth Trip Generation Spreadsheet Tool – Similar to the EPA method, this tool employs trip generation rates specific to the San Diego region. Although the trip rates vary from the ITE rates, the internal trip capture results should be representative of a development similar to the proposed Project	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts
Neal K. Liddicoat	26-Sep-22	C158-13	The results of these analyses are summarized below. ITE/NCHRP 684 Internal Trip Capture Estimation Spreadsheet Tool Attachment 4 contains a copy of the spreadsheet illustrating the results of this analysis procedure. Although the spreadsheet tool allows for adjustments to be made to reflect transit usage and changes to vehicle occupancy, no such modifications were made. Doing so would simply reduce the number of vehicle-trips estimated (internal, external, and total) with no effect on the resulting internal trip percentages. As shown in Attachment 4, the model projects an internal capture percentage of nine percent (actually 8.8 percent). The gross total of 12,256 daily trips would be reduced to 11,180, with 1,076 internal trips estimated. (Note that three of the individual daily trip totals were rounded up to ensure equal	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
			numbers of entering and exiting daily trips in the spreadsheet. Thus, the total trip generation in the model is 12,256 instead of the 12,253 described earlier.)	
Neal K. Liddicoat	26-Sep-22	C158-14	EPA Mixed Use Trip Generation Model The results of this analysis are presented in Attachment 5. According to the EPA tool, the Project's 12,253 daily trips would be reduced to 11,291 external vehicle-trips (a difference of 962 trips). Those 962 internal trips include 796 vehicle-trips, 114 external walking trips, and 53 external transit trips. Considering only vehicle-trips (and ignoring external walking and transit trips), the 796 internal vehicle-trips represent an internal capture rate of 6.5 percent.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts
Neal K. Liddicoat	26-Sep-22	C158-15	SANDAG Smart Growth Trip Generation Spreadsheet Tool As described above, the SANDAG tool is very similar to the EPA tool, but with minor modifications to reflect local San Diego conditions. Nonetheless, it is believed to provide valuable perspective regarding the level of internal tripmaking at the proposed Project. The SANDAG results are provided in Attachment 6. The SANDAG model estimates that a total of 996 trips will be in the form of 821 internal vehicletrips, 120 external walking trips, and 55 external transit trips. The 821 internal vehicle-trips constitute 6.7 percent of the 12,253 gross total daily trips.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-16	Summary The internal trip values derived from the three models presented here range from 6.5 to 8.8 percent, and all are substantially lower than the 24.4 percent value employed in the DEIR analysis. By substantially overstating the volume of traffic to be captured within the Project site, the number of external trips was excessively reduced. Consequently, the DEIR analysis has failed to accurately assess the off-site impacts of the Project. Specifically, by underestimating the number of external trips, the analysis has similarly understated the Project-related VMT, which serves as basis for determining the significance of the Project's transportation impact. In short, the Project's transportation impact has been greatly understated due to a failure to provide an accurate estimate of the volume of traffic resulting from the Project.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Neal K. Liddicoat	26-Sep-22	C158-17	Flawed Project Traffic Assignment – DEIR Table 3.14-3: Projected Traffic Volumes in Plan Area (DEIR p. 441) presents traffic volume information for the three road segments that provide access to the site – Arnold Drive north and south of the site and the proposed Highway 12 connector. (Orchard Road connects to Jack London State Park to the west of the site, but would not be expected to carry a meaningful volume of Project traffic. That road is not included in the DEIR analysis.) Information is presented for various scenarios, both with and without the Project and with and without the Highway 12 connector. Based on this information, it is possible to derive the Project traffic assignment – that is, how many of the Project's claimed 4,338 external daily trips are estimated to be added to each of these three road segments. Table 4 below summarizes that information. (We should note that we were unable to confirm all of the existing traffic volumes, as DEIR p. 419, which apparently includes some of that information, was missing from the document that was available for downloading from the county website.) In each scenario analyzed, the volume of Project traffic assigned to the regional access roads falls substantially short of the 4,338 external trips claimed to be generated by the Project. In both scenarios involving implementation of the Highway 12 connector, the volume of traffic projected on Arnold Drive between Harney and Glen Ellen is actually shown to be reduced upon completion of the Project, which seems unlikely. The volume of Project traffic and its relationship to the claimed Project trip generation is summarized as follows: • Existing + Project (With Highway 12 Connector): 4,070 Daily Trips (93.8% of Project trips) • Existing + Project (No Highway 12 Connector): 3,410 Daily Trips (78.6% of Project trips) • Future + Project (With Highway 12 Connector): 3,320 Daily Trips (76.5% of Project trips)	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
			• Future + Project (No Highway 12 Connector): 2,650 Daily Trips (61.1% of Project trips)	

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-18	The DEIR analysis apparently fails to include a substantial portion of the Project traffic. Oftentimes, this sort of oddity is described as being due to existing or "background" traffic being diverted to other routes when the Project traffic demand is added to the study area roads. This can occur in a travel demand forecasting model when the added traffic causes a particular route to become congested and have high travel times, so the model redirects traffic to other, less congested routes so as to create an equilibrium condition on the study area road network with respect to travel time. In this case, though, no such alternative routes are available, so this explanation would not apply. The only explanation that does seem to apply is that the analysis is defective, and that it fails to accurately account for the full volume of Project traffic. The significance of this deficiency is magnified by the fact that the DEIR analysis only includes about 38 percent of the actual volume of Project traffic (i.e., 4,338 external trips compared to the corrected values of 11,180 – 11,291 documented in Table 3). The transportation analysis must be revised to remedy these substantial deficiencies, and the new analysis must recirculated for public review.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts
Neal K. Liddicoat	26-Sep-22	C158-19	5. Defective Vehicles-Miles Traveled Analysis – The analysis of VMT impacts (Impact 3.14-2, DEIR p. 445) indicates that the Project will have a significant and unavoidable impact, with a significant impact relative to Household VMT and less than significant impacts regarding Employment VMT and Total VMT per Service Population. A significant impact was also found with respect to induced VMT associated with the proposed connector to Highway 12 (which is described as an "east-west emergency access connection from the site"). (DEIR p. 447) We believe the VMT analysis is flawed, as described in the following sections.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-20	Transportation Demand Management Effects The VMT analysis is summarized in DEIR Table 3.14-4: Planning Area VMT Metrics. (DEIR p. 446) That table includes a section labeled “Proposed Plan with 15% TDM Reduction,” which is described as being for informational purposes and “reflect[s] a theoretical 15% reduction in VMT associated with required TDM measures.” We believe this information is misleading, as no support is provided with respect to the feasibility of actually achieving a 15 percent reduction in VMT. Further, based on this “theoretical” information the DEIR makes the questionable and conclusory statement that (DEIR p. 447): . . . it is likely that actual VMT will be less than the projections above. Our analysis has suggested that, to the contrary, the actual VMT will be substantially greater than those projections. In fact, only one paragraph later the DEIR contradicts itself and recognizes the questionable nature of the suggested TDM benefits (DEIR p. 447): However, the ability for individual development projects to achieve a 15 percent reduction in VMT is uncertain. Clearly, any statement regarding the potential benefits of implementing TDM measures at the Project must be taken with a sizable grain of salt.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-21	Employment VMT Analysis As noted above, the DEIR analysis found a less than significant impact with respect to Employment VMT (also referred to as "Home-Work VMT per Worker" in the DEIR), with a finding of 4.8 homebased commute VMT per worker. (DEIR p. 445) Table 3.14-4 lists values for other pertinent geographical areas near the Project, as follows: • Planning Area Baseline Average: 7.1 home-based commute VMT per worker, • Countywide Baseline Average: 12.4 home-based commute VMT per worker, and • Regional Baseline Average: 16.9 home-based commute VMT per worker. These values raise questions regarding the validity of the DEIR's employment VMT finding of 4.8 home-based commute VMT per worker. This value is about 67 percent of the corresponding value for the Planning Area, 39 percent of the Countywide value, and only 28 percent of the Bay Area Region value. Without further substantiation of the DEIR's VMT analysis procedures and background parameters and inputs, it is difficult to readily accept that the Project's VMT result would be so vastly different from the other areas referenced above. Unfortunately, the reviewing public is expected to blindly accept the output of the SCTM19 travel demand forecasting model even though, as described above, the model has obvious flaws with respect to its ability to estimate Project-related traffic volumes. In short, we question whether the employment VMT value derived for the Project is credible.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
Neal K. Liddicoat	26-Sep-22	C158-22	Proposed Policies Reducing VMT Impact In recognition of the Project's significant and unavoidable VMT impact, the DEIR addresses ways to reduce that impact. The primary approach to achieving this goal is apparently Specific Plan Policy 3- 41, which states, in part (Specific Plan p. 3-12): Require all development to reduce vehicle trips by at least 15 percent below rates listed by the Institute of Transportation Engineers Trip Generation manual using transportation demand management strategies. As we described above, however, the Project's supposed trip generation, as reflected in Section 3.14 – Transportation, is already extremely low. According to the DEIR, the total daily trip generation is 5,736 trips/day. This includes trips associated with 1,000 residential dwelling units and substantial non-residential development types although, unfortunately, no trip generation breakdown is provided between the residential and non-residential land uses. For perspective, if we totally ignore the non-residential development (a frankly ridiculous notion, given that this ignores 190,000 SF of office space and 40,000 SF of commercial space), the Project's trip generation rate would be 5.736 trips per dwelling unit (i.e., 5,736 trips / 1,000 DU = 5.736). If the non-residential land uses were included, the overall Project trip rate would be substantially lower.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts
Neal K. Liddicoat	26-Sep-22	C158-23	For comparison, the current ITE daily trip generation rates for various types of residential uses that are potentially applicable to the Project are as follows: • Single-Family Detached Housing: 9.43 daily trips/dwelling unit, • Single-Family Attached Housing: 7.20 daily trips/dwelling unit, • Multifamily Housing (Low Rise – Not Close to Rail Transit): 6.74 daily trips/dwelling unit. Therefore, it appears that, if the Project's trip generation estimate is to be believed, the Project trip rate is already substantially less than 15 percent below the ITE trip rates. Two conclusions can be	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
			derived from this information: • The Project's trip generation as presented in the DEIR is not to be believed, and • Specific Plan Policy 3-14 is specious.	
Neal K. Liddicoat	26-Sep-22	C158-24	Summary As we have described above, the DEIR transportation analysis is significantly flawed and those flaws relate directly to the validity of the VMT analysis. To briefly summarize: • The Project trip generation estimate substantially understates the volume of traffic that will result from the Project. • The internal trip capture rate is excessive, resulting in further reduction of the Project's traffic volumes. • Only a portion of the Project's trips have actually been assigned to the study area roads. • The purported benefits of implementation of TDM strategies are unlikely to be realized. • The Project's derived Employment VMT value is highly questionable, when viewed in light of corresponding values for nearby geographical areas. • Specific Plan Policy 3-41, which is claimed as a means to reduce Project VMT, is virtually meaningless, unless the Project's trip generation estimate is substantially modified to reflect reality. The VMT analysis must be modified to correct the deficiencies described above. Upon completion of that revised VMT analysis, the DEIR must be recirculated for further public review.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Neal K. Liddicoat	26-Sep-22	C158-25	Our review of the transportation analysis presented in the Draft Environmental Impact Report for the proposed Sonoma Developmental Center Specific Plan project in Sonoma County, California revealed several issues affecting the validity of the conclusions presented in that document. Particular deficiencies were identified with respect to the volume of traffic associated with the Project, how much of that traffic will be captured internally, the assignment of that traffic to the study area roads, and the validity of the estimate of Project-related vehicle-miles traveled. These issues must be addressed prior to approval of the proposed project and its environmental documentation by the County of Sonoma.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts
Norman Gilroy		C159-1	Comments on Historic Alternative appear to be written as a put-down to downgrade the Historic Alternative and boost the Preferred Plan, with comments prepared by the same author as proposed the Plan. Not appropriate to EIR process. Supposed to be dispassionate examination. Best done by a third party. References to the "community alternative" are to the approach and plan in the proposal presented to DGS on September 9, 2022 by the community in Glen Ellen and the Sonoma Valley most affected by the impacts of the proposed Plan.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Norman Gilroy		C159-2	Comments/questions: On page 561: assumes "a preference for more large lot, single family home to maximize financial feasibility". Based on what analysis or precedent? In fact community's alternative does not rely on large lot, single family homes, but contains a mix of all types of housing in a village community setting. On page 561: "open space available within the Core Campus would be less than in Proposed Plan due to lower densities in existing buildings and the location of buildings within areas reclaimed as open space in Proposed Plan". Based on what analysis? In fact, the community's alternative has more open space than the Proposed Plan and buildings do not interfere with open space. On page 562, paragraph 2: Refers to "lower financial feasibility" of Historic Alternative. Based on what evidence? Community's plan shows more financial feasibility based on compact smaller scale layout rather than sprawling layout in	A financial feasibility study was completed as part of the SDC Specific Plan planning process. Additionally, it is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			Preferred Plan. On page 562 Para 2: “lower potential for well designed active gathering spaces”. Based on what analysis? Community plan has equal or more spaces for active gathering.	
Norman Gilroy		C159-3	On Page 563, Para 2: “area available for habitat and movement would be … lower than the Proposed Plan”. Based on what analysis? Community plan shows increase in space for wildlife habitat and movement over Preferred Plan. “ On Page 564, Para 2 & 4: “lower inefficiency of historic buildings for heating and cooling and difficulty of updating energy systems in existing buildings”. Based on what evidence and what studies? Old fashioned thinking. Not true in light of European and US experience where existing buildings are often brought up to modern standards, producing an efficient, net zero, low carbon footprint using fossil fuel free heat pumps and “second skin” technologies like those suggested in the community plan. On Page 564,, Para 4. “Would provide less support for an expanded transit system in the area”. On what evidence? In fact there is virtually no transit system in the area. The community’s plan includes one, owned and operated by local people, part of the local community at village scale, connecting to County system and even SMART in its present and future service configurations.	Thank you. The comments are not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Norman Gilroy		C159-4	On Page 565, Para 1: "Compared to the Proposed Plan, the Historic Alternative would have a similar degree of (energy and greenhouse gas emission) impacts". On what evidence or studies? In fact, a smaller village plan with a mix of adaptive use of existing buildings would have a smaller degree of impacts in those area than the massive 1000 or more unit and commercial space plan proposed as "preferred" in the draft EIR. On page 565, Para 3: "somewhat greater exposure to hazardous materials, result in hazardous waste materials". Based on what evidence or analyses? With aging infrastructure left in the ground and "second skin" technologies sealing in old materials and replacing plumbing and electrical with new, the exposure is likely to be lower as evidenced by technologies cited here On page 565, Para 4: "impacts on hydrology, drainage and water quality similar to Proposed Plan due to demolition still required for demolition of existing buildings". Again, based on what analysis and evidence? The Historic Alternative would, as in the community plan, result in less demolition and deconstruction where appropriate, resulting in lower impacts on the resources listed	Chapter 3.6.3 of the DEIR analyzes the energy and greenhouse gas emissions impacts of the Proposed Plan. Furthermore, the impacts are compared to the project alternatives in Chapter 4.
Norman Gilroy		C159-5	On Page 566, Para 1: "Larger areas of Core Campus would likely remain developed with creek buffers and wildlife corridors maintaining their current areas instead of expanding as in the Proposed Plan." Again full of suppositions, and based upon what study or evidence? "Likely" is not a term that is appropriate to an evaluation under CEQA (argumentative and imprecise). In the community plan, the wildlife corridor and creek buffers arte greatly expanded and placement of a community of 2500 people in 1000 units with 1500 cars immediately adjacent to those sensitive amenities is avoided. On Page 566, Para 2, Land Use and Planning: "Historical Alternative would reduce affordable housing, maximize historic preservation, focus on single-family detached residential units rather than other typologies of residential in order to support the high costs associated with the adaptive use of historic buildings, and limit stores, services and community amenities on the site". Based on what evidence, research or studies? Again, old fashioned thinking, when the community plan, while admittedly reusing historic buildings (a good thing), will increase the affordable housing available, provide a vibrant	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			mix of types of housing and supporting uses (though in a rural village setting at a scale smaller than the PP), and will handle the supposed "high costs" by innovative means available to anyone who puts his mind to it. On page 566, Para 3 & following page: "the opportunities (for enhancing th streetscape, improving bicycle facilities, and providing a network of paseos, parks and open spaces within the Core Campus) would be limited in this Alternative due to the increase in historic buildings retained which would limit the possible changes in the streetscape" and "alternative would have significantly less housing available for working families, students, seniors and households with low, very low, and extremely low incomes".	
Norman Gilroy		C159-6	Again, where is the evidence to support this statement? Or is it supposition by the author stated to support the Proposed Plan? The community's plan has as many as 470 units of affordable housing able to support those residents while the Proposed Plan has 250 (maybe 275) – a 60% increase, and available to all of the mix referred to in the EIR. The village, even though smaller n scale, would avoid the problem of squeezing all 1,000 units into the same space, likely reducing the opportunities for the amenities listed in the Proposed Plan. On page 570. Para 2 Wildfire: "Impact from Wildfire would be greater than the Proposed Plan, longer evacuation time in certain scenarios". Again, based on what evidence? Nor substantiated in fact. The Historic Alternative would add a substantially smaller population to the area, resulting in fewer dangers and impacts in a wildfire than the more than 1000 units added in the Proposed Plan. The Historic Alternative would function with or without the escape route to Hwy 12 included in other alternatives in the EIR and, with a smaller number of peole needing to escape, would shorten the evacuation time in case of a wildfire rather making it longer as claimed.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Norman Gilroy		C159-7	On page 570-572: “Significant impacts of the Proposed Plan and the Historic Alternative are largely comparable, but the HA would be less superior in environmental features such as energy use, biological resources, and wildfire risks, and would not support key objectives related to increased housing supply, varied housing opportunities, community vibrancy, and long term fiscal sustainability to the same degree as the proposed plan”. Where is the evidence for any of these claims? Evidence has been provided to the contrary in each of the categories in the EIR. Each of the summary claims is speculative, without supporting data or findings, and seemingly has been presented by the author to support his/her Proposed Plan. Not appropriate for a CEQA evaluation. The draft EIR states “Overall, the Historic Preservation Alternative is the environmentally superior alternative”. We agree, and we urge the Planning Commission to adopt it as the Preferred Alterative and Proposed Plan under the Final EIR. Thank you for the opportunity to testify.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Ritch Foster	Monday, September 26, 2022	C160-1	I am attaching a letter and would appreciate it being included in Public Comments as regards the SDC Specific Plan and the SDC DEIR. Thank you.	Thank you.
Ritch Foster	Monday, September 26, 2022	C160-2	I do not support any of the proposals submitted by Permit Sonoma for development of the SDC Specific Plan. It is MUCH TOO LARGE of a project to be sandwiched in between rural Glen Ellen. The proposals need to be SCALED BACK. Consider the North Sonoma Valley MAC proposal, which included Historic Preservation, increased protection of the wildlife corridor and reduced housing numbers. We need a proposal with fewer significant negative impacts on the surround communities of Glen Ellen, Kenwood and the Sonoma Valley. Why does it seem that you have not heard the majority of people that have spoken out against the huge overreach of the current proposal? I would, however, support a development of 450 or fewer low-income and affordable homes (NOT market rate), especially if many of the buildings could be adaptively reused, and the Historic District preserved.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Ritch Foster	Monday, September 26, 2022	C160-3	The inclusion of a hotel in this project is wrong for so many reasons. It would only exacerbate traffic and the need for low-income workers to be traveling long distances for work…we are supposed to be CUTTING BACK on traffic and our carbon imprint, not ex- acerbating it. Plus, the water use needed for a hotel is FAR beyond that of residences. We are already experiencing drought conditions and water levels/supply issues with multiple dry years affects our diminishing water supply. A large development (1000 homes plus a hotel) would certainly dangerously diminish our water supply. The only reason to include a hotel in the project is its profitability enticement for a developer, and that is not compelling enough, considering the negative impacts of VMT and traffic that would create.	Thank you for your comment. The Water Supply Assessment, includes analysis for both proposed residential and non-residential uses. It can be found in the Appendix of the DEIR.
Ritch Foster	Monday, September 26, 2022	C160-4	Wildfire evacuations would be significantly negatively impacted with the addition of 1,000 new homes and 2,000+ additional vehicles. It is laughable to say that the impact would be insignificant! For those of us who were caught in real-time long traffic delays during previous evacuations, we would strongly disagree. Why are you ignoring the reality of the impact of overdeveloping this site will have on our small rural community? Why have you not considered or pursued outside or alternative funding sources or implementation of a public trust option?	See Master Response 4 created to address questions about the wildfire evacuation analysis. Furthermore, the Chapter 7 of the Specific Plan includes a financing and implementation strategy.
Ritch Foster	Monday, September 26, 2022	C160-5	Why is the state not being held responsible for the condition they are leaving the buildings, property and infrastructure in? Their neglect and the cleanup costs associated with developing the site seem to be a big factor in your feeling the need to significantly overdevelop the property in order to offset these costs which should not be the responsibility of our local community to absorb. Please consider all of the important points that so many have brought to you and do not accept this current plan.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Robert Baeyen	Monday, September 26, 2022	C161-1	No, no, no. Do not proceed another step with the current plan. The SDC property is worth far more to Glen Ellen, Sonoma Valley, the migrating wild life and the county than any development will ever be. The plan would alter the character of the entire area. I do not understand how our supervisors and permitting department could ever seriously consider such a plan. It is directly opposite to our own 2020 General plan. Our Supervisors and voters just voted to extend the very nature	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			of our beautiful county for another 20 year. Then they approve of this? No we do not.	
Robert Baeyen	Monday, September 26, 2022	C161-2	There are dozens of examples of this in the 2020 plan, for example: Policy OSRC-1a: Avoid amendments to increase residential density in Community Separators, since these densities were established based upon the policies set forth in other elements of this plan as well as the open space, separation and visual considerations identified in this section. The integrity of Community Separators cannot be maintained at densities in excess of one unit per ten acres. However, under no circumstances shall this policy be used to justify an increase in density from that designated on the land use map. How can the current plan be approved if we as a county have vigorously made it known that this plan is not wanted. I haven't even mentioned the strain this would put on the infrastructure etc.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Rowan Schneider	Thursday, September 22, 2022	C162-1	My name is Rowan, I live in El Verano and I have some concerns about pushing the SDC Project in a for-profit direction and I have a potential alternative. You have done a great job weighing community and environmental needs. As someone who lives downstream near the Sonoma Creek, the care and attention brought to this project is very comforting. The broader social and economic goals of creating a new gathering place is inspiring. I fear that the wonderful plan put forward in the SDC Public Review Draft will be compromised in its execution.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Rowan Schneider	Thursday, September 22, 2022	C162-2	The execution of the plan will reflect its funding; if a developer assumes responsibility for this project they will be compelled to complete it in the most profitable manner. Construction would follow conventional production methodologies and produce a space with the heart and character of an outdoor mall. The quality and ethic of the execution of this project will ripple through Sonoma Valley and Sonoma County. This land being left for profit would further entrench us in	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			systems that do not provide the freedom to adequately respond to rising social inequality and changing climates.	
Rowan Schneider	Thursday, September 22, 2022	C162-3	I believe there is an opportunity for a different ethic to emerge: an attitude of respect and generosity already apparent in the Public Review Draft. If we were to use the cooperative legal structure, we could create an entity more capable of representing the needs of Sonoma Valley and her people. The members of the cooperative would be the different organizations interested in engaging with the space. These organizations would be responsible for funding the projects they were interested in, as well as contributing to the collective maintenance of the property. Citizens of the Valley would have the opportunity to patronize the projects they are most passionate about, creating a direct democracy measured in dollars.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Rowan Schneider	Thursday, September 22, 2022	C162-4	There are several opportunities such an undertaking would facilitate: The ancestral keepers of this land could be invited to participate in the decision making process. This particular land has been a place of intercultural relations prior to European arrival. This is a unique opportunity to honor the people who so masterfully tended this land and be able to build something new together. It could provide a central organizing system for the various philanthropic, socially and environmentally active groups of Sonoma Valley. So much good work is being done here but it is scattered. The property could be developed as needed. This would lower upfront costs as well as reduce the strain on local roadways by construction workers. This would give the property a much more organic and welcoming atmosphere and allow it greater flexibility to precisely meet the needs of its residents. The creation of a Library/Community information center. This center could provide local cloud storage and more equitable access to high powered computers. There are many young people who have been sucked into the internet, especially after the pandemic. Making a space for people to come together to work, learn and play would allow for these activities to be less inherently anti-social while making them easier to regulate. A weekly open air market/festival showcasing craft and food from throughout the Bay Area. A blend between the Sonoma Farmers Market and the Plein Air Art Show, this would give local artisans greater opportunities while further distinguishing Sonoma Valley as a center of the arts. A venue for hosting performances, from musical guests to local performers such as the Avalon Players, Broadway Under the Stars and Rhoten Productions.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Rowan Schneider	Thursday, September 22, 2022	C162-5	The problems facing the SDC and Sonoma Valley are not unique. Everywhere people are facing water shortages that force us to rethink how we use our resources and produce our food. Our farmers need the most support so they can have the freedom to innovate, they are severely limited in their capacity to do this when their survival depends on profitability. A rising cost of living prevents people from purchasing in line with their ethics and ideals, forcing them to choose the cheapest (and most exploitative) products.	Thank you for your comment. The Water Supply Assessment, includes analysis for both proposed residential and non-residential uses. It can be found in the Appendix of the DEIR.

Commenter	Date	Letter	Comment	Response
Rowan Schneider	Thursday, September 22, 2022	C162-6	This cost of living is forcing young people like myself out of this region. I (along with some peers) am starting an organization to be able to address these kinds of problems. Broadly speaking, we are committed to learning how to adapt technologies to satisfy a particular use case. I have spent quite a bit of time familiarizing myself with the cooperative structure in that endeavor, hence the enthusiasm about its potential application in this setting. The first technology we are setting out to master is the personal computer. We are not trying to innovate or redesign anything, just know what technologies are available and help people end up with the tools they actually need and make sure they know how to use and maintain them. The goal of this organization is to be able to build the capacity to address some of the larger issues outlined above, naturally that will take quite a bit of time.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Rowan Schneider	Thursday, September 22, 2022	C162-7	Still, as someone who is very passionate about the Sonoma Creek, I cannot help pondering this issue of what technologies are needed to meet the needs of this valley. The idea of a single entity providing the investment for the SDC project makes me deeply uneasy about the level of influence they would have in that situation. Much of my family still farms and I am very acutely aware of the pressing need for our food system to evolve if my future children are going to be well fed. It seems foolish to me to not draw on the wisdom cultivated over centuries and millennia for coexisting and thriving with this land, but all too often it seems that wisdom and those practices are flaunted by European Legacy institutions with no connection to the people who actually practice and developed it. I know it is likely far too late for such a proposal to be considered for this project, especially in such an undeveloped form. If there is any chance of such an organization emerging I would gladly contribute in any way possible.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-1	This letter will provide limited comments about the Draft Environmental Impact Report (DEIR) prepared for the Sonoma Developmental Center (SDC) Specific Plan. This letter is not intended to be an inclusive examination of the DEIR, but is intended to address key deficiencies in the DEIR, and specifically includes a comment about one unacceptable purported "policy"/"action."	Thank you.
Sonia E. Taylor	24-Sep-22	C163-2	Specific Plan Standard Conditions of Approval The DEIR prepared for the SDC Specific Plan is a "self-mitigating" DEIR, and relies on the SDC Specific Plan's "Standard Conditions of Approval," as well as other federal, state and local regulations, rules, laws and policies1 for other "conditions" that will allegedly be required of any future development, instead of proposing mitigation measures and a mitigation monitoring program. This is unacceptable for multiple reasons. First, there appears to be no framework requiring that the Specific Plan Standard Conditions of Approval (hereinafter "Conditions") actually be undertaken, or requiring compliance with any existing federal, state and local regulations, rules, laws and policies (hereinafter "Policies"), and there certainly is no way for any interested member of the public to monitor whether those Conditions/Policies have been demanded of any future development, since there is no required reporting process. Second, there is no way to evaluate whether any of those Conditions/Policies are feasible, will have the purported result reported in the EIR and/or are enforceable. Third, many of those Conditions/Policies defer analysis to some later future time, which is impermissible under the California Environmental Quality Act (CEQA), particularly since some or all proposed developments on SDC may not require any future CEQA review. This could lead to a result where the CEQA required analysis of both impacts and cumulative impacts will never have been completed prior to development on the SDC property. Finally, it's astounding to me that many of the Conditions that the DEIR relies on to make its findings – most of which indicate either "less than significant" impact or "no impact" – are NOT included in the required Standard Conditions of Approval. This means, of course, that those missing	Refer to Master Response 1 on the adequacy of a self-mitigating Specific Plan. Additionally, any future project will need to conform with the policies in the Specific Plan, including the Conditions of Approval.

Commenter	Date	Letter	Comment	Response
			Conditions are not actually required, and therefore that any reliance on those Conditions to somehow mitigate impacts, resulting in those findings of "less than significant" impact or "no impact," is contrary to the purpose of CEQA, and renders the DEIR worthless.	
Sonia E. Taylor	24-Sep-22	C163-3	Future Analysis Conditions: Some of the many Conditions contained Exhibit A of the SDC Specific Plan that defer analysis to some later future time include, but are not limited to: 1. Almost all of the Utility Conditions, including "UTIL-3 Complete an analysis of the capacity of SVCSD trunk sewer to serve the SDC at full buildout." Obviously, this future analysis could result in information that the proposed future development would overload the SVCSD trunk sewer, which would be a significant impact requiring specific mitigation, if possible, and/or would cause significant unmitigatable impacts. 2. Many of the Biological Conditions. For instance, the future required analysis of "presence of special-status species and sensitive habitats at proposed development sites" must be conducted now, as part of the DEIR, as that information would inform whether there are significant unmitigatable impacts of the proposed Specific Plan.	The comment is noted. Please see MR-9 and MR-7 regarding the Mitigation Monitoring/Performance Standards, and the adequacy of impacts on wildlife movement or disagreement with analysis/findings.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-4	Missing Conditions: As just one example of missing Conditions, in DEIR Section 16.1.3.3 “Relevant Policies and Implementing Actions” regarding Wildfire Hazards, the DEIR lists a number of “implementing actions” (hereinafter Actions) that are not contained In the Specific Plan Standard Conditions of Approval, and are not otherwise required by other Federal, State or local regulations, rules, policies, etc., including, but not limited to: Policies 2-31, 2-34, 2-35, 2-37, 2-39, 2-42, 2-54, 6-1, 6-19. 6-21, and 6-27. If there are Federal, State or local regulations, rules, policies, etc. that require2 that any of the Actions listed in the DEIR, including those listed above, be implemented, specifically set forth the exact regulations, rules, policies, etc. for each said Action. To make matters worse, some of the Actions relied on by the DEIR in its finding of “less than significant” impact or “no impact” are vague and unenforceable, including but not limited to by leaving significant discretion to individuals/jurisdictions considering future approvals (which means that any given individual/jurisdiction in the future could make a decision that the Action required by the DEIR doesn’t have to be met). This, of course, would render the DEIR’s findings of “less than significant” impact or “no impact,” which required the Action to be taken to make said finding, worthless, and would require reevaluation of the DEIR’s findings and conclusions.	Refer to Master Response 1 on the adequacy of a self-mitigating Specific Plan. Additionally, any future project will need to conform with the policies in the Specific Plan, including the Conditions of Approval.
Sonia E. Taylor	24-Sep-22	C163-5	There is no question that these Conditions/Actions must be implemented for the DEIR’s findings to be accurate and for the DEIR to be considered adequate. Because there is no requirement for these Conditions/Actions to be implemented, there is a very real possibility that they will be neglected or disregarded, which renders this DEIR fatally flawed. The DEIR’s conclusions of “less than significant” impact and/or “no impact” either hangs together as a whole, with every Condition/Policy/Action required to be met, or those conclusions fail if any one single Condition/Policy/Action is not met.	Refer to Master Response 1 on the adequacy of a self-mitigating Specific Plan. Additionally, any future project will need to conform with the policies in the Specific Plan, including the Conditions of Approval.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-6	One specific Policy/Action that has no basis in law and cannot be accomplished is the allegedly required "Shelter-In-Place" facility, discussed below. "Required" Shelter- in-Place Facility In Chapter 3.16: Wildfire, the DEIR contains the allegedly required Action that: 2-54 Ensure that the project sponsor proactively plans for emergency wildfire safety by: b. Building or designating an on-site shelter-in-place facility, to be open to both SDC residents and the general public, prior to construction of the 200th housing unit, with specifications for the facility to be included as part of the Emergency Preparedness and Evacuation Plan; In spite of the laundry list of Federal, State and location regulations, rules, policies, etc. listed in Section 3.16 Wildfire preamble, according to my research there is not one single United States or California regulation, rule, policy, or ANY other specific guidance about shelter-in-place facilities with regard to wildfires.3 This complete lack of law and guidance renders this alleged required Action impossible to meet.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-7	Specifically, at the Federal level, there are materials covering shelter-in-place for hurricanes, tornadoes, high wind events, chemical attacks and other chemical issues, and similar situations, but not a single direction regarding shelter-in-place facilities for wildfires. Further, this complete lack of regulations, rules, policies, etc., let alone any guidance whatsoever, is true at both the California State and local Sonoma County level.4 It is clear that this Action is "required" because it will be – after construction of 200 residences –impossible to safely evacuate everyone living/working on the SDC site, requiring them to "shelter-in-place" to attempt to survive a wildfire impacting the area. However, given the complete lack of a California definition of shelter-in-place during wildfires (as well as any rules/regulations/guidance about how a shelter-in-place facility for wildfire should be constructed/utilized, etc.), I have no idea how this purported facility will save lives. Perhaps this proposal should actually be for a "temporary refuge" or for a "refuge of last resort," although that clearly is not what is being proposed.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-8	Please state explicitly what allegedly required "specifications" for this shelter-in-place facility would render it an acceptable "mitigation measure" allowing findings of "less than significant" impact in this Wildfire section of the DEIR. Because, frankly, there is literally no evidence that specifications exist, except in a foreign country – Australia, specifically. Clearly California, and the United States, have not adopted any of Australia's rules, regulations and policies regarding shelter-in-place, stay and defend, refuge of last resort, etc.5 Since this is one essential required Action for the Wildfire section of the DEIR, and there are no standards or any evidence that it mitigates evacuation during a wildfire, it cannot be achieved, and therefore every conclusion of "less than significant" impact is rendered meaningless, causing the DEIR to fail with regard to the Wildfire section. Attached for your information please find information I gathered about shelter-in-place earlier this year.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-9	Additional comments about Section 3.16 Wildfires: Impact 3.16-1, the DEIR states that any future project: [W] ould also explore the feasibility of providing an additional east-west emergency access connection from the site to SR 12 in order to improve access to the emergency evacuation route (Policy 3-5). Policy 3-5 states: Reuse existing street network to the greatest extent feasible. Improve multi-modal access from the SDC to SR 12 by exploring the feasibility of providing an additional east-west emergency access connection from the site that includes high quality pedestrian and bicycle facilities. (Curiously, in Section ES.2 "Areas of Known Controversy" of the DEIR, it is stated that "The Proposed Plan features a new connection from SDC to Highway 12," which is flatly untrue – the DEIR only proposes "exploring" if said connection is "feasible.") Again, this is a proposed "mitigation measure" Action that relies on some future possible Action that may never happen or may not be feasible (clearly the use of the word "explore" in this proposed policy does not require any action), and therefore this is an impermissible deferral of analysis to some future time.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-10	2. The evacuation times listed in Table 3.16-1 would be hilarious if the consequences of their gross underestimate weren't so potentially dire. While I have never evacuated in the Sonoma Valley, I had to evacuate in the very early morning during the Tubbs fire in 2017 in Santa Rosa. It took me over 10 minutes to just drive three blocks. There is not a chance that the evacuation times listed in Table 3.16-1 are an accurate reflection of reality during a wildfire disaster. Please state what modeling evaluation methods were used to arrive at the DEIR's evacuation times. The purported "evacuation analysis for this EIR prepared by Kittelson & Associates" will apparently not be made available for public review; I explicitly requested that analysis and my request was denied. This renders it impossible for any decision maker or member of the public to adequately evaluate this analysis and comment effectively.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-11	After receiving this denial, I did a little research on Kittelson & Associates, learning that of all the many listings on their website of work they have performed/ideas they have, only two items had anything to do with evacuations: "Capacity and Strategy Assessment of North Carolina Hurricane Evacuation Routes" and "Emergency Evacuation Strategies for Every Community." The first item is categorized as "work," and the second item as "ideas." In the description of the first item, which obviously isn't relevant except in the most general sense, since it's discussing freeway behavior and there's generally a great deal of advance notice of hurricanes, Kittelson's website states that they modified the analysis tool Freeval with North Carolina Department of Transportation tools and strategies to evaluate reversal of North Carolina's freeway lanes to allow evacuation during a hurricane. Freeval's website states that it is "powerful macroscopic freeway analysis tool based on Highway Capacity Manual (HCM)." The Freeval website also only lists the North Carolina freeways as a specific use. Did Kittelson use Freeval to evaluate evacuation from SDC during a wildfire event? I have no idea.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-12	For Kittelson's "Ideas" listing about emergency evacuations in general, their website states that they partnered with Stephen Wong, Ph.D., who does research on (among other things) emergency evacuation strategies. Interestingly, in a 2022 paper co-authored by Dr. Wong on California wildfire evacuee behavior, the following statement is made: While extensive research has been conducted on hurricane evacuation behavior, little is known about wildfire evacuation behavior. https://scholar.google.com/citations?view op=view citation&hl=en&user=Y7LlCiAAAAAJ&c itation for view=Y7LlCiAAAAAJ:Tyk-4Ss8FVUC Did Kittelson partner with Stephen Wong to evaluate evacuation from SDC during a wildfire event? I have no idea. It is unacceptable to not release the actual Kittelson & Associates evacuation analysis. Because of this refusal to release this analysis, the public has had no opportunity to evaluate same and provide comments. It's not the public's job to provide an alternative analysis; it's the DEIR's job to prove that its analysis is accurate, and in this regard the DEIR has failed.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-13	3. The DEIR is internally inconsistent with regard to its conclusions of "less than significant" impact regarding Impact 3.16-1. As stated above, and by other commenters, the alleged "additional east-west emergency access connection" is not required by the DEIR, and is only to be "explored" for possible feasibility of same. However, Impact 3.16-1 clearly states that a condition for the finding of "less than significant" impact is that the project must: "[Ensure] that every parcel within the Core Campus has two routes for ingress and egress during an emergency" Without the additional access to the property, I believe this is impossible to accomplish. If you believe that every parcel will have two means of ingress/egress without the possible "additional east-west emergency access connection," please explicitly show how that will be accomplished.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-14	4. Also in Impact 3.16-1, the following is stated: "Historically, a fire approaching from the west may be less likely, and therefore did not warrant further specific analysis." While a fire approaching the SDC site from the west "may" be less likely, that is not an adequate reason for not evaluating and analyzing the impacts therefrom. If the DEIR had stated that this possibility "is" less likely, perhaps the conclusion that no analysis was needed could have been reached, but "may" certainly implies that it is possible, and therefore the possibility should have been addressed and evaluated.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-15	SHOULD "SHELTER-IN-PLACE" DURING WILDFIRES EVER BE CONSIDERED AN ALERNATIVE TO EVACUATION AND/OR AS AN ACCEPTABLE MITIGATION MEASURE? The short answer is an emphatic "no." I'm starting to hear people talk about "Shelter-In-Place" as an equivalent alternative to wildfire evacuations, or even as a CEQA mitigation measure to allow development in fire prone communities. Sheltering in place during a wildfire conflagration should never be a first choice, as review of information from communities who have Shelter-In-Place policies and experience makes clear, and that is backed up by the opinion of experienced fire professionals. Everyone agrees that while sometimes it can be the only solution for people who have waited too long to evacuate or who are caught with a wind driven wildfire bearing down when it could be even more dangerous to attempt to drive out, it should never be considered the first choice. Ever. In fact, Shelter-In-Place is the last resort.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-16	Critical Experience-Driven Shelter-In-Place Lessons: 1. There is no guarantee of safety or survival while sheltering in place. 2. Shelter-In-Place is not a passive experience; instead it requires physical, mental and emotional fitness, and those who Shelter-In-Place must actively work hard to survive. 3. Shelter-In-Place comes with high risks and should always be a last resort. Locations with Shelter-In-Place Experience: In California, there are two locations with Shelter-In-Place experience: Rancho Santa Fe in San Diego County and Pepperdine University in Malibu. Australia also has many years of Shelter-In-Place experience. I'll discuss each location's policies, recommendations, experiences and the unintended consequences, below.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-17	Rancho Santa Fe Rancho Santa Fe, in San Diego County, is often brought up as an example of how "Shelter-In-Place" is an alternative to providing adequate evacuation routes and planning. Nothing could be further from the truth. In Rancho Santa Fe, the community was built to have the best odds possible of surviving wildfires – although it was built to 2003-04 Building/Fire Codes, and we know much more now than we did then, raising the question of whether the community is still adequately protected. Moreover, Shelter-In-Place is not considered the first or safest choice for residents, as the Rancho Santa Fe Fire Department made clear on December 7, 2017: "Clarification for our Shelter-in-Place communities: While your communities were built to a specific standard designed to withstand wildfires, they will still be evacuated if a wildfire is threatening. If evacuation orders are issued for your community, please evacuate and evacuate early. That is still the safest scenario for residents and emergency personnel. Only if you are unable to do so may it be safer to stay in your home, or shelter-in-place, than to	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			evacuate under hazardous conditions." (Emphasis added) https://www.rsf-fire.org/shelter-in-place/	
Sonia E. Taylor	24-Sep-22	C163-18	Further, the materials distributed to residents of Rancho Santa Fe's "Shelter-In-Place" communities make clear that evacuation is still the best option, and that sheltering in place is not. (https://www.rsffire. org/wp-content/uploads/2016/09/SIP for web.pdf) Following is the checklist distributed to residents in these communities considering whether to evacuate or Shelter-In-Place: "Should I stay or should I go Quiz": • Are you physically fit to fight spot fires in and around your home for up to 10 hours or more? • Are you and your family members mentally, physically and emotionally able to cope with the intense smoke, heat, stress and noise of a wildfire while defending your home? • Can you protect your home while also caring for members of your family, pets, etc.? • Do you have the necessary resources, training, and properly maintained equipment to effectively fight a fire? • Does your home have defensible space of at least 100 feet and	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			is it cleared of flammable materials and vegetation? • Is your home constructed of ignition resistant materials? If you answered “No” to any of these questions, then plan to evacuate early.	

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-19	In addition, CalFire's "Ready Set Go Plan" reiterates multiple times that you should evacuate, not "Shelter-In-Place," and has a section titled "If You Are Trapped – Survival Tips." That checklist for people who are trapped includes "Patrol inside your home for spot fires and extinguish them," and "Patrol your property and extinguish small fires." (https://www.fire.ca.gov/media/4996/readysetgo plan.pdf) Obviously, sheltering in place is NOT a passive experience. Individuals/families can't remain in their house and just safely wait for the fire to pass. Individuals must be able to fight spot fires, be mentally, emotionally and physically fit, and have adequate resources and training to have a chance of surviving sheltering in place (and even then, there are no guarantees). Having a structure built to the best fire safety codes, even with "perfect" defensible space, is not enough. During a life threatening event, most people are not going to have the training, physical, mental and/or emotional endurance, or the resources and abilities to be able to cope with sheltering in place, which will not only be dangerous for those individuals, but for the Fire Department, who will likely be called in to rescue them. Sheltering in place should never be the first choice, should never be considered an acceptable substitute for safe and sufficient evacuation routes and planning, and should never be considered an acceptable CEQA mitigation measure in lieu of adequate evacuation routes and planning.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Sonia E. Taylor	24-Sep-22	C163-20	Australia Australia historically had a "Prepare, Stay and Defend or Leave Early" policy, which has undergone significant reevaluation after the 2009 Black Saturday fires, when people died in their homes while sheltering in place. Currently the Australian policy is known as "Prepare. Act. Survive." and promotes evacuation as the safest option – well before a fire is a threat. The genesis of Australia's policy is that oftentimes their fires are explosive and unpredictable, leaving residents with no time to evacuate. They have identified "Bushfire Safer Places" and "Bushfire Last Resort Refuges" for those emergency situations. A "safer place" is a "place of relative safety," that "may save your life but they do not guarantee safety," and may be subject to "sparks, embers and smoke which may start secondary fires in vegetation, gardens and structures." A "last resort refuge" is to be used "only if you cannot reach a Bushfire Safer Place," and is "not suitable for extended use," providing only limited protection, with no guarantee of safety. (See, as one example of many, https://www.cfs.sa.gov.au/prepare-for-a-fire/be-prepared/bushfire-safer-places/)	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-21	Because of Australia's development patterns, and because of human nature (which is unpredictable, at best), Australia's policy for the times when residents either will not or cannot evacuate called "Prepare. Act. Survive.", which is essentially "Shelter-In-Place." To stay in a building during a fire, however, is acknowledged by Australian officials as requiring significant preparation, including a written and practiced bushfire plan, as well as available water with pumps and hoses and a power source. Of course, the first crucial decision about whether to Shelter-In-Place involves ensuring that the building has been constructed for best survival probabilities during a fire, along with having perfect defensible space. After that, though, the Australian literature for "Prepare. Act. Survive." emphasizes similar issues as does Rancho Santa Fe.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-22	The first priority is always to evacuate early. Only if you get "caught" should you stay, and if you stay, you should be prepared, with a plan. The recommended preparation includes being mentally, emotionally and physically capable, because individuals will likely experience spot fires, smoke, heat and darkness. Individuals will also likely not have power or running water, and may not have Internet or cell phone connections. Prior to the arrival of the fire, Australian materials state that individuals sheltering in place will have to fight spot fires, prepare their home, and patrol inside and outside extinguishing embers and fires. When the fire arrives, individuals sheltering in place will have to take shelter inside the house, while also patrolling inside the house putting out embers and fires. After the fire has passed, individuals sheltering in place are told they will have to continue to put out spot fires, continue patrols inside and outside their house, and hose down the house as needed. Australia has multiple resources about bushfires, including at https://www.dfes.wa.gov.au/site/ and https://www.abc.net.au/emergency/plan-for-emergency-bushfire/12412042 plus many more (It's important not to refer to anything dated 2010 or earlier, since policies changed after 2009). In other words, Australia does not consider sheltering in place to be a passive activity. "Being in a bushfire could be the most traumatic experience of your life. You may have to fight spot fires for hours, even days at a time." Their bottom line recommendation is: "The best way to survive a bushfire and avoid radiant heat is to leave early and be away from the threat."	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Sonia E. Taylor	24-Sep-22	C163-23	Pepperdine University When Californians cite Shelter-In-Place policies, Malibu's Pepperdine University comes up most frequently, since some of their students sheltered in place during the 2018 Woolsey fire. Unfortunately, I see little evidence that Pepperdine's policy is a realistic one that should be applied elsewhere. Pepperdine allegedly has a "detailed shelter-in-place plan," but I have been unable to find any evidence of said detailed plan – all I can find are general policies. Pepperdine's 2010-11 Emergency Preparedness Guide discusses their Shelter-In-Place policy in general terms (it is not the "detailed plan"), but also states: "Have an evacuation plan in place and identify two exit routes from your neighborhood. If you are asked to evacuate by fire or police officials, do so immediately." (the 2020-21 Guide is apparently only available to students, requiring student ID to review) The President's August 2020 letter states: "Through diligent training, equipping, studying, staffing, and commitment, we are prepared to be our own first responders until local and state agencies reach campus." (emphasis added)	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-24	Clearly Pepperdine's Shelter-In-Place plan relies on the LA Fire Department's assistance on the Malibu Pepperdine campus, which is confirmed in their web-based general policies. Pepperdine's own firefighting resources are two "fire trucks" and their " expertly trained staff" "able to respond 24/7" (https://pepemergency.files.wordpress.com/2020/09/fy21-presidents-letter.pdf), but their general webbased policies state that Pepperdine will "host the Los Angeles County Fire Department's Incident Command Post (ICP) on the Malibu campus for wildfires in the area." Further, their Emergency plans state: "University officials maintain and develop relationships with first responders, government officials, utility providers, and others who could assist the University during emergencies." (See,	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			https://emergency.pepperdine.edu/brush-fires/, https://emergency.pepperdine.edu/emergencyoperations-committee-eoc/, https://emergency.pepperdine.edu/shelter-in-place/) This makes clear that Pepperdine is "hoping" that the LA Fire Department will be on the campus pursuant to the relationships Pepperdine has with them, so Pepperdine won't have to rely on their own staff for protection of life and property, or at least only until the Fire Department arrives on site.	
Sonia E. Taylor	24-Sep-22	C163-25	Although Malibu has prepared an August 2020 Mass Evacuation Plan, Malibu's General Plan is dated 1995, and I presume the associated FEIR/DEIR is equally old (it's not readily available online). This means that Malibu doesn't have a city-wide EIR that complies with current CEQA requirements to evaluate potential impacts to existing wildfire evacuation plans, which I consider a significant problem, because all of Malibu is designated as a Very High Fire Hazard Severity Zone. Malibu's 2020 Mass Evacuation Plan unfortunately mentions Shelter-In-Place as if it's a "safe" option, without any discussion of the critical difficulties with doing so, or any indication of when orders to Shelter-In-Place might be issued. The Plan also identifies "Safe Refuge Areas," all of which are on Malibu's beaches – Pepperdine's campus is apparently not considered a "Safe Refuge Area." The Plan makes clear, however, that these areas, no matter how named, are not necessarily "safe" and that evacuation may be necessary: "Safe Refuge Areas are temporary staging areas in a mandatory evacuation. They may also be used to help move traffic off the road to speed up the movement of people out of the	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			immediate danger area. Residents seeking refuge in a Safe Refuge Area will be notified that the Safe Refuge Area is not a 'hard or permanent shelter' and in the event, the evacuation order involves the Safe Refuge Area, those residents will be required to evacuate." (https://www.malibucity.org/DocumentCenter/View/26832/FINAL-Evacuation-Plan-8192020)	
Sonia E. Taylor	24-Sep-22	C163-26	I grew up in Malibu, so am familiar with Malibu in general, as well as the Pepperdine campus. Pepperdine established their Shelter-In-Place policies because: 1) Pepperdine is – for Malibu – in a relatively "open space," 2) their 3000 +/- students may not have the ability to evacuate (many don't have individual vehicles on site), and 3) any significant wildfire in Malibu will likely cause gridlock on the 2 lanes each way Pacific Coast Highway (the only real way to evacuate away from a typical wildfire). Notwithstanding these reasons, I believe Pepperdine's Shelter-In-Place policy has significant downsides.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-27	First, any Fire Department will always default to protecting people over buildings, and when people are sheltering in place, that will divert Fire Department resources to protect those people, as appears to have happened during the 2018 Woolsey fire (I've reviewed multiple newspaper articles about the Woolsey fire, as well has had personal communications with Malibu residents). Second, even though Pepperdine is (relatively) open space and has (relatively) fire safe buildings, that cannot protect students from smoke inhalation, from	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			radiant heat, from fear, or from the possibility that they might have to run for their lives if a fire conflagration were to invade the campus.	
Sonia E. Taylor	24-Sep-22	C163-28	There also is no available evidence about who will take the necessary active roles required during Shelter-In-Place. While the University has two "fire trucks" (the photo online is not of full size fire engines), there is no indication of the number of staff assigned to those trucks or about their training, and, frankly, since the campus is 830 acres, there is no possibility that those two trucks could effectively put out all embers and spot fires, or effectively respond should a more significant fire start or enter the property. Unless, of course, the LA Fire Department is already also on site doing that actual work, which seems to be Pepperdine's assumption. There is also no discussion of whether the students and staff sheltering in place are physically, mentally and/or emotionally capable of doing so.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-29	In fact, in spite of Pepperdine's 30+ year old Shelter-In-Place policy, during the 2018 Woolsey Fire apparently many of the students did evacuate. And, as a result of the Woolsey Fire, it appears that there will be a reevaluation of Pepperdine's Shelter-In-Place policies, although there is no evidence I can find of any such reevaluation to date. As we've seen around the state, when faced with a life threatening situation such as a wildfire, the odds that residents and personnel will behave in a logical fashion is decreased, oftentimes substantially, and when a large portion of the population consists of very young adults, it should not be surprising when things don't go as planned.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-30	Shelter-In-Place can be a “tool” in the “tool kit,” but should never be the first choice. It should only be used when evacuation has become impossible. I believe Pepperdine should be required to keep adequate buses, with trained employees available to drive them, to fully evacuate the entire campus as early as possible, and should keep their Shelter-In-Place policy only for instances where there is not adequate time to evacuate. I will be watching closely to see how Pepperdine will prepare for a future of wildfires with their University full of young adults in a very high fire danger zone now that fire season is 12 months long, and will be watching to see how they change their Emergency plans. I can find no evidence that Pepperdine has a realistic Shelter-In-Place policy, and do not believe their policy should be used as an example for any other situations.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-31	Conclusion: Shelter-In-Place is not an appropriate solution for most people. As one Australian website states: “Being in a bushfire could be the most traumatic experience of your life. You may have to fight spot fires for hours, even days at a time.” (https://mybushfireplan.wa.gov.au/stay-and-defend) If California communities, or California in general, want to consider using Shelter-In-Place as an tool for what is now our Climate Change driven year-round fire seasons, they should first carefully consider the realities and requirements of Shelter-In-Place.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-32	Shelter-In-Place as a Mitigation Measure: Shelter-In-Place should never be considered an acceptable mitigation measure to allow the construction of buildings or location of businesses in high/very high fire danger areas without adequate evacuation routes, personnel and planning. Shelter-In-Place requires each individual to assess their own personal physical, mental and emotional fitness and their ability to fight spot fires, survive darkness, heavy smoke and heat, and more. Therefore, no development can either require or assume that the residents/employees and visitors will qualify to Shelter-In-Place. As an example, let’s assume that a development of homes is permitted in a high fire danger zone, but only one means of egress is required, and that road is narrow, because instead of	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			requiring the development to be constructed so everyone can safely evacuate in an emergency, the project approval instead permits the development to have one or more locations where the residents will Shelter-In-Place.	
Sonia E. Taylor	24-Sep-22	C163-33	These are the questions that logically arise: Do all purchasers/renters of the homes have to guarantee that they are physically, mentally and emotionally capable of sheltering in place, will do so during any fire, and will always remain capable? What happens if a resident is injured, develops an illness, or just gets older – would they then be required to move out of the development? What if someone has one or more children – would they be required to move because the children couldn't qualify as capable? What about visitors or employees at the development – would they also be required to agree that they are physically, mentally and emotionally capable of sheltering in place before they visit or take a job in the development? "Do not underestimate what is required to maintain your house as a place of safety during a bushfire. Actively defending your property will take huge physical and mental effort for many hours before, during and after the fire, as conditions will be unbearably hot. You need the right equipment, protective clothing for all your family or household members, and a property prepared to the highest level." https://www.parliament.wa.gov.au/publications/tabledpapers.nsf/displaypaper/3814042a195d0712a147f5514825791a00045feb/$file/4042.pdf As it would be legally impossible to require any individual to be capable of sheltering in place at any time – again, it is an active activity, not a passive activity – Shelter-In-Place should never be used as a mitigation measure.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-34	Shelter-In-Place as a "Tool": Currently, California courts are starting to issue decisions requiring adequate evacuations and planning, supported by California's Attorney General, and I believe that's where we should be focusing our time and attention – on safe evacuations and evacuation planning. However, if California communities want to consider using Shelter-In-Place as a tool, in addition to evacuation, It would be wise for them to thoroughly educate themselves about what Shelter-In-Place actually consists of. As is made obvious above, sheltering in place requires a building – and all surrounding buildings – constructed to the highest fire resistant standards with perfect defensible space. Then, the individuals sheltering in place will be physically, mentally and emotionally challenged for many hours, with no guarantee of their survival or safety.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Sonia E. Taylor	24-Sep-22	C163-35	Identification of "Safer Places" and/or "Last Resort Refuges" may make sense to give people a place to go if they have attempted to Shelter-In-Place but then have to run, or for people who are caught because they wait too long to evacuate, but there's no question that those areas should only be used if absolutely necessary. Therefore, those areas – if identified – would need to be explicitly identified as areas where people's safety is not guaranteed, and where they might, in fact, have to run for their lives. If identification of those locations will make individuals feel like they don't really "have" to evacuate, I believe their identification would be a disaster in the making. With human nature the way it is, I have deep concerns that identification of "Safer Places" and even "Last Resort Refuges" would make individuals complacent and less likely to evacuate when requested to do so. While firefighters will always try to first protect against loss of life, I believe that adding to their burdens by putting individuals in what are really unsafe locations, instead of focusing on safe evacuations, is a very bad idea. Sheltering in place puts not just the individuals sheltering in danger, but also the firefighters, and is very likely to delay essential fire suppression efforts. Time spent rescuing people just allows wildfires to grow larger.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Sonia E. Taylor	24-Sep-22	C163-36	The bottom line is that as Climate Change impacts cause more intense, frequent and fast moving wildfires, with devastating losses to lives and property, we should be focused on data-supported analyses of existing road capacity and impacts to evacuation response times during wildfire emergencies. We must – instead of trying to find a magic bullet to allow more development in high fire danger areas – mitigate existing evacuation hazards and ensure adequate evacuation routes and planning, not create new evacuation hazards that will likely result in loss of lives. I believe that Shelter-In-Place is a terrible idea, and should only ever be used as an absolute last resort.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.
Steve Birdlebough	September 23,2022	C164-1	The Sonoma County Transportation and Land-Use Coalition Appreciates this opportunity to comment on the Draft Specific Plan for the Sonoma Development Center (SOC) and to raise questions regarding its Draft Environmental Impact Report (DEIR). Our comments come in the shadow of legislation recently signed by the Governor to address the Climate Crisis by reaching state-wide carbon neutrality, and improvements in available funding for this purpose. We also note that the goal of the Sonoma County Regional Climate Protection Authority is to reach net zero greenhouse gas emissions by 2030. We have queries and concerns about two issues in the Specific Plan and DEIR:	Thank you.
Steve Birdlebough	September 23,2022	C164-2	How seriousl.y would construction of a thousand new housing units at the SDC impact greenhouse gas emissions and the County's plans to reach carbon neutrality? State law (SB 375 - Steinberg - 2008) calls for reductions in driving (VMT) in order to address the climate crisis. The draft environmental analysis finds that the SOC plan to reduce driving by 15% is IlQ.t likely to succeed. Sonoma County's Regional Climate Protection Authority aims to reach carbon neutrality by the year 2030, which will require annual reductions in driving at a rate of up to 6% per year. (Please respond to the attached detailed discussion)	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-3	How does the plan to demolish SDC structures impact greenhouse gas emissions at the SDC, as compared with reuse? Although the reconstruction of a building may be proportionately more labor intensive than its replacement, the resulting GHG emissions may be significantly increased. (Please respond to the attached detailed discussions)	Chapter 3.6.3 of the DEIR addresses impacts of greenhouse gas emission of demolition.
Steve Birdlebough	September 23,2022	C164-4	Authors of the DEIR note that failure to deliver a specific plan to the Department of General Services within the next few months might upset the effort to retain local control of the future of the property. However, much has changed recently. The State is now committing $54 billion over the next five years to address the climate crisis. This funding is to be matched by $9 billion per year of federal climate investments in California. In the light of these changes in the fiscal outlook, shouldn't the State Department of General Services be much less concerned about the need to fund $100 million worth of remediations to the existing SOC property?	Thank you.
Steve Birdlebough	September 23,2022	C164-5	Wouldn't proposed project alternative units at the SOC affect the environment in cumulative ways not yet discussed in the Program DEIR, such as the potential redevelopment of the nearby Hanna Boy's Center and other North Sonoma Valley projects currently in the permitting process or planned within Permit Sonoma? The County's concerns should now be focused on limiting suburban sprawl, and salvaging existing structures wherever possible. For these reasons the SCTLC recommends that Sonoma County act now to develop the environmentally superior project, which is Historic Preservation/Reuse. The timeline should be re-negotiated, and the Specific Plan for the SOC should be refocused on reducing greenhouse gas emissions, HISTORIC PRESERVATION AND REUSE, and on protection of the site from wildfire risks. If you wish to discuss any of these issues, please contact me at scbaffirm@gmail.com, or call me at 707-5766632.	The comment is noted. It does not relate to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-6	WHY IS A PLAN PROPOSED THAT IS INCONSISTENT WITH LONG-ESTABLISHED COUNTY AND VOTER APPROVED COMPACT GROWTH POLICIES THAT PROTECT THE ENVIRONMENT? The DEIR is inadequate, because it fails to recognize that the Proposed Plan is inconsistent with the County's long-standing land use and open space protection policies, with its compact development goals, and with its voter-approved urban growth boundaries. The DEIR fails to justify a major reversal of the County's existing land use policies that have served to maintain its rural character and protect the environment. Page 14 of the DEIR does acknowledge that: "Overall, the Historic Preservation Alternative is the environmentally superior alternative." However, without being specific, it goes on to assert that the environmentally superior alternative "would not support key project objectives related to increased housing supply ... and long-term fiscal stability to the same degree as the Proposed Plan." What is meant by "fiscal stability?"	Thank you for your comment letter. The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Steve Birdlebough	September 23,2022	C164-7	The DEIR fails to mention that there are nine cities and many urbanized areas in Sonoma County that offer more environmentally beneficial housing sites than the SOC. Why does the DEi R fail to admit that the Proposed Plan is in grave conflict with established Sonoma County policies to direct major residential developments into its cities and urbanized communities? The history of these policies is described on the Permit Sonoma web page as follows: "The 1978 General Plan included land use policies intended to focus development within the urban areas, which included the eight incorporated cities. The concept of "community separators" was also first introduced in the 1978 General Plan, which maintained open space between the cities and preserve their distinct community identities along the Highway 101 corridor. A total of 9,300 acres of land considered under pressure for development were designated as community separators: areas north of Santa Rosa;	Thank you for your comment letter. The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			areas north of Rohnert Park and south of Santa Rosa; and Meachum Hill, just north of Petaluma."	
Steve Birdlebough	September 23,2022	C164-8	"The primary focus of the 1989 General Plan was the preservation of the County's agricultural and resource lands that form the scenic resources of the County. Additional policies were added to the Open Space Element for the protection of designated streams. Community separator policies were strengthened and additional Scenic Resources protections were added to include designated Scenic Landscape Units and Scenic Corridors. Allowable densities were reduced in rural areas while other areas identified as unincorporated communities were allowed higher densities." "In 1996, the Community Separator policies became the genesis of the Community Separator ballot measures that required voter approval of any changes in land use density or intensity if the cities had adopted urban growth boundaries. In 1998, an amendment to the General Plan was adopted adding another Community Separator south of Petaluma." "The County's efforts in preserving rural landscapes had a profound effect of encouraging the cities to adopt urban growth boundaries (UGBs) as part of their General Plan updates. Today all nine cities have adopted urban growth boundaries that were subsequently enacted by voter initiatives. The Local Agency Formation Commission has followed the County's lead by adopting policies that mirror the city-centered growth policies of the Sonoma County General Plan."	Thank you for your comment letter. The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-9	"GP 2020 continued the principals of city-and community-centered growth, with compact boundaries and community separators, and protecting agricultural land. GP 2020 includes robust policies preventing the expansion of urban services. The Agricultural Resources Element precludes converting agricultural lands to nonagricultural uses and establishes policies to increase the economic viability of agricultural properties. The Circulation Element emphasizes alternative modes to automobiles. GP 2020 also updated eight area plans and called for repealing all others where policies have already been implemented or could be incorporated into the General Plan. Sonoma County currently has eight specific and area plans that remain in effect as follows, and one that is currently being developed: -Airport Industrial Area Specific Plan (update in progress) -Bennett Valley Area Plan -Franz Valley Area Plan -Penngrove Area Plan -Petaluma Dairy Belt Area Plan -The Springs Specific Plan (draft) -Sonoma Mountain Area Plan -South Santa Rosa Area Plan -West Petaluma Area Plan." 1	Thank you for your comment letter. The comment is noted; however, it pertains to the Specific Plan and is not related to the adequacy of the DEIR, thus no further response is required.
Steve Birdlebough	September 23,2022	C164-10	WHY IS A PLAN PROPOSED THAT IS INCONSISTENT WITH SONOMA COUNTY GOALS TO ADDRESS THE CLIMATE CRISIS BY REDUCING VEHICLE MILES TRAVELED? Sonoma County has been a leader in efforts to reduce greenhouse gas emissions, and at page 218, the DEIR recognizes that in 2021 the County's Regional Climate Protection Authority (RCPA) has set a goal of carbon neutrality by the year 2030. This Is an ambitious goal, and California law recognizes that success will depend strongly on reduced driving as well as shifts to electric vehicles.2 According to the Authority, the transportation sector is responsible for 60% of the county's GHG emissions.3 The DEi R also acknowledges that Sonoma County Resolution 18-0166 calls for reductions in greenhouse gas emissions, and that "reducing travel demand through focused growth" is the	Your comment is noted. The Proposed Plan would result in significant and unavoidable and cumulatively considerable VMT impacts. See MR-6 for more information regarding whether fewer housing or jobs would result in better VMT outcomes.

Commenter	Date	Letter	Comment	Response
			second-identified strategy for such reductions. (DEIR, p. 217) Why does the DEIR neglect to explain the need for the SDC project to actually accomplish significant reductions in vehicle miles traveled (VMT). The DEIR "conservatively" states that despite the extensive discussion of VMT reduction goals and policies in the Proposed Plan, it must be assumed that the construction of one thousand	
Steve Birdlebough	September 23,2022	C164-11	Three years ago, agencies in Sonoma County began announcing climate emergency goals that focused on 2030 as a target year to reach "carbon neutrality." More recently, an analysis of Sonoma County driving habits by the County Transportation Authority has revealed that merely providing bicycle-pedestrian trails and bridges are not sufficient to reach those goals. We will need changes in culture as great as those of the recent pandemic.4 The DEIR shows that the policies and the proposed SDC Specific Plan will undermine local, regional and state policies and commitments to address the climate crisis due to the significant and unavoidable increases in VMT. The DEi R shows no way to offset or mitigate the extra driving generated by the new housing, retail, and commercial development proposed for the SDC. The County must not approve this project as proposed with these impacts if it is serious about addressing the climate crisis. Taking this approach would fail to meet the standards contained in CEQA because an increase in VMTs can be avoided by focusing the construction	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts

Steve Birdlebough	September 23,2022	C164-13	WHY ARE EMBEDDED GREENHOUSE GAS EMISSIONS IN EXISTING STRUCTURES AT THE SONOMA DEVELOPMENT CENTER LEFT OUT OF THE ENVIRONMENTAL CALCULATIONS? Why has County Staff/Consultants done the following, and what are your mitigation recommendations?: The EIR & SP preparation violates BPC6731, without a Civil Engineer in responsible charge of Planning? The EIR has committed the County to a course of action,,new development, prior to El R's Certification? Historic Reuse appears proper, yet each price consequence results in expanded project impacts. What is the economic obsolescence impact to the Springs/Glen Ellen of the proposed project? The EIR and SP propose demolition of 1.2M sq-ft of buildings, along with the 1M+0.35M gal fresh water tanks, see Figure 4.3-1: "Historic Assets", without reference to local Wildfire protection. Why?	Chapter 3.6.3 of the DEIR addresses impacts of greenhouse gas emission of construction.
Steve Birdlebough	September 23,2022	C164-14	The EIR & SP propose demolition of Historic Firehouse (c1932) without wildfire impact consideration? EIR & SP neglect wildfire consideration, as not "High Fire Risk", though analysis excluded SOC? Why does EIR & SP use uncalibrated (unrealistic) models, eg without reference to actual fire evacuation? The EIR develops a series of conclusions as analysis, beginning after point in time of project completion? The EIR assumes no cumulative effects to the proposed project; eg. GHG's and solid waste, but does not include project specific demolition, nor constructed lifecycle, GHG's & wastes? Why? The EIR assumes no cumulative effects from combining the proposed project wastewater into a downstream waste treatment facility when a historic facility is located on site to recharge the wetlands/creek. SOC is an Historic opportunity to propose and develop an integrated environmental & climate protective response to wildfire, in a traumatized and sensitized area, without which this proposal has a significant cumulative negative impact to the local & regional environment due to unrealized wildfire protections.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-15	Why is EIR & SP preparation biased in favor of Standard-Operating-Procedure for new development? Why does it appear the SOC EIR and associated Specific Plan (characterized by the County's preferred Proposed Project Alternative) have defined and committed the County of Sonoma, as Lead Agency under CEQA, to a series of specific decisions, plans, and/or alternatives without fully considering other acceptable plans (under legislation 14670.10.5), alternatives, mitigation measures, and the Null Project.	The draft EIR considers a range of alternatives, mitigation measures and two No Project Alternatives.
Steve Birdlebough	September 23,2022	C164-16	Please explain why the County (Permit Sonoma) has allowed the EIR to be produced which does not address the mitigatable cumulative effects of waste generated by the proposed alternative over the Null Project hypothesis, to the extent where recommended building demolition of ~1.2M sq-ft produces a minimum of 161,000 cy of debris equal to 67 years of operation of the Proposed Project Alternative in addition to the equal amount of debris produced by the eventual demolition of the Proposed 1.2M sq-ft Project (L=322,000 cy, or 134 years at the rate of the Proposed Project at completion); together with the project waste there will be an average cumulative waste of 19.8 tons/day or 1.5% of daily averages (2016-2020, per SP pg 603}? Since we are already transferring all our solid waste away from Sonoma County because we do not have local landfill capacity, and our waste. charges ($135/ton} are double the charge for Hazardous Waste ($50.97/ton asbestos waste} taken to Kettleman Hills landfill, this must be considered a significant mitigatable impact by Reuse and Historic Preservation of the existing buildings. At the local waste costs, this represents >$960,000/yr = ~$6SM over the 67 years, from these 3 sources.	The comment is noted. See response to comment C168-1.

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-17	Why is no mention made in the EIR or SP of GHG's which were imbedded and carried within the existing constructed buildings which will be released into the atmosphere by their demolition, nor is any mention made of the GHG emissions which are imbedded in the production of the new materials and resources which are expected to replace the demolished SOC b_uildings, these are significant long term mitigatable cumulative effec:ts? Why has the EIR not addressed either of these cumulative GHG effects, from demolition, neither the before demolition GHG emissions sequestered in the existing buildings which will be released, nor the GHG emissions released in the production of the replacement 1.2M sq-ft of buildings together with their own lifecycle emissions released upon their demolition? These GHG's must be considered a significant mitigatable impact by their Reuse. Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish?	Chapter 3.6.3 of the DEIR addresses impacts of greenhouse gas emission of construction.
Steve Birdlebough	September 23,2022	C164-18	Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-ofthe-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that	See Chapter 3.6.3 of the DEIR for impact analysis of energy and greenhouse gas emissions related to project construction and operation.

Commenter	Date	Letter	Comment	Response
			almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building?	
Steve Birdlebough	September 23,2022	C164-19	Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to "In-Situ" mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the buildings?	Chapter 3.8 of the DEIR examines impact analysis related to hazards and hazardous materials
Steve Birdlebough	September 23,2022	C164-20	Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, "a death by 1000 cuts" to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation? Can you explain how you are mitigating this neglect, in producing a cycle of demolition and reconstruction which has a cumulative effect on the environment due to exploitative expectations, the expectation that 'everything I have should be new', 'we need the new', 'I need the new'? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis?	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-21	County's evidentiary record is anecdotal @best. Sonoma Valley represents a national treasure, as described as, "The Valley of the Moon". Sonoma is the Native Indigenous American name for the valley. When White settlers asked what Sonoma meant, Natives pointed to the trace of the Moon setting and rising behind the eastern ridgetops during certain times of the year, the White's interpretation was that "Sonoma" meant 'the valley that the Moon touches' ("The Valley of the Moon"). My Anthropology studies and linguistic avocation has taught me to hear the phonetic sounds (the basic phonemes), particularly for significant language words, words that have cultural, spiritual, or international usage, such as words which are adopted into a language from another. The basis of this study is Multi-critical analysis as opposed to diacritical analysis. Typically there will be very little understanding of the actual meaning of an adopted word. Then, if it ret_ains a high referential standing, it indicates it's an adopted word, not merely a forgotten word. Typical adopted words with high Referential standing and forgotten meanings are: Alleluia, precious, and Amen. In this case we have Sonoma: what are the phonemes for "Sonoma", they are "Tsu" (not Tso) & "Noma"; so in this case our supposition is correct, because these are two very important international words. "Tsu" or "Tzu" represents the name given by the Chinese to one of their greatest Philosophers, "LaoTzu" the founder of Taoism (from UCI Anthropology studies "Chinese, Taoism & Confucianism", 1983), "LaoTzu" was originally named "LoTzu", meaning "Man-Master" (Philosopher) and when he was older it was changed to "LaoTzu", meaning "Old-Man-Master" (or Great Philosopher): Therefore "Tzu" means "Master". "Noma" is the Aramaic word for 'name' establishing the identity and essence of a thing and thereby giving man control over the substance, and in the Greek "Nomo" means "law or control", again, in Western parlance the essence is unknowable but the manifestation is controllable by the 'name': so control and name are the same thing, therefore "Noma" means "name" (from participation in Antiochian and Greek culture, which develops from a multi-critical analysis as opposed to diacritical). "Sonoma" therefore means "The Master's Name", and in a	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			Spiritual sense, it means the highest name above all names. "The Master's Holy Name", in an Eastern Spiritual sense describing God's, the Creator's, or Great Spirit's control over the location by the Moon's contact with the Earth, not Man's control over God by invocation of the Name. This we hear many times from Joseph Campbell, man's search for control vs man's search for God.

Steve Birdlebough	September 23,2022	C164-22	Analysis of EIR Historical Asset discussion: The Program Draft EIR is silent on the above discussion, while reporting Environmental Impact Report - County Summary "5.3 Significant and Unavoidable Impacts: According to CEQA Guidelines 15126.2(b), an EIR must discuss any significant environmental impacts that cannot be avoided under full implementation of the proposed program ... However the Proposed Plan aims to be self-mitigating. Thus, all proposed policies aim to address environmental impacts (to the, sic) to the greatest extent feasible and no mitigation measures are required. The analysis in Chapter 3 determined that the Proposed Plan would result in significant impacts to the cultural/historic resources and transportation (home-based work trip vehicle miles traveled per capita) that, even with implementation of mitigation measures, would remain significant and unavoidable". This language neglects real analysis of the Null Hypothesis Project, and only considers the Proposed Plan impacts which it states (along with all other alternatives) have similar impacts [without discernment as to avoidable, mitigatable, or unmitigatable], which is entirely untrue in the Null Hypothesis case.	See Master Response 1 created to address questions about the adequecy of a self-mitigating Specific Plan. Furthermore, the DEIR includes a range of alternatives, including two No Project Alternatives.
Steve Birdlebough	September 23,2022	C164-23	Continuing; "5.3.1 Cultural, Historic, and Tribal Resources: new construction under the Proposed Plan has the potential to disconnect the remaining contributing resources in the Core Campus from those in the Community Separator and Regional Parks lands to the east and west, disrupting the SSHHD's overall integrity to the point that it would no longer be eligible for listing in the National Register of Historic Places, CRHR, or as a California Historic Landmark. This impact, in addition to demolition of the aforementioned resources would result in a substantial adverse change to the significance of the historic district such that the significance of the historic district would be materially impaired pursuant to Section 15064.5. Implementation of goals 2-1 and 2-J and policies 4-20 through 4-32 as well as Standard Conditions of Approval (LUl through LU6) would partially compensate for the impact associated with the demolition of historically contributing resources and physical alteration of the historic district to the maximum extent practicable; however, because these measures would not be enough to avoid or reduce the impact completely, the Proposed Plan's impact would remain significant and	Chapter 3.5 of the DEIR explains the tribal consultation process that has been completed for this project. Additionally, a number of related conditions are included as part of the Specific Plan policies and Standard Conditions of Approval.

Commenter	Date	Letter	Comment	Response
			unavoidable". No mention is made of the Tribal Resources, because no artifacts remain or they could be recovered in a project excavation, but this does not address the transcendent value ,of the space and place name as a World Heritage Cultural Site, which can be subsumed in the potential Project construct, where we have heard discussed 2-3Msf of Commercial Construction.	
Steve Birdlebough	September 23,2022	C164-24	Again, the Program Draft EIR's considerations of the impacts, mitigations, and alternatives appear limited to the Proposed Plan Project Alternative, and do not address the Alternatives, nor the Null Hypothesis Project, continuing a foregone conclusion (see 2-3Msf of Commercial Construction discussed above, is that unmitigatable?). Please see the following analysis of project conceptual iteration for planning and design. Please see pg4 p3 San Mateo Gardens, re "substantial evidence in the record, is a predominantly factual question ... for the agency ... drawing on its particular expertise"; here we are bringing your attention to the word "expertise ". Friends of the College of San Mateo Gardens v. San Mateo County Community College District https ://law .justia.com/ cases/california/ cou rt-of-appeal/2017 /a135892.html We want to accept the presumption of legal operation, b_ut we must also accept and correct the illegal condition when evidence is presented to the contrary. In a County system, Engineering is not conducted without Accounting. But if the Accounting fails such as for Northwestern Pacific Railroad, the sad evidence must be accepted, and correction immediately made or we suffer the loss of funding or function. No one was there to accept the Trucker's weighmaster's tickets when the washout deliveries were made in the upper NWP line, none could be found, none ever delivered, no NWP.	The comment is noted. Please see MR-1 regarding the adequacy of a self-mitigating Plan.

Commenter	Date	Letter	Comment	Response
			The reason we approach the initial determination of a project this way, using California Supreme Court's remand for San Mateo Gardens, is, here we equate the Court EIR analysis process to the Engineering process, in that there are a sequence of iterative steps involved. This process is best exemplified from the CA Supreme Court's remand expressed in San Mateo Gardens, where a series of back-and-forth evaluations and propositions are made in analyzing a project (one such method is CPM,Critical Path Method), which is the same process we use in conceptual design or planning. A comparison is made by question; does the "initial concept" with its features fit the need and the existing space, then we may have to adjust the concept's features to the needs, or to the space? Conceptual planning designs forward & backward many times.	

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-25	This comparison is not to decry the effort expended or the information obtained through Planning education or product, but a marathon runner prepares for a marathon, not Law or Engineering. Preparation for a marathon may be great preparation for someone wanting to become a Lawyer, Doctor, or Engineer, but by itself does not make one a Lawyer, Doctor, or Engineer. Nor is an Urban Planner a qualified Civil Engineer, and therefore is unable to make prpfessional judgments in respect to the Planning of "fixed works" identified in BPC 6731. [See Licensing BPC 6730-6730.2(a); 6731; 6734; 6735(a). See also Administrative Mandamus case, Morris v Harper (2001) 94 Cal.App.4th 52 . "After all, ""[i]t is the refusal or neglect to perform an act which is enjoined by the law as a present duty that serves as the very foundation for the [mandamus] proceeding.'" (Morris v. Harper, supra, at p. 60.)"] San Mateo Gardens; "Instead of resting on whether a project is new "in an abstract sense, " the "decision to proceed under CEQA's subsequent review provisions must ... necessarily rest on a determinationwhether implicit or explicit-that the original environmental document retains some informational value . " (Id. at p. 951.) Such an inquiry "is a predominantly factual question ... for the agency to answer in the first instance, drawing on its particular expertise." (Id. at p. 953.)" From where does this "expertise" derive, Planners require no Science education?	The comment is noted. Please see MR-3 regarding the level of detail of analysis and programmatic nature of the Draft EIR

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-26	The EIR standard is, if/when there are sign{ficant environmental impacts, then a review of impacts and mitigations must obtain (other than stating overriding or unmitigatable conditions), and a "judicial review must reflect the exacting standard that an agency must apply". San Mateo (ibid) pg 8. What this is referring to is, that the evidence must be prepared to a very high standard, from the beginning, in order for it to be considered "substantial evidence in the record". Where is the "exacting Standard" & "expertise"? According to the National Society of Professional Engineers code of ethics, Professional Engineers may disagree without a single outcome obtained, but must remain decorous. ["The Supreme Court in San Mateo Gardens provided guidance for how to apply the subsequent review provisions. It explained that whether "major revisions" will be required as a result of project changes "necessarily depends on the nature of the original environmental document," i.e., whether it was an EIR or a negative declaration. (San Mateo Gardens, supra, 1 Cal.5th at p.958.) It further explained that the appropriate standard of review also depends on the nature of the original environmental document. Although an agency's determination of whether major revisions are required is reviewed for substantial evidence, "judicial review must reflect the exacting standard that an agency must apply when changes are made to a project that has been approved via a negative declaration,11 as opposed to the deferential standard that applies when the project was originally approved by an EIR. (Id. at p. 953; see Committee for Re-Evaluation ofTLine Loop v. San Francisco Municipal Transportation Agency (2016) 6 Cal.App.5th 1237, 1247, 1251-1252 [applying San Mateo Gardens in case where project originally approved by EIR]; Latinos Unidos de Napa v. City of Napa (2013) 221 Cal.App.4th 192,"]	The comment is noted. Please see MR-1 regarding the adequacy of a self-mitigating Plan.

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-27	In planning, we have said, the process is intensely exhaustive and iterative, and what is described as the Court EIR review process is also exhaustive and iterative. The Court ceding competency to the local agency is similar to the process of presenting a case to a Court of Competent Jurisdiction. A Court of Competent Jurisdiction is composed firstly of a trained lawyer, either by a Law School or by preparation and passing the Baby Bar. Then of course, the prospectant Judge must pass the National Bar Exam locally administered, next the Judge must practice law for a minimum of 10 years. At some point the Judge is appointed or runs for election, and finally, the Judge is selected to hear a case by the Chief Judge. The Court itself must also be of Competent Jurisdiction, meaning it is the proper venue, as established by our system of Jurisprudence. These are significant tests. If someone went to College and studied English or Political Science, they could learn a lot of laws, but they would not be presumed to know how to practice Law, And they did not go to Law School or pass the Baby Bar, and they have not prepared to be a Lawyer, let alone a Judge.	The comment is noted. Please see MR-2 regarding the need for more time/selection of a developer before finalizing the Specific Plan
Steve Birdlebough	September 23,2022	C164-28	Engineering is one of the most complex problems in supply & demand, as evidenced by the number of divorces in custom home remodeling and construction, and why Public Works requires Licensed Civil Engineers. Our critique is not meant to characterize the work of any Engineers having completed reports for the SOC □IR-SP, since we do not know what instructions they were given. But we contend that recommended demolition for over l.2Msf without analysis of 400,000sf, and recommended demolition of ~75,000sf of Hospital Treatment Building rated at "not requiring any updates", represents an incomplete analysis at best, and certainly a neglect of the impacts on the resources being analyzed. As we spoke of backward-and-forward analysis in design, this is required in Planning as well, unless a truncated process is employed. It is far easier to make the facts fit the design, than to make the design fit the facts. If your timeline is short, it is far easier for you to establish the Project, and make the analysis fit	The comment is noted. Please see MR-1 and MR-3 regarding the adequacy of a self-mitigating Plan and level of detail of analysis and programmatic nature of the Draft EIR

Commenter	Date	Letter	Comment	Response
			the Project by not addressing impacts except in a standard way, such as, "(h)owever the Proposed Plan aims to be self-mitigating". "from Program Draft EIR 5.3 Significant and Unavoidable Impacts"	
Steve Birdlebough	September 23,2022	C164-29	Subsequent to the very specific State Law being passed to sell SOC, incorporating significant intent for community participation, many meetings were held with studied interest and good comments. Comments were sent to Permit Sonoma and the Planners involved in SDC's NOP of Program Draft EIR & SP, but these comments were not incorporated in the evaluation nor in the Proposed Alternative Project SP, nor were they forwarded to the Planning Commission, nor were they provided to other participants or commenters to the EIR & SP. This is not standard practice, and violates CEQA Code 15300(a)&(b)(l)-(3); "(a) Before granting any approval of a project subject to CEQA, every lead agency or responsible agency shall consider a final EIR or negative declaration or another document authorized by these gujdelines ... (b) Choosing the precise time for CEQA compliance involves a balancing of competing factors, El R's and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment."	Chapter 1.3 of the DEIR includes information about the planning process, including the notice of preparation and public participation that have gone into the process. These comments are available to the public, including the Planning Commission, as Appendix A of the DEIR.

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-30	(b)(l) "With public projects, at the earliest feasible time, project sponsors shall incorporate environmental considerations into project conceptualization". The timeframe window for "cumulative impacts" evaluation was limited to after Proposed Alternative Project completion, leaving out the demolition and construction of the entire project, let alone the life cycle embedded costs, GHG's and energy to be demolished as a consequence from the new construction. This time frame results in unsubstantiated conclusions for the Proposed Project Alternative in ES.3 Alternatives to the Proposed Plan, "As discussed in Impacts 3.6-2, the Proposed Plan would thus support and reflect the increasingly stringent State and local goals and regulations that seek to increase energy efficiency, reduce energy consumption, and prioritize renewable energy - reinforcing that the Proposed Plan would not result in cumulatively cons_iderable impact with respect to wasteful, inefficient, or unnecessary consumption of energy resources." They left out 161,000 tons of waste. 15300 (b)(3), "With private projects, the Lead Agency shall encourage the project proponent to incorporate environmental considerations into project conceptualization, design, and planning at the earliest feasible time." This truncated analysis appears to be the type that establishes priorities, goals, and objectives before the certification of the EIR is complete, therefore "limiting alternatives or mitigation measures".	The comment is noted. Please see MR-1 and MR-3 regarding the adequacy of a self-mitigating Plan and level of detail of analysis and programmatic nature of the Draft EIR

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-31	This truncated analysis would violate CEQA Code 15300 (b)(2), "public agencies shall not undertake actions concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance";"and for example, agencies shall not:(b)(2)(B)", "Otherwise take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project". Given that Permit Sonoma will only provide the public's comments to the Planning Commission upon final EIR Certification, and a series of comments have been made to the SDC Comprehensive Planning Manager which has not incorporated the public's comments into the Proposed Project Alternative, "at the earliest feasible time", they appear to have violated See's 15300(a)&(b)(l)-(3), inclusive. What we contend here is, that the proper "back-and-forth" process has not occurred, as within the planning process proper, within the design process proper, within the EIR process, as would be the same within the Court's evaluation of the EIR process itself, from San Mateo Gardens remand from the California State Supreme Court, which constitutes proper Authority to all jurisdictions within California.	Chapter 1.3 of the DEIR includes information about the planning process, including the notice of preparation and public participation that have gone into the process. These comments are available to the public, including the Planning Commission, as Appendix A of the DEIR.
Steve Birdlebough	September 23,2022	C164-32	We also contend that "particular expertise" and "the exacting standard that an agency must apply" is not available to the review that the "judicial review must reflect", without a Licensed Civil Engineering in Responsible Charge of "Fixed Works" Planning, BPC 6731. Also, in another form of Transcendence, both "Tsu" and "Noma" mean "control", so they are like conjoined twins, in a simple manifestation of the "Rosetta Stone". Looked at separately, we call this a "Translation", but conjoining them is a form of transcendence in the physical plane of existence. The name "Sonoma" appears to be used as a descriptive tool, by connecting physical transcendence (translation of place) with the location of a Spiritual Transcendence (in reference to the verticality of the Moon's	Section 6.1 of the DEIR lists the agencies, names and titles of people that contributed to the DEIR.

Commenter	Date	Letter	Comment	Response
			touching the Earth), it again mirrors the "Rosetta Stone" representing two kinds of Transcendence, with the Earthly "T" crossing the Spiritual vertical demarcation.	
Steve Birdlebough	September 23,2022	C164-33	More than the mere analysis of the word and its application to the space, is the significance of "Sonoma" in the cross-cultural linguistic representation of deification using ancient language references from across the sea, and linked only by many thousands of years. There is no other place name which connects so perfectly the unity of man, the Name itself transcends both the ages and the seas, thus we have the essence of a World Heritage Cultural Site. Like many other UNESCO World Heritage Sites, which are in disrepair and in danger of destruction, Sonoma's "Valley of the Moon" is suffering an existential threat from the Proposed Project Alternative. Located at near the exact geographic center of Sonoma Valley, 10 miles from it's head along Hwy 12, and 12 miles from it's outlet at Skagg's Island. And transected by a vital Wildlife Corridor connecting 2 Mountain Parks: Sugarloaf/Hood and Jack London Parks; no discussion or analysis has been given to the significance of this World Heritage Cultural Site, or the impacts or any mitigation from the significantly new, taller, and dense construction within the Program Draft EIR-SP Project analysis (cursory discussion was given to light pollution, but none to the physicality of the presence of tall, dense, populous village construction in the midst of an Historic Treasure, McDonalds centered in Teotihuacan).	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR, and MR-7 regarding the adequacy of impacts on wildlife movement or disagreement with analysis/findings.

Commenter	Date	Letter	Comment	Response
Steve Birdlebough	September 23,2022	C164-34	The significance of this Spiritual location was not lost on those who created the Sonoma Developmental Center for a healing center for their developmentally disabled children. We should hope that at this more enlightened time, and consistent with CEQA, the Historical Preservation Act, and the 50th Anniversary of the World Heritage Convention (Sept 17, 2022), we should be prepared to preserve both the content and the context, as much as is physically possible, for this National Treasure, "The Valley of the Moon". Under the UNESCO World Heritage Convention, which the United States was signatory (though withdrawn from 2018), we should "strengthen Credibility of the World Heritage List, ensure Conservation of World Heritage properties, promote Capacity-building measures, increase public awareness, involvement and support for World Heritage, and enhance the role of Communities in implementation of the World Heritage Convention". What has been done here appears to be the opposite, a complete neglect of not only Native American cultural values, but World Heritage Convention values.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Tadashi Nitasaka	26-Sep-22	C165-1	We are writing today following our review of the draft environmental impact report pertaining to the Sonoma Developmental Center's (SDC) future. As most following this planning process, including Sonoma County Planning Commissioner Greg Carr, have stated (repeatedly, loudly, emphatically) – we find that this report fails, either in part or in total, to account for several environmental impacts essential to any meaningful understanding of the ways in which the public's safety, true protections for the natural environment, and the many human needs are to be addressed. And so, with but a few scant weeks to pour through a 789 page report that bases its assessments, conclusions, and recommendations on the previous "Plan" - and so is itself deeply flawed and grossly inadequate, we will once more howl into the void. Others with more advanced professional qualifications have pinpointed the flaws in those sections of the report pertaining to the natural environment, historic preservation, public safety, and traffic. We will restrict our comments to concerns for the future housing uses of SDC's Core Campus - and to a planning process that appears to have now gone off the rails – disappearing into the abyss of railroaded transparency! The first of our issues concerns the so-called "SDC Specific Plan" and the "reasonable range of alternatives to the Proposed Plan" - as required by CEQA in an EIR. Is it just us? We find that the community's input is nowhere to be seen in either of these deeply deficient reports. To illustrate, we and others have proposed, as one reasonable alternative, using SDC's built footprint, referred to elsewhere as its "historical 180-acre built area," as a campus for those seeking training in the trades, in the applied sciences, public service occupations, and other professions of financial and social benefit to the students, their families, and the entire state.	The comment is noted. Please see MR-3 regarding the level of detail of analysis and programmatic nature of the Draft EIR

Commenter	Date	Letter	Comment	Response
Tadashi Nitasaka	26-Sep-22	C165-2	We see no evidence that this invaluable, desperately needed (see any number of actual empirical studies) educational use was given a moment of consideration. Remarkably shortsighted given that use of SDC's Core Campus as a campus would come with fewer vehicle miles travelled, allocations for affordable housing, to name but a few of the benefits, in part because students, staff, and educators could be offered housing within the campus. Please see the attached letter sent to the Sonoma County Board of Supervisors on November 21, 2021 as it offers a deeply researched look at just such a use. Further, the Draft EIR ignores the county's dire need for affordable housing, calling instead for allocating 90% of the 1,000 proposed new houses as market rate homes. This in defiance of The Final Regional Housing Needs Allocation (RHNA) Plan , adopted in December 2021 which determined that Sonoma County's fair share of regional housing would be 3,881 units, with 1,632 allocated as housing affordable to very low- and low-income households. That would be about half the homes to be built, not 10% as this draft EIR calls for! Just a disgraceful display of the preference throughout the draft for meeting the needs of the wealthy over the rest of us. "SDC Core Campus: Consists primarily of residential buildings, with medical, educational, recreational, and administrative buildings interspersed. A cluster of utility and support buildings, and fire station sit at the western edge of the Core Campus. On the eastern portion of the site, historic agriculture uses…" Government Code Section 14670.10.5 (c) (4): The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be appropriate for the property shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that is deed restricted to provide housing for individuals with developmental disabilities. To this end, we propose developing cottage clusters throughout the campus designed to meet specific needs such as supportive housing for individuals with disabilities, older adults, agricultural workers, and young families in need of starter homes. As an enriching environment affording access to the educational, recreational, social, health, and support resources, all on this technical college campus, all bringing full circle the many necessities of	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

			life - all without segregating this campus from the rest of Glen Ellen - what could be better?	

Commenter	Date	Letter	Comment	Response
Tadashi Nitasaka	26-Sep-22	C165-3	It is outrageous to propose 100 of the 1,000 housing units might be deemed affordable, especially when communities such as Glen Ellen have been ravaged for Tourist Occupancy Taxes since Sonoma County's Vacation Rental Ordinance went into effect more than a decade ago. One hundred units doesn't begin to make up for the hundreds of homes converted into commercial tourist traps over these years. We need to actually, truly, add to our housing stock. By "add to" we mean in addition to recovering, by some means, those dwelling units sacrificed for profit, private and public. The proposed housing outline comes nowhere near to meeting the documented need for affordable housing in Sonoma County. Although state housing element law is cited in Chapter 3.1.2: Population and Housing, we believe that, beyond this scant mention, it ignores state law and the Sonoma County Housing Element. Certainly, it does not begin to touch on the county's requirement to provide for its burgeoning homeless population, a significant aging population unable to live on its paltry retirement income, or an agricultural community ignored in this process - as usual. Our second point also concerns process. While the people of Sonoma County, of the State of California have been encouraged to participate in a planning process sold to us as public, above board, and time constrained, we have just learned of another process (see attached 9/23/22 Index-Tribune article). This one private, ongoing, underhanded, free of transparency, a play for SDC by a real estate developer and his business partner - both with lengthy histories of questionable business ethics. This time, having sufficiently inserted themselves into the state system, carrying satchels of cash, of many millions of tax dollars, all offered to Sonoma County in exchange for a deal requiring NO Environmental Impact Report and benefitting only the few, the wealthiest schemers. "Public records reveal that two Sonoma County businessmen — Darius Anderson and Doug Bosco — played central roles in the backdoor negotiations for the easement sales" in a sham process meant to deflect the public's attention away from the dealmaking between a little-known state agency headed by the same man working to bring coal through Sonoma County on the Sonoma-Marin Area Rail Transit district — SMART line (see two attached 2021 Bohemian articles)	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Tadashi Nitasaka	26-Sep-22	C165-4	Former congressman Doug Bosco is the CEO of the private freight company Northwestern Pacific Railroad Company (NWP Co.). Along with his business partner, real estate developer (e.g., Treasure Island: Radioactive debris) and owner of the powerful Platinum Advisors political consulting firm, Darius Anderson, they leveraged their influence to lobby state and federal lawmakers for the right to transport coal, among other commodities on the SMART rail line. Although most of their plans failed to pan out, through a series of complex loans and contracts (according to The Bohemian's 2021 report), a publicly chartered rail agency, North Coast Railroad Authority (NCRA), now owes NWP Co. millions of dollars. And today they continue running freight on the SMART rails. It should be noted that Anderson and Bosco are founding members of Sonoma Media Investments, which owns most of the print media in Sonoma County including the Press Democrat, Sonoma Index-Tribune, Sonoma County Gazette, Petaluma Argus-Courier, North Bay Business Journal, Sonoma Magazine, and La Prensa. So it's business as usual as the high rollers operate behind the scenes, leveraging millions of tax dollars in a play for possession of a community resource. Doug Bosco believes he and he alone can secure SDC, work around the usual requirements for an EIR, and buy off Sonoma County to create his next dream project. When Supervisor Gorin spoke at last week's (September 21) meeting of the North Sonoma Valley Municipal Advisory Council, there was no mention of the Bosco/Ocean Conservancy deal. Nor did County Planner Oh indicate that he was negotiating a deal with Doug Bosco when he addressed the Sonoma County Planning Commission at its September 15 meeting. The public is entitled to an explanation - NOW! This planning process must be halted until those who will pay (in oh so many ways) are fully informed of the facts. And now, one final point that cannot be ignored: The Sonoma Developmental Center, Eldridge, the neighborhoods south of SDC - WE ARE ONE! We are Glen Ellen. We will not stand for further planning hellbent on separating our neighborhoods by this or any other planning process!	The comment is noted. Please see MR-2 regarding the need for more time/selection of a developer before finalizing the Specific Plan

Teri Shore	Wednesday, September 21, 2022	C166-1	Please find below and attached my official detailed public comments on the SDC Draft Environmental Report and Specific Plan to be entered into the public record and administrative record. Looking forward to the county's responses. It consists of 12 pages of a letter; 20 pages of a table with comments; and 8 pages of an article. Please include all. Thanks for your consideration. Dear Permit Sonoma, Board of Supervisors and Sonoma County Planning Commission, As a long-time resident of Sonoma Valley who cares deeply about the lands, wildlife and people who live here, I do not support the Sonoma Developmental Center (SDC) Specific Plan as proposed by Permit Sonoma and find that the DEIR is inadequate to meet the requirements of the California Environmental Quality Act. Please see my general comments followed by comments on the DEIR and a detailed table with more detailed comments.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Teri Shore	Wednesday, September 21, 2022	C166-2	GENERAL COMMENTS on SDC DEIR, Specific Plan and Planning Process Reversal of County Land Use Policies: The proposed SDC Specific Plan and DEIR comprise a complete reversal on decades of city centered growth and open space protection in Sonoma County. Instead of providing a visionary plan that addresses climate change and environmental protection while providing appropriate affordable housing, the County of Sonoma is deciding to forever urbanize the heart of rural and agricultural Sonoma Valley. Whether or not the Specific Plan is implemented or not, the rezoning of these lands for residential, hotel, commercial, retail and other new land uses will forever transform these lands.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Teri Shore	Wednesday, September 21, 2022	C166-3	Public Land for Public Good: This public land has always served the public good. For decades, everyone from local residents to county elected officials to open space agencies and the general public have envisioned these lands for protected open space and serving the needs of people with developmental disabilities and others who may need housing and services. So, it is extremely heartbreaking to realize that the county is instead intent on building a giant new subdivision here despite the many other options that have been forwarded by the community and stakeholders. The state statute is being willfully misinterpreted by the County of Sonoma to the detriment of the	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
			people of California who own these lands. Turning public lands over to private developers for profit is simply wrong when there are many models for repurposing public lands without doing so, such as Marin Headlands, Presidio Trust, and Mare Island.	
Teri Shore	Wednesday, September 21, 2022	C166-4	Open Space: My comments are primarily focused on the open space lands surrounding the campus. These lands are critical for conservation, biodiversity and habitat linkage at a regional and state level. These lands qualify for and are prioritized for recognition in Governor Newsom's 30 X 30 Executive Order among environmental leaders such as Sierra Club, Sonoma Land Trust and Sonoma Mountain Preservation. It is unfortunate that the DEIR and Specific Plan do not give these treasured lands the level of analysis and protection as the development on the historic campus. Definitions are unclear and there are no requirements or details on how, when or through what process the open space will be permanently protected in public ownership. No doubt it is because the primary focus has been on urban planning. It might be a very good urban plan for a town or city but not for the center of the Sonoma Valley Wildlife Corridor and open space that provides easy access to nature and quiet recreation for all, across the income spectrum. Here the urban plan constitutes old fashioned sprawl.	The comment is noted. Please see MR-7 regarding the adequacy of impacts on wildlife movement or disagreement with analysis/findings, and MR-8 regarding the Historic Preservation Alternative.
Teri Shore	Wednesday, September 21, 2022	C166-5	Housing: While we all recognize the need for affordable housing, we also know that we can't build our way out of it. Just look to the rest of the Bay Area and places like Los Angeles where affordable housing is even more scarce. There is room in existing cities and towns to provide affordable housing for the people who need it. But of course, we need to change the way we provide housing; build-baby-build isn't it. The SDC lands are the wrong place for massive housing development comprised primarily of market rate housing. This will simply create another high-end wine country enclave and profits for private developers. Timeline: While I don't have any confidence that the county intends to change course, I do request that the county provides	The comment is noted. However, it does not relate to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			the public, Planning Commission and Board of Supervisors adequate and appropriate time to revies and finalized the DEIR and Specific Plan. The County must ask the State of California for more time to accomplish this important planning process. The County and State should not adopt a plan just to meet an arbitrary deadline. There is no rush given that the SDC property will be in transition for decades to come.	
Teri Shore	Wednesday, September 21, 2022	C166-6	DEIR COMMENTS REVISE DEIR TO MEET CEQA: Revise and strengthen the Draft Environmental Impact Report to meet the requirements of California Environmental Quality Act by analyzing and preventing or reducing all negative environmental impacts generated by the proposed Specific Plan by scaling back project, avoiding impacts and providing legally enforceable mitigation measures in a Mitigation and Monitoring Program. As drafted the DEIR is not adequate to meet CEQA. It has zero mitigations for any environmental impacts, including two that are "significant and unavoidable:" historic preservation and VMTs. 2. REVISE SELF-MITIGATED SPECIFIC PLAN: Revise and strengthen the Specific Plan Conditions of Approval to be legally enforceable requirements and recast as mitigation measures in the DEIR, as above. As drafted, the "self-mitigating" Specific Plan does not mitigate significant negative environmental impacts. The Conditions of Approval (CofAs) only apply to half of the environmental areas required for study under CEQA. And there are none for critical issues such as wildfire. Most of the CofAs for biological resources apply only to construction, not operations or maintenance, and are based mostly on existing state law or Best Management Practices, which are not in statute and therefore not legally enforceable. All Specific Plan Goals and Policies need to be specific, strong and enforceable. Otherwise, they are practically meaningless. Please remove vague words such as "promote" or "encourage" or "if feasible." Replace with "require", "shall" or "must." These strengthened Goals and Polices then need to be made Conditions of Approval and recast as Mitigations in the DEIR in a Mitigation and	The comment is noted. Please see MR-1 regarding the adequacy of a self-mitigating Plan.

Commenter	Date	Letter	Comment	Response
			Monitoring Program. If CofAs, policies or goals can't be made specific, then remove them as they do not mitigate environmental impacts. Having a Self-Mitigated Plan is not part of CEQA and does not necessarily meet CEQA; and certainly not in the case of the SDC Specific Plan and DEIR.	
Teri Shore	Wednesday, September 21, 2022	C166-7	3. SCALE BACK DEVELOPMENT AND CHANGE PREFERRED ALTERNATIVE: Scale back the development to 450 or fewer homes in scale with the rural character of the property; utilize existing buildings, preserve historic features. Require that 100 percent of the homes be affordable to low, very low- and moderate-income working people and to individuals with developmental disabilities. Require that all homes and buildings meet Visitability Standards for access by Americans with Disabilities (ADA), prioritizing those who currently live in Sonoma Valley. - Eliminate the hotel, retail and commercial space that is not needed as those services already exist nearby in Sonoma Valley. - Change the Preferred Alternative to the Historic Preservation Alternative, which is the most environmentally sound, and amend to reflect the requirements above.	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-8	ANALYZE OPEN SPACE AND PUBLIC INSTITUTUION ALTERNATIVES: All the alternatives studied by the County of Sonoma are variations on a major mixed-use development that maximizes urban style use. The scaled back Historic Alternative is the closest to what the public and community has asked for over the years. However, the Open Space and Public Institution Alternatives that were dismissed by the County of Sonoma offer significantly difference alternatives that deserve further analysis. The Marin Headlands and Presidio Trust are good examples of how public land was repurposed without overdevelopment that could be analyzed further in the Open Space Alternative. Providing more details on the Historic, Open Space and Public Institution Alternatives will serve to meet CEQA criteria to provide the public and decisionmakers with a true range of alternatives. While the DEIR claims that these alternatives were dismissed due lack of consistency with state statute, I would argue that the various development alternatives that were presented are too narrow and also inconsistent with state statute. State statute calls for housing as appropriate on the SDC site and to prioritize affordable housing and housing for developmentally disabled individuals. What's present is very much out of scale and not appropriate for rural land. In addition, the DEIR and Specific Plan calls for the introduction of commercial agriculture throughout the preserved open space areas, which was never mentioned in state statute. Many other new land uses never mentioned in state statute are also proposed. In there any legal, statutory or other reason why County of Sonoma should not analyze and provide more details on the Historic, Open Space and Public Institution Alternatives?	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-9	5. PROVIDE SPECIFICS AND ADDRESS IMPACTS TO OPEN SPACE – The Specific Plan and the DEIR mentions open space protection in general terms in several places, in various ways, but fails to provide a clear definition of "preserved open space," or to give the exact boundaries (other than in one general overlay map), or give details on how or when it will be protected, transferred or managed. Vague Goals and Policies contained the Specific Plan and DEIR do not suffice, such as "future developers at the site must work with the County to ensure proper management and stewardship" and "Work with Sonoma County to dedicate the preserved open space as regional parkland." Not resolving these issues is likely to create confusion and conflict later for all involved, as elected officials, agency staff and developers change over time. The DEIR and Specific Plan cannot rely on state statute to protect the open space lands [1] as that language is vague, only as "feasible" and in the "best interests of the state." These inadequacies need to be resolved in the DEIR and Specific Plan by adding clear descriptions of the open space lands with exact boundaries; likely mechanisms for transferring the lands and to what possible entities or types of entities; a timeline; and how the lands will be managed and under what authority. Environmental impacts and mitigations for impacts to the open space lands from development of the campus and ongoing operations must be provided.	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-10	Preserved Open Space and Agriculture: The Specific Plan and DEIR make sweeping statements about “historic agriculture” but do not explain the extent of past agriculture in terms of types or amount of acreage. The impacts of allowing commercial agriculture on open space that is currently not in agriculture must be analyzed and the environmental impacts avoided or mitigated in the DEIR. Unacceptable New Uses in Preserved Open Space: Table 4-3 (attached) of the Land Use Section of the Specific Plan outlines many new uses in “preserved open space” including wine tasting rooms, timber conversion, wholesale nurseries, sports facilities and several others that have not been analyzed under CEQA or addressed at all in the goals, policies or CofAs of the Specific Plan. These “permitted” new uses in Preserved Open space must be analyzed, avoided or prevented and mitigated as required under CEQA and in my view NOT ALLOWED OR PERMITTED in Preserved Open Space. SHOULD NOT ALLOW AS PROPOSED THESE USES IN PRESERVED OPEN SPACE TABLE 4-2 SPECIFIC PLAN Agricultural Crop Production and Cultivation Agricultural Processing Animal Keeping: Beekeeping Animal Keeping: Confined Farm Animals Animal Keeping: Farm Animals Animal Keeping: Pet Fancier - Farm Retail Sales Farm Stands Indoor Crop Cultivation Mushroom Farming Nursery, Wholesale Timberland Conversions, Minor Nursery, Wholesale Tasting Rooms SHOULD NOT ALLOW AS PROPOSED IN SPECIFIC PLAN WITH CONDITIONAL USE PERMIT Recreation and Sports Facilities: Recreation Facility, Outdoor Recreation and Sports Facilities: Rural Sports and Recreation	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-11	6. SONOMA VALLEY WILDLIRE CORRIDOR MAPPING AND RIPARIAN SETBACKS: Increase setbacks along Sonoma Creek, Riparian areas and the Sonoma Wildlife Corridor to at least 100 feet, instead of inadequate 50 feet as proposed. Explain why 50 feet is adequate to protect riparian areas and the wildlife corridor. In this section, I will defer to comments by the experts, including the Sonoma Land Trust and Center for Biological Diversity. Mapping: Neither the DEIR nor the Specific Plan provides an accurate map of the Sonoma Valley Wildlife Corridor. The DEIR refers to Figure 1.6-3, which does not appear in the DEIR. The Specific Plan Figure 1.6-3 is a map of Existing Vegetation. In the Specific Plan Figure 1.6-2 titled “Wildlife Constraints,” something that appears to represent the Sonoma Wildlife Corridor consists of two wavy green lines labeled as “Critical Wildlife Linkage Marin Blue Ridge.” However, that term is not defined, does not contain the words “Sonoma Valley Wildlife Corridor” and is never used anywhere else in the Specific Plan or DEIR. And, in fact, the Sonoma Valley Wildlife Corridor does not appear to be specifically mapped anywhere in the Specific Plan or DEIR that I could find. To meet CEQA by providing the public and decisionmakers with accurate information, the Sonoma Wildlife Corridor needs to be clearly mapped and defined with consistent terms. You must revise the DEIR and Specific Plan to specifically map and describe the boundaries of the Sonoma Valley Wildlife Corridor.	The comment is noted. Please see MR-7 regarding the adequacy of impacts on wildlife movement or disagreement with analysis/findings.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-12	7. WILDFIRE: There are no mitigation conditions of approval for wildfire; and the goals and policies are based on a future Emergency Response Plan that will be developed at some point. This is inadequate under CEQA. The DEIR and Self-Mitigating SDC Specific Plan do not eliminate risk or wildfire hazard to insignificant levels. Develop and add enforceable Mitigations in the DEIR and Conditions of Approval in the Specific Plan for Wildfire to reduce and prevent risk as there currently are none. The Evacuation Time analysis seems unrealistic and not based on fact as it suggests that "added times" for travel during an evacuation range from 1 or 2 minutes to 37 minutes to get to Napa. It took people HOURS to evacuate from Kenwood and Sonoma Valley during recent fires. Also, the DEIR calls for the "requirement" for a shelter-in-place facility at SDC after 200 homes are built. There is no proven rationale for sheltering in place particularly in a High Fire Risk Area. Revise wildfire evacuation impacts to reflect on-the-ground experiences during recent wildfires and new state and county wildfire risk and hazard maps. Eliminate the shelter-place as there is no evidence it would save lives. The DEIR and Specific Plan must also consider a wildfire mitigation that includes retreat from wildfire areas. Please see attached article in Bay Nature from experts on land use and wildfire which explains why developing in high wildfire areas is no longer appropriate or safe. Please include by reference the comments on wildfire and evacuation from the State Alliance for Firesafe Road Regulations and other commenters with expertise on these issues.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis .

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-13	8. CLIMATE CRISIS and VMTs: The DEIR finds that the proposed Specific Plan will produce “significant and unavoidable” environmental impacts due to huge increases in Vehicle Miles Traveled that will be generated primarily by new residents driving to and from the SDC site. The DEIR offers no mitigations or conditions of approval to reduce or avoid the amount of driving. The DEIR finds that the proposed SDC Specific Plan will undermine local, regional and state policies and commitments to address the climate crisis as it found significant and unavoidable impacts in the areas of vehicle miles traveled. That means that there is NO WAY to offset or mitigate the extra driving generated by all the new housing, retail, commercial development proposed at SDC. The County must not approve this project as proposed with these impacts if it is serious about addressing the climate crisis. Taking this approach fails to meet the standards contained in CEQA because VMTs can be avoided and reduced by building fewer homes, reusing and demolishing fewer buildings, requiring public transit, and other measures that were never considered. The DEIR and Specific Plan must be revised to analyze and provide mitigations and measures to reduce VMTs.	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-14	9. CONFLICTS WITH EXISTING COUNTY AND VOTER APPROVED POLICIES: Statements in the DEIR and Specific Plan that the proposals do not conflict with existing county policies are inaccurate. The proposed Specific Plan is a complete reversal of land use policy in the County of Sonoma dating back to the original General Plan in 1989. It constitutes urbanization of rural and open space lands not seen since the 1970s; and the type of development that paved over places such as Silicon Valley. As proposed, the DEIR and Specific Plan violates decades of city-centered growth policies adopted and supported by the voters of Sonoma County and contained in the General Plan. Until now, the County of Sonoma has mostly upheld policies to grow inside existing cities and towns, honor voter-approve Urban Growth Boundaries, protect greenbelts and open space, and respect voter-approved community separators. The voters of Sonoma County have taxed themselves to create the Ag + Open Space District, the SMART Train, and provide expanded funding to Sonoma County Regional Parks. The DEIR must analyze and mitigate the impacts to these long-standing land use and open space protection policies and voter-approved measures from the proposed Specific Plan and complete reversal of land use policy in order to comply with CEQA.	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR, and MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-15	10. HOUSING AND POPULATION New housing at SDC is not required or necessary for the County of Sonoma to meet its state mandated Regional Housing Needs Allocation of 3,881 housing units for the next 8-year cycle (2023-2031), as cited in the DEIR. In fact, housing at SDC was never considered as part of the RHNA process because the property's future remains uncertain and is currently zoned for public facilities, not housing. The DEIR cites the Association of Bay Area Governments (which also assigns RHNA numbers) that between 2020 and 2040, the number of housing units in Sonoma County will grow by 15 percent, while the population grows by 9 percent. These facts indicate that adequate housing units will be provided if housing units grow twice as fast as population. These projections of housing and population indicate that housing needs are likely to be met without building 1,000 units at SDC. In addition, the DEIR discloses that unincorporated Sonoma County is in fact losing population. It is clear that the housing numbers proposed in the Specific Plan and analyzed in the DEIR do not reflect actual official population or housing needs. It is based solely on Permit Sonoma's assumptions about how to make the development profitable for developer. This is the wrong baseline and approach. The DEIR fails to consider that Sonoma County Transportation Authority has previously determined that the county and cities could build at least 30,000 new and rebuilt (post fire) housing units without expanding outside of UGBs or existing USAs. SDC was neither referenced nor considered as a location for housing. The DEIR fails to make note that the City of Sonoma has adequate room to meet and exceed its RHNA allocations for the next 8-year cycle; or that according to the Springs Specific Plan Notice of Preparation of an EIR, there is potential for 700 new	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts.

Commenter	Date	Letter	Comment	Response
			housing units there. The county Housing Rezone EIR has also identified parcels for higher density housing in the Springs and around the unincorporated county which would result in additional housing. With these facts in mind, the DEIR must analyze and mitigate the growth inducing impacts of adding 1,000 extra housing units to Sonoma Valley and the County of Sonoma. One alternative the DEIR should consider is putting those 1,000 units into existing towns and cities, possible through a Transfer of Development Rights agreement with cities and the county of Sonoma itself.	

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-16	11. ENDANGERED, THREATENED SPECIES The DEIR and Specific Plan fail to adequately analyze or mitigate the negative environmental impacts to endangered and threatened species on the SDC lands. The mitigations, goals, policies and Conditions of Approval are inadequate because they are weak with unenforceable actions, rely primarily on existing laws that have to be followed anyway, and/or rely on future studies and assessments as assessments – all of which fail to meet CEQA. In addition, the DEIR and Specific Plan fail to provide any analysis or even discuss the fact that mountain lions and bears and other predators utilize the SDC lands; or any of the research on this wildlife and others that is published or available. The DEIR and Specific Plan must recognize and provide details on this wildlife and provide analysis and mitigations to reduce negative environmental impacts; and prevent human-wildlife interactions – at the least. I will defer to comments on this section to the experts including Center for Biological Diversity and Sonoma Land Trust.	The comment is noted. Please see MR-7 regarding the adequacy of impacts on wildlife movement or disagreement with analysis/findings.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-17	12. COMMUNITY BENEFITS AGREEMENTS The DEIR and Specific Plan need to consider and analyze the benefits of the use of a Community Benefits Agreements at SDC with the community, labor, and public and appropriate stakeholders as a way to provide certainty that the mitigations and measures to protect the environment and community are upheld over the decades as SDC is being transformed. For example, county residents, particularly in the Sonoma Valley could determine what is most important based on community needs and particulars of the project once a property owner or manager is identified. For example, we could require the property owner or manager to commit to high levels of affordable and workforce housing, good, living wage jobs, protecting wildlife corridors, supportive and accessible housing for disabled people, and much more. We could fill in the gaps that the DEIR and Specific Plan don't provide, particularly if the state choose a different plan and/or the county never adopts or implements the Specific Plan.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-18	13. STATE STATUTE: The County of Sonoma needs to revisit its interpretation of the state statute in respect to the Specific Plan and EIR as follows: Housing: State Statute says the following: It is the intent of the Legislature that priority be given to affordable housing in the disposition of the Sonoma Developmental Center state real property. The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be appropriate for the property shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that is deed restricted to provide housing for individuals with developmental disabilities. Nowhere does the statute call for maximum urbanization of the SDC nor to create a new town, hotel, commercial or retail. The scale of housing and development is not appropriate for the rural property surrounded by ag land. Therefore, the County of Sonoma's Specific Plan and DEIR are not consistent with and misinterpret the state statute. Both need to be revised to align with state statute and public comment by scaling back the development, eliminating market rate housing and other development, and providing deed-restricted affordable housing to individuals with developmental disabilities. Open Space: State Statute says the following: The Department of General Services recognizes the exceptional open-space, natural resources, and wildlife habitat characteristics of the Sonoma Developmental Center. It is the intent of the Legislature that the lands outside the core developed campus and its related infrastructure be preserved as public parkland and open space. The disposition of the property or property interests shall provide for the permanent protection of the open space and natural resources as a public resource to	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts; and MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
			the greatest extent feasible and shall be upon terms and conditions the director deems to be in the best interests of the state.	

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-19	The state statute makes clear that the permanent protection of open space lands is for public parkland and natural resources as a public resource. The County's Specific Plan and DEIR are inconsistent with state statute as they propose introducing agriculture, sports fields and other uses without consider the negative environmental impacts of doing so. However, the state statute also conditions protection of the open space "to the extent feasible" and to "be in the best interests of the state." That is why the county Specific Plan and DEIR must provide details on how, when and with what entities that the open space will be protected. If not, then the state legislature will need to act to ensure the protection of the open space and that none of it is sold off for development or other inappropriate use.Economic Feasibility: State Statute says the following: The planning process shall facilitate the disposition of the property by amending the general plan of the county and any appropriate zoning ordinances, completing any environmental review, and addressing the economic feasibility of future development.	The comment is noted. Please see MR-8 regarding the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Teri Shore	Wednesday, September 21, 2022	C166-20	The County of Sonoma's entire Specific Plan and DEIR is tied to this one mention of economic feasibility to the exclusion of just about everything else. The state did not mandate that the project be economically feasible or financially feasible but to address it. Economic feasibility changes constantly with market conditions. Specific Plans and General Plans are written for long periods of time when economic feasibility is certain to change. The County is misinterpreting state statute to maximize urban development at the SDC site. The proposal could also be economically feasible if, for example, the state paid to clean up the site, then transferred it to state parks or another public conservation entity. A bond measure or initiative could be written. However, the County looked at only one option or alternative: making profits for a private developer. This lacks visionand is inconsistent with state statute and CEQA The Planning Commission must direct Permit Sonoma to revise the Specific Plan and DEIR to be consistent with state statute and public comment and provide new alternatives that don't focus entirely on urbanization and developer profits.There are many other concerns that I have regarding the DEIR and Specific Plan, but these arewhat I am able to provide with the time and energy that I have at this time. PLEASE SEE DETAILED TABLE OF COMMENTS BELOW AS WELL AS ARTICLE MENTIONED ABOUT WILDFIRE RETREAT.	The comment is noted. Please see MR-2 regarding the need for more time/selection of a developer before finalizing the Specific Plan , and MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	18-Sep-22	C167-1	Why has County Staff/Consultants done the following, and what are your mitigation recommendations?: The EIR & SP preparation violates BPC6731, without a Civil Engineer in responsible charge of Planning? The EIR has committed the County to a course of action, new development, prior to EIR's Certification? Historic Reuse appears proper, yet each price consequence results in expanded project impacts. What is the economic obsolescence impact to the Springs/Glen Ellen of the proposed project? The EIR and SP propose demolition of 1.2M sq-ft of buildings, along with the 1M+0.35M gal fresh water tanks, see Figure 4.3-1: "Historic Assets", without reference to local Wildfire protection. Why? The EIR & SP propose demolition of Historic Firehouse (c1932) without wildfire impact consideration? EIR & SP neglect wildfire consideration, as not "High Fire Risk", though analysis excluded SDC?	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis .
Thomas Chase Ells	18-Sep-22	C167-2	Why does EIR & SP use uncalibrated (unrealistic) models, eg without reference to actual fire evacuation? The EIR develops a series of conclusions as analysis, beginning after point in time of project completion? The EIR assumes no cumulative effects to the proposed project; eg. GHG's and solid waste, but does not include project specific demolition, nor constructed lifecycle, GHG's & wastes? Why? The EIR assumes no cumulative effects from combining the proposed project wastewater into a down-stream waste treatment facility when a historic facility is located on site to recharge the wetlands/creek. SDC is an Historic opportunity to propose and develop an integrated environmental & climate protective response to wildfire, in a traumatized and sensitized area, without which this proposal has a significant cumulative negative impact to the local & regional environment due to unrealized wildfire protections. Why is EIR & SP preparation biased in favor of Standard-Operating-Procedure for new development? There is, at great expense, no Professional caliber analysis within these documents, explain?	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	18-Sep-22	C168-1	Though Permit Sonoma worked hard, produced >4000pgs, & created many potential alternatives within their Specific Plan/EIR process, they have overshot the mark creating a plan for the past, “fighting the last war” as we often do, and not taking advantage of the opportunity to present a plan for the future. Why does it appear the SDC EIR and associated Specific Plan (characterized by the County’s preferred Proposed Project Alternative) have defined and committed the County of Sonoma, as Lead Agency under CEQA, to a series of specific decisions, plans, and/or alternatives without fully considering other acceptable plans (under legislation 14670.10.5), alternatives, mitigation measures, and the Null Project. Please explain why the County (Permit Sonoma) has allowed the EIR to be produced which does not address the mitigatable cumulative effects of waste generated by the proposed alternative over the Null Project hypothesis, to the extent where recommended building demolition of ~1.2M sq-ft produces a minimum of 161,000 cy of debris equal to 67 years of operation of the Proposed Project Alternative in addition to the equal amount of debris produced by the eventual demolition of the Proposed 1.2M sq-ft Project (∑=322,000 cy, or 134 years at the rate of the Proposed Project at completion); together with the project waste there will be an average cumulative waste of 19.8 tons/day or 1.5% of daily averages (2016-2020, per SP pg 603) ? Since we are already transferring all our solid waste away from Sonoma County because we do not have local landfill capacity, and our waste charges ($135/ton) are double the charge for Hazardous Waste ($50.97/ton asbestos waste) taken to Kettleman Hills landfill, this must be considered a significant mitigatable impact by Reuse and Historic Preservation of the existing buildings. At the local waste costs, this represents >$960,000/yr = ~$65M over the 67 years, from these 3 sources.	The comment is noted. The comment is noted. The DEIR does analyze a reasonable range of alternatives. Section 15126.6 of the CEQA Guidelines states that: An EIR shall describe a range of reasonable alternatives to the project, or the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. See also Impacts 3.15-4 and 3.15-5. Demolition and construction activities associated with implementation of the Proposed Plan would result in a temporary increase in solid waste generation periodically during construction. However, the increase would be minimal and temporary. Standard Conditions of Approval UTIL-5 is included to ensure preservation of topsoil removed during construction for reuse in revegetation. The Proposed Plan would not generate solid waste in excess of State or local standards or in excess of the capacity of local infrastructure during construction. This impact would be less than significant. See also Chapter 5 for an analysis of cumulative impacts.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	18-Sep-22	C168-2	Why is no mention made in the EIR or SP of GHG's which were imbedded and carried within the existing constructed buildings which will be released into the atmosphere by their demolition, nor is any men-tion made of the GHG emissions which are imbedded in the production of the new materials and resour-ces which are expected to replace the demolished SDC buildings, these are significant long term mitigat-able cumulative effects? Why has the EIR not addressed either of these cumulative GHG effects, from demolition, neither the before demolition GHG emissions sequestered in the existing buildings which will be released, nor the GHG emissions released in the production of the replacement 1.2M sq-ft of buildings together with their own lifecycle emissions released upon their demolition? These GHG's must be considered a significant mitigatable impact by their (building) Reuse. Why is no mention made in the EIR or SP of the cumulative effects of the opportunity lost to lead this community and the Global Community in re-visioning the future, from the past that we have, into the future that we need while using the existing buildings and infrastructure you demolish? Why is Historic Preservation of the existing buildings considered by the EIR & SP to be financially infeasible and unmitigatable? This is not a fact, nor is it a reasonable conjecture from any basic set of reasonable assumptions, other than a prejudice against Historic Buildings in preference to the Cult-of-the-New. Historical Preservation and Reuse of these buildings is relatively simple. In particular, historic lumber is dimensionally greater and structurally superior, providing more insulative cavity, and other materials were more dense historically. History teaches us that the oldest buildings are the most energy efficient for their locations; such as Kiva & Adobe Structures of the America Southwest are stone or adobe to insulate against the heat, raised pole structures in the Indus Valley Civilization and Mounded Structures of the Mississippian Culture prevent flood inundation, Northern Long Houses of the Iroquois in the East and the Suquamish of the West are large multifamily dwellings and made of wood frames and bark covering to insulate against the cold, even Igloos of the Eskimo. Why have you neglected the consideration that almost every older building uses less energy than that which replaces it, despite the efficiency of the New Building?	The environmental impacts related to traffic, noise, and air quality and GHG emissions during construction and operation of the park facilities have been considered throughout this EIR (see Section 3.3: Air Quality, Section 3.6: Energy and Greenhouse Gas Emissions, Section 3.11: Noise, and Section 3.14: Transportation). Please see also MR-3 regarding the programmatic nature of the DEIR.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	18-Sep-22	C168-3	Why is scant consideration, even superficial avoidance, of the topic of Hazardous Materials mitigation and removal given within the EIR and SP as a direct consequence of the building demolition, as opposed to “In-Situ” mitigation in place through reuse and Historic Preservation of the existing buildings; Diesel Tanks, Film Development, Chemical Storage, Paint Shops, Corporate Yards and Transportation buildings, all have significant potential for Hazardous Materials impacts, as well as, the asbestos insulation and lead based paint in the housing, hospital, and office buildings? Lack of consideration of this impact has direct impacts of needlessly and costly filling existing hazardous waste landfills, both individually and cumulatively, though mitigatable. Each of the above considerations, taken individually are significant impacts not covered by the EIR and SP, but there is also a cumulative effect of the above neglectful preparation of the EIR and SP, “a death by 1000 cuts” to the Historic Preservation (stated to be unmitigatable). Why has the cumulative effect of this neglectful preparation not been addressed within the EIR and SP, which then augers for and streamlines the process for replacement by the preferred Proposed Project Alternative as opposed to Historic Preservation (HP)? Can you explain how you are mitigating these neglected impacts which should be further compared to the environmentally preferred HP, in producing a cycle of demolition and reconstruction which has a cumulative effect due to volume of waste, and on the environment due to exploitative expectations, the expectation that ‘everything I have should be new’, ‘we need the new’, ‘I need the new’? Again, why does the EIR and SP neglect the positive environmental impact the development could have by leading, rather than following old worn-out traditions of thinking, that have cumulatively placed us in our Climate Crisis?	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-1	County's evidentiary record is anecdotal @best. Sonoma Valley represents a national treasure, as described as, "The Valley of the Moon". Sonoma is the Native Indigenous American name for the valley. When White settlers asked what Sonoma meant, Natives pointed to the trace of the Moon setting and rising behind the eastern ridgetops during certain times of the year, the White's interpretation was that "Sonoma" meant 'the valley that the Moon touches' ("The Valley of the Moon"). My Anthropology studies and linguistic avocation has taught me to hear the phonetic sounds (the basic phonemes), particularly for significant language words, words that have cultural, spiritual, or international usage, such as words which are adopted into a language from another. The basis of this study is Multi-critical analysis as opposed to diacritical analysis. Typically there will be very little understanding of the actual meaning of an adopted word. Then, if it retains a high referential standing, it indicates it's an adopted word, not merely a forgotten word. Typical adopted words with high Referential standing and forgotten meanings are: Alleluia, precious, and Amen.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-2	In this case we have Sonoma: what are the phonemes for "Sonoma", they are "Tsu" (not Tso) & "Noma"; so in this case our supposition is correct, because these are two very important international words. "Tsu" or "Tzu" represents the name given by the Chinese to one of their greatest Philosophers, "LaoTzu" the founder of Taoism (from UCI Anthropology studies "Chinese, Taoism & Confucianism", 1983), "LaoTzu" was originally named "LoTzu", meaning "Man-Master" (Philosopher) and when he was older it was changed to "LaoTzu", meaning "Old-Man-Master" (or Great Philosopher): Therefore "Tzu" means "Master". "Noma" is the Aramaic word for 'name' establishing the identity and essence of a thing and thereby giving man control over the substance, and in the Greek "Nomo" means "law or control", again, in Western parlance the essence is unknowable but the manifestation is controllable by the 'name': so control and name are the same thing, therefore "Noma" means "name" (from participation in Antiochian and Greek culture, which develops from a multi-critical analysis as opposed to diacritical). "Sonoma" therefore means "The Master's Name", and in a Spiritual sense, it means the highest name above all names. "The Master's Holy Name", in an Eastern Spiritual sense describing God's, the Creator's, or Great Spirit's control over the location by the Moon's contact with the Earth, not Man's control over God by invocation of the Name. This we hear many times from Joseph Campbell, man's search for control vs man's search for God. Also, in another form of Transcendence, both "Tsu" and "Noma" mean "control", so they are like conjoined twins, in a simple manifestation of the "Rosetta Stone". Looked at separately, we call this a "Translation", but conjoining them is a form of transcendence in the physical plane of existence. The name "Sonoma" appears to be used as a descriptive tool, by connecting physical transcendence (translation of place) with the location of a Spiritual Transcendence (in reference to the verticality of the Moon's touching the Earth), it again mirrors the "Rosetta Stone" representing two kinds of Transcendence, with the Earthly "T" crossing the Spiritual vertical demarcation.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-3	More than the mere analysis of the word and its application to the space, is the significance of "Sonoma" in the cross-cultural linguistic representation of deification using ancient language references from across the sea, and linked only by many thousands of years. There is no other place name which connects so perfectly the unity of man, the Name itself transcends both the ages and the seas, thus we have the essence of a World Heritage Cultural Site. Like many other UNESCO World Heritage Sites, which are in disrepair and in danger of destruction, Sonoma's "Valley of the Moon" is suffering an existential threat from the Proposed Project Alternative. Located at near the exact geographic center of Sonoma Valley, 10 miles from it's head along Hwy 12, and 12 miles from it's outlet at Skagg's Island. And transected by a vital Wildlife Corridor connecting 2 Mountain Parks: Sugarloaf/Hood and Jack London Parks; no discussion or analysis has been given to the significance of this World Heritage Cultural Site, or the impacts or any mitigation from the significantly new, taller, and dense construction within the Program Draft EIR-SP Project analysis (cursory discussion was given to light pollution, but none to the physicality of the presence of tall, dense, populous village construction in the midst of an Historic Treasure, McDonalds centered in Teotihuacan).	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-4	The significance of this Spiritual location was not lost on those who created the Sonoma Developmental Center for a healing center for their developmentally disabled children. We should hope that at this more enlightened time, and consistent with CEQA, the Historical Preservation Act, and the 50th Anniversary of the World Heritage Convention (Sept 17, 2022), we should be prepared to preserve both the content and the context, as much as is physically possible, for this National Treasure, "The Valley of the Moon". Under the UNESCO World Heritage Convention, which the United States was signatory (though withdrawn from 2018), we should "strengthen Credibility of the World Heritage List, ensure Conservation of World Heritage properties, promote Capacity-building measures, increase public awareness, involvement and support for World Heritage, and enhance the role of Communities in implementation of the World Heritage Convention". What has been done here appears to be the opposite, a complete neglect of not only Native American cultural values, but World Heritage Convention values. Analysis of EIR Historical Asset discussion: The Program Draft EIR is silent on the above discussion, while reporting Environmental Impact Report - County Summary "5.3 Significant and Unavoidable Impacts: According to CEQA Guidelines 15126.2(b), an EIR must discuss any significant environmental impacts that cannot be avoided under full implementation of the proposed program...However the Proposed Plan aims to be self-mitigating. Thus, all proposed policies aim to address environmental impacts (to the, sic) to the greatest extent feasible and no mitigation measures are required. The analysis in Chapter 3 determined that the Proposed Plan would result in significant impacts to the cultural/historic resources and transportation (home-based work trip vehicle miles traveled per capita) that, even with implementation of mitigation measures, would remain significant and unavoidable". This language neglects real analysis of the Null Hypothesis Project, and only considers the Proposed Plan impacts which it states (along with all other alternatives) have similar impacts [without discernment as to avoidable, mitigatable, or unmitigatable], which is entirely untrue in the Null Hypothesis case.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-5	Continuing; "5.3.1 Cultural, Historic, and Tribal Resources: new construction under the Proposed Plan has the potential to disconnect the remaining contributing resources in the Core Campus from those in the Community Separator and Regional Parks lands to the east and west, disrupting the SSHHD's overall integrity to the point that it would no longer be eligible for listing in the National Register of Historic Places, CRHR, or as a California Historic Landmark. This impact, in addition to demolition of the aforementioned resources would result in a substantial adverse change to the significance of the historic district such that the significance of the historic district would be materially impaired pursuant to Section 15064.5. Implementation of goals 2-I and 2-J and policies 4-20 through 4-32 as well as Standard Conditions of Approval (LU1 through LU6) would partially compensate for the impact associated with the demolition of historically contributing resources and physical alteration of the historic district to the maximum extent practicable; however, because these measures would not be enough to avoid or reduce the impact completely, the Proposed Plan's impact would remain significant and unavoidable". No mention is made of the Tribal Resources, because no artifacts remain or they could be recovered in a project excavation, but this does not address the transcendent value of the space and place name as a World Heritage Cultural Site, which can be subsumed in the potential Project construct, where we have heard discussed 2-3Msf of Commercial Construction.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-6	Again, the Program Draft EIR's considerations of the impacts, mitigations, and alternatives appear limited to the Proposed Plan Project Alternative, and do not address the Alternatives, nor the Null Hypothesis Project, continuing a foregone conclusion (see 2-3Msf of Commercial Construction discussed above, is that unmitigatable?). Please see the following analysis of project conceptual iteration for planning and design. Please see pg4 p3 San Mateo Gardens, re "substantial evidence in the record, is a predominantly factual question...for the agency...drawing on its particular expertise"; here we are bringing your attention to the word “expertise”. Friends of the College of San Mateo Gardens v. San Mateo County Community College District https://law.justia.com/cases/california/court-of-appeal/2017/a135892.html We want to accept the presumption of legal operation, but we must also accept and correct the illegal condition when evidence is presented to the contrary. In a County system, Engineering is not conducted without Accounting. But if the Accounting fails such as for Northwestern Pacific Railroad, the sad evidence must be accepted, and correction immediately made or we suffer the loss of funding or function. No one was there to accept the Trucker's weighmaster's tickets when the washout deliveries were made in the upper NWP line, none could be found, none ever delivered, no NWP.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-7	The reason we approach the initial determination of a project this way, using California Supreme Court’s remand for San Mateo Gardens, is, here we equate the Court EIR analysis process to the Engineering process, in that there are a sequence of iterative steps involved. This process is best exemplified from the CA Supreme Court's remand expressed in San Mateo Gardens, where a series of back-and-forth evaluations and propositions are made in analyzing a project (one such method is CPM,Critical Path Method), which is the same process we use in conceptual design or planning. A comparison is made by question; does the "initial concept" with its features fit the need and the existing space, then we may have to adjust the concept's features to the needs, or to the space? Conceptual planning designs forward & backward many times. This comparison is not to decry the effort expended or the information obtained through Planning education or product, but a marathon runner prepares for a marathon, not Law or Engineering. Preparation for a marathon may be great preparation for someone wanting to become a Lawyer, Doctor, or Engineer, but by itself does not make one a Lawyer, Doctor, or Engineer. Nor is an Urban Planner a qualified Civil Engineer, and therefore is unable to make professional judgments in respect to the Planning of "fixed works" identified in BPC 6731. [See Licensing BPC 6730-6730.2(a); 6731; 6734; 6735(a). See also Administrative Mandamus case, Morris v Harper (2001) 94 Cal.App.4th 52 . “After all, ‘“‘[i]t is the refusal or neglect to perform an act which is enjoined by the law as a present duty that serves as the very foundation for the [mandamus] proceeding.’ ” (Morris v. Harper, supra, at p. 60.)"]	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-8	San Mateo Gardens; "Instead of resting on whether a project is new “in an abstract sense,” the “decision to proceed under CEQA’s subsequent review provisions must . . . necessarily rest on a determination—whether implicit or explicit—that the original environmental document retains some informational value.” (Id. at p. 951.) Such an inquiry “is a predominantly factual question . . . for the agency to answer in the first instance, drawing on its particular expertise.” (Id. at p. 953.)" From where does this “expertise” derive, Planners require no Science education? The EIR standard is, if/when there are significant environmental impacts, then a review of impacts and mitigations must obtain (other than stating overriding or unmitigatable conditions), and a "judicial review must reflect the exacting standard that an agency must apply". San Mateo (ibid) pg 8. What this is referring to is, that the evidence must be prepared to a very high standard, from the beginning, in order for it to be considered "substantial evidence in the record". Where is the “exacting Standard” & “expertise”?	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.
Thomas Chase Ells	23-Sep-22	C169-9	According to the National Society of Professional Engineers code of ethics, Professional Engineers may disagree without a single outcome obtained, but must remain decorous. ["The Supreme Court in San Mateo Gardens provided guidance for how to apply the subsequent review provisions. It explained that whether “major revisions” will be required as a result of project changes “necessarily depends on the nature of the original environmental document,” i.e., whether it was an EIR or a negative declaration. (San Mateo Gardens, supra, 1 Cal.5th at p. 958.) It further explained that the appropriate standard of review also depends on the nature of the original environmental document. Although an agency’s determination of whether major revisions are required is reviewed for substantial evidence, “judicial review must reflect the exacting standard that an agency must apply when changes are made to a project that has been approved via a negative declaration,” as opposed to the deferential standard that applies when the project was originally approved by an EIR. (Id. at p. 953; see Committee for Re-Evaluation of TLine Loop v. San Francisco Municipal Transportation Agency (2016) 6 Cal.App.5th 1237, 1247, 1251-1252 [applying San Mateo Gardens in case where project originally approved by EIR];	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			Latinos Unidos de Napa v. City of Napa (2013) 221 Cal.App.4th 192,"]	
Thomas Chase Ells	23-Sep-22	C169-10	In planning, we have said, the process is intensely exhaustive and iterative, and what is described as the Court EIR review process is also exhaustive and iterative. The Court ceding competency to the local agency is similar to the process of presenting a case to a Court of Competent Jurisdiction. A Court of Competent Jurisdiction is composed firstly of a trained lawyer, either by a Law School or by preparation and passing the Baby Bar. Then of course, the prospectant Judge must pass the National Bar Exam locally administered, next the Judge must practice law for a minimum of 10 years. At some point the Judge is appointed or runs for election, and finally, the Judge is selected to hear a case by the Chief Judge. The Court itself must also be of Competent Jurisdiction, meaning it is the proper venue, as established by our system of Jurisprudence. These are significant tests. If someone went to College and studied English or Political Science, they could learn a lot of laws, but they would not be presumed to know how to practice Law, And they did not go to Law School or pass the Baby Bar, and they have not prepared to be a Lawyer, let alone a Judge.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-11	Engineering is one of the most complex problems in supply & demand, as evidenced by the number of divorces in custom home remodeling and construction, and why Public Works requires Licensed Civil Engineers. Our critique is not meant to characterize the work of any Engineers having completed reports for the SDC EIR-SP, since we do not know what instructions they were given. But we contend that recommended demolition for over 1.2Msf without analysis of 400,000sf, and recommended demolition of ~75,000sf of Hospital Treatment Building rated at "not requiring any updates", represents an incomplete analysis at best, and certainly a neglect of the impacts on the resources being analyzed. As we spoke of backward-and-forward analysis in design, this is required in Planning as well, unless a truncated process is employed. It is far easier to make the facts fit the design, than to make the design fit the facts. If your timeline is short, it is far easier for you to establish the Project, and make the analysis fit the Project by not addressing impacts except in a standard way, such as, "(h)owever the Proposed Plan aims to be self-mitigating". “from Program Draft EIR 5.3 Significant and Unavoidable Impacts”	See Master Response 1 created to address concerns about the adequacy of a self-mitigating Specific Plan.
Thomas Chase Ells	23-Sep-22	C169-12	Subsequent to the very specific State Law being passed to sell SDC, incorporating significant intent for community participation, many meetings were held with studied interest and good comments. Comments were sent to Permit Sonoma and the Planners involved in SDC's NOP of Program Draft EIR & SP, but these comments were not incorporated in the evaluation nor in the Proposed Alternative Project SP, nor were they forwarded to the Planning Commission, nor were they provided to other participants or commenters to the EIR & SP. This is not standard practice, and violates CEQA Code 15004(a)&(b)(1)-(3); “(a) Before granting any approval of a project subject to CEQA, every lead agency or responsible agency shall consider a final EIR or negative declaration or another document authorized by these guidelines…(b) Choosing the precise time for CEQA compliance involves a balancing of competing factors, EIR’s and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
			provide meaningful information for environmental assessment." (b)(1) "With public projects, at the earliest feasible time, project sponsors shall incorporate environmental considerations into project conceptualization".	
Thomas Chase Ells	23-Sep-22	C169-13	The timeframe window for "cumulative impacts" evaluation was limited to after Proposed Alternative Project completion, leaving out the demolition and construction of the entire project, let alone the life cycle embedded costs, GHG's and energy to be demolished as a consequence from the new construction. This time frame results in unsubstantiated conclusions for the Proposed Project Alternative in ES.3 Alternatives to the Proposed Plan, "As discussed in Impacts 3.6-2, the Proposed Plan would thus support and reflect the increasingly stringent State and local goals and regulations that seek to increase energy efficiency, reduce energy consumption, and prioritize renewable energy – reinforcing that the Proposed Plan would not result in cumulatively considerable impact with respect to wasteful, inefficient, or unnecessary consumption of energy resources." They left out 161,000 tons of waste. 15004 (b)(3), "With private projects, the Lead Agency shall encourage the project proponent to incorporate environmental considerations into project conceptualization, design, and planning at the earliest feasible time." This truncated analysis appears to be the type that establishes priorities, goals, and objectives before the certification of the EIR is complete, therefore "limiting alternatives or mitigation measures".	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-14	This truncated analysis would violate CEQA Code 15004 (b)(2), "public agencies shall not undertake actions concerning the proposed public project that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance";"and for example, agencies shall not:(b)(2)(B)", "Otherwise take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project". Given that Permit Sonoma will only provide the public's comments to the Planning Commission upon final EIR Certification, and a series of comments have been made to the SDC Comprehensive Planning Manager which has not incorporated the public's comments into the Proposed Project Alternative, "at the earliest feasible time", they appear to have violated Sec's 15004(a)&(b)(1)-(3), inclusive.	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.
Thomas Chase Ells	23-Sep-22	C169-15	What we contend here is, that the proper "back-and-forth" process has not occurred, as within the planning process proper, within the design process proper, within the EIR process, as would be the same within the Court's evaluation of the EIR process itself, from San Mateo Gardens remand from the California State Supreme Court, which constitutes proper Authority to all jurisdictions within California. We also contend that "particular expertise" and "the exacting standard that an agency must apply" is not available to the review that the "judicial review must reflect", without a Licensed Civil Engineering in Responsible Charge of "Fixed Works" Planning, BPC 6731. CEQA Guideline 15149 "USE OF REGISTERED PROFESSIONALS IN PREPARING EIRS" suggests nontechnical preparation of EIR documents, but this does not exempt Program EIR's completed in conjunction with Specific Plans from the "particular expertise" and "exacting standards" of the Court, nor from State Law BPC 6731 declaring "City and Regional Planning to be Civil Engineering" requiring "responsible charge engineering"	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-16	Appendix of additional CEQA Guideline Violations, following: 15064.5. DETERMINING THE SIGNIFICANCE OF IMPACTS TO ARCHAEOLOGICAL AND HISTORICAL RESOURCES (a) For purposes of this section, the term "historical resources" shall include the following: (3) Any object, building, structure, site, area, place,… Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code § 5024.1, Title 14 CCR, Section 4852) including the following: (A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage; (D) Has yielded, or may be likely to yield, information important in prehistory or history	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.
Thomas Chase Ells	23-Sep-22	C169-17	15065 MANDATORY FINDINGS OF SIGNIFICANCE (a) A lead agency shall find that a project may have a significant effect on the environment and thereby require an EIR to be prepared for the project where there is substantial evidence, in light of the whole record, that any of the following conditions may occur: (1) The project has the potential to: … eliminate important examples of the major periods of California history or prehistory. (2) The project has the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals. (3) The project has possible environmental effects that are individually limited but cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-18	(c) Following the decision to prepare an EIR, if a lead agency determines that any of the conditions specified by subdivision (a) will occur, such a determination shall apply to: (1) the identification of eff-ects to be analyzed in depth in the environmental impact report or the functional equivalent thereof, (2) the requirement to make detailed findings on the feasibility of alternatives or mitigation measures to substantially lessen or avoid the significant effects on the environment, (3) when found to be feasible, the making of changes in the project to substantially lessen or avoid the significant effects on the envir-onment, and (4) where necessary, the requirement to adopt a statement of overriding considerations. Note: Authority cited: Section 21083, Public Resources Code. Reference: Sections 21001(c), 21082.2, and 21083, Public Resources Code; San Joaquin Raptor/Wildlife Center v. County of Stanislaus (1996) 42 Cal.App.4th 608; Los Angeles Unified School District v. City of Los Angeles (1997) 58 Cal.App.4th 1019, 1024; and Communities for a Better Environment v. California Resources Agency (2002) 103 Cal.App.4th 98.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-19	15088 EVALUATION OF AND RESPONSE TO COMMENTS (a) The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written re-sponse. The Lead Agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments. (b) The lead agency shall provide a written proposed response to a public agency on comments made by that public agency at least 10 days prior to certifying an environmental impact report. (c) The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, the major environmental issues raised when the Lead Agency‘s position is at variance with recommendations and objections raised in the comments must be addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice. Note: Authority cited: Section 21083, Public Resources Code. Reference: Sections 21092.5, 21104, and 21153, Public Resources Code; People v. County of Kern (1974) 39 Cal. App. 3d 830; Cleary v. County of Stanislaus (1981) 118 Cal. App. 3d 348. 15088.5 RECIRCULATION OF AN EIR PRIOR TO CERTIFICATION (a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification… “Significant new information” requiring recirculation include, for example, a disclosure showing that: (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project’s proponents decline to adopt it. (4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (Mountain Lion Coalition v. Fish and Game Com. (1989) 214 Cal.App.3d 1043)	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-20	15091. FINDINGS (a) No public agency shall approve or carry out a project for which an EIR has been certified which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. The possible findings are: (1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR. (2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency. (3) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR. (b) The findings required by subdivision (a) shall be supported by substantial evidence in the record. (c) The finding in subdivision (a)(2) shall not be made if the agency making the finding has concurrent jurisdiction with another agency to deal with identified feasible mitigation measures or alternatives. The finding in subdivision (a)(3) shall describe the specific reasons for rejecting identified mitigation measures and project alternatives. (d) When making the findings required in subdivision (a)(1), the agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to avoid or substantially lessen significant environmental effects. These measures must be fully enforceable through permit conditions, agreements, or other measures.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-21	15092. APPROVAL (a) After considering the final EIR and in conjunction with making findings under Section 15091, the Lead Agency may decide whether or how to approve or carry out the project. (b) A public agency shall not decide to approve or carry out a project for which an EIR was prepared unless either: (1) The project as approved will not have a significant effect on the environment, or (2) The agency has: (A) Eliminated or substantially lessened all significant effects on the environment where feasible as shown in findings under Section 15091, and (B) Determined that any remaining significant effects on the environment found to be unavoidable under Section 15091 are acceptable due to overriding concerns as described in Section 15093. 15093. STATEMENT OF OVERRIDING CONSIDERATIONS (a) CEQA requires the decision-making agency to balance, …the adverse environmental effects may be considered "acceptable." (b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reasons to support its action based on the final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Thomas Chase Ells	23-Sep-22	C169-22	15097. MITIGATION MONITORING OR REPORTING. (a) This section applies when a public agency has made the findings required under paragraph (1) of subdivision (a) of Section 15091 relative to an EIR or adopted a mitigated negative declaration in conjunction with approving a project. In order to ensure that the mitigation measures and project revisions identified in the EIR or negative declaration are implemented, the public agency shall adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects. A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity which accepts the delegation; however, until mitigation measures have been completed the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program. (b) Where the project at issue is	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			the adoption of a general plan, specific plan, community plan or other plan-level document (zoning, ordinance, regulation, policy), the monitoring plan shall apply to policies and any other portion of the plan that is a mitigation measure or adopted alternative. The monitoring plan may consist of policies included in plan-level documents. The annual report on general plan status required pursuant to the Government Code is one example of a reporting program for adoption of a city or county general plan.	
Thomas Chase Ells	23-Sep-22	C169-23	15126. CONSIDERATION AND DISCUSSION OF ENVIRONMENTAL IMPACTS All phases of a project must be considered when evaluating its impact on the environment: planning, acquisition, development, and operation. The subjects listed below shall be discussed as directed in Sections 15126.2, 15126.4 and 15126.6, preferably in separate sections or paragraphs of the EIR. If they are not discussed separately, the EIR shall include a table showing where each of the subjects is discussed. (a) Significant Environmen-tal Effects of the Proposed Project. (b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented. Association of Environmental Professionals 2018 CEQA Guidelines 174 (c) Significant Irreversible Environmental Changes Which Would be Involved in the Proposed Project Should it be Implemented. (d) Growth-Inducing Impact of the Proposed Project. (e) The Mitigation Measures Proposed to Minimize the Significant Effects. (f) Alternatives to the Proposed Project.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-24	15126.2 CONSIDERATION AND DISCUSSION OF SIGNIFICANT ENVIRONMENTAL IMPACTS. (a) The Significant Environmental Effects of the Proposed Project. An EIR shall identify and focus on the significant environmental effects of the proposed project….The subdivision would have the effect of attracting people to the location and exposing them to the hazards found there. Similarly, the EIR should evaluate any potentially significant impacts of locating development in other areas susceptible to hazardous conditions (e.g., floodplains, coastlines, wildfire risk areas) as identified in authoritative hazard maps, risk assessments or in land use plans addressing such hazards areas. (b) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented. Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the project is being proposed, notwithstanding their effect, should be described. (c) Significant Irreversible Environmental Changes Which Would be Caused by the Proposed Project Should it be Implemented. Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since …generally commit future generations to similar uses. (d) Growth-Inducing Impact of the Proposed Project. Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. … projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-25	15126.4 CONSIDERATION AND DISCUSSION OF MITIGATION MEASURES PROPOSED TO MINIMIZE SIGNIFICANT EFFECTS. (a) Mitigation Measures in General. (1) An EIR shall describe feasible measures which could minimize significant adverse impacts, including where relevant, inefficient and unnecessary consumption of energy. (A) The discussion of mitigation measures shall distinguish between the measures which are proposed by project proponents to be included in the project and other measures proposed by the lead, responsible or trustee agency or other persons which are not included but the lead agency determines could reasonably be expected to reduce adverse impacts if required as conditions of approving the project. This discussion shall identify mitigation measures for each significant environmental effect identified in the EIR. (B) Where several measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified. Formulation of mitigation measures should not be deferred until some future time. However, measures may specify performance standards which would mitigate the significant effect of the project and which may be accomplished in more than one specified way. (C) Energy conservation measures, as well as other appropriate mitigation measures, shall be discussed when relevant. Examples of energy conservation measures are provided in Appendix F. (D) If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed but in less detail than the significant effects of the project as proposed. (Stevens v. City of Glendale (1981) 125 Cal.App.3d 986.) (2) Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally binding instruments. In the case of the adoption of a plan, policy, regulation, or other public project, mitigation measures can be incorporated into the plan, policy, regulation, or project design.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-26	15126.6. CONSIDERATION AND DISCUSSION OF ALTERNATIVES TO THE PROPOSED PROJECT. (a) Alternatives to the Proposed Project. An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. … There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason. (Citizens of Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553 and Laurel Heights Improvement Association v. Regents of the University of California (1988) 47 Cal.3d 376). (b) Purpose. Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly. (c) Selection of a range of reasonable alternatives. The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination. Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are:(i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-27	(d) Evaluation of alternatives. The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant environmental effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. (County of Inyo v. City of Los Angeles (1981) 124 Cal.App.3d 1). (e) "No project" alternative. (1) The specific alternative of "no project" shall also be evaluated along with its impact. The purpose of describing and analyzing a no project alternative is to allow decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The no project alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does establish that baseline (see Section 15125). (2) The "no project" analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-28	(3) A discussion of the "no project" alternative will usually proceed along one of two lines: (A) When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. Typically this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan. (B) If the project is other than a land use or regulatory plan, for example a development project on identifiable property, the "no project" alternative is the circumstance under which the project does not proceed. Here the discussion would compare the environmental effects of the property remaining in its existing state against environmental effects which would occur if the project is approved. If disapproval of the project under consideration would result in predictable actions by others, such as the proposal of some other project, this "no project" consequence should be discussed. In certain instances, the no project alternative means "no build" wherein the existing environmental setting is maintained. However, where failure to proceed with the project will not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project's non-approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment. (C) After defining the no project alternative using one of these approaches, the lead agency should proceed to analyze the impacts of the no project alternative by projecting what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. (f) Rule of reason. The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making.	

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-29	(1) Feasibility. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives. (Citizens of Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553; see Save Our Residential Environment v. City of West Hollywood (1992) 9 Cal.App.4th 1745, 1753, fn. 1). 15130. DISCUSSION OF CUMULATIVE IMPACTS (a) An EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable, as defined in section 15065 (a)(3). Where a lead agency is examining a project with an incremental effect that is not "cumulatively considerable," a lead agency need not consider that effect significant, but shall briefly describe its basis for concluding that the incremental effect is not cumulatively considerable. (1) As defined in Section 15355, a cumulative impact consists of an impact which is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. An EIR should not discuss impacts which do not result in part from the project evaluated in the EIR. (2) When the combined cumulative impact associated with the project's incremental effect and the effects of other projects is not significant, the EIR shall briefly indicate why the cumulative impact is not significant and is not discussed in further detail in the EIR. A lead agency shall identify facts and analysis supporting the lead agency's conclusion that the cumulative impact is less than significant.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	23-Sep-22	C169-30	15355. Def. CUMULATIVE IMPACTS “Cumulative impacts” refers to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts. (a) The individual effects may be changes resulting from a single project or a number of separate projects. (b) The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time. 15144. FORECASTING Drafting an EIR or preparing a Negative Declaration necessarily involves some degree of forecasting. While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can. Note: Authority cited: Section 21083, Public Resources Code; Reference: Sections 21003, 21061, and 21100, Public Resources Code. 15151 ‘Standards of Adequacy of EIR: good faith effort at full disclosure’. Commenter	Date	Letter	Comment	Response
Thomas Chase Ells	26-Aug-22	C170-1	Galen's Gardens/Samaritan Housing Society's offer is $1B for "Improvements to the Environment" at Sonoma Developmental Center (SDC) to such an extent as to offset the value & price of any other offer. The current process has gone off track, while Permit Sonoma's efforts at creating an EIR & Specific Plan process for development of SDC have produced Yeomen's effort of planning & exceptional avenues for creative visioning at SDC, they have shot clear past the demarcations of the community's desires/needs. Galen's Gardens/Samaritan Housing Society offer is a "Null Hypothesis Project" proposal for "Improve-ment of the Environment" at SDC and Historic Restoration of the Historic main building ("Professional Education Building/PEC"), which exempts the proposal from CEQA. We in America suffer from a lack of vision, we have been convinced that the proper thing to do is to "Think Globally, but Act Locally" only. This is not correct, this is unscientific, it is anti-scientific and anti-American, we need to "Think Locally, and Act Globally", because that is scientific. What we want locally around us, we should want for all, and similarly with what we don't want near us. We've lost the Public will. See Appendix"A"Term Offer Sheet.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Thomas Chase Ells	26-Aug-22	C170-2	Our offer is simple: create a Climate Crisis Center; establish a Polytechnic Environmental Institute; reuse as many of the buildings and facilities as possible; prevent waste & GHG emissions in the demolition of the County Proposed Project Alternative (CPPA) of ~161,000 tons waste along with the replacement of these same buildings with another ~161,000 tons of future waste (∑=134yrs waste); establish 6-Agencies with 100units/ each of affordable housing, with each reserving 10 of these units for "short term rentals". We will use Camp Via as an RV site, and re-establish the water & waste treatment systems for wetlands. The value of this proposal to the State is $1.133 Billion, and we would return all the property to the State at any time they wish (subject to the Housing & School Leases, and $100M Rehab Loan). Our only conditions for the creation of the Climate Crisis Center, the Polytechnic Environmental Institute and the affordable housing is $100M Endowment from California Coastal Conservancy, $25M/yr Operating Budget (per CalPoly	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

			Humboldt) for the Polytechnic Institute, and the use of the property until it's return to the State. Please see attached Appendices for details.	
Thomas Chase Ells	Friday, September 23, 2022	C171-1	Dear Brian Oh, Comprehensive Planning Manager, and To Whom This May Concern, Please find, consider, and respond to the following SDC EIR & Specific Plan comments; 2 Comment letters (Demolition 1a, and Process Comments 2a) were dated 9/18/22. 1 Comment letter (Process Comments 3a) is dated 9/23/22. 1 Proposed Null Project Alternative Development (Transaction Cover Letter), with Environmental Benefits. Thomas C. Ells, RCE 40656	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.
Thomas Chase Ells	Sunday, September 18, 2022	C172-1	Please see attached, additional SDC Program Draft EIR Comments (1a & 2a). No where in the Sept 15th Planning Commission meeting comments did I see my original set of Draft EIR comments, which were emailed to you, and which you responded "no problem" you would include them in with all the other comments at that time. I saw none of those prior comments. Please respond.	The comment is noted and relates to the Specific Plan and not the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Tiare Welch	Monday, September 26, 2022	C173-1	I've been wanting to submit my contribution to the SDC planning process. The lighting that is part of any development at SDC needs to be low lighting to preserve dark sky and nocturnal animal hunting and activities. My husband is an amateur astronomer and has to drive up to Lake Sonoma with his local astronomers group to do sky viewing. The new lighting these days is atrocious and needs to be carefully planned to preserve quality of life and looking up at the stars. With attention to detail this can be accomplished - Please include this planning in the SDC going forward - Super Important to minimize the impact of lighting. Thank-you. I didn't see anything about lighting in the EIR report. Did I miss it? I've lived in the valley since 1977. Our quality of life and wild land habitat are of extreme importance. Our care for nature is what makes this valley the special place that it is.	Section 3.1.3 of the DEIR analyzed the aesthetic impacts of the Proposed Plan.
Tracy Salcedo	Wednesday, September 21, 2022	C174-1	On behalf of Sonoma Mountain Preservation, I have attached our comments on the draft environmental impact statement and preferrred specific plan for the Sonoma Developmental Center. Thank you for your consideration. We all hope, with the incorporation of community input into a plan that is truly community driven, we will create a wholesome, viable future for this very special place and for the people who love it.	Thank you.
Vivien Hoyt	31-Aug-22	C175-1	I am writing because I strongly disagree with the most recent proposal to develop SDC for the following reasons: 1) 1000 housing units and 940 on-site jobs is too large for our small town. This monstrosity would significantly impact traffic, water use, and greenhouse gas emissions. We are already in a severe drought and we don't have the water supply to house that many people. 2) It is an extreme fire risk to add 2000+ cars onto our roads as it took hours to evacuate during the last big fire. Your plan will be putting many people's lives and animals at risk. The idea that creating another road to Highway 12 wouldn't remotely solve the problem. The fire chief's assessment that this new	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			development would only cause 1-2 minutes extra time for evacuation is not based on the reality of the citizens who live here. 3) The plan will negatively effect our wildlife, which is the glory of living here in Glen Ellen. One of the reasons we choose to live here 35 years ago, is because of the wildlife and openness of the area. I believe that is also why tourists love coming to our pristine valley.	
Vivien Hoyt	31-Aug-22	C175-2	My vision for the property is mostly reserved open space, transferring the property to a public or non-profit company, offering community based programs ie: educational, sustainable green techlology center, historic preservation of the main building, bicycle paths and an organic farm. The Wildlife Corridor and Sonoma Creek should be well protected with no more then 200 affordable, sustainable homes with priority to people with disabilities. The State of California should pay to clean up the mess left behind, which is something we were taught as children. Pushing this expense onto Sonoma County or the new builder is unethical. The State has a surplus of funds so they can afford it. We have an opportunity to behave differently then our previous generations. The model of “bigger is better” isn't working any more. The planet is suffering so we need to approach this jewel in a sustainable, carbon neutral way. Thank you for your careful consideration.	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.
Will Ivancovich	Saturday, September 24, 2022	C176-1	Our farm labor community could desperately use the housing on site. Don't tell me the buildings aren't suitable to live in. If you ever went to Mexico and saw what the majority of people live in, you would agree that the accomadations at Sonoma Development Center look like palaces. If that is to difficult for the majority to comprehend than do nothing with the property. Let it rot away and become open space for nature to enjoy and the public also!	Thank you for the feedback. It is not related to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
William B Hirsch	Friday, September 23, 2022	C177-1	I live on Arnold Drive, just south of Sobre Vista Drive. These comments are directed to the Sonoma Development Center Specific Plan Draft Environmental Impact Report, dated August 22, 2022. I am quite disturbed by many of the assumptions and conclusions included in the report, and would like a detailed response to the questions and issues raised below. FIRE EVACUATION In the Specific Plan, the Vision and Guiding Principles are full of references to “well-planned evacuation routes” and "proactively planning for community safety in natural disasters,” but the DEIR somehow concludes that pouring a couple of thousand cars onto Arnold Drive in the event of a disastrous fire will somehow not have a significant impact on emergency evacuation plans. This is a flawed and inadequate analysis for many reasons.	The comment is noted. Please see MR-1 regarding the adequacy of a self-mitigating Plan.
William B Hirsch	Friday, September 23, 2022	C177-2	FIRE FROM THE WEST The DEIR states on p. 515: “Historically, a fire approaching from the west may be less likely, and therefore did not warrant further specific analysis.” This is troubling for at least three reasons. First, the lower likelihood of a fire coming from the west is based on historical records that are less and less relevant given the impact of global warming and changing weather patterns. For these reasons, it is very difficult to predict how and where fires will originate and spread. Lightning strikes could occur anywhere, as we saw in 2020, and wind and drought conditions could make previously rare situations more common. Second, the DEIR should be planning for all contingencies, even “black swans.” This is particularly important since the project will have a permanent impact on the community and will impose threats for decades. Third, a fire from the west would be particularly devastating, as it likely would give residents much less time to evacuate and cause massive and sudden evacuation by residents and workers at the SDC and the surrounding communities. The assumptions on p. 515 that 25% of residents and employees would evacuate when given an Evacuation Warning and 65% would evacuate when given an Evacuation Order seems false and irrelevant, as most everyone would immediately flee when they saw the fire racing down the mountain (as would the other people on	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis .

Commenter	Date	Letter	Comment	Response
			Arnold Drive and the surrounding areas). Given all this, please respond to these concerns and explain in detail why the impact of a fire from the west was not considered. A full and complete study of this issue needs to be completed, and its results need to be considered and incorporated into the Specific Plan, before the DEIR can be approved	

Commenter	Date	Letter	Comment	Response
William B Hirsch	Friday, September 23, 2022	C177-3	FIRE FROM THE NORTHEAST AND SOUTHEAST As for the analysis of evacuation from the northeast and southeast, the analysis in the DEIR is also faulty and disconnected with real life experience. On p. 512, the DEIR states that "the travel model represents a typical weekday peak hour…" and then proceeds to add the potential impact of additional traffic from residents and workers at SDC. The total number of cars from residents and workers according to the DEIR would be over 2200. Although the DEIR never directly says how many additional vehicles will flood onto Arnold Drive from the SDC in the result of a fire emergency, it does state that 75% of the residential units, including two cars from each household, and 75% of the workers, with one car each, will be involved (p. 515)- given the Proposed Plans goal of adding 1000 new housing units and employing 940 people (Table 4.1-1 Summary of Alternatives, p. 534), the total is approximately 2205 vehicles. Add hotel guests (possibly one vehicle for each of the 120 rooms) and visitors (shopping, recreation, friends), and the total is probably closer to 2500. The first problem is that there is insufficient data supporting the travel model which is relied upon. In the Appendix to the DEIR, Appendix F is entitled "Traffic Model Data." It consists of one page. There is no information regarding how the study was done, when it was done, or what criteria was used. It could have been done so long ago it is irrelevant, or during Covid, when traffic was not typical. According to p. 512 of the DEIR, the DEIR relied upon the Sonoma County Regional Travel Model which "estimates traffic generated by land uses and tracks traffic volume relative to road capacities to calculate the associated levels of congestions and congested speeds." No other information is given regarding the travel model and, significantly, it does not appear to be based on a detailed and empirical study of realistic and existing traffic patterns. This is not acceptable for a project of this magnitude, especially when it is supposed to seriously evaluate emergency evacuation routes in the event of what could be a huge, fast-moving catastrophic fire.	The comment is noted. Please see MR-4 regarding the inadequacy or disagreement with wildfire evacuation analysis .

Commenter	Date	Letter	Comment	Response
William B Hirsch	Friday, September 23, 2022	C177-4	Second, the DEIR again assumes that only 25% of the residents will evacuate when they receive an Evacuation Warning. It seems risky and irresponsible to bet the lives of so many people on that assumption, rather than assuming that there will most likely be widespread panic if disaster strikes, especially now that we all know about what happened in Paradise and other communities. It also is important to note that the study that the DEIR cites for these evacuation rates only relies on three fires which took place in 2017 and 2018.[1] Besides the fact that the analysis is based on a limited sample and is therefore unreliable, this raises the question of whether the cumulative psychological impact of yearly devastating fires since 2017-8 has in itself begun to change behavior. That question is unasked and thus unanswered. Further, the study itself states the following in the section entitled Evacuation or Stay: For wildfires, the direct implications of high and variable shadow evacuation rates (ranging form 29.1% to 75% for the three fires) are unclear. One possible explanation is that officials were often unable to issue mandatory evacuation orders before residents needed to evacuate. Another explanation is that residents may have found the environmental cues of the fire to be very high risk, leading them to evacuate without an order. Future research is needed to separate the impacts of poor messaging and environmental cues on shadow evacuations for wildfires.	See Master Response 4 created to address concerns about the inadequeacy or disagreement with wildfire evacuation analysis.
William B Hirsch	Friday, September 23, 2022	C177-5	This suggests that the statistical analysis relied upon by the DEIR is tentative at best and needs further study, something that the DEIR does not recognize. Much more needs to be studied before an emergency evacuation plan can be based on such tenuous assumptions about evacuation rates. The third problem is that the DEIR ignores the fact that if there is a fire, the traffic on Arnold Drive will not be the same as a "typical weekday peak hour." The reason, of course, is that all the people in the area will be impacted during a massive explosive fire emergency, and they will swell Arnold Drive and Highway 12 well beyond "typical weekday peak" traffic. However, it is odd and indefensible that the DEIR focuses only on daily traffic patterns and employees and residents of the new town envisioned by the Specific Plan, but ignores the significantly increased volume of traffic that would occur from	See Master Response 4 created to address concerns about the inadequeacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			all the other residents of Glen Ellen and along Arnold Drive, as well as those fleeing the fire from other locations in the area. The DEIR also does not take into account the additional traffic that will be generated by the guests at the proposed 120 room hotel (possibly another 120 vehicles) or the visitors to the new commercial and recreational space they seek to build.	
William B Hirsch	Friday, September 23, 2022	C177-6	The fourth problem is that the analysis of the impact of the Proposed Plan on fire evacuation itself provides no backup material explaining exactly how the results were obtained. Table 3.16-1: Peak Hour Travel Times With Fire Evacuation (p. 517) is presented without any further explanation of how the results were actually calculated. This is particularly relevant as the invalid or limited assumptions discussed above skew the results, and a more accurate model would undoubtedly yield different results. It is therefore important to provide a detailed description of the statistical model and the methodology and imputs relied upon, so that the appropriate corrections can be made to yield more accurate results. Finally, none of what the DEIR states is consistent with actual events or personal experience. The DEIR concludes that travel time in the event of an evacuation will increase by only 1.2 minutes - actually, in my experience, even during normal traffic, sometimes it takes several minutes before I can even get onto Arnold Drive, so it seems unlikely that a huge influx of traffic will delay me, and many others, no more than a minute. It seems that the DEIR overlooks the basic fact that Arnold Drive is a two lane country road with hundreds if not thousands of residents on either side of the road with no other escape route. Arnold Drive was backed up for miles and barely moved during the Nuns Canyon Fire and the Kincade Fire evacuations. And sending people to Highway 12 is not the solution – that too is a small congested two -lane road and it is jam packed during normal rush hour traffic, and will be a poor evacuation route	See Master Response 4 created to address concerns about the inadequeacy or disagreement with wildfire evacuation analysis.

Commenter	Date	Letter	Comment	Response
			under the best of conditions. However the study is skewed to obtain the desired results of "no impact," the actual experiences of people in the area and common sense starkly contradict the conclusion that the addition of close to 2500 vehicles (including hotel guests and visitors) will have no significant impact. Please address each of these concerns in detail and explain why the DEIR does not adequately address the public safety issues they raise.	
William B Hirsch	Friday, September 23, 2022	C177-7	CONCLUSION All this raises serious questions about the DEIR's conclusion that "implementation of the Proposed Plan would not impair an emergency response or emergency evacuation plan and impacts would be less than significant" (p. 517) and that therefore "no mitigation is necessary." (p. 518). This defies logic and needs to be explained in detail in light of the questions and issues raised above. Beyond this, the DEIR should not be approved until there is a serious, complete and evidentiary based Emergency Response Plan in place and only after there has been a comprehensive and objective study of how the Planned Project will impact public safety and traffic conditions on Arnold Drive during a fire emergency	See Master Response 4 created to address concerns about the inadequeacy or disagreement with wildfire evacuation analysis.
Alexandra D. Syphard	Monday, September 26, 2022	C178-1	I apologize, but I forgot to send you a link to the appendices. Please find them here: Attach E Appendices.pdf	The comment is noted. It does not relate to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Caroline Hipkiss	26-Sep-22	C179-1	We provide these comments in response to the County of Sonoma's (County) Sonoma Developmental Center Specific Plan (Specific Plan) Draft Environmental Impact Report (DEIR) published on August 10, 2022. As long-time residents of Glen Ellen and the greater Sonoma Valley, we have significant interests in the Specific Plan and ultimate development of the former Sonoma Developmental Center (SDC) site. We are concerned that the DEIR does not provide substantial information about the environmental impacts of the County's proposed Specific Plan (Proposed Plan) as compared to alternatives. While our concerns extend to the cumulative environmental impacts of development under the Proposed Plan, we are particularly struck by the DEIR's failure to study or disclose the impacts to the resources and existing communities in and around the SDC. The analysis in the DEIR focuses on how the proposed development would be experienced by future residents and workers at the SDC site and does not adequately consider how doubling the current population of Glen Ellen would affect the surrounding community. This bias is laid bare by the DEIR's finding that more than doubling the residential population would have comparable impacts to increasing the population by approximately 50 percent. In short, the DEIR does not fulfill its basic purpose, which is to demonstrate that the County has fully considered and disclosed the potential impacts of implementing the Proposed Plan and alternatives.	See Master Response 3 created to respond to concerns about the level of analysis and programmatic nature of the DEIR.

Commenter	Date	Letter	Comment	Response
Caroline Hipkiss	26-Sep-22	C179-2	COMMENTS We organize our comments according to the headings in the DEIR for ease of reference. Table of Contents The Table of Contents shows the DEIR is over 600 pages, exclusive of appendices. That is a lot of paper for the public to review and provide written comments on within 45 days. Thus, while the Table of Contents does not contain substantive information, it nonetheless conveys a fundamental deficiency running throughout the EIR, namely that the DEIR does not facilitate the public's understanding of the County's proposal or the environmental impacts of implementing that proposal. A 600-plus page DEIR is not just a hardship for the public, it is contrary to the California Environmental Quality Act (CEQA). CEQA Guidelines direct that environmental documents be clear and easy to understand: "EIRs shall be written in plain language and may use appropriate graphics so that decisionmakers and the public can rapidly understand the documents."1 Further, EIRs should be concise: "the text of draft EIRS should normally be less than 150 pages and for proposals of unusual scope or complexity should normally be less than 300 pages."2 An EIR should "effectively disclose to the public the 'analytic route the ... agency traveled from evidence to action.'"3 Indeed, making the EIR accessible and understandable to the public is necessary to achieve the policy objectives behind CEQA's requirement that state agencies prepare an EIR, which include "protect[ing] the environment but also … demonstrat[ing] to the public that it is being protected. (County of Inyo v. Yorty, 32 Cal. App. 3d 795)," and "demonstrat[ing] to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action. (People ex rel. Department of Public Works v. Bosio, 47 Cal. App. 3d 495.)."4 The DEIR is over 600 pages and includes an additional 3,500 pages of appendices, yet it still fails to present a clear picture of the County's proposed action or the environmental consequences of it. In making the DEIR unduly long and confusing and providing the public only 45 days to review and provide comments, despite many requests for additional time, the County has effectively deprived the public a fair and meaningful opportunity to understand and engage in the environmental review and consideration of the Proposed Plan	Chapter 1 of the DEIR provides a description of the Proposed Project. See Master Response 3 created to respond to concerns about the level of analysis and programmatic nature of the DEIR.

Commenter	Date	Letter	Comment	Response
Caroline Hipkiss	26-Sep-22	C179-3	Section 1.1 Purpose of the EIR According to the County, the DEIR is intended to serve multiple purposes: • To satisfy CEQA requirements for analysis of environmental impacts by including a complete and comprehensive programmatic evaluation of the physical impacts of adopting and implementing the Proposed Plan; • To recommend a set of measures to mitigate any significant adverse impacts; • To analyze a range of reasonable alternatives to the Proposed Plan; • To inform decision-makers and the public of the potential environmental impacts of the Proposed Plan prior to taking action on the Proposed Plan, and to assist County officials in reviewing and adopting the Proposed Plan; and • To provide a basis for the review of subsequent development projects and public improvements proposed within the Planning Area. Subsequent environmental documents may be tiered from the Final EIR.	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.
Caroline Hipkiss	26-Sep-22	C179-4	As described below the DEIR does not achieve these purposes. The DEIR does not provide a complete or comprehensive evaluation of the physical impacts of adopting and implementing the Proposed Plan. Under CEQA, "[t]he purpose of an [EIR] is to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided."6 To this end, an EIR must describe, in detail, the significant effects on the environment of the project, including cumulative effects.7 Contrary to the requirements under CEQA, the DEIR's impacts analysis here is largely limited to a description of goals and policies applicable to a given resource or category of resources, followed by a conclusion that, if all future development activities contemplated by the Proposed Plan are perfectly designed and implemented to comply with those goals and policies, then there will be no significant impacts. In other words, the DEIR finds that any and all development under the Proposed Plan would effectively be self-mitigating across all resource areas, except for historic resources and transportation. The DEIR's impacts analysis does not appear to cite to specific evidence as the basis for these findings.8 The DEIR does not	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
			show that the County undertook specific studies or evaluation of the potential impacts of development activities covered under the Proposed Plan. Instead, the DEIR repeatedly states that the County chose to defer field and other site-specific studies.9	
Caroline Hipkiss	26-Sep-22	C179-5	This facile analysis, which does not point to any mechanism for the County (or other regulatory entity) to ensure that future development activities perfectly comply with all applicable goals and policies for resource protection, is insufficient to support the DEIR's conclusory findings that any and all reasonably foreseeable impacts of implementing the Proposed Plan can be avoided or effectively mitigated to the point of insignificance. As indicated above, we were unable to locate discussion of specific field studies or site-specific analyses that the County undertook to evaluate the potential impacts of development under the Proposed Plan or alternatives. Based on our review, the DEIR does not provide information or substantive explanation adequate to resolve or narrow the issues we raised in our Scoping Comments, including, but not limited to: § Biological Resources o Analysis of impacts to fish and wildlife resources and habitat, including any federally listed endangered or threatened species that are or have the potential to occur in the project area o Analysis of impacts to plant and botanical resources o Analysis of the potential for development activities to introduce non-native, invasive species	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
Caroline Hipkiss	26-Sep-22	C179-6	Energy Resources o Analysis of whether there are adequate, cost-effective renewable energy sources available to timely meet anticipated energy needs on the campus under the Specific Plan and alternatives o Analysis of whether proposed development under the Specific Plan and alternatives would affect reliability or cost of energy resources locally or regionally § Greenhouse Gas Emissions o Quantitative analysis of any changes to greenhouse gas emissions caused by the development program proposed under the Specific Plan and alternatives § Hydrology and Water Quality o Analysis of hydrogeologic impacts, including whether restoration of onsite water supply systems would potentially impact surficial expression of interconnected groundwater sources o Analysis of potential geomorphological impacts to natural waterways caused by increased runoff volume and duration from additional impervious surfaces	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.
Caroline Hipkiss	26-Sep-22	C179-7	oPublic Services, Recreation o Analysis of the Specific Plan's impacts to existing recreational use on the SDC campus, particularly passive recreation o Analysis of opportunities to meet latent and future recreational demand under the Specific Plan and alternatives § Utilities and Service Systems o Analysis of whether there are adequate water supplies to reliably meet demand on the campus under the Specific Plan and alternatives into the future, including description of specific sources and whether those sources could be cumulatively affected by other developments within the region, e.g., implementation of the Sustainable Groundwater Management Act, or potential changes to regional surface water supplies caused by the decommissioning of the Potter Valley Hydroelectric Project (FERC No. 77).	Chapter 3.15 of the DEIR addresses utilities and service systems impact. Additionally, the appendix includes a Water Supply Assessment done for the Proposed Plan.

Commenter	Date	Letter	Comment	Response
Caroline Hipkiss	26-Sep-22	C179-8	Transportation and Traffic o Analysis of the availability of feasible existing or future public transit alternatives to serve increased population given the relative geographic isolation of the SDC campus from urban and suburban commercial districts and other services and amenities o Analysis of impacts related to pedestrian and bicycle safety on two-lane roads in the broader area, not just within the project boundary § Wildfire Hazards o Analysis of the increased risks of wildfire occurrence and severity locally and regionally under the Specific Plan and alternatives o Analysis of the impacts to safe and effective evacuation routes locally and regionally in the event of wildfire or other natural disasters.10	The comment is noted. Please see MR-6 regarding the inadequacy of or disagreement with transportation analysis, or call for reducing the number of housing units or jobs at the site to reduce traffic impacts.
Caroline Hipkiss	26-Sep-22	C179-9	The DEIR does not recommend a specific set of measures to mitigate any significant adverse impacts. Under CEQA, "[a]n EIR shall describe feasible measures which could minimize significant adverse impacts."11 As stated above, here the DEIR generally finds that the Proposed Plan will not have any significant impacts that require mitigation.12 These findings are based on assumptions that specific development projects will be designed and implemented by unknown developer(s) to achieve and adhere to all current goals and policies related to resource protection. However, these assumptions are not supported by any specific analysis based on record evidence for how specific development projects could be designed or reliably implemented to attain all resource goals and policies and effectively mitigate project impacts. Further, the DEIR states that the Proposed Plan is non-binding on the state or any future owner. The DEIR does not provide any basis for the assumption underlying the impacts analysis that the state or future owner will implement specific development projects in a manner that is self-mitigating, even where attainment of all the listed resource goals and policies may exceed legal and regulatory requirements. The DEIR's assumption that specific development projects under the Proposed Plan will be designed and built to be self-mitigating is meaningless in the absence of any demonstrated authority to require that outcome.	The comment is noted. Please see MR-1 regarding the adequacy of a self-mitigating Plan.

Commenter	Date	Letter	Comment	Response
Caroline Hipkiss	26-Sep-22	C179-10	The DEIR does find that development under the Proposed Plan would adversely impact cultural and historic resources and transportation. However, it finds that these impacts would be "significant and unavoidable" and does not propose any specific mitigation measures for either category of impacts.13 In sum, the Proposed Plan does not include any specific mitigation measures to lessen even those impacts that the DEIR concedes would be significant. The DEIR does not provide adequate analysis to meaningfully compare the Proposed Plan to alternatives. "One of [an EIR's] major functions ... is to ensure that all reasonable alternatives to proposed projects are thoroughly assessed by the responsible official."14 The discussion of alternatives must "include sufficient information about each alternative to allow evaluation, analysis, and comparison with the proposed project." 15 "Under the 'rule of reason,' an EIR's discussion of alternatives is adequate if it provides sufficient information to compare the project with a reasonable choice of alternatives."16 The DEIR's alternatives analysis does not meet these standards.	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.
Caroline Hipkiss	26-Sep-22	C179-11	In response to the County's Notice of Preparation, we requested that the EIR consider a reasonable range of alternatives to the County's proposal, and further requested that the range of alternatives "not be limited to variations on the same development plan differing only slightly by number of housing or other building units proposed to be constructed."17, 18 Despite this request, the only meaningful difference in the alternatives considered in the DEIR is the density of the proposed development. The DEIR does not even consider a true no action alternative. Under CEQA, an EIR's discussion of alternatives must include a "no project" alternative.19 The purpose of discussing a no project alternative is to permit a comparison of the impacts of approving the proposed project with the effects of maintaining the status quo.20 The no action alternative "is a factually based forecast of the environmental impacts of preserving the status quo. It thus provides the decision makers with a baseline against which they can measure the environmental advantages and disadvantages of the project and alternatives to the project."21	Chapter 2.6 of the DEIR provides a description of the intended uses of the DEIR. Additionally, see Master Response 3 created to respond to concerns about the level of analysis and programmatic nature of the DEIR.

Commenter	Date	Letter	Comment	Response
Caroline Hipkiss	26-Sep-22	C179-12	Rather than continuation of the status quo, the DEIR defines the no action alternative to include a similar or greater level of development as the Proposed Plan: “the No Project Alternative would result in a palette of uses similar to those outlined in the Proposed Plan, and like in the Proposed Plan, these uses would be located at the Core Campus, and the surrounding land would be preserved as open space.”22 By assuming there would be comparable development under the No Project Alternative and the Proposed Plan, the DEIR omits analysis of the environmental impacts of the Proposed Plan as compared to existing (baseline conditions). This hides the actual environmental impacts of the Proposed Plan and all alternatives considered in the DEIR. Under CEQA, “[a] public agency should not approve a project as proposed if there are feasible alternatives or mitigation measures available that would substantially lessen any significant effects that the project would have on the environment.”23 Here, the DEIR identifies the Historic Preservation Alternative as the environmentally superior alternative because it would reduce the “significant and unavoidable” impacts to historic resources under the Proposed Plan to be “less than significant.”24 However, the DEIR does not recommend the Historic Preservation Alternative because it would have “overall environmental impacts that are largely comparable between the Proposed Plan and the alternatives,” but would not provide as much housing or “long-term fiscal stability.”25 The DEIR’s impacts analysis, which is not based on any specific development design scenarios or supported by field or other site-specific studies, is inadequate to demonstrate that the environmental impacts of the Historic Preservation	Refer to Master Response 8 to assess how the DEIR evaluates impact differences between the Proposed Plan and the Historic Preservation Alternatives. The DEIR analyzes the impacts of the Proposed Plan compared to the baseline, which is the current conditions at the time of Notice to Preparation.

Commenter	Date	Letter	Comment	Response
Caroline Hipkiss	26-Sep-22	C179-13	Alternative would be comparable for all resources other than historic resources. 26 It strains credulity to predict that the Proposed Plan for 1,000 housing units and a population of 2,400 would have comparable impacts to a plan for 450 housing units and population of 1,080 (i.e., less than half the housing and population density as the Proposed Plan).27 Contrary to CEQA's policy objectives, this conclusory analysis does not demonstrate to the public that the County "has, in fact, analyzed and considered the ecological implications of its action."28 The DEIR is inadequate to inform decision-makers or the public of the potential environmental impacts of the Proposed Plan. An EIR should inform decisionmakers of the environmental impacts of a proposed project and ensure that the "government at all levels to make[s] decisions with environmental consequences in mind."29 For the reasons discussed above, the DEIR's analysis of the impacts of the Proposed Plan as compared to alternatives is too vague and conditional to provide clear understanding of the environmental impacts of the Proposed Plan or alternatives, or to demonstrate that any government decisions based on the DEIR's analysis will have been made "with environmental consequences in mind."	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.
Caroline Hipkiss	26-Sep-22	C179-14	The DEIR is too vague to serve as a basis for future, project-specific environmental documents. The DEIR acknowledges that additional environmental analysis for specific development projects will be required: "As a program EIR, the preparation of this document does not relieve the sponsors of specific projects from the responsibility of complying with the requirements of CEQA (and/or NEPA for projects requiring federal funding or approvals)." 30 However, the DEIR indicates that future environmental documents may rely upon the DEIR's analysis to some extent: "These projects may, however, use the discussion of impacts in this EIR as a basis of their assessment of these regional, countywide, or cumulative impacts, provided that the projects are consistent with the Proposed Plan and the data and assumptions used in this EIR remain current and valid."31 For the reasons described above, we strongly disagree that the impacts analysis provided in the DEIR could or should be relied upon in future project-specific environmental documents.	The comment is noted. Please see MR-3 for the level of detail of analysis and programmatic nature of the Draft EIR.

Commenter	Date	Letter	Comment	Response
			IV.CONCLUSIONWe request the County revise the DEIR to address the deficiencies described above prior to finalizing the document. In particular, the County should reconsider its definition and analysis of the No Project Alternative, and rejection of the Historic Preservation Alternative. We thank the County for considering these comments.	
Charles Mikulik	Aug-22	C180-1	Sonoma Developmental Center Specific Plan: Draft Environmental Impact Report, August 2022 Comments by Charles Mikulik Numbers in parenthesis proceeding a comment refer to the PDF page number and the document page number of the Draft EIR respectively. 1. It is not clear how the potential loss of historic integrity under CEQA is being assessed. Furthermore, the Draft EIR indicates that the Specific Plan, if implemented, would result in the property to no longer qualifying as a National Register eligible Historic District. How specifically did you determine this? What are the criteria for determining the level of integrity tied to the number of historic buildings that are necessary to retain eligibility? This is particularly confusing as this is something that would generally be determined by the State Historic Preservation Officer. Did Page & Turnbull somewhere state that this loss of integrity is unavoidable? If so, based on what?	This comment is noted. As described on page 296 of the DEIR, "New construction has the potential to disconnect the remaining contributing resources in the Core Campus from those in Community Separator and Regional Parks lands to the east and west, consequently disrupting the feeling and character within the historic district. This would affect the cohesiveness of SSHHD's overall integrity to the point that it would no longer be eligible for listing in the NRHP, CRHR, or as a California Historic Landmark. The impact of such activities is considered significant because they would cause a substantial adverse change to the historical district as defined by CEQA Guidelines Section 15064.5.

Commenter	Date	Letter	Comment	Response
Charles Mikulik	Aug-22	C180-2	ES.1.2 Purpose 2. (13/4) “Allow County departments, other public agencies, and private developers to design projects that will enhance the character of the Planning Area, preserve environmental resources, and minimize hazards”. While this sounds great, it is vague at best. More specific language would be nice. What do you mean by enhance the character of the Planning Area? Please explain why the preservation of as much the structures, buildings, and landscape does specifically meet this purpose? ES.1.3 Objectives 3. (16/6) Please explain and define what the criteria for determining feasibility are? My understanding is that cost is not a legal factor for determining whether something is feasible. 4. The use of “feasibility” appears to be open to interpretation. It appears that if adopted, the individual responsible for determining what is feasible will define what that means for themselves. Is true? Why are there no clear guidelines presented in the document?	This comment is noted. Please see Section 3.1 starting on page 85 of the DEIR in regards to the potential impacts of the Proposed Plan on the environmental lanscape and MR-9 in regards to the performance standards.
Charles Mikulik	Aug-22	C180-3	ES.2.1 Cultural, Historic, and Tribal Resources 5. (18/8) Similar to questions 3 and 4 the statements on this page appear to state that the impacts to the historic district are unavoidable and would reduce the integrity to a point where the property is no longer eligible. How was this determined and by whom? Has the State Historic Preservation Officer been notified that the eligibility status has been predetermined without concurrence from the Office of Historic Preservation? 6. Regarding California Code of Regulations Title 14: 15064.5 (which can be reviewed here: https://casetext.com/regulation/california-code-of-regulations/title-14-natural-resources/division-6-resources-agency/chapter-3-guidelines-for-implementation-of-the-california-environmental-quality-act/article-5-preliminary-review-of-projects-and-conduct-of-initial-study/section-150645-determining-the-significance-of-impacts-to-archaeological-and-historical-resources#:~:text=Download-,Section%2015064.5%20%2D%20Determining%20the%20Significance%20of%20Impacts%20to%20Archaeological%20and,Commission%2C%20for%20listing%20in%20the).), there is no discussion regarding what the impacts to the community could be if this lost its integrity. Please explain what consequences are expected if this were to occur?	This comment is noted. As described on page 296 of the DEIR, "New construction has the potential to disconnect the remaining contributing resources in the Core Campus from those in Community Separator and Regional Parks lands to the east and west, consequently disrupting the feeling and character within the historic district. This would affect the cohesiveness of SSHHD’s overall integrity to the point that it would no longer be eligible for listing in the NRHP, CRHR, or as a California Historic Landmark. The impact of such activities is considered significant because they would cause a substantial adverse change to the historical district as defined by CEQA Guidelines Section 15064.5." Please see Section 5.2.5 of the DEIR starting on 589 regarting the cumulative impacts to cultural, historic and tribal resources.

Commenter	Date	Letter	Comment	Response
			7. Implementation of goals 2-I, 2-J and policies 4-20 through 4-32 and Standard Conditions of Approval LU1 – LU-6 would be a partial mitigation but not enough but do not legally appear to be enough. Why are there no project specific mitigation measures to support and guarantee proper implementation?	
Charles Mikulik	Aug-22	C180-4	ES.4.2 Identification of Environmentally Superior Alternative 8. (23/14) While it is acknowledged that the Historic Preservation Alternative is the more environmentally sound approach, it is then indicated that it would be inferior regarding energy use, biological resources, and wildfire risks. Please present the data used to make this determination. . 2.4.4.1 Core Campus Districts 9. (83/Figure 2.4-2: Districts) I am not sure what to make of this as this depiction of the “Historic Core” seems to fly in the face of everything we know about the history of the campus. 3.1.3.4 Impacts 10. (110/101) Impact 3.1-1. This section does not make sense and is contradictory to other statements. Please explain how the assumption that there is a “less than significant impact” was determined? By definition, a property losing its status as a historic district is a significant impact. This section needs to be redone and the impacts need to be appropriately acknowledged. Section 3.5: Cultural, Historic, and Tribal Cultural Resources 11. (269/260) The first paragraph on this page states that they are providing a list of all previously identified cultural resources, however, this is not true as no one has consulted	This comment is noted. Please see MR-8 regarding the Historic Preservation Alternative. Regarding Impact 3.1-1, as noted on page 94 of the DEIR, "Appreciation of aesthetics and visual resources is generally subjective by nature, andtherefore the extent of visual impact associated with adoption and implementation of theProposed Plan can be difficult to quantify. In addition, it is difficult to estimate the impactfuture development would have on scenic resources, since individual developmentprojects can be designed to be compatible with and/or enhance the aesthetic quality of anarea. As such, this analysis was based onthe overall amount of new development atbuildout of the Proposed Plan, the potential location of new development, and policies andstandards in the Proposed Plan."

Collin Thoma		C181-1	The following comments are to make sure that the SDC is transformed into a neighborhood that is accessible and affordable to all, epically people with disabilities. Given the SDC's history of being an old hospital for people with disabilities it is vital that the entire development is acesaaible. One of the ways to achieve this is to build as many homes using the Visibility method. Visitability requires a zero-step entrance with a slope no greater then (1:12), 32-inch width pathways and doorways. Bathrooms are also equipped with grab bars and are big enough for a mobility device user. Additionally, the climate controls and light switch are low enough for those who use a mobility device. Petaluma passed their own Visitability ordinance earlier this year and it's a great example. The highlight of their ordinance is the width measurements are several inches great then the minimum 32 inches. Visitability has less extremity requirements then Universal Design which requires lower counters or a roll in shower. This could Visitability more appealing to build since it has less extensive design requirements. It was good to see at least 5 parcels be set aside for people with Developmental Disabilities. Ideally there will be more then 5-10 parcels and are built using Universal Design or Visitability.	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.
Collin Thoma		C181-2	It is great that a top priority is to transform the SDC into a pedestrian ordinated and multimodal neighborhood. However, it will need to be acesaaible and safe for people with disabilities. This will mean having a sidewalk network that has no gaps and is well maintained. People with disabilities are more likely to be hit by a car if they need to go into the street to due to a sidewalk gap or an obstacle. They are at greater risk as they may not hear or see the car and if they are in a mobility device they may not be seen by motorist. In addition, sidewalks in disrepair can higher trip/fall hazard. They may not see the crack or bump or it could cause their mobility device to get stuck potentially causing it to flip over. Ideally as much of the bicycle network is built with raised curbs or another physical barrier. This is important for people with disabilities as they may a have specially adopted bike which may be lower the ground and harder to see. It will also allow for someone to safely avoid heavy foot traffic or an obstacle on the sidewalk. The sidewalk and bicycle network should also extend outside of the SDC and provide access to Glen Ellen, and other	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			surrounding areas. In addition, wayfinding will also need to be acesaaible with large bold text and have a section that's in brail. Furthermore, intersections and crosswalks will need to be highly visible by being pained in large bold stripes. In addition, curb extension or cut outs should be built to maximize visibility. Having crosswalks that are signalized and adequately timed is also vital for safety and accessibility. For example, a crosswalk may to be extended from 10 seconds to 20 seconds to allow for a safe crossing. While it is good to see Complete Streets as one of the goals adding Vision Zero elements should also be considered.	
Collin Thoma		C181-3	Figure 5.1-4 the Arnold Drive concept is overall pretty good. It excels in having a highly visible intersections, crosswalks and protected bike lanes. Having a narrower road will help motorist driver slower enhancing pedestrian safety. Still other ways to make motorist slow down such as landscaping separating opposite lanes of travel should be considered. Signalized crosswalks, traffic lights or stop signs will need to be added to make it accessible. Figure 5.1-6 Harney Street concept is good in that it has wider sidewalks however, the bike lanes should be protected like the ones on Arnold Drive. The bike lane in the middle should be removed as it is too dangerous for bicyclists with disabilities. It is also hard to tell if the intersections are highly visible which is needed given the potential for heavy traffic. In figure 5.1-8 it is good to see a Class 1 bike lane and should be on both sides of the street. Since there is a Class 1 pathway the bikeways on the streets should be removed. The intersection and crosswalk could also be highly visible with signalized crosswalks. Public transportation is also important for those who may not drive due to their disability. More routes into the Santa Rosa, and other major hubs in the area should be added to enhance service. In addition, the county should strongly consider having some express buses to these major hubs. The stops should also	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			provide real time info on routes and schedules with information being provided in both audio and visual format. The stops will need to be covered to provide protection from the elements. The county should also improve its paratransit service so it is easier to get same day rides.	
Collin Thoma		C181-4	The SDC presents a great opportunity to build affordable housing and help alleviate the housing crisis. The severe housing widely felt for people with disabilities due to the lack of very and extremely low-income housing. This is because many people with disabilities rely on Social Security Insurance (SSI) and/or other public benefits. All of these benefits pay a few hundred or up to around a thousand dollars less than the average rent across the county. Thus, they fall into the very and extremely low-income. Furthermore, the recipient may receive the money from their benefits after rent is due resulting in late fees. This can further reduce one's budget for the month as they may not have the luxury of getting bi weekly. In addition to everyday items extra costs may include medical, support services, or assistive technology to help them with their disability. Given the severe economic challenges that people with disabilities face it's important there is as much affordable housing as possible. The plan mentions building at least 183 affordable units but the county should strongly consider building a mere 17 more units so it's an even 200. It is also very important that future landlords are willing to accept Section 8 and other housing vouchers. These vouchers are a common way for people with disabilities to obtain housing that would otherwise be unaffordable. However, it can be very challenging to find landlords that will accept these vouchers. It would be good to see the county work with landlords to accept	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			these vouchers. This can look like educating landlords on the importance of accepting them and clearing misconceptions of who uses them.	
Collin Thoma		C181-5	Given that the area is in an extremely high fire danger area it's vital that homes and buildings are built to be fire resistant and fuel loads are cleared from the area. The current road network needs to be studied to see how it will handle the increase in traffic during an evacuation. Due to the challenges from disasters improvements will need to be made like building another road to highway 12. The county will also need to take into account that people with disabilities may need extra assistance while evacuating. They may need a ride out of the area and may bring a mobility device, an oxygen tank or other medical equipment. Alerts and warnings will need to be sent out via landline phone and email as these could be their primary way communication. Police and fire personal may need to go door to door since people with a vision or sight disability may not hear or see the high/low sirens. In addition, some may more advanced warnings as it may take longer for them to pack and be ready to leave. For those with cognitive or learning disabilities they may assistance packing the correct supplies or extra explanation on evacuating. While doing outreach and education with residents on wildfire resiliency make sure the information is presented clearly for those with a cognitive disability. Any pictures or graphics will need to be described for those who with sight disability and in audio format for those who have hearing a disability. The fire station at the SDC is a great idea and it should also operate as an	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			operations center. This will help improve response to both the SDC and greater Sonoma Valley.	
Collin Thoma		C181-6	It is important that resources like the Sonoma House or main building are kept to help pay respect and homage to past SDC residents and employees. The Sonoma House or main building should be converted into a museum on the history of the SDC. The cemetery should also be revitalized to pay respect for those who died at the center. Other buildings that are persevered should be turned into community space such as an event center instead of a hotel. The Flex Zone is a great concept and supportive services should be considered to occupy the space. It would also be good to see mixed use which is a good way to maximize affordable housing. If the water recreation area at Suttonfield Lake is created it will need to be designed be acesaaible. This will mean having a paved pathway to the to the water's edge. It is also important that the other open spaces are also accessible. If they have amenities such as play structures or work out machines will need to be able to accommodate all mobility levels. To help finance the project all state, federal, private funding are pursued especially for affordable housing. It would also be good to see at least some community buildings be built in the 1-5-year phase instead of the 5-10-year phase. The development should also take into consideration of where a school could be built if the demand arises. Thank you for taking time to review my comments on the future of the Sonoma Development Center and for previous comments and focus groups. The plan presents a great opportunity to make a vibrant community that is affordable and	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			acesaaible. If the SDC is developed to be acesaaible it will be a great way to carry on its legacy.	
Deborah C. Nitasaka	26-Sep-22	C182-1	We are writing today following our review of the draft environmental impact report pertaining to the Sonoma Developmental Center's (SDC) future. As most following this planning process, including Sonoma County Planning Commissioner Greg Carr, have stated (repeatedly, loudly, emphatically) – we find that this report fails, either in part or in total, to account for several environmental impacts essential to any meaningful understanding of the ways in which the public's safety, true protections for the natural environment, and the many human needs are to be addressed. And so, with but a few scant weeks to pour through a 789 page report that bases its assessments, conclusions, and recommendations on the previous "Plan" - and so is itself deeply flawed and grossly inadequate, we will once more howl into the void. Others with more advanced professional qualifications have pinpointed the flaws in those sections of the report pertaining to the natural environment, historic preservation, public safety, and traffic. We will restrict our comments to concerns for the future housing uses of SDC's Core Campus - and to a planning process that appears to have now gone off the rails – disappearing into the abyss of railroaded transparency! The first of our issues concerns the so-called "SDC Specific Plan" and the "reasonable range of alternatives to the Proposed Plan" - as required by CEQA in an EIR. Is it just us? We find	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			that the community's input is nowhere to be seen in either of these deeply deficient reports. To illustrate, we and others have proposed, as one reasonable alternative, using SDC's built footprint, referred to elsewhere as its "historical 180-acre built area," as a campus for those seeking training in the trades, in the applied sciences, public service occupations, and other professions of financial and social benefit to the students, their families, and the entire state.	

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C182-2	We see no evidence that this invaluable, desperately needed (see any number of actual empirical studies) educational use was given a moment of consideration. Remarkably shortsighted given that use of SDC's Core Campus as a campus would come with fewer vehicle miles travelled, allocations for affordable housing, to name but a few of the benefits, in part because students, staff, and educators could be offered housing within the campus. Please see the attached letter sent to the Sonoma County Board of Supervisors on November 21, 2021 as it offers a deeply researched look at just such a use. Further, the Draft EIR ignores the county's dire need for affordable housing, calling instead for allocating 90% of the 1,000 proposed new houses as market rate homes. This in defiance of The Final Regional Housing Needs Allocation (RHNA) Plan , adopted in December 2021 which determined that Sonoma County's fair share of regional housing would be 3,881 units, with 1,632 allocated as housing affordable to very low- and low-income households. That would be about half the homes to be built, not 10% as this draft EIR calls for! Just a disgraceful display of the preference throughout the draft for meeting the needs of the wealthy over the rest of us. "SDC Core Campus: Consists primarily of residential buildings, with medical, educational, recreational, and administrative buildings interspersed. A cluster of utility and support buildings, and fire station sit at the western edge of the Core Campus. On the eastern portion of the site, historic agriculture uses…" Government Code Section 14670.10.5 (c) (4): The agreement shall require that housing be a priority in the planning process and that any housing proposal determined to be appropriate for the property shall include affordable housing. It is further the intent of the state that priority be given to projects that include housing that is deed restricted to provide housing for individuals with developmental disabilities.	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C182-3	To this end, we propose developing cottage clusters throughout the campus designed to meet specific needs such as supportive housing for individuals with disabilities, older adults, agricultural workers, and young families in need of starter homes. As an enriching environment affording access to the educational, recreational, social, health, and support resources, all on this technical college campus, all bringing full circle the many necessities of life - all without segregating this campus from the rest of Glen Ellen - what could be better? It is outrageous to propose 100 of the 1,000 housing units might be deemed affordable, especially when communities such as Glen Ellen have been ravaged for Tourist Occupancy Taxes since Sonoma County's Vacation Rental Ordinance went into effect more than a decade ago. One hundred units doesn't begin to make up for the hundreds of homes converted into commercial tourist traps over these years. We need to actually, truly, add to our housing stock. By "add to" we mean in addition to recovering, by some means, those dwelling units sacrificed for profit, private and public. The proposed housing outline comes nowhere near to meeting the documented need for affordable housing in Sonoma County. Although state housing element law is cited in Chapter 3.1.2: Population and Housing, we believe that, beyond this scant mention, it ignores state law and the Sonoma County Housing Element. Certainly, it does not begin to touch on the county's requirement to provide for its burgeoning homeless population, a significant aging population unable to live on its paltry retirement income, or an agricultural community ignored in this process - as usual.	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C182-4	Our second point also concerns process. While the people of Sonoma County, of the State of California have been encouraged to participate in a planning process sold to us as public, above board, and time constrained, we have just learned of another process (see attached 9/23/22 Index-Tribune article). This one private, ongoing, underhanded, free of transparency, a play for SDC by a real estate developer and his business partner - both with lengthy histories of questionable business ethics. This time, having sufficiently inserted themselves into the state system, carrying satchels of cash, of many millions of tax dollars, all offered to Sonoma County in exchange for a deal requiring NO Environmental Impact Report and benefitting only the few, the wealthiest schemers. “Public records reveal that two Sonoma County businessmen — Darius Anderson and Doug Bosco — played central roles in the backdoor negotiations for the easement sales” in a sham process meant to deflect the public’s attention away from the dealmaking between a little-known state agency headed by the same man working to bring coal through Sonoma County on the Sonoma-Marin Area Rail Transit district — SMART line (see two attached 2021 Bohemian articles) Former congressman Doug Bosco is the CEO of the private freight company Northwestern Pacific Railroad Company (NWP Co.). Along with his business partner, real estate developer (e.g., Treasure Island: Radioactive debris) and owner of the powerful Platinum Advisors political consulting firm, Darius Anderson, they leveraged their influence to lobby state and federal lawmakers for the right to transport coal, among other commodities on the SMART rail line. Although most of their plans failed to pan out, through a series of complex loans and contracts (according to The Bohemian’s 2021 report), a publicly chartered rail agency, North Coast Railroad Authority (NCRA), now owes NWP Co. millions of dollars. And today they continue running freight on the SMART rails.	This comment has been noted however it does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C182-5	It should be noted that Anderson and Bosco are founding members of Sonoma Media Investments, which owns most of the print media in Sonoma County including the Press Democrat, Sonoma Index-Tribune, Sonoma County Gazette, Petaluma Argus-Courier, North Bay Business Journal, Sonoma Magazine, and La Prensa. So it's business as usual as the high rollers operate behind the scenes, leveraging millions of tax dollars in a play for possession of a community resource. Doug Bosco believes he and he alone can secure SDC, work around the usual requirements for an EIR, and buy off Sonoma County to create his next dream project. When Supervisor Gorin spoke at last week's (September 21) meeting of the North Sonoma Valley Municipal Advisory Council, there was no mention of the Bosco/Ocean Conservancy deal. Nor did County Planner Oh indicate that he was negotiating a deal with Doug Bosco when he addressed the Sonoma County Planning Commission at its September 15 meeting. The public is entitled to an explanation - NOW! This planning process must be halted until those who will pay (in oh so many ways) are fully informed of the facts. And now, one final point that cannot be ignored: The Sonoma Developmental Center, Eldridge, the neighborhoods south of SDC - WE ARE ONE! We are Glen Ellen. We will not stand for further planning hellbent on separating our neighborhoods by this or any other planning process!	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.
Deborah C. Nitasaka	26-Sep-22	C183-1	We have been asked to select from the three options laid out in the SDC Alternatives Report released just a few weeks ago (November 1, 2021). Each offering little realistically plausible beyond an audacious open door for upscale developers to bring in projects bound to fail if past is prologue (i.e., Rohnert Park's Sonoma Mountain Village]aka Hewlett-Packard] and Petaluma's telecom boom (and bust). Beyond some open space promises (with little detail), the rest in no way addresses the very real and urgent needs of Sonoma County residents. More tourist-serving accommodations? This valley has been decimated by the county's cash-cow (Transient Occupancy Tax), converting units built for, zoned for, subsidized for, intended for - residents to live in - now operating as disruptive commercial enterprises in residential neighborhoods. The costs	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			to our communities are innumerable. It is clear we have been sold out by our civic leaders. Any further moves toward "tourist-trapping" our community will not go down well. Forget the hotel! Give us back our housing stock!	
Deborah C. Nitasaka	26-Sep-22	C183-2	Industrial parks? For which segment of our undereducated population? According to The Sonoma County Workforce Investment Board's draft Local Workforce Development Plan 2021 – 2024: Over the next five years, the following are the top five occupations that will be in-demand for Sonoma County: 1. Office and Administrative Support 2. Sales 3. Food Preparation and Serving 4. Transportations and Material Moving 5. Management Unless Sonoma County changes course, opting for a more enriching, visionary future, these will be the jobs of tomorrow. I see no reason to settle, to offer so little to our children, to our community. My vision is one calling for opportunity, advancement, growth, fulfillment in work and play.	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C183-3	The people of Sonoma County have been told there must be a plan covering how anything we ask for will be paid for. Curiously, I see no such level of detail in this consultant's report. Why the dichotomy? Maybe it's time to get real, to try a bit more transparency, to actually explore feasible options that will bring to the county what residents so urgently need, with top of the list being decent affordable housing for agricultural workers, students, developmentally disabled, the unhoused, and others most sorely in need. This housing might well be thought of as that needed to replace the hundreds of homes lost to the vacation rental industry as well as to the fires of 2017 - 2020. Sonoma County may not have fulfilled its promise of a community-driven process, but the people of Glen Ellen and beyond are stepping up on their own. For my part, I am pushing past what some say is the line of possible to envision the day students live, learn, and work on SDC's campus. Imagine SDC as a place flourishing with innovation, preserving history, expanding its role to enrich the surrounding community with lifelong learning opportunities, special needs housing and education, visiting professor lecture series, and all while graduating people prepared with the skills essential for fulfilling, well-paying careers, ably set to meet and exceed the demands of today and the future.	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C183-4	I am in full agreement with the thoughts and recommendations sent to you by the Sonoma Land Trust concerning the need to preserve the wildlife corridor. Therefore, the remainder of my comments will pertain to the built portion of the campus. To start, I have to say that the prospect of jamming together thousands of homes in the southern end of SDC is appalling. How does such a banal idea enrich the quality of life for Sonoma County residents? As a housing advocate clocking in more than 30 years, I endorse incorporating housing into SDC's future, especially special needs housing. To do so well will require far more thought than we see here. Questions remain as to how many homes can safely be added to the this part of the valley, how the units would be protected from further loss to Sonoma County's Vacation Rental Conversion Program or to any other misuse. As well, I need to see much more detail regarding the intended population. As others have said (and I concur), "The alternatives do not provide for adequate emergency egress in the event of wildfire, are not compatible with the rural character of the surrounding communities within the Sonoma Valley, and do not realistically address impacts on infrastructure, such as water recharge, inadequate roadways, sewage system capacity, etc."	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C183-5	Too often Sonoma County officials have ignored what is needed for what is easiest, furthering the human toll. I've seen it all. The matter of public safety became alarmingly clear as a planning oversight when we learned, through the series of meetings held within a single week earlier this month (11/13/21, 11/16/21, 11/17/21), that the consultants did not meet with CalTrans when developing their traffic outline, yet calculated traffic flow by comparing apples and oranges. Able-bodied drivers (2,000-4,000 new local residents, those traveling into Glen Ellen for work, tourists, and others are likely not comparable to developmentally disabled people who have never driven. Their traffic pattern predictions would be laughable if they weren't also potentially deadly (as we have seen when residents attempting to escape the Paradise fire and who were incinerated while desperately fighting to escape the flames). A related shock, we also learned the consultants never met with local fire agencies. Simply appalling comes nowhere close to my outrage that Sonoma County is, once more, cashing in at the expense, at an ultimate cost of the very lives of the people who live and work here.	This comment is noted. Please see MR-6 on the adequacy of the transportation analysis.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C183-6	• Yes, the pressures for change have arrived. Sonoma County's needs are: Development (commercial: housing imbalance) - We need to plan for a rebalancing; • Poverty escalation due to promotion of industrial sectors paying less than living wages (hospitality, tourism, and agriculture) must be addressed by accepting nothing less than living wage jobs. We need to prepare our young people for a brighter future; • Economic collapse following the housing bust; • Brain drain: SDS closure, the relocation of well-paying industries (telecommunications, Hewlett-Packard, etc.; • An insatiable hunger for revenue derived from new sources such as recreational drug production and sales, vacation rental conversion of thousands of Sonoma County homes; • A growing homeless population; • Escalating real estate prices - pricing most local residents out of the market; • Housing codes prejudicing construction of large homes over more modest sized units; • The impact of a collapsing infrastructure (fires, contaminated drinking water, unkept electrical systems); • The decline of our professional and degreed populace; • Climate change; • Questionable practices at the county level (planning, code enforcement, zoning, emergency services); • Student housing shortage: Santa Rosa Junior College opted to use bond revenue for the construction of an elaborate parking structure instead of desperately needed student housing - resulting in thousands of students now sleeping in their cars (some in that very parking structure [PD article about JC students living in their cars]); • Low to middle income and special needs housing loss due to VACATION RENTAL industry & lack of building; • Shortage of skilled tradespersons: Sonoma County lacks cutting-edge jobs training for a sorely-needed workforce - one able to meet national trades workforce shortage.	This comment has been noted however it does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C183-7	What is the best possible use for SDC as one answer to the issues listed above? Let's start with the dilapidated SDC structures. Their condition is undoubtedly the result of the state's neglect. Therefore, it is incumbent upon Sonoma County to insist that the state acknowledge it is theirs to repair. Not only must the restoration be paid for by the state, we have recently learned that California has a revenue surplus to cover those costs. And those resources have attached to them some stringent guidelines as to how the reported surplus can be spent. Lucky for us infrastructure and colleges are among the options: "California is — once again — overflowing with money, and will likely have a $31 billion budget surplus next year, according to a Wednesday report from the independent Legislative Analyst's Office. And because the state is forbidden from spending more tax dollars per Californian than it did in 1978, once adjusted for inflation, it only has a few options for handling most of the cash windfall: slashing taxes; issuing tax rebates; funneling it to schools and community colleges; or earmarking it for certain purposes, such as infrastructure." (Hoeven, 11/18/21)	This comment has been noted however it does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C183-8	As indicated above, Sonoma County's workforce predictions are not encouraging. They mirror a sad national trend wherein opting out of college are also coming up short on the skills needed to succeed in the workplace: Two-thirds of Americans over 25 don't have a bachelor's degree or higher. A Harvard study uncovers inconsistent efforts to give these workers skills for economic mobility and calls for improving the problem. Academic work on training programs has been somewhat static, says Rachel Lipson, director of the Harvard Project on Workforce. A paper from 30 years ago might not look much different from one published today. "There's been a lot of attention on K-12 quality and college access and completion, but a lot less on the types of educational and training pathways that sit in between high school and four-year college," she says. These pathways are critical to the future of economic mobility, and the Project on Workforce hopes to raise the research community's interest in them. "The plurality of the U.S. labor force does not have a four-year college degree," says Lipson. "We can't throw up our hands and say four-year colleges are the only answer." (Smith, 2021)	This comment has been noted however it does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Deborah C. Nitasaka	26-Sep-22	C183-9	Answers: Having outlined the need and some substantial financial avenues, I will now outline how to put SDC to work for the betterment of the people of Sonoma County. Instead of continuing to produce cooks and tourism graduates, we need to give our kids a better future, one promising living wage opportunities, not a serf's subsistence; one grounded in an understanding of California's history as essential to knowing how best to go forward! Some Educational & Housing Models As Best Fits For The SDC Campus: ▪ High Tech "Trade Tech College" - ▪ Satellite Junior College Campus: Vocational Tech! ▪ Berea College: I have learned that Berea is interested in expanding to develop this unique college model in every state: Every student attends tuition-free! Every student works on campus, putting to work the lessons learned in the classroom. Majors include education, agriculture, the trades, the arts, and much more. ▪ The University of Oregon, Phil and Penny Knight Campus for Accelerating Scientific Impact: a 160,000-square-foot campus built to accelerate groundbreaking scientific discovery and development in a collaborative multidisciplinary environment <https://inhabitat.com/leed-goldtargeted-knight-campus-advances-scientific-innovation/> ▪ Career Technical Education, (Sonoma County) also referred to as CTE, is a multi-year sequence of courses that integrates core academic knowledge with technical and occupational knowledge to provide students with a pathway to post-secondary education and careers. CTE programs deliver an enriched educational experience that promotes student interest and academic success while developing technical and career readiness skills necessary for the workplace of the future. Graduates of today's rigorous and relevant CTE programs are better prepared for high-wage, high-skill and high demand careers.	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Deborah C. Nitasaka	26-Sep-22	C183-10	I would add that it is entirely feasible within these models to: ▪ Incorporate an affordable housing component, including special needs housing, into the campus plan; ▪ Offer on-site housing for students, staff, faculty which will reduce traffic impacts and provide additional incentives to prospective applicants; ▪ Training/Educational offerings might include an emphasis on high tech (environmental sciences, construction trades - including 3-D printing for housing production, modern firefighting and law enforcement courses, certificate programs in mental health, special education, & so much more); ▪ Traditional Trades (Carpenter, electrician, plumber, telecommunications engineer, auto mechanics, fire fighting, law enforcement - emphasizing community policing!, ecological land/resource management, nursery management [plant propagation, marketing, shipping], etc.), w/emphasis on high tech tools; ▪ LEED Certification program; ▪ Environmental Sciences: building in internships around campus grounds care (maintenance, repairs, upgrades, etc.) - Forestry, Firefighting technology, Alternative Energy Program; ▪ Sustainable Farming Program; ▪ Indigenous People's Program: History & Culture; ▪ Health/Medical: Psych techs, med techs; ▪ Arts & Crafts Program (including student work program, sale to the public of hand-made goods); ▪ Retail Management: (w/training to include time spent running on-campus market); ▪ Day school for students with developmental disabilities (plug in tech students for "on-the-job" psych tech training aspect); ▪ Carve-outs for Crisis Management Clinic for Developmentally Disabled in need of care beyond that available in their community settings; ▪ Permanent Supportive Housing: See as a model Sweetwater Spectrum, Fifth Street West, Sonoma - a "mini-community" for autistic adults (Kory Stradinger, Executive Director);	This comment has been noted however is pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Elizabeth Brand	Monday, September 26, 2022	C184-1	In reading about noise on page 323 in the DRAFT EIR, I am curious what mitigations planned to keep noise down in the future development that harm the wildlife? Our society is noisier and higher volume with humans pushing the limits on modified mufflers, house parties, and electronic music. We know these excessive noise levels affect humans in negative ways, and also stresses our native wildlife. What will be done to limit the stress due to noise on the critical habitats surrounding SDC, including the wildlife corridor? I have another Q. This time about light pollution. Our nocturnal species need dark skies to feed, procreate and navigate at night. What is the plan to limit lighting at the new development with special consideration to native wildlife? What will be the plan to educate future residents of the area on living in harmony with wildlife, esp. with respect to the above subject areas?	This comment is noted. Please see MR-7 on impacts to wildlife including noise and light pollution.
Joanna Felder	Monday, September 26, 2022	C185-1	I do not feel that the environmental report considered the wildlife corridor sufficiently. The stated goals of the project are at odds with the environmental report. There did not appear to be cognizance of current migratory pathways — where the animals are now using the land — and how that would be considered in such a dense residential project. The other issue that was not addressed is water. What aquifer does SDC draw from. What is the current state of that aquifer in terms of capacity, depth and anticipated longevity. With water being a state-wide concern, more consideration needs to be given to this issue. Long-term residents are suffering now and the Environmental Report short-shifted this critical issue. Obviously the number of proposed dwellings is out of scale with the size and character of Glen Ellen but perhaps that is beyond the scope of the Environmental Report. Hiring a San Francisco firm to assess such a fragile and rural landscape was a problem in itself. Their ideas of "walkable village environment" — very hip and very urban in its concept is ridiculous in the isolated setting of the SDC.	This comment is noted. Please see MR-5 on the adequacy of the Water Supply Assessment, and MR-7 on wildlife movement.

Commenter	Date	Letter	Comment	Response
Joseph & Deborah Votek	Monday, September 26, 2022	C186-1	We have been residents in Glen Ellen for 38 years recording rainfall. The rainfall average at our home on Sonoma Mountain Road is 45 inches. Last year we recorded 14.5 inches with the average steadily getting lower over the years. There are many cases of neighbors' residential well water levels also getting lower over the years. Where is the evidence that the development of the scale proposed for SDC will not further impact water availability for those of us who do not have municipal water available to them? The DEIR is inadequate while the so-called self-mitigated Specific Plan contains many general policies, goals and conditions of approval to address environmental impacts, the DEIR does not meet CEQA requirements. The DEIR clearly does not adequately analyze and prevent or reduce environmental impacts in most if not all of the areas studied as evidenced by too few requirements and many vague words such as “promote” or “encourage” or “if feasible.” The DEIR definitely needs to be amended and the Conditions of Approval strengthened and moved into a legally enforceable Mitigation and Monitoring Program.	This comment is noted. Please see MR-1 on the adequacy of a self-mitigating Specific Plan, and MR-9 on Mitigation Monitoring.
Linn Briner	Monday, September 26, 2022	C187-1	I have many concerns about where the planning for the future of the SCD is going. For example: to state that effectively doubling the size of Glen Ellen would increase commute or evacuation times by only 15 seconds is outlandish. What type of modeling did you use I wonder. I personally had to evacuate during the 2017 fires and part of my property was destroyed. I live just one row of houses from a property line for the SDC. The traffic was bumper to bumper on one of the only two roads out from town. The main topic of this letter, however, is water. Again, what type of modeling did you use? As you know, we’re experiencing climatic change and more erratic weather, and more droughts are predicted for our area. Putting the load of so many new people (2+ thousand) on the local, fragile water supply seems a ticket for disaster. Additionally, I am concerned about the safety of the creeks, streams and rivers on the SDC property. I do not think that a 50 foot setback is enough to protect the waterways and the wildlife associated with those same waterways. Demolition and building projects will release pollutants into the soil and water, as would the increased population. Right now, this area is a	This comment is noted. Please see MR-4 on wildfire evacuation, and MR-5 on the adequacy of the Water Supply Assessment.

Commenter	Date	Letter	Comment	Response
			delicate sanctuary for many other types of life as well. Please increase setbacks to 100 ft from all waterways.	
Tamara Boultbee	Monday, September 26, 2022	C188-1	The Glen Ellen Historical Society requests that the video and minutes of the September Landmarks Commission be reivewed for inclusion in documentation regarding the DEIR and the Draft Specific Plan via landmarkcommision@sonomacounty.org. Minutes nor video are not yet posted however the Commisssion's dismay and lack of background on these two documents should be documented.	Thank you for your comment. This comment is noted however it is not relevant to the adequacy of the DEIR, thus no further response is required.
Tamara Boultbee	Monday, September 26, 2022	C189-1	There are several areas that I wish to address today concerning the draft SDC EIR. The areas are: 1. Density 2. Traffic 3. Environmental 4. Consistency with Goals & policies of GP as well as Specific Plans	Thank you for your comment. This comment is noted however it is not relevant to the adequacy of the DEIR, thus no further response is required.
Tamara Boultbee	Monday, September 26, 2022	C189-2	Density: Proposed density is much too high for the location and creates inherent negative impacts on the existing population, environment and adjacent locales. High density, such as proposed (housing as well as commercial), increases the danger of wildfires, changes the world of wildlife and nature (a critical need to preserve), changes the cultural, visual and societal quality of life, presents a considerable impact (both now and in the future) on agriculture, and such density should be restricted to existing developed areas within major city boundaries, not in rural areas.	This comment has been noted however is pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.
Tamara Boultbee	Monday, September 26, 2022	C189-3	Traffic: Increased traffic would negatively impact roads, especially those designated to remain rural roads in the county General Plan as well as Specific/Area Plans due to large scale commuting, avoidance of congested major roadway, and other	This comment is noted. Please see MR-6 on the adequacy of the transportation analysis.

Commenter	Date	Letter	Comment	Response
			rationale. Also, would have a serious impact on emergency evacuations in this area as well as adjacent areas due to wildfires, earthquakes, emergency services, etc.	
Tamara Boultbee	Monday, September 26, 2022	C189-4	Environmental: Negatively impacts the rural environment/quality of life, scenic resources, wildlife corridors and existence, and is in conflict with the General Plan for areas that are to be maintained “rural.” Treats a rural area more as an urban area in proposed design. Ignores the personality of an area and the needs of existing occupancy/usage. It appears to desire to create a large area of relative high density in contrast to existing and long time usage as well as expressed future designations (GP). Additionally, the existing inadequate water usage and recycling as well as inadequate energy provisions are major obstacles - and costly. (Prior to building any major density growth the infrastructure needs, residential as well as commercial, must be in place prior to any new development or usage i.e. any new or adequately restructured roadways, improved and adequate water availability and reuse thereof. Also, alternative transportation needs such as buses, etc.should be in place.	This comment is noted. Impact 3.10-2, "Development under the Proposed Plan would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect." is less than significant because, as described on page 321 of the DEIR, the Proposed Plan is consistent with the General Plan’s goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency.
Tamara Boultbee	Monday, September 26, 2023	C189-5	Consistency with GP and Specific/Area Plans: These BOTH need to be thoroughly reviewed as the impacts of this proposal is far reaching - the negative impacts extend far beyond the confines of this project. Per the GP-to maintain the rural quality (visual as well as technical/environmental) with development to be in sync with established precedents and within established urban/rural locations. You have received, I am sure, numerous letters from a wide variety of persons and perspectives. Herewith are my suggestions (based upon my many years of being involved in voluntarily working with the county on the General Plan and more specifically a Specific/Area Plan). Maintain the general character of the area. Any development should be low profile, provide for a greater percentage of low-middle income housing within a set total allotment, keep any additional commercial to a minimum, no hotels, and the total number of new housing (including any bonuses) should be capped @ 450! And by all means, protect the open space, wildlife corridors, rural amenities and the character of the existing locale.	This comment is noted. Impact 3.10-2, "Development under the Proposed Plan would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect." is less than significant because, as described on page 321 of the DEIR, the Proposed Plan is consistent with the General Plan’s goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency.

Teresa Murphy		C190-1	I have been a strong community advocate for the preservation and prudent management of the Eldridge Property formerly known as Sonoma Developmental Center since 2012. I STRESS that the urbanization of Eldridge is not portrayed accurately in the Draft EIR. The number of houses, population and vehicles are not realistic The Draft EIR does not stress the preservation of cultural integrity, history, conservation and housing in scale. The inadequacy of the term 'self-migrated" is repeated over and over. Specific plan appears to fall short of CEQA. Legally enforceable Mitigation and Monitoring should be included in the DEIR that currently states in many instances, "no mitigation needed.'	This comment is noted. Please see MR-1 on the adequacy of a self-mitigating Specific Plan.
Teresa Murphy		C190-2	I respectfully request the following; There should be a review of the Landmarks Commission meeting at which the Commissioners self-disclosed that they were uninformed due a less than seven day opportunity to review the documents. Permit Sonoma did not send the DEIR and DSP until Friday before Labor Day and the hearing was the next week. It appeared that the Commission would like more time to study the historic aspects of the property. Why was not the Landmarks Commission brought in two YEARS earlier for their expert opinion? Include a reference or rationale of why Sonoma County has not responded to a two-year-old application for Historical Landmark status for Eldridge. A CEQA level identification of potential impacts of known or potential historic sites and landscapes. Consider the historic sites as an entire cultural landscape. Do not individual buildings individually to be demolished. Require a future developer prepare a historic preservation plan, based on desired development and suitability of buildings for adaptive reuse, with the overarching objective of preserving a set of buildings that reflect the diversity of building types and the continuum of life at the former SDC.	This comment is noted. Please see Section 3.5.3 of the DEIR for an assessment of the impacts on historic resources. Please see page 4-26 of the Specific Plan for goals and policies regarding historic resources, including policy 4-22: "Require that the project sponsor prepare a historic preservation plan, based on desired development and suitability of buildings for adaptive reuse, with the over-arching objective of preserving a set of buildings that reflect the diversity of building types and the continuum of life at the former SDC. For instance, retain and reuse buildings that represent various architectural styles that are character-defining to the Historic District, including French Eclectic, Spanish Eclectic, and Tudor Revival, as well as character-defining materials such as tile roofs, stucco and brick cladding, and wood windows."

Commenter	Date	Letter	Comment	Response
Teresa Murphy		C190-3	Explain how the demolition of buildings reduces the eligibility of the property for the National Register of Historic Places. The property application has been submitted by SHPO and the GEHS has been asked for additional and expanded information on the property, specifically the east side of Arnold Drive. According to the Draft not all buildings, structures, and landscape elements within the historic district boundary are considered contributing resources because some of them are outside the 1889- 1949 period of significance and others do not have sufficient historical integrity. Due to the expansion of the historic district boundary as requested by SHPO, the number of contributing resources grew from 46, as identified in JRP's May 2017 report, to 94 buildings and structures. Where is any reference to Wallace, Roberts and Todd or Page and Turnbull or JRP and their findings regarding historical preservation of building and landscapes? Why is there no mention of historic preservation in the initial bullet points? The statement of Balance with Historic Resource Conservation is acceptable however it is qualified with 'where feasible.' What is the definition of the phrase 'where feasible?'	This comment has been noted however is pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.
Teresa Murphy		C190-4	Did the consultants confer with CALFIRE developed recommendations for fire prevention in older buildings and evacuation plans for the Valley? CALFIRE identified the oldest fire suppression buildings in the State dating to 1931-2. The Eldridge Fire Department was built in 1932 yet it is not considered significant and one to be potentially removed. Then the plan calls the area Fire House Commons. Why will the area be named for a building to be remove as 'insignificant? The Historic Core according to Dyett and Bhatia appears to consist of two buildings: The Sonoma House and the Professional Education Building. The buildings adjacent to them (Oak Lodge, Hatch and McDougall) are important representatives of early 20th century institutional care. This section is nearly contiguous with the cemetery and Jack London HISTORICAL State Park. Has there been any rationale to create a historic area within the property historic district and how the Department of Parks and Recreation could be expanded to include this historic area? What is the definition of a 'flex' area?	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-1	This letter contains my comments on the Draft Environmental Impact Report (DEIR) for the SDC Specific Plan and on the Draft Specific Plan (proposed plan) itself. Thank you for considering and responding to these comments and sharing them with the planning team. I agree with and support the comments submitted by the Sonoma Land Trust (SLT). Also, I agree with and support the comments identified in the North Sonoma Valley MAC comment letter. In addition to the issues identified in those two letters, I have submitted comments to the County Landmarks Commission and the County Planning Commission – the comments in both these letters (attached at the end) are hereby incorporated by reference and should be addressed in the Final EIR.	This comment has been noted however it does not relate to the adequacy of the DEIR therefore no further response is required.
Vicki Hill	26-Sep-22	C191-2	Overall, as a 30 plus year land use planner and CEQA specialist, I am disappointed with the failed process to prepare a plan that represents at least a modest amount of responsible land use planning, mindfulness of site constraints, and community input. Sonoma Valley residents, including the community surrounding SDC, supports housing, especially affordable housing. However, there is no support for the high-density scale reflected in the proposed plan, which would double the size of the existing semi-rural community. At even half the proposed size, the project would represent the largest development in Sonoma Valley in decades. The plan reads as if it belongs in an existing urban area in a city and does not reflect the rural character and special qualities of the site and surrounding area that are valued by residents and visitors. The proposed plan does not reflect a "community-driven" process - it fails to incorporate a moderate scale that was requested by the vast majority of public comments over the past two years. The plan also lacks many mitigating policies that were requested multiple times.	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.
Vicki Hill	26-Sep-22	C191-3	The DEIR is fundamentally flawed, as outlined in my comments below. Overall, the DEIR reflects a bias towards the proposed dense development and tends to dismiss the proposed plan's environmental disadvantages when comparing it to other reduced-scale alternatives. Many comments from wildfire experts have already been submitted and I share their concerns, having had to evacuate twice from my home. Revisions to both the EIR and the Specific Plan are necessary to address these	This comment has been noted however it pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			potentially significant impact issues and to develop a more balanced plan that will reduce significant impacts.	
Vicki Hill	26-Sep-22	C191-4	GENERAL EIR COMMENTS – Please respond to each of these concerns 1. Deferral of analysis – In many topical areas, the DEIR states that sufficient details are not available to conduct the environmental analysis and that the analysis will occur when individual projects are proposed. However, many of the projects will not be subject to CEQA due to exemptions provided once the Specific Plan is completed. Therefore, this deferral is not adequate. 2. Minimization of impacts - The DEIR assumes plan policies will mitigate impacts, but the feasibility of these policies is unknown (such as increasing transit and building a road connection to Highway 12) and many policies are unenforceable. So, the DEIR grossly underestimates the impacts. The DEIR is clearly result-driven. 3. Skewed Alternatives Comparison - The DEIR identifies the Historic Preservation Alternative as environmentally superior, but then dismisses advantages of this smaller alternative and incorrectly claims that impacts of the proposed plan and the Historic Preservation Alternative are "comparable." Some mitigating components (e.g., widening creek corridors) were arbitrarily excluded from the Historic Preservation Alternative, making it look worse than it is. For a fair unbiased analysis, the alternatives must be evaluated in an "apples to apples" comparison to the proposed plan, using the same or similar assumptions about project components that offer mitigation.	This comment is noted. Please see MR-3 on the level of detail of analysis and programmatic nature of the EIR. Please see MR-1 on the adequacy of a self-mitigating Specific Plan. Please see MR-8 on the adequacy of the Historic Preservation Alternative in addressing the project objectives.
Vicki Hill	26-Sep-22	C191-5	4. Environmentally Superior Alternative Should Be Selected: Given the sensitivity of the site, the onsite wildlife corridor, surrounding open space, rural location, wildfire risks, and guiding principles, both a reduction in the number of homes and substantial reduction in commercial development size should be the preferred plan. A reduced-size alternative is the only way to mitigate the many significant impacts of the proposed high intensity project. Design guidelines will not mitigate the impacts. The market study did not identify a high	This comment is noted. Please see MR-8 on the adequacy of the Historic Preservation Alternative in addressing the project objectives.

Commenter	Date	Letter	Comment	Response
			demand for non-residential development. The Historic Preservation Alternative, while not ideal, is the only alternative that presents a level of land use development at a scale compatible with the site, surrounding rural lands, and overall Sonoma Valley character. There has been an overwhelming number of public comments requesting a smaller alternative.	
Vicki Hill	26-Sep-22	C191-6	5. Comparison to Previous SDC Use: The continued argument that the SDC property should be able to accommodate thousands of residents and workers because it used to house and employ thousands of residents and workers is not valid. Nor is it valid to compare existing building square footage to proposed square footage, in an attempt to justify the proposed plan and minimize impacts, as it is the proposed use (not necessarily footprint) of the buildings that drives most of the impacts. The reason this comparison is invalid is as follows: a. As an institution, SDC tread very lightly on the environment and adjacent community. At its most populous, most of the residents of SDC did not leave the property. They did not drive cars, they didn't go offsite to schools, doctors, restaurants, etc. b. Vehicle trips were primarily limited to employees who worked three shifts so that traffic was spread out, rather than concentrated at peak hours. c. Because of the limited outdoor activities and absence of constant vehicle traffic onsite, people and cars did not interfere with wildlife movement; the campus was open, peaceful, and not occupied with uses that generated a substantial amount of traffic (e.g., hotel, restaurants, etc.). d. There were no retail uses drawing visitors and vehicles to the site. It should also be noted that employment and resident numbers at SDC reached a peak during a time over 50 years ago when there was very little cumulative growth in Sonoma Valley and both Arnold Drive and Highway 12 were still well-functioning roadways.	The comment is noted. As described in pages 579-584 of the DEIR, the Proposed Plan is consistent with the overarching regional need for both market rate and affordable housing in the Sonoma Valley and throughout the Bay Area, as well as with historic residential and employment uses of the site: SDC has facilities that housed up to 3,700 clients, and SDC was one of the largest employers in the County and the largest in Sonoma Valley. While there is no direct perfect comparison for new residents at the SDC site, the numbers are provided to give contextual reference to the fact that the site has been previously developed and has served as a home to a substantial population of residents and employees previously. Ultimately the DEIR's environmental impact analysis considers the existing conditions of the site.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-7	6. Lack of supporting evidence – Throughout the DEIR, conclusions and assumptions are made without providing supporting information, thus providing no rationale or transparency. 7. Project Scale is Source of Significant Impacts and Failure to meet project objectives: The proposed plan's size and scale contradicts the County's transit-oriented growth and land use policies; and is inconsistent with its own guiding principles, failing to balance development with resource and historic protection. Another SDC Specific Plan guiding principle directs the plan to balance redevelopment with existing land uses and calls for looking at how uses fit the character and values of the site and surrounding area, as well as benefit local communities and residents. It does not appear that the proposed project abides by this principle. Regardless of whether the housing is low, medium, or high density, it's the total amount of housing and commercial development that is particularly important in evaluating the project. The community will not benefit from clogged roadways and increased fire risks and evacuation delays. Because of its size, the project will have significant impacts in both transportation and historic resources, but no mitigation is offered in the way of downscaling the size to reduce these impacts. There is no way that the site can provide all the goods and services needed for this large population. To try to provide that undermines the function of the surrounding open space and destroys the semi-rural character of the existing community on both sides of the site.	This comment is noted. Please see MR-3 on the level of detail of analysis and programmatic nature of the EIR. Please see MR-1 on the adequacy of a self-mitigating Specific Plan. Please see MR-9 on project phasing and Mitigation Monitoring.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-8	8. Missing Project Phasing and Performance Standards – a. The proposed Specific Plan is missing mandatory phasing requirements that would help mitigate impacts. The phasing components of the proposed Specific Plan are advisory only and not enforceable. There is no guarantee that the needed housing will be developed before the hotel or other commercial uses. There is nothing stopping the future landowner from building the hotel first, which would be contrary to the project objectives. b. Affordable housing should be prioritized in a mandatory phasing plan. c. The project description needs to identify a project phasing plan to address all the demolition and remediation that will need to occur, as well as site preparation, infrastructure repairs, etc. This plan needs to be fully evaluated in terms of impacts on traffic and roadways, wildlife and open space resources, and surrounding land uses (noise, emissions, glare), etc. d. Project phasing should be tied to performance standards. There are no performance standards to gauge or monitor project impacts. Since many of the future impacts are unknown and feasibility of some policies is unknown, performance standards are needed to ensure that future development can be modified if policies or mitigation measures are not effective. For example, biological surveys should be required to monitor how well wildlife adapts to demolition, construction, and new land uses. If it becomes clear that the wildlife corridor is being adversely impacted, additional measures and design features could be implemented to reduce impacts before proceeding with additional development phases. VMT and roadway congestion thresholds should also be established and traffic impacts mitigated to the maximum extent feasible before continuing with buildout. Performance standards could be developed for each environmental resource area.	This comment is noted. Please see MR-9 on project phasing and Mitigation Monitoring.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-9	Flawed Market Demand Study – The market demand study prepared in 2020 for the SDEC Background Report and the Alternatives Report that preceded the DEIR was updated via a short memo (July 14, 2021), with assumptions that were never reviewed by the public or peers. The update was to attempt to justify larger housing numbers, using a straight-line projection over the next 20 years. This updated study was then used as the basis for including and defending the proposed 1000 homes in the proposed Specific Plan. However, there is no justification for the projections methodology, which is over-simplified. There is no evidence that housing demand in Sonoma Valley will increase at the rate presented in the updated market study. This "update" to the market study cannot be used as a basis for the housing in the proposed plan.	This comment is noted. Please see MR-3 on the level of detail of analysis and programmatic nature of the EIR.
Vicki Hill	26-Sep-22	C191-10	DETAILED DEIR COMMENTS DEIR EXECUTIVE SUMMARY Page 3, "…does not mandate that the State will accept the outcome of the County-driven process…" – This statement implies that somehow the State has jurisdiction over the approval of the Specific Plan. It does not have any Specific Plan approval authority and this misleading wording should be stricken. The County planning process does not require approval from the State. Whoever buys the property from the state will be bound by the Specific Plan. This type of wording has been used by the County as a thinly veiled threat to the community that if we don't accept the County's plan, the state will enact a far worse redevelopment. Page 3, "The Planning Area includes all SDC property, encompassing approximately 945 acres –which includes a developed Core Campus covering approximately 180 acres, the 755 acres of contiguous open space, and the 11-acre non-contiguous Camp Via grounds within Jack London State Historic Park." Is this planning area equivalent to the study area for the EIR? The study area should go beyond the site itself and must be clearly defined for each impact topic.	This comment is noted. As noted in the DEIR on page 529, "While this EIR cannot pre-judge the State's actions, the EIR tries to frame these in light of the State Legislature's established land use objectives for the site, per Govt. Code Section 14670.10.5. Furthermore, the State has already released a developer request for proposal for development of the site pointing to the Proposed Plan underway, and can enter into long-term ground leases with private developers—cited as a mechanism for the site in the Government Code for SDC redevelopment—so that the State retains planning control over the campus unfettered by local regulations to achieve these land use objectives, should the County be unwilling to plan and zone for these uses." While the RFP released by the State may indicate the State's preference for sale of the property, the Government code, which specifies a lease as a method of disposition, maintains the right of the State to enter into a ground lease rather than a sale of the property. The DEIR defines the Planning Area it considers in the Project Description, while Chapter 3 defines the specific thresholds considered under CEQA guidelines.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-11	Page 7, Buildout: “Buildout projections of this EIR do not include the total amount of potential development that could be accommodated by the Proposed Plan; rather, the buildout outlines the most likely development that would occur by 2040, including additional bonus housing units that would result from provision of affordable housing as mandated by the Proposed Plan.” Basing the DEIR analysis on this assumption of the “most likely development” is insufficient and is not supported by any evidence that this level of development is the most likely scenario. The DEIR underestimates the overall impacts because it does not evaluate the reasonable worse case buildout scenario. The DEIR must evaluate a reasonable worse case of development to ensure that all potential impacts are identified. Page 7, Buildout: “The Proposed Plan is anticipated to result in a total buildout of approximately 2,400 residents, 1,000 housing units, and 940 jobs.” This does not clarify whether this is the total maximum buildout or the “likely development” referenced in the previous paragraph. Looking at the minimums/maximum table in Chapter 4 of the plan shows that over 1200 units could be built and that doesn’t even include bonus densities. Page 7, Areas of Controversy: “Many members of the public expressed opposition to new housing development in the area…” This appears to be another attempt to paint the community as NIMBYS. This statement is not true, which I can say after listening to hours of public testimony and reading countless comment letters. This statement must be modified to note that people support housing, especially affordable housing, but are opposed to the large number of houses, especially the large number of market rate housing, based on the fact that the site is outside of the urban growth boundary and not along a transit corridor.	This comment has been noted. As noted in the Specific Plan under Table 4-2, "3. While the base housing unit range for each district is represented as a range, the total base number of units built across all districts should equal the total shown in the table". While the Specific Plan limits development at the site to a maximum of 740 units, the DEIR analyzes the impacts of 1,000 units to account for the addition of density bonuses by a future project sponsor. While the final number of units, including the density bonus units, cannot be known at this time, the addition of 240 density bonus units to the EIR's analysis represents a good faith effort to accurately analyze the maximum buildout in the DEIR.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-12	Page 11 acknowledges that "the market demand for non-residential uses (with the exception of a hotel) is limited and higher employment levels will reduce financial feasibility." Yet, the DEIR still analyzes a proposed plan with more than 900 jobs, which detracts from financial feasibility and substantially contributes to significant impacts. What is the basis for this high amount of commercial development? Page 11, Reduced Alternative – The text states that this alternative would be less economically viable – what does that mean? Is it viable or not? There is no provision in the state legislation or in the project objectives to maximize economic viability. Yes, the plan must be feasible but it does not need to maximize financial gains.	While the project objectives do not specify that economic viability be maximized, California Government Code Section 14670.10.5 states that in light of the statewide affordable housing crisis, the SDC Specific Plan should prioritize housing, especially affordable housing and housing for individuals with developmental disabilities. The legislation also acknowledges the importance of the significant open space areas of the SDC site and requires permanent protection of the SDC site's open space and natural resources, along with protection of the Eldridge Cemetery located on the property. Other required components of the planning process include involvement of the community in order to reduce uncertainty, increase land values, expedite marketing, and maximize interest of potential purchasers, and ensuring economic feasibility. Given that the Proposed Project is already facing a finacial feasibility gap and the Reduced Development Alternative would further widen that gap, the Reduced Development Alternative does not meet the project objectives - in particular financial feasibility and prioritization of housing - as successfully as the Proposed Project.
Vicki Hill	26-Sep-22	C191-13	Page 12, Historic Preservation Alternative – There is no basis given for only a partial reduction in jobs - why not reduce the jobs proportionately? With 600 jobs, it would be heavier on commercial development than housing, when in fact the State has prioritized housing, not commercial development.	Commenter would like to see change to one of the alternatives analyzed This comment is noted.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-14	Page 14, Environmentally Superior Alternative (also in Section 4.5): "Overall, the Historic Preservation Alternative is the environmentally superior alternative, although significant impacts of the Proposed Plan and the two alternatives are largely comparable, and the Historic Preservation Alternative would be less superior in some environmental features such as energy use, biological resources, and wildfire risks. Additionally, this alternative would not support key project objectives related to increased housing supply, varied housing opportunities, community vibrancy, and long-term fiscal stability to the same degree as the Proposed Plan." This statement is incorrect and misleading for several reasons. • To say that the proposed plan's impacts are "largely comparable" to the impacts of other alternatives is seriously flawed. The types of impacts may be the same, but the magnitude of impacts is much less under the Historic Preservation Alternative, with the substantial reduction in buildout. This needs to be acknowledged and corrected throughout the EIR. The Historic Preservation Alternative, in addition to reducing historic resources impacts, would substantially reduce impacts in the issue areas of traffic, biological resources, land use, noise, visual, air quality, Greenhouse Gas emissions, and public services. Traffic impacts may still be significant, but they would be much less severe in the Historic Preservation Alternative. • It is reasonable to assume that impacts across the board would be reduced with a smaller development.	This comment is noted. Please see MR-8 on the relative cost and feasibility of the Historic Preservation Alternative.
Vicki Hill	26-Sep-22	C191-15	• The way the Historic Preservation Alternative is crafted, it excludes components that allow a fair comparison between it and the proposed plan. For example, widened creek corridor setbacks are included in the proposed plan but arbitrarily excluded from the Historic Preservation Alternative, resulting in a conclusion that this alternative would cause greater biological impacts. Corridor setbacks could be easily incorporated into the Historic Preservation Alternative in most locations. The connection to Hwy 12 is also excluded from this alternative, thus making the traffic impacts greater. This alternative (or the proposed plan) must be modified to include the same impact-reducing features such as creek corridor setbacks, roadway connections, etc. to at least provide a fully transparent, apples to apples comparison. If properly	This comment is noted. Please see MR-8 on the relative cost and feasibility of the Historic Preservation Alternative. Please see MR-6 regarding the impact of the Highway 12 connector. Commenter offers several suggestions to change the Historic Preservation Alternative to improve the biological resouces and wildlfire impacts of the alterantive; this comment is noted. It is also noted that impacts in these topics are not significant impacts of the Project or this alternative, and the Drat EIR calls the Historic Preservation Alterantive as environmentally superior.

Commenter	Date	Letter	Comment	Response
			compared, the impacts in biological resources and wildfire risks would be reduced compared to the proposed plan. ••	As noted on page 524 of the DEIR, 'Section 15126.6 of the CEQA Guidelinesstates that: An EIR shall describe a range of reasonable alternatives to the project, or the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, andevaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range ofpotentially feasible alternatives that will foster informed decision making and public participation. Case law suggests that the discussion of alternatives need not be exhaustive. CEQA Section 15126.6(f) states that the alternatives in an EIR should be governed by a "rule of reason."'
			The Historic Preservation Alternative would support multiple key project objectives, including significantly increasing housing supply with the largest housing project ever in the Sonoma Valley; contributing to community vibrancy and long-term fiscal stability; AND reducing both traffic and historic resources impacts, as well as other impacts. The DEIR provides no supporting information to substantiate the claim that the Historic Preservation Alternative would not support key project objectives. There is no basis for the claim that the Historic Preservation Alternative would not achieve long-term fiscal stability similar to the proposed plan.	Commenter's assertion that the Historic Preservation Alternative would reduce historic resources impacts of the Project is correct, and this is noted in the Draft EIR. Regarding traffic impacts, the Draft EIR notes that impacts of the Historic Preservation Alterantives would not be substantially different than that of the Project. The Draft notes on page 569, "The Historic Preservation Alternative is projected to result in approximately 50 percent fewer daily vehicle trips than the Proposed Plan, indicating that the total VMT generated may also be roughly 50 percent lower. As discussed in the Historic Preservation Alternative, this reduction in the total VMT generated by development in the Plan area would be substantial though would not necessarily translate to less residential VMT per capita, which is the efficiency metric for which a significant VMT impact was identified." The Proposed Project is superior to the Historic Preservation Alterntive in terms of two of the three key objectives laid out for SDC by the State: (1) The Project provides more than twice the number

Commenter	Date	Letter	Comment	Response
				of housing units compared to teh Historic Preservation Alternative, significantly advancing State objectives for the site, and (2) The Proposed Project is also close to financially feasible with a gap of approximtely $95,000 per market rate housing unit, without consideration of strategies such as tax credits and infrastructure financing districts laid out in Chapter 7 of the Draft Specific Plan. The Historic Preservation Alternative has a financing gap of $495,000 per market rate unit, making it financilly infeasible, couner to a key state objective, and also would also result in much more expensive rather than workforce or affordable housing. Furthermore, it is noted that State legislation does not mention historic preservation as an objective for the SDC site.
Vicki Hill	26-Sep-22	C191-16	EIR MAIN BODY Page 41, Section 1.1.1, Purpose: One of the purposes of the DEIR is stated as: "To recommend a set of measures to mitigate any significant adverse impacts." Yet, there is no mitigation included in the DEIR. Even in the two significant impact areas, no additional mitigation is recommended although there is feasible mitigation. For example, the proposed hotel size could be reduced, or the overall development size could be reduced to minimize environmental impacts.	This comment is noted. Please see MR-1 on the adequacy of a self-mitigating Specific Plan.
Vicki Hill	26-Sep-22	C191-17	Page 43, Scope of EIR: "…nor does it assess project-specific impacts of potential future projects under the Proposed Plan, all of which are required to comply with CEQA and/or the National Environmental Policy Act (NEPA) as applicable." This statement contradicts statements elsewhere that indicate that most, if not all, future development will be exempt from CEQA due to streamlining provisions. Please clarify which individual projects will be subject to environmental review. Even if project-specific impact assessment is not possible at this stage, it is feasible to assess the types and magnitude of impacts of buildout and to identify appropriate types of mitigation measures. This has not been done in the DEIR.	This comment is noted. Please see MR-9 on deferred CEQA analysis. Appendix A of the Specific Plan outlines additional (additional to the County's already existing) Standard Conditions of Approval, regardless of whether any future CEQA document for a project is prepared or not. Thus, identification of future environmental studies or conditions to implement Specific Plan policies at a project level is not deferred. To the extent a future development project would be subject to discretionary review, it would also be subject to CEQA.

Commenter	Date	Letter	Comment	Response
			Page 47: “Subsequent to certification of the Final EIR, the Board of Supervisors may approve the Proposed Plan.” Isn’t it possible for them to approve one of the alternatives, as well? Please clarify.	As noted on Page 42 of the DEIR, "In accordance with CEQA requirements, this EIR also identifies and evaluates alternatives to the Proposed Plan, including the No Project Alternative, should the Board of Supervisors not adopt the Specific Plan." This EIR is an informational document to assist the Board of Supervisors with its decision-making, and does not circumscribe or limit its actions in any way.
Vicki Hill	26-Sep-22	C191-18	Page 51, “In addition, the Proposed Plan includes amendments to the County’s General Plan and Zoning Code.” The DEIR is incomplete in that these proposed amendments, particularly the zoning code amendments, are not included in the plan or DEIR project description. Page 51, Location: The description of the project location is erroneous in claiming that it is between Glen Ellen and Eldridge, as if it will not disrupt these two communities. Why does the County insist on continuing to ignore the neighborhood south of SDC and call it Eldridge? It is part of Glen Ellen and the SDC site is in the middle of Glen Ellen, dividing it. Furthermore, there’s nothing in the text noting that this location is OUTSIDE of an urban growth area, which is an important land use policy consistency issue.	This comment is noted. The DEIR uses the census designated place name Eldridge for the area that falls within its boundaries as defined by the census. It is not within the scope of the EIR to address community names and boundaries.
Vicki Hill	26-Sep-22	C191-19	Page 53, Planning Area: Sonoma Valley Regional Park is not located to the south of the SDC site. Page 53, Section 2.1.2.1, Land Use: “…designed in a relatively compact footprint within the expansive grounds to maximize the benefits of the tranquility and peacefulness of the site.” These tranquil features are at the core of the existing land use pattern and must be considered in assessing the proposed plan’s consistency with County land use policies, the proposed plan objectives, and Glen Ellen Design Guidelines. Page 55, Section 2.1.2.3, Environmental Resources and Natural Setting: This section fails to discuss the critical wildlife corridor that covers the entire property.	This comment is noted. Please see MR-7 on adequacy of impacts on wildlife movement. The following text edit has been made: DEIR p. 53: "Sonoma Valley Regional Park is directly to the north; ~~portions of Sonoma Valley Regional Park,~~ Martin Street~~,~~ and Mill Creek to the south;" This is a minor correction made to clarify and does not affect the findings of the DEIR.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-20	Page 57, Water: The text states that the water system components "have the capacity to provide drinking water, irrigation, and fire suppression to a resident population in the neighborhood of 6,600 people." Please cite the source of this statement and provide documentation to support it. Also, if the water system is going to be restored to service this number of people, this growth-inducing impact needs to be evaluated in the DEIR. Page 58: "…WTP is in relatively good condition." This conclusion is not supported by any analysis. Assessments in earlier reports indicated problems with the system. Page 61: "SDC was the valley's largest employer until it closed." Please provide documentation to support this statement. Employment at SDC dropped off dramatically in the past 10 years before closing, as the client population was reduced.	This comment is noted. Please see MR-5 on the adequacy of the Water Supply Assessment. The following text edit has been made: DEIR p. 61: "~~SDC was also the valley's largest employer until its closure~~ For a significant part of the 20th century SDC was Sonoma Valley's largest employer, with ties to adjacent communities of Glen Ellen and Eldridge." This is a minor correction made to clarify and does not affect the findings of the DEIR.
Vicki Hill	26-Sep-22	C191-21	Page 68, Section 2.4.3: "It also aims to improve multi-modal access from the SDC to Highway 12 (State Route 12 or SR 12) by exploring the feasibility of constructing an additional east-west emergency access connection from the site." This makes the connection to Hwy 12 sound very tentative and, therefore, the road connection cannot be assumed in the DEIR analysis. It is not known whether this roadway is feasible or could be permitted by CalTrans.	This comment is noted. Please see MR-6 for more details on the transportation analysis and Highway 12 connection. Please see MR-9 on Mitigation Monitoring.
			Page 71: "8 to 30 units per gross acre and a maximum FAR of 2.0" – This is a very broad range – what was assumed for the EIR analysis? Page 72: Institutional Use: FAR of 2.0 – There is no discussion of the acreage provided for this category so the project description is incomplete. Page 72, Buffer areas: Who will be responsible for maintaining these buffer areas and ensuring they are fire resistant and appropriate for wildlife use?	This comment is noted. Please see new Table 4-4 for assumed buildout in the SP updates. Please see policy 2-1 in the SP regarding management of the buffer open space.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-22	Page 73, Hotel: 120 rooms is entirely out of scale for this rural location, outside of an urban growth area and within a high fire risk area. This use will substantially increase VMT, hamper wildfire evacuation, and generate the need for other goods and services demanded by clientele at such a high-end hotel. The community has been very vocal about not turning SDC into a tourist destination. How does this fit in with a primarily residential area and lower income residential population? Furthermore, there is nothing in the state legislation calling for a large-scale hotel. This use was not adequately analyzed in the DEIR. Page 73, Section 2.4.4.1, Core Campus Districts: There is no documentation or analysis of how these districts fit in with the surrounding land uses on neighboring lands. It is not clear how these districts comply with the fundamental objective of the project: "Balance Redevelopment with Existing Land Uses. Use recognized principles of land use planning and sustainability to gauge how well proposed land uses protect public trust resources and fit the character and values of the site and surrounding area, as well as benefit local communities and residents." What benefits are provided to the surrounding and neighboring Sonoma Valley communities?	The commenter questions several features of the Specific Plan and these comments are noted. Please see MR-3 on the level of detail of analysis in the Draft EIR.
Vicki Hill	26-Sep-22	C191-23	Page 77, Build Out: "While the project buildout projection reflects a reasonably foreseeable maximum amount of development for the Planning Area through 2040, it is not intended as a development prediction or cap that would restrict development in any of the five subareas." This statement contradicts other statements about buildout assumptions. Doesn't the plan need to have a development cap? The DEIR needs to identify the maximum buildout for each land use and then analyze that maximum development scenario. Table 4-2, DEIR assumptions regarding buildout: Table 4-2 in the Specific Plan lists the minimum and maximum number of housing units for each district. The maximum totals 1210 and the table footnote states that this number does not include additional county and state density bonuses. Density bonuses are likely to occur and are reasonably foreseeable. Therefore, the EIR substantially underestimates the full project impacts by more than 200 units or 20 percent of the project.	This comment has been noted. As noted in the Specific Plan under Table 4-2, "3. While the base housing unit range for each district is represented as a range, the total base number of units built across all districts should equal the total shown in the table". While the Specific Plan limits development at the site to a maximum of 740 units, the DEIR analyzes the impacts of 1,000 units to account for the addition of density bonuses by a future project sponsor. While the final number of units, including the density bonus units, cannot be known at this time, the addition of 240 density bonus units to the EIR's analysis represents a good faith effort to accurately analyze the maximum buildout in the DEIR.

Commenter	Date	Letter	Comment	Response
			Arnold Drive Overlay: Figure 5.3-1 in the Specific Plan shows maximum building heights of 45 feet in the historic core, right up to Arnold Drive. This height contradicts the proposed policies for Arnold Drive and conflicts with multiple requests to maintain the open feel of Arnold. This is a significant visual impact.	The figure should be read in conjunction with Plan policies. Please note that Goal 5-K of the Draft Specific Plan has been revised to read as follows:"5-K Arnold Drive Overlay: Along Arnold Drive, development should maintain the existing mature vegetation and trees, current building setbacks, and cottages on the western edge. Maintain a variety of building types and scales and views into the ballfield and other portions of the SDC site." Policy 4-27 of the Drat Specific Plan states, "Preserve and reuse houses along Arnold Drive within the core campus, reconstructing as necessary. Require that the developer hire a preservation architect to undertake a conditions assessment and reconstruction plan prior to demolishing and reconstructing houses on Arnold Drive that are in poor condition. Reconstruction should adhere to the Secretary of the Interior's Standards for Reconstruction." Streestcape improvements (figure 5.1-1 through 5.1-3) call for and depict Arnold Drive to be " Tree-lined bicycle- and pedestrian-ori-ented parkway. Narrowed roadway, raised bike lanes, improved sidewalks, infill street trees" With these policies, visual impacts to Arnold Drive are considered to be less than significant.
Vicki Hill	26-Sep-22	C191-24	Page 81, "This EIR serves as the environmental document for all discretionary actions associated with development under the Proposed Plan." This statement implies that all development will be exempt from CEQA and contradicts the statement noted on page 43. Please clarify these contradicting statements and document what projects will and will not be subject to subsequent CEQA. The road connection, for one, will not be exempt.	This sentence is deleted. As noted previously on this page (page 81 of the Draft EIR), "This EIR is intended to review potential environmental impacts associated with the adoption and implementation of the Proposed Plan and determine corresponding mitigation measures, as necessary. This EIR is a program-level EIR and does not evaluate the project-specific impacts of individual developments or projects that may be allowed under the Proposed Plan." The following text edit has been made: DEIR p. 81: "~~This EIR serves as the environmental document for all discretionary actions associated with development under the Proposed Plan.~~ This

Commenter	Date	Letter	Comment	Response
				EIR is also intended to assist other responsible agencies in making approvals that may result from the Proposed Plan. Federal, State, regional, and local government agencies that may have jurisdiction over development proposals in the Planning Area include:" This is a minor correction made to clarify and does not affect the findings of the DEIR.
			Is the site in a designated “transit-priority area”? Section 3.1 Aesthetics Section 3.1.2, Environmental Setting: The description fails to discuss the existing scenic landscapes created by the former SDC. Broad lawns and vistas to both the east and west mountain ranges exist within the campus and along Arnold Drive and these scenic vistas need to be acknowledged. The campus was intentionally designed to provide open spaces and extensive landscaping between buildings to establish a calming, tranquil environment for the clients. Please include this information in the setting and include an assessment of these visual features in the impact analysis.	Scenic resources in the Planning Area are discussed in Section 3.1.2.1 of the DEIR. As noted on page 91 of the DEIR, "There are several specific character-defining features that contribute to the SSHHD. Such features include the Core Campus, west of Arnold Drive, which creates the feeling of a traditional campus enclave with components that include a mix of buildings typical of different eras of institutional development, unified by clear east-west and north-south “axes,” lawns, and ornamental trees and landscape." The impacts to these scenic resources on the campus are discussed on page 103 of the DEIR: "Given that construction will be clustered only in the previously developed Core Campus and that new development will keep with the overall scale and development height variation of the current SDC campus, adverse effects on the scenic vistas of SR 12 on theeastern edge of the Planning Area and the scenic landscape unit on the western edge ofthe Planning Area would be less than significant. Further, as described under Impact 3.1-2, adherence withexistingand proposed policies and standards would ensure that construction of an SR 12 connector under the Proposed Plan would minimize adverse effects on a scenic vista to a less-than-significant level."

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-25	Page 103: "Given that construction will be clustered only in the previously developed Core Campus and that new development will keep with the overall scale and development height variation of the current SDC campus, adverse effects on the scenic vistas of SR 12 on the eastern edge of the Planning Area and the scenic landscape unit on the western edge of the Planning Area would be less than significant." There is no guarantee that new development will be required to comply with the advisory goal of keeping with the overall scale and development height of the current SDC campus so compliance cannot be assumed. This conclusion fails to acknowledge the increased density and overall increased number of buildings at higher heights than existing, not in keeping with surrounding land uses. The proposed plan will not maintain the large internal open space expanses. This impact analysis also fails to address the impacts on scenic vistas of Sonoma Mountain and the Mayacamas along Arnold Drive.	This comment is noted. Please see MR-9 on Mitigation Monitoring.
Vicki Hill	26-Sep-22	C191-26	Page 104: "With adherence to existing and proposed policies and standards, development of an SR 12 connector under the Proposed Plan would ensure that damage to scenic resources along SR 12 would be less than significant." But many of the proposed policies are not mandatory and therefore cannot be assumed in the analysis. Page 104, impact 3.1.3: The analysis states that the site is nonurbanized but fails to acknowledge the significant impact that will occur as a result of the proposed urban development plan – it represents a significant change in visual character. Instead, the analysis attempts to justify the project because it will create a new vibrant community. How does creating a "vibrant" community protect rural scenic qualities? The proposed plan's urban features are in direct conflict with rural scenic resources, both onsite and on surrounding properties, especially since SDC is in the middle of the rural village of Glen Ellen. Page 104, impact 3.1.3: The analysis fails to address the fact that the introduction of new modern, urban architectural features will significantly impact existing historic visual character of the campus and surrounding land uses. There is no discussion of impacts on surrounding land uses. What policies will ensure that architecture blends in with surrounding land use character? Consistency with Glen Ellen Development and Design	This comment is noted. Please see MR-9 on Mitigation Monitoring.

Commenter	Date	Letter	Comment	Response
			Guidelines: There is no mention of these existing guidelines that address Glen Ellen. How does the proposed redevelopment conform to these existing guidelines?	
Vicki Hill	26-Sep-22	C191-27	Section 3.3 Air Quality Page 167, Construction: The analysis fails to mention or address demolition impacts, which will be substantial. Page 167, Construction: Even though this EIR is programmatic, the deferral of construction impact analysis is not acceptable. There is substantial information available to develop reasonable demolition and construction scenarios. The aggregate dust and toxic air contaminants released from demolition activities must be analyzed because the amount of demolition will be enormous. Page 169: “Furthermore, because the SDC facility has been closed since 2018, there has been no change in the amount of development or types of land uses in the Planning Area between 2019 and 2022 – meaning that the 2019 baseline year conditions are comparable with existing conditions as of the release of the NOP for this EIR.” Please define both the Planning Area and study area for the air quality analysis. Is the Planning Area the same as the study area? The study area for air quality should include the surrounding community. Please provide evidence to support the conclusion that there has been no change in development. As a local resident, I can verify that conditions have indeed changed since 2019. In 2019, Glen Ellen had just lost 180 homes. These homes are still being rebuilt, as of 2022 and many empty lots are waiting to be rebuilt. There continues to be demolition, site-grading, and construction.	This comment is noted. As noted on page 167 of the DEIR, "Impacts of the Proposed Plan on air quality and criteria pollutant emissions from operations were quantified (where applicable) and assessed using standard and accepted software tools, techniques, and emission factors. Construction emissions as well as impacts related to a new connector road to Highway 12 were assessed qualitatively based on the availability of data for this plan-level document". The baseline used for impact analysis in the DEIR is from 2019 conditions which is pursuant to CEQA requirements from the NOP release. The Planning Area is the SDC site area as defined in the Project Description.

Commenter	Date	Letter	Comment	Response
			Relevant Proposed Policies: There are no mitigating policies for reduction/avoidance of demolition impacts on air quality or GHG emissions.	
Vicki Hill	26-Sep-22	C191-28	Page 183, VMT: It is incomprehensible that VMT would increase by less than 1000 as a result of the proposed plan, with so much new development and the introduction of thousands of new residents. The SDC site's location outside of an urban area will necessitate vehicle use for daily goods and services. Because the VMT is grossly underestimated, the air quality and greenhouse gas analysis both underestimate impacts and must be revised. Impact 3.3-1: The DEIR impact analysis relies on proposed plan policies to reduce air quality impacts and conform to the 2017 Clean Air Plan. Some of these policies are enforceable, and the feasibility of several policies has not been determined. For example, relying on multi-modal transportation to reduce VMT is unrealistic given the site's rural location and lack of existing or planned frequent transit service. There are no schools within walking distance, nor are there doctors' offices, hospitals, farm jobs, or winery jobs. People will be required to drive on a daily basis, most likely to Santa Rosa, Sonoma, or Napa. Also, there is no discussion of the massive amounts of demolition and associated emissions that will occur to develop a plan of this size.	This comment is noted. Please see Section 3.14 on transportation impacts. Please see MR-6 for further insight into transportation impacts.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-29	Impact 3.3-2: The DEIR claims that construction impacts cannot be assessed at this time. How will these impacts be assessed if future projects are exempt from CEQA? Page 200, Impact Summary: "Future development would be subject to individual review; new sources would be evaluated through the BAAQMD permit process and/or the CEQA process to identify and mitigate any significant exposures." This deferral of analysis and mitigation measures is not acceptable, especially since future projects may be exempt from CEQA and many uses will be allowed by right. The DEIR should at least require a buffer between new development at SDC and existing residential uses adjacent to the southern boundary, as mitigation for future potential impacts. Missing Analysis: The DEIR fails to analyze the numerous types of land uses permitted under the proposed plan that will involve toxic emissions, such as fertilizer plants and laundry facilities.	Please see MR-9 on mitigation monitoring and the deferal or exemption from CEQA analysis. Please see Section 3.10 for impacts associated with Land Use and Planning.
Vicki Hill	26-Sep-22	C191-30	Section 3.4 Biological Resources Missing Species: The wildlife species list is missing Bald Eagle, observed multiple times at the Lake Suttonfield reservoir. Missing Analysis: Impacts on wildlife movement through the campus are not discussed in the EIR. The campus itself is part of the wildlife corridor. Proposed development will result in far more activity within the campus than ever existed, even during SDC's peak operation. There will be significant impacts on wildlife movement from the introduction of thousands of people and vehicles. Furthermore, there is no overall prohibition or restrictions on fencing within the campus so wildlife will likely be blocked from movement through the campus. The proposed fencing policies refer to the open space and campus interface areas, not the campus itself.	This comment is noted. Missing species: Under CEQA, impacts to sensitive species are typically assessed if they have a moderate to high potential to occur and would potentially be affected by the proposed action. For many bird species, significant impacts would typically be associated with the potential for nesting activities to be adversely affected. While bald eagles have been observed flying over the site and in the vicinity of Suttonfield Lake, there was determined to be a low potential for bald eagles to nest on the site because the water bodies on the site and in the vicinity of the site are not large enough to support a nest. Golden eagles have a higher potential to be able to nest, due to a lower requirement for proximity to major bodies of water for nesting. Therefore, the DEIR included analysis of potential impacts to golden eagles and did not include bald eagles for analysis. Additionally, COA BIO-4 would require nesting raptor surveys to occur prior to any construction in the nesting season, which would further ensure no significant impacts occur to sensitive raptor species, including bald eagles. Missing Analysis: The Specific Plan would preserve the entirety of the approximately 755

Commenter	Date	Letter	Comment	Response
				acres outside the Core Campus as open space, including improved open space within the Core Campus through 30-50 acres of buffer open space (including riparian, wildlife corridor, and Arnold Drive buffers). The Specific Plan would also expand the Sonoma Valley Wildlife Corridor at the pinch point close to Suttonfield Lake by removing existing buildings in the northeastern portion of the Planning Area and providing that land for wildlife movement. Additionally, the Specific Plan includes policies designed specifically to minimize the impacts to wildlife at the interface of the built and natural environment during future operation (proposed policies 2-6 through 2-26). Such measures include implementing "dark skies" standards for all public realm lighting, restricting development in the wildlife corridor and creek corridor to limited trails/paths and informational signage, prohibiting domestic animals in designated areas, adhering to residential nighttime noise standards, and requiring all fencing within the open space to be wildlife permeable. The requirement for wildlife permeable fencing throughout the Core Campus would be overly perscriptive, as some areas such as the proposed dog park or gardens may be intentially designed to limit the ability of wildlife to enter.
Vicki Hill	26-Sep-22	C191-31	Section 3.5 Cultural Resources Page 295: "Furthermore, at the time when rehabilitation projects for these two individual historic resources or new work immediately adjacent to the historic resources are proposed, the project-level CEQA document would need to identify potential impacts to historic resources." This conclusion is flawed in that it attempts to defer necessary impact analysis. Again, many future projects will be exempt from CEQA so there will be no way to analyze potential impacts and develop appropriate mitigation measures.	The comment is noted. Policy 4-20 has been amended to require identification of impacts on the historic resources at the time development is proposed. This will be reflected in the County's development checklist, per Policy 4-13

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-32	Section 3.10 Land Use Analysis Page 321, Land Use Impact Analysis: The DEIR states that the proposed policies will be incorporated into the zoning codes that will be concurrently adopted by the Board. Where are the proposed amendments to the Zoning Code? Don't they have to be specified in an official proposed zoning code amendment and analyzed in this DEIR in order to proceed with adoption? Page 317, Impact 3.10-1: The DEIR claims that there is no impact associated with physically dividing an established community. This conclusion is in error. There is no discussion of the fact that the proposed dense development, which is in effect a new city, is in the middle of the existing semi-rural village of Glen Ellen. There have been many references to the proposed development as a self-contained "closed community" - this indicates that it will indeed cut off the two parts of Glen Ellen. The massive size and scale of the proposed plan will certainly divide Glen Ellen. There is no attempt to integrate the land uses on the site with neighborhoods to the north and south because the large amount of proposed commercial development is basically inconsistent with the nearby residential and semi-rural village uses. Instead, the proposed plan will create gridlock on Arnold Drive, preventing local residents from passing from one side of the village to the other side. The previous low-intensity institutional use did not create a barrier or divide the community.	The comment is noted. Please see MR-6 regarding the use of VMT rather than LOS for CEQA analysis. The Proposed Plan would still adhere to objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan which pertain to vehicle level of service (LOS) standards. While most of the intersections are projected to meet the County's LOS D standard under future conditions with buildout of the SDC Specific Plan, modifications would be necessary to achieve acceptable operation at Arnold Drive/Harney Street and SR 12/New SDC Connector Road.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-33	Impact 3.10-2, General Plan Policy Consistency Analysis The Sonoma County General Plan (GP) contains many policies aimed at preventing urban sprawl and encouraging development within or adjacent to urban growth areas. The high-density development proposed for SDC is neither within nor adjacent, or even near, urban growth boundaries. Furthermore, all the land around it is within a community separator. As such, the proposed plan's size and scale is in direct conflict with County General Plan policies and therefore, the plan's project description is inconsistent with the General Plan. These existing policies still apply to the SDC site and will not be replaced by the Specific Plan. As noted on Draft EIR page 312, under CEQA, if a proposed project conflicts with a land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, then a significant land use impact would occur. The DEIR analysis of consistency with existing policies, contained on pages 319 to 321, does not address individual policies and fails to address the many significant impacts associated with policy conflicts. Furthermore, by failing to identify impacts, it fails to recommend mitigation measures (such as downscaling, reducing overall density and bulk, etc.) to reduce these major conflicts. This DEIR land use section includes conclusions without providing any analysis or evidence to support the claims that the proposed plan is consistent with the General Plan policies. Instead, it ignores the relevant policies and concludes that the project is consistent and no mitigation is required. The analysis of this land use impact must be revised to address each applicable General Plan policy and any other existing relevant policy.	This comment is noted. As described on page 321 of the DEIR, the Proposed Plan is consistent with the General Plan's goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-34	Page 321, DEIR states: “Further, the Proposed Plan retains the overall land use framework of the General Plan with some targeted changes to promote economic development and appropriate residential and commercial infill development in the Core Campus. The Proposed Plan’s land use designations (see Figure 3.10-3) are generally consistent with those in the General Plan, although they differ in some instances. In these limited exceptions, the Proposed Plan’s designations differ from the General Plan in order to more accurately reflect either the existing zoning or current use on the property. While the Proposed Plan does include some targeted changes to land use designations, these changes are generally consistent with the General Plan vision of supporting transit-oriented residential and commercial development, encouraging new retail opportunities, and preserving open space.” This paragraph is full of inaccuracies and misleading statements. Placing high density development in a semi-rural area does NOT retain the overall land use framework of the General Plan in Sonoma Valley. It is not an infill site in an urban area. The Proposed Plan’s high density land use designations are not consistent with General Plan designations outside urban growth areas. The statement that the Proposed Plan’s designations differ from the General Plan in order to more accurately reflect existing zoning or current use on the SDC site is completely erroneous. The site is zoned Public Facility and the current use is vacant. The prior use was an institution, not a high-density urban residential and commercial community. This is not a transit-oriented development site (not along a major travel corridor in an urban area, with existing frequent transit service) and is inconsistent with General Plan policies regarding transit-oriented development.	The comment is noted. Please see Impact 3.10-2 on page 319 of the DEIR for an analysis on conflicts with any land use plan, policy or regulation. Given that the Proposed Plan is consistent with the General Plan’s goals for the Planning Area and includes provisions to update the General Plan and Zoning Ordinance consistent with State law in order to ensure consistency as discussed above, there would be less than significant impact from implementation of the Proposed Plan related to conflicts with local plans and regulations. In addition, as noted under Impact 3.1-3 on page 105 of the DEIR, new development under the Proposed Plan will occur primarily within the previously developed Core Campus area, excluding the SR 12 connector which will reuse the existing street network and avoid damage to scenic resources to the greatest extent feasible. Therefore, the proposed development would not differ substantially or detract from the existing visual quality and public views of the site by keeping with the overall scale and development height variation at the current SDC campus and by preserving the site’s open space framework outside the Core Campus.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-35	The following policy conflicts would occur, as a result of the proposed plan. These policies need to be addressed in the DEIR. It is likely that there are other relevant policies not listed below that need to be analyzed as well. OPEN SPACE/AESTHETIC POLICIES Goal OSRC-1: Preserve the visual identities of communities by maintaining open space areas between cities and communities. Objective OSRC-1.1: Preserve important open space areas in the Community Separators shown on Figures OSRC-5a through OSRC-5i of the Open Space and Resource Conservation Element. Objective OSRC-1.2: Retain a rural character and promote low intensities of development in Community Separators. Avoid their inclusion in City Urban Growth Boundaries or Spheres of Influence. Avoid their inclusion within Urban Service Areas for unincorporated communities. Objective OSRC-1.4: Preserve existing specimen trees and tree stands within Community Separators. Goal OSRC-2: Retain the largely open, scenic character of important Scenic Landscape Units. Objective OSRC-2.1: Retain a rural, scenic character in Scenic Landscape Units with very low intensities of development. Avoid their inclusion within spheres of influence for public service providers. Goal OSRC-3: Identify and preserve roadside landscapes that have a high visual quality as they contribute to the living environment of local residents and to the County's tourism economy. Objective OSRC-3.1: Designate the Scenic Corridors on Figures OSRC-5a through OSRC-5i along roadways that cross highly scenic areas, provide visual links to major recreation areas, give access to historic areas, or serve as scenic entranceways to cities. Objective OSRC-3.2: Provide guidelines so future land uses, development and roadway construction are compatible with the preservation of scenic values along designated Scenic Corridors. Goal OSRC-4: Preserve and maintain views of the nighttime skies and visual character of urban, rural and natural areas, while allowing for nighttime lighting levels appropriate to the use and location.	The comment is noted. See response to Comment C191-34.

Commenter	Date	Letter	Comment	Response
			COMMENT: The above General Plan policies point out the importance of maintaining rural landscapes and land uses and protecting the very qualities that make Sonoma Valley attractive to residents and visitors. The intensity and density of uses in the proposed Specific Plan are contrary to these policies. Implementation of the proposed plan will not preserve the scenic values of the Arnold Drive and Highway 12 scenic corridors. The visual identity of Glen Ellen and Sonoma Valley will be permanently altered.	
Vicki Hill	26-Sep-22	C191-36	COMMENT: Arnold Drive is a designated scenic corridor. It serves as a scenic component of the village of Glen Ellen; it provides expansive views of both the Mayacamas and Sonoma Mountain; it instills a sense of calm and peacefulness with its beautiful large mature treescape. The proposed land uses, development and new roadway construction will NOT be compatible with the preservation of scenic values along this scenic corridor. The policies in the proposed plan do not protect these scenic values, as the plan allows tall out of scale buildings adjacent to Arnold, inconsistent with existing land	The comment is noted. See response to Comment C191-34.

Commenter	Date	Letter	Comment	Response
			uses on the site and nearby developed properties. Figure 5.3-1 (Specific Plan) shows maximum building heights of 45 feet in the historic core, right up to Arnold Drive. The policies intended to protect qualities are “should” statements rather than shall statements. Therefore, the proposed plan is inconsistent with General Plan policies intended to mitigate an environmental effect. This is a significant impact.	
Vicki Hill	26-Sep-22	C191-37	LAND USE POLICIES Goal LU-3: Locate future growth within the cities and unincorporated Urban Service Areas in a compact manner using vacant "infill" parcels and lands next to existing development at the edge of these areas. Objective LU-3.3: Encourage "infill" development within the expansion areas of the cities and unincorporated communities. COMMENT: This is NOT an infill project. Infill development is within urban areas, as in “urban infill.” This site is not an edge to urban areas – it is within the semi-rural unincorporated low-density village of Glen Ellen, some distance away from urban goods and services (e.g., doctors, schools, etc.). Nor is the site an “expansion” area – it was a low-intensity institution that had very little impact on the surrounding community. The proposed plan will destroy the existing rural, scenic character of this area with massive removal of trees, highly dense construction, and urban development features. It is inconsistent with these existing General Plan land use policies.	The comment is noted. See response to Comment C191-34.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-38	Sonoma County Code: The DEIR summarizes relevant sections of the County Code: "Article 82 of Chapter 26 of the Sonoma County Code details general design review standards. The intent of Article 82 is not to stifle individual initiative, but to set forth the minimums necessary to achieve a healthful community whose property values are protected from unplanned developments. General development standards favor preserving natural topography, landmark sites and trees, views and vistas of the landscape, harmony with site characteristics and nearby buildings, and local architectural motifs. Article 82 also details general development standards that pertain to light and glare. Requirements include that the number, location, size, design, lighting, materials, and use of colors in signs are compatible with the architectural style of the structure they identify and harmonize with their surroundings. The color, size, height, lighting and landscaping of appurtenant signs and structures shall be elevated for compatibility with local architectural motif and the maintenance of view and vistas of natural landscapes, recognized historic landmarks, urban parks, or landscaping. Article 64 of Chapter 26 of the Sonoma County Code outlines the purpose and development criteria for the Scenic Resources Combining District which applies to the Planning Area. The purpose of this district is to preserve the visual character and scenic resources of lands in the county and to implement the provisions of Sections 2.1, 2.2 and 2.3 of the General Plan Open Space Element. Article 64 provides specific provisions that impact development for scenic landscape units and scenic corridors within the county. Such requirements include that structures should be sited below ridgelines, be screened by vegetation, and that development should be clustered. Further, Article 64 outlines requirements regarding Community Separators which also apply to the Planning Area. Except for most of the Core Campus area, the SDC site is located within a local voter-approved Community Separator overlay that preserves lands with very low densities between communities. The Community Separators help to achieve the County's General Plan Land Use Element goal to maintain natural character and low intensities of development in open spaces between cities and communities. The Historic Combining District (HD) also applies to the	The comment is noted. See response to Comment C191-34.

Commenter	Date	Letter	Comment	Response
			Planning Area. As stated in Article 68 of Chapter 64 of the Sonoma County Code, the purpose of the HD is to protect those structures, sites and areas that are remainders of past eras, events and persons important in local, state or national history, or which provide significant examples of architectural styles of the past, or which are unique and irreplaceable assets to the county and its communities. Alterations to existing structures and construction of new structures within historic districts shall be consistent with the historic district design guidelines adopted by the board of supervisors. COMMENT: It appears that the proposed plan conflicts with numerous provisions of the County Code, as it will not preserve existing character and will introduce high-density development directly adjacent to designated community separator lands. Also, the proposed removal of many historic structures will violate the intent of County Code provisions.	

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-39	TRANSPORTATION POLICIES COMMENT: The County General Plan establishes Level of Service (LOS) standards for roadway operations. Although CEQA no longer requires LOS analysis, the LOS standards still apply to the proposed Specific Plan. The proposed Specific Plan is in direct conflict with these existing LOS standards. This policy conflict must be evaluated and disclosed in the DEIR. Section 3.14 Transportation Flawed Analysis: The transportation analysis is deficient because of the lack of transparency, missing supporting documents, underestimation of impacts, and missing analysis. The assumptions used in the transportation impact analysis must be transparent and based on existing conditions and traffic patterns. Policies to encourage onsite jobs are not enough to reduce the impact. People will still need to drive to schools, doctors, grocery stores, etc. and commercial uses onsite and a hotel will draw visitors and generate many additional vehicle trips. It cannot be assumed that providing a jobs/housing balance will substantially reduce VMT. Vehicle Trip Generation: VMT is underestimated likely because of unrealistic assumptions about transit and vehicle use. The DEIR's proposed plan trip generation estimate was developed using the SCTM19 travel demand forecasting model maintained by the Sonoma County Transportation Authority (SCTA). However, the trip generation factors used in the analysis were not included in the DEIR. Consequently, it is impossible to evaluate the reasonableness of either those factors or the resulting trip generation estimates. This information is critical to understand and independently review the DEIR conclusions. Underestimation of impacts: The transportation analysis must evaluate a reasonable worse-case scenario, meaning it should be assumed that the large amount of proposed commercial space could accommodate regional businesses that generate a high volume of vehicle trips (e.g., Amazon distribution center or large retail facility). These types of facilities are being proposed in other parts of Sonoma County.	The comment is noted. Please see MR-6 regarding the use of VMT rather than LOS for CEQA analysis. The Proposed Plan would still adhere to objectives CT-4.1 and CT-4.2 of the Sonoma County General Plan which pertain to vehicle level of service (LOS) standards. While most of the intersections are projected to meet the County's LOS D standard under future conditions with buildout of the SDC Specific Plan, modifications would be necessary to achieve acceptable operation at Arnold Drive/Harney Street and SR 12/New SDC Connector Road.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-40	Missing baseline and impact analysis: One glaring omission in the transportation analysis is that there is NO MENTION of Warm Springs Rd., which connects to Bennett Valley Road (also not addressed) and is a major commuter route between SDC (as well as Sonoma and Napa) and Santa Rosa. People and trucks use this route to bypass the congestion on Highway 12 because it's faster. The VMT on this rural, winding, two-laned roadway will dramatically increase, yet there is no analysis. As a 30-year resident on Warm Springs Road, I can speak from experience regarding Glen Ellen traffic patterns. Arnold Drive is used as an alternative to Highway 12 for commuting between Santa Rosa and Napa, Vallejo, and San Francisco. The commuting route includes Bennett Valley Road, Warm Springs Road and Arnold Drive. It has gotten to the point of being dangerous to pull out onto Warm Springs Road from private driveways between Arnold Drive and Bennett Valley Road. The narrow two-lane winding country Warm Springs and Bennett Valley roads provide poor line of sight, and commuting vehicles drive at excessive speeds. There is no bicycle lane or even a roadway shoulder, yet it is a very popular bicycle route to avoid Highway 12 between Glen Ellen and Kenwood – literally hundreds of bicyclists use the road on some days. With the increase in traffic from the Specific Plan buildout, this hazardous roadway situation will be significantly exacerbated, yet it was not studied. Other commuters coming from Santa Rosa use Highway 12 to Arnold Drive to bypass congestion in Boyes Hot Springs on Hwy 12. The intersections of Arnold Drive/Highway 12 and Arnold Drive/Warm Springs Road must be added to the analysis. Traffic in Sonoma Valley has dramatically increased during the past 20 years, as evidenced by congestion on Highway 12 and Arnold Drive. All studies should be conducted using current traffic counts. Traffic counts conducted in 2018 for the referenced study "Sonoma Valley Capacity Threshold Study, Draft Report" are not reflective of current conditions. This was a time period after the fires and many residents were dislocated to other parts of the valley due to their homes being lost.	The transportation analysis focuses on the assessment of VMT, which unlike LOS, is not analyzed in CEQA transportation analyses on particular roadway segments or intersections. VMT is a measure of the amount of automobile travel occurring in a region, as measured in miles. Consistent with State requirements, the VMT effects of the Proposed Specific Plan's land uses and Highway 12 road connection were assessed using performance metrics including VMT per capita, VMT per employee, total VMT per service population, and total regional VMT. VMT is a measure of distance and does not directly affect bicyclists, though increased use of bicycling as a travel mode does reduce automobile VMT. With respect to broader bicycling conditions on Warm Springs Road and Bennett Valley Road, the 2010 Sonoma County Bicycle and Pedestrian Master Plan identifies a proposed Class II (bike lanes) facility along the length of Warm Springs Road, a proposed Class III (bike route) facility on Bennett Valley Road between Warm Springs Road and Grange Road, and a proposed Class II (bike lanes) facility on Bennett Valley Road between Grange Road and the City of Santa Rosa. With respect to bicycle commuting to and from Santa Rosa, the Bike Plan identifies the future Central Sonoma Valley Trail along the Highway 12 corridor, to which the proposed Specific Plan would include connections. The Central Sonoma Valley Trail bicycling route is anticipated to be the primary regional connection for commute and recreational travel, and will establish a much more comfortable route for bicyclists than Warm Springs and Bennett Valley Roads since it would be off-street, flatter, and straighter. Regarding the dates of traffic counts, transportation VMT analyses do not rely upon such data. Note that the analysis completed in the standalone traffic study completed for the Specific Plan did analyze LOS, and relied upon intersection traffic volume data obtained in April

Commenter	Date	Letter	Comment	Response
				2022 and supplemented by several segment counts obtained in the fall of 2021. The trip distribution estimates produced by the SCTM19 travel demand model were used in assessing the non-CEQA LOS analysis and included three percent of trips oriented to and from Warm Springs Road. Again, this information is used outside of the DEIR since LOS is no longer a topic area addressed in CEQA.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-41	Missing Analysis – Traffic Safety on Arnold Drive: Because VMT is substantially underestimated and there is no LOS analysis (that is required by General Plan policies), there is no consideration of the traffic safety implications for Arnold Drive both north and south of the SDC site. Arnold Drive bisects the central village of Glen Ellen where commercial business and private driveways join the street and pedestrians cross back and forth between businesses. This semi-rural village will very likely experience gridlock with the addition of thousands of vehicles on a daily basis. There will be substantially increased safety risks for cars trying to turn onto Arnold Drive and for pedestrians using this segment of Arnold Drive. In effect, the increased traffic on Arnold Drive will divide the existing village of Glen Ellen. South of the SDC site, vehicles exiting the multitude of private driveways (including the several hundred apartments just south of SDC) will have an extremely difficult time trying to turn onto Arnold Drive. The existing hazardous condition will be significantly exacerbated with the addition of project-related traffic. Page 409, Highway 12 Connection: The DEIR refers to Caltrans comments regarding the proposed Hwy 12 connection, “noting that the new connector should not be designed to increase vehicular throughput, since doing so could result in induced auto travel and prior Caltrans studies have indicated that Highway 12 and Arnold Drive already have sufficient capacity to accommodate growth.” What previous studies? When? Did those previous studies anticipate the size of redevelopment at SDC? How will the new connector NOT increase vehicular throughput? By its very nature, it will increase vehicle throughput to Hwy 12. Highway 12 Connection: The impact analysis assumes that the possible road connection to Hwy 12 will be implemented despite the absence of any feasibility study. The Specific Plan makes the proposed road seem tentative, which it is since it will have to undergo a lengthy CalTrans review process. It should not be assumed in the transportation impact analysis.	As discussed informationally on pages 441-442 of the DEIR, traffic volumes on Arnold Drive through Glen Ellen are projected to be very similar with the proposed Specific Plan as without it. Accordingly, the commenter's assertions that added traffic will create adverse safety conditions in the community of Glen Ellen are unsupported. The commenter's concerns about traffic delays encountered by residents to the south of the SDC campus is noted, though does not constitute an adverse safety effect of the project, and as previously described effects related to traffic congestion are no longer considered to be environmental impacts in CEQA. The commenter questions statements made by Caltrans in their response to the project's NOP regarding Highway 12 and Arnold Drive; while these statements are not part of the DEIR transportation analysis, the study that Caltrans was referring to is the "Transportation Concept Report State Route SR 12 (West)," Caltrans, 2014. The proposed Highway 12 connector road would increase throughput; this was assessed from a VMT perspective on pages 434-435 of the DEIR, with a resulting significant impact. The roadway is a component of the proposed Specific Plan and was analyzed accordingly at a programmatic level. The Specific Plan and DEIR clearly state that the precise alignment and configuration of the connector road have yet to be determined and will be subject to further CEQA review.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-42	Page 409-410: "…though a feasibility analysis of the viability of future transit service increases is beyond the scope of a programmatic CEQA assessment." The proposed Specific Plan identifies numerous policies regarding provision of transit services. How can we know if these policies are feasible and will reduce/avoid impacts if no feasibility analysis is conducted now? Infeasible mitigation policies cannot be assumed to reduce impacts. Page 410: Where is the following referenced traffic study available for review: Focused Traffic Operation Analysis for the SDC Specific Plan, W-Trans, August 2022? This report is necessary in order to conduct an independent review of the traffic numbers. Page 417: "The segment of Arnold Drive between Harney Street within the Planning Area and Glen Ellen carried a daily volume of approximately 5,400 vehicles per day in 2021." Please clarify where in "Glen Ellen" the traffic volumes on Arnold Drive were counted. Is the northern terminus of this segment at Hwy 12 or where? Page 417, incomplete sentence: "To the south of the Proposed Plan area between Harney Street and Madrone Road, daily volumes in 2021 were approximately 6,200 vehicles, as compared to approximately 7,100" – when?	As a programmatic EIR for a plan that is anticipated to come to fruition over a long-range planning period, completion of a feasibility study assessing the viability of transit service at all points in time is not currently possible. As noted by the commenter, the Specific Plan includes several policies emphasizing the need to provide effective transit service to the area; these policies are intended to guide decisionmakers and funding decisions regarding transit, including the potential extension of the Route 32 "Sonoma Shuttle" (which already operates nearby) to the Planning area and continued subsidization of fares on that route. The DEIR acknowledges the uncertainties in guaranteeing that transportation demand management (TDM) strategies to reduce VMT including those related to transit will be viable at all times, and as a result, identifies a significant and unavoidable VMT impact. The traffic study report is available on the project website. https://static1.squarespace.com/static/5e44526401cadd5712640ee4/t/6317b5c9700b2b4827735924/1662498250512/Focused+Traffic+Operations+Analysis+for+the+SDC+Specific+Plan_unsecured.pdf. The 5,400 vehicles per day Arnold Drive volume questioned by the commenter was obtained using "big data" sources provided by Streetlight Data, and reflects average weekday volumes just south of Glen Ellen near the Hill Road intersection. The 7,100 volume questioned by the commenter reflects average daily volumes on the segment south of SDC in 2019.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-43	Page 425: “Areas that have a diverse land use mix and ample facilities for non-automobile modes of travel, including transit, tend to generate lower VMT than auto-oriented suburban areas.” The SDC site is an example of an “auto-oriented” location. It is not located on a transit corridor and will generate higher VMT than a site closer to an urban area. Page 427, Historical traffic volumes: How is this discussion of historic traffic volumes relevant? The method to estimate old volumes is not accurate; also, this was 7 years ago, before regional growth occurred. “…estimated to have generated approximately 3,800 vehicle trips per day in 2015 when it was fully operational.” It wasn’t fully operational in 2015 – the clients had dramatically decreased. Table 3.14.3 Traffic Volumes: How can it be that the proposed plan results in lower traffic volumes than No Project? This makes no sense and is not valid. The assumptions for the No Project Alternative need to be revised to reflect a truly No Project scenario. Proposed Project Scenario – The traffic analysis assumes construction of the Hwy 12 connection but there are no details on this connection and no project-specific CEQA analysis of the connection to satisfy CalTrans approval requirements. Therefore, this connection cannot be reasonably assumed. As requested by Planning Commissioner Carr, please redo the analysis without the Hwy 12 connection and then compare it to the Historic Preservation and other alternatives.	The commenter's statement that the campus is auto-oriented is noted. The VMT analysis was completed in the SCTA's regional travel demand model and accounts for numerous factors beyond the site's location; the analysis does indicate that residential VMT per capita would be above the applicable threshold and would be a significant impact. The discussion of historical traffic volumes is provided solely for informational purposes as this was a topic of interest to many in the community, but this information is not relied upon in the CEQA transportation analysis. Regarding reductions in traffic volumes, Table 3.14-3 does have typographical errors; these did not affect the conclustions of the transportation analysis. For an explanation and corrected values please see responses to comment B11-246-250. Please see Master Response 6 for more information regarding the analysis of the Highway 12 connector road and its influences on the VMT analysis. Regarding the need to obtain Caltrans approval for the new roadway connection, the County will need to obtain an encroachment permit and satisfy Caltrans review processes and documentation requirements; such processes are routine and are not considered to be an indicator that the new connection would be infeasible.
Vicki Hill	26-Sep-22	C191-44	Page 432, Transportation Methodology: “The model’s 2040 cumulative year includes growth that is consistent with adopted general plans within the County and with regional projections contained in Plan Bay Area 2040.” There is no way to determine if the multiple Sonoma Valley projects that are reasonably foreseeable are included in these growth forecasts. Page 440: “For informational purposes, it is estimated that the Sonoma Developmental Center historically generated approximately 3,800 daily vehicle trips, suggesting that the Proposed Plan would generate approximately 13 percent more vehicular traffic than historical uses.” This type of statement skews the analysis and attempts to minimize the impacts of the proposed plan, by comparing trips to historical levels that are not relevant to current conditions. This type of bias should be	The effects of other foreseeable individual development projects in Sonoma Valley would not measurably influence the number of miles that future residents and employees within the proposed Specific Plan area drive on an average day. While other projects would be expected to increase background traffic volumes, they would not individually or collectively result in substantial changes to existing or cumulative travel patterns with respect to the number of daily miles that residents or employees typically drive. With respect to information about historical transportation patterns, as noted previously, this information was included because it is of interest to

Commenter	Date	Letter	Comment	Response
			removed from the DEIR. Internal Circulation Impacts: The DEIR claims that there would be little or no traffic impacts resulting from internal vehicle trips at the SDC site. However, if Arnold Drive is considered part of the “internal” roadway system, this conclusion is invalid. Arnold Drive, as a major connector roadway and essential part of the internal roadway system will be adversely impacted by the large increase in vehicle use.	some in the community, but is not relied upon in the analysis. The commenter's concerns about traffic impacts on Arnold Drive within the site are noted; based on an assessment of the projected volumes and in consideration of potentially high levels of pedestrians and bicyclists, adverse impacts are not anticipated. The Specific Plan includes several policies emphasizing Arnold Drive as a "complete street" within campus and measures to enhance circulation safety. If the commenter's concerns are related more to traffic congestion, such issues are no longer addressed in CEQA as previously noted.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-45	Specific Plan Policy 3-27, “Provide no free parking within campus.” The EIR did not analyze the impacts of this policy. This policy must be removed from the specific plan. There will be impacts on neighboring narrow streets and restrictions on vehicular access. Furthermore, where do people park their extra cars, given that only 1 space per unit is required? Impacts on recreation users – people who can’t afford to pay for parking. Also, visitors to the site? Nowhere in Sonoma Valley are there parking meters. Specific Plan Policy 3-30: “Allow adjacent on-street parking spaces to apply towards minimum parking requirements.” How would this work if there is no free parking on campus? Back-in diagonal parking – this technique doesn’t work in semi-rural areas where there are large trucks, trailers, etc. This parking configuration will have adverse impacts on roadway operations and safety. Policy 3-43, “Work with Sonoma Regional Parks Department to ensure that there is adequate off-street parking for parks users on both the east and west sides of Arnold Drive, including through the use of shared parking areas, and eliminate existing on-street parking along Arnold Drive north of the Core Campus.” This area is not part of the campus, is it? It is in the county road right of way and is an extremely popular trail access and should NOT be deleted. People with disabilities use this parking area to access the paved pathway because it is the closest area to park to pavement. Removal of this parking area will have adverse impacts on recreation access. This policy should be removed from the plan.	The intent of Specific Plan Policy 3-27 was to foster alternative mode use through charging for off-street parking in the core campus. Policy 3-27 has been amended to read, "Price off-street parking within the Core Campus to encourage alternative mode use." Parking conditions are not considered to be an environmental impact under CEQA. The presence of priced parking near an area with free parking can cause motorists to search for spaces on those free streets (commonly known as “spillover”). However, there is a limited distance motorists are willing to walk from their vehicles. In the case of SDC, on-street parking pricing would only be considered in non-residential areas, primarily in the “core campus”. The core campus is located roughly one-third mile from the nearest residential uses in Eldridge and almost two-thirds mile to Glen Ellen, walking distances that would be too lengthy and inconvenient for most motorists. Thus, the potential for spillover parking is minimal. The presence of free parking often leads to many motorists seeking spaces in the same highly-desired locations, resulting in vehicles circling the area. This can have the unintended effect of marginally increasing VMT and creating potential safety issues as drivers spend a greater amount of time searching for parking spaces. In regards to off-street spaces provided for new land uses, the one space per unit is a minimum requirement designed to allow developers to build less parking if the market they are catering to has fewer cars - it does not prevent developers from providing more than one space per unit. The goal is to not require the provision of more parking than what is anticipated to be used (which historically has occurred in many City Codes). On-street spaces abutting land uses are often the most sought-after by motorists and allow them to park in

Commenter	Date	Letter	Comment	Response
				those spaces in-lieu of off-street spaces; not including those spaces towards the minimum requirement would effectively lead to an over-supply of off-street parking. Motorists who frequently use on-street parking (e.g. patrons and visitors) will use on-street parking if it is priced appropriately (i.e. low enough such that most spaces are occupied). In terms of back-in diagonal parking, it is sized to accommodate all vehicles, similar to front-in diagonal parking and can fit large trucks. It has been shown to be generally safer than front-in diagonal spaces with fewer collisions occuring with passing bicyclists and vehicles. Vehicles with trailers are longer than all standard diagonal on-street parking spaces regardless of front-in or back-in configuration. In regards to Policy 3-43, Figure 3.1-1 shows that Arnold Drive is to be converted into a complete street, which could involve the removal of on-street parking if desired. Specific Plan Policies 2-1 and 2-4 have been amended to clarify that designated parking areas for trail users be addressed by the owner/operator.

Vicki Hill	26-Sep-22	C191-46	Specific Plan Components Causing Impacts There are numerous proposed Specific Plan policies and components of the proposed site plan that will have direct impacts that have been underestimated. As mitigation, revisions must be made to certain plan features. Here are some examples. Page 4-6, Specific Plan: "Employment uses are clustered in the northwest, creating a job center" – this is one of the most sensitive places for wildlife movement. Structures, employees, and vehicles will have significant impacts on the wildlife corridor in this area. Revisions to the plan are needed to avoid this impact. Specific Plan Figure 4.1-3 (FAR) doesn't show 2.0, which is what much of the campus will be allowed. Permitting 2.0 FAR reflects a strictly urban plan. There is no consideration of the site's special landscape features or of its semi-rural location, or the people living in adjacent neighborhoods. The FAR should be reduced in highly visible scenic areas along Arnold Drive and in areas where wildlife movement is important. Specific Plan Page 4-7, Plan Impacts: Provide an "active jobs center for the broader Sonoma Valley" – this will generate thousands of extra vehicle trips that are unnecessary to meet the project objectives. The state legislation does not mandate a job center nor is it appropriate in this semi-rural location, not on a transit corridor. This land use is inconsistent with county city-centered growth policies and should be identified as such in the DEIR land use policy consistency analysis. Page 4-10, Specific Plan: Creek buffer is only 50 feet – is this adequate for protection of wildlife movement?	The commenter offers several comments relating to the Specific Plan. These comments are noted. Impacts of the various Plan features referenced in the Draft EIR.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-47	Specific Plan Permitted Uses Table 4-3 and Potential Impacts: • Laundry plant, fertilizer plant, etc. - These uses would result in use of highly toxic chemicals, in close proximity to homes. This impact has not been analyzed. • Timberland Conversions – Impact 3.2-3 states that: "Further, the proposed plan does not contemplate allowing any timber harvesting activities in the area." However, Table 4-3 of the Specific Plan allows Timber Conversions as a permitted use in both the Preserved Open Space lands and in the Flex zone. This is a significant impact that has not been identified. Impact 3.2-3 must be modified to note this impact. • Tasting rooms would be permitted by right in flex zone - Please remove this from the list of permitted uses. Glen Ellen and Sonoma have been overrun by tasting rooms and they do not benefit residents. • Resort permitted by right in Hotel Overlay zone and the flex zone - Elsewhere, a hotel is referenced, which is different from a resort. Neither a resort nor hotel should be allowed by right, potentially circumventing public review and CEQA. • Both a conference center AND a 120 -room hotel are listed as permitted uses. This combination of uses is not discussed or analyzed in the DEIR. What was assumed for VMT of these two combined uses? Why are both a conference center and a hotel allowed – this was never discussed with the community?	This comment is noted. Please see the amended Table 4-3 in the Specific Plan.
Vicki Hill	26-Sep-22	C191-48	Specific Plan Policy 4-3, "Require completion of at least 10,000 square feet of retail and eating and drinking establishments and of at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive." This policy could hamper housing development. If the County truly wants to promote housing, why is there a condition limiting housing until at least 10,000 square feet of commercial is developed? This provision seems contrary to the purpose.	This is a comment on the Specific Plan rather than the EIR and is noted.

Commenter	Date	Letter	Comment	Response
			Policy 5-K Arnold Drive Overlay: “Along Arnold Drive, development should maintain the feel and scale of the buildings and landscape along Arnold Drive, including with a variety of building types and scales, a continuous landscape setback, activity, and views into the SDC site.” This goal and its implementing policies must be modified to say “shall” and include provisions to protect views of Sonoma Mtn. and Mayacamas from Arnold Drive. Otherwise, there will be a potentially significant impact on both historic resources and visual resources (scenic views and scenic view corridor). There is no mention of protecting these views or the existing beautiful mature trees that line Arnold Drive. Also, existing setbacks and lower building heights must be maintained along Arnold Drive. Current proposed policies don’t provide those protections that the community has requested, repeatedly. Policy 5-52 “Vary building heights and types along Arnold Drive to avoid a monolithic appearance and to foster an interesting streetscape, and the existing setbacks along Arnold Drive should be maintained.” This policy needs to be strengthened by replacing “should” with “shall.”	This comment is noted. The figure should be read in conjunction with Plan policies. Please note that Goal 5-K of the Draft Specific Plan has been revised to read as follows:"5-K Arnold Drive Overlay: Along Arnold Drive, development should maintain the existing mature vegetation and trees, current building setbacks, and cottages on the western edge. Maintain a variety of building types and scales and views into the ballfield and other portions of the SDC site." Policy 4-27 of the Drat Specific Plan states, "Preserve and reuse houses along Arnold Drive within the core campus, reconstructing as necessary. Require that the developer hire a preservation architect to undertake a conditions assessment and reconstruction plan prior to demolishing and reconstructing houses on Arnold Drive that are in poor condition. Reconstruction should adhere to the Secretary of the Interior’s Standards for Reconstruction." Streestcape improvements (figure 5.1-1 through 5.1-3) call for and depict Arnold Drive to be " Tree-lined bicycle- and pedestrian-ori-ented parkway. Narrowed roadway, raised bike lanes, improved sidewalks, infill street trees" With these policies, visual impacts to Arnold Drive are considered to be less than significant.

Vicki Hill	26-Sep-22	C191-49	Chapter 4 Alternatives Page 529, No Project Assumptions: “While this EIR cannot pre-judge the State’s actions, the EIR tries to frame these in light of the State Legislature’s established land use objectives for the site, per Govt. Code Section 14670.10.5. Furthermore, the State has already released a developer request for proposal for development of the site pointing to the Proposed Plan underway, and can enter into long-term ground leases with private developers—cited as a mechanism for the site in the Government Code for SDC redevelopment—so that the State retains planning control over the campus unfettered by local regulations to achieve these land use objectives, should the County be unwilling to plan and zone for these uses.” Under the No Project alternative, it cannot be assumed that the state will take control of the site and that the county will have no land use authority. If the state proceeds with sale of the property, any private developer would be subject to county land use controls. The RFP issued by the State clearly states that the property is being offered for sale. There is nothing in the RFP referencing the possibility for a long-term ground lease with private developers. Furthermore, there is no documentation of how the EIR preparers derived the housing and job numbers for the No Project scenario. The State legislation does not specify that jobs are a high priority. Historic Preservation Alternative: It appears that the Historic Preservation Alternative arbitrarily excludes some elements in order to make it look less environmentally superior. For example, the road connection to Highway 12 (for emergency response) is not included. As a result, the Draft EIR claims that the Historic Preservation Alternative has greater evacuation impacts than the proposed plan. All things being equally compared, the proposed project will have substantially greater impacts on evacuation times.	This comment is noted. Please see MR-2 on the RFP timeline and MR-8 on the Historic Preservation Alternative. As noted in the DEIR on page 529, "While this EIR cannot pre-judge the State’s actions, the EIR tries to frame these in light of the State Legislature’s established land use objectives for the site, per Govt. Code Section 14670.10.5. Furthermore, the State has already released a developer request for proposal for development of the site pointing to the Proposed Plan underway, and can enter into long-term ground leases with private developers—cited as a mechanism for the site in the Government Code for SDC redevelopment—so that the State retains planning control over the campus unfettered by local regulations to achieve these land use objectives, should the County be unwilling to plan and zone for these uses." While the RFP released by the State may indicate the State's preference for sale of the property, the Government code, which specifies a lease as a method of disposition, maintains the right of the State to enter into a ground lease rather than a sale of the property.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-50	Page 533: “Thus, it is anticipated that some new development would occur under the Historic Preservation Alternative, and this alternative would prioritize market rate housing units over affordable housing units in order to generate adequate financial returns, undermining the State mandate and project objectives to promote affordable housing.” There is no documentation of this conclusion – please provide evidence to support this statement that market rate housing would be prioritized over affordable units. In fact, compared to current and projected construction costs for new buildings, adaptive reuse is an effective way to reduce costs. The alternative could still promote affordable housing, which may be more viable with lower adaptive reuse costs. Furthermore, there are financing mechanisms to fund affordable housing and policies can be included in the Specific Plan to promote more affordable housing.	This comment is noted. Please see MR-8 on the Historic Preservation Alternative.
Vicki Hill	26-Sep-22	C191-51	Page 570, Environmentally Superior Alternative: “Overall, the Historic Preservation Alternative is the environmentally superior alternative…” The text goes on to dismiss this alternative and minimize its environmental benefits. To say that the proposed plan’s impacts are “largely comparable” to the impacts of other alternatives is inaccurate and misleading. The types of impacts may be the same, but the magnitude of impacts is much less with a reduced size alternative. The Historic Preservation Alternative, in addition to reducing historic resources impacts, would substantially reduce impacts in the issue areas of traffic, biological resources, land use, visual, air quality, climate change, and public services, if properly compared to the proposed plan. Even if reuse of existing buildings may be more expensive than new construction, it would offset the significant greenhouse gas emissions and site disruption that will result from demolition and new construction. The reuse analysis conducted by the planning team did not factor in the costs of mitigating greenhouse gas impacts, which will be substantial. Therefore, the Historic Preservation Alternative provides significant advantages over the proposed Specific Plan.	This comment is noted. Please see MR-8 on the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-52, C191-53	Growth-Inducing and Cumulative Impacts Section 5.1.1.2 Jobs/Housing Growth: It is completely inaccurate to say that the proposed job growth of 940 jobs outside of an urban growth boundary, within the rural village of Glen Ellen is a “modest” number. The number of jobs cannot be compared to the county-wide number. Compared to jobs in Sonoma Valley, the addition of 940 jobs is significant and is growth-inducing. Commercial businesses are struggling to find employees for existing retail services so it is not clear how the EIR can claim that there is a shortage of jobs. Furthermore, the market study conducted for the Specific Plan determined that non-residential development did not generate overall revenues and was not a contributing factor for financial feasibility. As quoted in the SDC Alternatives Report (November 2021), "Commercial and industrial uses may support building construction costs but are unlikely to have a significantly positive impact on overall development feasibility.” While there is a large demand for affordable housing in Sonoma Valley, creating over 700 market-rate homes is a significant growth-inducing impact because there is no evidence to demonstrate the existing or projected demand for this high number of market-rate homes. These housing units will not serve the existing Sonoma Valley population – they will attract people from outside the valley and outside of Sonoma County. Page 568, Historic Preservation Alternative, Growth Inducement: “The Historic Preservation Alternative would result in 600 jobs, which is much lower than both the historical employment level of 1,365 employees at SDC prior to its closure, as well as jobs to fully balance the projected population and would thus not induce growth. Additionally, as with the Proposed Plan, all development will occur in already developed areas. The Historic Preservation Alternative would not induce substantial unplanned population growth in the Planning Area and the impact would be less than significant and comparable to the Proposed Plan. However, this Alternative would accommodate a lower proportion of the projected regional growth within the SDC campus, and lead to greater development pressures elsewhere in the region.” This is not a growth-inducing impact, yet the table shows it as	Commenter's disagreement with Draft EIR conclusions is noted. Commenter also makes regional policy suggestions that are planning rather than CEQA related and are noted. Commenter asserts that becaue the Historic Preservation accomodates less growth, it is less growth-inducing. The assertion that housing at SDC will not serve existing Sonoma County population and will attract people from "outside the vally and outside of Sonoma County" and is therefore growth inducing is incorrect. Since 2016, "natural" population increase (births minus deaths) has accounted for the majority of population growth of the Sonoma/Napa region (See report from Center for the Continuing Study of the Californai Economy https://www.ccsce.com/PDF/Numbers-Jan2021_Population-Estimates-Implications.pdf) Accodrding to the report, for Sonoma/Napa counties, "Net out-migration has been increasing since 2015 and is probably attributable to the region’s high and rising housing costs and low levels of building relative to demand." California Government Code Section 14670.10.5 makes a direct connection bewtween California's "acute housing crisis" and the need for housing, especially affordable housing, at SDC. CEQA Guidelines require that an EIR “[d]iscuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly” (CEQA Guidelines Section 15126.2(e)).Plan Bay Area 2050 aniticpates just 2% each of household and job growth in the Bay Area to be in Sonoma County. However, that regionally-small percentage still translates to 32,000 new households (or about 34,000 new housing units) and 30,000 new jobs. The Draft SDC Specific Plan will accomodate a small share--less than three percent of projected Sonoma County housing needs and exactly three percent of projected job needs--rather than induce

Commenter	Date	Letter	Comment	Response
			having a greater impact than the Proposed Plan, which is absurd. There is no basis provided for this conclusion and no evidence of regional growth projections that show this demand in Sonoma Valley. It cannot be justified that this site should accommodate a disproportionate amount of the Countywide projected growth. There is no large-scale “projected growth” for this rural area because it is outside the urban growth boundary. Growth should be placed in urban growth areas, consistent with city and county policies to avoid leapfrog development and urban sprawl.	growth. Becuase the Histotic Preservation Alterantive would accomodate lesser growth, it will result in need for additioal housing elsewhere in Sonoma County. Therefore the Draft EIR correctly concludes that this alternative would be more growth inducing.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-54	TRANSPORTATION POLICIES The County General Plan establishes Level of Service (LOS) standards for roadway operations. Although CEQA no longer requires LOS analysis, the LOS standards still apply to the proposed Specific Plan. The proposed Specific Plan is in direct conflict with these existing LOS standards. This policy conflict must be evaluated and disclosed in the DEIR. DEIR Section 7.2: Section 7.2 of the plan references additional project review but does not address any future CEQA review. MISSING SPECIFIC PLAN POLICIES THAT WOULD HELP MITIGATE IMPACTS Despite the large number of policies in the proposed plan, there are numerous critical policy omissions. Here are suggested policy additions and modifications. These policies should be incorporated into the EIR as mitigation measures. • Prohibit Big Box Developments – this type of development would significantly impact the site and surrounding area and draw large numbers of vehicles. • Prohibit exclusionary fencing within the campus, in order to allow wildlife movement throughout the campus. • Establish MANDATORY project phasing programs to ensure that housing development is prioritized over hotel and commercial development. • Require design features to incorporate permeability. • Establish performance standards to guide project phasing. • Establish mandatory policies to minimize demolition impacts associated with noise, air toxics, dust, etc. This should include project phasing.	This comment is noted. Please see MR-6 on the adequacy of the transportation analysis. Please see MR-9 on Mitigation Monitoring and performance standards.
Vicki Hill	26-Sep-22	C191-55	I am a land use planner and CEQA specialist in Sonoma County and have many concerns regarding the proposed large-scale SDC Specific Plan and the adequacy of the SDC Specific Plan Draft EIR. I am still reviewing the Plan and EIR and will submit detailed comments by the comment due date. However, I wanted to bring to your attention a few of the many issues that need to be addressed. Overall, the DEIR reflects a bias towards the proposed dense development and tends to dismiss the proposed plan's environmental disadvantages when comparing it to other reduced-scale alternatives. Substantial revisions are necessary to the EIR and Specific Plan to make the EIR adequate, under CEQA, and to create a plan that represents sound land use planning.	This comment has been noted however is pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-56	Specific Plan Scale The planning process has failed to result in a plan that even remotely resembles a community-supported alternative. The promised community-driven process has not occurred. Despite widespread, valid public concerns about the proposed high-density plan and the Board of Supervisors direction to evaluate a plan with 450 to 800 residential units, the proposed Specific Plan still includes an extreme amount of development (1000 plus homes, 410,000 square feet of commercial), which is totally out of scale for this location outside of an urban growth boundary and in the middle of the semi-rural village of Glen Ellen. There is no project comparable to this size in the entire Sonoma Valley. This urban sprawl development, including a 120-room hotel and potential conference center, will, in effect, create a new city, in direct conflict with good land use planning principles and County growth policies. Yes, we need and want housing, but there must be a balanced approach that factors in site constraints, impacts, surrounding land uses, historic resource values, and limited transportation network. This balanced approach is even reflected in the plan's guiding principles (see DEIR page 5-6) but the plan fails to conform to these principles. Project objectives to "balance redevelopment with existing land uses" and "balance development with historic resource conservation" have been ignored. The Draft EIR identifies significant, unavoidable impacts on historic resources and traffic from the proposed Specific Plan due to its size. There is no mitigation identified for destroying so many historic buildings and converting the site to a new urban development. These issues could be addressed with a smaller alternative.	This comment has been noted however is pertains to the Specific Plan and does not relate to the adequacy of the DEIR therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-57	Environmentally Superior Alternative DEIR page 570 states: "Overall, the Historic Preservation Alternative is the environmentally superior alternative…" The text goes on to dismiss this alternative and minimize its environmental benefits. To say that the proposed plan's impacts are "largely comparable" to the impacts of smaller alternatives is false and misleading. The types of impacts may be the same, but the magnitude of impacts on traffic, climate change, historic resources, noise, biological resources, public services and land use would be much less with a reduced-scale alternative. The Historic Preservation Alternative is feasible and its size and scale should be pursued as the preferred plan. Some modifications to this alternative could be incorporated to further reduce impacts, such as even more adaptive reuse and more compact development design. It appears that some impact-reducing elements included in the proposed plan were arbitrarily excluded from this alternative (e.g., the road connection to Highway 12 for emergency access), thus making this alternative appear less environmentally advantageous. Also, there is no reason to conclude that this alternative couldn't achieve affordable housing goals. Compared to current and projected high construction costs for new development, adaptive reuse can be an effective strategy to reduce overall project costs and impacts.	This comment is noted. Please see MR-8 on the Historic Preservation Alternative.
Vicki Hill	26-Sep-22	C191-58	Deferral of Analysis The Draft EIR defers analysis of impacts on some resources to a future time when individual projects are proposed. However, most if not all future projects will be exempt from CEQA under permit streamlining legislation so there will be no means to limit full buildout or implement much-needed future mitigation measures. Specific Plan Phasing SDC Planning Advisory Team (PAT) members and public comments stressed the importance of project phasing to reduce impacts on the environment and on the community. There is only one requirement for phasing (Policy 4-3, which requires completion of at least 10,000 square feet of retail businesses and at least 200 housing units west of Arnold Drive before beginning construction of any housing east of Arnold Drive) and this policy does not reduce any environmental impacts. The Specific Plan itself has a section on "Recommended Phasing"	This comment is noted. Please see MR-9 on project phasing and Mitigation Monitoring and deferred CEQA analysis.

Commenter	Date	Letter	Comment	Response
			but these provisions are advisory and not mandatory. The EIR must identify phasing as mitigation to help further reduce traffic and other impacts.	
Vicki Hill	26-Sep-22	C191-59	Need for Performance Standards Project phasing should be based on performance standards adopted for each environmental issue area. In this way, impacts can be monitored and additional mitigation measures developed, as needed. For example, there is no certainty that massive demolition and construction activities, as well as the introduction of a large mobile population to the site, will not dramatically affect the surrounding open space resources. Before proceeding with full buildout, it should be proven that the site can actually accommodate the projected buildout. 26 Specific Plan Policy Language and Enforceability Many of the policies in the proposed plan are intended to reduce/avoid impacts but the wording is such that it is not mandatory and many policies are not carried forward to Appendix A, Standard Conditions of Approval. Thus, these policies cannot be relied on to be implemented and fully mitigate impacts. Any policy that does not have a strong “shall” statement is not enforceable.	This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-60	Jobs/Housing Growth (DEIR Section 5.1.1.2) It is completely inaccurate to say that the proposed job growth of 940 jobs outside of an urban growth boundary is a “modest” number. The number of jobs cannot be compared to the county-wide number – this methodology purposefully minimizes the impact. Compared to the rest of Sonoma Valley, which is a distinct planning region, the addition of 940 jobs is significant and is growth-inducing. Also, there is no documentation of the need for these jobs in Sonoma Valley. The market study conducted as part of the Specific Plan alternatives report (November 2021, see sdcspecificplan.com/documents) determined that non-residential development did not generate overall revenues and did not contribute to financial feasibility. The alternatives report states: "Commercial and industrial uses may support building construction costs but are unlikely to have a significantly positive impact on overall development feasibility.” Also, the EIR (page 11) states: “…the market demand for non-residential uses (with the exception of a hotel) is limited and higher employment levels will reduce financial feasibility.” While there is a large demand for affordable housing in Sonoma Valley, creating over 700 market-rate homes is definitely a significant growth-inducing impact because there is no existing demand for this high number. These housing units will not serve the existing Sonoma Valley population – they will attract people from outside the valley and outside of Sonoma County.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-61	Comparison to Previous Institutional Use The EIR analysis, including the growth-inducing section as well as other sections, attempts to justify the large-scale plan by erroneously comparing the proposed plan population and employee growth to the previous institutional use and number of clients/employees. This comparison is invalid and should not be used as a basis for over-developing the site due to the fact that: •As an institution, SDC tread very lightly on the environment and adjacent community. At itsmost populous, most of the residents of SDC did not leave the property. They did not drive cars,they didn't go offsite to schools, doctors, restaurants, etc. •Vehicle trips were primarily limited to employees divided into three shifts so that traffic wasspread out, rather than concentrated at peak hours. There were no retail commercial uses or ahotel to generate trips. •Because of the limited outdoor activities and absence of constant vehicle traffic onsite, peopleand cars did not interfere with wildlife movement; the campus was open, peaceful, and notoccupied with uses that generated a substantial amount of traffic (e.g., hotel, restaurants, etc.). •Employment and resident numbers at SDC reached a peak during a time over 50 years ago whenthere was very little cumulative growth in Sonoma Valley and both Arnold Drive and Highway 12were still well-functioning roadways. Nor is it valid to compare existing building square footage to proposed square footage in an attempt to minimize impacts, as it is the proposed use of the buildings that drives most of the impacts.	The comment is noted. As described in pages 579-584 of the DEIR, the Proposed Plan is consistent with the overarching regional need for both market rate and affordable housing in the Sonoma Valley and throughout the Bay Area, as well as with historic residential and employment uses of the site: SDC has facilities that housed up to 3,700 clients, and SDC was one of the largest employers in the County and the largest in Sonoma Valley. While there is no direct perfect comparison for new residents at the SDC site, the numbers are provided to give contextual reference to the fact that the site has been previously developed and has served as a home to a substantial population of residents and employees previously. Ultimately, the DEIR's environmental impact analysis considers the existing conditions of the site.
Vicki Hill	26-Sep-22	C191-62	EIR Traffic Assumptions There is no guarantee that people who live onsite will work there. That cannot be assumed for purposes of analyzing traffic impacts. Also, it cannot be assumed that the roadway connection to Highway 12 will be developed. Therefore, the traffic impacts are substantially underestimated in the EIR.	This comment is noted. Please see MR-6 on the adequacy of the transportation analysis.
Vicki Hill	26-Sep-22	C191-63	Wildlife Corridor Impacts Despite many scoping comments, impacts on wildlife movement through the campus are not addressed in the EIR. The campus itself is part of the wildlife corridor and must be acknowledged as such. Furthermore, there is no overall prohibition or restrictions on fencing within the campus (only	This comment is noted. Please see MR-7 on wildlife movement.

Commenter	Date	Letter	Comment	Response
			prohibition on wooden fences) so wildlife will likely be blocked from movement through the campus. There will be significant impacts on wildlife movement from the introduction of thousands of people and vehicles, as well as fences.	
Vicki Hill	26-Sep-22	C191-64	No Project Alternative Definition Under the No Project alternative, it cannot be assumed that the state will take control of the site and that the county will have no land use authority. If the state proceeds with sale of the property, any private developer would be subject to county land use controls. The RFP issued by the State clearly states that the property is being offered for sale. The RFP contains no reference to the possibility for a long-term ground lease with private developers. Therefore, this is not a reasonable assumption.	This comment is noted. Please see MR-2 on the RFP timeline. As noted in the DEIR on page 529, "While this EIR cannot pre-judge the State's actions, the EIR tries to frame these in light of the State Legislature's established land use objectives for the site, per Govt. Code Section 14670.10.5. Furthermore, the State has already released a developer request for proposal for development of the site pointing to the Proposed Plan underway, and can enter into long-term ground leases with private developers—cited as a mechanism for the site in the Government Code for SDC redevelopment—so that the State retains planning control over the campus unfettered by local regulations to achieve these land use objectives, should the County be unwilling to plan and zone for these uses." While the RFP released by the State may indicate the State's preference for sale of the property, the Government code, which specifies a lease as a method of disposition, maintains the right of the State to enter into a ground lease rather than a sale of the property.
Vicki Hill	26-Sep-22	C191-65	Financial Feasibility Despite making references to financial considerations, there is no definition or accurate assessment of the financial feasibility of the proposed plan or alternatives. While financial feasibility is required, there is no mandate to maximize revenues at the cost of other resources and values, or at the cost of reasonable land use planning. Thank you for considering my comments. Please feel free to contact me if you have any questions or need clarification on any of these comments.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-66	I am unable to attend the Landmark Commission hearing regarding the SDC Specific Plan and Draft EIR but have the following comments. As a land use planner and CEQA specialist, I have serious concerns about the proposed Specific Plan and it's impacts on historic resources (and many other environmental impacts). These impacts could be substantially reduced by a smaller alternative, as identified in the Draft EIR. 1.A redevelopment plan of this scale (over 1000 homes and 900 jobs) on the historic SDC campuswill destroy multiple significant historic structures and the historic setting and values of thesite. Although the Draft EIR assumes 1000 homes, Specific Plan Table 4-2 identifies maximumbuildout numbers, which total 1210 residential units. This total does not include densitybonuses that will likely be granted to the future developer. It will not be possible to preservethe historic character of the site with a project of this size.	This comment has been noted. As noted in the Specific Plan under Table 4-2, "3. While the base housing unit range for each district is represented as a range, the total base number of units built across all districts should equal the total shown in the table". While the Specific Plan limits development at the site to a maximum of 740 units, the DEIR analyzes the impacts of 1,000 units to account for the addition of density bonuses by a future project sponsor. While the final number of units, including the density bonus units, cannot be known at this time, the addition of 240 density bonus units to the EIR's analysis represents a good faith effort to accurately analyze the maximum buildout in the DEIR.
Vicki Hill	26-Sep-22	C191-67	The proposed plan is inconsistent with one of the fundamental project objectives, which calls forbalancing development with historic resource conservation. The high-density plan does notprovide a balance and would not maintain the historic integrity of the site. The SDC site hasbeen determined eligible for listing as a Historic District under the National Register of HistoricPlaces. 3.The Draft EIR identifies significant, unavoidable impacts on historic resources from theproposed Specific Plan. There is no mitigation identified for destroying so many historicbuildings and converting the site to a new urban city-like development, as called for in theproposed plan. 4.The Draft EIR identifies the Historic Preservation Alternative as the environmentally superioralternative. Because of its reduced size, impacts on historic resources would be less thansignificant under the Historic Preservation Alternative. This alternative would also be consistentwith the project objectives. Furthermore, this alternative has other environmental advantages,some of which have been dismissed in the Draft EIR.	This comment has been noted. Please see MR-8 regarding the Historic Preservation Alternative's adherence to the project objectives.

Commenter	Date	Letter	Comment	Response
Vicki Hill	26-Sep-22	C191-68	While financial feasibility is required, there is no mandate to maximize revenues at the cost ofhistoric resources. The Historic Preservation Alternative is feasible and its size and scale shouldbe selected as the preferred plan. Some modifications to this alternative could be incorporatedto further reduce impacts, such as even more adaptive reuse and more compact developmentdesign. It appears that some impact-reducing elements of the proposed plan were arbitrarilyexcluded from this alternative (e.g., the road connection to Highway 12 for emergency access).Also, there is no reason to conclude that this alternative couldn't achieve affordable housinggoals. Compared to current and projected high construction costs for new development,adaptive reuse can be an effective strategy to reduce overall project costs and impacts.	This comment is noted. Please see MR-8 on the relative cost and feasibility of the Historic Preservation Alternative.
Vicki Hill	26-Sep-22	C191-69	6. The Draft EIR defers analysis of impacts on individually significant historic resources to a future time when individual projects are proposed. However, many future projects will not be subject to CEQA and therefore the analysis cannot be deferred – it must take place as part of the Specific Plan EIR and mitigation measures must be identified.	As described on in Section 3.5.3.3 of the DEIR, the Specific Plan includes Goals, Policies and Standard Conditions of Approval developed to prevent any significant adverse impacts to the two individually significant historic buildings on the SDC campus. Additionally, while some projects on the campus may not be subject to further CEQA review, as noted on page 295 of the DEIR, "at the time when rehabilitation projects for these two individual historic resources or new work immediately adjacent to the historic resources are proposed, the project-level CEQA document would need to identify potential impacts to historic resources. The CEQA Guidelines require a project that will have potentially adverse impacts on historical resources to conform to the Secretary of the Interior's Standards for the Treatment of Historic Properties. Therefore, the impact of implementation of the Proposed Plan on individually significant historical resources would be less than significant with implementation of the proposed policies and actions referenced above and existing State regulations."

Planning Commission Hearing	Thursday, September 15, 2022	C192-1	I appreciate this opportunity to speak. I'm going to speak mostly about the EIR as it relates to the historical alternative. On page 561, it states the Historical Alternative assumes a preference for more large lot, single-family homes in order to maximize financial feasibility. My question is, based on what analysis or precedent? I'd like to point out the Community's Alternative Plan that we submitted last Friday to the DGS does not rely on large lot single-family homes but contains a mix of all types of housing in a village community setting. And for those of you, just to make it clear, the Community Plan was developed by the people of Glen Ellen and the surrounding Sonoma Valley. It was submitted to the DGS, as I said, last Friday. It came about due to extreme frustration with the County's planning process, where, while there were many community meetings and opportunity for input, they were generally largely ignored and both the MAC and the -- one of the PATs has filed complaints about that. So the community got together to develop a plan on its own. Some key issues of it are that it maintains local community control over the land for now and actually for the next hundred years. It's a truly community-developed plan, and I'd like to point out, this is a really democratic government action. It was done by the people for the benefit of the people, so thank you very much. I appreciate the opportunity.	Thank you for your comment. This comment has been noted. Please see MR-8 on the Historic Preservation Alternative's adequacy at meeting project objectives.

Planning Commission Hearing	Thursday, September 15, 2022	C192-2	I serve as Chair of North Sonoma Valley Municipal Advisory Council, or the MAC for short, and we're in the process of drafting a response to the draft EIR, and this will represent extensive community input over several years, which is also summarized in a letter to the supervisors in January. Whatever number of units is approved, we request the Specific Plan be revised to incorporate a multiphased approach, and it includes a robust Mitigation Monitoring Program. No one knows how this is going to turn out, and there needs to be room to maneuver in our rapidly changing landscape. It appears that the DEIR fails to disclose the full extent of impacts that will result from this large-scale development outside an urban growth area. The Specific Plan represents one of the largest, if not the largest, development in the history of Sonoma Valley and is in conflict with County General Plan policies calling for city center growth. Our many concerns about this project are detailed in our letter. I'd like to highlight that the DEIR itself states that the Historic Preservation Alternative is environmentally superior. That alternative calls for a cap of 450 housing units. The same number that has been endorsed by the MAC. Scale is the most obvious mitigation for this project. A smaller project means a smaller impact. One specific concern I'd like to mention, the DEIR states that the Core Campus is not included in any fire severity zones. The map used in the DEIR doesn't show such zones in the local responsibility area where the Core Campus is. That map was drawn by the state fire marshal and doesn't include that data for the LRA. In fact, the state's draft map shows moderate and high fire severity zones within the Core Campus. Please re-examine this data, and also please add a third scenario for the possibility of a wildfire coming down from Sonoma Mountain. Thank you.	Thank you for your comment. This comment is noted. Please see MR-8 regarding the Historic Preservation Alternative's alignment with project objectives. Please see response B3-25 regarding the LRA and response B3-23 regarding the possibility of a fire originating from the west.

Planning Commission Hearing	Thursday, September 15, 2022	C192-4	Josette Brose-Eichar, Boyes Hot Springs. I would like to thank Commissioner Carr for his realistic assessment and questions that he had up-front. I'm going to focus on just a few things since time is short. The hotel is one of the biggest problems. Vehicle miles traveled are not dealt with properly. It is pushed off to the future. Not only is gas travel not dealt with realistically, but the reality's that these will be low-paying jobs and employees will be traveling from outside the Sonoma Valley. Really, hotels should not be in the Specific Plan to begin with. Then we have the connector road to Highway 12. Nowhere is it addressed the impact this road will have on the wildlife corridor. It will be a complete disruption in how animals move today. Plus, it will be virtually useless during what we now -- what we now have: Unpredictable wildfires. Assumptions made in the draft EIR are not reality. Water. I see no analysis of what water we have today from our various water districts and no acknowledgment of climate change and a decreasing supply of groundwater. No specifics are offered on water recycling. Should that not be in the EIR? And why is the most ecologically sound plan not being considered? As an EIR is an environmental impact report, not -- why not go for the least environmental impact? And last, why are there no real numbers, aka, economic feasibility to explain pushing these housing units, which will most likely be unneeded market rate homes. The EIR uses outdated thinking and conclusions as if this was a new subdivision in Walnut Creek and not a massive development in the middle of a rural area. The impacts are not defined and push to the future when they will not be dealt with adequately. Thank you so much.	Thank you for your comment, This comment is noted. Please see MR-7 on the impacts of the Highway 12 connector on the wildlife corridor.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-5	Hi. My name is Sonya Karabel, and I'm with UNITE HERE Local 2, which is the hotel workers union for Sonoma County. I am commenting not really on the EIR but on the Draft Specific Plan, but since it seems that there's not going to be any future opportunity to comment on the Draft Specific Plan, I wanted to get that in now. And I just wanted to raise the -- you know, the Sonoma County, especially Sonoma Valley, has a really, really big problem with inequality and with development that furthers that inequality, and in order for this development to be something that actually moves that forward and helps to address those problems, there should be community benefits at the Sonoma Developmental Center, making sure that there's strong affordable housing, that there's -- that the jobs that are provided are good jobs, including, you know, if there are hotel jobs, that there's environmental protections, that there's wildlife -- wildlife corridors and that there -- that disability justice is integrated into the Plan. And that the best way to do that, you know, for -- to ensure those community benefits is to put that into whatever the ultimate development agreement that happens is and actually get whoever that developer is to make legally binding commitments to community priorities, and so that's something that we want to see be integrated into the Specific Plan and -- and ensuring that, you know, when we do know more about what this development actually -- you know, what a developer is proposing, that that developer, you know, commits to doing something that really benefits the entire -- the entire community and the residents. So thank you.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-6	Hi there. I think what I want to address is both the Specific Plan and the EIR. I may be one of the few people in here now who actually had a loved one at the SDC site in the Northern STAR Unit. That is my son, who, since the closure of the SDC STAR Unit has endured horrible abuse in the community, which has been verified heartily by Community Care Licensing, and he's currently being warehoused in his third stay at Northern STAR now in Vacaville, as a result of the close of the SDC. So I want to make really clear, you are aware that state legislation mandates that priority needs to be given to the housing needs of individuals with developmental disability when planning. There's not nearly enough talk about that mandate, which you are legally mandated to do. Along with many other families and advocacy organizations, I'm asking you to prioritize this population. Specifically we're asking for five enhanced behavioral support homes on the site, which would also be very good from an EIR perspective. This issue is really of utmost importance, as this population is falling through the cracks with the closure of Sonoma Developmental Center, and they are being subjected to ongoing harm due to the closure. So I'm asking everyone to honor the legacy of SDC, and I'm asking everyone involved in the process to carefully consider your legal obligations and to uphold your legal mandate to prioritize this population. Thank you.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.
Planning Commission Hearing	Thursday, September 15, 2022	C192-7	Thank you very much for the opportunity to speak today. My name is Bryce Jones. I live in Sonoma County for the past eight years and wanted to speak to the impacts of this project. Granted, a thousand units sounds like a lot of housing, but it's a drop in the bucket for what we need in terms of housing in Sonoma County. This project, as I can tell, preserves a huge amount of wilderness and open space, provides access to recreational opportunities, which is going to be great for multiple age groups, and as far as I can tell, you know, this project has been thoroughly discussed in the public. I've participated in some of the other comment sessions and would really like to applaud Permit Sonoma's Staff's work on this project. This is an incredibly attractive place to live from -- from my point of view, from somebody with a six-year-old daughter, you know, it seems like a great place to go for a walk. It's nice density so you can walk to different businesses that will potentially be there. There's a mixture of homes, and I	Thank you for your comment. This comment is noted however it is not relevant to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
			think Staff has really done a phenomenal job, along with the consultants, on crafting something that takes into concern, you know, the -- the wild environment, but as well the needs of creating housing opportunities for people and families in the county, and I would definitely like to recommend the planning commissioners support the project. And I really, you know, just think it's great. Thank you very much.	
Planning Commission Hearing	Thursday, September 15, 2022	C192-8	Thank you. Steve Birdlebough with The Transportation and Land Use Coalition, and I -- I think that the Plan that was drawn up was based on information that was years old. The negotiations with the state assume that, because there were more than 4,000 people on this site years ago, that you could have a development here that would involve a lot more driving than was involved in the previous occupancy. And the Air Resources Board is moving in the direction of reducing vehicle miles traveled. Sonoma County has a goal of reaching carbon neutrality by 2030. The state is looking at 2045. Our own goal would involve a six percent per year reduction in vehicle miles traveled. The state plan calls for about a one percent per year reduction. Both of those are very important to -- to honor, and I think this project just doesn't meet that goal. Highway 12 is pretty much at capacity now. Adding another 1,000 housing units in this particular location is not a good idea. Caltrans has told us that they don't want to have an additional road from this area over to Highway 12, so there's a lot that really hasn't been looked at and needs to be looked at in this situation. Thank you.	Thank you for your comment. This comment has been noted. Please see MR-6 on the adequacy of the transportation analysis.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-9	Good afternoon. My name is Teri Shore, environmentalist. I live in Sonoma Valley. First, I would support Greg Carr's comments about the Planning Commissioners to follow his lead. And regarding the planning, with all due respect to the urban planners, if this plan for the historic campus was in an existing city or town, I would probably support it, but unfortunately, it's in the middle of an ag and rural -- agricultural valley, and it really constitutes sprawl as proposed. I believe that the CEQA is inadequate, and the self-mitigating plan does not fully mitigate the environmental impacts by a long shot. I'll be providing more detailed comments, as will other folks, but I just wanted to focus on the open space at this time. And I'm very concerned that the Specific Plan in the EIR give few details about the preserved open space and how it will be protected and their re-introduction or introduction of commercial agriculture. Under the land use plan, I don't think any of these items were anticipated and preserved open space, which are in Table 4.3 of the Specific Plan, which includes wine tasting rooms, wholesale nurseries, timber conversions, indoor crop cultivation, farm stands, farm retail sales, animal keeping, agricultural processing, agricultural crop production and cultivation. None of those are appropriate for preserved open space, and none of those were studied in the EIR, so that is one major failure, and we need to clarify the open space unprotected from commercial agriculture. Thank you very much.	Thank you for your comment. This comment is noted. Please see MR-1 on the adequacy of a self-mitigating Specific Plan.
Planning Commission Hearing	Thursday, September 15, 2022	C192-10	Hi, I'm Tracy Salcedo, and I live in Glen Ellen -- am I? Yeah. Okay. And I just have a couple of comments. I'll be making other comments in a letter, but I'm talking right now from -- I'm multitasking from the library at Dunbar Elementary School in Glen Ellen, and it occurs to me that one of the things I haven't seen in either the EIR or the Specific Plan is discussion about the schoolkids that will be part of the new community that is being planned. If you add about a thousand homes at 2.5 people per home, assuming that the half person is a child and not someone who's been lopped off at the hips, that means that up to 500 of the new residents of SDC will be school-aged. Since there's no school planned for the property, that means all those kids will need transportation buses and/or private vehicles	Thank you for your comment. This comment is noted. As described on page 394 of the DEIR, one of the significance criteria assessed is the "Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services: a) Fire protection, b) Police protection, c) Schools, d) Parks, e)Other public facilities" As noted on page

Commenter	Date	Letter	Comment	Response
			to get to or from school. While vehicle miles traveled will be minimized by use of electric vehicles, that doesn't offset the traffic impacts that will be felt Valley-wide. So I would like to see the DEIR analyze replacing possibly the hotel with a school property, so that kids could maybe walk to school, and/or replacing the proposed conference center or, you know, something that would really benefit the community that way.	402 of the DEIR, "Using the SVUSD's student yield factors for K-6, 7-8, and 9-12 grade student populations per household for single-family housing, apartments, and affordable housing units,implementation of the Proposed Plan would result in a total of approximately 448 new students within the Planning Area.", an increase in student population that woulc fall well within the existing capacity of local area schools and would not require an expansion or construction of school facilities, as noted on page 403. Therefore the impact to school facilities would be less than significant.
Planning Commission Hearing	Thursday, September 15, 2022	C192-11	And just a final comment about cumulative impacts, which is kind of what I was talking about, and the analysis of fire danger. I'd to see the report analyze the cumulative impacts of shunting all of the proposed people onto Highway 12 in the event of wildfire blowing out of the Mayacamas and onto Arnold Drive, in the event of wildfire blowing off of Sonoma Mountain. And the reason is basically because you're taking so many more people and you're throwing them onto either one of those two-lane highways, and no matter which direction they go, they're going to end up in a bottleneck, either in Sonoma or heading into Santa Rosa. So those are my comments. Thank you.	Thank you for your comment. This comment is noted. Please see MR-4 regarding the wildfire evacuation analysis. Please see response to comment B3-27 on wildfire risk.
Planning Commission Hearing	Thursday, September 15, 2022	C192-12	Good afternoon, Commissioners. I'm Meg Beeler, the Chair of Sonoma Mountain Preservation. Like many in the audience, SMP believes that the DEIR needs significant modifications. We'd like it to be used as a tool for systematic implementation as required by the state. We'd like your help with this. The proposed new road from Arnold Drive to Highway 12 is one example. The road will create substantive adverse effects on the wildlife corridor, on the open space and on the protected wetlands that support documented endangered species. The road will be in the direct path of the 2017 fires, yet sending residents fleeing into Diablo winds is not even mentioned in the DEIR. Quote, "best practices" in the DEIR did not address the cumulative effects of such a road. The approach of quote, "We'll do needed studies later," unquote, gives developers no clear direction up front and does not guarantee wetlands and species protection or mitigation policy. Riparian zone	Thank you for your comment. This comment is noted. As noted on page 252 of the DEIR, Policy 2-25 requires inclusion of protective buffers of at least 50 feet along Sonoma and Mill creeks, as measured from the top-of-bank, to protect the sensitive communities. Section 7-14.5 of the Sonoma County Code establishes stream setbacks for structures requiring a building permit, with minimum setbacks equal to the greatest of 1) two and one-half times the height of the stream bank plus 30 feet, 2) 30 feet outward from the top of the stream bank, or 3) any distance established in the general plan and/or zoning code. Future development would be subject to these setbacks' requirements. If riparian habitat and other sensitive natural communities are present and disturbance is

Commenter	Date	Letter	Comment	Response
			protection is another. The DEI -- DEIR ignores studies that say that creek setbacks should be up to 325 feet. Instead, it proposes only a 50-foot setback next to Sonoma Creek and none next to Mill Creek. Adding 2400 people around these creeks, without addressing the cumulative effects of the environmental degradation is not best practice. It is unacceptable. The community's offered many specific suggestions for best practices and mitigation. It's 3500 pages, as you've noticed, yet these have largely remained unaddressed or ignored. We're counting on you to offer better direction to Permit Sonoma. Thank you.	required, federal and State regulations would require measures to reduce, avoid, or compensate for impacts to these resources. The requirements of these regulations are implemented through the permit process as indicated in Conditions of Approval Measure BIO-14. In addition, Conditions of Approval Measure BIO-1 requires conducting specific project biological resource assessments prior to commencement of any project. With implementation of Measure BIO-1 and Conditions of Approval Measure BIO-14, impact of future development under the Proposed Plan on riparian habitat or sensitive natural communities would be less than significant. See also response to comment B8-5 and B8-9 regarding riparian area policy amendments. Please see MR-6 on the impact of the Highway 12 connector.
Planning Commission Hearing	Thursday, September 15, 2022	C192-13	Hi. Good morning. Good afternoon. I'm Bonnie Brown, chair of the SDC Campus Project. We have a proposal out for two years for adaptively reusing some of the residential buildings on the east side of the build -- of the campus for single-resident occupancy for the disabled and people of lower income. They are good -- they are in good condition, as by all reports should have been done. They have some toxics that need to be removed. According to the Plan, Specific Plan, and you can see all the maps and in the DEIR, all of the buildings on the east side of Arnold Drive are planned to be demolished and all new construction. And one of the really big impacts of that, which has never been addressed, is the -- there are only two unavoidable impacts that have been designated in the DEIR and one that needs to be included, and we have asked for it to be quantified, is greenhouse gas emissions when you tear down that many buildings and then source all of the new materials for all new construction. And it has -- I haven't found it anywhere in the DEIR when we asked for that to be addressed.	Thank you for your comment. This comment is noted. Please see MR-8 on the Historic Preservation Alternative.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-14	Also, involving the connector road through the open space, that would go right through the wetlands, in the middle of the great east side of the open space. It would be right where the groundwater recharge would be happening, wildlife, and then the road runoff. And actually the state agencies have said there would be a lot of greenhouse emissions. We have Madrone Road three blocks south of the entrance to SDC campus, and it is a wide road of three lanes most of the way. If people try to take that as an access during wildfires, they wouldn't be able to get onto Arnold Drive or Highway 12. They'd be totally impacted. There's not a use for this road, and it's really a bad idea. I hope you'll speak to that. Thank you.	Thank you for your comment. This comment is noted. Please see MR-6 on the impact of the Highway 12 connector.
Planning Commission Hearing	Thursday, September 15, 2022	C192-15	Thank you. I'm Sharon Church. I'm a resident of Glen Ellen, and I have submitted some written comments already, but I would like to say, I appreciate Greg Carr's concern about the inadequate time on the schedule. It really feels like this horrendous plan is being shoved down our throats and that people haven't been listening and just, you know, minimally including a few little points here and there because we're going to ramrod through the maximum. Well, economically feasible doesn't mean eco -- doesn't mean maximum building for maximum profit, ignore everything else, and that's exactly what seems to be happening here. So please, please, take the time, listen to the comments. Let's make some adjustments. The community wants to have something there that will work and we can be proud of, that provides the legacy of care and housing for the developmentally disabled: Affordable housing. We don't need hotels, conference centers, expensive homes. Let's get real here about what we do need and recognize where you're building it: In the path of severe fires. Knowing loosies [phonetic] were the affordable housing when that does come to -- to pass, because if you really believe in affordable housing, you're not going to just say, "Hey, developer, you can pay me off with a few bucks and we've done our job." That just doesn't work anywhere. So at any rate, the community's participated. We really want to feel like we're being heard, and we'd like to partner in this, but so far it doesn't feel like that's what's been happening. Thank you.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-16	Yeah. First, I want to mention that I represent EcoRing, which is a nonprofit that promotes ecotourism and green travel. I want to endorse what Commissioner Carr said. I think that he's spot on. One of my big concerns is that I feel that the excessive development here will actually harm tourism; that it will diminish the attractiveness of the site and will increase the traffic to where people will not want to visit. And there's a great deal of economic activity that accrues from the tourism in the area, so it's -- it's a problem in that regard, and I think it needs to be addressed. I'm very concerned, too, about the cavalier attitude towards VMT and the greenhouse gas generation that it represents. VMTs have to go down, and this is going in the wrong direction. And the EIR that they're presenting suggests that it's not mitigatable. Well, that's because the plan they chose isn't mitigatable. They need to revise the Plan, and it can be mitigated in one way by reducing the amount of development. At any rate, so also I'm concerned about the fact that there's not a consideration for bicycle transport to Sonoma and to -- and to Santa Rosa from Eldridge, so there doesn't seem to be alternative transportation available. Thank you.	Thank you for your comment. This comment is noted however it is not relevant to the adequacy of the DEIR, thus no further response is required.
Planning Commission Hearing	Thursday, September 15, 2022	C192-17	Hi. This is Bob Holloway. I'm a resident of the nearby Agua Caliente neighborhood, and I want to thank you for the opportunity to comment here. I'd like to submit my strong support for the Historic Preservation Alternative that's outlined in the draft EIR. As you know, the County's preferred alternative, which is the Specific Plan, it does provide some very thoughtful preservation guidelines in the form of its goals and policies in the Cultural, Historic, and Tribal Cultural Resource, Chapter 3.5.33, but a loss of 28 percent of the contributing historic resources, combined with this new dense infill construction of, like, 30-foot to 40-foot high additional infill building and the alteration and reconstruction of the remaining contributing structures within this national and state register eligible historic district is simply too great a loss of the historic fabric to retain the district's historic feeling and character. This would cause a property to lose its eligibility for listing in the national and the California registers and as a California historic landmark. These impacts are described in the draft DEIR as significant because they cause a substantial adverse change to the historic district as defined by the -- the	Thank you for your comment. This comment is noted. Please see MR-8 on the adequacy of the Historic Preservation Alternative in satisfying project objectives.

Commenter	Date	Letter	Comment	Response
			district sense of place, and it would not honor the legacy of the developmental center's former uses and Staff. The historic story can best be told as -- with as much of the original character as possible, even with repurposed original buildings. So 1,000 units of housing is way too impactful, and I'd urge you to look at the Historic Preservation Alternative outlined in the DEIR as the preferred alternative. Thank you.	
Planning Commission Hearing	Thursday, September 15, 2022	C192-18	Hi there. I'll keep these brief to squeeze more people in. But I'm 33 years old and have lived in Sonoma Valley for about ten years now and just want to offer a perspective from my generation, a generation that's come of age during wildfires and heatwaves and COVID and what seems like ceaseless development. As I consider my future in this county, you know, in light of a housing affordability and climate crisis, the SDC planning process has been a revealing, if not frustrating, microcosm of the gulf between what this county says it values and what its actions suggest. I've attended many of these public comments and followed the evolution of this project closely and in community of people who live in the area, and I think it's obvious to anyone who's paying half -- halfway decent attention to this plan means to me the DEIR is friendly for developers and not the community. If the latter was actually granted the respect and attention it deserves, these units would prioritize affordable housing and minimize environmental impact entirely and really meet the moment of a world that's rapidly changing every day and hurdling us into an unlivable planet. And this plan obviously doesn't do that. I urge the Commission to listen to the overwhelming community consensus and echo the sentiment, as well of Commissioner Carr to allow more time for this process to be intelligently and democratically completed, and thank you everyone for their time.	Thank you for your comment. This comment is noted. Please see MR-2 on the need to extend the planning process timeline.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-19	Hello, this is Claire Amkraut. I'm a resident of Boyes Springs, and my comment is related to page 561, where it says open space is available within the Core Campus. It would be less than in the Proposed Plan due to lower densities in existing building in the location of buildings within areas reclaimed as open space in the Proposed Plan, and I'm talking here specifically about the Historic Alternative. What analysis is this based on? And I want to point out that the community's alternative, which was presented to DGS on September 9th, has more open space than the Proposed Plan and the buildings do not interfere with open space. I also want to point out that the lower number of housing units in the Community's Plan presents many options for mitigation of the issues that are pointed out in the EIR. Continuing on, on page 562, Paragraph 2, it refers to the lower financial feasibility of the Historical Alternative, and what evidence do you base this on? The Community's Plan shows more financial feasibility based on a compact, smaller scale layout rather than the sprawling layout in the Preferred Plan. I also am going to close by saying that I support Commissioner Carr's comments and also Bob Holloway, who is another supporter of the county looking at the Historic Alternative. Thank you for the opportunity to comment.	Thank you for your comment. This comment is noted. Please see MR-8 on the adequacy of the Historic Preservation Alternative in satisfying project objectives.
Planning Commission Hearing	Thursday, September 15, 2022	C192-20	Good afternoon, Commissioners. My name is John McCaull. I'm the Land Acquisition Director for Sonoma Land Trust. With more than four decades of experience in Sonoma Valley, the Land Trust is working to ensure that the irreplaceable wildlife corridor values of the SDC Campus and adjacent open space remain viable options for wildlife movement and health. Since we started working on SDC more than ten years ago, our conservations goals have remained the same, get the 750-plus open space acres of SDC transferred into park ownership and ensure the permeability of the SDC Campus for wildlife movement. We're also on record as supporting significant affordable housing development at SDC that is compatible with the property's natural values and resource constraints.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-21	I want to just -- we're going to submit detailed comments on the Specific Plan and EIR. I want to use the biological analysis today as an example of the problems with the concept of a self-mitigating EIR. The draft EIR's analysis and discussion of potential biological impacts is extremely limited and is insufficient to determine whether the Plan's potential impacts will be significant. The EIR fails to discuss how proposed new roads and significant increases in traffic and human activity on the site may affect wildlife movement or cause other significant impacts, and as one speaker mentioned, the EIR will permit uses in the preserved open space that conflict with open space preservation goals. The problem is that the lack of analysis of biological impacts and other impacts prevents the EIR from identifying significance levels. You can't identify impacts. You can't develop mitigation measures. So we have a lot more to say on this, but I just want to flag that this self-mitigating EIR framework is really where we need to start to understand the problems moving forward. Thank you very much.	Thank you for your comment. This comment is noted. Please see MR-1 on the adequacy of a self-mitigating Specific Plan.
Planning Commission Hearing	Thursday, September 15, 2022	C192-22	Thank you for the opportunity to talk to you today. First of all, I want to state my -- well, first of all, my name is Jim Price. I live in the Springs. I've been here since 2008, and a homeowner. My -- I want to state strong support, first of all, for the Glen Ellen Historical Society and their work in presenting a -- the -- what I would be calling the Hundred Year Proposal, and my comments are -- are based on, you know, the support for the Historical Alternative, which, when you look at how the -- the Permit Sonoma has characterized the historical alternative, it appears to be written as a put-down to the downgrade and the HAN boost the Preferred Plan with comments pared -- prepared by the same authors as proposed by the Plan. It's not appropriate in an ERA process for, you know, the -- you know, for the people who are -- who are offering a Preferred Plan to be stating their biases within the context of the EIR, which appears to be the case here. Specifically on page 562, Paragraph 2, the lower potential for well-designed active gathering places, what is that based on? What is the empirical data on which that analysis is based on? The Community Plan, which has been proposed by the -- on behalf of the community by the Glen Ellen Historical Society, provides more open space for activity gathering. On page 562,	Thank you for your comment. This comment is noted. Please see MR-8 on the adequacy of the Historic Preservation Alternative in satisfying project objectives.

Commenter	Date	Letter	Comment	Response
			Paragraph 2, quote, the area available for habitat and movement would be lower than the Proposed Plan. Based on what analysis? What is the empirical data in which the -- the authors are basing that on? The Community Plan shows increase in open space for wildlife habitat and movement over the Preferred Plan. Thank you for the opportunity to comment.	
Planning Commission Hearing	Thursday, September 15, 2022	C192-23	Thank you. As I mentioned, my concern is that we're not paying attention to democratic participation of the public, first, but more importantly, we have a rogue Planning Department that apparently is running the Board of Supervisors and apparently is in negotiation with the state in ways that none of the public is participating in, and I think we need to take another look and an analysis of our whole planning condition and what is going on here in terms of allowing public comments to be heard but not acted on. It's clear that we need to now reconsider everything, and of course, that's one of the things is we might consider how did the Planning Department choose this planning consultant, and why is it that the planning consultant and the planning department are so far away from what the public has been telling them for the last five or ten years? Something is way out of whack here, and I don't know quite who to go to other than, you know, a grand jury or a law case or take it to the public through some kind of a -- it says here in the planning laws that we can actually bring things like this, the changes in the planning -- the General Plan and changes in zoning can actually be put up to a public vote. So I'm not quite sure what our -- our mechanisms of change of this kind of a disastrous proposal can be, but I don't want anymore excuses from the Planning Department about how they've tried	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			to talk to the public and listen to the public and that this represents the public's interest, because that's not true, as many of the other facts and fictions that they put into their plans are not true, so I'm very concerned that we have some kind of evaluation of the planning process that's gone on, because it's low confidence.	
Planning Commission Hearing	Thursday, September 15, 2022	C192-24	Hello, I'm Gina Cuclis, and I'm glad I got to follow Larry Davis, because Larry is expressing what I, and I know a lot of people, feel about the frustration, feeling like the community has not been heard and listened to. I live in Boyes Hot Springs. I've lived in Sonoma Valley 36 years. It's where I raised my twin daughters, who are now 29. And the next thing I want to address is what was said earlier at Staff about middle-income housing. I happened to express that issue before. I've been to so many of these meetings in the last few years, I can't remember where and how many times I've said it, but this plan, the discussion in the EIR, doesn't address -- properly address middle-income housing. My experience over the 36 years in Sonoma Valley, and that includes being on the City of Sonoma's Planning Commission many years ago, private developers, they don't come to Sonoma Valley to build middle-income housing. We say 25 -- the Plan says 25 percent affordable, which, by the way, is way too low percentage, but the other 750, the develop -- a private developer is going to want to build as expensive housing as you can get, and that's McMansions. So this is not meeting a community need. And I just also want to the say thank you for Greg Carr. You can tell who the one Sonoma Valley resident is on the Planning Commission, and what he had to say about the planning process in moving forward is excellent, so thank you.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-25	Hi, my name is Deborah Nitasaka. Can you hear me? DEPUTY DIRECTOR ORR: Yes, we can. DEBORAH NITASAKA: I submitted a letter last November, and it seems to have been filed in the "Who Cares" bin as none of my thinking is reflected in anything coming out of Permit Sonoma, so I will revise that letter to reflect how the draft EIR's impact on it speaks to that. I've lived in Glen Ellen for 30 years. I'm an affordable housing advocate. I'm going to read a statement here. "SDC's built campus includes construction areas, a fire department, police and horticulture carve-outs, all areas that should be reinstated, this time as classrooms." I see no earnest attempt by the County to locate such a resource, but they are out there. My dream for a technical or trades campus would provide desperately needed professional training for California's young adults wanting to work with their hands and minds. Building trades, applied science programs, are just some of the ways in which this wonderful campus might educate people for the jobs of today and tomorrow, while also providing the means to maintain the special place to serve the special needs of those with special needs, the essential needs of those with special needs. This model would include surrounding cottage neighborhoods, housing requiring minimal traveled miles, as it would be largely for students, staff and educators, along with special needs housing designed to accommodate the developmentally disabled, those with other disabilities and physical challenges, etc. All affordable housing, all with appropriate supportive services to be coordinate and provided, where possible, by students and staff, to be developed on the outskirts of the main campus. Thank you. DEPUTY DIRECTOR ORR: Thank you, Deborah.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-26	My name is Kathy Pons. I'm looking at the goals of this project and -- and I'm finding it hard to find anything that is -- is regarding the legacy of care. I think that -- that because SDC was a hospital for developmental -- developmentally disabled people, that it just kind of follows that maybe some of that should be carried on and some of the buildings could be actually utilized for that. I think there needs to be -- I -- I support the historical alternative because of the opportunity to be able to reuse some of those buildings for that kind of housing, for housing with dis -- with -- for people with disabilities in particular. I think it's -- it should carry a higher priority than being economically feasible, which sounds like -- I mean, there's a common sense there, but -- but what -- if the developers are going to give priority to have to do what they want, just because it -- it's more economically feasible for them, I think we need to rethink that and have some discrepancy or some other perks for them if needed and get what the community is asking for in that area. So I support Commissioner Carr's comments on the time schedule, and I hope that that will, you know, go forward and soon. Thank you.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.
Planning Commission Hearing	Thursday, September 15, 2022	C192-27	Jim B., speaking as an Oakmont resident. This is more a visceral comment. I've enjoyed everything that everyone has said so far about the development. And I think -- I support Commissioner Carr as well, and I hope the other commissioners listen carefully to what he was saying. But I'll just -- this is just feelings, and I remember both being in line on Pythian for the Glass Fire to get out that direction, and then also the Oakmont Drive for the earlier Nuns Fire trying to get out. Both of them were very frightening situations for all of us here in Oakmont. And I heard someone say that the state of California has no intention of changing Highway 12. Well, that's great that you have a plan for leaving Elnoka and going out to Highway 12. What happens after you get out to Highway 12, though? It was frightening. I think the commissioners actually have people's lives in their hands right now in the decisions that they're making, and I support the person who brought up perhaps having a grand jury look at this and moving it out of these people's hands. Thank you.	Thank you for your comment. This comment is noted however it is not relevant to the adequacy of the DEIR, thus no further response is required.

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-28	Oh, great. Thank you. Thank you for the opportunity. Yeah, Larry Hanson, and I'm President of the Board of Forest Unlimited. We've been working to protect forest and forest watersheds in Sonoma County for over 25 years, and so I have a keen interest in the open space and the protection of the watersheds, protection of the forest and the woodlands there, for the watershed value for climate change mitigation and for wild -- wildfire, wildlife habitat I should say, and the wildlife corridors. However, the protection for this has not really been spelled out, and, therefore, is inadequate. In addition to that, the setbacks for the riparian zones do not actually protect the riparian areas, and are, therefore, inadequate in the Plan. The development plan should be based on the most ecological plan in this day and age that we are faced with, with wildfires and drought impacts and climate change, etc., and I don't think that's happening -- that's not the Proposed Plan. Housing should be city centered and not in a rural -- not rural centered, and there is insufficient analysis of the ingress and egress for wildfire impacts. And the alternative analysis is inadequate and needs realistic additions to it. I tried to cover as many -- as much as I can. The great comments that I've heard from everybody, I agree with. And Commissioner Carr we agree with. Thank you.	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.
Planning Commission Hearing	Thursday, September 15, 2022	C192-29	The process has failed to produce a reasonable plan. We all agree we need housing, but trying to force a high-density development into a site outside of an urban growth area makes no sense. The site is not in a transit corridor, nor is it next to an urban area. The state legislation does not mandate maximizing economic return, especially at the total expense of responsible land use planning. And how can it possibly be claimed that it will be a self-contained community? As a land use planner, I wholeheartedly agree with Commissioners Carr and Koenigshofer and their concerns. I urge you to stop the train to avoid a train wreck. Don't wait for the final EIR to implement changes. Stop now, downsize the Plan, listen to the public, incorporate much needed phasing requirements and performance standards and then finalize the EIR. It's the only rational way. The EIR assumes plan policies will mitigate impacts, but the feasibility of these policies is unknown, such as increasing transit. And many policies are unenforceable, so the EIR grossly	Thank you for your comment. This comment is noted. Please see MR-8 on the adequacy of the Historic Preservation Alternative in satisfying project objectives.

Commenter	Date	Letter	Comment	Response
			underestimates the impacts. It's clearly biased towards the Proposed Plan. The EIR identifies the Historic Preservation Alternative as being environmentally superior but then dismisses its advantages and incorrectly claims that the impacts of the Plan and alternatives are comparable. Some mitigating components, such as widening creek corridors, were arbitrarily excluded from the Historic Preservation Alternative, making it look worse than it is. The Proposed Plan contradicts the County Transit Growth and Land Use Policies and is inconsistent with its own guiding principles to truly balance uses and resources. I urge you to stop and take a look, and if you want to look at history, look at the Eldridge For All website. It has a lot of history about community input. Thank you.	
Planning Commission Hearing	Thursday, September 15, 2022	C192-30	Norman Gilroy. Thank you. It seems to me we're sitting here listening to the same debate that happened in San Jose and Silicon Valley 30 years ago. You know the results of that. They lost it piece by piece. And we are in the beginning of doing that, in fact maybe we're in the middle of doing that, in Sonoma County. We need to think carefully about our future. It's not for nothing that the community proposal is called the Hundred Year Plan. We need to be thinking in those terms, and I believe that we are not in this plan. I'm concerned that the language of the Plan, and in particular the language of the Historic Alternative, are biased to -- to the proposed -- to essentially put a hit on the Proposed Plan or at least support the Proposed Plan, I'm sorry. It talks about the Historical Alternative being less superior in environmental features, energy use, etc. lacking community vibrancy, etc., etc., all of which are unsupported claims. All of which, by the way, in the community's proposal, have been covered and are actually just the opposite. How do we get that kind of information into the process and take the bias out of the way the -- the analysis has been made? Overall the Historic Preservation Alternative is the environmentally superior alternative and reading from the Plan. We agree and we urge	Thank you for your comment. This comment is noted. Please see MR-8 on the adequacy of the Historic Preservation Alternative in satisfying project objectives.

Commenter	Date	Letter	Comment	Response
			the Planning Commission to adopt it as the preferred alternative under the EIR. I thank you for the opportunity to -- to testify. I support the comments of Commissioners Carr and Koenigshofer. I think they're right on. I think we should do something about that now. Thank you.	
Planning Commission Hearing	Thursday, September 15, 2022	C192-31	Thank you for this opportunity to speak, and I think my comments were made a few speakers back, so I won't take too long on this, but I just wanted to say that I think it's very clear that increasing the supply of affordable and workforce housing is broadly supported by the Sonoma Valley community. I live just south of the SDC site, very easy walking distance, and I personally really want to see a vibrant community there, but not at any cost to the environment and the health and safety of Sonoma Valley residents. And I think our general understanding was that the DEIR should really help the community better understand the scale of the environmental impacts of the Specific Plan, how they would be mitigated, what options were considered, and why these options were dismissed. And I don't think we're there yet, frankly, and I think part of that was just touched on, I think because a lot of the language is "should language" rather than "shall language," so it's not, you know, necessarily as impactful. There are terms used such as "if feasible" or "assumed" are used repeatedly, so I think the analysis -- there's some acknowledgement of some uncertainty in the impacts and the mitigation measures as well. So I really suggest that -- that as was just mentioned, we look at some way to phase the project, to look at mitigation check-ins or compliance or something along those lines to really better	Thank you for your comment. This comment is noted however it pertains to the Specific Plan and is not relevant to the adequacy of the DEIR, therefore no further response is required.

Commenter	Date	Letter	Comment	Response
			understand what we're doing and what we're getting into as we move through this process. Thank you.	
Planning Commission Hearing	Thursday, September 15, 2022	C192-32	Thank you. Just a few comments. In reviewing this draft EIR, it seemed to me there are a lot of conclusions stated, summaries stated, but not necessarily any supporting information in our studies. I always look for what the study underlying the conclusion in and it was lacking in a number of areas, and I'll cover just four of those. First, with respect to hazardous materials and hazardous waste, there was a phase 2 environmental analysis that recommended further study in quite a few areas that are summarized in a chart on page 464 of the appendix. Those apparently weren't done. Secondly, there's a reference to a W-Trans operational traffic study. If you look in the appendix, that's a one-page study of trip generation. There's no study. I think you want -- may want to look at the Sonoma Valley traffic study that was done in connection with the winery events as something that could be good. Third, as to vehicle miles traveled, I didn't see a study. Again, there's no link to what the study is, so you can't read through the assumptions, so what assumptions were used for household employment, total service segments of vehicle miles traveled where the -- where's the nearest affordable market, where's the nearest medical center, and so on. So that needs to be detailed. And then fourth, as far	Thank you for your comment. This comment is noted. Please see MR-6 on the adequacy of the transportation analysis.

Commenter	Date	Letter	Comment	Response
			as cumulative impacts, that essentially said that all the regional models capture cumulative impacts, and, therefore, we don't need to do a cumulative impact analysis. I urge you to -- urge you, Planning Commission, to ask for further studies that support the summaries and the recommendations because currently the underlying studies have not been provided or have not been done or both. Thanks.	

Commenter	Date	Letter	Comment	Response
Planning Commission Hearing	Thursday, September 15, 2022	C192-33	Thank you, Commissioners. And thank you, Brian for your presentation. Brian mentions that the PAT has supported a product Permit Sonoma has come up with. The PAT does not support this product. In fact, over a year ago, 12 of the 14 PAT members wrote a letter to Permit Sonoma saying this process is going in the wrong direction and is largely broken. As the commissioner asks, is this a done deal? This product, with all of its self-mitigating effects in the draft EIR, this quote-unquote "preferred alternative," appears to have been baked in from the start despite the community's clear preferences for other alternatives now coalescing around the Historic Alternative and as well as the Sonoma Valley Community Plan submitted to the Department of General Services last Friday. This Historic Alternative is clearly the superior alternative, not only environmentally, as is the concern in the draft EIR, but it also largely mitigates community concerns over emergency evacuation and traffic impacts in general, two factors Permit Sonoma identifies as problematic in the Historic Plan, are economic viability and slightly less open space in that plan. Well, the open space -- the housing in that plan was spread out deliberately. It can be easily brought in. There will be way more open space as it's easily brought in and adjusted. The economic viability, builder groups have been looking at the campus and have identified that a profit can be turned at 600, 450 and 385 units, depending on the group looking at it. Other groups that are supportive of this appropriately scaled alternative of 450 units are the North Sonoma Valley MAC, the Sonoma Valley Citizens Advisory Council, the Sonoma City Council, the Landmarks Commission and frankly the Board of Supervisors at their meeting in January. As Commissioner Carr wonders, I believe the whole Sonoma Valley community is supportive of doing the right thing and is committed -- and the community has clearly shown its commitment to participate in as many hearings as needed to get this right. We are with you. We can get this right. Thank you again.	Thank you for your comment. This comment is noted. Please see MR-8 on the adequacy of the Historic Preservation Alternative in satisfying project objectives.

3 Revisions to the Draft EIR

This chapter lists revisions to the Draft EIR by chapter and page, in the same order as the revisions would appear in the Draft EIR. New text is indicated with an underline in red and deleted text is indicated with ~~strikethrough~~.

Project Description

The first paragraph on page 68 is hereby amended as follows:

It also aims to improve multi-modal access from the SDC to Highway 12 (State Route 12 or SR 12) by exploring the feasibility of constructing an additional east-west emergency access connection from the site. Implementation of the Proposed Plan will also expand the existing Sonoma County fire district to serve SDC and identify a location for the fire district to construct a new fire station within the Core Campus.

The first paragraph on page 53 is hereby amended as follows:

Sonoma Valley Regional Park is directly to the north; ~~portions of Sonoma Valley Regional Park,~~ Martin Street~~,~~ and Mill Creek to the south; …

The first paragraph on page 61 is hereby amended as follows:

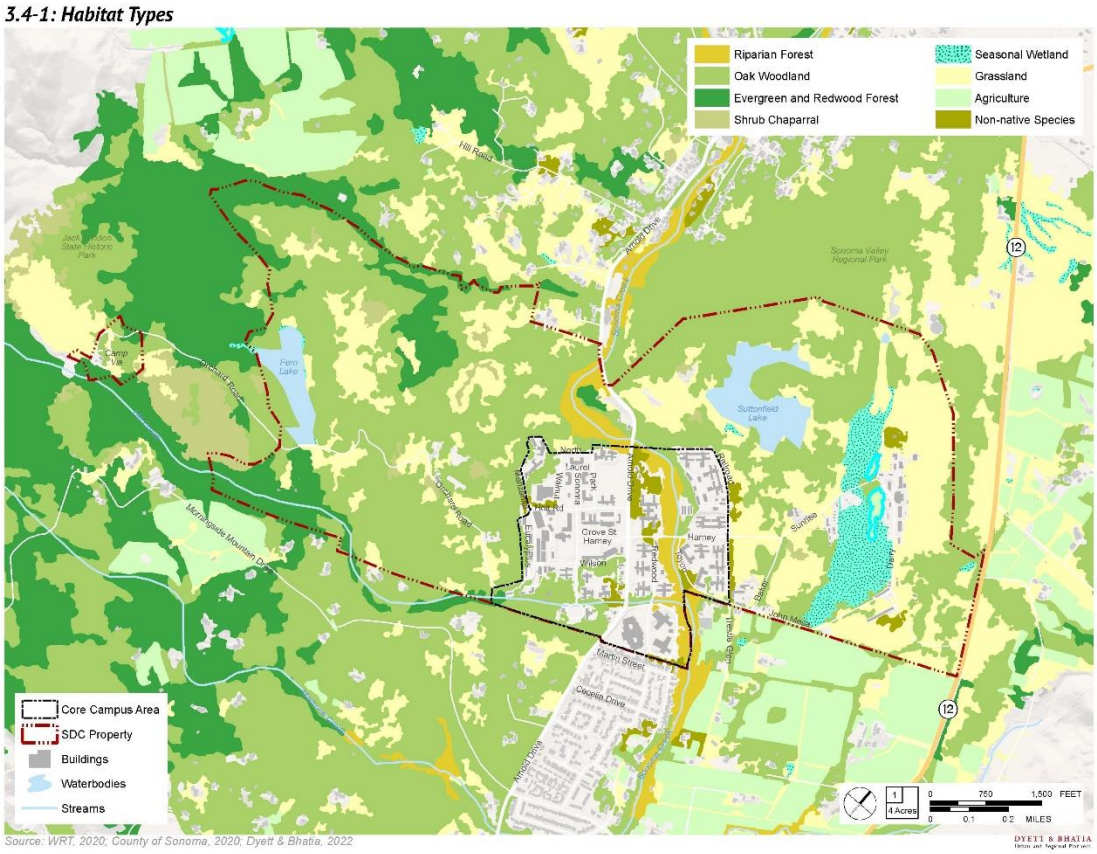
~~SDC was also the valley's largest employer until its closure~~ For a significant part of the 20th century SDC was Sonoma Valley's largest employer, with ties to adjacent communities of Glen Ellen and Eldridge.

The last paragraph on page 81 is hereby amended as follows:

~~This EIR serves as the environmental document for all discretionary actions associated with development under the Proposed Plan.~~ This EIR is also intended to assist other responsible agencies in making approvals that may result from the Proposed Plan. Federal, State, regional, and local government agencies that may have jurisdiction over development proposals in the Planning Area include: …

Biological Resources

Figure 3.4-1 is hereby amended to change the 'Vernal Pool' label to 'Seasonal Wetland'.



The first paragraph on page 68 is hereby amended as follows:

Other small patches of seep and swale wetlands on the property are typically beneath forest canopy and support herbaceous species such as mugwort (*Artemisia vulgaris*), horsetail (*Equisetum* spp.), ~~spice bush (*Lindera benzoin*),~~ knotweed (*Polygonaceae* spp.), and ferns.

Table 3.4-2 is hereby amended as follows:

Table 3.4-2: Potential Special-Status Wildlife

Scientific Name	*Common Name*	*Conservation Status*	*Potential to Occur in the Planning Area*
Agelaius tricolor	tricolored blackbird	~~SMBTAT~~ ST	**Moderate Potential.** The Planning Area contains two freshwater reservoirs that could support nesting tricolored blackbird.
Ammodramus savannarum	grasshopper sparrow	SSC	**Moderate Potential.** Grasslands in the Planning Area are potentially suitable to support this species.
Antrozous pallidus	pallid bat	SSC, WBWG High	**High Potential.** Trees with exfoliating bark and some structures within the Planning Area may provide areas suitable for roosting. The species has been documented within a mile of the Planning Area (CDFW 2022)
Aquila chrysaetos	golden eagle	BGEPA, SFP	**Moderate Potential.** The Planning Area contains suitable grasslands for foraging and suitable trees for nesting. The species has not been documented in or immediately near the Planning Area (CDFW 2022).
Ardea alba	great egret	no status (breeding sites protected by CDFW)	**Moderate Potential.** The Planning Area contains some trees near the reservoirs that could support this species.
Ardea herodias	great blue heron	no status (breeding sites	**Moderate Potential.** The Planning Area contains some trees near the

Scientific Name	*Common Name*	*Conservation Status*	*Potential to Occur in the Planning Area*
		protected by CDFW)	reservoirs that could support this species.
Athene cunicularia	burrowing owl	SSC	**Moderate Potential.** Grasslands in the eastern portion of the site could support this species in the winter. The species does not breed in Sonoma County.
Chaetura vauxi	Vaux's swift	SSC	**Present.** This species has been occasionally observed on the site (eBird 2022).
Circus cyaneus	northern harrier	SSC	**Moderate Potential.** The SDC contains open habitats for nesting and adequate areas for nesting.
Contopus cooperi	olive-sided flycatcher	SSC	~~**Moderate Potential**~~ **Present.** The Planning Area does contain coniferous forests that could support this species. An iNaturalist record exists for this species on the site.
Corynorhinus townsendii	Townsend's western big-eared bat	SSC, WBWG High	**High Potential.** Forests and structures within the Planning Area provide potentially suitable habitat for roosting.
Dendroica petechia brewsteri	(Brewster's) yellow warbler	SSC	**Moderate Potential.** The Planning Area does contain adequate riparian habitat to provide nesting habitat for this species.
Dicamptodon ensatus	California giant salamander	SSC	**Present.** This species is known to occupy forested areas near

Scientific Name	*Common Name*	*Conservation Status*	*Potential to Occur in the Planning Area*
			streams on the site, including Ashbury Creek along the northern border.
Elanus leucurus	white-tailed kite	SFP	~~**High Potential.**~~ **Present.** The Planning Area contains suitable grassland and forested habitat for nesting and foraging.
Emys marmorata	Pacific (western) pond turtle	SSC	~~**Moderate Potential.**~~ **Present.** The permanent and perennial aquatic features and surrounding areas on the site contain suitable habitat for this species. There is an iNaturalist record for this species on the site.
Icteria virens	yellow-breasted chat	SSC	**Moderate Potential.** Some suitable habitat is present in riparian areas.
Lanius ludovicianus	loggerhead shrike	SSC	**Moderate Potential.** The Planning Area contains open grasslands and patches of sparse woodlands that could support this species.
Lasiurus blossevillii	western red bat	SSC, WBWG High	**High Potential.** The Planning Area contains some broad-leaved trees that are suitable for roosting.
Myotis thysanodes	fringed myotis	WBWG High	**High Potential.** Forests and structures within the Planning Area provides potentially suitable habitat for roosting. The nearest documented occurrence is along

Scientific Name	*Common Name*	*Conservation Status*	*Potential to Occur in the Planning Area*
			the northern border of the Planning Area (CDFW 2022).
Myotis volans	~~L~~long-legged myotis	WBWG High	**Moderate Potential**. Primarily found in coniferous forests, but also occurs seasonally in riparian and desert habitats. Large hollow trees, rock crevices and buildings are important day roosts.
Nycticorax	black-crowned night heron	no status (breeding sites protected by CDFW)	**Moderate Potential.** The Planning Area contains some trees near reservoirs that could support this species.
Oncorhynchus mykiss irideus	steelhead - central CA coast DPS	FT	**Present.** This species is known to occur within the reach of Sonoma Creek that runs through the Planning Area. Sonoma Creek, and streams in the SDC are designated Critical Habitat for the species.
Oncorhynchus tshawytscha	Chinook salmon - California coastal ESU	FT, RP	~~**Moderate Potential**~~**.** **Present.** This species has been reported to be present within the Sonoma Creek watershed, upstream of the site. ~~Sonoma Creek, and connecting tributaries within and around the Planning Area, provide suitable habitat~~. This species has only rarely been documented in this part of the watershed and it is unlikely that a viable run exists.

Scientific Name	*Common Name*	*Conservation Status*	*Potential to Occur in the Planning Area*
Rana boylii	foothill yellow-legged frog (northwest/north coast clade)	SSC	**Present.** The species has been documented in Asbury Creek and is assumed to be present in the other rocky streams on the site.
Rana draytonii	California red-legged frog	FT, SSC	**Moderate Potential.** The nearest documented occurrence of this species in the CNDDB is located about 2 miles from the site. There is an iNaturalist occurrence that may be closer. Several aquatic features on-site have the physical and biological characteristics that could support CRLF. Despite the presence of bullfrogs and predatory fish in at least some of these features, the presence of CRLF cannot be ruled out without further, site specific analysis that employs ~~CDFW~~ USFWS protocol level surveys.
Strix occidentalis caurina	Northern spotted owl	FT, ST, SSC	**High Potential.** The Planning Area contains forest with suitable complexity necessary to provide nesting habitat for this species. Known occurrences are present in the adjacent Jack London State Park, with contiguous forest into the SDC.
Syncaris pacifica	California freshwater shrimp	FE, SE	**Present.** This species is known to occur within Sonoma Creek on the SDC property. Other streams and creeks in the Planning Area also

Scientific Name	*Common Name*	*Conservation Status*	*Potential to Occur in the Planning Area*
			contain suitable habitat for the species.
Taricha rivularis	red-bellied newt	SSC	**Moderate Potential.** There are nearby occurrences for this species and habitat in and around the streams is suitable to support it.
Taxidea taxus	American badger	SSC	**Moderate Potential.** The Planning Area contains some areas that support fossorial mammals. The species has not 7been detected within the SDC, but grassland habitat is suitable for burrowing.

***Key to status codes:**

requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site. High Potential: All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site. Present: The species has been observed on the site, or in the case of chinook salmon, it has been observed upstream and would have necessarily transited through the site to get to its observation point.			

Cultural, Historic, and Tribal Cultural Resources

The last paragraph on page 281 is hereby amended as follows:

Chris Wright, Dry Creek Rancheria Band of Pomo Indians.

The last paragraph on page 281 is hereby amended as follows:

Greg Sarris, ~~The~~ Federated Indians of Graton Rancheria.

The last paragraph on page 281 is hereby amended as follows:

~~Dino W.~~ Reno Franklin, Kashia Pomo~~s~~ Stewarts Point Rancheria.

The last paragraph on page 281 is hereby amended as follows:

~~Michael Mirelez, Torres Martinez Desert Cahuilla Indians.~~
~~Michael Mirelez, Torres Martinez Desert Cahuilla Indians.~~

Hazards and Hazardous Materials

The first paragraph on page 257 is hereby amended as follows:

Sonoma ~~County~~ Valley Fire District (SCFD) provides fire and emergency response services to the county.

Hydrology and Water Quality

The third paragraph on page 274 is hereby added as follows:

California Code, Water Code - WAT § 6102
The California Water Code entrusts dam safety regulatory power to DWR, Division of Safety of Dams (DSOD). The Division of Safety of Dams as part of the department inspects and reevaluates its jurisdictional dams and reservoirs for the purpose of determining their safety. In order to ensure the safe operation of dams and to maintain public confidence in dam safety, the Division of Safety of Dams must inspect dams within its jurisdiction once per fiscal year with the exception of low hazard potential dams which will receive inspections every two fiscal years at a minimum. California's dam safety procedures must stay on par with, or ahead of, best practices and must continually update those procedures based on the best available knowledge.

The last paragraph on page 275 is hereby amended as follows:

Policy C-WR-2f: Discretionary projects in Urban Service Areas, where the density of development thus extent of impervious surface area is greater than in Rural Communities, shall be required to maintain the site's pre-development recharge of groundwater to the maximum extent practicable/feasible. Develop voluntary guidelines for development in Rural Communities that would accomplish the same purpose

Policy C-WR-4b: Use water effectively and reduce water demand by developing programs to: (1) Increase water conserving design and equipment in new construction, including the use of design and technologies based on green building principles; (2) Educate water users on water conserving landscaping and other conservation measures; (3) Encourage retrofitting with water conserving devices; (4) Design wastewater collection systems to minimize inflow and infiltration; and (5) Reduce impervious surfaces to minimize runoff and increase groundwater recharge.

Policy C-WR-4f: To minimize generation of wastewater and encourage conservation of Coastal water resources, require use of water saving devices as prescribed by the local water provider in all new developments.

Public Services and Recreation

The text under 'Fire Protection' on pages 387 – 389 is hereby amended as follows:

~~The SDC property constitutes its own fire district served by the Eldridge Fire Department, which operates out of the station located directly on the main campus. The Eldridge Fire Department is a State agency that coordinates with the County as an all-risk department, responding to all emergencies within the district. Due to uncertainty whether the department would continue operation after closure of the developmental center, the fire department lost many of its staff members and is currently understaffed. However, the Eldridge Fire Department was extended to continue full operation and currently covers two of three shifts, supplemented by staff from the neighboring fire protection district Sonoma Valley Fire and Rescue Authority (SVFRA) for the remaining shift, following a 2/4 schedule (two days on, four days off).~~

~~The Eldridge Fire Department maintains a two-minute getaway service standard from the time they receive a service call, which are responded to through a mobile data transmitter (MDT) system. Equipment operated by the department includes a Type 1 fire engine and a Type 3 brush rig. An ambulance is also available through partnership with SVFRA, but it is not used for service calls. The Eldridge Fire Department does not have an ISO (Insurance Services Office) rating but run under SVFRA's Class 1 rating standard. The Eldridge Fire Department continues to operate independently, and it is anticipated that future services will still be provided in coordination with neighboring Sonoma County fire districts including SVFRA, Mayacamas Volunteer Fire Department, and Kenwood Fire Protection District, with which the Eldridge Fire Department has automatic aid agreements. The Sonoma County Local Agency Formation Commission (LAFCO) will also have the responsibility to review and approve or disapprove these proposed changes regarding expanding the existing Sonoma County fire districts to serve the Planning Area.~~

~~The Sonoma County Fire Prevention Division is responsible for programs, procedures, and projects for preventing outbreak of fires and to regulate storage, handling, and processing of hazardous materials in the county. Sonoma County has 25 fire departments that cover the 44 public fire districts in the county, with additional support from Cooperative Fire Protection Agreements with the State Department of Forestry and Fire Prevention (CAL FIRE).~~

~~In 2002, the City of Sonoma and Valley of the Moon Fire Protection District entered into a Joint Powers Agreement creating a public entity known as the Sonoma Valley Fire & Rescue Authority (SVFRA). The SVFRA provides all-risk fire, rescue, and emergency medical services to 58.5 square miles comprised of the communities of Agua Caliente, Boyes Hot Springs, Diamond-A, El Verano, Fetters Hot Springs, Temelec, Seven Flags, and contract services to the City of Sonoma and Glen Ellen.~~

~~As of 2022, there are four career fire stations and two volunteer-staffed stations organized into six companies under the SVFRA—four paramedic engine companies and two ALS ambulances. SVFRA also staffs an assortment of specialized equipment through the supplemental staffing of 41 dedicated volunteer firefighters. This equipment includes a Ladder Truck, two Rescues, three Water Tenders, and nine additional Fire Engines, including six specialized wildland engines. The SVFRA also provides ambulance service to the greater Sonoma Valley, an area of approximately 100 square miles. Station 5, the Glen Ellen Station, is also staffed by SVFRA employees.~~

~~SVFRA maintains standards of response coverage benchmarks of six minutes until the first unit arrives on the scene for urban areas, seven minutes for suburban areas, and 12 minutes for rural areas, with a goal of meeting these standards for 90 percent of all calls for service. Based on the 2017 Annual Report, which represents the most recent data available, there were approximately 5,300 calls for service, most of which were for emergency medical services (68 percent). The District has achieved a one minute and 56 second average improvement in response times.~~

~~Other nearby fire stations include the Mayacamas Volunteer Fire Department in the Mayacamas Range west of the SDC site, and the CAL FIRE Glen Ellen Station located within the Sonoma Valley Regional Park.~~

~~With four SVFRA stations in addition to the Eldridge Fire Department within four miles of the SDC site, fire service is well-established in the area. **Table 3.13-1** lists fire department stations anticipated to serve the Planning Area.~~

The SDC property is served by the Eldridge Fire Department, which operates out of the station located directly on the main campus. The Eldridge Fire Department is a State agency that coordinates with the County as an all-risk department, responding to all emergencies within the SDC property. Due to uncertainty whether the department would continue operation after closure of the developmental center, the fire department lost many of its staff members and is currently understaffed. However, the Eldridge Fire Department was extended to continue full operation and currently covers two of three shifts, supplemented by staff from the neighboring fire district Sonoma Valley Fire District (SVFD) for the remaining shift, following a 2/4 schedule (two days on, four days off).

The Eldridge Fire Department maintains a two-minute getaway service standard from the time they receive a service call, which are responded to through a mobile data transmitter (MDT) system. Equipment operated by the department includes a Type 1 fire engine and a Type 3 brush rig. An ambulance is also available through partnership with SVFD, but it is not used for service calls. The Eldridge FD does not have an ISO (Insurance Services Office) rating but runs under SVFD's Class 2 rating standard. The Eldridge Fire Department continues to operate independently, and it is anticipated that future services will still be provided by the Sonoma Valley Fire District, as the entire SDC Planning Area is within the boundaries of the SVFD. The Sonoma County Local Agency Formation Commission (LAFCO) approved this boundary change first in 1996 and then affirmed by LAFCO when the Sonoma Valley Fire District was formed in 2020.

The Sonoma County Fire Prevention Division is responsible for programs, procedures, and projects for preventing outbreak of fires and to regulate storage, handling, and processing of hazardous materials in the county. Sonoma County has 25 fire departments that cover the 44 public fire districts in the county, with additional support from Cooperative Fire Protection Agreements with the State Department of Forestry and Fire Prevention (CAL FIRE).

The Sonoma Valley Fire District (SVFD) provides all-hazards fire, rescue, and paramedic level emergency medical services to the communities of Agua Caliente, Boyes Hot Springs, City of Sonoma, Diamond-A, El Verano, Fetters Hot Springs, Glen Ellen, Mayacamas, Temelec, Seven Flags, and Kenwood (under a contract for services).

The SVFD is governed by a seven-member Board of Directors, elected at-large by their constituents, and each serving a four-year term. The Fire Chief oversees the District's general operations under the Board of Directors' policy direction. The SVFD serves an area of approximately 114 square miles with a resident population of roughly 52,000. The District includes extensive wildland-urban interface (WUI) areas, large single-family homes, multi-family residential complexes, several hotels, ten schools, a hospital, and a historic downtown Plaza. SVFD also provides ambulance service to an additional 100 square miles, and an additional approximately 5,000 residents, as well as a significant number of visitors in the greater Sonoma Valley.

SVFD is a combination agency that maintains five career-staffed fire stations, three volunteer stations, an administrative office, and a maintenance facility. SVFD has 60 full-time personnel and over 50 volunteer personnel. SVFD's daily staffing includes four paramedic engines, two advanced life support ambulances, and a Battalion Chief. In addition, this staffing is enhanced through the cadre of dedicated volunteer firefighters and an assortment of specialized equipment, including a ladder truck, seven wildland engines, two rescue trucks, three water tenders, and three additional engines.

The SVFD maintains standards of response coverage benchmarks of six minutes until the first unit arrives on the scene for urban areas, seven minutes for suburban areas, and 12 minutes for rural areas, with a goal of meeting these standards for 90 percent of all calls for service. Based on the 2017 Annual Report, which represents the most recent data available, there were approximately 5,300 calls for service, most of which were for emergency medical services (68 percent). The District has achieved a one minute and 56 second average improvement in response times.

Another nearby fire station is the seasonally staffed CAL FIRE Glen Ellen Station located within the Sonoma Valley Regional Park. With five SVFD stations in addition to the Eldridge FD within four miles of the SDC site, fire service is well-established in the area. Table 3.13-1 lists fire department stations anticipated to serve the Planning Area.

Table 3.13-1 on page 389 is hereby amended as follows:

Table 3.13-1: Fire Department Stations Serving the Planning Area

Fire Station	*Services*
Eldridge Fire Department 15000 Arnold Drive, Eldridge	Type 1 Fire Engine
~~SVFRA~~ SVFD Fire Station 1 630 Second Street West, Sonoma	Type 1 Fire Engine ALS Ambulance
~~SVFRA~~ SVFD Fire Station 2 877 Center Street, El Verano	Type 1 Fire Engine
~~SVFRA~~ SVFD Fire Station 3 1 West Agua Caliente Road, Agua Caliente	Type 1 Fire Engine ALS Ambulance
~~SVFRA~~ SVFD Fire Station 5 13445 Arnold Drive, Glen Ellen	Type 1 Fire Engine
SVFD Fire Station 6 9045 Sonoma Highway, Kenwood	Type 1 Fire Engine

Source: Dyett and Bhatia, 2022; Sonoma Valley Fire & Rescue Authority, 2022

The third paragraph on page 400 is hereby amended as follows:

The Eldridge Fire Department continues full operations that service the Planning Area, supplemented by staff from the neighboring fire protection district, ~~SVFRA~~ SVFD. The increased local projected buildout population, employment, and housing units generated by the Proposed Plan would likely result in a subsequent increase in fire and emergency medical service calls to the Planning Area compared to existing conditions. Standards of response coverage benchmarks, as defined in the ~~SVFRA~~ SVFD Standards of Response Coverage report, include six minutes until the first unit arrives on the scene for urban areas, seven minutes for suburban areas, and 12 minutes for rural areas, with a goal of meeting these standards for 90 percent of all calls for service. In order to maintain standards of response coverage benchmarks as a result of buildout under the Proposed Plan, ~~it is anticipated that services will still be provided in coordination with neighboring Sonoma County fire districts including SVFRA, Mayacamas Volunteer Fire Department, and Kenwood Fire Protection District~~ services will be provided by the Sonoma Valley Fire District (SVFD) from the new fire station to be built in the SDC Planning Area as well as from the SVFD's 5 other staffed fire stations.

~~Further, the Proposed Plan will expand the existing Sonoma County fire district to serve the Planning Area and identify a location for the fire district to construct a new fire station within the Core Campus in order to meet the needs of the population under buildout (proposed Policy 6-1).~~ Further, the Proposed Plan will expand the existing SVFD to fully provide fire and EMS services to the SDC Planning Area and identify a location for the construction of a new fire station (to SVFD standards and specifications) within the Core Campus in order to meet the needs of the population under buildout (proposed Policy 6-1). This includes the Plan providing the funding for this new facility, equipment, and ongoing services. The new location of the fire station will be within the Core Campus to ensure easy and proximate emergency access to Arnold Drive with minimal crossings of pedestrian and bicycle routes. The Proposed Plan will also explore the feasibility of providing an additional east-west connection from the Core Campus to SR 12 to further improve emergency access (proposed Policy 3-5).

Transportation

The last paragraph on page 417 is hereby amended as follows:

To the south of the Proposed Plan area between Harney Street and Madrone Road, daily volumes in 2021 were approximately 6,200 vehicles, as compared to approximately 7,100 vehicles in 2019. Historical daily traffic volumes on this segment Arnold Drive reflect a peak of approximately 8,000 vehicles in 2014.

Utilities and Service Systems

The second paragraph on page 457 is hereby added as follows:

State Regulations for Submetering of Water for Multifamily Residential (Housing Senate Bill SB-7)
Submetering of individual units has been required in new construction of multifamily buildings since 2018 as a conservation measure that provides a rate-based incentive to reduce water use and allows equitable billing based on actual use. Some exemptions exist, including for low-income housing. Enforcement of the submetering requirement falls to the water purveyor as a condition of hook up.

The second paragraph on page 458 is hereby amended as follows:

~~The standards allow small graywater systems to be installed in homes without a construction permit, substantially reducing the barriers to installing small residential graywater systems in California. The purpose of the regulations is to conserve water by facilitating greater reuse of laundry, shower, sink, and similar sources of discharge for irrigation and/or indoor use; to reduce the number of noncompliant graywater systems by making legal compliance easily achievable; to provide guidance for avoiding potentially unhealthful conditions; and to provide an alternative way to relieve stress on private sewage disposal systems.~~ The standards allow single drain systems and washing machine systems that do not alter existing plumbing to be installed in homes without a construction permit, substantially reducing the barriers to installing these residential graywater systems in California. Although allowed under the emergency regulation, the installation of single drain systems without a permit was later removed in the final regulation adopted. The purpose of the regulations is to conserve water by facilitating greater reuse of laundry, shower, sink, and similar sources of discharge for irrigation and/or indoor use; to reduce the number of noncompliant graywater systems by making legal compliance easily achievable; to provide guidance for avoiding potentially unhealthful conditions; and to provide an alternative way to relieve stress on private sewage disposal systems. As of 2017, California's graywater code is found in Chapter 15 of the California Plumbing Code.

The second paragraph on page 464 is hereby added as follows:

Sonoma County Green Building Regulations
The County of Sonoma has only adopted the mandatory measures of CALGreen and the California Energy Code. CALGreen is California's Green Building Standards that apply to all newly constructed buildings as well as additions and certain alterations with building permit applications received on or after January 1, 2020.

The second paragraph on page 466 is hereby amended as follows:

The riparian and appropriative water rights owned by the State for the SDC property limit water use for onsite purposes and no offsite use is allowed under current water rights.

The third paragraph on page 466 is hereby amended as follows:

…SDC could provide limited supplies (two weeks) during an emergency to serve as a back-up water supply source for ~~Sonoma County~~ VOMWD to mitigate water service disruption to retail customers in the Sonoma Valley.

The second paragraph on page 467 is hereby amended as follows:

While the lakes provide water storage, the water treatment plant has been shut down and most of the water transmission and distribution systems (piping) are described as beyond useful life and obsolete by previous studies[1].

…Wilson north of Sonoma, and Eucalyptus streets installed in 1995 that should be able to be preserved as the Sherwood report[1] states…

Table 3.15-1 on page 468 is hereby amended as follows with changes highlighted in blue:

Proposed Project Water Demand Estimates (Revised)

Sonoma Developmental Center Specific Plan, Sonoma County, California

Project	Land Use	Water Use Factor (a)	Water Use Factor Units	Estimated Water Use (AFY) (b)				
				2025	2030	2035	2040	2045
Sonoma Developmental Center Specific Plan	Single Family Residential	244	gpd/du	0	11	25	41	68
	Multi-Family Residential	100	gpd/du	0	0	9.0	29	56
	Missing Middle Residential	172	gpd/du	0	7.7	17	29	48
	Hotel	0.16	AFY/employee	0	28	28	28	28
	General Commercial	1.79	AFY/10,000 sf	0	2.7	4.5	5.4	7.2
	Office	1.79	AFY/10,000 sf	0	3.6	7.2	16	23
	Public / Institutional	1.79	AFY/10,000 sf	0	4.5	13	18	28
	Research & Development	2.35	AFY/10,000 sf	0	0	6	24	30
	Total Open Space	--	--	--	--	--	--	--
	Irrigated Park Area	(c)	--	0	3.5	10	14	21
	Other Irrigated Common Space Areas	(c)	--	0	0	1.4	1.9	2.9
System Water Losses (d)	N/A	9.5%	--	0.0	5.8	12	19	30
			Total (e)	0	67	133	225	342

Abbreviations:

"AFY" = acre-feet per year
"du" = dwelling units
"MAWA" = Maximum Applied Water Allowance
"MWELO" = Model Water Efficient Landscaping Ordinance
"sf" = square feet
"VOMWD" = Valley of the Moon Water District

[1] SDC Existing Conditions Report. Hydrology & Site Infrastructure. Sherwood Design Engineers Jan 8, 2018.

Pages 470 and 471 are hereby amended as follows:

Existing Sewer Flows:

Based on the maximum daily flow records provided in table 4, provided in the July 2021 Wood Rogers report, *the 2015 Peak Wet Weather Flow was estimated as 1,141,670 GPD=1.14 MGD.*

Month	2015
January	170,840
February	552,230
March	158,820
April	211,660
May	147,190
June	163,830
July	144,070
August	147,450
September	171,900
October	303,330
November	104,050
December	1,141,670
Yearly Average	**284,753**

2015 Maximum Daily Flow (GPD) into SVCSD System,
Table 4, July 2021 Wood Rogers report.
The July 2021 Wood Rogers report noted that the current 2020 average dry-weather daily flows are below 10,000 gpd.

Total Wastewater Demand (2045):

Sonoma County Water Agency design and construction standards for sanitation facilities, Standard 138 references the allowance for Inflow and Infiltration as 800 Gallons Per Acre Per Day[2]. Therefore, the Wet Weather Infiltration/Inflow for future development within the approximately 180-acre SDC Planned Core Campus can be calculated as 144,000 GPD.
The 2045 water demand was estimated in the July 2022 WSA report as 342 AFY[3]. Therefore, the 2045 Wastewater Average Dry Weather demand can be calculated based on Proposed Plan buildout water use, excluding the landscape water use, as 318 AFY= 283,704 GPD.
The Peak Dry Weather Flow can be determined by multiplying the average dry weather flow by a peak factor of 2.47 as 700,749 GPD.
The Peak Wet Weather Flow for the proposed buildout can be calculated as the Peak Dry Weather Flow plus the Wet Weather Infiltration/Inflow for future development as 844,750 GPD=0.85 MGD.

[2] Sonoma County Water Agency Design and Construction Standards for Sanitation Facilities, November 2020

[3] Water Supply Assessment for the SDC Specific Plan. EKI / VOTMWD July 2022.

Table 3.15-2: Wastewater Generation in the Planning Area

Wastewater Generation	*Average ~~Gallons per day~~ Dry Weather Flow (GPD)*	*~~Acre-feet per year (AFY)~~Peak Wet Weather Flow (GPD)*
2015 Wastewater Flows to SVCSD	~~284,753~~	~~319~~ 1,141,670
2020 Wastewater Flows to SVCSD	10,000	~~11~~
2045 Total Wastewater Demand	~~336,000~~ 283,704	~~376~~ 844,750

~~1. The 2045 wastewater demand is calculated based on Proposed Plan buildout water use estimates in the WSA with a 10% allowance for inflows and infiltration.~~

Source: Wood Rogers, 2021 & July 2022 WSA,

The above wastewater generation ~~estimate~~ is estimated as 0.85 MGD for buildout of the Planning Area ~~is an average flow. Assuming~~ for the Peak Wet Weather Flow assuming a peak factor of 2.47 ~~2.5, peak flow over a given day count be on the order of 0.85 MGD.~~

Additional studies are needed to evaluate alternatives for ~~rehabilitation and~~ replacement of existing sewer lines described in the 2021 Wood Rogers report and to evaluate the timing of when work can be done in advance of future buildout to reduce infiltration and inflows. The evaluation also needs to assess the SVCSD downstream collection system for Peak Wet Weather Flow contributions from the SDC site. While full buildout of the site is estimated to significantly reduce I&I, and thus PWWF discharges, compared to existing conditions, any interim phases of development completed ahead of full replacement of SDC's on-site sewer system need to be evaluated to ensure no increases in PWWF. In addition, while the increased average dry weather flow contributions from the SDC site to the treatment plant are not anticipated to exceed the plant's current permitted ADWF treatment capacity, further evaluation of impacts to the permitted treatment capacity is needed when considered in combination with other planned developments.

The third paragraph on page 474 is hereby amended as follows:

Project water and sewer demands were analyzed by comparing SDC pre-closure conditions to conditions expected with buildout of the Planning Area as they are similar in magnitude with respect to usage of available onsite water sources ~~and capacity of existing downstream sewer facilities~~. However, under buildout conditions, it is expected that new sewer construction would substantially reduce SDC's wet-weather contributions to sewer compared to pre-closure conditions since the majority of the wet weather sewer contributions are not derived from onsite water (supply) sources. As a result, the existing downstream sewer facilities will experience lower PWWFs and be less susceptible to sewer overflows compared to existing conditions.

The last paragraph on page 481 and the first four paragraphs on page 482 are hereby amended as follows:

~~Existing and projected wastewater generation for the Planning Area is shown in gallons per day and acre-feet per year in **Table 3.15-2**. The SVCSD Treatment Plant is permitted to discharge an average dry weather flow of 3 MGD. Additionally, the SVCSD Treatment Plant can treat, up to 16 MGD and has the ability to discharge 11 MGD. The SVCSD Treatment Plant also has 35 million gallons of equalization storage. Infiltration and inflow are significant issues within SVCSD and within the SDC.~~
~~As shown in **Table 3.15-2**, estimated average wet-weather sewer flow with buildout of the Proposed Plan in 2045 is 0.3 MGD, which represents approximately 2 percent of total available capacity in 2045. Therefore, the Treatment Plant will have adequate capacity to serve the 2045 service population of the Planning Area.~~
~~Excessive infiltration and inflows from structurally deficient sewer pipes and structures can contribute to sewer system backups and overflows. Given the poor condition of much of the site sewer lines, it is important that damaged portions of the existing sewer system continue to be disconnected and abandoned as soon as possible. Should the abandonment work continue prior to buildout of the Planning Area, the risk of sanitary sewer overflows will be minimized.~~
~~To minimize ground disturbance from construction of new sewer mains, these utilities should be installed concurrently with the construction or reconstruction of roadways.~~
~~If the SVCSD trunk sewer capacity is found to be adequate to convey the increase in flows from buildout of the Planning Area, implementation of the Proposed Plan will have a less than significant impact on wastewater facilities as no new wastewater treatment facilities aside from a small-scale recycled water or individual greywater systems have been determined to be required or are proposed to serve the Planning Area.~~

Existing and projected wastewater generation for the Planning Area is shown in gallons per day in **Table 3.15-2**. The SVCSD Treatment Plant is permitted to discharge an average dry weather flow of 3 MGD. Additionally, the SVCSD Treatment Plant can treat up to 16 MGD and has the ability to discharge 11 MGD. The SVCSD Treatment Plant also has 35 million gallons of equalization storage. Infiltration and inflow are significant issues within SVCSD and within the SDC.
As shown in Table 3.15-2, the estimated peak wet-weather sewer flow with buildout of the Proposed Plan in 2045 is 0.85 MGD, which is less than the 2015 record flow and represents approximately 5 percent of total wet-weather treatment capacity of the SVCSD Treatment Plant. Compared to 2020, the average dry-weather flow is estimated to increase by 0.274 MGD in 2045, representing approximately 9% of the treatment plant's permitted ADFW capacity. By itself, this increase is anticipated to fall within the current available ADWF treatment capacity of the plant, but needs to be evaluated further in combination with other planned projects to verify available capacity. The implementation of the Proposed Plan will have a less than significant impact on wastewater facilities as no new wastewater treatment facilities aside from individual greywater systems have been determined to be required or are proposed to serve the Planning Area.
Excessive infiltration and inflows from structurally deficient sewer pipes and structures can contribute to sewer system backups and overflows. Given the poor condition of much of the site sewer lines, it is important that damaged portions of the existing sewer system continue to be disconnected and abandoned as soon as possible. Should the abandonment work continue prior to buildout of the Planning Area, the risk of sanitary sewer overflows will be reduced.
To minimize ground disturbance from construction of new sewer mains, these utilities should be installed concurrently with the construction or reconstruction of roadways.

The last paragraph on page 484 is hereby amended as follows:

Sonoma County's General Plan, and Municipal Code also include multiple provisions that support water ~~conservation~~ use efficiency.

The first paragraph on page 486 is hereby amended as follows:

As shown in **Table 3.15-2**, at build-out, the Proposed Plan is estimated to generate about 0.~~3~~85 MGD of wastewater, …
